The Russian Government has during the year 1869 commenced a radical reform of the clergy by the promulgation of a decree, by which the hereditary levitical character of the Russo-Greek priesthood is to be forever abolished. The measure, according to the *Moscow Gazette*, has been carefully prepared, to avoid the infringement of justice in respect to vested interests. The children of the clergy lose none of their rights with the abolition of the hereditary character of the clerical office. If born of priests or deacons, they will in future have the status of "personal nobility" (that is, the social position of gentry), while those of parents who are lower in the hierarchy are now placed on an equality with the upper grade of the mercantile class. They are to continue to have the benefit of the charitable and educational establishments hitherto maintained for the clergy. Another important feature in the new ukase is the better provision which it makes for the maintenance of the priesthood. Their poverty has been principally due to the excessive number both of parishes and priests, the former having been created for the latter. There is to be a new distribution of cures, on the basis of population, facility of communication between villages, the moral condition of parishioners, etc. Each parish will be served only by an "incumbent" and "psalmist," the office of deacon being abolished except in the capitals and in cathedrals, where a greater number of priests can also be attached; and no priestly office can in future be held under the age of thirty. The *Moscow Gazette* calls this act the "emancipation of the clergy." Another important alteration in the ecclesiastical laws of Russia is about to be submitted to the Emperor for approval. It admits of civil marriages in the case of Russian Dissenters who do not acknowledge the Orthodox Sacraments, and is calculated to obviate a great amount of immorality among a large and not unimportant class of the population.

There are several sects among the Russian schismatics, of very marked peculiarities in doctrine and discipline, some of which are distinguished by extreme fanaticism and endurance in self-infliction. Although they have existed for several centuries in the heart of the empire, and even in the principal cities, but little has been known of them in other countries till within a few years, when they have been described with considerable particularity in the works of Haxthausen and other writers. Two hundred of these sects are said to have been described by Archbishop Dimitry, in a book which he wrote about them a century and a half ago; since his time some of them have died out, and others have sprung up, so that it would be a difficult task to describe them all.

Among the most remarkable of these sects are the Morelschiki, or the Immolators. Their leading idea is to mortify the flesh for the sake of saving the soul, and in order to do this efficiently they have recourse to various means of mutilation and death. Fearful accounts are given of the way in which their sacrifices are performed. Sometimes a deep pit is dug in the earth, and partly filled with wood and straw, which are lighted, and into which the victims leap, singing hymns, and are burned. At other times they in a similar manner burn themselves in houses, their neighbors looking on at the act without interfering, for they consider the rite a sacred one of baptism by fire. To this sect belong the Scoptsi, or Society of the Mutilated, who practise peculiar secret rites of mutilation. The order is quite strong in organization, and its members are found in nearly every station of social life, and some in official positions, where the tutored eye can easily distinguish them by the peculiarities of their appearance. Among their religious exercises is a peculiar dance, which they call the "Boat Radyenie," which is participated in by members of both sexes, and in which they become excited to an uncontrollable frenzy, when, according to their belief, they become spiritually united with Christ, and the "whole Trinity" descends upon them. The Scoptsi have ideas about marriage, and the relations of the sexes, which are justly regarded as detestable. In other respects they are eminently sober and prudent. They are teetotallers, and extend the principle of abstinence to tobacco, and to some practices which the world generally regard as innocent. Even in the poorest districts they are always well to do, if not affluent, and pauperism is utterly unknown among them. Within their own circle they are very charitable, and they are not unkindly even to outsiders. It is said that most of the money-changers of Russia, and many of the jewellers and goldsmiths, belong to the sect; thus they have many rich men among them. Their numbers have been exaggerated, and are really quite small. In 1843 the Scoptsi known to the police were under 2,000. Haxthausen said in 1847 that there were "from 2,000 to 3,000 known to the officials," but that more than ten times that number really existed. Like the Shakers, they depend entirely upon accessions from outside for the keeping up of their numbers. Not only are their social tenets objectionable, but their political doctrines are fraught with danger to the Government. They believe that the Emperor Peter III., whose person is tenanted by the soul of Christ, is still alive. Some day, they hold, he will return from Siberia, whither he has fled. Then he will enter the Church of the Ascension in the Kremlin at Moscow, and sound the great bell. Its peal will be heard in every part of the habitable world; whereupon the Scoptsi will arise and assemble around their lord, and the whole earth shall be given up to them, and they shall reign with him for-

ever and ever. Many attempts have been made by the Russian Government to suppress the Scoptsi, but as yet they have proved fruitless.

In 1869 the authorities made a raid upon the Scoptsi of Marshausk, seized their common fund, and imprisoned several of their leading members. The latter are to be brought to trial at Moscow, when it is expected that a degree of light will be thrown upon the secret history of the sect, which is at present involved in mystery.

Another peculiar sect is that of the Khlisti, or Scourgers, whose notion of a religious service is a wild dance accompanied by severe castigation. In the middle of the room in which they meet stands a vessel containing water, and to this they go from time to time, in order to wet their heads or to drink out of their hands. Then they resume their stamping and their flogging, until they fall down utterly exhausted, or convulsions seize them, during which they utter ravings which they call prophecies. Every Easter night, the fanatics "all assemble for a great solemnity, the worship of the Mother of God. A virgin fifteen years of age, whom they have induced to act the part by tempting promises, is bound, and placed in a tub of warm water; some old women come and first make a large incision in the left breast, then cut it off, and stanch the blood in a wonderfully short time. Other barbarities follow, too shocking to be told. During these operations a mystical picture of the Holy Spirit is put into the victim's hand, in order that she may be absorbed in regarding it." Afterward a wild dance takes place around the tub, kept up by the whole congregation until their strength is exhausted. The girls who have been thus mutilated are ever afterward considered sacred. At the age of nineteen or twenty they are said to look like women of fifty or sixty, and they generally die before reaching their thirtieth year.

The Beslovesniki, or dumb, existed in considerable strength in former days, but appear to have died out. Scarcely any thing is known about them, for as soon as any one joined the community he became mute, and from that time forward no articulate sound ever escaped his lips. Various attempts have been made at different times to torture them into speaking, but always in vain.

From among the Molokani have arisen the Dukhobortsi or Soul-wrestlers, who hold that "the Dukhoborets is God, and cannot sin, but the non-Dukhoborets is radically wicked—all that he does, even what appears to be good, is sin." One of their characteristics is "the remarkably handsome forms of both the men and women, and the health and strength they display." This is partly to be accounted for by the fact that they put to death every child that is delicate or deformed. "The soul," they say, "being the likeness of God, must dwell in a worthy, noble, and vigorous body. If we find it in a weak and poor one, we are bound to free it from its ignoble prison; it then chooses for itself, according to the law of transmigration of souls, another and a better body." Such child-murder gives little pain to the parents, for their theory is, that "the soul, the image of God, recognizes no earthly father or mother," and that "there is only one father, the totality of God, who lives in every individual; and one mother, universal matter or Nature, the earth." Consequently, the Dukhobortsi never call their parents "father" or "mother," but only "old man" and "old woman;" and the parent does not speak of "my" children, but of "ours," meaning the community's.

GRESWELL, Rev. EDWARD, D. D., a learned theological and chronological writer, Senior-Fellow and Vice-President of Corpus Christi College, Oxford, born at Denton, England, August 8, 1797; died at Oxford, June 29, 1869. His early education was conducted by his father, and subsequently at the Manchester Grammar-School, and in 1815 he was elected to a scholarship in Brasenose College, which he soon exchanged for the Lancashire scholarship at Corpus Christi College. He graduated B. A. in 1818, a double first class in classics and mathematics. He was appointed college tutor in 1822, and served till 1833. He was elected to a fellowship in 1823. In 1833 he resigned his tutorship to devote himself more exclusively to the great theological and chronological works on which he had then been engaged for fifteen years, and to which he determined to dedicate his life. Thenceforward he held no college appointment except that of vice-president, the duties of which were very light. He devoted many years of close and wearisome study to the investigation of the primitive calendars and their relations to the chronology of the Scriptural events. His investigations on this difficult subject were exhaustive; he had published, between 1840 and 1868, seventeen octavo volumes of these "Histories of the Primitive Calendar," taking up in succession the calendars of the Egyptians, Chinese, Hindoos, the early Italians, the early and later Romans, the early and later Greeks, the Jews, etc., and had nearly completed a fourth instalment embracing the Mexican and South American and some of the African calendars, and an elaborate treatise on the chronology of the Old Testament which would have occupied eight or nine more volumes. He had also published in 1840 a very elaborate work on the chronology of the Scriptures to the close of the Evangelists, as a prolegomena to his great work on the gospel harmony; and in 1862 "The Three Witnesses and the Threefold Cord," being the testimony of the natural measures of time, of the primitive civil calendar, and of antediluvian and postdiluvian tradition, on the principal questions of fact, in sacred or profane antiquity. In addition to these labors, which consumed the greater part of fifty years of sedulous and constant work, Dr. Greswell had prepared a

Harmony of the Gospels and the Acts, in Greek, and an exposition of the parables and other parts of the Gospels, in six volumes, octavo, and a reply to Colenso's work on the Pentateuch. He had also published translations of Milton's "Comus" and "Samson Agonistes" into Greek verse. There are very few examples of a scholar devoting himself for more than fifty years so patiently to investigations which can never be popular, and which bring with them only the reward of a consciousness of an unattractive and somewhat wearisome labor well and conscientiously performed.

GRISI, GIULIA, an eminent Italian opera-singer, born in Milan, May 22, 1812; died in Berlin, Prussia, November 29, 1869. She was the daughter of an officer of engineers in the army of Napoleon I., and a niece of the celebrated singer Josephine Grassini. She was educated at first in a convent at Girizia, and subsequently was for a short time a pupil in the *Conservatoire* of Milan, where her elder sister, Judith, had received a brilliant musical education. She was, when yet but a child, a pupil of the composer Marliani, and at his direction went from Milan to Bologna, to complete her musical training. In that city she made her first *début* in Rossini's *Zelmira*, when she was but sixteen years old, and won all hearts by her sweet and powerful voice, the grace of her action, and her wonderful beauty. From Bologna she went to Florence, and there achieved a remarkable success in the part of Juliette in Vaccai's opera of the *Capulets;* and the year following in Rossini's *Zoraida*. From this time forward her success in all the Italian theatres was assured. In 1830 she appeared in the theatre of Pisa, and in 1831 came before the critics of *La Scala* in Milan as *Adelgisa*, in the opera of *Norma*, an opera in which she subsequently won her highest reputation, sharing at this time the glory of the performance, which enchanted all her hearers, with Pasta. Her first Parisian season as prima donna of the Italian opera was extremely brilliant; her *début* in London, in 1834, was equally successful, and she soon won and held a rank, as a great dramatic singer, second to that of none of her contemporaries. Her wonderful personation of the part of *Norma* won for her the title of "Diva." As *Semiramide*, *Lucrezia Borgia*, and *Elvira*, she displayed great ability as an actress, and in the buffo music of *Il Barbiere di Seviglia*, *Don Pasquale*, or *Cenerentola*, she was scarcely less successful. In 1836 she was married in London to M. de Melcy, a French gentleman, but the union proved unhappy, and for many years she lived with Mario, by whom she had a number of children. In 1854 she visited the United States, in company with Signor Mario, sang in the principal cities, and returned the next year to England. She was connected with her Majesty's Theatre in London till 1846, and with the Royal Italian Opera, Covent Garden, from that time till 1861, except her tour in the United States. She retired from the stage in 1861, but reappeared for a short time in Madrid in 1864, and in London in 1865 and 1866. Her voice had become somewhat weakened by the lapse of time, but she acted her part as gracefully as ever, and retained much of her former beauty. Her reputation in *Norma*, which never waned, was due quite as much to her graceful action and to her melodious recitative, or *cantabile*, as the Italians named her special gift, as to her admirable singing. She has the credit of being the first operatic singer who introduced this effective style of chanting into her performance. In 1869 she visited St. Petersburg with her children, and spent some months there. She had reached Berlin on her return-journey when she was seized with fatal illness.

GUTHRIE, JAMES, LL. D., an American statesman, born near Bardstown, Ky., December 5, 1792; died in Louisville, Ky., March 13, 1869. He was educated at the Bardstown Academy, and, after spending several years of his life as a trader to New Orleans, he studied law, and some time afterward entered upon the practice of his profession at Louisville. At this early period the internal trade of the Southwest was dependent upon the flat-boats of the Mississippi, and it was as an owner of these that he conducted his business during the few years that he was engaged in mercantile pursuits. In 1820 he was appointed prosecuting attorney in the county in which he lived. Early in his political career he was shot by an opponent, the wound prostrating him so that he was confined to his bed for three years. He was for fifteen years a member of the Kentucky Legislature, and during six years of that time he was a member of the State Senate. In 1849 he was chosen president of the Kentucky Constitutional Convention, in which body he not only gained prominence as a presiding officer, but was distinguished as an able and ready debater. He was Secretary of the Treasury, under the Administration of President Pierce, from 1853 to 1857. In 1860 he was a candidate before the Charleston Convention for the presidency, and he was a delegate to the Chicago Democratic Convention in 1864. Mr. Guthrie was elected to the United States Senate in 1865, and took his seat in that body, but in February, 1868, he was compelled to resign, owing to his failing health. During the war he was steadfastly union, and was especially active in preventing Kentucky from joining the Confederacy. The last political body of which he was a member was the "National Union Convention," held at Philadelphia in 1866.

H

HAMBURG, a free city of the North-German Confederation. Area, 156 square miles; population in 1867, 305,196. The "budget" for 1869 estimates the receipts at 5,059,400 thalers, and the expenditures at 5,357,400 thalers; deficit 298,000 thalers. The public debt, on December 31, 1867, amounted to 31,275,000 thalers. Total imports by land and sea in 1868, 818,040,000 marks banco (one mark banco equal to 34½ cents; one thaler equal to 69 cents). The exports of Hamburg cannot be ascertained, as, since 1857, no statement of exports has been demanded. The movement of transmarine shipping, in 1868, was as follows: entered, 5,397 vessels, together of 1,021,777 lasts; cleared, 5,287 vessels, together of 1,019,229 lasts (1 last 4,000 pounds). The merchant navy consisted, at the end of the year 1868, of 467 ocean-going vessels, together of 122,608 lasts.

The number of emigrants from the port of Hamburg amounted to 50,050 in 1868, to 42,889 in 1867, and to 44,780 in 1866.*

HARPER, JAMES, an American publisher, for more than fifty years the head of the publishing-house of Harper and Brothers, born at Newtown, L. I., April 13, 1795; died in New York City, March 27, 1869. He was the son of Joseph Harper, a farmer of Newtown, and his earlier years were passed upon his father's farm, and in attendance upon the public school of the village. At the age of sixteen he and his younger brother John were apprenticed to different printers in New York. The two boys were strictly temperate, industrious, and faithful, and, by increasing their small wages by overwork, were able to save a little sum, sufficient, when John had completed his apprenticeship in 1817, to enable them, with a few hundred dollars of assistance from their father, to establish a small printing-office in Dover street, N. Y. Their firm name was J. and J. Harper. In August, 1817, they delivered to Evert Duyckinck—then a leading bookseller of the city—2,000 copies of Seneca's "Morals," the first book they printed; in December, 2,500 copies of Mair's "Introduction to Latin," to the same publisher. In April, 1818, they sold to Mr. Duyckinck 500 copies of Locke's "Essay upon the Human Understanding," the first book upon which their imprint was placed. They proceeded cautiously, and when contemplating the publication of a book, especially if it was a reprint, sent to the leading houses in the trade to ascertain the number of copies each would take. Their work being well done, and their judgment in regard to the books demanded by the public proving excellent, they soon took rank as a leading and successful publishing-house. They published, among other serial works, "Harper's Family Library," which eventually extended to nearly 200 volumes. In 1825 two younger brothers, Joseph Wesley and Fletcher, having been admitted to the firm after having served their time as apprentices, the name of the house was changed to Harper and Brothers, and they removed to Nos. 81 and 82 Cliff Street. As the years drew on, the fame and business of the firm grew and increased, until they were acknowledged to be the largest publishers in the country. They had gradually added to their accommodations in Cliff Street, till they owned and occupied nine contiguous buildings, none of them fire-proof. On the 10th of December, 1853, this vast establishment was reduced to a mass of rubbish by a sweeping fire, and with but slight insurance. The loss was about a million dollars; but the great executive ability of James Harper and his brothers never showed to better advantage than on this occasion. Temporary quarters were immediately engaged; the *Magazine*, the entire edition of which for January had been nearly completed and was all consumed, was reproduced with but slight delay, and the business went on upon hired presses and with hands unskilled in their routine, for a time; but, before the rubbish could be cleared away, the plans for the new buildings, thoroughly fire-proof, were ready, and they were built and stocked without delay. In all these losses and the hurry and confusion which followed, James Harper never lost his equanimity or complete self-possession. Always early at his post, he was ever cheerful, genial, and courteous; ready with a kind word, a pleasant jest, a quick repartee, or judicious counsel. He was attached to his business, and, though he consented reluctantly to serve the city as mayor in 1844–'46, he could never afterward be drawn into political life or office, "preferring," as he said, quietly "to stick to a business that he understood." He was greatly in request as a presiding officer, a position which he filled with dignity and ability. From his early boyhood he had been rigidly temperate, and he was identified with many of the temperance movements of the time. He was a strictly religious man, a prominent and leading member of the Methodist Episcopal Church, and active in all benevolent enterprises. His fine health gave him the appearance of being much younger than he really was, and when he was last at his place of business, two days before his death, his powerful frame and his ruddy and healthful expression indicated that he had yet a full quarter of a century of life before him. On that afternoon, while driving in the upper part of the city, the pole of his carriage broke, his horses became

* For statistics of emigration of the years 1846 to 1867, see AMERICAN ANNUAL CYCLOPÆDIA for 1868.

frightened and ran, throwing both his daughter and himself violently upon the pavement. He was taken up insensible and carried into St. Luke's Hospital, where, two days later, without regaining consciousness, he died.

HAYTI.* The civil war in which Hayti had been involved for several years continued throughout the year 1869. In January, the rebels, under General Saget, advanced on Port au Prince and laid siege to it. Cape Haytien was also closely besieged by other revolutionary forces. Jacmel was still in their possession and able to resist the threatened attack by Salnave. The latter remained continually at the seat of war, conducting himself the military operations, and represented at Port au Prince by his Secretary of State. A desperate encounter took place on January 16, in which the Picos (Salnave's troops) lost some 200 men in killed and wounded, and were driven from their position. The port of Salut was bombarded and completely destroyed. The village of Torbecq, three miles from Aux Cayes, was burnt. Salnave visited, with two war-ships, the forts, and carried destruction everywhere. Business was suspended in Aux Cayes, and the foreign residents were seeking protection at their respective consulates, and on the vessels in the harbor. The conduct of the President roused the indignation of the French admiral at St. Marc; when he saw two French barks towed in by the Haytian gunboat Salnave as prizes, he put to sea in the flag-ship Semiramis, and, taking the two French vessels in tow of his own ship, brought them into St. Marc's with their national colors flying, and declared that there was no effective blockade in Hayti; that, by the French treaty which gave the latter her independence, France had a right to trade with the southern ports of the republic, and that the mere presence of a few gunboats on the coast could not be considered by the French as an effective blockade.

In the beginning of March, Salnave was again defeated, loosing 100 men and 8 pieces of artillery. The insurgents commenced the siege of Gonaives, to reënforce the garrison of which Salnave had arrested 200 merchants and others of Port au Prince.

In the mean while the French admiral reiterated his demand upon the Haytian Government for the payment of the French debt, and compelled Salnave to conclude a convention with France, by which the latter was to receive 12 per cent. of the revenues toward the payment of her claims. Her vessels were allowed to enter all the ports of Hayti.

Salnave was in a precarious situation, owing to the state of his finances. The navy had not received any pay for three months, and there was dissatisfaction at the capital against him. The blacks were jealous of the whites, and assassinations were feared.

The recklessness of Salnave's officers brought on new complications. They boarded the British mail steamer Cuba, seized the mail-bags addressed to Mr. St. John, the British *chargé d'affaires* at Port au Prince, broke the seals in spite of his remonstrances and protest, and abstracted numerous private letters, and delivered over the balance to him. The consequence was, that numerous arrests were made, on the strength of information obtained from the letters seized, while a number of other parties were shot. The British steamer Doris, twenty-four guns, under the command of Captain Glynn, was sent to demand from the Government at Port au Prince explanations and satisfactory reparation for the insult, and also to demand the immediate release of the British sloop Dolphin, which, having a cargo of merchandise for Aux Cayes, had been seized.

Soon after Salnave's arrival at Gonaives with his war-ship Alexandre Petion, the Cacos (insurgents) made a vigorous and very desperate attack, pressing far into the city, which they at one time held, fighting with great bravery and determination. The guns, however, of the Alexandre Petion threw them into some confusion, which was taken advantage of by the Government forces, who drove them from their position with considerable loss.

At St. Marc the revolutionists acted with spirit; they fortified the town, making it a stronghold. The British steamer Doris had meanwhile arrived at Port au Prince, and notified the commander of the Haytian gunboat Salnave and the war-bark Trait d'Union that neither of them would be permitted to leave port until an apology and ample reparation had been made for the insult offered to her Majesty's mails. The same announcement was made to the President (the effect of its delivery was somewhat startling to the Haytian authorities), who immediately hastened to the Doris and assured the commander that the most ample satisfaction would be given; but, as the embargoed ships were on an important mission, and their detention would be attended with great inconvenience, they requested that the vessels might be permitted to proceed. The English captain, however, was not so easily imposed on; he expressed regret that their detention should so seriously interfere with the plans of the President, but that these were his instructions. The steamer and bark were accordingly detained, and, lest either should slip out to sea in the darkness of the night, a strict watch was kept upon them, and the British war-ships Doris and Jason kept their boats manned and in readiness on alarm, to make the captures if escape was attempted.

On the 31st of March Salnave made the most humiliating apology to the commanders of the Doris and Jason, in the presence of Mr. St. John, the British *chargé d'affaires*, declaring that he was utterly ignorant of the seizure of the mail-bags, and at the time was far away from the capital. He assured them of his

* For statistics, *see* AMERICAN ANNUAL CYCLOPÆDIA for 1868.

extreme regret and annoyance at what had been done, and his grief of mind at the discovery, when it was too late to remedy it; expressing his readiness, in the official *Moniteur* of the 3d, to make the most ample public apology.

Captain Annesley, of the Jason, in reply, stated that this was the third time her Majesty's ships had been sent to Port au Prince to demand satisfaction from the Government of Salnave for insults offered to the British flag, her Majesty's representative, in the person of Mr. St. John, and also, on the present occasion, for an outrage of a most barbarous character, and for a most barbarous purpose, on her Majesty's mails. On each occasion, the only reparation offered was a paltry apology; but to commit an outrage and then apologize was not quite so satisfactory to her Majesty's Government as the Government of Hayti seemed to suppose, and he felt it his duty on the present occasion to inform the President that this was the last time such apologies would be accepted, and that next time when her Majesty's naval authorities were sent to Port au Prince on a similar mission the reparations demanded and enforced would be of a much more substantial character, and would also be of such magnitude as would make the Haytian authorities hesitate before offering insult to a great power, and sufficiently effective to check very materially the naval strength of the republic. The President expressed himself satisfied, and the naval commanders, having accepted of the President's apology, liberated the embargoed vessels, and, hoisting the Haytian flag on the fore of the Doris, gave it a national salute, and the Jason returned to Jamaica to report.

Thus the civil strife went on, with alternate success or defeat, until, in September, things began to turn in favor of the revolutionists. On the 27th a naval engagement took place before Cape Haytien between Salnave's steamers and those of the revolutionists. In the beginning, the rebel steamer Republic fought alone against the Alexandre Petion and the Silvain, and, notwithstanding she was subject to the concentrated fire of those two steamers, ran down the Silvain, causing her great damage. At this time the rebel steamer Mont Organisé appeared on the scene of conflict, thus making the forces equal. After eight hours' engagement, Salnave's steamers were so badly damaged that they were compelled to retire, the Alexandre Petion being completely disabled, and having to be towed into Cape Haytien by the Silvain, where they took protection under the guns of the fort.

Gonaives was surrendered to the revolutionists; so were Aquin, Borgue, Fort Liberté, Saint-Louis, Le Male, and Port de Paix. A large quantity of coffee, reported to be twelve thousand bags, fell into the hands of the revolutionists in Aquin. In Jeremie and Aux Cayes the headquarters of Salnave's troops were abandoned to the rebels, and the communications by land to Aquin were entirely reëstablished. Salnave's forces, besieging Jacmel, went over to the revolutionists.

In October gold rose to 1800. Salnave applied to the British admiral, Phillimore, commanding the English squadron at Jamaica, to send a vessel to Port au Prince to protect it against the threatened bombardment by the rebels. He also forwarded troops and supplies to Gonaives, Aux Cayes, and Jacmel, the last place being beseiged by General Chevallier, Salnave's Secretary of War. But his general, Vil Lubin, was defeated before Jacmel by the insurgents under General Louis Tanné. The Picos (Piquets), seeing the turn things were taking with Salnave, began to desert from his ranks in large numbers, and to join the revolutionists. In November, Salnave prepared for the worst. He rapidly concentrated the few forces left at his command and fortified Port au Prince to the utmost. Exchange rose to 2,500. Salnave's position in November is best seen by the following proclamation:

To the People and to the Army:

HAYTIANS: After the unfortunate surrender of the army of Gonaives under the command of Victorin Chevallier, after the unwarrantable and extravagant acts he committed at the capital during my absence at Camp Bondet, I nevertheless ventured to nominate him to the high position of Minister of War and Marine, to satisfy his insatiable ambition, and the better to have under my notice his injurious and hypocritical movements. Shortly after, at the head of the army besieging Jacmel, he has, after two months' sojourn before that city, managed, from the nature of his high position, to betray my confidence and to raise the standard of revolt at the head of the army he commanded; without, however, reflecting that he was contributing by that act of infamous treachery to augment the evils which for so long a time have afflicted our unfortunate country.

Haytians! it was on the 4th of this month of November that Victorin Chevallier betrayed his command in pretending that the army under his orders had voluntarily bestowed on him the title of chief of the popular army, in using the name of General Vil Lubin as Provisional President, and in seeking, finally, to seduce from allegiance General Jean Chrisostom Ulysse, commanding the Department of the West, and Hector Rebecca, commandant of the district of Léogane.

These two honorable officers have done their duty toward me by remitting me the dispatches addressed to them. They have done worthily. I congratulate them.

This act, without precedent in our political antecedents, instead of enfeebling me, adds to my stability; for, as I have promised to the nation, in the face of God and of man, I will chastise all these traitors; I will purge society from these ambitious men who infest it; I will reëstablish public order and national unity.

In consequence, Victorin Chevallier, ex-Secretary of State for War and Marine, is placed without the pale of the law. All citizens are invited to abandon him, and the officers generally of the army are absolved from all obedience to him.

Given at the National Palace of Port au Prince, 6th November, 1869, and the sixty-sixth year of independence. S. SALNAVE.

General Chevallier, in his turn, issued the following proclamation:

REPUBLIC OF HAYTI.

General of Division, VICTORIN CHEVALLIER, *General-in-Chief of the Popular Army. To the Committee of Jacmel, and to the Military Authorities:*

SIRS: The people, worn out by the sanguinary exactions of Salnave, have proclaimed his downfall. You are invited to reunite for the carrying on of the revolution, to labor with its members for the organization of a definite and regular government.

The brave and loyal General Vil Lubin has been proclaimed by the army Provisional President.

That those who partake of our sentiments may unite with us, we request your attendance forthwith at Camp Ogé.

Safety and the country! V. CHEVALLIER.

GENERAL QUARTERS OF CAMP OGÉ, *Nov.* 6, 1869, And the sixty-sixth year of Independence.

Victorin Chevallier, General in-Chief of the Popular Army, to the Army.

SOLDIERS: A new order of things has arisen. It is time that the civil war which has decimated your ranks and destroyed the vitality of the country was ended.

General Salnave is deposed from the presidency of Hayti. From all parts his downfall is proclaimed. You have made your voices heard—you, who have remained longest faithful to a chief in whose hands you placed the destinies of your country, and who has held them so cheap.

Before the national will, Salnave has bowed his head. If, forgetting the submission he owes to the sovereign will of the people, he accedes not, it is necessary that you, who have arms in your hands to make the nationality respected, and to watch over the safety of your country—it is necessary, I say, that you impose on him obedience and submission.

We are going to march, then, against Port au Prince. Close your ranks. Press round your flags; they are the banners of order. Let him who remains behind be proclaimed a traitor to his country. Yet a few days, and this land, saturated with the blood of our fathers, and which should never be overclouded by the actions of their descendants, by disorder, anarchy, and the phalanx of evils which accompany them, shall again flourish under the shadow of peace.

Soldiers, cry with me, "Vive la paix et l'ordre! Vive la Constitution! Vive la république, une et indivisible et prospère!" V. CHEVALLIER.

General Chevallier was received with enthusiasm in Jacmel, and the day after, the 5th, taking with him all the pickets that had surrounded Jacmel for fourteen months, he marched on to Port-au-Prince. Cape Haytien was taken by storm by the insurgents on November 13th, and the war-vessels A. Petion, Salnave, and Rouillone, in Cape Haytien, were captured, so that Salnave was confined to the city and vicinity of Port au Prince. The revolutionists being now in the complete possession of the northern part of the island, made energetic preparations to attack Port au Prince, where $4,000 Haytian paper-money were worth one dollar in gold.

The attack upon Port au Prince by the revolutionists was commenced on the morning of the 18th of December, at four o'clock. At that hour the rebel steamers, three in number, made their appearance in the harbor, and seized Salnave's last vessel, the Terreur, lying at anchor. Immediately after, General Brice landed with about 1,200 men. An engagement followed, and, after a sharp struggle, the insurgents carried the northern lines of the town. These were held by General Brice until eleven o'clock in the forenoon of the 19th, at which time he received reënforcements. Salnave, growing desperate, retired to the national palace, whence he dispatched his trusty General Vil Lubin, at the head of the guards, amounting to four hundred men, to attack the insurgents. They took with them a piece of ordnance, which, for some time, made sad havoc in the insurgent ranks, but which was eventually captured by a body of volunteers, fifty in number, composed of gentlemen who had been ill-treated by Salnave, and had joined Brice. Vil Lubin, finding that the battle was lost, retreated to the palace, whence he returned to impart the unwelcome intelligence to his chief. From the palace Vil Lubin returned to his command at Fort Bezouton, and the fighting was continued at intervals during the day, the arsenal and Fort St. Clair falling into the hands of Brice before dark. On the morning of the 19th General Brice held a council of war, and it was determined that Salnave should be attacked in the palace. The fleet was ordered to prepare for a bombardment, and the Terreur was selected to fire on the palace. Salnave, by this time, saw that to hold out any longer would be useless, and he left, followed by several of his generals, intending to go to the American consulate. Before he had mounted his horse, however, a shell from the Terreur struck the throne-room, the most magnificent apartment in the building, which was consumed in a short time, and Salnave, with a few followers, took the Petionville road. Just about this time fire was put to the northern part of the town by Salnave's soldiers, but Captain Salmon, of H. B. M. ship Defence, with several of his officers and the crew of that vessel, landed, and through their noble exertions the conflagration was subdued, and that part of the town was saved from being entirely consumed. It appears that Salnave had stowed away, in vaults at the palace, a large quantity of ammunition. The shells fired from the Terreur penetrated its vaults, causing several terrific explosions, and the palace was utterly destroyed. Twelve houses in the neighborhood were burned to the ground; many more, in other parts of the same quarter of the town were destroyed, and hundreds of people have consequently been left without homes.

On the afternoon of the 19th a steamer was despatched to l'Archaie for Nissage Saget, who arrived in the capital on the 20th, where he was received with acclamations. A few days after the taking of the city, Domingue, the so-called President of the South, was sent for, and a Provisional Government was formed. This Government consists of Nissage Saget, President; Domingue, Vice-president; General F. Rameau, Minister of Finance and Commerce; Septimus Rameau, Minister of Justice; and General Brice, Minister of War. A decree was

issued convoking the Legislative Chambers for the 1st of February, 1870, and ordering elections in the mean time to fill the vacancies in the Lower House. Salnave was captured, tried by court-martial, and shot.

HENGSTENBERG, ERNST WILHELM, a German theologian, author, and editor; born in Fröndenberg, Westphalia, October 20, 1802; died in Berlin, Prussia, June 3, 1869. He was the son of a Lutheran clergyman, and was prepared for the university by his father. While at the University of Bonn, he devoted himself principally to Oriental and metaphysical studies, taking an enthusiastic part at the same time in the *Burschenschaften*. While at this university, he published two volumes which gained him considerable reputation, a German translation of the metaphysics of Aristotle, and a critical commentary upon the *Moallakah*, a famous Arabic poem of the sixth century. His sympathies at that time were with the rationalistic school, but in 1823, going to the University of Basel, he came under the influence of the missionary institution, and soon commenced his theological studies there with new and higher views, becoming identified with the Evangelical Lutherans. In 1824 he went to Berlin as a theological *privat-docent*, and soon became known as the leader of a rising orthodox party, and for many years defended their principles with singular zeal and ability. He published two small theological treatises in 1825 and 1826, and in the latter year was made extraordinary, in 1828 ordinary professor of theology, and in 1829 doctor of theology. In 1827 he founded the *Evangelische Kirchenzeitung* (Evangelical Church Gazette), a periodical which is still in existence and has combated with great zeal and ability all the forms of rationalism. His theological works have been mostly written with the same object—the defence of orthodoxy against the assaults of the rationalists. The following are those which have given him the most reputation: "Christology of the Old Testament, and Commentaries on the Messianic Prophets," 3 vols., 1832–'35, revised in 1854–'56; "Introduction to the Study of the Old Testament," 3 vols., 1831–'39; "Commentaries on the Psalms," 4 vols., 1842–'45; second edition 1850; "Commentaries on the most Important and most Difficult Portions of the Pentateuch," 1 vol., 1842; "Commentaries on the Apocalypse of St. John," 2 vols., 1850–'51; "Explanation of the Song of Songs of Solomon," 1 vol., 1853; "Essay upon the Book of Job," 1856; "Freemasonry and the Duty of the Evangelical Pastor," 1854. Of late years Dr. Hengstenberg had parted company with his old Evangelical associates, Neander, Tholuck, and Lange, and had become a very High-Church Lutheran, and extremely intolerant, going so far as to recommend to the King the persecution of all sectaries; but his splendid contributions to theological science will live when these errors are forgotten.

HESSE-DARMSTADT,* a grand-duchy of Germany. Grand-duke, Ludwig III., born June 9, 1806; succeeded his father June 16, 1848. Area, 2,970 square miles; population, according to the census of 1867, 823,188 (among whom were 564,657 Evangelicals, and 229,373 Roman Catholics). Hesse-Darmstadt forms part of the North-German Confederation, but only for the province of Upper Hesse, and two little communities north of the river Main, belonging to the other provinces, together with 257,479 inhabitants. The budget for one year of the financial period from 1869–'71 estimates the revenue at 10,311,922; the expenditure at 10,000,017 guilders. The public debt (inclusive of railroad debt) amounted, at the close of 1868, to 15,621,000 florins.

HUBER, VICTOR AIMÉ, a German historian, critic, publicist, and promoter of coöperative enterprises, born at Stuttgart in 1800; died at Wernigerode, in the Hartz Mountains, July 26, 1869. He was educated at Würzburg and Göttingen, and studied medicine, intending to devote himself to the practice of that profession. But, after leaving the university, he travelled extensively in France, Spain, Portugal, England, and Scotland, and, having made himself master of the literature of those countries, resolved to undertake the work of instruction in them. He was successively professor of Modern Languages, History, and Literature at Bremen, Marburg, and Berlin. In 1852 he resigned his professorship, in order to prosecute with more vigor and energy the two somewhat incongruous objects he had at heart, the promotion of coöperative societies and cooperative efforts among the working-class, and the support of the reactionary measures of the German governments against state constitutions and republicanism in every form. For the latter purpose he wrote "The Conservative Party," Halle, 1841; "The Opposition," Halle, 1842; "To Every One His Own," Berlin, 1849; "Berlin, Erfurth, and Paris," Berlin, 1850; and founded, in 1845, and edited an annual volume, entitled "Janus, a German Year-Book of Opinion, Education, and Action." For the promotion of coöperation he made the widest and most thorough investigations in England, Scotland, France, and Italy, and wrote and printed many valuable and helpful books and tracts on the subject, and finally made his village, Wernigerode, in the Hartz Mountains, a perfect hive of coöperatives. In this village, which he may almost be said to have created, he built and established, on his favorite plan, schools, workmen's homes, etc., devoting for the later years of his life his entire energies to the work. His principal historical and critical works were: "History of the Cid," Bremen, 1829; "Chronicle of the Cid," Marburg, 1844; "Essays on Spain" (a work of great merit), 4 vols., Göttingen, 1828–

* For an account of the population of the largest cities, and the regulation of military affairs, *see* AMERICAN ANNUAL CYCLOPÆDIA for 1868.

'35; "The New Roman Poesy in France," Leipsic, 1833; "The English Universities," 2 vols., Cassel, 1839–'40; translated into English by F. Newman in 1843, and acknowledged by English authorities to be the best work on the subject; and "Essays on Ireland," Berlin, 1850. He was strongly attached to England, and was often present at the meetings of the coöperative societies of Rochdale and other great manufacturing centres in Lancashire.

HUNGARY, a kingdom of Europe, united with Austria under one sovereign, but separated from it in local government. (For the statistics of population and nationalities, *see* AUSTRIA.)

In February a conference of the non-Magyar nationalities was held at Temesvar. Besides Croatians and Slavonians, who form a group apart and have a special convention with Hungary insuring to them complete independence, there are, dispersed in larger and smaller groups and intermingled with the Hungarian and German elements, Serbs in the south, Rumanians in the east of Hungary and in Transylvania, and Slovaks and Ruthenes in the north. All these, of course, enjoy the same civil and political rights as the Hungarian and German populations, and in the last Diet a special law was carried by which the free use of their language in local administration and in the courts of law has been insured to them, the Hungarian language retaining merely the precedence in the Diet and the Central Government and in the courts of appeal, without which any thing like a political union of the country would have been an impossibility.

The position thus created for these nationalities did not satisfy their leaders, who brought in a project of their own by which the whole internal division of Hungary into counties was to have been remodelled according to nationalities, so that in each administrative unit the language of the majority should be the ruling one, to the exclusion of the language of the minority. This proposal, which was tantamount to cutting up Hungary into so many Swiss cantons, was, however, not even supported by all the representatives of the different nationalities in the Diet, as only a few of the Northern Slovaks and Ruthenes gave it a qualified support; only the Rumanians of Transylvania and Hungary and the Serbs stood up for it, and when they saw they could not carry their point, they withdrew from the debate. The following programme was agreed to:

1. Solidarity of all non-Magyar nationalities or races, as they have a common interest.
2. The question of nationalities is to be solved in the sense of the proposal made in the last Diet by the Serbs and Rumanians.
3. The conference adopts the declaration of the Rumanian deputies of Transylvania, protesting against the union of Transylvania with Hungary.
4. The nationalities will work with all their power to upset the compromise of 1867, as its decisions are fatal to the national rights of the non-Magyar races.
5. The nationalities will support the opposition of the party in Croatia, which is against the compromise effected between that country and Hungary.
6. Municipalities are to be organized on the principle of liberty and democracy.
7. The conference protests against the insinuations that the nationalities follow a policy which aims at the destruction of the Hungarian state.
8. The members sent by the non-Magyar races to the Diet will form there a distinct national party which has nothing in common with any of the Hungarian parties.

This programme aims at something like the Swiss Confederation.

The Rumanians held also a conference by themselves on February 15th, at Deés, in which, after exhaustive debates, almost all the members decided in favor of abstaining from the elections, because, after the sufferings of centuries, the just claims of the Rumanian nation had been disregarded by the Pesth Reichsrath, and the unjust electoral law had been maintained.

The elections were conducted with no little asperity, and resulted favorably to the Deak party. Both Houses of the Hungarian Diet were opened by the Emperor Francis Joseph in person, who made the following peaceful address:

Magnates and Gentlemen: It is with feelings of satisfaction that I welcome you at the opening of this new session, the more so as I am convinced of the necessity of your wise and powerful support in order to bring to an early and successful solution the great questions which lie before us. Although the last Diet has, through the settlement of state questions which had been pending for generations, created a safe basis upon which the work is now carried on more easily, there is still much to be done to lay the foundations of a better future, and the greatest and most pressing part devolves upon the present Legislature. For the fate of nations the constitutional state relations form but one part of the elements or pledges of success; the chief and most enduring among those pledges, without which not even the best constitution can offer a lasting success, lies in the internal development of the strength of the nation itself.

The development of this vitality depends upon those traditions of the past which are opposed to the progressive spirit of the times, and to frame, according to it and to the wants of the new situation, the institutions of the country; to develop the moral and material weight of the nation in every direction, so that it may fill with dignity the place which it has taken in the rank of states, as one of the guardians and representatives of Western civilization. My government will lose no time in claiming your activity in that direction. It is, above all, the grave question regarding the administration of justice which I recommend to your serious consideration. A just, rapid, and impartial administration of the laws is one of the first requirements of a well-ordered state. It is, therefore, necessary that, on the one side, he to whom the exercise of judicial power is intrusted should be surrounded with every guarantee of independence, individually as well as officially; while, on the other, every person should be secured against any usurpation of judicial authority. My government will, therefore, present to you projects of law regarding the exercise of judicial power, as well as the responsibility of judges. In conjunction with this is the project of law concerning the organization of tribunals of the first instance, which proposes that those tribunals should have permanent official places of judicature, distributed according to the requirements of the populations and traffic, so that every one may find, in a sure and speedy manner, the judicial assistance necessary for his case.

At a later period there will be brought before you

for constitutional consideration the bill of criminal procedure, which will place the high interests of society as well as the personal liberty of the individual—till now dependent upon insufficient and uncertain laws, and be insured between the central government and organs of the administration. The recent election has given you fresh proofs of the defects of the electoral laws of the year 1848. To remove these defects and to regulate the elections so that the liberty of the electors is guaranteed against the excesses of party-spirit, is also one of your foremost and most pressing tasks.

The laws of 1848 have transferred the legislation of the country from the representation of the former estates to one based upon that of the people, but have left the organization of the House of Magnates (*Magnatentafel*) unchanged. It will be an essential part of your legislative activity to reform the organization of the House of Magnates according to the present necessities of the country, retaining, at the same time, all the advantages which this Upper House affords by its historic traditions and its connection with the highest interest of the kingdom. As regards the freedom of the press, there are in the present laws two great guarantees, one of which consists in the abolition of the censorship, the other that the press offences will be tried by jury. At the same time that these two principles are to be upheld, care also must be taken that the dignity of the press be maintained. It should be provided for that in serious discussions of public interest, passion must not interfere, and respect for them not lost sight of, which can be done by quick punishment of all abuses dangerous to the real liberty of the press. As in this respect article eighteen of the press law of 1848 is in many respects insufficient, public order requires that its deficiencies should ere long be remedied. The right of meeting must also be regulated, so that this fundamental right of constitutionalism may be placed under the protection and control of the law, and a line drawn as to the obligation of government interference.

The last Diet has passed a law concerning the commutation of tithe on wine. It will be one of the duties of the present Diet to abolish the remnants of feudalism, yet preserving the sanctity of property on the basis of sound political and economical principles. The late Diet has, by its law upon elementary schools, extended the blessings of public instruction to the entire population. But by this only the first stone has been laid toward the whole edifice of public instruction, and the highest interests of the nation demand also the regulation of the higher spheres of studies, in which the citizens of the state can obtain superior instruction in the several branches of art and science, according to the progress of the age.

There will be laid before you, according to article sixteen of the law of 1867, several international treaties concluded with foreign powers for your sanction. It is an absolute necessity to regulate the industrial relations about which we have partly defective and partly no laws at all. The impulse given to enterprise and the prosperous state of commerce render it incumbent that the companies formed by shareholders should also be governed by a new law. My government will introduce the necessary bills in regard to both these subjects, and several others concerning the preservation and augmentation of national property. You will have to decide on the projects of law respecting the construction of several railway lines, and also public works and river laws, which will give in their practical results a fresh impulse to the material well-being of the people. Your constitutional activity will also embrace the financial estimates, in fixing which you will, I am convinced, take good care that the economy of the state be well balanced and the finances of the country placed upon a safe basis. I must here call your attention to the necessity of reform in the system of taxation (*Steuerwesen*), which forms one of the most important elements in the prosperity of the kingdom. The discussions of the Diet will offer you a favorable opportunity to draw closer that legal union which the late Diet has reëstablished between Hungary, Croatia, and Slavonia, by sentiments of reciprocal brotherly love and attachment, so that they may share the burdens as well as the glory of those legitimate measures on which the common weal and greatness of the united countries of the Hungarian crown depend.

Magnates and Deputies: You are face to face with an important period of transition. Besides the beforementioned tasks, there are many others awaiting you yet. To surrender every thing that has become untenable in past traditions, and create at the same time institutions corresponding with new ideas, is the double and inseparable problem, the solution of which you have to overcome. This sifting of circumstances requires great efforts and time, for the difficulties in the execution may be augmented not only by clinging to remembrances of the past, which support even that which has no life in itself and prevents new creations; but also, on the other side, by too great hurry, which will not take into account existing facts, and cover the field, which ought to be sown, with ruins that prevent further action. The right sense of the nation, its moderation and wisdom, will no doubt take the right road between the two extremes which will lead us to more prosperous times. The friendly relations which we maintain with all foreign powers give us the assuring prospect that the peace and tranquillity which are required for the execution of internal reforms will remain. God bless your deliberations! Under the burden of your work, may you be fortified by the consciousness that it is the welfare of future generations which is in your hands, and that, although at such periods patriotic devotion enjoys but very rarely the gratitude of the contemporaneous world, the thanks are more sure and imperishable which are given by posterity to all those perseverant workmen of this great transformation! I declare this Diet opened.

The speech was received with loud cheering. During the inaugural ceremony the Hungarian and Croatian tricolors were hoisted beside the royal standard on the castle of Buda. At the close of the sessions of the Hungarian Diet, the speech from the throne enumerated the favorable results which had attended the labors of the Diet, and which, it says, were due to the sincere union existing between the King and the nation. It adds:

The Diet has put an end to the uncertainty hitherto prevailing. Both halves of the empire are independent of each other as regards the conduct of their own affairs, and they exercise an equal constitutional influence over the affairs which are common to both. The monarchy has sought and found a rallying-point within itself, and now marches onward with renewed strength, in a path which will conduce to the peace and welfare of the country, and to its preservation of the position which it is called upon to take up among European nations. The King nourishes the conviction that the new constitutional bases which have already effected so much good, and so greatly strengthened the monarchy, will be durable, and beneficial to the interests of the country.

Complaints have arisen among commercial men in Vienna and Pesth concerning the sand-banks which have again formed at the Salina mouth of the Danube. The keeping open of this mouth was, by the Treaty of Paris of 1856, intrusted to a so-called "European Committee of Regulation," the seat of which has been Galatz. It is contended in Pesth that the navigation of the Salina mouth has again be-

come almost as dangerous as it was before the Crimean War, when it was under the exclusive sovereignty of the Emperor of Russia. The remedy suggested is to raise a loan of 3,500,000 francs for the removal of this obstruction.

HUNT, JAMES, M.D., Ph.D., F.S.A., an English physiologist, philosopher, anthropologist, and author, born at Swanage, Dorsetshire, in 1833; died near Hastings, from the effect of a sunstroke, August 29, 1869. He was educated for a physician, and gave special and earnest attention to the study of anatomy, physiology, and chemistry. Before the completion of his twenty-first year he had published three volumes of great merit, a "Memoir of his Father, Thomas Hunt, M.D.;" a treatise on "Stammering and Stuttering, their Nature and Treatment," which is still accepted as the standard work on the subject; and an elaborate work on "The Philosophy of Voice and Speech," for which he had drawn largely on Dr. James Rush's "Philosophy of the Human Voice." In 1854 he became a member, and in 1859 Honorary Secretary of the Ethnological Society, into which he infused new life. He resigned in 1862, and the next year founded the Anthropological Society of London, of which he was president for four years, and director for one. He edited *The Anthropological Review and Journal*, the organ of the Society, contributed largely to its two volumes of memoirs, and translated and edited several French and German anthropological works. Belonging to the most advanced section of the modern physio-philosophical school, he was engaged much of the time in active controversies, but manifested great tact and ability in the maintenance of his opinions. He was an active member of the British Association for the Advancement of Science, and contributed many papers to its transactions. He was a Fellow and Honorary Foreign Secretary of the Royal Society of Literature, and a Fellow of the Society of Antiquaries, and had been elected a corresponding member of many foreign archæological and anthropological societies. The University of Giessen had conferred on him, in 1855, the diploma of Doctor of Philosophy, and in 1867 that of Doctor of Medicine, *honoris causa*.

HYDROGENIUM. Thomas Graham, F.R.S., master of the British Mint (whose death during the year was a great loss to the world of science), submitted to the Royal Society in June a second paper, giving additional observations on hydrogenium, the supposed metallic base of hydrogen gas, the discovery of which in 1868, by Mr. Graham, was the most remarkable event in the chemical annals of that year (*see* article HYDROGENIUM in AMERICAN ANNUAL CYCLOPEDIA for 1868). From his former experiments Mr. Graham had inferred the density of hydrogenium to be a little under 2, but he subsequently found that another number of about half that amount could be deduced with equal probability from the same experimental data. This double result is a consequence of the singular permanent shortening of the palladium-wire, observed after the expulsion of hydrogen which had been previously occluded by the palladium. In a particular observation formerly described, for instance, a wire of 609.14 m.m. increased in length to 618.92 m.m. when charged with hydrogen, and fell to 599.44 m.m., when the hydrogen was extracted. The elongation was 9.77 m.m., and the absolute shortening or retraction 9.7 m.m., making the extreme difference in length amount to 19.47 m.m. Mr. Graham proceeded to say:

> Now, it is by no means impossible that the volume added to the wire by the hydrogenium is represented by the elongation and retraction taken together, and not by the elongation alone, as hitherto assumed. It is only necessary to suppose that the retraction of the palladium molecules takes place the moment the hydrogenium is first absorbed, instead of being deferred till the latter is expelled: for the righting of the particles of the palladium-wire (which are in a state of excessive tension in the direction of the length of the wire) may as well take place in the act of the absorption of the hydrogenium as in the expulsion of that element. It may, indeed, appear most probable in the abstract that the mobility of the palladium particle is determined by the first entrance of the hydrogenium. The hydrogenium will then be assumed to occupy double the space previously allotted to it, and the density of the metal will be reduced to one-half of the former estimate. In the experiment referred to, the volume of hydrogenium in the alloy will rise from 4.68 per cent. to 9.36 per cent., and the density of hydrogenium will fall from 1.708 to 0.854, according to the new calculation. In a series of four observations upon the same wire, previously recorded, the whole retractions rather exceeded the whole elongations, the first amounting to 23.29 m.m., and the last to 21.38 m.m. Their united amount would justify a still greater reduction in the density of hydrogenium, namely, to 0.8051.
>
> The first experiment, however, in hydrogenating any palladium-wire appears to be the most uniform in its results. The expulsion of the hydrogen afterward by heat always injures the structure of the wire more or less, and probably affects the regularity of the expansion afterward in different directions. The equality of the expansion and the retraction in a first experiment appears, also, to be a matter of certainty. This is a curious molecular fact, of which we are unable as yet to see the full import. In illustration, another experiment upon a pure palladium-wire may be detailed. This wire, which was new, took up a full charge of hydrogen, namely, 956.3 volumes, and increased in length from 609.565 to 619.354 m.m. The elongation was, therefore, 9.769 m.m. With the expulsion of the hydrogen afterward, the wire was permanently shortened to 600.115 m.m. It thus fell 9.470 m.m. below its normal or first length. The elongation and retraction are here within 0.3 m.m. of equality. The two charges taken together amount to 19.239 m.m., and their sum represents the increase of the wire in length due to the addition of hydrogenium. It represents a linear expansion of 3.205 on 100, with a cubic expansion of 9.827 on 100. The composition of the wire comes to be represented as being—

	In volume.	
Palladium	100.000	or 90.895
Hydrogenium	9.827	or 9.105
	109.827	or 100.000

> The specific gravity of the palladium was 12.3, the weight of the wire 1.554 grm., and

its volume 0.126 cubic centim. The occluded hydrogen measured 120.5 cubic centims.; the weight of the same would be 0.0108 grm., and the volume of the hydrogenium 0.012382 cubic centims., and its density therefore 0.872, which is a near approach to the preceding result of 0.854. Calculated on the old method, the last experiment would give a density of 1.758.

Mr. Graham presented the results of experiments upon the occlusion of hydrogen by the alloy of palladium with various metals. He had first ascertained that palladium alloyed with silver continued to occlude hydrogen, and he afterward proved that this property belongs generally to the palladium alloys when the second metal does not much exceed one half of the mixture. The alloys are all enlarged in dimensions, when they acquire hydrogenium. In conducting the experiments, the alloy of palladium with platinum, gold, etc., was made into wire or a thin ribbon, and the elongation caused by the addition of hydrogenium measured on a graduated scale as in the earlier experiments; the results appear in the following summary:

Palladium was fused with platinum, a metal of its own class, and gave an alloy consisting, according to analysis, of 76.03 parts of the former, and 23.97 parts of the latter. This alloy was very malleable and ductile. Its specific gravity was 12.64. Like pure palladium, it absorbed hydrogen, evolved on its surface in the acid fluid of the galvanometer, with great avidity. A wire 601.845 m. m. in length (23.69 inches) was increased to 618.288 m.m., on occluding 701.9 volumes of hydrogen gas. On expelling all hydrogen from the wire at a red heat, the latter returned to its first dimensions as exactly as could be measured. The platinum present appears to sustain the palladium so that no retraction of that metal is allowed to take place. This alloy, therefore, displays the true increase of volume following the acquisition of hydrogenium without the singular complication of the retraction of the fixed metal. The compound alloy returns to its original density (12.64) upon the expulsion of the hydrogen, showing that hydrogen leaves without producing porosity in the metal.

Palladium, Gold, and Hydrogenium.—Palladium fused with gold formed a malleable alloy, consisting of 75.21 parts of the former, and 24.79 parts of the latter, of a white color, and ductile. Its specific gravity was 13.1. A wire of this alloy, 601.85 m.m., lay occluded, 464.2 volumes of hydrogen, with an increase in length of 11.5 m.m. The wire returned to its original length after the extraction of the hydrogen, and there was no retraction. The hydrogenium may be supposed to be in direct combination with the palladium only, as gold by itself shows no attraction for the former element.

To ascertain the smallest proportion of gold which prevents retraction, an alloy was made by fusing seven parts of that metal with 93 parts of palladium, which had a specific gravity of 13.05. The button was rolled into a thin strip and charged with hydrogen by the wet method. An occlusion of 585.44 volumes of gas took place, with a linear expansion of 1.7 on 100. A retraction followed to nearly the same extent on afterward expelling the hydrogen by heat.

With another alloy, produced by fusing 10 of gold with 90 of palladium, the occlusion of gas was 475 volumes, the linear expansion 1.65 on 100. The retraction on expelling the gas afterward was extremely slight. To nullify the retraction of the palladium, about 10 per cent. of gold appears, therefore, to be required in the alloy.

Another alloy of palladium of sp. gr. 13.1, and containing 14.79 per cent. of gold, underwent no retraction on losing hydrogen, as already stated.

The presence of so much gold in the alloy as half its weight did not materially reduce the occluding power of the palladium. Such an alloy was capable of holding 459.9 times its volume of hydrogen with a linear expansion of 1.67 per cent.

Palladium, Silver, and Hydrogenium.—The occluding power of palladium appeared to be entirely lost when that metal was alloyed with much more than its own weight of any fixed metal. Palladium alloys containing 80.75, and 70 per cent. of silver, occluded no hydrogen whatever.

With about 50 per cent. of silver, palladium rolled into a thin strip occluded 400.6 volumes of hydrogen. It expanded 1.64 part in 100 in length, and returned to its original dimensions without retraction upon the expulsion of the gas.

An alloy, which was formed of 66 parts of palladium and 34 parts of silver, had the specific gravity 11.45. It was drawn into wire, and found to absorb 511.37 volumes of hydrogen. The length of the wire increased from 609.601 to 619.532 m.m.

In a repetition of the experiment upon another portion of the same wire, 407.7 volumes of hydrogen were occluded, and the wire increased in length from 609.601 m.m. to 619.44 m.m. The absolute volume of hydrogen gas occluded was 124.0 c. c., and its calculated weight 0.01111 grm. The two experiments are, indeed, almost identical. The wire returned in both experiments to its original length exactly after the extraction of the gas.

Palladium, Nickel, and Hydrogenium.—The alloy, consisting of equal parts of palladium and nickel, was white, hard, and readily extensible. Its specific gravity was 11.22. This alloy occluded 69.76 volumes of hydrogen, with a linear expansion of 0.2 per cent. It suffered no retraction below its normal length on the expulsion of the gas by heat.

An alloy of equal parts of *bismuth* and palladium was a brittle mass that did not admit of being rolled. It occluded no hydrogen, after exposure to that gas as the negative electrode, in an acid fluid for a period of eighteen hours. It seems probable that malleability and the colloid character, which are wanting in this bismuth alloy, are essential to the occlusion of hydrogen by a palladium alloy.

An alloy of one part of *copper* and six parts of palladium proved moderately extensible, but absorbed no sensible amount of hydrogen. The metallic laminæ which remain on digesting this alloy in hydrochloric acid, and which were found by M. Debray to be a definite alloy of palladium and copper (PdCu), exhibited no sensible occluding power.

The following is a statement of the author's conclusions as to the density of hydrogenium observed in its compound with palladium, and also with the palladium alloys:

	Density of Hydrogenium observed.
When united with palladium	0.8540 to 0.8720
When united with palladium and platinum	0.7401 to 0.7545
When united with palladium and gold....	0.7110 to 0.7150
When united with palladium and silver...	0.7270 to 0.7420

He called attention to the fact that the results are most uniform with the compound alloys, in which retraction is avoided, and they lie between 0.7110 and 0.7545. Taking the mean of these two numbers as the most legitimate deduction from the experiments on the compound alloys, Mr. Graham thought that 0.733 should be accepted provisionally as the approximate density of hydrogenium.

I

ILLINOIS. On the 5th of January the Legislature assembled at Springfield, the political complexion being—

	Senate.	House.	Joint Ballot.
Republicans	18	58	76
Democrats	7	27	34
Republican majority	11	31	42

On the 13th of January, General John M. Palmer, the Governor-elect, was inaugurated as the fourteenth Governor of the State, to serve for four years, that being the duration of his term of office.

The Legislature, as one of its first important acts, passed a bill providing for a general convention to revise the constitution of the State, the people of the State having by their votes demanded such action.

The legislation of the session was very heavy, over two thousand bills and joint resolutions being passed and submitted to the Governor for signature. Of these, by far the greater part were private bills; of the others, the greater proportion were acts of incorporation and railroad bills. Much time was taken up in investigating the manner in which the work upon the new State-house had been performed, and in providing for its continuance.

The Canal and River Improvement Bill; the bill to repeal the act by which seven per cent. of the gross earnings of the Illinois Central Railroad were paid as taxes to the State; the appropriations for State charitable and reformatory institutions; the bills in reference to the Chicago harbor and lake front, and the "Texas Cattle Bill," took up a large amount of time. The action taken in each case will appear below.

On the 5th of March the fifteenth amendment to the Constitution of the United States was submitted to the Legislature, and was ratified by the following vote:

	Senate.	House.
Yeas	17	52
Nays	7	27
Majority	10	25

On Thursday, the 11th of March, the Legislature took a recess until the 14th of April, to give the Governor an opportunity to examine over 1,500 bills awaiting his signature. April 14th the Legislature reassembled, when the Governor returned over sixty of the bills, without approval, among them the bill for the enlargement of the harbor of Chicago, and giving the entire lake front to the city.

Among the acts which became laws were an act to provide for building a soldiers' monument at the National Cemetery, near Mound City; an act for the improvement of the Illinois and Michigan Canal from lock fifteen to its junction with Illinois River; and an act appropriating $25,000 to the Douglas monument at Chicago.

"The Canal and River Improvement Bill" approved by the Governor, and entitled, "A bill for an act to amend an act entitled an Act for Canal and River Improvements," approved February 28, 1867, when put upon its final passage, received a very decided majority in both Houses, the vote in the House being sixty-one to nine in its favor.

The amended act fixes the number of Canal Commissioners at three, whose term of service is limited to two years. The appropriation is limited to $400,000, and no more; and the commissioners are strictly confined and restricted to the surveys contemplated in the original act, and to the construction of one lock and one dam in the Illinois River, as mentioned in section ten of said act, and to dredging out the mouth of said canal at La Salle, between the lower lock and the river. More than this, the commissioners are forbidden to commence the construction of the lock and dam, or improvement of the Illinois River, as provided for in section ten above referred to, unless they shall first ascertain from the estimates of at least two competent engineers, separately made, that the same can be completed for a less sum of money than is appropriated by the said act—to wit: $400,000, including all incidental expenses. And the commissioners shall not, under any circumstances, or under any claim of right, under any law, take, or attempt to take possession of, or in any manner interfere with, the Illinois and Michigan Canal, or the tolls or revenues thereof.

"The Texas Cattle Bill," providing for the exclusion from the State of cattle from those sections of the country where the Texas cattle-disease had been prevalent, became a law, but during the summer, on a trial of a case under its provisions in the Bellville Judicial Circuit Court, the decision was that the law was "repugnant to that clause in the Constitution of the United States which gives to Congress the right to regulate commerce between the States." The judge who rendered the decision said:

"The act prohibits the bringing of, *not diseased*, but Texas or Cherokee cattle into this State. This is equivalent to prohibiting Louisiana sugar, South Carolina rice, Georgia cotton, or Massachusetts boots and shoes. It would hardly be doubted that an act excluding any of those products would be declared to be unconstitutional. It was undoubtedly intended by the framers of our national Government that free trade should obtain among and between the several States, and for that reason the power of regulating commerce between the States was committed to the control of Congress exclusively. Texas would have no motive or interest in remaining in the Union if any other State could exclude her products at pleasure. This view is not incompatible with the right

of the State to provide proper police regulations. She may enact such laws as will protect the property, health, morals, or lives, of her people from injury or danger. She could prevent the introduction of gun-cotton or nitro-glycerine, because they are dangerous to life and property. She could inhibit obscene books, pictures, etc., because they are detrimental to good morals or policy. She could exclude goods or articles supposed to contain the germs of infectious diseases, because they would be dangerous to health. But the legislation must specify the causes of the exclusion, and the prohibition must be directed against the particular thing; thus, goods manufactured in, or shipped from a place where small-pox or yellow fever prevailed, could be rightfully excluded, but not all the trade with a State be disallowed because particular portions were infected with disease. All the goods manufactured in Massachusetts could not be declared contraband because there was small-pox in Lowell. The Legislature had the undoubted right and power to exclude diseased cattle coming from any or all the States, but had no power, in my judgment, to exclude all the cattle coming from Texas, whether they were diseased or not, or capable of communicating disease or not. Now, no doubt our General Assembly intended to guard against the introduction of diseased cattle from Texas or the Cherokee nation, but they were unfortunate in the choice of means. To say that all Texas cattle should be excluded because some Texas cattle could communicate a disease to our cattle, is going beyond our constitutional bounds, and treading upon inhibited ground.

I felt very reluctant to hold an act of the General Assembly to be invalid, because I think courts, and particularly circuit courts, should hesitate before they maintain that a co-ordinate department of the Government had transcended or mistaken its powers.

The session of the Legislature closed on the 20th of April, having lasted (including the recess) 106 days.

The question of the New State-house having come before the Legislature, and grave charges of corruption and extravagance, especially in the use of unnecessarily expensive stone for the foundations, being made, a full examination was had, and the action of the commissioners vindicated in every respect. The sum of $325,000 per annum for the years 1869 and 1870 was appropriated, and Jacob Bunn, J. H. Beveridge, and J. C. Robinson, reappointed commissioners. Their report for the year 1869 shows the following facts:

Vouchers issued by former Board and included in their report	$329,339 48
Vouchers issued by former Board and included in report of present Board	41,453 77
Vouchers issued by present Board and included in this report	156,876 76
Total amount expended to November 30, 1869.	$527,659 95

In prosecuting the work no new contracts were made, but the work was carried forward under the existing contracts to a point beyond what was at first contemplated; the foundation for the dome and the several vaults were carried up with the same material and class of masonry, to receive the basement floor.

The commissioners further state that full, complete, and perfect plans and specifications in detail, of the cut stone of the basement story, have been furnished, and satisfactory arrangements have been made to furnish and deliver the stone; also, all the iron-work that may be used, except the beams—the cutting of the stone and preparation of the iron to be done in the State prison with convict-labor.

The appropriations made during the session of the Legislature are as follows:

New State-house	$350,000
Southern Asylum for the Insane, and pay of Commissioners	143,250
Illinois State Hospital for the Insane, Jacksonville (old)	194,000
Northern Illinois Hospital and Asylum for the Insane, and pay of Commissioners	127,800
Illinois Institution for Education of the Blind	55,000
Illinois Institution for Education of the Deaf and Dumb	173,400
Illinois Penitentiary, including special appropriations for same	370,080
Normal University (Bloomington)	40,900
Illinois Industrial University	60,000
Southern Illinois Normal University, and expense of Trustees	79,000
Home for Children of Deceased Soldiers (Bloomington)	130,000
Illinois Soldiers' College (Fulton)	40,000
State Agent at Washington	12,100
Chicago Charitable Eye and Ear Infirmary	10,000
State Entomologist	6,000
Improvement Little Wabash	35,000
Canal and River Improvement	400,000
Commissioners of the Board of Public Charities	16,000
Constitutional Convention (estimated)	75,000
Printing and binding Adjutant-General's Reports	26,140
Sundry special appropriations	26,900
Amboy, Mattoon, and Sparta City Courts	8,000
Reform School (Pontiac)	80,000
All revenue tax in Alexandria County, given to county	14,000
Revenue tax given for Levee Funds in St. Clair, Lawrence, Randolph, and other Counties (estimated)	30,000
Increased compensation to Judges	67,200
	$2,797,870

The amount appropriated for salaries of the judicial and executive officers, Legislature, public printing and binding, conveying convicts to the penitentiary, and all ordinary and contingent expenses of the State government, including interest on the school, college, and seminary funds, is not included in the above, but, in the aggregate, would amount to about $725,000, making a grand total of $3,822,870.

The railroad legislation was of great magnitude and importance, and several new lines of road were chartered. The interest of the general public, however, centred in two bills, one of which, now a law, caused considerable discussion during the session. The act provides that it shall be lawful for any railroad company, organized and doing business, or which shall hereafter be organized under any law or laws of this State, by resolution of its board of directors or executive committee, to divide its board of directors into three classes, numbered consecutively: the term of office of the first class to expire on the day of the annual election of said company then next ensuing; the second class one year thereafter, and the third class two years thereafter. At each annual election after such classification, the stockholders shall elect, for the term of three years, a number of directors equal to the number in the class whose term expires on the day of such election, etc. The other and most important bill was one fixing rates of fare, and was general in its terms, yet was vetoed by

the Governor, on the ground that it interfered with the terms of the charter of the Illinois Central Railroad Company, and was, therefore, unconstitutional, since a charter, after acceptance by a company, becomes a contract, and is only subject to judicial control, and the Legislature, in attempting to interfere with its provisions, "assume judicial powers."

The State of Illinois is noted for the care bestowed upon those persons who, from physical or mental causes, are unable to provide for themselves, and the legislation for the year 1869 showed no departure from previous customs. Besides making ample provision for carrying on the institutions already in existence, appropriations were made for the extension of established asylums of different kinds, and for the founding of new institutions.

On the 1st of December, 1868, the number of inmates of the Insane Asylum was four hundred and six. This number of inmates was so large, and the rate of increase was so rapid, that, after carefully considering the matter, $300,000 was given for the establishment of two new institutions, to be located, one in the northern and one in the southern portion of the State, the money to be equally divided between them.

On the 11th of November the State Board of Public Charities met to consider the best system of treating the insane, in view of the alarming increase of lunatics in the State, and the inadequate provision for their care. In the course of the meeting the fact was elicited that, notwithstanding all that has been done by the State, a large number of insane paupers are now kept confined in cages at the various poor-houses throughout the State. The Board adopted the following resolutions:

Resolved, In the judgment of this conference, so far as practicable, a combination in insane asylums of the cottage system, with that at present in vogue, is desirable.

Resolved, That there are weighty reasons to believe such combination is practicable, and it would increase the economy and efficiency of asylums for the insane.

The general features of the Illinois plan are as follows: 1. A central hospital, with all the appliances in use at present, constructed upon the present system. 2. A large farm, not less than six hundred and forty acres of arable land. 3. Detached houses (not cottages) scattered over the farm, built to resemble ordinary dwellings, and without expensive heating-apparatus or plumbing. 4. Each house for male patients to be under the supervision of a man and wife, assisted by one female servant and two farm laborers. 5. Frequent transfers from one house to another, as circumstances may indicate. 6. More thorough classification. 7. The organization of labor; the whole institution to be, as far as possible, upon an industrial basis; and the attendants employed with the distinct understanding that they are not mere nurses, but fellow-laborers with the patients. 8. Increased personal freedom, and more life in the open air. 9. Provision in the same institutions with the curables for all the incurables in the State.

The State Institution at Jacksonville for the education of feeble-minded children, as appears from its annual report, is a great success, though entirely inadequate to the demands upon it. It furnishes the means of education to the children of the community who are not provided for in any other of its public institutions, and keeps them under the educational influences which it possesses, until they are sufficiently prepared for the ordinary duties of life. Physical training, bathing, exercise, and other details of sanitary process are applied to the little patients, to awake and develop their dormant mental faculties. The more apt pupils are also provided with suitable occupations, as far as circumstances will admit.

There are at present 63 pupils in the school, while there are 268 applications on file for admission to its privileges, though there is no room for the applicants. The reports of the other State benevolent institutions show a prosperous condition of affairs.

The Southern Illinois Normal University is to be completed by the 1st of September, 1871, the trustees having contracted for the erection of the university building at a cost of $65,000. It is to be 208 feet in length by 108 feet in width, two stories in height, with basement and Mansard roof. The fears which were entertained that the decreasing flow from the spring which supplied the State Prison at Jacksonville would leave that institution without water, have been dissipated by the success of the artesian well. This well has reached a depth of 513 feet, and water of good quality flows from it the full size of the five-inch bore. It is the opinion of the engineer in charge that by reducing the size of the tube the water will ascend of itself to the highest part of the prison.

The State finances are in a fine condition, and, while the debt is constantly decreasing, the valuation of property is constantly increasing. From the report of the Auditor of Public Accounts for the fiscal year ending November 30, 1869, it appears that the amount of the principal of the bonded debt paid and cancelled during the year was $799,411.14, and, including the payments on the registered canal bonds by the Canal Trustees, $864,162.87. The total State debt, on the 30th of November, was $5,124,995.64, distributed as follows:

Bonded debt falling due after 1869	$67,000 00
" " " 1870	3,142,633 41
" " " 1876	80,000 00
" " " 1877	1,270,426 23
" " " 1879	564,900 00
Amount not yet presented, called in by Governor's proclamation	20,136 00
Total	$5,124,995 64

There was in the Treasury, belonging to the State Debt Fund, on the 30th of November, $1,114,153.67, and it is estimated that the total receipts of funds applicable to the payment of

the State debt up to July 1, 1871, will amount to $4,211,103.03, which will be increased by the 1st of January, 1874, by the receipts from the Central Railroad, to $5,811,103.03. This will be more than sufficient to liquidate the whole outstanding debt of the State, and the Auditor estimates that the necessity for collecting the two-mill tax will cease after one more levy, the receipts from the Central Railroad being sufficient to pay the remainder of principal and interest.

The receipts into the Treasury during the fiscal year amounted to $956,478.43, and the warrants drawn thereon to $1,670,004.42. The amount of the School, College and Seminary Funds, on the 1st of September, 1869, was $1,165,407.32, upon which interest was paid at the rate of six per cent., amounting to $69,924.43. Of this amount $12,445.99 was paid to the Normal University, $2,913.51 to the Institution for the Deaf and Dumb, and $54,564.98 distributed to counties. The school-tax, distributed to counties in addition to the above, was $900,000, making a total of $954,564.12 distributed for school purposes. The total assessed value of property in the State, according to the assessment of 1868, was $463,776,494, and according to that of 1869 it was $486,954,577, showing an increase of $23,178,083.

The assessed value of railroad property (with the exception of the Illinois Central) was as follows:

RAILROAD PROPERTY.	Average Value.	Assessed Value.
Lands, acres 40,532	.....	$655,656
Town lots, No. 3,270	.....	1,302,260
Track, 2,917 miles, 2,502 ft.	$2,660 56	7,762,073
Rolling-stock	1,894 27	5,526,475
Other personal and miscellaneous property	.....	601,262
Total	.....	$15,847,726

The following table shows what portion of the property, according to the assessment of 1869, was personal and what was its nature:

PERSONAL PROPERTY.	Number.	Average Value.	Assessed Value.
Horses	374,237	$31 69	$27,702,943
Neat-cattle	1,584,445	9 78	14,497,350
Mules and asses	88,046	36 55	3,217,769
Sheep	1,937,564	89	1,612,472
Hogs	2,086,804	1 93	3,929,832
Carriages and wagons	279,433	21 55	6,022,396
Clocks and watches	239,900	3 95	948,142
Pianos	11,940	77 12	920,843
Total		$183 39	$59,651,769
Goods and merchandise			19,843,329
Bankers, brokers, and stock-jobbers' property			196,459
Manufactured articles			1,912,408
Moneys and credits			17,400,485
Value of moneys invested in bonds, stocks, joint-stock companies, etc			1,747,873
Value of shares in the capital stock of State and national banks			8,794,445
Unenumerated property			18,385,708
Aggregate			$128,133,470
Deductions			3,744,187
Total assessed value of personal property			$124,388,283

The county, township, and town and city debts, are as follows:

COUNTY DEBTS.	
Railroad debts	$2,152,566
Other than railroad debts	6,307,298
Railroad subscriptions not yet debts	7,078,933
Total	$15,538,797
TOWN AND TOWNSHIP DEBTS.	
Railroad debts	$1,697,028
Other than railroad debts	473,528
Railroad subscriptions not yet debts	4,474,400
School debts	10,702
Total	$6,655,658
CITY DEBTS.	
Railroad debts	$1,964,250
Other than railroad debts	13,060,704
Railroad subscriptions not yet debts	1,354,500
School debts	316,000
Total	$16,715,454
Grand total	$38,909,909

Of this amount, however, it will be seen that $12,907,833 are returned as railroad subscriptions not yet debts, leaving the amount of actual debts $26,002,076.

In consequence of the extraordinary expenditures under the appropriations of the last General Assembly for the benefit of several charitable and educational institutions, and for the Constitutional Convention, it was found necessary to increase the levy of 6½ mills on the assessment of 1868, to 18 mills, to meet the ordinary expenses of the State government and the deficiency of 1868. The Auditor, however, is of the opinion that the assessed value of the taxable property of the State is only about one-fourth its real value, and that the rate of taxation is not exorbitant, or relatively greater than that of other States.

The State bank system is virtually abolished, only two banks remaining in operation—the "Sycamore Bank," and the "Cumberland County Bank." The former had a circulation, on the 1st of December, of $87, and the latter of $419.

The report of the State Treasurer shows the following condition of the Treasury:

Amount on hand December 1, 1868, and amount received to December 1, 1869	$4,325,623 82
Amount paid out from December 1, 1868, to December 1, 1869	2,562,649 12
Total amount of funds in the Treasury, December 1, 1869	$1,762,974 70

The Treasurer says:

"In July, 1861, the bonded debt of the State was $12,327,166.86. On the 1st of December, 1866, it was $8,595,343.02, which was increased, in 1867, by the issue of bonds to meet the expenses of the penitentiary, $50,000—making a total debt, in 1867, of $8,645,342.02. On the 1st day of December, 1868, the debt was $5,988,453.53. On the 1st day of December, 1869, the entire debt, including $20,136 which has been called in by proclamation of the Governor, which has not been presented, and on which interest has ceased, is only $5,124,995.64.

The amount of principal of the debt paid from December 1, 1868, to December 1, 1869, was $863,457.89. This amount was paid from the State Debt and Illinois Central Railroad Funds, and by the Trustees of the Illinois and Michigan Canal from the

receipts of the canal. All of the debt which has matured has been called in by proclamation of the Governor, and the same paid, excepting the small amount of $20,186, referred to above. Of the outstanding debt, $67,000, which matures on the 1st Monday of January, proximo, has been called in by proclamation of the Governor, dated November 28, 1869, and will be paid at maturity. Of the remaining debt, $3,149,633.41 matures in 1870, which, when paid, will leave a debt of less than $2,000,000. It is estimated that the two-mill tax for 1869, collected in 1870, will yield $950,000, and that the amount to be received from the Illinois Central Railroad Company, previous to 1871, will be about $700,000, which, added to the State Debt Fund and the Illinois Central Railroad Fund now on hand, will nearly equal the amount of the debt which matures January 1, 1871, not taking into account the premium on gold. One more levy of the two-mill tax is all that will be required.

The number of acres of land in cultivation, according to the returns of the assessors, was as follows: wheat, 2,589,214; corn, 5,193,747; other field products, 1,820,538—total, 8,603,599.

The fertility of the soil of Illinois is proverbial, and, happily for the State, the origin of the prairie loam precludes the possibility of sterile extremes arising from local causes. Almost the entire State is covered by a stratum of drift formed by the decomposition of every variety of rock, and commingled in a homogeneous mass by the agents employed in its distribution. This immense deposit varies from ten to two hundred feet in thickness. Enriched by all the minerals existing in the crust of the earth, it necessarily contains a great diversity of constituents. Since plants differ so widely in the elements of which they are composed, this multiplicity of composition is the means of growing a great diversity of crops. The amount produced is correspondingly large, and so great is the fertility, that years of continued cultivation do not materially diminish the yield. Should superficial sterility be induced by excessive working, the subsoil extends to an unusual depth, and, when rendered available by deep ploughing, has a producing capacity equal to that of the surface.

From the report of the Superintendent of Public Instruction, it appears that the number of universities and colleges in the State is 20; female colleges and academies having a four years' course, 12; academies and seminaries of various grades and courses, 16; ladies' schools, of less than four years' course, 3; theological seminaries and church schools, 10; miscellaneous institutions, 5; public libraries, 7.

The forty-sixth Annual Conference of the Methodist Episcopal Church was in session at Lincoln for four days, commencing September 22d. This conference was of especial interest as the scene of a jubilee in honor of the fiftieth anniversary of the entry into the ministry of Rev. Peter Cartwright, the last survivor of a class of preachers who have passed away. The following is a synopsis of his remarks on the occasion:

He said he had been called a strong man, but to-day he felt weak as a child, so overcome was he by this manifestation of the love and esteem of his fellow-Christians. He was the oldest preacher in the Methodist Church now engaged in the ministry. For sixty-five years he had labored for his Lord and Master, and during that time had only received at three times the amounts allowed him by the Church. He had the oldest preacher's wife in the world, and had lived happily with her for sixty years. He had seven children and sixty grand and great-grand children. He was born in Virginia, and had been a citizen of the West from the time he was six years old, and he is now eighty-five years. He had no language to describe the situation of this country at that time. He had suffered much in body, mind, and purse. He had been caught five hundred miles from home, in a strange land, with an old blind horse, and seventy-five cents in his pocket. He had never been officially complained of in quarterly meeting but once. In his young days he wore knee-breeches and top-boots. At the first conference he ever attended a complaint was laid against him for corrupting the morals of the people by wearing a pair of suspenders, and they sent him home. But the Lord always provides for the lazy and His lame, and he found that Bishop McKendree had indulged in the same luxury. He was then shouting, happy enough. When he entered the ministry there was but one college-bred preacher, and he was only half bred. Through the efforts of Dr. Akers he got D. D. stuck to his name, and that very day he was taken with a bad pain in his back, and he rather thought it arose from his title. He was a poor soldier's boy, and his only son. There was but one mill within forty miles, and no paper in the country. His father wanted to make an educated man of him, but he missed it badly. When it pleased God to give him religion it was of the true backwoods style. He knew he had obtained the pardon of his sins, and the knowledge of that had sustained him in all trials. He had preached as many sermons as any living man, although he could not say how good they were. He hailed with delight the success of all who preached the true gospel. He had not strength to labor as a regular preacher, and he now entirely dissolved his connection with the Church as a travelling preacher; and, notwithstanding the crosses, trials, and troubles of a travelling preacher, he would rather be one than President of the United States; and, glory be to God, He sustains us all if we have His love in our hearts; and he bade farewell to his brethren with much love and feeling. He did not originate this jubilee and is not worthy of it. After a long, hard life, he had performed nothing but his duty. Farewell, farewell. I ask your sympathy and prayers for an old man who has spent his life in God's service; and may He bless you now and for evermore!

There is a large dairy interest in the vicinity of Elgin, Ill. The lands are high and rolling, while springs and streams of living water are more numerous than we obtain usually on the lands of Illinois. The soil here is a dark loam, not unfrequently mingled with clay, sand, and gravel, and good for grass. The production of milk, on farms in the vicinity of Elgin, springs from its demand in Chicago. Of easy access by rail to the city, with good prices and a constantly-increasing call for milk and cream, farmers were induced to try this kind of dairy farming, and soon were convinced that it yielded more profits than growing grain.

There is at this point a company called the "Elgin Milk-condensing Company," organized for the purpose of condensing and preserving milk and making cheese. The following abstract is taken from the books of the company:

	New milk received.	Preserved Milk.		Condensed Milk.		Cheese.	
		New milk.	Product.	New milk.	Product.	New milk.	Product.
1868.	Quarts.	Quarts.	Quarts.	Quarts.	Quarts.	Quarts.	Pounds.

1869.							
Jan....	67,146	66,746	17,188	400	90		
	400,644	158,777	40,812	134,360	33,261	95,079	23,376

Amount of sugar used in the above preserved milk was 44,869 pounds.

Other articles of food are condensed and preserved at this factory under the Borden process. A considerable business is done in condensing meats, beef and mutton, while the process is employed successfully in taking out the water from fruits and preserving them fresh in a condensed form.

The following important decisions were made in the Supreme Court, during the year, one of them on the matter of the assessment of bank capital for taxation.

The Court has decided that bank capital must be assessed at its par value, because, being itself the representative and standard of its own value, the assessor can have no discretionary judgment in the premises.

Another was in reference to the mutual rights of railway companies and travellers. The Supreme Court decided (Illinois Central Railroad *vs.* Whittemore) that a passenger on a railroad train must not be expelled from the car at any other place than a regular station, for the non-payment of fare. The justice of this ruling will at once become apparent and fully appreciated by those who travel on railroad trains. It not unfrequently happens by a multiplicity of causes, that a passenger is unable to secure a ticket at the office. The rules of the road prohibit the sale of tickets on the train, and compel the conductor to expel those who refuse to pay fare—the non-purchase of tickets being a violation of the rules of the company, and hence construed to be a refusal to pay fare.

Under such circumstances, there would be gross injustice in stopping the train at whatever point it might happen to be, whether in the day or night, and ejecting the passenger (it may be a woman) from the car. The court holds that a railroad company has a right to require of its passengers the observance of all reasonable rules calculated to insure comfort, convenience, good order and behavior, and secure the safety of its trains, and the proper conduct of its business as a common carrier, and that when a passenger wantonly disregards a reasonable rule (as to refuse to surrender a ticket to the conductor, etc.), the obligation to transport him ceases, and the company may expel him from the cars, not at a dangerous and inconvenient place; but a refusal to pay fare justifies an expulsion only at a regular station.

By far the most important event of the year, in the history of Illinois, is the assembling of the convention to revise the constitution. The convention was called under the first section of article twelve of the present constitution, as follows:

Section 1. Whenever two-thirds of all the members elected to each branch of the General Assembly shall think it necessary to alter or amend this constitution, they shall recommend to the electors, at the next election of members of the General Assembly, to vote for or against a convention; and, if it shall appear that a majority of all electors of the State voting for representatives have voted for a convention, the General Assembly shall, at their next session, call a convention, to consist of as many members as the House of Representatives at the time of making said call, to be chosen in the same manner, at the same place, and by the same electors, in the same districts that chose the members of the House of Representatives, and which convention shall meet within three months after said election, for the purpose of revising, altering, or amending this constitution.

Under this provision of the constitution, the Legislature, at the session of 1867, adopted the following concurrent resolution submitting the question to a vote of the people:

Resolved by the House of Representatives, the Senate concurring herein, That the electors of the State of Illinois be, and they are hereby, recommended, at the next election of members of the General Assembly, to vote for or against calling a convention to form a new constitution for the State of Illinois.

In accordance with this resolution, the people at the election in November, 1868, voted on the question of a State Convention, with the following result:

Whole number of votes cast for Representatives	444,860
One-half this vote (being the vote to be overcome)	222,430
Actual vote for Convention	223,134
Majority for Convention	704

The Legislature, accordingly, passed an act calling a convention, to consist of eighty-five members, to meet at Springfield on the second Monday in December, 1869, each representative district to be entitled to the same number of members of the convention as it was entitled to members of the House of Representatives of the then sitting General Assembly; the members of said convention to be chosen in the same manner, at the places fixed for holding general elections, and by the electors qualified to vote for members of the General Assembly, in the same districts that chose the members of the House of Representatives of the then sitting General Assembly.

The act also prescribed the manner of holding the election, of organizing the convention, of preserving the records, and of submitting the amendments to the people. It also provided for the pay of members, fixing the rate at six dollars per day, with mileage.

At the general election of November 2d, forty-four Republicans and forty-one Democrats were chosen as members of the convention.

Three State Constitutional Conventions have already met in this State. The first met at Kaskaskia, and concluded its labors August 26, 1818. An enabling act had been passed April 18, 1818, and the State was formally admitted with this constitution by the action of Congress, December 3, 1818.

The constitution of 1818 remained in force twenty-nine years, when a second Constitutional Convention was called, which assembled in Springfield June 7, 1847, and closed its session August 31st following. This convention was presided over by Newton Cloud, of Morgan County, and consisted of one hundred and sixty-two members. It counted among its members a large number of the most prominent men of the State. The constitution framed by this convention was submitted to a vote of the people at an election held on the first Monday of March, 1848, and ratified by a large majority.

The third State Constitutional Convention was chosen under an act of the Legislature of 1861, at the election in November following; met in Springfield, January 7, 1862, and adjourned *sine die* March 24, 1862. It consisted of seventy-five members, of whom forty-five were classed as Democrats, ten Union Democrats, and twenty Republicans. W. A. Hacker was president. The constitution framed at this time was submitted to a vote of the people on the Tuesday after the third Monday of June, 1862, and rejected by the following vote:

Against the Constitution	141,113
For the Constitution	125,052
Majority against Constitution	16,061

The convention met in the hall of the Representatives at 2 P. M. on the 13th of December.

On attempting to organize, William Cary, of Jo Daviess County, and J. C. Dement, of Lee County, were both put in nomination, both declared elected, and both conducted to the chair. A roll of the members was then called, and Mr. Dement, the Democratic candidate, elected, the Independent Republicans of Cook County voting with the Democrats. Secretaries were chosen, and the convention adjourned. No permanent organization was effected until the fourth day, December 17th, when the Democrats, by a union with the Conservative or Independent Republicans, secured the organization. The vote on president stood, Charles Hitchcock (Democrat), 45; Joseph Medill (Republican), 40.

The president did not announce the standing committees until Monday, December 20th, the sixth day, on which day the convention adjourned for the holidays, until January 5, 1870.

The following resolutions were adopted:

Resolved, That it is the sense of this convention, that any amendments to this constitution as proposed by this convention shall not take effect until ratified by a vote of the people.

Resolved, That the constitution of the State should be amended as follows, to wit: that the Governor of this State shall, at each regular session of the Legislature thereof, present with his message to the General Assembly a statement of the moneys paid out of funds under his order or control, and on what account, together with the vouchers therefor.

Also resolutions calling upon the Auditor for certain reports, in compliance with which the following statistics were furnished the convention:

Gross earnings of the Illinois Central Railroad, and amount of Tax paid into the Treasury since May 1, 1861:

FROM—	Gross earnings reported.	Amount of 7 per cent. on reported earnings.
May 1 to Oct. 31, 1861	$1,318,906 47	$92,323 45
Nov. 1 to April 30, 1862	1,063,790 61	74,465 84
May 1, '62, to Oct. 31, '62	1,967,275 18	137,709 26
Nov. 1, '62, to April 30, '63	1,809,066 97	126,634 63
May 1, '63, to Oct. 31, '63	2,482,382 12	173,759 75
Nov. 1, '63, to April 30, '64	2,429,393 28	170,055 08
May 1, '64, to Oct. 31, '64	3,363,699 48	235,458 96
Nov. 1, '64, to April 30, '65	3,436,453 28	240,553 84
May 1, '65, to Oct. 31, '65	3,656,286 56	255,936 00
Nov. 1, '65, to April 30, '66	2,985,788 55	209,501 70
May 1, '66, to Oct. 31, '66	3,165,843 63	221,574 05
Nov. 1, '66, to April 30, '67	2,959,566 99	207,169 70
May 1, '67, to Oct. 31, '67	3,383,400 57	236,838 04
Nov. 1, '67, to April 30, '68	2,780,043 05	194,603 01
May 1, '68, to Oct. 31, '68	3,339,921 01	233,794 47
Nov. 1, '68, to April 30, '69	2,999,196 41	209,943 75
May 1, '69, to Oct. 31, '69	3,642,706 06	254,989 56
Total	$46,743,011 97	$3,271,310 79

The Auditor reported that, since June 11, 1862, this last-named amount—$3,271,310.79—had been paid into the State Treasury by the company; $254,989.56 of this was paid on the 4th instant. The resolution requiring the statement was passed on the 20th of December.

The earnings of the road from November 1, 1868, to April 30, 1869, were from the following sources:

Freight	$2,066,947 53
Passengers	797,361 73
Extra baggage	904,074 00
Mails	33,601 36
Express	95,361 03
Total	$2,999,196 41

Do. from May 1 to October 31, 1869:

Freight	$2,529,734 82
Passengers	908,229 15
Extra baggage	1,027 04
Mails	38,188 89
Express, etc	165,587 16
Total	$3,642,706 06

Real and Personal Property of the State from 1864 to 1869, inclusive.

	Year.	Total value of real and personal property.	Rate of levy for all State taxes, per $100.	Total amt of errors, insolvencies, commissions, etc.
As assessed	1864	$356,878,847	7¼ mills	$214,774 57
"	1865	392,827,906	7 2-10 "	200,522 56
"	1866	410,694,993	7 "	236,094 19
" & equalized	1867	504,683,553	7 7-10 "	270,850 19
" "	1868	474,461,429	6½ "	239,109 14
" "	1869	491,081,314	13 "	*491,000 00

The total debt of the State is as follows: Bonded debt, December 1, 1869, $5,124,995,64;

* Estimated.

school fund, $1,165,407.32; total debt, $6,290,402.96.

The following are among the leading questions which will be agitated in the convention: special legislation; pay of officials; veto-power of Governor; the general railroad system; the Illinois Central Road; universal suffrage, including women; the compulsory observance of the Sabbath; ratification of amendments to the Constitution of the United States; majority and minority representation; corporations only to be created by general acts; judicial system of the State; amalgamation of races; "watering" stocks; educational system; death penalty; State militia; pledging the State credit; taxation; canal and river improvements; apportionment of Legislature; law of divorce; homestead law; the two-mill tax; State rights and Federal relations.

IMMIGRATION. The immigration to the United States from foreign countries, for the year ending June 30, 1869, was greatly in excess of that of any previous year since 1854, having reached the number of 352,569. The magnitude of the immigration for this year, as well as its rapid increase since the war, is shown by the following comparative statement of the total arrivals at the different ports of the country since and including the year 1856:

1856	200,436	1863	176,282
1857	251,306	1864	193,418
1858	123,126	1865	248,120
1859	121,282	1866	318,554
1860	153,640	1867	298,358
1861	91,220	1868	297,215
1862	91,987	1869	352,569
		Total in fourteen years	2,918,213

Total from July 1, 1865, to June 30, 1869, five years, 1,514,816.

The nationalities and occupations of the foreigners arriving in the United States during the year which ended June 30, 1869, as well as the proportion landed at the different ports, are given in the following exhibit:

Number of immigrants arrived in each customs district.		Number of immigrants arrived from each country.		Number of immigrants arrived belonging to each occupation.	
New York, N. Y.	263,754	Germany	122,537	Laborers	88,649
Huron, Mich.	35,686	Great Britain	60,286	Farmers	28,096

Total immigrants	352,569	Total immigrants	352,569	Total immigrants	352,569

The State of New York has the most extensive and the best-organized system in the country for the reception and care of immigrants. The "Board of Commissioners of Emigration of the State" has been in successful operation since the 15th of May, 1847; and its labors have been most beneficial to the interests of the immigrants, and to those of the country. The commissioners, who contribute their services gratuitously, make it their duty to anticipate the wants of immigrants on their arrival; to protect them from fraud and imposition, to care for the sick and helpless, render aid to those seeking employment, and, in general, to superintend their welfare. For the purpose of creating a fund to enable the commissioners to carry on this work, a *per capita* tax of two dollars and fifty cents is assessed upon each alien entering the port of New York, which is paid by the owner of the vessel carrying the immigrant. This commutation fund is the consideration of a contract between the immigrant and the State of New York, by which the latter binds herself "to protect him on his arrival, and for the period of five years thereafter provide him with shelter if destitute, and with medical and other aid if sick." The amount of this fund for the year 1868 was $538,480.50, and for the year 1869 exceeded the sum of $650,000; and the good which it has enabled the commissioners to accomplish is shown by the fact that in the year 1868 they paid to the hospitals and cities and counties of the State, for the nursing and support of immigrants, upward of $100,000, and also $230,000, the cost of maintaining 11,513 inmates of the immigrant hospitals and asylums on Ward's Island, in the bay of New

York. The Board now holds in trust a property on Ward's Island, valued at not less than two million dollars, and is constantly enlarging and improving the facilities for the effectual care and support of unfortunate immigrants. One of the most useful features of the system adopted by the commissioners is the "Labor Exchange," recently established for the purpose of procuring, free of charge, speedy employment for immigrants, and of supplying the demand for all kinds of labor in any of the States. The results of the labors of this Bureau, for the years 1868 and 1869, are here given. They indicate the points to which immigrants were sent in response to applications for their labor through the Labor Exchange; and it will be seen that the demands for labor from the States of New York, New Jersey, Connecticut, and Pennsylvania, were greater than from all the other States:

There is also an immigration on the Pacific coast which it may not be out of place here to mention. This consists of the Chinese who have arrived at San Francisco from Asia. The large mass of them are located chiefly in California; but many have found their way to the mining regions of Nevada and of some of the Territories. In California they are occupied chiefly in mining pursuits, and have generally been extremely successful. They cannot, perhaps, be strictly regarded as permanent inhabitants, as the intention to return to China with their accumulations is almost universal. They are males mostly, and come for the purpose of gain. In 1856 the number arrived at San Francisco was 4,783; in 1860 it was 5,467; in 1865 it was 2,942, and in 1869 it was 12,874. The total number of arrivals of Chinese since 1855 has been 78,817.

New York is the principal port of entry for the vast numbers of immigrants to this country, where more than five-sevenths of all those arriving are landed. Of the total number of arrivals during the year ending December 31, 1869, 254,837 entered at the port of New York. The nationalities and destinations of these, compared with the same statistics of last year, are given in the following statements, which also show the States receiving the largest number of immigrants:

Since the year 1847 no less than 4,038,991

immigrants have been landed at the port of New York alone. Valuable statistics, showing the country from which they emigrate, and the favorite localities for settlement, have been prepared with great care, and are given in the following exhibits:

TABLE SHOWING THE NUMBERS AND NATIONALITIES OF IMMIGRANTS WHO ARRIVED AT THE PORT OF NEW YORK, FROM MAY 5, 1847, TO JANUARY, 1869.

From the above statistics it will be seen that the emigration from Ireland, during the seven years immediately following 1847, was unusually large, and that the tide of German emigration, greater in 1851 than it had been during any previous year, rapidly increased in each of the three succeeding years. The years 1858 and 1859 as well as 1861 and 1862 show a great decrease in the number of arrivals. The causes of these results are explained by Mr. Frederick Kapp, one of the Commissioners of Emigration of the State of New York, who has made the subject of immigration a special study, in the following language:

"The emigration from Ireland, which from 1844 rose much beyond its former proportions, reached its culminating point after the great famine of 1846. During the decade of 1845 to 1854 inclusive, in which period the highest figures ever known in the history of emigration to the United States were reached, 1,512,100 Irish left the United Kingdom. In the first half of that decade, viz., from January 1, 1845, to December 31, 1849, 607,241 went to the United States, and in the last half, viz., from January 1, 1850, to December 31, 1854, as many as 904,859 arrived in this country. With this unprecedentedly large emigration Ireland has exhausted herself. Since 1855 her quota has fallen off to less than one-half of the average of the preceding ten years.

"Almost coincident, in point of time, with this mighty exodus from Ireland was the colossal emigration from Germany which followed the failure of the political revolutions attempted in 1848 and 1849. Already in 1845 and the following years the German contingent of emigrants to the United States showed an average twice as large as in the same space of time previous to the year named. But a voluntary expatriation on a much larger scale resulted from the final triumph of political reaction. The *coup d'état* of Louis Napoleon closed for all Europe the revolutionary era opened in 1848. In the three years preceding that event the issue of the struggle of the

people against political oppression had remained doubtful. But the 2d of December, 1851, having decided the success of the oppressors for a long time to come, the majority of those who felt dissatisfied with the reactionary *régime* left their homes. The fact, that the largest number of Germans ever landed in one year in the United States came in 1854, showed the complete darkening of the political horizon at that time. The apprehension of a new continental war, which actually broke out a year later in the Crimea, also hastened the steps of those who sought refuge in this country. People of the well-to-do classes, who had months and years to wait before they could sell their property, helped to swell the tide to its extraordinary proportions. From January 1, 1845, till December 31, 1854, there arrived 1,226,392 Germans in the United States, 452,943 of whom came in the first five years of this period, and 773,449 in the last five.

"But the numerical strength of emigration to this country is not governed by material and moral disturbances in Europe only. While bad crops, commercial and industrial crises, and unfavorable turns in political affairs in the Old World tend to increase emigration, the appearance of the same phenomena in the United States as certainly tends to decrease it. Thus, in 1838, the total of emigration decreased to 38,914, while in the previous year it had amounted to 79,340, and in 1839 and 1840 it increased again to 68,069 and 84,066 respectively. The reason of this extraordinary decrease was the great financial crisis of 1837, which shook the foundation of the whole industrial and agricultural life of the United States. Again, the influx of aliens into New York was smaller in 1858 and 1859 than in any previous year since 1842, for the only reason that the commercial crisis of 1857 had frightened those who wanted to make a living by the labor of their hands. In 1858 and 1859 only 78,589 and 79,322 immigrants respectively arrived in New York, while in 1856 their number amounted to 142,342, and in 1857 to 186,733. In 1860 it rose to 105,162, but, in consequence of the breaking out of the civil war, it fell again in 1861 to 65,539, and in 1862 to 76,306. In 1867 the German immigration in New York increased over that of 1866 by more than 10,000, in which last-mentioned year it had already reached the large number of 106,716 souls. Its ranks were swollen in 1867 in consequence of the emigration of men liable to military service from the new provinces annexed to Prussia in 1866, and of families dissatisfied with the new order of things. Hanover contributed the largest share to this kind of emigration. In 1868 the tide subsided again, as people began to become reconciled to the sudden change. In short, bad times in Europe regularly increase, and bad times in America invariably diminish, immigration."

The occupations of the passengers that arrived in the United States, during the thirteen years from 1856 to 1868 inclusive, are shown in the following statement:

OCCUPATIONS.	1856.	1857.	1858.	1859.	1860.	1861.	1862.	1863.	1864.	1865.	1866.	1867.	1868.	Total.

The above figures include the arrivals of citizens of the United States, returning to this country, the proportion of which will be found by comparing the aggregates for the different years with the total number of alien arrivals for the same period given above.

It is estimated that more than two-thirds of the population gained by the United States

since 1790 is of foreign extraction. This estimate is based upon the calculation that the average increase of the population of this country, by the excess of births over deaths, is at the rate of 1.38 per cent. Applying this rule to the increase of the population of this country since 1790, in which year it was, exclusive of slaves, 3,231,930, the results show the magnitude of the foreign element.

The following figures represent what the population, exclusive of slaves, would have been at intervals of ten years, if increased only by the excess of births over deaths, and what it actually was under the influence of constant immigration:

	By natural increase.	Actual population.
In 1800	3,706,674	4,412,896
" 1810	4,251,143	6,048,450
" 1820	4,875,600	8,100,056
" 1830	5,591,775	10,796,077
" 1840	6,413,161	14,582,008
" 1850	7,355,423	19,987,563
" 1860	8,435,882	27,489,662
" 1865	9,034,245	about 30,000,000

From this, it will be seen that, of the total population in 1865, 20,965,755 were of foreign extraction.

In 1856, the Commissioners of Emigration in New York prepared statistics for that year, showing the average amount of money brought into the country by immigrants, and this was found to be $68.08 for each person. The commissioners subsequently discontinued this examination, because they were not able to obtain correct information, the immigrants being suspicious of their motives. It has since been estimated that the average amount of personal property brought by each immigrant to this country is $150.

The subject of immigration has recently received a new interest and an increased importance, on account of the needs of the Southern and Southwestern States, and the efforts made by them to increase the flow of immigration into their section of the country. In all of the commercial conventions held during the year, this was one of the leading topics of discussion, and there was a marked unanimity of opinion as to the necessity of encouraging immigration as the best means of developing the material and industrial resources of the South. A plan was recommended by the Commercial Convention assembled at Louisville in October, for the establishment of a General Agency, or Bureau of Immigration, for the purpose of preparing reports showing the physical geography of these States, their industrial resources, and the advantages and inducements offered to immigrants; such reports to be translated and published in the various languages, and gratuitously distributed among the nations of Europe. The active efforts made by the South to induce immigrants to settle there will undoubtedly have an important influence upon the future history of emigration to the United States.

INDIA, British, a dependency of Great Britain, in Asia. According to the "Statistical Abstract for the Colonial and other Possessions," etc., 1852–1866 (London, 1868), British India had, in 1866, an area of 988,091 square miles, and 150,767,851 inhabitants. The revenue was £48,935,000; the expenditures, £47,332,000; the debt, £98,384. The imports were valued at £56,160,000; the exports, at £67,660,000.

Out of 150,000,000 of people under British dominion, it is estimated that there are 110,000,000 Hindoos, 25,000,000 Mohammedans, 12,000,000 of the aboriginal tribes, and 3,000,000 or 4,000,000 Buddhists, Jews, and Parsees.

In no part of India is the progress so remarkable as in the Punjab. Of its area, 96,000 square miles are under the direct government of Great Britain, while no less than 197,000 square miles are owned and administered by native chiefs. Of these 96,000 square miles, 33,000 are cultivated. The crops are raised from 9,752,165 acres in spring, and 9,250,245 acres in autumn, judging from the approximate returns of last year. Upward of 50 per cent. of the spring crops was wheat, and 30 per cent. other food grains; 4 per cent. consisted of oil seeds, and 2 per cent. of vegetables; tobacco covered 76,866 acres; the poppy for opium 16,872; and tea 5,187. About 8 per cent. of the autumn crops was rice, and 7 per cent. other food grains; 4 per cent. was sugar-cane, and between 8 and 9 per cent. cotton; 188,671 acres were under oil-seeds, and 67,546 acres were covered with indigo. The wages of a common laborer varied from 3d. to 7½d. a day, and of skilled labor from 6d. to 1s. 6d., the last being the rate given to masons and carpenters. Wherever the railway and public works are found, prices rise in even a higher ratio than wages; but the only class which suffers is the unskilled laborer, who is always the victim of famine. Every war, whether in Hindostan, China, or Abyssinia, benefits the Punjabee above all classes, and soon leads him to turn his sword into a ploughshare, so that it is now impossible to get good Sikh and even Punjabee Mussulman recruits for the army. Of the whole population of about 17,500,000, 9,403,819 are agriculturists, and 8,190,127 non-agriculturists.

The revenue in 1867–'68 was £3,283,107 from all non-military sources, and the civil disbursements £1,230,655, leaving a surplus, for the army, public works, and other imperial demands, of £2,052,452. Of these £3,250,000, exclusive of all local funds, £2,170,636 is derived from the state assessment on the land, which falls so lightly as at the rate of 2s. 1d. on each acre of cultivated area, or 1s. 3½d. on each acre of cultivated land, or 8½d. on each acre of the total area assessed, which is upward of 61,000,000 acres. As a rule, the natives of India are very lightly taxed. They pay per head of population from 9s. a year, as in British Burmah, where alone there is a capitation tax, to 5s. in other provinces.

The army in the Punjab consists of the purely native frontier force of about 13,000 men, besides a militia; the ordinary English and Sepoy troops count 29,000 men, and 130 guns.

The figures showing the value of the trade of India during the years ending 30th April, 1867 and 1868, are suggestive. In a year of continued commercial stagnation, the trade amounted to £101,038,621 in value, or £5,500,000 more than in the previous twelve months, which almost immediately succeeded the close of the American War:

	1867.		1868.

Total value of export of treasure	4,935,371		3,009,553	

The modern question of the national tongue has taken a peculiar shape on India soil. The Urdu and the Hindi languages contend for the predominance in official use and in journalism. The former is employed by twenty-five million Moslems, the latter by a large portion of the one hundred and ten millions who, living under English rule, are described as Hindoos on the registers. Yet it is not easy to define wherein the difference between the two consists. They are not two languages, nor two dialects, but the same language, corrupted in different degrees by foreign words of Persian and Arabic origin—the Urdu more, the Hindi less. Both are commonly called Hindustani, and the only real distinction of the Hindi is the Indian, of the Urdu, the Arabic characters and writing. While the contest is thus apparently about the alphabet, in the background lie Sanscrit and Arabic, Koran and Veda.

Both styles of letter are alike inconvenient for a people who read and write much, and rapidly. The Arabic is still in a state as of infancy, being destitute of vowel-signs. It is not strange, then, that shrewd persons tell the nationalists who rally for the Hindi, and seek to supply their wants from the treasures of the Sanscrit, as well as the Moslems who seek their fine phrases in the technical language of the Arabians, and in the turgid poetry of the modern Persians, that much better than the use of either would be the adoption of the English language; should they, however, insist upon the Hindustani, it would be desirable to accept a European alphabet.

We learn from a recent pamphlet* of M. Garcin de Tassy, for many years teacher of Hindustani in the school of modern Oriental languages at Paris, on what ground the contest is carried on on both sides. It is not very remarkable that the learned and amiable author of the "*Histoire de la littérature hindoue et hindoostane*" (of which at the close of the year 1869 a second edition was in press) inclines to the Moslem view.

The native journals, which, after the English style, have become very numerous, so far as they appear in the northern provinces, generally adhere to the Urdu, and affect Arabesque titles—for example, the "Mirror of Wisdom," "Novelties of Novelties," "Fountain of Knowledge," "Star of News," etc. Most of the readers in that section seem also to be followers of the Prophet. On the other hand, the many national unions which the intelligent Hindoo has likewise copied from his latest rulers, and in which most of the efforts for a reform in social and religious concerns are made, address their countrymen in Hindi. In this respect they hold on to the old, and take their titles from the Sanscrit—for example, *Brahma Dschnan Prakash* (Guide to Brahmanic Knowledge), a monthly review published under the direction of the *Brahma Sabha* (Brahma Club); *Pap Motschan* (Deliverance from Evil), likewise a periodical of the reformers in Agra; *Dschagat Samatschar* (How it goes in the World), a weekly paper issued at Mirat, and many others.

The most extensive, most influential, and most active of these societies, which has been some time established, is the above-mentioned Brahma Club, located at Calcutta, a society of theists. They spin out the old threads of the Vedanta philosophy, and interweave them with European nationalism. They have both theoretically and practically abolished all that seemed to them unworthy and childish in the religious traditions of their fathers. They lay claim to a higher point of view, and to a freer horizon than those of the Christians. The chief of this new sect, Babu Ischandr Sen, who has built a temple in Calcutta to the new service, where "the one true and holy God shall be worshipped in spirit and in truth," is honored by his followers as inspired; according to their ancient custom of worship, they fall at his feet, and call him good master, and the refuge of sinners.

Another society has been organized in Calcutta, under the presidency of Radscha Kali Krishna Bahadur, with the single purpose of purifying the religious customs of the Hindoos.

* *Cours d'Hindoustani. Discours d'ouverture du 6 Décembre*, 1869. (Paris, 1870.)

If it should know how to carry through a real reform while yet adhering to the simpler and significant forms of worship of the olden time, it might succeed in abolishing many absurdities and blemishes of a newer invention. But the interest of those who enjoy the fruits of the present usages will stand in its way.

By far the most numerous kind of societies, which later years have produced, are of a philanthropic or popular scientific character. Lucknow, that city of remarkable history in connection with the great Indian rebellion, has a society of this kind, with conferences, lectures, and periodical publications, which accepts members of every nationality. And in Jeypoor where the roads from Delhi and Agra meet, the prince of Rajpootana—who boasts himself descended from Rama, and to belong to the oldest dynasty in the world, that of the Mikado not excepted—patronizes an association which is called the Rajpootana Social Science Congress, and goes out to found schools, to distribute instructive books, and to oversee public sanitary measures, and the elevation of the peasantry. Quite remarkably, the association begins by arranging a system of instruction for young persons of the higher families, in which are taught natural science and political economy, English as well as the native language, and the accomplishments of cavaliers. The Rajpootanans are the feudal lords of the district, the oppressors of the races which they call their subjects, professed descendants of the almost extinct warrior-caste. It is thus natural that they should first think of culture of corresponding character for the aristocracy.

Not far from this place, in Alighur, is the seat of the East India Association, with the general object of promoting the good of the people, which has recently connected with itself a branch society in Mooradabad, east of Delhi, which is under the patronage of Sir William Muir, Governor of the Northwest Provinces, author of a Biography of Mohammed, and brother of the celebrated patron of Indian studies, John Muir, to whom the University of Edinburgh is indebted for its chair of Sanscrit. This association will, among other objects, assist journeys of natives to Europe, since the Pundits have very recently found that these journeys are not directly forbidden in their books. The Government, also, is not idle in this matter. It has granted stipends for literary journeys to England, two for each of the three presidencies, and three for the other provinces.

An active spiritual movement is to be observed among both Hindoo and Moslem. On both sides they seek to secure for themselves the advantages of European culture, primarily in the hope of being able to bid effectively for the position of ascendency against their tyrants. Necessarily, with the spread of this culture, a great many foolish prejudices will fall, which are now held as inseparable from national integrity.

That Islam, although its adherents are unmistakably the more energetic party, has a prospect of flourishing again, is hardly to be feared. It is in itself too powerless and thoughtless to throw kindling sparks into the spirit. Nevertheless, many conversions to it are taking place, not only from the Hindoos, but from abandoned persons of European descent. Thus, not long ago, a number of beggarly fellows are said to have abjured their faith in a mosque at Madras, and to have gone on a pilgrimage to Mecca, in order, as the Hindoo says, to fill their bellies there. And one curious fellow, a Swiss, not contented with the name only of Islam, is reported to travel as its missionary through the Bundelcund, dressed in Oriental costume, expounding the Koran in the public places.

INDIANA. The regular session of the Legislature commenced in January, and during that month and February but little actual business in the way of legislation was accomplished. Bills were introduced with the intention of materially altering the constitution of the State courts, but, owing to the premature adjournment in March, were not acted upon. Grave complaints were made against the prison management, and much of the time of the Legislature was taken up with debates on the subject and with official investigations. The necessity of electing a United States Senator, in place of Thomas A. Hendricks, caused party spirit to run high; and while the Democrats were united on Hendricks, the Republicans were divided between Lieutenant-Governor Will Cumback and James S. Frazer. The two Houses met in joint convention, January 20th and 21st, without effecting a choice, but on the third day, January 22d, the Republicans united on Daniel D. Pratt, who was elected by the following vote: Daniel D. Pratt, 83; Thomas A. Hendricks, 70.

On the 25th of February, the following joint resolutions were approved by the Governor, after passing both Houses of the Legislature:

That our Senators in Congress be and they are hereby instructed and our Representatives requested to vote for and otherwise promote the repeal of the act of Congress commonly known as the tenure-of-office law.

That our Senators in Congress be instructed, and our Representatives requested to oppose, by their influence and votes, the passage of any bill that shall specially legalize coin contracts until the United States shall redeem its Treasury-notes in coin; and to oppose the enactment of any law which shall have the effect to reduce the present volume of the paper-money in use among the people of the United States.

They were presented to the United States Senate, by Senator Morton, March 2d.

The question of adopting the fifteenth amendment to the Constitution of the United States having come before the Legislature, the Democratic members and a portion of the Conservative Republicans opposed its consideration, on the ground that, at the time of the election at which they were chosen, the ques-

tion was not before the people, and consequently should not be acted upon until the will of the people could be ascertained from the result of an election based upon this issue. The Republican members having, in caucus, resolved to force the ratification through the Legislature, the Democratic members on the 3d of March, in caucus, resolved to resign in a body, and all did so with the exception of those who were ordered by the caucus to remain and care for the interests of the party. Seventeen Senators and thirty-six Representatives resigned, on the 4th of March, thus reducing the number of both Houses below a quorum, and stopped legislation. This disruption of the Legislature left the charitable and other institutions of the State in a crippled condition, as the appropriation bills had not been passed. The Governor at once issued writs for special elections of members of the Legislature, to fill the places of those who had resigned, and, on the 22d of March, issued a proclamation convening the General Assembly of the State, in special session, and summoning the members to meet on the 8th day of April.

On the 8th the Legislature assembled in obedience to the call of the Governor, but, before taking the oaths of their offices, the Democrats exacted from the majority of the Republican members of the Legislature a pledge that the consideration of the fifteenth amendment should not be taken up until after the legislation necessary for the interests of the State had been accomplished.

Among the more important acts passed by the Legislature were, an act providing for the introduction of the German language into the course of study in the public schools, and an act establishing a female prison and reformatory institution for girls and women at Indianapolis, to which all female convicts should be sent instead of to the State prison.

The location of the Agricultural College was fixed in Tippecanoe County, and, in consideration of the gift of $100,000 cash, by John Purdue, of Lafayette, was called the Purdue Agricultural College.

On the 13th of May a joint resolution for the ratification of the fifteenth amendment was introduced in the Senate, but, as all the Democratic members had handed their resignations to the Governor, it was claimed by the opposition to the resolution that there was no quorum. There were, however, enough present in the Senate-chamber to constitute a quorum, and, though they refused to vote, and claimed that they were no longer Senators, the President of the Senate decided that, no notification of their resignations having been sent to the Senate by the Governor, they were still members of that body. A vote was accordingly taken, and the resolution was adopted. On the 14th of May the joint resolution as adopted by the Senate came up in the House, but in the mean time all the Democratic members, except two (left by order of caucus to attend to the interests of the party), having resigned—forty-three in all—there were about fifty-six members left, eleven less than a quorum. The Democrats claimed that there could be no legal legislation, the chair ruled that there was a quorum of the *de facto* members present. The opposition appealed from the decision, in the following language:

On Friday afternoon, May the 14th, A. D. 1869, a call of the House having been ordered and taken, which showed that only fifty-six (56) members were present, and no motion being made to send for absentees, and a communication from the Governor having been presented and read, showing that, on the 13th day of said May, forty-two members of the House had resigned; thereupon the gentleman from Putnam and Hendricks (Mr. Osborn) moved to proceed to the consideration of the Senate joint resolution No. eighteen (18), which is a joint resolution to ratify the proposed fifteenth amendment to the Constitution of the United States, whereupon the gentleman from Huntington (Mr. Coffroth) raised the point of order that it was not competent for the House to proceed to the consideration of said joint resolution, because there was no quorum present; and that, for the same reason, it was not in order to transact any legislative business. But the chair overruled the said point of order, and decided that the House could proceed to the consideration of and a decision upon said resolution.

Now, from said decision, we, the undersigned, appeal.

J. B. COFFROTH,
Representative from Huntington.
JOHN S. DAVIS,
Representative from Floyd.

The appeal was laid on the table, and a vote on the resolution was taken as follows: yeas 54, nays 0, the appellants refusing to vote.

The Specific Appropriation Bill was passed under the same circumstances, and the question of its validity was brought up before the Supreme Court in July. The result of the trial was, to sustain the validity of the act.

The election laws of the State were so modified as to have the elections held biennially instead of annually, the first election under the new law to be held the second Tuesday in October, 1870.

After ratifying the fifteenth amendment and passing the Specific Appropriation Bill, the Legislature adjourned.

During the year the Hospital for the Insane was enlarged, repaired, and improved, and is now said to be fully equal to any other State institution of the kind in the country. The question of the right of the State to tax national-bank notes having been brought before the Supreme Court of the State, a decision was rendered to the effect that, while legal-tender notes are not taxable under the decision of the Supreme Court of the United States, this is not the case with national-bank currency. The opinion was given by Judge Ray, who quotes the thirteenth section of the act of June 30, 1865, and says:

This, at a first glance, might seem to bring the national currency within the exemption, and we are now indebted to counsel for a solution of the difficulty; it, doubtless, has misled them into argument. But the words in the quotation in the thirteenth sec-

tion are technical, and are not the identical words used in the same order in the first section; and, therefore, the reference to that question would be more than questionable. All doubt, however, is removed by the use of the same technical phrase in the eleventh section of the same act, in which it is provided that, if any person having control, custody, or possession of any plate or plates from which any obligation or other security, or any part thereof, shall have been printed, etc., or shall have or retain in his possession, after a distinctive paper shall be adopted by the Secretary of the Treasury for obligations and other securities of the United States, any similar paper adapted to the making of any such obligations or security, etc., every person so offending shall be deemed guilty of a felony, and shall, on conviction thereof, be punished, etc. It thus appears plain that the entire intent and purpose of the last section of the act were to throw around the national currency the same guards against counterfeiting that were by law provided for obligations and other securities of the United States. Clearly no exemption in any act prior to the authority given to issue national currency can apply; and as they are not obligations of the United States in any proper sense of that expression; as they do not rest primarily on the promise of the Government to pay them as her own debt, but simply on her promise that she will amply indemnify herself in her own bonds only after the failure of the bank and foreclosure of the bonds to her, will she regard herself as finally liable? Certainly there is nothing in the letter of the law exempting this circulation from taxation; and, though we do not discuss the power of Congress to make such exemption, we are free to admit that we see nothing in the paper itself, or in the circumstances of its issue, which would authorize such a limit to be placed on the power of the State to tax.

The operations of the Treasury department for the fiscal year ending October 31, 1869, appear as follows:

Balance November 1, 1868, as per last report	$591,370 04
Receipts during fiscal year	4,197,489 21
	4,788,859 25
Warrants paid during fiscal year	4,473,129 66
Balance in Treasury November 1, 1869.	$315,729 59

The development of the mineral resources of Indiana has received much attention during the year, rich mines of iron and coal, and fine quarries of building-stone, having been discovered. The line of the Vincennes Railroad passed through some of the richest portions of the mineral region, and accurate and reliable information as to the extent and value of these discoveries has been obtained by the engineers of the road. Near Brooklyn, about twenty miles from Indianapolis, is a fine outcrop of the sandstone formation. It has been used to some extent in public buildings in Indianapolis, and is undoubtedly the best building-stone in the State. It exists in great abundance. The next point is the limestone formation, commencing at Gosport and extending twelve miles. It is of great variety, and includes the finest building-material in the world. Portions of it can be worked easily under the chisel; other portions are very soft, and can be worked by any ordinary tools; it is very durable, and equal to the celebrated Bath stone of England. This limestone formation extends as far as Spencer, where a sandstone formation commences and extends a distance of seven miles, to a point about sixty-five miles from Indianapolis, where the first coal-bed is reached. This coal is the first strata, which is known as the lower strata. These beds extend for thirty-eight miles along the line of the road, as far down as Edwards's Point, and include seven distinct veins.

The first coal-seam is about two feet in thickness; the next is about three feet thick. In a distance of seven miles there are four seams of coal, the thickest one being along the ridge of Eel River, which is developed, showing a thickness of four feet one inch. The undulations of the country allow the opening of these veins, and a natural drain for any mines that may be established for their working.

At Edwardsport there are three seams, one of them forty-three inches, one twenty-one inches, and one fifty-one inches in thickness, lying one above the other. They have been traced a distance of four miles. No place presents a better chance for mining coal than the valley of White River. Taking the level of the road at Worthington, it descends twenty-three feet in seven miles, and in twenty-seven miles the grade of the road ascends in all four hundred and seventy feet of these coal strata, so that coal can be worked without the cost of shafting, pumping, or hoisting, on nearly every mile of the road.

Iron not only exists on the line of the road, but the engineers of the road are absolutely cutting through it and using iron-ore as a protection against the rip-raps of the river. Its outcroppings are as extensive as are the best hematite iron-ore regions of Pennsylvania. The purehy drated oxide of iron and the blue iron-ores that are seen on the Terre Haute road have been found. One bed is known to be four feet in thickness, and how much more cannot be said, on account of water. Chemists say it will produce over fifty per cent. of iron.

The coal-seams have been accidentally discovered by the washings of the creeks or the digging of a well, it all being under surface. In one place coal has been found nine feet in thickness. The first seam of coal found is cannel-coal, rich with oil, and it is said that oil can be produced from it with more certainty than by means of boring in an oil region; but this is a mere conjecture. There has been no market for this coal, beyond the few smith-shops in the country, and the seams have not been worked to any great extent.

Of the 8,000 square miles of mineral wealth of the State, every square mile is accessible to railroads, which is a great advantage, as coal or iron cannot be brought to market by mules, or worked profitably a mile distant from rail or water transportation.

The Brazil mines were considered to cover an area of nine by twelve miles square; near Rockville is another small stretch of coal, and

these with the Cannelton beds have been considered, heretofore, all there were in the State, but coal has been traced all the way from Pine Creek to the Ohio River, finding it cropping out in a number of places, and the veins can be reached at any point by mining. The coal-region of the State, it is believed, covers 8,000 square miles, and a prominent geologist states that he never met the same indications of iron in the best mining districts of Pennsylvania as he can show in a number of counties in the State.

A ton of Indiana hematite-ore that will yield fifty per cent. can be reduced with one-third less coal than a ton of Lake Superior ore, as the flux will flow more easily, on account of the lime in it. The rich deposit of the iron-ore extends along the edge of the coal-fields from Lodi, Parke County, to Martin County. The surface indications in Martin are less than in Parke, Fountain, or Sullivan Counties, but indicate a very rich deposit.

Professor Cox, the geologist, reports that in Vermillion County he discovered three seams of coal, varying in thickness from four to seven feet. Between Highland and Newport, one of these seams—he was unable to discover which, not having time to trace it—is from five to seven feet in thickness, and the lower part, being from thirty to thirty-six inches thick, is pure block coal, of very fine quality. The upper part is good caking coal, and will make excellent fuel. These seams are all very accessible, and can be reached either by shafts or drifts. In the shales of the upper coal-measures are found bands of iron stone from three to fifteen inches thick. There are large deposits of this in the western part of the county, which will be found of great value when used in connection with other ores. A smelting-furnace, called the Indiana Furnace, was in operation here for a number of years, and was quite successful for a time, smelting with charcoal. Now, however, when other ores are so easily procured, this would not be rich enough to pay for working alone. In connection with the coal was also found fire-clay of fair quality.

Dr. G. M. Levette, Prof. Cox's assistant, found in Putnam County coal scattered about, but not in any great quantities. Some of the veins can be worked, however. One near Putnamville has been operated for years, and the proprietor exhibits letters, written by blacksmiths in Indianapolis, Cambridge City, and other towns, before the railroad was built, ordering his coal. Dr. Levette found any quantity of building-stone. On the farm of D. C. Donahue, two miles from Greencastle, are large deposits of sandstone, which, for the purpose of making furnace-hearths, is unequalled. It has been used at the Planet Furnace, near New Harmony, and at several places in Ohio. The stone is abundant in the county.

The claims of the State against the United States, for expenses incurred in the war, were finally disposed of by the following report:

The commissioners appointed under act of Congress, March 29, 1867, to settle the Indiana war claims, respectfully report that, pursuant to instructions from the Secretary of War, they met at Indianapolis, March 10, 1869, and published and notified the Governor of their readiness for business.

The claims were presented by General W. H. H. Terrell, Adjutant-General of the State; and, on a careful examination of the items, and the proofs and vouchers to support them, the commissioners find there is due the State of Indiana for war expenses, under the act above mentioned, $481,178.24, as follows:

Enrolling	$5,543 04
Equipping	4,884 15
Arming	18,469 23
Subsisting	18,818 23
Transporting	7,581 88
Paying	431,381 71
Total	$481,178 24

The commissioners would say that the claims, before they were presented, appear to have been carefully examined by the Adjutant-General, and no claim was presented except such as was fully sustained by vouchers and testimony.

And, considering the length of time since making the expenditures, the vouchers and proofs submitted are regarded by the commissioners as fully sustaining the allowances made.

We herewith return and file all the papers, vouchers, correspondence, evidence, and documents, relating to our proceedings, or connected with the claims, as per schedule hereto annexed, with the expression of our high appreciation of the courtesy of Governor Baker, General Terrell, and other officers of the State, in facilitating our labors. We also desire to tender our thanks to our clerks, Messrs. Pray and Hayden, and our messenger, Mr. Ottwell.

All of which is respectfully submitted.

W. R. KINNEY,
J. H. BROADHEAD,
ROBERT FLINT,
Commissioners.

On the 1st of October, during the trial of the machinery at the State Fair, a steam-boiler exploded, killing twenty and wounding more than forty others. The cause of the accident was a deficiency of water.

On June 8th a Woman's State Suffrage Convention assembled at Indianapolis, and the following resolutions were adopted:

Whereas, The possession of any God-given faculty presupposes the right to use that faculty; and

Whereas, Men and women have been endowed by the Creator with the same mental and moral powers: therefore

Resolved, That their right to use these mental and moral powers is equal, and that legal restrictions are not only unnecessary, but wrong in principle.

2. That one class in society cannot properly represent the interests of another, and that, to secure justice to all, all must have a voice in making and enforcing our laws.

3. That wherever woman has taken her place side by side with man, in the many avocations and professions, she has shown herself his equal, and has exerted a refining influence, and all have been made better.

4. That we will in all honorable ways labor to remove all legal disabilities that now trammel the efforts of women; and let capacity, inclination, and circumstances, control their sphere of action, as with men.

5. That we feel justly proud of the action of our representatives in Congress, who have taken position in favor of the sixteenth amendment, for we feel that, while our laws are being reconstructed so as to give

the elective franchise to colored men, they should not forget the women of the country, who are surely as competent to use that power judiciously as those who have so recently been in the degradation of chattel slavery.

Also the following were adopted:

Resolved, That so long as woman has no legal existence, just so long will she be compelled to labor without a fair equivalent.

Resolved, That woman's right to the elective franchise would eventually be the means of the entire overthrow of the liquor-traffic throughout the land.

Whereas, Christianity elevates woman to an equality with man in religious privileges and blessings, in that it declares that in Christ Jesus there is neither male nor female; and,

Whereas, The Declaration of American Independence declares that all men, and, by implication, all women, are born free and equal in all civil, moral, and religious rights and privileges: therefore

Resolved, That all existing laws and customs, barring woman from any of these rights which men lawfully claim, are relics of barbarism, and should be expunged from our laws and customs.

IOWA, as a State, is twenty-three years old, and possesses an area of 55,000 square miles, the Mississippi washing the entire length of its eastern boundary, while the Missouri borders it on the west. About ninety per cent. of it is prairie-land, not flat but rolling, and having a common altitude of 1,350 feet above the level of the sea. Its elevations and depressions afford complete drainage. Its soil is rich and elastic, a black loam, from two to six feet deep.

The population in 1836, was 10,000; in 1846, 97,000; in 1856, 519,000; in 1867, 920,000; and it is presumed that the census of 1870 will show from 1,100,000 to 1,200,000.

Only one-third of the land is, as yet, under cultivation; a portion of the residue can be obtained under the homestead act, while that in the possession of private hands may be obtained on easy terms, at from two and a half to ten dollars per acre.

The soil is congenial to the growth of every product of the temperate zones.

The following facts, carefully prepared, will make manifest the surprising progress which, in a few years, has been achieved in the State, and which clearly indicates the elements of prosperity and wealth:

SHIPMENTS OF CATTLE FOR THE PAST FIVE YEARS.

1864	65,942
1865	81,999
1866	78,212
1867	64,846
1868	82,841

SHIPMENTS DURING THE YEAR 1868.

Live hogs	No.	431,734
Lard	lbs.	2,645,829
Dressed hogs	"	21,051,187
Pork	"	8,009,835
Sheep	No.	48,464
Wool	lbs.	2,061,739
Wheat	bush.	19,487,853
Corn	"	2,331,430
Oats	"	931,817
Barley	"	461,208
Other cereals	"	2,601,985

It is a noticeable fact that, in 1864, the imports of sheep were ten times greater than the exports; while in 1868 the imports were 3,668, against exports 48,464. Also that the shipments of wheat in 1868 were 5,944,525 bushels more than the entire receipts at Chicago; while, of live hogs received in that city (1,688,189), Iowa furnished over one-fifth of the number.

A great scarcity of lumber, salt, and lime, prevails, as will be seen by the

IMPORTS FOR THE YEAR 1868.

Lumber and timber	feet	167,772,732
Staves and hoop-poles	cords	411
Lath		10,582,104
Shingles	M.	35,109,4624
Salt	bbls.	1,504,614
Lime and cement	"	1,727
	lbs.	836,766

The railroad development commands notice. In 1862 the State possessed only 616 miles of railroad; in 1864, 727; in 1866, 1,060; in 1868, 1,370; and now, in 1869, it has at least 1,600 miles.

The last Auditor's report shows a permanent school fund of $2,221,497.52; the value of the public school-houses is estimated at nearly $5,000,000. In 1867 the pay of school-teachers alone amounted to $1,161,653. In the same year there were 6,229 schools, with a total attendance of 251,281.

From the report of the Auditor of the State the following is presented:

The balance remaining in the State Treasury at the close of the fiscal year, November 2, 1867, was $97,740.45.

There was received into the State Treasury during the past two years, including the above balance in hand, $2,355,170.08, and the disbursements by the State Treasurer during the same period amounted to $2,051,971.23, leaving in the State Treasury, October 30, 1869, $303,198.86.

Of the Des Moines River land claim (special fund) there has been received from the Valley Railroad Company $162,796.17.

Warrants redeemed and interest allowed on same to November 1st, $158,879.43, leaving a balance in the Treasury of $3,916.74.

The resources of the State are reported as follows:

Balance of revenue in State Treasury	$296,160 13
Balance of State revenue from counties	432,971 05
Balance of Insane Hospital revenue from counties	98,699 75
Balance of Blind Asylum clothing account due from counties	514 67
Balance of Deaf and Dumb clothing account due from counties	114 41
Amount due from banks	101,361 00
Tax of 1869, based on valuation	588,064 44
Tax of 1870, estimated at two mills	600,000 00
Railroad tax, estimated for 1870 and 1871	100,000 00
Estimated balance due from United States —taxes of insurance companies	25,000 00
Total	$2,333,563 57

The bonds of 1858 have all been paid. Those of 1860 (war and defence bonds), and

due 1881, are not offered for redemption, and could not be purchased at par.

The Auditor states that, during the last two years, over $38,000,000 have been added to the material wealth of the State, which manifests an unusual degree of prosperity.

The amount of warrants issued, and other expenditures of general revenue during the two years ending November 1, 1869, is $1,574,534.03.

The estimated expenditure of the next two years, exclusive of extraordinary appropriations, until April 1, 1872, is $1,107,955.20.

The balances due from the several counties on the 30th October, 1869, are:

State revenues	$432,971 05
Insane hospitals	98,699 75
Deaf and Dumb clothing account	114 41
Blind Asylum " "	514 67
Total amount due from counties	$532,299 99
To balance due from county treasurers	43,224 56

The following is a summary of taxable property, and the State tax thereon, in each county, for the year 1869:

Acres of land	30,109,771
Reported value of land	$181,881,953 00
Reported value of town-lots	40,272,055 00
Personal property	71,971,191 00
Reported total value	294,125,199 00
Equalized total value	294,532,225 00
State tax at two mills	589,064 44

The assessment of stock, etc., is as follows:

Cattle	No.	841,925	Value	$10,406,619
Horses	"	422,275	"	18,947,868
Mules	"	26,259	"	1,618,071
Sheep	"	1,100,708	"	841,451
Swine	"	679,703	"	1,692,852
Total value				$33,506,860

A convention was held at Dubuque, on November 11, 1869, composed of the leading men of the West, including the Governors of Iowa and Wisconsin, and several members of Congress, to take into consideration the feasibility of improving the water communication between the Mississippi River and the Lakes (a distance of about 280 miles), and also the most judicious course to be pursued in order to obtain an appropriation from Congress to carry out the work. Statistics were read, showing the advantage of water over land transportation of freight.

The following resolutions were unanimously adopted:

Resolved, That we adopt, as the unanimous sense of this meeting, the resolutions passed by the City Council of the city of Milwaukee, on Monday last, to wit:

Resolved, That the great question of cheap transportation of products of the Northwest by means of free navigation by the Mississippi River to Eastern markets, embracing the Fox and Wisconsin Rivers improvements, and the Michigan Ship-canal, is one of the most important and grand projects of this age, and commends itself to every producer and consumer in the Northwest.

Resolved, That this subject should command the earnest and prompt attention of all Representatives of the new States in Congress, and that liberal appropriations should be made to promote the accomplishment of a work so much needed by the people, and demanded by the necessities of commerce.

This improvement of water communication, it is stated, will reduce—at 10 cents per bushel—the cost in the transshipment of wheat alone by the enormous sum of $1,500,000 annually, not taking into consideration the other cereals and products. It is strongly urged that with wheat selling in the State of Iowa at an average price of 50 cents per bushel, and on Lake Michigan at 75 cents per bushel, Congress should not hesitate to grant the needed appropriation.

From the late geological survey it appears that the extent of the coal area has been underestimated, and, when capital is inducted into this channel, it is anticipated that these vast beds underlying every portion of the State, especially along the valleys of the rivers, will become one of the chief sources of wealth.

The existence of vast quantities of peat has been clearly demonstrated, which, when the scarcity of native timber is considered, forms a highly-favorable solution to the question of a future supply of fuel.

Upon the same authority it is stated that extensive mines of lead are found underlying the whole region of Dubuque.

Stone of good and durable quality (sand and limestone) is found in various parts of the State, and in sufficient quantity to satisfy demands.

Beds of excellent quality of gypsum have been found in the northwestern part of the State near Fort George, and in a deposit so vast that, when worked, it will afford the entire West all it may need for centuries.

A large quarry of marble of a beautiful quality, and susceptible of a fine polish, is now worked in Marshall County. It has also been found in Johnson and other counties.

Potters' clay of superior quality is abundant in many sections, as likewise a superior clay for brick.

Iron-ore has been discovered, but not in richness exceeding forty per cent.

In reply to a request from the Citizens' Association of New York, a letter was addressed to its president, Mr. Peter Cooper, on November 28, 1868, presenting such statistical and other information as was deemed of value to persons seeking homes. This letter was subsequently reprinted in various languages and widely scattered over Europe, and has been instrumental in causing a great influx of respectable immigrants. A plan is now maturing, through the coöperation of railroad corporations and wealthy merchants, to furnish a constant supply of labor by granting facilities of land-purchase and transportation.

From all sections of the State the universal desire appears to be the establishment of manufactories for the various staples which the State produces—which, when the prices of provisions and moderate rentals are taken into consideration, appear to promise good profits.

The State library at present contains 10,961

volumes, besides several hundred pamphlets. It is anticipated that the number will be increased at the rate of 1,000 annually, by donations and otherwise.

The extent of the grants of public land made to the State is as follows: For educational purposes, $1,843,549.94; for railroads, internal improvements, etc., $5,433,395.70; total, $7,276,945.64.

The Democratic party met in convention, and after a spirited contest the following ticket was nominated: For Governor, Geo. Gillespie; for Lieutenant-Governor, A. P. Richardson; for Supreme Judge, W. F. Brannan; for Superintendent of Public Instruction, Edmond Jaerger. The following platform was unanimously adopted:

Whereas, Upon the eve of a political canvass, the time-honored usage of our party requires that a platform of principles be announced for the government of those who may be elected to office: therefore be it

Resolved, That the Democratic party view with alarm the election of an unscrupulous majority in Congress, in its attempts to absorb the powers of the executive and judicial departments of the Government, and to annihilate the rights and functions reserved to the State governments.

Resolved, That we favor a reform in the national banking system, looking to an ultimate abolition of that pernicious plan for the aggrandizement of the few, at the expense of the many.

Resolved, That now, as in times past, we are opposed to a high protective tariff, and that we will use every effort to prevent and defeat that system of national legislation which would enrich a small class of manufacturers at the expense of the great mass of producers and consumers, and that we are in favor of such reforms in our tariff system as shall promote commerce with every nation of the world.

Resolved, That the pretended trial, conviction, and execution of persons not belonging to the military or naval service of the United States, by military commission, is in direct conflict with the Constitution, and we denounce the same as unworthy of a free people, and disgraceful to the American Government.

Resolved, That we demand no more, and will submit to nothing less, than the settlement of the Alabama claims according to the recognized rules of international law, and that we declare it to be the duty of the Government to protect every citizen, whether naturalized or native, in every right of liberty and property throughout the world, without regard to the pretended claims of foreign nations to their allegiance.

Resolved, That we are in favor of, and insist upon, an economical administration of the national and State Governments, that the people may be as speedily as possible relieved from the load of taxation with which they are now oppressed, and that public officers should be held to strict accountability to the people for all their official acts.

Resolved, That a national debt is a national curse; and that, while we favor the payment of our present indebtedness, according to the strict letter of the contract, we would rather repudiate the same than see it made the means for the establishment of an empire upon the ruins of constitutional law and liberty.

Resolved, That, in the opinion of this convention, the so-called Maine liquor law, which now disgraces the statute-books of the State of Iowa, ought to be repealed at the earliest possible moment.

Resolutions in reference to the fifteenth amendment, and several other matters, were laid on the table.

The Republican State Convention nominated, for Governor, Samuel Merrill; Lieutenant-Governor, Madison M. Walden; Judge of Supreme Court, John F. Dillon; Superintendent of Public Instruction, Abraham J. Kissell.

The following platform was framed and adopted:

Resolved, That we cordially indorse the Administration of Governor Merrill as wise, economical, and honest, and that it deserves, as it has received, the hearty approval of the people of Iowa.

Resolved, That we insist upon a continuance of strict and close economy in all departments of our State government, in order to the maintenance of the happy and exceptional financial condition to which our State has attained under Republican rule.

Resolved, That the means now in the State Treasury, and which may become available, ought to be used for the purpose of defraying the necessary expenditures of the State government, economically administered, and for no other purpose; and no State taxes, or only the minimum absolutely required, should be levied or collected, until such means are exhausted, to the end that the burden of taxation may be made as light as possible.

Resolved, That we rejoice in the glorious national victory of 1868, which has brought peace, and happiness, and prosperity, to our nation, and we heartily indorse the Administration of General Grant.

Resolved, That the Republican party of Iowa, being among the first since the rebellion to incorporate in a State constitution the great principle of impartial suffrage, cordially accepts the opportunity presented, by adopting the fifteenth amendment to the Constitution of the United States, of making the principle national.

Resolved, That the public expenditures of the national Government should be reduced to the lowest sum which can be reached, by a system of the most rigid economy; that no money should be taken from the national Treasury for any work of internal improvement, or for the erection of any public buildings not clearly necessary to be made or erected, until the national debt is paid or greatly reduced. That all the money that can be saved from the national revenue, honestly collected, should be applied to the reduction of the national debt, to the end that the people may be relieved from the burden of taxation as rapidly as practicable.

Resolved, That we indorse and approve the policy which the present Secretary of the Treasury of the United States has pursued.

The result of the election was as follows: Merrill, Republican, 96,579; Gillespie, Democrat, 57,434. Merrill's majority, 39,145.

The Legislature contained: in the Senate, 43 Republicans and 7 Democrats; in the lower House, 86 Republicans and 14 Democrats.

ITALY,* a kingdom in Southern Europe. King, Victor Emmanuel, born March 14, 1820; succeeded his father, as King of Sardinia, on March 23, 1849; assumed the title of King of Italy on March 17, 1861. Heir-apparent to the throne, Prince Humbert, born March 14, 1844; married April 22, 1868, to Princess Marguerita of Savoy, daughter of the late Duke of Genoa, brother of King Victor Emmanuel. The area of the kingdom (since the annexation of Venetia, in 1866) is 118,356 square miles; the population, according to the census of 1862, 24,273,

* *See* the AMERICAN ANNUAL CYCLOPÆDIA of 1868 for the population of the large cities, ecclesiastical and educational statistics, etc.

776. According to official calculations, the total population was in January, 1869, 25,527,915; in 1868, 25,404,723; in 1867, 24,273,776. The interest of the public debt amounted, in 1869, to 359,167,030 lire (nominal value of capital). The number of war-vessels was, in January, 1869, 96, armed with 948 guns. The number of ironclads was 22, armed with 266 guns. The official value of the special commerce in 1867 was as follows: imports, 830,800,000 lire; exports, 520,500,000 lire; transit, 77,700,000 lire. The movement of shipping, including coasting vessels, was, in 1866, as follows:

	Vessels.	Tonnage.
Entered	117,828	9,506,573
Cleared	115,869	8,923,018

The merchant navy, in 1867, consisted of 17,786 vessels, having an aggregate tonnage of 815,521.

The financial question offered serious difficulties, and gave rise to great agitation, both in Parliament and through the nation. On April 21, 1869, Count Cambray-Digny, the Finance Minister, laid his budget before the Chamber of Deputies, according to which the total deficit to be provided for was 788,000,000 lire (1 lira = 1 franc). This sum included the amount necessary to pay the debt due to the National Bank, and to abolish the forced currency. He proposed financial operations by which he expected to obtain 794,000,000 lire. He further demonstrated that there had been a steady increase in the ordinary revenue and decrease in the expenditure since 1867. In future years, he anticipated that there would be a reduction of the ordinary expenditure to 360,000,000 lire, and of the extraordinary to 60,000,000 lire. The minister, moreover, anticipates a balance of the revenue and expenditure in 1875. No new taxes are proposed, but bills are to be introduced for reorganizing the system without increasing the amount of the direct taxes, and also for regulating the provision-tax. Public works will be vigorously prosecuted, without fresh burdens being imposed upon the treasury. The expense of reorganizing the army and navy will be spread over a long series of years. In 1870 the revenue from the grist-tax will reach its normal amount. The National Bank will receive 180,000,000 lire of its debt in 1870 out of the revenue of the following two years, and the forced currency will be abolished in 1873. The ecclesiastical property affords an available resource of 500,000,000, not including about 80,000,000 lire, the value of the Church property in the secularization bill now in litigation. The revenue from the customs duties of 1869 shows an increase of 2,500,000 lire over that of 1868. The lottery revenue has increased 4,000,000 lire. The estimated revenue for 1870 is 914,000,000 lire, and the expenditure 1,030,000,000 lire, showing a deficit of 116,000,000, reducible to 94,000,000 by the reception of payments belonging to 1869, but not receivable until 1870.

The grist-tax proved to be the most odious, but was considered necessary to enable the Government to make the required expenditure without new loans, so that the Chamber sanctioned the tax. But the people vetoed it in a very serious manner. Revolts of peasants raged through the central provinces; the enemies of the present *régime* helped to increase the feverish agitation. The troops, accompanied by mobilized National Guards and gendarmes, marched all over the country. An official report spoke of 257 killed, 1,099 wounded, and 3,288 arrested. Ferrari, supported by 80 deputies of the Left, moved in the Chamber that the ministry had arbitrarily violated the law and the rights of citizens guaranteed by the Constitution. Excited debates lasted five hours, but the Government remained firm and obtained a decisive victory, the Chamber tabling the motion by 207 votes against 157.

The uncertain state of affairs induced the ministers to tender their resignation to the King, on May 5th. Menabrea, president of the ministers, undertook to form a new Cabinet, but soon retired in favor of Count Cambray-Digny. On May 13th the crisis ended by the formation of the following ministry: General Menabrea, President of the Council and Minister of Foreign Affairs; Signor Ferrari, Minister of the Interior; Signor A. Mordani, Minister of Public Works; Signor Bargoni, Minister of Public Instruction; Signor Minghetti, Minister of Commerce and Agriculture; the Ministries of Finance, War, and Marine, remaining unaltered. The reconstruction of the Cabinet was, however, instantly followed by a fresh ministerial crisis, the financial measures of Cambray-Digny, which had received the sanction of the Chamber before, being voted on again and lost. The crisis passed over, and the Government carried through its measures. The grist-tax was brought into operation everywhere, and did not meet with any further serious opposition. All illegal resistance having ceased, a great number of mills were reopened by the order of the Government. In November, 58,527 mills had taken out licenses and were in full working order; 14,926 paying the entire tax, 18,955 a large portion of it, while 24,626, being burdened with numerous arrears, did not yet pay any thing into the treasury. A new ministerial crisis took place in December. General Cialdini was summoned by the King to form a new ministry, but neither he nor Sella succeeded. Lanza undertook the task, on the condition that the former ministers Menabrea and Cambray-Digny should leave, and the military budget be reduced by 80,000,000 lire. The ministry, formed December 13th, consists of: Lanza, President of the Ministry and Minister of the Interior; Sella, Minister of Finance; Viscomte Venosta, Minister of Foreign Affairs; Gorone, Minister of War; Baeli, Minister of Justice; Biancheri, Minister of the Navy; Luzzati, Minister of Commerce. It is a ministry of the Right Centre. Sella's financial

plans, to be laid before the Chamber toward the end of January, 1870, are said to be: reduction of the army and navy budget, and an increase of direct taxes (including the one on real estate) by ten per cent., by the aid of which measures he expects to effect a saving of 60,000,000 lire. The agitation in regard to taxes still continued at the end of 1869. In the provinces of Verona, Cuneo, Modena, Piacenza, Arezzo, Bologna, Cremona, and Pavia, there were popular assemblages and demonstrations against the grist-tax; but the people were everywhere dispersed, and order was restored without difficulty. Riotous demonstrations were made by the peasants at Borgo San Donino. Troops arrived, several arrests were made, and order was restored. At Pelago, in the province of Florence, some armed peasants attacked the town-hall, which was defended by the National Guard. One peasant was killed and several were wounded.

The King continues personally to be popular, notwithstanding the violent agitations prevailing against his administration. He accepted the gold medal offered him by the committee charged with the distribution of rewards to those who have rendered services in the promotion of public health. On the occasion of his visit at Venice, to welcome the Empress Eugenie, in October, 1869, he was received most enthusiastically. In November he fell seriously ill, and his life even was despaired of on November 7th, so that the members of the royal family were summoned to Florence. He recovered, however, and was received with great warmth on his trip to Turin, and on his return to the capital.

According to a scheme laid before the Italian Chamber by the Minister of War, for the reorganization of the Italian army, there will be an active army and a reserve. The yearly contingent will consist of three divisions: the first to serve twelve years, four in the ranks, five on furlough, and three in the reserve; and the second and third to serve six years only. The cavalry will serve five years in the ranks. The first two divisions constitute the active army, and the third the reserve. The privilege of appointing substitutes is abolished, but exemption by payment is still to be allowed in exceptional cases. Under the new scheme the yearly contingent will consist of 88,000 men, one-half of whom will be placed in the first division, and the entire strength of the active army will be 400,000 men, of whom 270,000 could at once be sent into the field in case of war. The reserve is to consist of 198,000 men. In order not to exceed the fixed sum of 140,000,000 lire allowed for the military budget, the effective strength of the army in time of peace is to be 173,000. A reduction of the army was talked of at the end of the year.

Great progress is making with the Mont Cenis Tunnel, the works being actively carried on night and day, and there is every probability that the line will be opened in the course of next year. To celebrate this event, it has now been definitely decided that a Universal Exhibition shall be held at Turin in the spring of 1872.

A meeting of freethinkers, or radical antipapists, convened at Naples, on December 9th, proved a failure, it having been dissolved by the prefect.

J

JAHN, OTHO, a German philologist, archæologist, and critic, born in Kiel, Holstein, June 16, 1813; died at Leipsic, September 19, 1869. After passing through the university course in his native city, he went to Berlin in 1833, to complete his studies under Lachmann and Gerhard. Having received the degree of Doctor of Philosophy in 1836, he spent considerable time in study and travel in France and Italy, and, returning to Kiel, commenced a course of special instruction, as *privat docent*, in archæology and philology. In 1841 he published, at Kiel, "Telephus and Troilus;" in 1842, "Pentheus and the Mœnades;" and the same year a little volume "*In Memoriam Kellermanni.*" In 1842 he was called to Greifswald, as extraordinary, and soon after made ordinary, professor of archæology and philology. In 1847 he was called to the same chair in the University of Leipsic, and was also, until 1851, director of the Museum of Archæology. In the last-named year he was deprived of both appointments, for having taken part in the popular revolutionary movement of 1848–'49, and returned to private life, devoting himself to his favorite pursuits. As an archæologist he published, besides many dissertations and essays in Gerhard's *Archæological Gazette*, the following works: "The Picture of Polygnotus at Delphi," Kiel, 1841; "Paris and Œnone," Greifswald, 1845; "Hellenic Art," Greifswald, 1846; "Peitho, the Goddess of Persuasion," Greifswald, 1847; "Archæological Dissertations," Greifswald, 1845; "Archæological Studies," Greifswald, 1847; "The Cista of Ficoroni," Leipsic, 1852; "Description of the Collection of Vases of King Louis, in the Pinakothek of Munich," with eleven plates, Munich, 1854. Among his philological labors the principal were: critical editions of *Persius* (Leipsic, 1843 and 1852); of *Censorinus* (Berlin, 1845); of *Florus* (Leipsic, 1852); of *Juvenal*, the same year, and of Cicero's *Brutus* and *De Oratore;* of the *Psyche and Cupid* of Apuleius for an edition *de luxe* of the later classics. Herr Jahn was also a profound student of musical science, and a constant contributor to the *Musical Gazette* of

Leipsic. He had published a "Study upon the *Paulus* of Mendelssohn," at Kiel, in 1842; a critical edition of Beethoven's *Fidelio* at Leipsic, in 1851; and a remarkable biographical and critical memoir of Mozart, in two volumes, at Leipsic, in 1856. He was an active member of the Academy of Sciences of Leipsic, and a frequent contributor to its Transactions. The popular work on "Biblical Archæology," which has been attributed to him, was written by Johann Jahn, a Catholic archæologist and professor at Vienna, before the birth of Otho Jahn. The Viennese professor died in 1816.

JAPAN, an empire in Eastern Asia. The area is estimated at 150,000 square miles; the population variously at from 18,000,000 to 35,000,000. The conflict between the Mikado and Tycoon, in 1867 and 1868, resulted in the resumption of the administration of the empire by the Mikado, and in the total abolition of the Tycoonate. The following foreign powers were, at the close of 1869, represented in Japan by diplomatic agents: United States of America (Robert B. Van Valkenburgh, minister), Belgium, Denmark, France, Great Britain, Italy, Netherlands, North-German Confederation, Austria, Portugal, Russia, and Switzerland.

The movement of commerce and of shipping, at the principal ports open to foreign nations, was, in 1868, as follows:

PORTS.	Imports. Val. in Dol.	Exports. Val. in Dol.	ENTERED.		CLEARED.	
			Vessels.	Tonnage	Vessels.	Tonnage
Yokohama....	18,849,318	33,918,134	373	287,531	342	274,384
Hiogo & Osaka	5,196,448	1,148,787	193	114,687	178	109,907
Hakodadi....	214,035	431,152	114	40,815	113	40,618
Nagasaki.....	5,248,966	1,775,907	294	105,213	265	95,531

In February, 1860, the Japanese admiral, Ennemato, a supporter of the Tycoon, took possession of the entire island of Yesso. He celebrated the event by firing a salute of a hundred and one guns from the fleet and batteries ashore. He notified all the consuls of the formation of a provisional government, and of the appointment of the necessary permanent officers in the principal departments. His forces were rapidly increasing. He strongly fortified his position near Volcano Bay, with the intention of fighting, unless the Mikado complied with the demands of the exiled clans, which were, to allow them to retain the island of Yesso, and to be ruled over by the Tycoon. In March the northern daimios took the important island of Sado, on the western coast of Niphon. Three of Ennemato's vessels attempted to capture the Government's steamer, Stonewall, but without success, one of his vessels being beached and burned. But the Mikado gained ground, and several of the leading daimios, in April, surrendered to him their territories and sovereign rights and privileges, with a view to centralizing and strengthening the Government for the general good. The Mikado left Kioto for Yeddo, where a great congress of the daimios of the empire was to assemble by his command. He arrived there on May 8th. On the 18th a Parliament was convoked by the following proclamation:

Since the establishment of the Mikado's authority, old prejudices and customs have been done away with (literally, washed away), and a channel of communication has been opened up through all classes in the empire, from the highest to the lowest. No impediment whatsoever exists. Several persons, who have diligently served their country and without the least hesitation (literally, dread) have assisted the Government with their advice, have been gradually selected for the discharge of official duties. Nevertheless, the Government have not been able to put all their plans into execution. It is thought that a sufficiently wide circulation has not been given to the imperial wishes, and that there are still men of sound judgment who should be selected. This has caused the imperial mind much concern, and therefore it is intended to open a People's House of Representatives in Yeddo Castle, in which men of sound judgment, no matter how low their rank may be, can at once offer what advice they think best. His Majesty will afterward communicate through their chief (or president) the imperial will concerning the views of each.

The number of deputies was 227. When they had assembled, the president rose and read the following message from the Emperor, all in the House prostrating themselves during its reading:

Whereas, we propose shortly to proceed to our eastern capital, there to assemble around us our Kuges, Daimios, and the members of the various administrative departments, in order to consult them upon the foundation of the new constitution of this country: this shall be framed so as to insure safety and peace. Let every one at the present moment remember that the constitution and laws must be the foundation of government, and, as millions of people are ruled by them, let them not be framed inconsiderately or without mature deliberation. Our officers having reported to us the completion of the rules for the establishment of a public council, we desire that it shall be opened without delay.

Let the rules of decorum be observed throughout its proceedings, and its debates be conducted with temper and discretion, in a public-spirited manner. Then may we hope that the deliberations will be productive of useful and clear decisions. Let the fundamental laws of our ancestors serve as a guide, and apply them to the character of men and the spirit of the times. Let the different subjects be successively treated according to their importance, and, finally, let the results of your debates be reported to us, when we will determine upon those that merit our approval.

After the reading of the message, the House proceeded to business.

The following scheme for the rules and regulations of the Parliament present an extraordinary example of reform in government:

The settlement of the laws of the Assembly is the most important duty. Any point not included in these laws must be left to the decision of the President; the Assembly cannot charge itself with (providing against) unforeseen and extraordinary cases.

1. The period for which the members of Parliament will serve is limited to four years. Half the members will be reëlected every two years. Retiring members may be immediately reëlected. New members will enjoy the same privileges and rank with old members. When the time arrives for the first reëlection, half the members will retire by lot.

2. Members of Parliament must have completed their twenty-fifth year.

3. Members of Parliament may not hold any other office.

4. Should any member be appointed to another office or retire, a substitute will immediately be elected.

5. Any member having a motion to propose will hand in the same in writing to the President.

6. Should any person, not being a member of Parliament, wish to introduce any motion in the House, he may intrust it in writing to the President or to any member.

7. Statements of motions must be brief and plain; they must have foundation and substance.

8. The President will receive the various motions and number them, and, having copied them in form, will cause them to be printed. The order in which motions will come before the House will be according to the pleasure of the President, and will in no way depend upon the numbers which they bear.

9. Six days in every month, the 2d, 7th, 12th, 17th, 22d, and 27th, are fixed days of assembly.

10. On the fixed days of assembly members will take their places at ten in the morning.

11. The places in the House will be numbered beforehand, and at the opening of the House members will draw lots for their places, in which they will take their seats accordingly. These numbers will be changed every month.

12. Every month six officers named Kanji [the functions of these officers are not defined; they appear, however, to be destined as a medium of communication between members of the House and the President, and to assist the latter in conferring with the officers of the Government] will be elected from among the members of Parliament.

13. At every meeting of the Assembly a printed motion will be handed to each member.

14. Members, having received a printed motion, will carry it home, and, after mature reflection, will criticise it, and at the next meeting will carry the motion with them and publicly read out their criticisms. Should any questions be asked of them as to the reasons for this opinion, they will be prepared to reply.

15. The order in which members will read out their opinions or address questions will be according to the fixed number of their places.

16. On the second occasion, when a subject comes up for debate, members are not restricted to speaking once. On other occasions they may only speak once.

17. When a subject has been debated by the members in conclave, any member returning home and again pondering over the subject, and having arrived at a conclusion as to its merits, may put his opinion in writing, and hand it to the President at the third sitting.

18. Papers thus handed to the President will, when the original motion is approved, bear the character *ka* (ay) in red ink on the right-hand corner. When the motion is disapproved, they will bear the character *hi* (no) in red ink on the left-hand corner.

19. The President having collected the whole opinions of the members, and having duly arranged them, will, should three-fifths or more of the members be in favor of the motion, declare it to be carried, and will request the Emperor's judgment.

20. Should three-fifths of the members be against the motion, the President will declare it lost, and it will be abandoned accordingly.

21. When three votes are wanting to make up three-fifths, the President has the power of deciding the question by his vote.

22. Should the "ayes" and the "noes" together not amount to three-fifths of the members of the House, the debate will be postponed, and resumed at the expiration of one year.

23. Should three-fifths of the whole House decide that the motion should be heard again in the same year, the motion must be heard again forthwith.

24. At each assembly there will be three matters to be dealt with. First, the scrutiny of the "ayes" and "noes" on the motion of which notice has been received at the previous meeting. Secondly, the debate upon the motion of which the "ayes" and "noes" have been scrutinized at the previous meeting. Thirdly, the receipt of a new motion. These constitute the orders of the day. The President will, however, be competent to introduce variations in the orders of the day.

25. Should any question before the Parliament have to be referred to the officers of the Government, the debate will be postponed until the next meeting, when the officers of the Government will be invited to attend.

26. When the officers of the Government attend at the House, the Kanji, or officers of the House, will confer with them. At such conferences the President will attend, and, taking deeply into consideration the arguments of both parties, will see that nothing improper occurs.

27. The various motions, the results of the scrutinies and the approval and disapproval of the Emperor, will be printed.

28. If, in the course of debate, the President should strike the board by his side, the House will be silent.

29. Should any member be prevented from attending, he may delegate a proxy.

30. A proxy may give his vote for the member who has delegated him.

31. No member may hold more than one proxy.

32. No scrutiny of "ayes" and "noes" can take place when less than two-fifths of the whole House are present.

33. Should any mistake occur in the course of debate, the President will correct it. Should he fail to do so, he may be called upon to exercise his authority by any member.

34. Newspapers and street reports are not to be quoted to substantiate statements.

In June the Mikado's forces commenced attacking Hakodadi, the capital of Yesso, which was occupied by the rebels under the powerful daimios Aidzu and Ennemato. The greater part of the city, with its ancient temples, was laid in ashes on June 19th. The battle raged with unabated fury from 4 A.M. till 8 P.M., after which it subsided into picket-firing, which was kept up during the night, with an occasional shell exchanged between the fleet and forts. While the Mikado's fleet was busily engaged in shelling the enemy's position, Admiral Ennemato steamed out with his remaining vessel, the Emperor, from under the fort, and with Spartan courage boldly attacked the whole fleet of wooden vessels, for the purpose of relieving his troops from their harassing fire, actually driving them from their positions and exploding the Don Juan with 250 men on board, about 50 of whom were saved. He continued to engage them, but they declined the combat, or fought at long range. After holding the fleet at bay for upward of an hour, the Stonewall drew off from her position, where she had been shelling the city fort, and slowly advanced to the attack, when the Emperor as slowly and sullenly retired, exchanging shots with her the while. Toward nightfall the vessel sank, opposite the city she had defended against the combined attack of the fleet, with flying colors, and every man at his gun. Ennemato had about 8,000 and the Mikado about 8,000 men.

In the mean while the Parliament continued its sessions at Yeddo. The most important

and interesting discussions turned upon the following questions from the "Foreign Office:"

1. On the question, if the country was to be closed or to be opened, the different parties have had many discussions since olden times. Some say that no relations ought to be entertained with the barbarians, the birds and beasts, as they call them; others that now, when our country is not yet sufficiently rich and powerful, we ought to make our own their advantages and make up our defects through them, and that when this is done we ought to drive them away. Others, again, desire that we should completely adopt the customs of foreigners, that our schools ought to be open to their sciences, and that we ought to practise the use of ships and cannons, and then proceed to a thorough expulsion of them; others say that we ought to kill the barbarians. If, now, it should be resolved upon to open the country, shall then the existing treaties forever remain as they are, or shall we follow another line of policy with regard to the treaties?

2. If the closing of the country should be demanded, shall we then proceed to a systematical expulsion, or shall the foreigners residing in our country be killed? But if the foreigners wage war against us for this, what shall we do to resist them?

3. If they attack us by land and sea without our having sufficient soldiers to oppose them, are you then content that the country and the nation, together with the imperial family, be destroyed?

4. If in case of a war it should be decided to oppose the foreigners with open force, and if some did not approve this decision, in what manner should they be brought over to your opinion?

5. If the closing of the ports were decided upon and war became imminent, where shall our imperial family find a refuge, and with what troops will you protect them? What measures will you take in that case?

6. Lately innocent foreigners have been killed in our country, bad gold and silver coins have been brought into circulation, large loans have been contracted, and if the number of such facts should augment from day to day, and all the nations together put their troops in motion to make war against our Government and demand peremptorily satisfaction for these deeds, or if they should take possession of the open ports, seize our ships, occupy our islands, how can we prevent this? What measures do you intend to employ to prevent this?

7. If we look at the present state of affairs, we find that the partisans of the opening of the ports are also in favor of the propagation of foreign (religious) sects, while their opponents are in favor of the Japanese and Chinese doctrines. If we wish to arrive at a fusion of both opinions, what steps have we to take in order to arrive at a certain and stable situation?

8. How do you think that the propagation of the (Shinto) doctrine of our gods could be brought about in the whole country for the instruction and guidance of our people?

9. If unanimity should be arrived at with regard to these questions, do you believe that the opening or closing of the ports would be more in accordance with the spirit of the age, and eventually what profits or disadvantages would we have from the execution of these measures?

10. Our treaties with the foreign countries have been concluded for commercial purposes. Now, during these last years the foreign powers have vied with each other in stationing troops and ships in our country for the protection of their countrymen: if difficulties arise, they immediately draw out their troops for the protection of the different places; English soldiers are at this moment nearly 3,000 men in our country; the next in number are the French; America and other countries have men-of-war stationed here. Our holy empire, which never since the oldest times has been despised, has provoked these humiliations, and just at this moment we feel them very much. What law shall we make to wipe away this stain?

11. According to our views the state of affairs is as follows: Except in conquered countries the law of nations does not allow that theatres should be imposed by military force; but after, in former years, several tens of merchants had been killed, the foreign countries concerned have, as soon as any one was killed, augmented the number of soldiers, so that it has arrived at the extent now existing. If new murders should take place at the present time, the number of soldiers will also be augmented in proportion thereto, until it has become large enough to guarantee sufficient safety. What are the means to put an end to this state of affairs?

12. If, in consequence of new murders of foreigners, their troops should be so much augmented that they occupied all our ports, what country will be then more despised and humiliated than our heavenly country? Even now, there are many grievances the foreigners have against us. How can we clear our old and sacred laws and religion from this stain in the eyes of foreigners? What are we to do?

13. It is because our Government can neither protect their own people nor the foreigners that the foreign countries have sent their troops to us, and they declare that they will not withdraw them until the Government has obtained the power over life and death, and to punish and reward. And this power the Government must have — enough authority to protect their own people and the foreigners. That, as is now the case, the foreign countries punish themselves crimes committed in our country, is a shame and an insult. How can we wipe it out?

14. Because under the former Benkfu Government the power over life and death and to reward and punish had passed into the hands of low people, a change of government has taken place. How can we paralyze these old hereditary evils?

15. How shall we prevent the foreign representatives going everywhere, under the protection, not of our soldiers, but of their own? Or shall we forbid it?

16. If the foreigners now ask how the kerais or regular troops of the provinces, clans and districts, shall be prevented from molesting foreigners they meet on the road, or if the Government has power to prevent such things, what shall we reply?

17. If we desire that you should decide now over peace and war, you ought to do so with zeal and prudence. Only a small mistake on one side or the other will cause us great difficulties and miseries, and the power of Government will fall necessarily into the hands of bad officers. Therefore your decision ought to be clear and to the point.

18. The debts toward foreign countries taken over by the new Government from the old one amount to about $6,000,000 (one dollar being equal to three and a half boos). The immediate payment of them has often been demanded from us, but, as the expenses for interior and foreign affairs are so very heavy at this moment, we address ourselves to you in order to learn how to satisfy these claims.

From the Simonoseki affair with Choshin, part of the indemnity to be paid to England, France, America, and Holland, $1,500,000, is still unpaid.

The Oriental Bank of Yokohama has made us a loan of $500,000. One million dollars have been lent by the English merchant Oruto to the imperial mint.

Debts from daimios to foreigners have been guaranteed by the Government to the amount of $230,000 to $240,000.

Further expenses for the factory at Nagasaki, the dock at Yokotska, light-houses, mines, and men-of-war, to be paid for to foreigners, make up the total amount before mentioned. To specify exactly the different items is not possible.

19. Bad silver and gold coins circulating in the country, a large quantity of bad silver and gold has come through trade into the hands of foreigners. The

amount thereof is perhaps equal to 30,000,000 rios of good coin. The foreigners have now addressed themselves to their representatives, and demand that either this bad money should be exchanged against good at the foreign office, or that they should be indemnified for their losses, which amount, according to their statement, to 6,000,000 rios.

What shall be done in this matter? According to the new treaty, article three, the boo is a coin of two nomme bun weight, equal to not less than 134 grains troy weight, and containing not less than nine-tenths of pure silver and one-tenth of alloy.

As this has been stipulated by the treaty, the boo, although a Japanese article, is, nevertheless, no more something exclusively Japanese, having to be regarded in the light of a medium of exchange between the foreign and Japanese commerce; as, per example, a Japanese, being in the service of a foreigner, cannot act any more according to his own free will. Although, influenced by this idea, the old Government had faithfully observed the treaties, and more than one-tenth of alloy was contained in their coins, nevertheless much bad coin has been issued during these last times, and the boos coined at Osaka are of a very bad standard, the niboos have been adulterated equally, and, as before mentioned, these bad coins have now passed into the hands of foreigners. All this has happened because the officials in the imperial mint have thought that it was indifferent with what standard and under what form the Government coined money, it being sure to pass as paper money does.

20. If the foreign representatives now ask us by whom besides by the Government such bad coin has been issued, what shall we reply to them?

There exists a rumor that by others, as well as by the Government, bad coins have been issued secretly; and if one looks at the statement that 30,000,000 rios are in the hands of foreigners, ought one not to believe that besides by the old and new governments, also by others, bad coins had been issued surreptitiously?

21. The Japanese Government, by issuing bad coins and acting contrary to the treaties, has, by deceiving their own people and foreigners, polluted their name in the sight of all the countries; how shall we clear ourselves of this stain?

As the preceding points are of the greatest importance for the country, and the above-mentioned difficulties cannot be cured by any single individual, we recommend to you an early and thorough discussion of them most urgently.

FOREIGN OFFICE.

Third Month (*12th April*, *12th May*).

The Japanese Parliament showed itself very hostile to the Christian religion. Only one member dared to defend it, while 210 voted for a resolution declaring Christianity to be opposed to the state. Another resolution, to inflict severe penalties for bringing back the apostates to one of the religions of the country, was negatived by 176 against 44 votes. The violent denunciations of the Christian religion, and of the treaties, induced the representatives of the foreign powers to address, on June 17th, a joint note to the Japanese Government, in which the latter is reminded that the Parliament has no right to modify the treaties with the foreign powers.

The representatives of the foreign powers formally announced the termination of the civil war, and withdrew their notification of neutrality. The Mikado intrusted all the important positions in the empire to Satsuma, Chosiu, Tossa, and Nadijena, ignoring altogether the claims of the other princes, many of whom are very influential. It was further ordered that within a certain period all the daimios must deliver up to the Government their war-material, receiving payment for the same in kinsats (paper).

A great deal of jealousy continued to exist among the daimios.

One of the greatest difficulties the foreign diplomatists have had to encounter in Japan has been to acquire a knowledge of those mysterious laws of Gongensama to which Japanese officials so often refer as containing the basis of their political system, and in which they profess to find precedents for any line of conduct they may choose to adopt. These laws, variously called the Legacy of Iyeyas, the Laws of Gongensama, and the Laws of Japan, were framed by Iyeyas, a celebrated Tycoon, the founder of the family of the Tycoon of our own day. Iyeyas lived in the beginning of the seventeenth century, and after his death was deified under the title of Gongensama. Many attempts to gain possession of this important code have been made, at last successfully; manuscript copies have now been obtained, and one or two have lately found their way to Europe. These laws consist of one hundred sections, and display throughout how thoroughly feudal is the Japanese system of government, how much the power of the sword is respected, how little regarded are the people. The laws begin by claiming exemption from the gaze of all but official eyes. "This manuscript * * * * may not be seen by any but the Gorojiu (Council of State at Yeddo), who, profoundly secreting it even in the precincts of the official residence, in order to conceal it from the sight of others, shall reflect upon and regard it in their hearts." After a few recommendations to the practice of self-denial in the performance of duties, the providing "for the widower, the widow, the orphan, and the lone," and the cultivation of purity of heart, they proceed to the estimate of the revenue of the empire. "The whole amount of the revenue of the empire of Japan is 28,190,000 kokus of rice (each koku equals 5.13 bushels). Of this 20,000,000 is to be divided among the daimios (nobles) and shomios, who render faithful service; and the remaining 8,190,000 kokus form the public revenue, which should provide for the protection of the Emperor, and for keeping in subjection the barbarians of the four coasts."

After an exposition of the rules of government, follow rules for the selection of magistrates of the civil criminal courts, who "are the reflectors of the mode of government. Those who are invested with this office should be chosen from a class of men who are upright and pure, distinguished for charity and benevolence. Once every month one of the Gorojiu should be sent, unexpectedly, to inquire into their mode of administration; or the Shôgun should himself go unexpectedly and investigate

and decide the case on hand." This watchful system is no dead letter; it is sharply felt by officials of every grade. The rewards of virtue which the magistrate may bestow, the punishment of vice he may inflict, are next enumerated, the latter list exhibiting strange refinements in cruelty, terminal words "and so on" giving officials the power to apply any supplementary torture they may happen to fancy. These punishments are: 1st, branding; 2d, splitting the nose; 3d, banishment; 4th, transportation; 5th, strangulation; 6th, imprisonment; 7th, decapitation, and exposure of the head; 8th, crucifixion and transfixion; 9th, burning; 10th, decapitation; "and so on." But the infliction of the severe punishments of tying a criminal's legs to two oxen and driving them in different directions, and of boiling in oil, is not within the power of the Shôgun (i.e., Tycoon), and is, therefore, we presume, a prerogative of the Emperor.

The maintenance of the standing army is made to devolve on the government of the different provinces. Each province is compelled to furnish soldiers in proportion to the quantity of rice grown within its boundaries, whether on public or private properties. "For 1,000 kokus of rice five cavalry-men may be required; for 10,000, 50 men; for 50,000, 250 men; for 100,000, 500 men; for 200,000, 1,000 men. One thousand horsemen form an army, and 3,000 form three complete armies. The commander-in-chief takes command of the whole. The second in command takes command of two armies. The third in command is the leader of one army."

The persons of members of the imperial family are considered sacred, and a death among them ranks as a public misfortune. "The departure from life of the Emperor, the imperial sire, the imperial spouse, or any of the imperial blood relations, are occasions of profound darkness, and great and ominous calamity for the whole empire."

The Japanese have already far outstripped the Chinese in progress toward Western civilization. The Government has troops uniformed and armed with the latest improved breech-loading guns. The naval vessels are well armed. A hospital has been built at Hioga, and is in charge of an American surgeon, and is open to foreigners. Light-houses are built and lighted, and a light-ship is being equipped, to be stationed off Treaty Point. The coal-mines are successfully worked, and supply foreign vessels with coal, while the Chinese refuse to allow foreigners to mine coal.

On January 6, 1869, a new era in the foreign political intercourse with Japan commenced. On that day the Mikado, or Emperor, emerged from his normal state of seclusion, and, disregarding the time-honored tradition which forbids the "barbarian" to gaze on his "sacred countenance," received in state the foreign ministers residing at Yeddo, and exhibited an earnest desire to maintain peaceful relations. The ports of Yeddo and Negata were opened to foreigners, and Yeddo made the official residence of the Mikado, and the permanent capital of the Japanese empire. The trade with foreigners has been increasing since the opening of the first ports. The following figures will give some estimate of the trade of Hioga for the year 1868:

Total number of vessels arrived, 190; tonnage, 116,917—of which number 64 were American, with an aggregate tonnage of 73,195; English, 111, with 39,186 tons; other countries, 15.

The total value of imports for the same time amounted to $4,710,214; of which $822,404 came direct from foreign ports. The total value of exports amounted to $1,561,090; of which $388,096 was direct to foreign countries, and a large proportion of the rest also went to foreign countries, but was first shipped to Yokohama. For instance, the value of the silk export alone—that is, including silkworms' eggs—amounted to $749,044, and the tea to $309,025. Altogether this is a very healthy showing, and whether Kobe supersedes Yokohama or not, we may confidently expect that her trade will foot up in a couple of years to a very considerable amount.

An Austrian naval and diplomatic expedition visited Japan in the fall. Very flattering accounts have been received of the reception it met from the imperial court and its officers, and from the foreign diplomatic agents and merchants. The points of a draft of a commercial treaty, which placed Austria on the same footing with the most favored nations, were agreed upon within less than ten days. The treaty was signed on the 18th of October, the anniversary of the departure of the expedition from Trieste. Among the most remarkable incidents of the mission was that of the ceremonial audience with the Mikado, who took this opportunity to give the admiral a letter for the Emperor of Austria, which was written with his own hand. This is the more noticeable, because it is the first instance of a Japanese ruler dispatching an autograph letter to a foreign sovereign. In Yeddo a brilliant reception was given the embassy by the Japanese minister in a place splendidly fitted up for this occasion. The uncle of the Mikado, a leader in affairs of state, was present. As this prince had never before dined with Europeans, he suffered himself to be instructed for the occasion by Herr Alexander von Siebold in the use of the knife and fork.

Besides the expensive gifts of Austrian articles of manufacture, which were brought to the Mikado by the embassy, specimen proofs of the publications of the Academy of Science of Vienna, printed on the imperial press, were given to the high schools in Yeddo, and attracted the particular attention of Japanese statesmen and scholars. At the same time an exposition of Austrian goods took place at the port of Yokohama, which was not only much

attended by the resident merchants and artisans, but produced also practical results in the shape of several direct orders. Yokohama, as is well known, is the principal emporium of Niphon, in which the greater part of the business of the import and export trade is transacted. The reports of the mission mention, with warm thankfulness, the great courtesy and alacrity with which they were assisted in their intercourse with the court officials, the statesmen, and other officers, by the British secretary of legation, Herr Alexander von Siebold. This young diplomat, who speaks the language of the country with the polish and elegance of a cultivated Japanese, is the eldest son of the celebrated naturalist who died a few years ago at Munich. Herr von Siebold was already acquainted with, and a personal friend of the chief of the statistical and scientific department of the expedition, the ministerial councillor, Dr. Karl von Scherzer. Herr von Scherzer, who, both in Japan and China, displayed a zeal for the commercial interests of the expedition worthy of recognition, and who materially furthered the objects of the embassy by his practical skill as well as by his personal influence, and winning amiability, which had great effect upon the Asiatics, separated himself temporarily from the expedition at Yokohama, in order to go to California and obtain a brief view of commercial affairs there. The expedition left Japan on the 10th of November for San José, in Guatemala, where it was expected that Dr. von Scherzer would rejoin it.

JEWS. The Board of Delegates of American Israelites is an association somewhat on the plan of the "Universal Israelitish Alliance" of Paris. It is an attempt to unite the congregations of the Jews in the United States in efforts for education, for the protection and assistance of Jews in foreign countries where disabilities are still imposed, for enlarging the privileges and liberties of the Jews, and defending them against encroachments, and in general for what may tend to the increased prosperity of the people. The movement of the Board has not been encouraged with what its executive committee consider "adequate liberality," and its enterprises have consequently been contracted by the limitation of its means. In 1868 the committee reported only 50 out of 200 Jewish congregations in the country as entered upon its rolls, and lamented the entire absence of union among the Hebrews, and the lack of means of obtaining statistics or information about congregations or societies. The Board have approved of a suggestion looking to the formation of an American Jewish Church, but that being an ecclesiastical movement, and not within their objects, it declined to take action in the matter.

The Board now hold a Palestine fund of $3,300, the interest of which is given to the schools established by the Universal Israelitish Alliance at Jerusalem and Jaffa. These schools are to be enlarged by the opening of an agricultural school at Jaffa. A further scheme for the amelioration of the condition of the Israelites in the Holy Land has been submitted for approval. It contemplates the erection of dwellings for pilgrims to Palestine, and for the aged and indigent resident there. Several such have been erected by the English and French Jews, and the coöperation of American Jews is invited.

At home the Board of Delegates are guarding against the proposed amendment to the Constitution of the United States recognizing Christianity as the religion of the land, and are endeavoring to secure amendments to the Sunday laws of the States, where such proviso is not already made, exempting from their operation those who keep the seventh day as the Sabbath, and conduct their business on the first day "quietly and not to the public detriment." The executive committee of the Board recommend that steps be taken for the regular authorized issue of Jewish publications, and call attention to the fact that every denomination in the United States has a publication society, while the Hebrews have none. The plan, which was offered in 1868 and renewed in 1869, proposed a committee to be intrusted with the duty of selecting books to be translated or printed in the original. The publication "should embrace reading-books for Jewish schools, works in the various departments of Hebrew literature, Jewish history, etc. Philosophical works might be reprinted or subscribed for, and authors and translators of useful books aided in publishing them. The tendency of the society should be to avoid works of pronounced party character—its aim, the propagation of Jewish knowledge and impartial science. Correspondence and coöperation with similar organizations in Europe should also be comprehended in the plan."

Maimonides College was opened at Philadelphia, in October, 1867. Its course is liberal, embracing the Hebrew language and literature and Jewish theology, the classics, *belle-lettres*, and mathematics. The sessions have been maintained since without interruption (except regular vacations), but the committee are not able to speak hopefully, rather apologetically, of its condition and prospects, and of the support it receives from the congregations. The committee continue in their report:

> The committee observe little effort on the part of American Israelites to combine their forces for the public good. The only interest which appears to prompt united action is the work of charity; and in this they do labor with unwonted energy. There are societies having extensive branches throughout the Union, which, by the establishment of asylums for the needy, the sick, the widow, the orphan, by the maintenance of a liberal system of mutual aid, and by generous benefactions in special cases, have stimulated thousands of Israelites to take more interest in their common welfare, and to consult together for purposes of benevolence and profoundly affecting all. The ultimate result of these measures may be to engage them in movements looking to the elevation of

Israel, the enlightenment of the masses. Let us hope so. But the fact remains unaltered, that at present education is regarded by most Israelites as chimerical, at least in its connection with commercial work and progress.

It is also apparent that union, for the purpose of advancing the religious and moral progress of our people in America, is regarded with disfavor by those who should be among the foremost in advocating, encouraging, and cementing such a bond. If the wisdom of the leading men among American Israelites incline toward the principle of independence in congregational affairs, this idea should not be carried to such an extent as to discountenance the combination of means and strength for the promotion of other than purely ecclesiastical interests.

A Rabbinical Conference of "Reformed Jews," those who favor religious progress, was held in Philadelphia in November. Its spirit and the character of its proceedings are best illustrated in the account of it which was given by Rabbi Wise, of Cincinnati, to his congregation after the adjournment:

The principles which the conference authoritatively declared, he said, were precisely the same which for the last twenty years were advanced, expounded, and defended by all liberal Israelites in America and Europe. That the Israelite of the nineteenth century expects not to return to Palestine, and construct a new Government under a Messiah, Prince of the house of David, as the sovereignty of freedom and the supremacy of justice are the very realization of the sublime ideals connected with the Messianic doctrine of the fathers; that the dispersion of Israel was not a punishment, divine retribution being threatened only to the third and fourth generations; it was the object of Providence that the children of Israel carry the pure word of God to all climes and generations; that it is not a people whose redemption and salvation the Lord has ordained—it is the whole human family which is to be saved and united by the instrumentality of God's chosen people; that it is not the resurrection of the human body in which our hopes centre—it is the immortality of the soul, and God's grace and justice to His image, which is our work of salvation; that, although it is our duty to maintain the Hebrew language, in which the divine treasures were intrusted to our care, nevertheless, many Israelites not being sufficiently conversant with the holy tongue, it is necessary that the vernacular be introduced in the synagogues as much as possible.

The resolutions were chiefly limited to the laws of marriage and divorce, some of which had come in conflict with the modern laws of civilized nations. These resolutions were based on the principle that it is every Israelite's religious duty to obey the laws of the land; that the synagogue therefore acknowledges no marriage lawful which has not the sanction of the law of the land; that it acknowledges the verdict of the public law in cases of divorce as final and binding, and abolishes the ancient rabbinical form of divorce; that it considers all laws, concerning the deceased brother's wife and concerning the sons of Aaron, as binding no longer. But that in all cases of marriage or divorce, in any State or Territory not having reached the height of the Biblical morals, the synagogue must adhere to the moral law of the Bible, and the rabbis, before solemnizing the marriage of a divorced party, must investigate into the causes on which the divorce was granted, and none must solemnize a marriage contrary to the provisions of the Bible. Man and woman, according to the spirit of the Scriptures, are perfectly equal before God. Therefore, in the covenant of matrimony, husband and wife have equal duties, claims, rights, and privileges, which are to be symbolically expressed by the exchange of rings, and the proper formula of marriage. Although this is in advance of the laws of many countries, nevertheless it is in the spirit of the sacred Scriptures, and binding upon all Israelites.

In regard to circumcision, it was declared as being an acknowledged law in Israel that the offspring of a Jewish mother is by virtue of its birth one of Israel, with or without circumcision. In all these matters the conference only declared authoritatively that which was acknowledged by all American Israelites, and again has the only merit of giving it authority.

The Hebrew free-school organization of the city of New York have four free schools under their charge; the design of them is to counteract the efforts of what are called "Christian Jews," who have also organized free schools, and teach doctrines which are regarded as opposed to the tenets of Judaism. The association now numbers over six hundred members, each paying an annual contribution of five dollars, out of which sum, and from donations received from various sources, the expenses of the schools are supported. The Board of Directors have it in view to abandon the instruction in the common English branches, as a good deal of opposition has been shown among the Jews of the city against it, since they claim that in the public schools, free to all, these are taught to better advantage, and that to maintain it in a distinctly Hebrew school might give rise to a charge that the Jews are opposed to the public-school system, while they are its earnest friends. Heed is to be given to this objection, and these Hebrew free schools will probably, hereafter, be continued only for free religious instruction, and for maintaining the Hebrew language among the "rising generation."

The Universal Israelitish Alliance, of Paris, has now in operation thirteen schools—six in Morocco, three in Turkey, two in Palestine, one in Syria, and one in Asia Minor, besides the normal school in Paris. The schools in Morocco are in a flourishing condition, encouraging the establishment of others in the Orient. The preparatory school in Paris is also prosperous, and is giving instruction to scholars preparing to become teachers, natives of Poland, Hungary, Turkey, Palestine, Syria, Morocco, and Abyssinia.

Monsieur Joseph Halevy, who had undertaken a mission to the Falasha Jews of Abyssinia on behalf of the Universal Israelitish Alliance, presented a report of his proceedings and the result of his investigations to the general committee of that association. It leaves no doubt as to the Judaism of the Falashas. Isolated locally, and even physically, from their coreligionists—for these Israelites dwell in a remote and little-known region—they remain faithful to the law of Sinai; and the civilized Jew, coming to them from a refined capital of the Western world, found himself in the midst of brethren. They testified their anxiety to rivet the link of brotherhood by confiding to M. Halevy a young member of their community, as an ambassador from them to the Alliance. Their complexion is more or less black, but they have not the

physical type of the negro. They retain a deep and pathetic attachment to the Holy Land. The word "Falasha" means exile. They speak two languages, belonging to different philological stocks. One is the vernacular of the district, the Amharic. But the language which they use in their families is a dialect of the Agaou, which they also employ for their prayers. Many of their names are Biblical, and consist of Hebrew words pronounced in Abyssinian manner. In the place of worship, men and women sit apart, and there is a sanctuary which is only entered by the high-priest on the day of atonement. Sacrifices are performed, but these are only commemorative, and are therefore not in accordance with the Mosaic ordinances. There are no sacrifices on Sabbaths. Almost all the manufactories of the country are in the hands of Falashas. They enjoyed civil rights until the accession of the late king. (*See* ABYSSINIA.)

At the close of the first Israelite Congress of Hungary, which took place on the 24th of February, after a session of more than two months, a deputation presented the statutes, elaborated by the Congress, to the Minister of Public Worship, requesting him to bring in a bill in the next Diet by which the Israelite confession as such should be received in the number of the legally-recognized confessions. According to the statute, the 475,000 Israelites of Hungary and Transylvania are formed into free communities, which in their turn are collected in twenty-six districts. Rules are drawn up regulating schools, endowments, the position of rabbins, and other confessional and educational matters. The future Congress is to consist of eighty-six members, and bear, as it were, the supreme authority.

The condition of the Israelites in the Danubian Principalities is improved, through the energetic interposition of the European governments in their behalf. The bitterness of the people against them is very great, however, in Rumania, where they have been exposed to violence from mobs. A better state of affairs is hoped from the accession of the new ministry. In Servia, the *régime* of liberty introduced by the new government will, it is hoped, be favorable to the Jews. Much good is looked for from the establishment of religious liberty in Spain. European and American Jews have been invited to coöperate in erecting a synagogue at Madrid. The plan of dollar subscriptions has been adopted.

The success of M. Halevy's mission to the Falashas of Abyssinia has suggested the dispatch of that gentleman to China, to inquire into the condition of the Jews there, and ascertain what can be done for them. The Universal Israelitish Alliance and the Board of Delegates of American Israelites coöperate in this action.

JOMINI, Baron HENRI, a Swiss general historian and military critic, born in Payerne, Canton de Vaud, Switzerland, March 6, 1779; died at Passy, near Paris, France, March 24, 1869. While still a boy, he served in a Swiss regiment in French pay, from 1789 to 1792. When the foreign troops were disbanded he returned to Switzerland, and studied military science with great assiduity. In 1803 he returned to France, and, upon the recommendation of Marshal Ney, secured the opportunity to pursue his commercial avocations in Paris, but in 1804 he entered the French army, obtaining the grade of *chef de bataillon*, and he was made colonel in 1805. Before this Jomini had been a laborious student of the art of war, and in 1805 had published his "Traité des grandes opérations militaires, ou histoire critique et militaire des guerres de Frédéric II. comparées à celles de la Révolution," in five volumes. He published his "Memoire sur les probabilités de la guerre de Prusse" in 1806. While serving on the staff of Marshal Ney, in the campaign of 1806 and 1807, he attracted the attention of Napoleon, who bestowed upon him the title of baron. In 1808 he accompanied Ney into Spain, but, in consequence of a misunderstanding with his superior, he remained inactive for two years. About this time he was solicited to enter the service of Russia, and was offered the rank of major-general, but he refused, and was again restored to favor and made a general of brigade in 1811. He was at the same time made historiographer of France, that office, which had been unoccupied since the time of Marmontel, being revived for his acceptance. In 1812 he was made governor of Wilna and Smolensk, and distinguished himself in the well-contested struggle at Bautzen, May 20, 1813, where the allies were worsted and the French general Duroc, was killed. Ney recommended him for promotion to the rank of general of division, but Berthier, who was his enemy, not only refused the request but struck his name from the list of promotion, and caused his arrest upon some trifling charge of routine irregularity. Jomini never forgave this treatment, and, immediately after the armistice of Pläswitz, he bade farewell to the French army and took service under Alexander, who immediately appointed him an aide-de-camp. Napoleon caused charges of desertion to be filed against Jomini, and a French court-martial found him guilty and sentenced him to death—a sentence which could scarcely be carried into execution while the culprit was in the camp of Alexander. Jomini behaved in the most honorable manner at this time, not only refusing to divulge Napoleon's plan of operations, with which he was thoroughly familiar, but declining to take part in the campaign against the French. Although his enemies accused him of having betrayed the French to the Russians, Napoleon emphatically denied the statement. In 1815, while visiting Paris with the Czar, Louis XVIII. conferred upon him the cross of the Order of St. Louis. He remained several years in Paris, superintending

the publication of some of his military works. In 1822 he returned to Russia, and was charged with the military education of the Grand-duke Nicholas. When his pupil ascended the throne, Jomini was attached to his person as an aide-de-camp. He participated in 1828 in the Russian war against Turkey, at the conclusion of which he retired to Brussels, where he resided from 1829 to 1853. The breaking out of the Crimean War again called him from his retirement, but he bore no particularly prominent part in that struggle, and at its conclusion returned to Brussels, and in 1863 was permitted by Napoleon III. to reside at Passy. Since that time he had been engaged upon various works of military history. He ranked as one of the most profound writers on the art of war, and his works are counted among the standard text-books. His chief publications were: "Principes de la stratégie" (3 vols. 8vo, Paris, 1818); "Vie politique et militaire de Napoléon, racontée par lui-même au tribunal de César, d'Alexandre et de Frédéric" (4 vols. 8vo, Paris, 1827); "Tableau analytique des principales combinaisons de la guerre et de leurs rapports avec la politique des états" (4th ed., St. Petersburg, 1836); "Précis de l'art de la guerre, ou nouveau tableau analytique des principales combinaisons de la stratégie, de la grande tactique et de la politique militaire (5th ed., Paris, 1838);) "Précis politique et militaire de la campagne de 1815" (Paris, 1839); "Appendice au précis de l'histoire de la guerre" (Paris, 1849).

JONES, ERNEST, an English radical journalist, reformer, and orator, born in Berlin, Prussia, January 22, 1819; died in London, January 26, 1869. He was of the old Norman stock; his father, a brave and gallant Englishman, was a major in the 15th Hussars of the Hanoverian contingent, and Ernest I., King of Hanover, was his godfather. He was very thoroughly educated, speaking and writing fluently all the the modern languages of Europe, and becoming versed in the politics of the European states, and graduated with distinction at the College of St. Michael, Luneburg. In 1841, with this superior education, and endowed with remarkable abilities, with an eloquence which to his dying day carried the masses as by storm, with the most indomitable energy, a zealous patriotism, a fierce hatred of class legislation, and an enthusiastic devotion to the cause of the common people, Jones came to England, was called to the bar, and commenced the practice of the law with great success. In 1844 he flung himself into the cause of the people, embarking in the Chartist movement with all that earnestness and impetuousness which always characterized him. The Chartist movement was taking form and character, and Jones was from the first its leader. He lectured, he conducted open-air meetings, in which by his fiery eloquence and his severe denunciations he brought the passions of the masses to fever-heat in their hatred of the aristocratic class and its oppressions; he established and edited *The People's Paper* for eight years; he wrote books and tracts, to rouse them to greater exertion; and all this without fee or reward, though he was very poor, and at times his refined and accomplished wife and his young children knew what it was to want bread. But he had entered upon this contest from no mercenary motive, only from his love of the people. At length, in 1848, taking advantage of some of his expressions, uttered in the heat of one of his most impassioned speeches, the Government arrested him on the charge of making a treasonable speech, and he was consigned to prison for two years. For nineteen months of that time he was deprived of pens, ink, and paper, and his family were suffered to starve, while his letters from them were kept back for three months at a time, and he was unable to learn whether the cholera, then fearfully prevalent, had or had not carried them off. His uncle, Hilton Annesley, being near death, sent to him in prison offering to settle on him an annuity of $10,000 per annum, if he would abandon his radical course, and the advocacy of the cause of the Chartists. Suffering both in his own person and in the fate of his hapless family, it was a great temptation; but he put it from him without hesitation, preferring to starve rather than forego his principles. Harder and sterner was the cruelty which, under the name of justice, was inflicted on him by his jailors, till even Parliament was compelled to investigate his treatment. During his confinement, he wrote a poem, "The Revolt of Hindostan," with his own blood upon the leaves of his prayer-book. It was said to have been the most eloquent of all his writings, and its polished invective excited the admiration of Mr. Disraeli, much as he disliked Jones's political views. He was discharged from prison, at last, to find his gifted wife dying of her privations and sufferings, and himself compelled to resume with broken health the old warfare. He was now, however, more discreet, though no less bitter. He had been a candidate for Parliament before his imprisonment, and was so again in 1853 and 1857, but was defeated each time. He still labored on for the people and with increasing chances of a partial success. He was not destined to see any of the reforms he sought for completely achieved, but he was cheered by the knowledge that they were approaching. He declared for universal suffrage, and he saw the number of voters in England more than doubled; for the vote by ballot, which the present Parliament will probably grant; for the disestablishment of the Irish Church, which is already ordered; for the extirpation of the English establishment, which is inevitable, and for the abolition of the House of Lords, which cannot be very long delayed. These measures, which, twenty years ago, seemed so horrible to the minds of the middle class in Great Britain, are all now advocated by many of the first men of the nation. Mr.

Jones devoted considerable attention to poetical composition from 1853 to 1860. His "Battle Day" appeared in 1855; "The Painter of Florence," and "The Emperor's Vigil," in 1856; "Beldagon Church," and "Corayda," in 1860. They are all fervid, and exhibit a high degree of poetic talent, but, like our own Whittier, the versification would doubtless have been more perfect and melodious had he not "run an opinion mill." Upon the extinction of Chartism, in 1858, he resumed practice as a barrister on the Northern Circuit. He had been a candidate in Manchester for the present Parliament, had received 10,746 votes, and, though his opponent had been declared elected, he would probably have received the seat, as that opponent was unseated for bribery. He would also have been elected for Drogheda, had his health permitted him to be a candidate.

JUKES, JOSEPH BEETE, M. A., F. R. S., an eminent geologist and writer on physical science, Professor of Geology, etc., born near Birmingham, October 10, 1811; died in Dublin, July 29, 1869. He was educated at the Grammar School, Wolverhampton, King Edward's School, Birmingham, and at St. John's College, Cambridge, where he graduated B. A. in 1836, and M. A. in 1841. In 1839 he was appointed Geological Surveyor of the colony of Newfoundland, and returned to England the following year. In 1842 he was appointed, by the Admiralty, naturalist to H. M. S. Fly, which was then about to proceed on a surveying and exploring voyage to the shores of Australia and New Guinea. In September, 1846, he was assigned to a post on the Geological Survey of the United Kingdom, under the late Sir H. De la Beeche, the Director-General. In November, 1850, he was transferred to Ireland, as local director of that branch of the survey; and on the establishment of scientific lectureships in the Museum of Irish Industry, under Sir Robert Kane, M. D., in 1854, he was also elected Lecturer on Geology to that institution. He was the author of many valuable geological works, among which may be mentioned, "Sketch of the Physical Structure of Australia;" "Popular Physical Geology;" "The Student's Manual of Geology;" "Geology of the South Staffordshire Coal-field;" and numerous papers on geological subjects in the journals and periodicals of those societies. He was a fellow of several learned societies.

K

KANSAS. The liabilities of the State government of Kansas, at the close of the year, consisting of 6 and 7 per cent. bonds of various classes, and 10 per cent bonds (Agricultural College), with outstanding State and Territorial warrants and taxes overpaid by sundry counties, amounted to $1,771,107.94; and the resources, in unpaid taxes levied in the years 1861 to 1868, with amount in treasury (Treasury Military), were $809,550.43. The total receipts from all sources during the year were, $1,335,341.05; the total disbursements during this period, $1,287,250.63, leaving a balance in the treasury of $48,091.62.

An increase of the district schools shows the interest taken in education: 335 have been added to the number during the year, showing a total of 1,707 schools. The number of male pupils, between the ages of 5 and 21 years, was 48,007, showing an increase of 7,761. The number of females of school ages was 44,510, being an increase of 8,606; and the whole number of persons enrolled in common schools, 58,681; increase for the year, 13,541. Number of pupils in select schools, seminaries, and colleges, 2,783; decrease, 615. The whole number in public schools and other institutions of learning, 61,465; increase, 14,256. The average daily attendance in public schools was 31,124, being an increase of 3,886; and the average length of time public schools have been taught is five months. Number of male teachers employed, 896; female teachers, 1,118; increase, 263. The average wages paid to male teachers, $37.07 per month; decrease, $2.49. The average wages paid to female teachers, $28.98; decrease, $12. The total amount paid for teachers' wages in public schools, $292,719.74. Increase for the year, $88,844.40. The amount raised for public schools, $565,311.17; increase, $136,095.59. The number of log school-houses, 338; frame, 606; brick, 35; stone, 224; and the total value of school bonds, $7,031,892. The number of students in the State University was 143; the library connected therewith has received and an increase of over 2,000 volumes. A valuable astronomical transit was recently donated, and an observatory-wing has also been added to the building. The Agricultural College contains 173 students, and rapid progress is taking place in all the departments.

The average number of patients in the Insane Asylum for the past twelve months was 31; and during the year the number treated was 55; discharged, 18; died, 1. The trustees estimated the annual expenses at $9,000.

The Blind Asylum contained 20 pupils in attendance during the year; two were discharged, and one died. The estimate, by the trustees, for the year's current expenses, was $8,600; building purposes, etc., $6,000. The Deaf and Dumb Asylum numbered 34 pupils in attendance during the year, and the expenses were estimated at $17,000, which included the payment of all salaries. A verbal inaccuracy arose in the recital of the fifteenth amendment to the Constitution of the

United States, as incorporated in the resolution of ratification passed by the Legislature at the previous session; and the Governor recommended to the Legislature that the mistake should be rectified, forming as it did an important part of the fundamental law of the nation. The Governor, in his remarks, also proceeds to state that the present seems a fitting time for the removal of restrictions upon the privileges (political or otherwise) placed by the State upon citizens for participation in the late war. He said: "Probably these restrictions were justifiable, as long as the public safety demanded. The theory of the Government is to regard each citizen as an equal member of the State, vested with important and active rights, and nothing less than a consideration for public safety can justify the State in depriving any well-conducted citizen of such rights." He alludes also to the subject of assessments, and proceeds to remark that the propriety of making the assessed value of property approximate to its cash value ought to receive due attention. It is evident that a return of $100,000,000 of taxable property, with a levy of eight mills, would make a better margin for the State than a return of $80,000,000 with a levy of ten mills; the actual amount of property in each case being equal, the amount of revenue raised would be the same, and the taxes of each individual the same. Equitable distribution of taxation, provision for prompt collection, and rigid but wise economy in appropriations, will soon make the financial condition all that could be desired. Much has been accomplished in the construction and projection of railroads, and far exceeded the most sanguine expectations. A number of lines are now in progress, and the construction rapid, and the miles now in use must at least be nine hundred. The Governor says also that no other agency tends so much to the development of unsettled regions and the protection of distant frontiers, as the building of railroads. It is to be hoped the Government, in their land-grants to the State, for further railroad constructions through the undeveloped portions, may pursue a policy that will protect the poineer settlers, and yet enlist capital. The advantages already derived from those portions of the State partially developed are daily becoming more apparent, as they promote the discovery and availability of new sources of wealth—like quarries of building-stone of extraordinary quantity and quality; marbles of intrinsic beauty; mines of coal and mineral pigments of excellent quality, salt, gypsum, and numerous other commodities, the presence of which was before unknown, or but little regarded or cared for.

At Leavenworth City a railroad bridge over the Missouri River is rapidly progressing to completion. It is built in consonance with the richness and beauty of its surroundings, and of a sufficient capacity to equal the demands if the route should become one of the prominent highways of the continent, and Leavenworth the commercial emporium of the Missouri Valley.

The Governor calls the attention of the Legislature to the importance of a direct route from the interior to the sea, which will not tax the labor of the working-man seventy-five per cent., simply to furnish transportation for his products. He deems it eminently fit and proper that Congress should be memorialized on this question, asking that, as a national enterprise, the James River and Kanawha Canal, in Virginia, be enlarged and completed in such a manner as to connect the navigable waters of the Ohio and James Rivers, thus affording means of transit by water from the navigable streams of the interior to the Atlantic Ocean, without the necessity of transshipment, and without risk from climate, tempest, or an alien enemy, and at a cost for transportation vastly less than that of the present lines of communication.

The selection of public lands due the State, under the act of Congress, September 4, 1841, was made by commissioners appointed by the Executive of the State, and was approved by the Secretary of the Interior, to the amount of 495,552 acres.

Except the passage of the fifteenth amendment to the Federal Constitution, the action of the Legislature was confined to matters of local interest.

The fifth article of the treaty of 1867 with the Indian Sac and Fox tribe states, "their land should be opened to entry and settlement, but subject to all the laws and regulations of the General Land-office." The amount of land ceded, in the treaty referred to, is 150,000 acres.

A diversity of opinion exists as to the production and planting of grapes. This branch of horticultural wealth has caused considerable discussion, forming, as it does, an important item in the products of the State. A well-known Western authority submitted that the planting should receive plenty of room, say, eight feet by eight feet, on elevated ground, and adds, "the Catawba grape can be successfully grown." A member of the State Horticultural Society, indorsed by several leading growers, advised the planting of those known to the initiated as "Ires," "Concord," "Crerelling," "Isabella Nortons," "Virginia," and, lastly, not to forget the "mottled." A warm, light soil is needful, well underlaid with limestone or shale.

Salt is abundantly found in every section of the State, and will form an important and staple article. Its analysis has been made by Dr. Kindell, and resulted as follows:

Chloride of sodium	98.86
Sulphate of lime	.76
Chloride of magnesium	.25
" of calcium	.13
	100.00

As a wheat-growing country, Kansas ranks prominently. The average yield last year was

greater than that of any other State in the Union, with the exception of little Vermont, which realized 16 bushels per acre against Kansas 15.6. The limestone soil is specially adapted to the culture of this cereal. Both spring and fall varieties seem admirably suited to the soil and climate.

Much interest has been manifested in the cultivation of timber known as the European larch. An investigation has clearly shown that this wood is applicable for domestic purposes, and is also much sought for buildings and railroad purposes. One hundred and fifty thousand acres of wood land are cut yearly to supply the demand for railroad sleepers alone.

Much fear has been awakened by the reckless disregard paid by settlers to the forests, and it has been suggested that an appeal should be made to the Legislature to protect them by some stringent enactment.

A woman's rights convention was held in September, but was not favorably viewed and no important action was taken.

KENDALL, Amos, LL. D., an American statesman, political leader, and publicist, born in Dunstable, Mass., August 16, 1789; died in Washington, D. C., November 11, 1869. His parents were poor, and he worked with his father on the farm until he was sixteen years old, enjoying few privileges of education. He then became anxious to enter college, and after little more than a year's preparation entered Dartmouth. Still poor, he was obliged to absent himself a large part of the time, in order to obtain means for support by teaching. With all these discouragements, however, he was graduated the first in his class. He then studied law with W. B. Richardson, of Groton, Mass., subsequently Chief Justice of New Hampshire, and in the spring of 1814 moved to Lexington, Ky. His practice not proving lucrative, he again resorted to teaching, acting for some time as tutor in the family of Henry Clay. Removing to Georgetown, Ky., he was there appointed postmaster, and there also commenced his editorial career by writing for a local paper. His writings attracted attention, and in 1816 he accepted a position on the staff of *The Argus of Western America*, the State journal at Frankfort. He advocated the measures of the Democratic party, taking also a special interest in the common schools, and securing the passage of an act to district the State and set apart one-half the profits of the Bank of the Commonwealth as a school fund. During the presidential contest of 1824 Mr. Kendall was a warm supporter of General Jackson, and, when he took the presidential chair, Kendall was called to Washington as Fourth Auditor of the Treasury. Here his influence was soon felt, and, augmented by his own natural secretiveness, he came ere long to be looked upon as the secret spring which moved the presidential pen, and perhaps, also, the presidential will. That he enjoyed the utmost confidence of President Jackson, and lent his pen to express the President's desires, is perfectly well known. When the President first concluded to take action against the United States Bank, Mr. M. M. Noah, surveyor of this port, received a note from Mr. Kendall, informing him of the tenor of the forthcoming message. This letter, slightly altered, appeared as an editorial in *The Courier and Enquirer* the next morning. When the Senate reached Mr. Kendall's name, on the list of appointments, it was very unwilling to confirm it, and when it was confirmed it was by the casting vote of the Vice-President. When the name of Isaac Hill was rejected, a long communication was published in *The New Hampshire Patriot*, calculated to make every Jackson man regard the rejection as a personal affront. There is little doubt of Kendall's being its author. When the quarrel between Jackson and Calhoun became public, General Duff Green, editor of *The United States Telegraph*, the organ of the Administration, sided with the Vice-President. Kendall foresaw the defection, and gave the President warning, and it was by his request that his old contributor, Francis P. Blair, came to Washington and established *The Globe*. In 1835 Mr. Kendall was placed at the head of the Post-Office Department. His administration here was very successful. He freed the department from debt, and induced Congress to adopt an organization which has continued with little change up to the present time. In 1835, while he was Postmaster-General, he issued his famous order concerning the United States mails. On the 29th of July, a report was spread in Charleston, South Carolina, that the mails from the North contained a quantity of abolition documents. A public meeting was called. This meeting resolved that the mail matter in question should be publicly burned. Accordingly a mob proceeded to the post-office, seized and rifled the mail-bags, but did not find any thing more incendiary than a few harmless Northern papers, which were destroyed. The postmaster at Charleston reported the occurrence to Postmaster-General Kendall. He replied in an official letter, sanctioning the proceedings. "I am satisfied," he wrote, "that the Postmaster General has no legal authority to exclude newspapers from the mails, nor to prohibit their carriage and delivery on account of their character or tendency, real or supposed. But I am not prepared to direct you to forward or deliver the papers of which you speak. We owe an obligation to the laws, but a higher one to the communities in which we live; and, if the former be permitted to destroy the latter, it is patriotism to disregard them." In his next annual report he urged Congress to pass a law, for which he framed a bill himself, forbidding the circulation in the mails of "any pamphlet, newspaper, handbill, or other printed paper or pictorial representation, touching the subject of slavery," etc. He left the Cabinet in 1840, and was no longer heard of in public life. President Polk offered him a foreign mis-

sion, but it was not accepted. In the political reaction which followed Mr. Van Buren's Administration, several suits at law were brought against Mr. Kendall by disappointed mail-contractors, whose monopolies he had so sternly resisted, in rescuing the Government from the pressure of debt they were imposing upon it. Declining to take any advantage of his official privilege, Mr. Kendall met these suits alone and at his own cost. In 1845 he became associated with Prof. S. F. B. Morse in the ownership of the telegraphic patents, and the management of the organization, which extended their benefits to all portions of our country, and to most of the countries of Europe. Unquestioned as are the merits and genius of Prof. Morse, it is not too much to say that, but for the executive ability and the far-reaching enterprise of Mr. Kendall, that great invention would have been long delayed in its extension and diffusion, and our communication with Europe and Asia, and even with our own Pacific coast, might not have taken place before the close of the present century. Mr. Kendall was a devout Christian in his private life, and took a very active interest in the prosperity of the Baptist Church in Washington. The Calvary Baptist Church, erected in 1864, was built almost entirely by his contributions, he having subscribed, at various times, about $100,000 toward its erection. After its destruction by fire in 1867, he again contributed largely to have it rebuilt, it being his intention to establish it as a memorial church to his wife. His total contributions to the church amounted to $115,000, and his contributions to the Deaf and Dumb Asylum to about $20,000. He was the founder of the Deaf and Dumb Asylum. He was the first president, and remained as one of the directors up to the time of his death. Besides the above gifts, Mr. Kendall, in the spring of 1869, gave $10,000 worth of bonds to endow two mission schools, and just before his death he gave $15,000 more for the purchase of lots and buildings. He was, for some years before his death, president of the Board of Trustees of the Columbian College, and had endowed several scholarships in that institution. In the autumn of 1865 he made the tour of Europe, continuing his journey to Egypt and Palestine, being absent about two years. His investigation of the questions of Biblical geography and literature connected with the Holy Land was very thorough, and his observations were as accurate and comprehensive as they could have been in his younger days, when friends and foes alike gave him the reputation of being the ablest and most incisive writer in Washington.

KENTUCKY. Quiet and order prevailed generally throughout the State during the year. In the early part of the summer, several acts of violence were committed in Lincoln and the adjoining counties, by marauding bands of outlaws, headed by one Henderson Gooch, whose depredations were a serious annoyance to the inhabitants of these counties. At the request of the judge and the Commonwealth's attorney of the circuit in which these disorders occurred, Governor Stephenson without delay called out the militia, both infantry and cavalry, to maintain the supremacy of the law; order was promptly restored, and several of those charged with violating the law were arrested and committed to jail for trial.

As the regular sessions of the General Assembly are biennial, and are limited in time to sixty days, unless extended by a two-third vote of all the members elected to each branch, it was deemed necessary by the Legislature of the preceding year to hold an extra session during this year; accordingly, this body met pursuant to adjournment, on the 5th of January, 1869. The session was short, and the acts were mostly of a local or personal nature. At this session the fifteenth amendment to the Constitution of the United States was considered. The vote was taken on the 12th of March, which resulted in the rejection of the measure by 27 nays to 6 yeas in the Senate, and 80 nays to 5 yeas in the House. An important measure of this session was the provision for raising money in support of the common schools of the State. The bill provided for the levying of a tax of fifteen cents on the hundred dollars, to be devoted exclusively to school purposes, and for the submission of the question to a vote of the people of the State. Notwithstanding the proposed assessment was three times greater than any previous tax for a similar purpose ever before submitted to a popular vote in Kentucky, the measure was carried at the election by a majority of twenty-five thousand votes. A bill was also passed providing for the establishment of a House of Reform for Juvenile Delinquents. Pursuant to the provisions of this act, a location for the institution was selected in Jefferson County, and a tract of land containing two hundred and thirty acres was purchased at a cost of $20,000. The work is now under contract, and the buildings will be completed and ready for the reception of subjects by the 1st of September, 1870.

The political canvass opened with the Republican State Convention, which assembled at Lexington, on the 27th of May. Ex-Attorney-General James Speed presided over the convention. The only candidate chosen was one for the office of State Treasurer, for which Mr. E. R. Wing received the nomination. The convention adopted the following platform:

Resolved, That we regard the inaugural of President Grant as eminently wise and sound, and pledge ourselves to support him in administering the General Government upon the principles therein announced.

Resolved, That we heartily recommend the ratification of the fifteenth amendment, believing that it will eminently conduce to the peace and welfare of the country.

Resolved, That the fundamental principle of the Republican party—equal rights under the law—is ap-

proved by us, and we pledge ourselves to continue our support of this great truth.

Resolved, That we denounce the wanton extravagance of the State government, which has so embarrassed the finances of the State as to make additional taxation necessary; the unequal administration of the laws, which has made life and liberty so precarious in the State; and that we pledge the Republican party to a reform in this matter which will restore health to the finances, and give protection to all in their rights.

Resolved, That the national debt, occasioned and necessitated as it was by the rebellion, aided in the salvation of the nation, is sacred and inviolate, and its payment should never be questioned in any wise whatever.

Resolved, That we claim the admission of the black population of this State to the right of testifying in our State courts in all cases whatsoever, upon the same terms accorded by law to other classes of citizens. We claim this as an act of justice to our most helpless people, and because it is right.

At the Democratic Convention, subsequently held, Mr. J. W. Tate was chosen as the opposing candidate for the office of State Treasurer. The election was held on the first Monday in August, when 82,607 votes were cast for Mr. Tate, and 24,759 votes for Mr. Wing—Mr. Tate being elected by a majority of 57,848.

The General Assembly met at Frankfort, on the 6th of December, when H. P. Leslie was elected as President of the Senate, and J. H. Bunch as Speaker of the House. This body was composed of 36 Democrats and 12 Republicans in the Senate, and 92 Democrats and 8 Republicans in the House. In view of the fact that the term of Thomas C. McCreery, in the United States Senate, would expire in 1871, it became necessary to elect a United States Senator at this session. This matter was taken up early, when a spirited and protracted contest ensued, in which Governor John W. Stevenson and Senator McCreery, the present incumbent, were the prominent candidates. The contest resulted in the election of Governor Stevenson, who received on the last ballot 117 votes—67 being necessary to a choice.

The finances of the State are in a sound and prosperous condition. The receipts for the fiscal year ending October 10, 1869, were $678,505.70, which, with the balance of $587,199.68 in the Treasury at the beginning of the fiscal year, amounted to $1,265,705.38. The expenditures for the year were $908,921.26, which, deducted from the preceding sum, left a surplus in the Treasury on the 10th of October, 1869, of $356,783.42; which, added to $902,552.08, the amount of outstanding loans made by the Commissioners of the Sinking Fund, increases the amount standing to the credit of the State to $1,259,335.50. The amount of the State debt on the 10th of October, 1869, was $3,307,177.52, including bonds dedicated to the school-fund, and not now redeemable, to the amount of $1,648,288.52, which, deducted from the preceding amount, reduces the State debt proper to $1,658,894. This indebtedness of the Commonwealth consists of—

6 per cent. bonds which have matured and are outstanding	$33,394 00
5 per cent. bonds due and outstanding	10,000 00
6 per cent. bonds maturing in 1870 and 1872	1,120,500 00
Military bonds maturing in 1895	336,000 00
5 per cent. bonds maturing between 1871 and 1878	160,000 00
Total	$1,658,894 00

The amount of the stocks held by the Commissioners of the Sinking Fund was $1,287,858.46, which, with the surplus in the Treasury, together with the loans made by the commissioners, gives a balance in favor of the State over its outstanding indebtedness of $888,294.96.

Of the loans here referred to, the principal item is the amount of $840,849.55 due from the revenue department proper to the State. The annual current revenue of the State has been insufficient for years past to meet the ordinary necessities of the State government. To supply these deficiencies from time to time, the Commissioners of the Sinking Fund were empowered by various legislative enactments to make the advancements to the revenue department which were to be returned to the Sinking Fund. The first of these loans was made in the year 1861. This insufficiency of the revenue has resulted from a thoroughly defective system, the provisions of which are incongruous and inconsistent. Many subjects, which should be assessed, and which would yield a large income, have escaped taxation altogether by reason of not having been on the revenue lists; while many of the items on the lists are not taxed in proportion to the value of other property. In some portions of the Commonwealth, property is assessed by a specie, in other portions by a paper standard. The revenue has also been weakened by unequal valuations of property, and by a failure in some instances to collect taxes due. The attention of the last Legislature was called to this subject, with the view of effecting a thorough revision of the present revenue laws.

The charitable and reformatory institutions of the State are in good condition. The enlargements and improvements which have been made in several of these institutions during the year afford greatly-improved accommodations for the comfort of the unfortunate inmates.

The number of convicts in the Penitentiary, at the close of 1869, was 650; 84 more than there were at the close of the preceding year. During the year, efforts were made for the introduction of changes and improvements in the prison system. A plan was proposed for classifying and separating the convicts, and for giving the convict on his restoration to liberty a portion of his surplus earnings. The provision made by the Legislature, at its extra session in the beginning of the year, for the establishment of a House of Reform for Juvenile Delinquents, is intended to withdraw from the Penitentiary the younger class of offenders.

A committee of three was also appointed to visit the prisons of other States, and make a report upon the whole subject of prison dis-

cipline, with a view of introducing needed improvements into the prisons of Kentucky.

The question of the power of a State to tax United States bonds for State purposes came up during the year in the County Court of Jefferson County, and a decision was rendered by Judge Hoke. This was the first case testing the constitutionality of the act of the General Assembly of Kentucky, passed in March, 1867, providing for the taxation of the income derived as interest on United States bonds.

The defendants, the Louisville City National Bank, claimed that the act of the Legislature was in violation of the Constitution, that it impaired the obligation of contracts, that it was double taxation, and not uniform.

Judge Hoke, after remarking that "this case brings for the first time before the courts the constitutionality of the power of a State, through its Legislature, to tax the interest of United States bonds for State purposes," gave a full review of the law bearing upon the point at issue, showing that the act of the Legislature was constitutional.

Affirming the principle that "the taxing power is inherent in sovereignty, and must, upon the supposition that the States are sovereign, belong to them, unless it can be shown that they have surrendered it," he said: "Every species of property located in a State, except such as is owned by the United States, is subject to the sovereign power of the State, and the power of the State exists, by virtue of the authority inherent in the State itself, not subject to the control of the General Government. The right of taxation exercised by the State over all property belonging to corporations or individuals is older than the Government, and a sacred right, to be restrained only when in conflict with the carrying into effect some power belonging to the General Government. The Federal Government is the creature, and the States the creator—the Union being supreme only in such powers as have been delegated. In denying this you deny the sovereignty of the States, making them mere creatures of the Union, holding the same relation to the Government that the counties bear to the State." In the case above referred to, the court said: "If the right were conceded to the General Government to limit or control taxation in the States, it would involve the power to prohibit their collection, and the power to prohibit involves the authority to render the power to raise the revenue necessary for the support of the State Government useless, if not impossible."

Holding that national banks, although incorporated by Congress, are protected by and subject to State law, the judge, in closing, said: "I am unable to see any illegality or unfairness in the enforcing of the act of the Legislature. I find it as a law, and am not willing, because of some mere inconvenience to the national Government, to decide the act unconstitutional."

The General Assembly, having determined to test the constitutionality of the Civil Rights Bill, counsel were employed, and two cases involving the validity of the act have been carried to the Supreme Court of the United States for decision. At present there is no law in Kentucky requiring the registration of births and marriages, the statute for this purpose having been repealed about the beginning of the war. The medical societies throughout the Commonwealth having urged the enactment of a similar law, the matter was brought before the last Legislature.

During the year improvements have been effected, and others are in progress on various land and water lines, which will give greatly-increased facilities for travel and the transportation of freight. In railroad matters an important event of the year was the formal opening of the Louisville and Cincinnati Railroad, which event was celebrated at Louisville on the 28th of June. The length of the road is 106 miles, and the running time between the two cities five hours.

One of the National Commercial Conventions was held at Louisville, Ky., commencing on the 13th of October. For an account of its proceedings, *see* the article on COMMERCIAL CONVENTIONS.

Since the war, a growing need has been felt in Kentucky for labor and capital, to promote the material prosperity of the State; and the subject of immigration as the best means of accomplishing this end has been increasing in interest and importance. The attention of the last Legislature was called to this matter by the Governor, in order that some system might be adopted, either of coöperating with other Southern States, or of acting alone, for disseminating information in Europe showing the material resources and the industrial advantages of the State, and the good feeling of its citizens toward immigrants. It was suggested to the Legislature, that Kentucky might establish a conjoint agency with Virginia, West Virginia, and Tennessee, for the purpose of preparing accurate statements embodying the social, political, and industrial statistics of these States, to be translated and published in the various languages, and distributed among the different nations of Europe, in order to remove any prejudice or error in regard to the country and people of the South, that might exist in the minds of emigrants before their departure for America. The rich deposits of iron-ore and the vast coal-fields of Kentucky need but the aid of the capitalist and the laborer to make them a source of wealth and revenue to the State. Toward this end efforts have already been made, and greater will be made in the future.

KING, JONAS, D. D., an American Congregationalist clergyman, and missionary to Greece, born in Hawley, Mass., July 29, 1792; died at Athens, Greece, May 22, 1869. He was fitted for college under the instruction of Rev. Moses

Hallock, of Plainfield; graduated at Williams College in 1816, and at Andover Seminary in 1819. Receiving ordination at the close of his seminary course, he was employed some months as a missionary in South Carolina. In 1821, at the founding of Amherst College, he was named Professor of Oriental Languages and Literature; and to prepare himself for this office he repaired to Paris, his expenses being paid by private friends. While sojourning in that city he received, by letter, an urgent invitation from Rev. Pliny Fisk, of the Palestine mission, to go to his aid in establishing the mission at Jerusalem. Relinquishing his connection with the college at Amherst, Mr. King offered his services to the American Board for three years, and, through the liberality of friends, started without loss of time for Malta, and reached Jerusalem in April, 1823. Having completed his three years, he left Beirut on the 26th of September, homeward-bound, going overland to Smyrna. Remaining several months at Smyrna, he improved the time by studying the modern Greek language. After reaching Boston, early in the autumn of 1827, he was for a time employed in promoting the missionary cause in the Northern and Middle States. Meanwhile Greece had been desolated by Turkish and Egyptian armies; and the Philhellenes of this country were sending supplies to the starving inhabitants. Mr. King was invited, by a committee of ladies, to go out in one of the vessels loaded with supplies, and assist in their distribution. He did so, and arrived at Paros in July, 1828. On the 22d of July, 1829, he married, on the island of Tenos, a young Greek lady of a respectable family in Smyrna. Mr. King was reappointed a missionary of the Board in December, 1829. He had previously visited Athens, and made arrangements for residing there; and removing thither early in 1831, after the Turks had vacated the place, he became one of the earliest settlers. Soon after this, he received the degree of Doctor of Divinity from the college at Princeton, N. J. Before leaving Syria, he had addressed a "Farewell Letter" to his friends in that country, stating the reasons why he did not become a Roman Catholic. This letter, translated, with some additions by Mr. Goodell, into the Armenian language, found its way to Constantinople, where it attracted the attention and awakened the interest of influential Armenians, who at once assembled a national council, in which the abuses there exposed were discussed and severely censured, and measures were adopted for their removal. This farewell letter was circulated, in modern Greek, by Dr. King; and it became, with others of his publications, in 1852, the basis of a prosecution against him in the criminal court at Athens; where, under the pressure of great popular excitement, he was condemned, against law and justice, to confinement for fifteen days in a loathsome prison, and, after that, to expulsion from the kingdom of Greece. Owing to the vigorous protests of our Government and the efforts of American citizens when in Europe, his confinement was but for a single day, and the sentence of banishment was not carried into effect. Dr. King was a man of indomitable energy and equal to the noblest of the reformers. In a single year he distributed more than seven hundred copies of the Scriptures in Greece. Prior to 1857, he had translated into modern Greek, and printed, five volumes of the American Tract Society's publications, making a total of two thousand five hundred pages. At his private expense he also published four volumes of his own works in that language. As an Oriental scholar he was of the first rank, and as a missionary his zeal and devotion were unsurpassed.

L

LABORDE, Léon Emmanuel Simon Joseph, Comte de, a distinguished French archæologist and traveller, born in Paris, June 12, 1807; died there, March 21, 1869. He was the son of Alexandre de Laborde, known for his devotion to the arts. After studying at the University of Göttingen, he visited Egypt at the age of twenty-one, and from thence undertook the exploration of Arabia Petræa in conjunction with M. Linant. Being an expert draughtsman, he filled his portfolio with sketches, and on his return to Europe, in 1830, commenced the publication of his observations, under the title of "Voyage de l'Arabie Pétrée." The success of this work induced him to embark in another enterprise, and the "Voyage en Orient" appeared in 1838–'55. The history of the fine arts next attracted his attention, and in 1839 he commenced a "Histoire de la Gravure en Manière Noire, et son Application à l'Imprimerie." Subsequently, he published "Recherches sur la découverte de l'Imprimerie," 1840; and "Le Procès de Guttenberg à Strasbourg," 1841. Upon the death of his father, in 1840, he succeeded to all his honors. In 1841 he was elected a deputy, and the following year took his place in the Academy of Inscriptions and Belles-Lettres. In 1847 he was appointed Curator of the Antiquities in the Louvre, a position which he held until the Revolution of February, 1848, when he was thrown out of office, but on the 10th of December regained it, and had placed under his care the monuments of the Renaissance and modern Sculpture. After a journey into the Netherlands, he published a catalogue of the artists of that country, and also a work intended to show the state of the arts in France and the Low Countries in the Fifteenth Century, under the Dukes of Burgundy, under the title "Les Ducs

de Bourgogne." In April, 1847, he was promoted to be an officer of the Legion of Honor; and was a member of the commission to the Great Exhibition in London in 1851. In consequence of differences with the administration, he resigned in 1854 his position as Curator of Antiquities at the Louvre, and was appointed Director-General of the Archives of the Empire, in 1856. A short time before his death he was elevated to the Senate. His latest works were: "La Renaissance des Arts à la Cour de France," which was to be completed in four volumes 8vo., but only three had appeared at his death; "L'Union des Arts et de l'Industrie," 2 vols.; and "Inventaires et Documents publiés par Ordre de l'Empereur." Besides these, M. de Laborde communicated numerous articles to the *Revue Archéologique*, the *Revue des Deux Mondes*, and other periodicals.

LAMARTINE, ALPHONSE MARIE LOUIS PRAT DE, a French poet, historian, and statesman, born at Macon, October 21, 1790; died in Paris, February 28, 1869. His family name was Prat, but he adopted that by which he was best known on the death of his uncle Lamartine, who left him his name and a considerable legacy. His father had been a cavalry major under the monarchy, and had married Mlle. Alix de Roys, daughter of the Duke of Orleans's Intendent-General of Finance, and granddaughter to one of the under-governesses of the duke's family. During the Reign of Terror, both his father and mother were imprisoned at Autun, and only escaped the guillotine by the death of Robespierre. After that event they occupied a small farm-house at Milly, near Macon, and young Lamartine received his early education from his mother, of whose gentle manners and loving instruction he has preserved some pleasant reminiscences in his "Confidences." In 1805 he was sent to the college at Lyons, and soon after transferred to the Jesuits' school of the "Fathers of the Faith," at Belley, where he remained till 1809. It was at this period that he formed that attachment for his young neighbor Elvira which he has made classic in the history of Graziella, in "Les Confidences." His parents, to divert him from this attachment, sent him first to Paris and then to Italy. He remained abroad for a considerable time, and, soon after his return, in 1814, entered the army of the Bourbons, which he did not quit until the close of the "Hundred Days." He had already made some essays in the way of poetry, and several of his early dramas were regarded by Talma as full of promise. It was not, however, till 1820 that Lamartine took an acknowledged rank as a poet of the first order. In that year appeared his "Méditations Poétiques," including numerous pieces which at once gave him national fame, from the evidence they displayed of commanding genius and the force with which they struck some of the most sensitive chords in the breasts of his countrymen. The volume had an immense sale, no fewer than forty-five thousand copies having been bought by the public in the space of four years. But it did more for its author than merely give him literary reputation. It opened to him a diplomatic career, and he was appointed *attaché* to the French embassy at Naples. On his way thither he spent some time in Geneva, and renewed his acquaintance with Miss Birch, a young English lady of brilliant talents, a superior artistic education, and considerable wealth, whom he had met the previous year in Savoy, and who was strongly attached to him. The acquaintance ended in a mutual affection and in his marriage, and Madame de Lamartine made him one of the best of wives. After his marriage he became successively secretary of the embassy at Naples and at London, and afterward *chargé d'affaires* in Tuscany. During all this time Lamartine was enabled to live in splendid style, his wife having brought him a considerable fortune, to which were added the profits arising from the sale of his works; but he did not neglect to cultivate the muse, although several of the productions he published at this period were not considered equal to his earlier poetic efforts. Like all poets who have seen her sunny skies, and felt the inspiration of her grand monuments of the past, he loved to sing of Italy; and in one of his poems, deploring the decadence that had overtaken the country, he employed certain expressions descriptive of the Italians, which led to a duel between him and Colonel Pépe, in which he was dangerously wounded. Toward the close of his stay in Italy appeared his "Harmonies Poétiques et Religieuses," in which he stood forth as the brilliant and ardent defender of the religion and government, and which had the effect of adding immensely to his already great renown. This was in 1829, in which year he returned to France, and was elected a member of the French Academy. On the outbreak of the Revolution of 1830, advances were made to him by the new government; but these he declined, his self-respect, as he said, forbidding that he should take office under the monarchy which had supplanted that he had all along been serving. He became a candidate, however, for a seat in the Chamber of Deputies, but failed to obtain it, the result of which was that, dismissing politics for a time from his mind, he resolved to gratify a wish he had long felt, of visiting the East. The book in which Lamartine relates his travels in the East has obtained a world-wide fame, despite its extravagances, occasional inelegancies, and frequent geographical errors, and it well deserves its great reputation, for never before had poet travelled under such conditions, and never before had traveller described, with such poetic power, the varying scenes and incidents of journeyings by sea and land. Lamartine went to the East in his own vessel, equipped and armed by himself. He took his wife and his daughter with him; he had a splendid

library on board; and he furnished himself with a number of elegant presents for the chiefs he intended visiting. He travelled through Asia Minor in princely style, and passed through a number of striking adventures, all of which are given in his book. Unfortunately, he lost his daughter, who died at Beirût, which sad event hastened his return to France, where, during his absence, he had been elected to a seat in the Chamber of Deputies. In this new sphere he very soon distinguished himself, taking a prominent part in the debates in that body, his speeches being all characterized by the spirit they breathed of a love of liberty, justice, and tolerance, as well as by the eloquence that marked their style and delivery. The subjects upon which he most frequently and forcibly dwelt were such as the abolition of capital punishment, the Eastern question, defence of literary studies, projects of law relative to social assistance, etc.; and in discussing them he aimed perpetually, as the great end of his pleadings and efforts, at infusing the spirit of Christianity into the legislation of his country. Meanwhile he still vigorously pursued his literary studies, and in 1835 published the well-known account, already alluded to, of his Eastern travels. About the year 1837 Lamartine began in the Chambers to form a party, which was for several years known as the Social party, the main object of which was to promote the progress of the country by improving, through the employment of moral agencies and the wise development of its natural resources, the condition of the whole body of the people of France. The seeds sown by that small party have certainly borne some good fruit. His influence in the Legislature being considerable, he was, in 1844, offered a portfolio by Louis Philippe, but this he declined, and gradually drew nearer and nearer to the party opposed to the policy of M. Guizot, until, at length, he became completely identified with the movements which led eventually to the overthrow of the citizen king, a result to which his famous work, the "History of the Girondins," is believed to have materially contributed. This great work, which at first appeared as a serial in one of the Parisian journals, and was published in eight volumes, 8vo, in 1847, does credit alike to the genius and republicanism of its author. The part played by Lamartine during the period that succeeded the flight of Louis Philippe furnishes one of the most striking pages in the exciting history of revolutionary France. Never, perhaps, has eloquence so successfully vindicated the magical power attributed to it, as it did in the case of Lamartine during the Paris troubles of 1848, when he not only swayed the Senate by his powerful oratory, but tamed and held under control the fiery spirits of the mob. That was the grandest moment of his life, when the infuriated mob which surrounded the Hôtel de Ville, recognizing in the poet-statesman its master, yet unwilling to be controlled, clamored, with its ten thousand voices, for the adoption of the red flag as the future standard of revolutionized France. No man in France knew better than the historian of the Girondins the terrible significancy of that cry; for the red flag had been the symbol of the Reign of Terror. Stepping forward, boldly but calmly, upon the balcony of the Hôtel de Ville, and looking with the utmost self-possession upon the ruffianly and brutal masses below, some of whom were at that moment aiming their rifles at him, he said, in a voice so distinct that every one of the surging crowd understood each word: "No! for myself, I will never adopt it. The tri-colored flag has made the circuit of the world with the republic and the empire, with your liberties, and your glories: the red flag has only made the circuit of the *Champ de Mars*, trailing in pools of human gore. *Vive la tri-color!*" Touched by his enthusiasm, and lifted by it, for the moment, out of their brutality, the mob took up his cry, and shouted, "*Vive la tri-color!*" till they were hoarse. He was in reality the founder of the provisional government, which was the first step toward the Republic which he desired should succeed the fallen monarchy; but his moderation and conservatism did not long content the restless masses, who desired anarchy and the reënactment of the scenes of 1793. Yet, for a time, he was the most popular man in France. He accepted the post of Minister of Foreign Affairs in the provisional government, and by his brilliant and carefully-worded manifesto to foreign powers contributed greatly to win their confidence in the new republic, which their vivid recollection of the terrors of 1793 had led them to regard with hostility and fear. Such was his popularity at this moment that, although he had not expressed a wish to be a candidate for the Constituent Assembly, he was returned by eleven different departments, among them that of his birthplace. Through all the trying scenes of those days, however, he remained steadfast in his defence of the cause of law and order, stoutly resisting those excesses to which the people, in their temporary madness, were only too inclined to run. It was singular, nevertheless, that the cause of his downfall should have been the suspicion that he was conspiring, with Ledru Rollin, to give the ascendency to the Red Republicans, whose influence he had thus far been seeking to thwart. He opposed and personally fought against the insurgents of the June insurrection, but his power over them was gone, and he resigned his own executive office and favored the dictatorship of General Cavaignac. At the election for President in the autumn of 1848, he received only 19,900 votes, though ably supported by Pelletan and La Guéronnière. At the election of 1849, not one of the eleven departments, which a year before had so eagerly voted for him, chose him to the Legislative Assembly, and he only obtained a seat in the Chamber in a subsequent partial election.

from an obscure district where he was personally unknown. His influence in the Chamber was but slight, and even his eloquence produced little effect. At the time of the *coup d'état* (December 2, 1851) he withdrew finally from public life. He was at this time poor, although nominally the possessor of large tracts of territory in Turkey, and the recipient of a considerable income from his works. He had lived extravagantly, and was deeply in debt. A large subscription was raised for him both at home and abroad by his friends; but it was not sufficient to lift the burdens which oppressed him, and he checked it, and went resolutely to work to endeavor to raise the amount by his literary labor. But he was already past sixty years of age, and, though he wrote voluminously, his writings were mostly of ephemeral character, and lacked the freshness, the grace, and the brilliancy of his earlier compositions. He prepared a collected edition of his works, and appealed to the public to purchase them to relieve him from embarrassment; he put his estates into repeated lotteries, in which he urged all his friends to participate, and his later years were spent largely in querulous complaints against the public for their ingratitude to their benefactor. About a year before his death, the Emperor offered to discharge his debts, amounting to about one hundred and twenty thousand dollars, without exacting any conditions from him, but the old republicanism of the poet led him to refuse this offer, which seemed really to have been kindly intended. The death of his wife, in 1863, rendered him more unhappy than before, and he indulged in strange vagaries, forgetful, at times, of his own grand and noble career. His works, besides those already named, were his beautiful poem, "Jocelyn," 1835; "The Fall of an Angel," 1838; "Poetical Miscellanies," 1839; "Three Months of Power," 1848; "History of the Revolution of 1848," two volumes, 1849; "Les Confidences," 1869; "Toussaint l'Ouverture," a dramatic poem, 1850; "The New Confidences," 1851; "Genevieve, the Memoirs of a Savant," 1851; "The Tailor of St. Point," 1851; "Graziella," 1852; "History of the Restoration," six volumes, 8vo, 1851–'63; "New Voyage in the Orient," 1853; "Visions," 1852; "History of Turkey," six volumes, 8vo, 1854; "History of Russia," two volumes, 1855; "The Counsellor of the People," 1849–'50; "The Civilizer," 1851; "Familiar Course of Literature," 1856–'63. His complete works, collected by himself, published 1860–'69, number about thirty uniform volumes.

LIBRI-CARUCCI DELLA SOMMAIA, Guglielmo Brutus Icilius Timoleon, Count de, an Italian mathematician, professor, author, and bibliophile, born in Florence, January 2, 1803; died at Fiesole, near Florence, September 28, 1869. He was the son of the Count Libri-Bagnano, who several years later, after some not very creditable adventures, escaped from the prison at Lyons, and became from 1825 to 1830 the secret agent of the King of the Netherlands in Belgium. The son was well educated at Florence and Pisa, and early developed a remarkable talent for mathematical studies. In 1820, at the age of seventeen, he published an extraordinary memoir on the "Theory of Numbers;" in 1823 another on some points in Analytic Geometry; in 1826 one on the General Resolutions of Undetermined Equations of the First Degree; and in 1826 a volume on "Physical Questions." He had been appointed a professor in the University of Pisa in 1822. In 1830 his political views, which he enunciated with great freedom, and his participation in the unsuccessful insurrection of that year, made him obnoxious to the Austrian Government, and, through its influence, he was compelled to seek safety from arrest by flight to France, where, through the friendship of Arago, he was introduced into the circle of science. In 1833 he was naturalized as a citizen of France, and was elected the successor of Legendre in the French Academy. He secured the friendship of Guizot and many other eminent men, though his first friend, Arago, turned against him. Honors were bestowed upon him in abundance; he was made a professor at the Sorbonne, a professor at the College of France, and, after he had given in his adhesion to the *doctrinaire* party, he was appointed to the chair of Analysis in the Faculty of Sciences in Paris, and charged with the functions of Inspector General of Public Instruction, of newspapers, and of the public libraries of France. He received the decoration of the Legion of Honor, and became editor of the *Journal des Savants*. Possessing remarkable capacity for intellectual labor, and great industry, Libri accomplished in the fifteen years that followed a vast amount of work. His "History of the Mathematical Sciences in Italy from the Renaissance up to the end of the Seventeenth Century," four volumes, 1838–'41, is a work of great erudition and ability, and will always be the standard history of those sciences for that period; but it excited the displeasure of Arago and some of the French mathematicians because it demonstrated that what they had claimed as original with them had been known two centuries before in Italy. He also published during this period four very remarkable treatises on the higher mathematics. Turning his attention also to matters connected with his official position, he published "Letters on the Clergy and the Liberty of Instruction," and "Recollections of the Youth of Napoleon." He was also at this time editor, not only of the *Journal des Savants*, but of the *Revue des Deux Mondes*, and a constant contributor to the *Journal des Débats*, and wrote largely on bibliographic subjects. His patrimony and his official positions had made him wealthy, but this and his somewhat sarcastic and haughty temper had also gained him many bitter enemies; and, when he proposed through M. Guizot to give

his magnificent library, very rich in Italian books, especially of history and science, to the French nation, on condition of its being preserved together as the Libri Collection, his enemies began to circulate the report that he had availed himself of his position of Inspector of Public Libraries, to steal the most valuable of the books which he now proposed to give to the nation. Meantime the revolution of 1848 was drawing near, and, just on the eve of it, a report, bearing the signature of M. Boucly, *procureur du Roi*, was drawn up, bearing date February 4, 1848, and sent to M. Guizot, charging him specifically with the theft of numerous valuable works from certain libraries of Paris and other cities, and demanding his trial on those charges. M. Guizot, during the two or three stormy weeks of insurrection which followed (the overthrow of Louis Philippe occurred, it will be remembered, February 22–24, 1848), had no leisure to take any action in regard to this report, and the document was found on file with his other papers at the sacking of the Foreign Office. Libri, meantime, as a strong adherent of Louis Philippe, was threatened with political vengeance, and, like the King, was compelled to take refuge in England. Then followed his trial in his absence, the seizing of his library and effects, his condemnation, in default, to ten years' imprisonment and to be forever incapacitated from holding office. Knowing the bitterness of his foes, Libri did not trust himself in France, but he protested against the injustice of this judgment, and demonstrated that the most valuable books he was charged with stealing were either still in the libraries from which they were alleged to have been taken, or had been taken from them and sold to the British Museum or other collections before he came to France. He also twice or three times sold collections of books at auction in London containing most of those books, and appended to their titles in his catalogue sworn copies of the receipted bills of the second-hand dealers of whom he had bought them. But he was never able to obtain any redress from the French Government, and those who advocated his cause were punished. In England, he was generally believed innocent. The cloud under which he rested broke down his spirits, and deprived the world of the labors of one of the finest and clearest intellects of modern times. He had commenced years ago the Life of Galileo, but could not bring himself to complete it.

LINCOLN, HEMAN, an eminent citizen and philanthropist of Boston, Mass., born in Hingham, Mass., January 7, 1779; died at Boston August 11, 1869. He was favored with a careful early training under pious and judicious parents, and in 1793 removed to Boston and was apprenticed to a carpenter, whom he served till his majority. When about twenty years of age he was converted and became connected with the Second Baptist Church, of which he was subsequently for a time one of the deacons. With no desire or taste for political life, he was urged by his fellow-citizens to accept of positions of honor and responsibility in the State government. He served at different times in both Houses of the Legislature, and in 1820 was a member of the convention for the revision of the State constitution. In 1827 he joined a colony from the Second Church in the formation of what is now the Clarendon Street Church, Boston, of which he was immediately constituted a deacon, holding that office until his death. After years devoted to mechanical pursuits, he entered into a prosperous mercantile connection, under the firm name of Jackson & Lincoln, widely known for its fair and honorable reputation. For several years Mr. Lincoln was president of the American Baptist Home Missionary Society, and, as early as the commencement of the mission to Burmah, entered with his whole soul into the cause of foreign missions, of which he was ever after a liberal supporter. In 1824 Mr. Lincoln was elected Treasurer of the Baptist General Convention, an office which he held twenty-two years, rendering invaluable gratuitous service. In 1833 he visited, by appointment from the Board and at his own expense, the Cherokee Mission, then in North Carolina, and became warmly interested in the evangelization of that tribe. He was one of the founders of the Newton Theological Seminary in 1825, and was for many years a trustee of that institution as well as of Brown University. From 1846 to 1848 he was chairman of the Executive Committee of the American Baptist Missionary Union. In all these positions of responsibility, as well as in his every-day life, he was held in the highest estimation for his strict integrity of character and thorough devotion to the cause of truth and justice.

LITERATURE AND LITERARY PROGRESS IN 1869. Whether we regard the number or the quality of the books published in the United States during the last year, we can speak of progress only in a somewhat equivocal sense. The production of books has been less active and less profitable than it was during the year preceding, and the number of them that take high rank in the scale of literary appreciation is proportionately less.

The causes of this depression are doubtless the same that affect other departments of business. Special reasons are to be found in the effect of the tariff as it now stands to favor the foreign book-manufacture at the expense of the American trade, and the increased prominence of newspapers and periodicals as sources of literary nutriment to the mass of readers. As these publications have gained in strength and in solid literary and scientific value, they more completely satisfy the mental cravings of their readers, and in the same proportion diminish the disposition to purchase books. This form of competition with the

book-trade is not without its compensations, for it cannot be but that the appetite for books is stimulated in many cases by the same means that dulls it in others. The increasing tendency on the part of book-publishers to have each one or more periodical organs of communication with the public seems to imply on their part no dread of injury by one branch of their business to another.

The diminished product of books may be due in part also to the draft made on the mental energies of the American people by the important public and social questions demanding attention. It is a very common complaint that many of our best men are apathetic on our most pressing public interests. Yet it must be that a large amount of study and thought is given to matters of this sort. To the pressing political problems bequeathed by the civil war, which are nearly concluded, have succeeded those of revenue and taxation, of protection and free trade, of woman's suffrage and other assumed rights of the sex, and the semi-political, semi-ecclesiastical issue respecting common-schools. The difficulty is not that important matters are neglected, but that the best thought of the community is brought only so indirectly into relation with its governing forces. What thinking is done on this class of subjects finds expression for the most part in periodical publications or on the platform, and leaves less indices in our record of authorship than it is entitled to by its intrinsic weight.

The absence of an international copyright, besides its effect on the higher order of literary productiveness, introduces an element of uncertainty into the publishing-business. The defect of the law has been partially remedied by the courtesy of the trade, according to which priority of announcement by any house secured to that house an exclusive right to republish the book announced. This right was strengthened by an agreement with the foreign author for a share of profits. It is true that this principle was never quite strong enough to prevent competition for the profits of any book sure of a very large sale. Some pretext could always be found, as, for example (to refer to a well-known incident), virtuous indignation at liberties taken with Lord Macaulay's spelling, a wrong which was expiated by an edition of his History that deviated from Macaulay's system of orthography as often as that system differed from the standard of *Worcester's Dictionary*. During the past year there have been several instances of misunderstanding between leading publishing-houses on their respective rights in the works of popular English authors. The result has been to multiply editions, to reduce prices, and to stimulate sales of their works, thus giving additional effect to a mistaken copyright policy, in subjecting American authors to an unequal competition. The effect of such rivalries on the interests and morals of the trade, it would scarcely be in place here to discuss.

Our first and chief attention in this review will be given, for obvious reasons, to the consideration of works that are the product of American authors. Other books published here, however valuable and improving to their readers, are no part of American literature, to the progress of which they contribute only indirectly. And, beginning with a department of writing in which our country early gained an honorable distinction—

I. Historical Works.—We find the field still cultivated with success. In the class of works on the colonial and earlier history of America, a prominent place is due to Mr. Francis Parkman's "Discovery of the Great West." The part played by France in American discovery and colonization was a happily-chosen theme, which Mr. Parkman has treated with admirable diligence, against discouragements and with much well-deserved applause. "The New England Tragedies in Prose," by R. H. Allen, apologetically reviews the relation of the government of Massachusetts to the early Quakers and to the witchcraft delusion. These and other related matters are ably treated in "Lectures on the Early History of Massachusetts, delivered before the Lowell Institute." "The Spanish Conquest of New Mexico," by W. W. H. Davis, comes within this division of the subject, as does also the first volume of "The Documentary History of Maine," containing "History of the Discovery of Maine," by J. G. Kohl; as also some reprints of old works, for example, "A Plain History of the Pequot War, by John Mason, with Introduction and Notes, by Thomas Prince," "The Sailing Directions of Henry Hudson," and "Laws and Ordinances of New Netherlands," by E. B. O'Callaghan. Among the records of our Revolutionary history, the "Memoirs of the War in the Southern Department of the United States," by General Henry Lee, has deservedly held a high place, but of late years has been out of print. A new edition, edited, with a Life of the Author, by his son—*that* General Lee whose abilities made the victory of the Union cause in our late struggle to be dearly purchased—restores to circulation a book that we "would not willingly let die." Lossing's "Pictoral Field Book of the War of 1812" has the unique combination of history, topography, etc., which gave such deserved popularity to his previous books. The third volume of "The Life and Times of James Madison," by William C. Rives, completed a biography which is equally a history, the interest of which includes the period of the Revolution, the forming of the Constitution, and twenty-five years of the Government of the United States. "Mexico and the United States," by G. D. Abbott, contributes to more recent history. Materials for the history of our civil war continue to accumulate, as they must continue doing for some time before the history that posterity will accept can be written. Of this class, Mr. Benson J. Lossing's third volume

completes his "Pictorial History." Another valuable work is the "History of the Seventh Regiment National Guards, State of New York, during the War of the Rebellion," by William Swinton; and, if the author just named will pardon the collocation, we may mention Mr. Raphael Semmes's "Memoirs of Service Afloat;" the chivalrous nature of his service, his warfare on unarmed vessels, is but too well remembered. Here belong the records of those benevolent societies by which the hardships of the soldiers' lot were mitigated, such as "Incidents of the United States Christian Commission," by the Rev. E. P. Smith, a volume supplementary to the more complete "Annals of the Christian Commission," by the Rev. Lemuel Moss, published in 1868; and, an "Historical Sketch of the Soldiers' Aid Society of Northern Ohio." Recollections of our Antislavery Conflict," by the Rev. S. J. May, aids in recalling the prologue to the great tragedy. Several able pens are understood to be engaged on the same theme, whose works may be expected to have place in a future record of progress.

Passing to Old World history and to that of a higher antiquity, we notice "Prehistoric Nations," by the Hon. J. D. Baldwin, a work of historical speculation, to which the praise of originality cannot be denied, but which rather opens than concludes the questions it offers to investigate; "Ancient States and Empires," by John Lord, LL. D., an outline for schools and for popular reading; "Manual of General History," by John J. Anderson; "Carthage and Tunis, Past and Present," by A. Perry; "The Queen of the Adriatic, or Venice, Past and Present," by W. H. D. Adams. "The Great Empress," by M. Schele de Vere, a portrait of the Empress Agrippina, hovers on the boundaries between history and historical fiction.

Of what may be termed special histories several have appeared during the year, of much merit. Such are the admirable "Studies in Church History," by H. C. Lea; the "History of American Socialisms," by J. H. Noyes, a complete view of a curious subject; Rev. J. F. Hurst's readable translation of Hagenbach's "History of the Church in the Eighteenth and Nineteenth Centuries," with additions; Dr. R. Anderson's masterly work on "Foreign Missions," ripe fruit of nearly thirty years' service as a Secretary of the American Board; and Judge Amos Dean's "History of Civilization," volumes 1–6. To these may be added "Pictures from Prison Life, an Historical Sketch of the Massachusetts State Prison," by G. Haynes; "Baptist History," by J. M. Cramp —not an American author, but, though he is of the Dominion of Canada, his work was originally published here, and thus fairly enters into American literature—in which the subject is treated in a way that is generally acceptable to the denomination concerned; "A Half Century with Juvenile Delinquents," by B. K. Peirce, an important contribution to reformatory literature; a revised and enlarged edition of the "Early History of the Catholic Church on the Island of New York," by J. R. Bayley; and perhaps its relation to the history of improvements in the arts would place here the "Biographical History of Clermont, or Livingston Manor before and during the War of Independence, with Sketches of the first Steam Navigation of Fulton and Livingston." Including local histories, among which the "History of Vermont," by Hiland Hall, deserves particular mention; works auxiliary to history, like the "Modern Historical Atlas," by W. L. Gage, the plan of which is excellent, the execution less so; reprints of antique tracts, school compilations, etc., about forty titles come under the head of history and materials of history.

II. Biography.—We have given two or three biographies a place among historical works. Perhaps there was as much reason to place in the same category "The Military Services and Public Life of General Sullivan," by T. C. Amory; the "Reminiscences of James A. Hamilton," and "The Life of Jefferson Davis, with the Secret History of the Southern Confederacy," by E. A. Pollard; though the latter has some title to a place among works of the imagination. The first volume of the promised "Life of Daniel Webster," by George Ticknor Curtis, appeared, and fully met the public expectation. "The Life of J. J. Audubon, the Naturalist," edited by his widow, is a delightful record of a unique career. But among the most valuable contributions to this department of writing in 1869 were clerical biographies. Rev. Dr. Sprague has given us another volume of his "Annals of the American Pulpit," including the ministry of the Lutheran, United Presbyterian, and (Dutch) Reformed Churches. "The Life of the Rev. Samuel Miller, D. D.," by Samuel Miller, and that of the Rev. Joseph Addison Alexander, D. D., by H. C. Alexander, somewhat tardily commemorate two eminent professors in the Princeton Theological Seminary. Both works, the latter especially, have the disadvantages inseparable from the composition of biographies by the near kindred of the subjects. "The Life of the Rt. Rev. George Burgess, D. D.," first Bishop of the Diocese of Maine, records a life of such choice culture and unobtrusive goodness as makes the biographer's task especially difficult. The "Memoir of Jared Sparks," by George E. Ellis, D. D., is also a record of a quiet scholar's life, though its beginning was in the atmosphere of theological polemics. "The Life and Letters of Fitz-Greene Halleck," by James Grant Wilson, revives a half-forgotten literary career with something of the old enthusiasm. Also "The Life and Letters of Mrs. Elizabeth Seton," by her grandson, Rev. Dr. Seton. "The Life of Gerard Hallock" is of interest, from the place long occupied by the subject in connection with

the newspaper press of New York. Including autobiographies (as of John Neal and P. T. Barnum) and contemporary biography (as of Father Hyacinthe), and excluding juveniles, about thirty works find a place under this head.

III. POETRY.—Of new poetry there was little of a high order produced on this side the Atlantic. "The Blameless Prince and other Poems," by E. C. Stedman, and "Poems Lyric and Idyllic," and "Alice of Monmouth," etc., by the same author, sustain the reputation won by former publications. "The Cathedral," by James Russell Lowell, though written for publication in 1870, got into circulation within the period under review. It was received with a unanimity of applause which will hardly represent the maturer critical judgment of the world, though it must be confessed to be the crowning gift of the Muses to us for 1869. A collected edition of Mr. Lowell's poems and of Mr. Whittier's appeared, as also a holiday edition of Whittier's "Ballads of New England," and of Mr. Longfellow's "Building of the Ship." Complete editions of Longfellow's Poems, and of Edgar Allan Poe's, were issued. The Poems of C. G. Halpine, edited by R. B. Roosevelt, have an interest as the memorial of a stirring time and a man of versatile genius, but will doubtless fail to claim permanently the attention of the public. "Vagabonds, and other Poems," by J. T. Trowbridge, brings together pieces that have gained popularity as they appeared in the pages of periodicals. They show a lively fancy, fine feeling, and grace of expression; they please, and, if they do not testify for the author "the vision" and the artist-power, they come very near it. "The Woman who Dared," by Epes Sargent, has passages of poetry in it, but it is mainly a novel in somewhat careless verse, with a polemic intention. Mr. C. G. Leland continues to give us Breitmann Ballads in the Pennsylvania Dutch dialect, and, as long as the public do not tire of reading, why should he of writing? Mention should also be made of the Poems of Mrs. Embury; "Titania's Banquet," etc., by George Hill; "A Chaplet of Leaves, by Jeanie G.," a promising beginning of authorship; "Western Windows," etc., by J. J. Piatt, a volume which gave the author a very favorable introduction to the reading public; and "Beautiful Snow, and other Poems," by J. W. Watson. In all, we count nearly fifty volumes of verse, a few of them new editions, or collections of original and selected poems.

IV. PHILOSOPHY.—Mental Philosophy has so prominent a place in the courses of liberal study in this country that it is pretty certain to be represented in literature. At the same time, the circumstance that the chief cultivators of the study are persons engaged as teachers in our colleges determines the form and direction of the philosophy. A reader of the periodical press finds traces of the modern materialistic scheme which tends to identify psychological and physiological activity in man. But our seats of learning offer little hospitality to such ideas. During the past year several works have appeared in the department of speculative philosophy. "The Science of Thought," by Professor Charles Carroll Everett, is a brilliant exposition of the Hegelian logic. For a metaphysical treatise the style is remarkably vivid. Professor Thomas C. Upham has prepared and published a carefully-revised edition of his "Mental Philosophy." The "Principles of Psychology," by Professor John Bascom, is the contribution of a forcible and independent thinker to the science. His style runs too readily into the pictorial and figurative cast of expression, making his statements less determinate and apprehensible than if the light were drier. "Studies in Philosophy and Theology," by Professor Joseph Haven, is a volume divided nearly equally between the two branches of science named in the title. The philosophical articles are more critical than speculative, but they are the criticisms of a strong and patient thinker. "Two Letters on Causation and Freedom in Willing, with an Appendix on the Existence of Matter and our Notions of Space," by Rowland G. Hazard, add to our stock of original speculation much in weight though comparatively little in bulk.

In books in the department of Ethical Philosophy an important contribution was made in "The Law of Love, and Love as a Law, or Moral Science Theoretical and Practical," by President Mark Hopkins. He has been claimed (or disclaimed) as an advocate of utilitarianism. But his real position is that of a reconciler of systems. In his view it is impossible "to construct a complete system of morals that is either wholly intuitional or wholly teleological." "Moral Philosophy, or the Science of Obligation," by President J. H. Fairchild, nearly coincides in its theory with that of President Hopkins. Fichte's "Science of Right," translated by Kroeger, is of course "intuitional."

V. SOCIAL SCIENCE AND REFORM.—Prominent among the topics covered by this general title is the emancipation (as it is called) of woman, including her enfranchisement. The advocates of this social revolution among us seem very generally to have decided that the burden of proof is on their opponents, and that their own function is merely to criticise the arguments proposed against them, which is most effectively done on the platform or through the newspaper press. The books that treat or touch upon the question are nearly all on one side. "Woman's Suffrage, the Reform against Nature," by the Rev. Horace Bushnell, though not very effective upon the reformers he argues against, commands the respectful attention of the non-combatant majority who will finally decide the matter. "The True Woman," by the Rev. J. D. Fulton, advocates

the same side of the question, with more warmth and less cogency. "The Feminine Soul," by Elizabeth Strutt, and "Man and Woman, Equal but Unlike," by J. Reed, and "Woman: Her Rights, Wrongs, Privileges, and Opportunities," by L. P. Brockett, deal with the subject, if not with the dispute. On topics more or less directly implicated in this question, important books are, "Essay on Divorce and Divorce Legislation," by President T. D. Woolsey, a careful record of facts, exposition of great principles, and a testing of our laws by means of them, and "Moral Reforms suggested in a Pastoral Letter," by the Rt. Rev. A. C. Coxe. "History and Philosophy of Marriage, or Polygamy and Monogamy Compared, by a Christan Philanthropist," seriously argues for Polygamy on both religious and humane grounds. The temperance reform has called out a reprint, for general circulation, of Mr. Parton's articles inquiring, "Will the Coming Man drink Wine?" and "Does it pay to Smoke?," both which questions Mr. John Fiske has answered affirmatively, and cleverly argued for that conclusion in his "Tobacco and Alcohol." The movement for the abolition of capital punishment is represented by "Christ and the Gallows, or, Reasons for the Abolition of Capital Punishment," by M. H. Bovee. A contribution of importance to the intelligent study of our financial problems is the Hon. E. G. Spaulding's "History of the Legal-Tender Paper Money issued during the War of the Rebellion." Bastiat's "Essays on Political Economy," translated, is a contribution to the rising discussion of the protective system. Questions now essentially settled—let us hope—are presented in diverse points of view, in Rev. Gilbert Haven's "Sermons, Speeches, and Letters on Slavery and its War," in the inexhaustibly witty "Tribune Essays," by Charles T. Congdon, and in "Conservative Views; the Government of the United States, What is it?" A kindred topic is treated in "The Chinese in California," by D. Cleveland. "A Chapter of Erie," by C. F. Adams, Jr., has an interest reaching beyond the immediate subject to the larger concerns of legislative and judicial purity. "Popular Amusements," by the Rev. J. T. Crane, and "The Dance of Modern Society," discuss the subject of amusement and recreation as related to culture and the moral welfare of society—the latter with exceptional vigor of argument and serious and witty invective. "Public Education in the City of New York; its History, Condition, and Statistics," by Thomas Boese, directs attention to an interest now increasingly prominent in the consideration of the public. And finally, the "Journal of Social Science," containing the transactions of the American Association for the Advancement of Social Science, a society which is doing the country good service, is a repository of papers, thus far, of the highest practical value.

VI. Travels.—Books of Travel, Adventure, and Exploration, have been, if less numerous, not less important and valuable in character than in 1868. The opening of the Pacific Railroad drew visitors across the continent, and gave an impulse to the record and publication of what was seen. Mr. Samuel Bowles gave us "The Switzerland of America, or, A Vacation in Colorado," besides embodying the substance of former books in "Our New West." "The New West, or, California in 1867," by C. L. Brace, though in some of its statements obsolete since the opening of the railroad, has a value as history, photographing a state of society some features of which are in a way to be "improved off." "The Sunset Land," by Rev. J. Todd, D. D., and "The Yosemite Guide-Book," by J. D. Whitney, also deserve mention. "A Winter in Florida," by Ledyard Bill, and "A Guide-Book of Florida and the South," by D. G. Brinton, M. D., have an interest for invalids and intending emigrants. "Adventures and Explorations in Old and New Mexico," is a guide out of the beaten track. "Across America and Asia," by Professor Raphael Pumpelly, has gone rapidly to a third edition, an evidence of public appreciation well deserved. "Travels in the East-Indian Archipelago," by Prof. A. S. Bickmore, combines the interest of scientific research with that of stirring personal adventure and of exploration in an unfamiliar region. "Our New Way Round the World," by C. C. Coffin, has the dash of an enterprising newspaper correspondent, and narrates in unfailing good-humor, if not always in the best taste, the victories of a Yankee over time and space. "Notes in England and Italy," by Mrs. Hawthorne, does not need that its independent merits should be reënforced by associations with the memory of our peerless romancer. Mr. Bayard Taylor's "By-Ways of Europe" attracts by its unworn topics, though the views have less of the transparent and achromatic character belonging to the author's earlier works. "Our Admiral's Flag Abroad," by J. E. Montgomery, commemorates the remarkable cruise of Admiral Farragut in 1867-'68. The Hon. G. M. Dallas's "Letters from London," though not without interest, fell below expectation. "The Letters of a Sentimental Idler, from Greece, Turkey, Egypt, and the Holy Land," by Harry Harewood Leech, not only describe, but reproduce, the spirit of Oriental life. There were less than the usual number of books made out of the stereotyped "grand tour" and the Guide-Books, but, though less than thirty in all represent the activity in this popular class of books, it will be seen that the quality is highly respectable.

VII. Physical Sciences.—In this department the number of original works, exclusive of school text-books, is not large. Prof. J. P. Cooke's "Principles of Chemical Philosophy," and the "Manual of Organic Chemistry," by C. W. Eliot and F. H. Storer; "Our Own Birds; a Familiar Natural History of the Birds

of the United States," by W. L. Bailey, edited and revised by E. D. Cope; "Prize Essays on the Physical Indications of Longevity," by J. V. C. Smith and J. H. Griscom; Dr. B. A. Gould's "Military and Anthropological Statistics of American Soldiers," and "The Physiology of Man," by Austin Flint, Jr.; "The Annual of Scientific Discovery"—a publication which annually improves (as there was need) in the selectness and sterling value of its contents—are the principal. To these we may add, "One Great Force the Cause of Gravitation, Planetary Motion, Heat, Light" (etc.), by Crisfield Johnson; "Physical Media in Spiritual Manifestations," G. W. Samson, D. D.; "Planchette, or the Despair of Science," by Epes Sargent, and "Wonders of the Deep," by M. Schele de Vere, a popularizing of science with a mixture of the poetical and the fabulous. The popular interest in descriptive science is mainly gratified, it will be seen, by the reproduction of European books.

VIII. Theology and Religion. — A complete list of publications embraced under this comprehensive title, especially if those intended for juvenile readers were included, would be remarkable for the variety of literary merit exhibited, and as an indication of the mental attitude of a large part of the community. It has been justly observed that the wide circulation of some religious books, impossible to be accounted for by their scanty literary merit, is evidence that they are prized for their religious character alone, a fact of some significance to those who imagine that religious faith is dying out.

Beginning with books of Biblical Exposition and Criticism, we notice the completion (vols. 2 and 3) of Rev. A. Barnes's "Notes on the Psalms;" Dr. Henry Cowles's commentary on Jeremiah; "The Gospel in Enoch," by H. H. Tucker; Lange's commentary on Romans, and the volume on Proverbs, Ecclesiastes, and the Song of Solomon; Dr. Noyes's excellent Translation of the New Testament; Lillie's learned Lectures on First and Second Peter; Dr. A. Nevin's "Popular Commentary on Luke;" "Closing Scenes in the Life of Christ" (Harmony), by D. D. Buck; "Moses, a Course of Lectures," by R. A. Hallam; Rénan's "St. Paul," translated (not in the best manner) by J. Lockwood; L. R. Paige's commentary on the New Testament, vol. 6—Ephesians to Jude; "Old Testament Shadows of New Testament Truths," by the Rev. L. Abbott; "The Overture of Angels," by H. W. Beecher; "The Wise Men; who they were and why they came to Jerusalem," by F. W. Upham, a thoroughly-studied monograph; "Companion to the Bible," by E. P. Barrows, D. D.; "The Primeval World of Hebrew Tradition," by Dr. F. H. Hedge; Winer's "Grammar of the New Testament Diction," edited by Lünemann, a revised translation by Professor J. H. Thayer; Smith's "Dictionary of the Bible," edited by Professor Hackett and Mr. Ezra Abbot, vols. 2 and 3; "Studies in Bible Lands," by W. L. Gage.

Of works in the department of Didactic and Polemic Theology we mention the Sermons of Rev. F. C. Ewer on the "Failure of Protestantism," which are more memorable for the controversy they excited than for their intrinsic claims to attention, though they show considerable literary skill; the effective discourses of the Rev. G. B. Bacon on "The Sabbath Question;" the new, revised edition of "The Apostolical and Primitive Church," by the Rev. Lyman Coleman, a polemic under severely didactic forms; "Living Questions of the Age," by the author of "The Philosophy of the Plan of Salvation," and "The Doctrine of the Holy Spirit, a Philosophy of the Divine Operation in the Redemption of Man," by the same author — treatises which show something of the power indicated in the book by which the author first became known, but "following it afar off;" "The Divine Human in the Incarnate and the Written Word, and Some Thoughts on the Atonement older than the Creeds," by "a Member of the New York Bar," marked by vigor of style, but more adapted to popular impression than to aid in the critical investigation of its topics; "The Oneness of the Christian Church," by Rev. Dorus Clarke; "A Doctrinal and Ritualistic View of the Holy Eucharist," by the Hon. George S. Lacey; "The Church Catechism Verified by Holy Scripture," by Rev. William Schouler, Jr.; "The Inspiration of Scripture," by F. L. Patton; "Congregational Church Polity," by A. Fleming; "Christ and the Bible, not the Bible and Christ," by Rev. W. A. Muhlenburg; "Bible Handbook Theologically arranged," by Rev. F. C. Holliday; "The Secret of Swedenborg," by Henry James—nearly as close a secret as before—with the mystery of Mr. James added; "Spirit Mysteries Revealed," by Andrew Jackson Davis, and "The Question Settled: a Comparison between Biblical and Modern Spiritualism," by Rev. M. Hull. To this head may be reduced volumes of sermons, including two volumes by Rev. H. W. Beecher; a volume by Rev. Charles Wadsworth; "Sermons in Grace Church," by the late Rector, Rev. T. H. Taylor, D. D.; Sermons of Bishop S. Elliot, of Georgia, with Memoir; — of Bishop L. L. Hamline, with Memoir by F. G. Hibbard; "Every-day Subjects in Sunday Sermons," by Rev. R. L. Collier; "The Marriage of the King's Son, and the Guilt of Unbelief," by W. James, with Memoir.

Some important Apologetic works have appeared: "Evidences of Christianity," by Pres. Dodge; "Studies in the Evidences," etc., by S. G. Bulfinch; Bishop Clark's "Primary Truths of Religion;" Fénelon's "Conversations on the Truth of Religion," with "Letters on the Immortality of the Soul and the Freedom of the Will," translated by A. E. Silliman; "Credo: The Supernatural in the Bible,"

anonymous, but ascribed to Prof. Townsend, of the Boston Theological Seminary; "Evidences of Natural and Revealed Theology," by Charles E. Lord; "Man in Genesis and Geology," by Rev. J. P. Thompson.

Of Devotional and Practical Works, we notice, a compilation of "Devotional Thoughts of Eminent Divines," by D. A. Harsha; "Mizpah, or Friends at Prayer," by L. C. Loomis; "A Garden of Spices," selections from Rutherford's Letters, with an Essay by A. C. George; "Jesus on the Holy Mount," by J. Sanderson, D. D.; "The Christian Worker, a Call to the Laity," by Rev. C. F. Beach; "The Christian Pastor," an excellent treatise on Homiletics and Pastoral Theology, by Prof. J. M. Hoppin; "Sermons on the Lord's Prayer," by H. A. Worcester; "The Holy Communion," by Dr. Morgan Dix; "He that Overcometh," by W. E. Boardman; "The Perfect Man, or, Jesus an Example of Godly Life," by Rev. H. Jones; "God's Thoughts Fit Bread for Children," by Dr. Horace Bushnell.

IX. MEDICINE.—Under this head we note fewer publications than were recorded last year, though the discrepancy may be more in our enumeration than in the number actually published. Among the principal may be mentioned, "A Treatise on Diseases of the Eye," by J. Soelberg; "Sleep and its Derangements," by W. A. Hammond; Maxson's "Practice of Medicine;" Paine's "Practice;" "Diseases of Children," by A. Vogel (translation); "Structural Lesions of the Skin," by H. F. Damon; "Compend of Materia Medica and Therapeutics," by J. C. Riley; "On Intraocular Tumors," by H. Knapp; "Percussion and Auscultation as Diagnostical Aids," by C. Hoppe (translated); "Pathology of Bright's Disease," by W. B. Lewis; T. G. Stewart on the same subject; "On the Wasting Diseases of Infants and Children," by E. Smith; "Causes of Infant Mortality," by J. W. Thrailkill; "Lectures on the Study of Fever," by A. Hudson; "Electricity in its Relations to Practical Medicine," by Meyer, translated, with additions by W. A. Hammond; "Family Adviser," by H. Hartshorn; "How to Bathe," etc., by E. P. Miller.

X. LAW.—Besides reports of judicial decisions, some important treatises appeared during the year. "Law of Carriers, of Telegraph Companies, of Innkeepers, and of Bailments," by Isaac F. Redfield; Sherman and Redfield "On the Law of Negligence;" Parsons "On the Law of Shipping and the Law and Practice in Admiralty;" D. Roberts "On Admiralty and Prize;" Hilliard's "Law of Real Property" and "of Injunctions;" Abbott's "Digest of the Laws of Corporations;" "The Bankrupt Law of the United States, with Rules, Forms," etc., by E. C. Brightly; Parsons's "Laws of Business for all the States of the Union, with Forms and Directions;" G. T. Curtis's "Equity Precedents;" an enlarged edition of Redfield's "Law of Railways;" treatise on "The Laws of Set-off, Recoupment, and Counter-Claims," by T. W. Waterman; "Manual of Practice in the Circuit Courts of the U. S.," by A. A. Boyce; "Court Rules of the U. S. Supreme, Circuit, and District Courts," by J. H. Bissell; Abbott's "U. S. Practice;" "Law and Practice in Bankruptcy," by E. Bump; "American Commercial Law," by F. Chamberlin; "Manual of the Laws of Massachusetts on Manufacturing Corporations," by S. Bachelder, Jr.; "Lectures in Harvard Law School and Dartmouth College," by Joel Parker; "Treatise on Proceedings in the U. S. Courts," by J. A. Murray; Angell's "Law of Water-Courses," edited by J. C. Perkins; "Official Opinions of the Attorneys-General of the United States;" "Everybody's Lawyer," by Frank Crosby. Besides these and Digests of Precedents, there were books of local interest on the duties of justices, supervisors, etc.

XI. ART AND THE ARTS.—Art proper is scantily represented. "Art Thoughts," by J. J. Jarves; "Sacred and Constructive Art, its Origin and Progress," by C. N. Otis; "Civil Architecture," by E. Shaw, with "Treatise on Gothic Architecture," by T. W. Silloway; "The Identification of the Artisan and Artist, the Proper Object of American Education," by Elizabeth P. Peabody, are the principal. The Arts may, for the purpose of this review, include the useful and ornamental, and, speaking generally, the practical arts of life. Books of technical instruction on a large variety of topics, from farming to chess-playing, will find place.

Leroux on the "Manufacture of Worsted and Corded Yarns," translated by H. Paine and A. A. Fesquet, and "Chemistry applied to Dyeing, with Fesquet's Chemistry of Coal Tar Colors;" "Manual of the Hand Lathe," by E. P. Watson; "Painter and Gilder and Varnisher's Companion;" Loring and Jenny's "Principles and Practice of Architecture;" "Practical Treatise on Portland Cement;" "The National Architect," by Woodward and Thompson; Clarke's "New Method for Reed Organs;" Strübe's "Drum and Fife Instructor;" Prof. Welch's "Physical, Intellectual, and Moral Culture" (Gymnastics, etc.); "Naval Architecture and Ship Building," by Commander Meade, U. S. N.; "The Metallurgy of Iron and Steel, Theoretical and Practical," by H. L. Osborne, LL. D.; Prof. G. C. Caldwell's "Agricultural Qualitative and Quantitative Chemical Analysis;" "Long and Short Span Railway Bridges," by J. A. Roebling; "Iron Truss Bridges: Method of calculating Strain," etc., by Brevet-Colonel W. E. Merrill, U. S. A.: "Manual of the Mechanics of Engineering, vol. I. Theoretical Mechanics," by Julius Weisbach, Ph. D., translated by E. B. Coxe; Wallen's "Service Manual for newly-commissioned Officers and the Rank and File;" Arnold's "Notes on Horses for Cavalry Service;" "Earth Closets —How to make and use Them;" by E. Waring, Jr.; "The Carpenter and Joiner;" "On Seats and Saddles, Bits and Bitting," by F.

Dwyer; "Elements of Tachygraphy," by D. N. Lindsley, a new system of short-hand; "American Chestnuts;" "How to Treat the Sick without Medicine," by J. C. Jackson; "The Greenhouse as a Winter Garden," by F. E. Field, with a preface by W. C. Bryant; "Pictures of Edgewood," by Mitchell, with Photographic Views; "On the Wing, a Book for Sportsmen;" "Hunter's Guide and Trapper's Companion;" "Mental Photographs," an Album, edited by R. Saxton; "Ten Working Designs for Catholic Churches;" "Specimens of Fancy Turning executed with the Hand and Foot Lathe, by an Amateur;" Scott's "Fishing in American Waters;" "Velocipedes, and how to use Them;" "Base-Ball Guide;" "Gun, Rod, and Saddle, by Ubique;" a "Treatise on the Teeth of Wheels," translated from the French; Ludden's "Thorough Bass;" "Farm Implements and Machinery," by J. J. Thomas; Courtney's "Farmer's and Mechanic's Manual;" "The Philatelist's Album;" "Manual of the Railroads of the U. S.," by H. V. Poor; M. de Chateller's "Railway Economy," translated by L. D. B. Gordon; "The Carpenter's and Builder's Guide," by P. W. Plumer; "How to become a Successful Engineer," by B. Stuart; "Formulas for the Strength of the Iron Parts of Steam Machinery," by J. D. Van Buren, Jr.; Quinn's "Pear Culture for Profit;" an enlarged edition of Downing's "Fruits and Fruit-Trees of America;" "Dictionary of Manufactures, Mining, Machinery, and the Industrial Arts." We have given these titles barely and somewhat indiscriminately, because most of the books are known to us only by the titles.

XII. Classical and other Text-Books.—Of Latin classics we have the "Æneid of Virgil," edited by N. C. Brooks; the first Six Books, edited by Prof. Searing, with a Vocabulary, and the same Books by Chase and Stuart; an Epitome of Latin Grammar, and J. T. White's Latin-English and English-Latin Dictionary. In Greek, Boise's Homer's Iliad, the first Six Books, and Grammars, one by W. H. Waddell, the other a compilation from Hadley's Grammar by an anonymous author. To the study of German, Prof. Whitney has contributed a Grammar and a Reader. Worman's "German Echo," Evans's "German Reader," Preu's "First Steps in German," and Grauert's "German Manual," claim mention. In French, Gasc's "Pocket Dictionary," a translator of English into French. Other text-books are Loomis's "Elements of Astronomy," Drew's "Manual of Astronomy," and White's (C. J.) "Elements of Theoretical and Descriptive Astronomy;" Roscoe's "Lessons in Elementary Chemistry;" "A New Arithmetic on the Unit System," by C. P. Buckingham; Lossing's "Grammar-school History of the United States;" Walker's "First Book of English Grammar;" Wiley's "Elocution and Oratory;" "The Model Speaker," by Prof. Philip Lawrence; Griffith's "Drill-Book of Elocution and Oratory;" "A Treatise on Logic," by A. Schuyler; "A Two Hours' Course in Standard Phonography."

XIII. Novels.—The year gave us a novel by an author new to this field of letters, "Malbone, an Oldport Romance," by Colonel Higginson, and a new novel by a veteran who had been supposed to be reposing on her laurels, "Oldtown Folks," by Mrs. Stowe. "Fair Harvard," a college novel, has attempted to do for our most ancient university what Mr. Hughes has done for Rugby and Oxford. Among novels of a secondary order of merit, a high place must be assigned to "Hitherto, a Story of Yesterdays," by Mrs. A. D. T. Whitney. But, in general, for satisfaction in this sort of reading, we fall back on the standard British novelists, and, after Dickens, upon the two or three late writers for whose stories our publishers emulously compete. Some French and German novels have been translated, and met with a hearty welcome. Those of Erkmann and Chatrian, from the French, of which two, "The Conscript," and "Waterloo," appeared within the year, and those of Spielhagen, from the German, by Prof. Schele de Vere, deserve particular mention—the former, for their simple truth to nature and history and their pure moral tone; the latter, for vehement, sometimes lurid passion, and the evident mental power they indicate. Less powerful but more pleasing and immediately popular are the novels of Auerbach, of one of which, "The Country House on the Rhine," there have been rival translations and editions. Rev. Edward Everett Hale has collected "The Ingham Papers," a volume of those short stories for which he has shown a peculiar talent. Whether the concentration of his inventive powers on the fuller development of a plot would secure for him success as a novelist equal to that he has earned as a story-teller can only be determined by experiment.

Miscellaneous.—It remains to speak of some books not reducible under any of the heads of our review. "The Dodge Club," a very humorous travesty of the Grand Tour, mingling racy wit with riotous fun and burlesque; "The Innocents Abroad," by Mark Twain, to the same purpose; "Five Weeks in a Balloon," translated from the French, an equally amusing take-off of African discovery and adventure; "Men, Women, and Ghosts," by E. Stuart Phelps, author of "The Gates Ajar," the popularity of which was probably relied on to float a volume made up of previously published sketches; "Five Acres too Much," by R. B. Roosevelt, turning the laugh on amateur farmers and believers in the dogma that "ten acres are enough;" Colonel Higginson's "Army Life in a Black Regiment," and Miss Alcott's "Hospital Sketches," each excellent in its kind and both valuable pictures of less-known features in the late war; "Sybaris and other Homes," by E. E. Hale, a unique combination of fact and fancy for a good purpose; "Adventures in the Wilderness, or Camp Life in the Adirondacks," by

W. H. H. Murray, a volume full enough of "life," but accused of resorting to the long-bow at times. "The Brawnville Papers," by Moses Coit Tyler, a lively and sensible plea for physical culture; J. Esten Cooke's "Hilt to Hilt, or Days and Nights in the Shenandoah," the story of a Confederate; "Evenings with the Sacred Poets," by Frederick Saunders, a work deeply interesting to all lovers of sacred song; "Home Pictures from the English Poets," a meritorious compilation for the young; "The Comic History of the United States," by J. D. Sherwood, amusing, though the jest is on a large scale; Mrs. Ellet's "Court Circles of the Republic," a sort of book always popular, when skilfully done; "Essay on Professional Ethics," by George Sharswood, a book for lawyers, from one of high rank in the profession. An edition of the prose writings of R. W. Emerson is a noteworthy event. Mr. R. H. Dana, Jr., has revived a long-remembered pleasure by a new edition, with additions, of his "Two Years before the Mast." "The Literature of the Age of Elizabeth," by E. P. Whipple, and "Lectures and Essays," by Henry Giles, are works of standard merit. A fourth volume of the Orations and Speeches of Edward Everett will be received with a pensive satisfaction by the admirers of his eloquence.

Here also should be mentioned some works of general reference: "The American Year-Book and Annual Register," edited by D. N. Camp, a work meant to occupy a place similar to that formerly maintained by the "American Almanac," and which is certainly a creditable beginning; McPherson's (standard) "Political Manual," a revised and Americanized edition of Haydn's "Dictionary of Dates," a very useful book, with room for still more revision and adaptation to American wants; "Zell's Popular Cyclopædia," in course of publication, a comprehensive work, containing much information in a highly condensed form—in fact, attempting so much as to make some deficiency and error almost unavoidable. Just begun, near the close of the year, a work of admirable promise, Lippincott's (Thomas's) "Biographical Dictionary." For extent, accuracy, and serviceableness for reference, it bids fair to excel all similar works that have preceded it.

"The Mississippi Valley," by J. W. Foster, LL. D., is rich in information, and there is considerable ingenious theory and speculation furnished by the way. "The New World compared with the Old," by George Alfred Townsend, is a good plan inadequately executed. The increasing summer resort to watering-places and rural retreats, from the cities, makes the guide-book an American necessity. Harper's "Guide-Book to Europe and the East" and Appletons' "Short-Trip Guide-Book" lead the list. Taintor's Guide-Books are twenty in number. "The Summer Tourist's Pocket Guide-Book to American Watering-Places," etc., by E. B. Hall, compacts much information within very small compass. "The Yosemite Guide-Book," and "Historical Sketch and Resources of Montana, with a Business Directory of the Metropolis," offer information relative to the new West. The last approaches more the character of the statistical almanac, of which an Oregon press furnishes a specimen in "McCormick's Almanac for 1870," with full statistics of Oregon, Washington, Idaho, and Montana. This class of publications increases in number and value from year to year. Each religious denomination has its annual publication; almanacs of political information and statistics issue from several leading newspaper offices, as the "Tribune Almanac," and "The World Almanac," and the Albany "Evening Journal Almanac." Prof. Schem's "Eclesiastical and Educational Almanac" contains an amount of valuable information such as merits a more attractive form.

In illustrated Gift-Books there has been for a year or two a declining interest. This cannot be the result of a growing dissatisfaction with their quality, for that has noticeably improved. It is probably in part a mere matter of fashion, in part due to improvement in the style of book-making generally, and to the greatly-increased use of pictorial illustration in popular works. Some of the most successful, in fact, of the holiday issues are equally suitable for gift or purchase at all seasons, and are noticed in other connections—such, for example, as "The Universe," by Pouchet; "The Ocean World;" Mr. Beecher's "Overture of Angels;" Rev. L. Abbott's "Old Testament Shadows;" and Mr. Mitchell's "Pictures of Edgewood." Besides these there are several that deserve particular mention: "The Goethe Gallery," by F. Pecht; Shakespeare's "Midsummer Night's Dream," with silhouette illustrations; Miss Alcott's "Concord Sketches;" "The Bryant Homestead Book," by Julia Hatfield, and illustrated editions of Mrs. Browning's "Lady Geraldine's Courtship," and of Miss Phelps's "Gates Ajar."

The number of Juvenile Publications increases from year to year. The union and denominational publishing houses give more attention to this branch of their business, new publishing firms give it their exclusive or principal attention, and long-established houses find it profitable to compete for youthful patronage. It were well if it could be said that our writers for the young are reaching a higher average of merit. It is to be feared that the pressure of demand leads to a hurried supply. And yet it is undoubtedly true that there is an improvement on the whole in the character of juvenile books, due to the fact that the quality of books republished and imported serves to make good the defects of native productions. Such a book as Napier's "Tommy Try, and what he did in Science," or the volumes in the Illustrated Library of Wonders, translated from the French, or the translation of Saintine's "Dame Nature," or the beautiful fictions of

Hans Christian Andersen (his fairy stories especially) and Björnsen, of which good versions are published, go far to redress the balance against us. At the same time, not to do injustice to our own authors, it may with truth be said that *the best* of our home-grown children's books are equal to any that come from abroad. The brothers Abbott, J. T. Trowbridge, T. Bailey Aldrich, W. T. Adams (Oliver Optic), Miss E. S. Phelps, and others that might be named, have a well-earned popularity with young readers.

Reprints and republications of English books, and of English translations from foreign languages, we have thus far intentionally excluded from consideration, though they form not only an important element in the book-trade, but a scarcely less considerable portion of our literary aliment. They are not properly a part of American literature. Yet, as they cannot but have a very appreciable influence in the intellectual development of the people, we are interested to notice the nature of that influence. It is safe to say that in no previous year have the republished books included so large a proportion of works of a high character. There has been a special activity in the reproduction of standard literature. Popular editions of the works of Scott, Dickens, Thackeray, Reade, Mrs. Lewes (George Eliot), and of the British Poets—Chaucer, Milton, Dryden, Herbert, Pope, Cowper, Beattie, Thomson, Goldsmith, Burns, Scott, Wordsworth, Moore, Campbell, Mrs. Hemans, Keble—of some of them competing editions—if purchased with any thing like the zest shown in publishing them, must be taken to indicate a wholesome taste. Of the works of contemporary English writers, besides those just named, we have editions of Tennyson's new Idyls, and rival editions of his complete works, William Barnes's Rural Poems, Browning's "The Ring and the Book" concluded, and an edition of his collected poems, Lord Lytton's version of the Odes and Epodes of Horace, and Merivale's translation of the Iliad, Sir J. Coleridge's "Life of Keble," Mr. John Forster's unique "Life of Walter Savage Landor," Mr. Gladstone's "Juventus Mundi," Ruskin's "Queen of the Air," Max Müller's "Chips from a German Workshop," a translation of Guizot's "St. Louis and Calvin," Lightfoot's "St. Clement of Rome," Dean Alford's Essays and Addresses, Liddon's University Sermons, the Sermons of the Rev. Stepford A. Brooke, an abridged edition (for which there was need) of the Memoirs of Baron Bunsen, Taine's "Italy," and Dr. Wm. Smith's "Old Testament History." Especial note should be made of some historical works—Mommsen's "History of Rome," Lecky's "History of European Morals," popular editions of Froude's "History of England," of Stanley's "Eastern Church" and "Jewish Church," a new edition of Milman's "History of Christianity," and of his "Latin Christianity," uniform with the History of the Jews before published, and forming with that a complete set of his historical works; and a new improved popular edition of Grote's "History of Greece." Popular editions have also been issued of the Rev. F. W. Robertson's Sermons and Life, and of Archbishop Trench's "Studies in the Gospels." Some current works of a severer cast, scientific and philosophic, have been promptly reproduced here: Herbert Spencer's Psychology, Mackay's "Popular Delusions," Dr. Forbes Winslow's "Force and Nature," Bain's "Moral Science," "The Mind and Brain," by Laycock, S. Baring-Gould's "Curious Myths of the Middle Ages," and his "Origin and Development of Religious Belief," "A Physician's Problems," by Dr. Chas. Elam, and Huxley's "Physical Basis of Life." Nor should we omit to mention "The Universe," translated from the French of Pouchet, profusely and superbly illustrated—a comprehensive popular view of physical science; Wallace's "Malay Archipelago," admirable for its freshness, its scientific character, and the pictorial accompaniments and auxiliaries of his graphic descriptions; Wood's "Bible Animals," with figures drawn from nature and finely engraved, combining with the pleasure it affords no little material for the illustration of Scripture; Hartvig's "Polar World," much enlarged and with numerous pictorial accessories, and Greenwood's "Wild Sports of the World," as entertaining as if the author had had personal experience of the adventures he describes. Even among the lighter republications, there is a satisfaction in seeing the Waverley novels retailing at *ten cents* each—a marked improvement in the quality of "dime novels."

De Quincey defines literature as the antithesis of books of knowledge, excluding from it "all books in which the matter to be communicated is paramount to the manner or form of its communication." The only alternative to this definition which he admits is that which makes literature include every thing that is printed. But the philosophical justice of the more restricted definition may be admitted, while the liberty is taken, for the purpose of this review, of including comprehensively the results of the intellectual activity of the nation so far as it was embodied in permanent forms. Without attempting to catalogue all that has been printed, this is what we have endeavored fairly to do.

And the conclusion to which we think an impartial survey directs the mind is on the whole auspicious. If in pure literature our product is small, it includes works of so high merit as to justify the belief that there is good upward progress making, that time is in our favor, that our material successes and engrossing practical aims are not on the whole hindering better things, but are laying a solid foundation on which art will build, and to which genius and culture will bring their best works.

LOUISIANA. The work of reconstruction in the State of Louisiana was completed before the close of the year 1868, and there has been little in the year which followed worthy of historical notice. The affairs of the State have passed from the field of national politics into the hands of its own citizens, and, as the constitution provided that the officers first elected thereunder should hold their positions for a full term of two years from November, 1868, no political canvass has occupied the attention of the people, or turned them from the duty of building up their ruined industries and organizing the administration of local affairs. The Governor, in his message to the Legislature, at the beginning of the year, after recounting the events of the last few years of turbulence and disorder, uttered the following exhortation:

Fellow-citizens, may we not hope that the storms of the past have died away forever, and that returning reason will remount its throne? The issues of the past eight years have been settled, we hope, forever. Slavery has been swept away, and along with it all the train of evils growing out of its wickedness, and has left us—master and slave, white and black—with the same rights under the law, the same chance to succeed in life, and with equally unrestricted aspirations and hopes. On an intelligent people, armed with a free press and free speech, and supported by the ballot, may we not confidently rely for such modifications of laws and customs in society as the sound judgment of the people may approve. Let us forget the passions of the great past, forgive those who have done us evil, and offer to all the same protection and encouragement claimed for ourselves. In this spirit, I recommend the abrogation of the 99th article of our constitution, and believe, if an amendment should be submitted to the people at the next general election, it would receive their almost unanimous approval. I regretted its insertion in the constitution, favored the proposition made to abrogate it at the last session, and now officially recommend it.

I am hopeful of the future. Our Heavenly Father has rewarded us with a bountiful crop, kept sealed the pestilence with which we have been in past times visited, and blessed the lovers of liberty and justice with the greatest political triumph ever accorded to them in this country. In the wise, economical, moderate, and firm administration of the government of the nation and the State, I believe are healings of all animosities and the prosperity and glory of the people.

The 99th section of the constitution here referred to is that which disfranchises a large number of citizens for participation in the cause of the Southern Confederacy in the recent civil war.

The Legislature, which assembled on the 4th of January, continued in session upward of two months, and a large number of bills were passed, most of which had a local importance only. Some of the unfinished legislation of the last session was completed, including the passage of the "Social Equality Bill," the public school law, and the act authorizing a loan of $5,000,000 by the city of New-Orleans. (*See* ANNUAL CYCLOPÆDIA for 1868.) The object of the city loan bill is indicated in its title, which is as follows: "An act to authorize and require the Mayor, Comptroller, and Treasurer, of the city of New Orleans to issue bonds for the redemption of the city notes, and for the liquidation of other indebtedness, to enable the city to resume payment of interest upon its funded debt; providing for the destruction of the city notes and other evidences of indebtedness, and the plates upon which they have been printed, prohibiting further issuing and receipt for taxes of city notes, and other evidences of indebtedness, and providing a fund for defraying the temporary expenses of the city government."

Under the new school-law the Board of Education consists of the State Superintendent of Schools and six other members, appointed by the Governor. This Board has the general supervision of the educational interests of the State, and appoints boards of directors for the different cities and country districts. The board of directors of New Orleans consists of nine members, and has power to appoint subordinate boards in the different wards. These directors are authorized to obtain sites for new school-houses, erect the necessary buildings, and, in general, carry into practical effect the provisions of the law. All children of the State, between the ages of six and twenty-one years, are to be admitted to the public schools and other institutions of learning established and sustained by the State, "without distinction of race, color, or previous condition." The law requires that in every school "there shall be taught orthography, reading, English grammar, geography, arithmetic, the history of the United States, vocal music, and loyalty to the national Government." A fund for the support of the public schools is to be raised by a poll-tax of one dollar on each male adult citizen, and a tax of two mills upon every dollar of taxable property in the State. An attempt was made to organize a system of schools under this law, but not with entire success. The Governor, in his message to the Legislature of 1870, speaks of the "impracticable character of the present law." "The machinery," he says, "is cumbrous and expensive, so much so, that it has proved a failure." He then suggests that "the plan be simplified, the districts enlarged, and the powers and discretion of the State board increased."

A measure which occupied a large share of the attention of the Legislature throughout the session, and was finally postponed without any decisive action, was a new charter for the city of New Orleans. A change in the character of this corporation was recommended by the Governor in his message at the beginning of the session. The government, he said, was "cumbrous, expensive, and irresponsible. Evils have grown up in it of a most dangerous character, which should be interdicted by law. It has issued a currency without authority of law, and has forced it upon the people in such amounts as to break down its value and destroy it as a circulating medium. It has failed to

pay the interest on its obligations, and is at double if not treble the necessary expense, owing to its inability to meet its current obligations. The charter should contain definite powers, less offices, and attach more responsibility to the officials." The subject was taken up by the members at an early day, and a joint committee on the city charter was appointed to receive propositions on the subject and to prepare a bill to effect the necessary reforms in the municipal government. A plan was introduced into the Senate by Mr. Bacon, embracing the leading features of a scheme submitted by the "Property Holders' Association" of the city. This provides that the powers of government be vested in a mayor and six administrators, two of the latter to be taken from the first district of the city, two from the second, and one each from the third and fourth districts, while the mayor is to be chosen from the city at large. The six administrators are to form a council, presided over by the mayor, and also to constitute the heads of the six executive departments of Finance, Commerce, Improvement, Assessments, Police, and Public Accounts. They are not chosen to preside over designated departments, but are assigned by the mayor after their election. The administrators must have been five years resident in the State, and three years in the city, must be thirty years of age, and qualified electors, and must have taken the oath of office prescribed in section 100 of the constitution. (*See* ANNUAL CYCLOPÆDIA for 1868.) Each is to receive a salary of $6,000 a year, and is required to give bonds in the sum of $100,000 for the faithful performance of the duties of his office. The mayor is to have a general superintendence and control over all the departments, and receive a salary of $5,000. The scope of the various departments is indicated in general by the title, but the charge of public education is placed under the department of assessments. The administrators are prohibited from having any interest, direct or indirect, in the works or contracts of the city, and from receiving any bribe for their official action. The principal objection brought against this measure was that it placed the government of the city in the hands of too small a number of persons. Among the amendments proposed was one brought forward by Mr. Ray, a country member of the Senate, for giving the Governor of the State the power to appoint the first mayor and council for the city, their term of office to expire in 1872, after which the government should be elective and the officials hold their places for two years. The discussion on this and other proposed alterations continued at intervals until near the close of the session, when the whole subject was postponed, and will come before the Legislature of 1870.

An act was passed, over the veto of the Governor, incorporating the Ship Island Canal Company and giving into its possession all the funds and assets of the old Drainage Commission of the Metropolitan District, which includes the parishes of Orleans and Jefferson, to the amount of nearly $2,000,000. The object of this company was the construction of a canal from the Mississippi River at Carrollton to the bayous some five or ten miles distant, and it received the drainage funds on the ground that the drainage of the entire district would be effected through this channel. This fund had been raised by assessment on the property to be benefited, for the special purposes of drainage, and it was claimed that it could not be diverted for the construction of a canal, which might or might not prove practicable for those purposes. The Drainage Commissioners under the old law refused at first to give way to the new system, but an injunction was obtained against them by the Canal Company, and, when the whole subject came before the courts, the constitutionality of the new law was sustained. The work of constructing the new canal went on slowly through the year, and in the mean time, by an amicable agreement, the drainage of the city went on in charge of the commissioners under the old law.

The act of the Legislature incorporating the Ship Island Canal Company, and placing at its disposal the drainage funds, was characterized, by the political opponents of the majority in that body, as a corrupt scheme, detrimental to the real interests of the cities concerned. Another measure, against which similar complaints were brought, was the act "to protect the health of the city of New Orleans, to locate the stock-landings and slaughter-houses, and to incorporate the Crescent City Live Stock Landing and Slaughter-house Company." This law gives to the company which it incorporates the sole right "to land, keep, or slaughter any cattle, beeves, sheep, swine, or other animals," at any place "within the city of New Orleans, or at any point or place on the east bank of the Mississippi River, within the corporate limits of the city of New Orleans, or at any point on the west bank of the Mississippi River, above the present depot of the New Orleans, Opelousas, and Great Western Railroad Company." The privilege here mentioned is granted to the proposed company, and forbidden to all other persons, under severe penalties. This was characterized as a gigantic monopoly, and it was claimed, with great emphasis, that it was carried through the Legislature by bribery and corruption. After the 1st of June, when this act went into effect, loud cries were made against its provisions by the butchers of the city and a large proportion of the citizens. Finally an action was brought against the company, and an injunction obtained on the ground that the law was unconstitutional. This view of the case was sustained by the court, and the injunction made perpetual. The ground on which the act of the Legislature was pronounced unconstitutional was, that it was inconsistent with the fourteenth amendment of the Federal Constitution, and the first

and second sections of the Louisiana Bill of Rights, which are as follows:

No State shall make or enforce any law which shall abridge the liberties or immunities of citizens of the United States; nor shall any State deprive any person of life, liberty, or property, without due process of law; nor deny to any person the equal protection of the laws. (*Fourteenth Cons. Am., Art.* 1.)

All men are created free and equal, and have certain inalienable rights; among these are life, liberty, and the pursuit of happiness. To secure these rights, governments are instituted among men, deriving their just powers from the will of the governed. (*Bill of Rights, Art.* 1.) * * * They, the citizens, shall enjoy the same civil, political, and public rights and privileges, and be subject to the same pains and penalties. (*Bill of Rights, Art.* 2.)

It was also declared to be in conflict with the provision of the Constitution of the United States, which gives to Congress exclusive power to regulate commerce, and the act of Congress admitting Louisiana into the Union in 1812, which provides "that the river Mississippi and the navigable waters leading into the same and into the Gulf of Mexico shall be common highways and forever free, as well to the inhabitants of the said State as to the inhabitants of the other States, and the territories of the United States, without any tax, duty, impost, or toll therefor imposed by the said States."

"Now," said Judge Collens, "this law (1) prevents any freedom whatever; (2) walls up many miles of the shores of the river on both sides against an important branch of commerce; (3) vests as it were a private company with an ownership in one of the greatest ports of entry of the United States; (4) gives this company alone the authority to 'establish wharves' for vessels bringing live-stock into the port of New Orleans; (5) yields it the exclusive right of having one or more stock-landings, with the 'exclusive' privilege of having landed at its wharves and landing-places all animals intended for sale or slaughter in the parishes of Orleans and Jefferson; (6) authorizes it to determine at what points or places wharves, stock-landings, etc., may be erected; (7) grants it the power of levying wharfage, not simply on the vessels, according to tonnage and time, but a round sum on the vessels and a duty of ten cents per head on large, and five cents per head on small beasts landed in this port, and (8) all this is made effective by penal clauses, imposing fines, etc. I think it clear this is not only a police regulation of the great trade in live-stock coming to this market, but (going far beyond such mere police ordinances as are necessary to prevent collision and disorder in the port, or to secure an equal and convenient use of the public banks to all) it amounts altogether to a bold and well-contrived regulation of commerce, compelling the coveted trade to flow into the channel, and leave the tribute in the coffers, of this private monopoly. It closes all the port except the wharf, slaughter-house, and stables of the company, to that trade. To my understanding its restrictions and preferences appear plainly as a violation of the act of Congress guaranteeing the freedom of the river to commerce."

There were several other measures of some importance passed, including an act to incorporate the Louisiana Transit Company, and aid it with the credit of the State to establish railroad and telegraphic communication between New Orleans and the Pacific coast. A new vagrant law was also enacted. A revenue bill, passed just before the adjournment of the Legislature, contained the following section, which was regarded by some as oppressive:

SEC. 4. *Be it further enacted, etc.*, That no physician, surgeon, midwife, lawyer, or other professional person, except teachers, shall practise in this State, unless he or she has first taken out a license in accordance with this law. No physician, surgeon, midwife, lawyer, or other professional person, teachers excepted, shall be allowed to collect a claim for professional services, unless he or she can exhibit a license in accordance with this law; a failure to exhibit such license, when called for, shall entitle the defendant to a non-suit. Each lawyer, before practising in any court of this State, shall have his license, under this law, recorded in a minute-book, kept by the clerk of such court for that purpose; and no judge, justice of the peace, or recorder, shall allow any lawyer to practise in his court until this law is complied with. Any judge, justice, or recorder, violating this act, shall be liable to a fine of five hundred dollars, to be recovered before a district court, to be sued for by the district attorney or attorney-general—one-half to go to the informer, and the prosecuting attorney to receive a fee of fifty dollars on conviction, in each case.

The fifteenth amendment to the Constitution of the United States, which provides that the right of citizens to vote shall not be abridged on account of race, color, or previous condition of servitude, was submitted to the Legislature by Governor Warmouth, on the 27th of February, with a recommendation that it be ratified at once. It was ratified in the Senate on the same day by a vote of 18 to 3, and two days later received the approval of the House of Representatives, by a vote of 55 to 9; while 36 members, all Republicans, refrained altogether from voting.

On the accession of General Grant to the Executive chair of the Federal Government, the following joint resolution was adopted:

Be it enacted by the Senate and House of Representatives of the State of Louisiana, in General Assembly convened, That we, the first representatives of the whole people of Louisiana, without distinction of race, color, or previous condition, hail with unutterable satisfaction and pride the declaration of principles and public policy embraced in the inaugural of the President of the United States, who has by their enunciation ranged himself as the foremost statesman, as he had before as the most illustrious general, of the Republic.

Be it therefore resolved, That we pledge ourselves to sustain to the utmost the President in carrying out his policy of economy in public expenditure, the strict accountability of all public officers, the enforcement of the reconstruction laws, the extension of universal suffrage by the constitutional amendment, the strict enforcement of law and order, the honest payment of the national debt, the speedy return to specie payment, and the early restoration of peace and harmony between all classes and sections of our beloved country.

The Legislature adjourned early in March, leaving several bills unsigned in the hands of the Governor, some of which, appropriating money to aid private enterprises, failed altogether to become laws.

Some difficulty occurred with regard to the authority of the Governor to fill offices by appointment when vacancies happened, which was probably not finally set at rest at the close of the year, although several judicial decisions had been rendered on the subject. The constitution provides that "the General Assembly may determine the mode of filling vacancies in all offices for which provision is not made" in that instrument itself. Accordingly, the Legislature of 1868 passed an act to determine the mode of filling such vacancies, the first section of which is as follows:

SEC. 1. *Be it enacted, etc.*, That whenever a vacancy occurs in any office, State, parish, or municipal, in this State, or which may hereafter be created, from death, resignation, or from any other cause whatever, the mode of filling which is not provided for in the constitution, all such vacancies shall be filled, if they be State or parish officers, by appointment by the Governor, with the advice and consent of the Senate, which appointment shall be for the entire unexpired term of such vacant office. If the Senate be not in session at the time the appointment is made, the vacancy shall be filled by appointment by the Governor, which appointment shall expire on the third Monday after the next session of the General Assembly thereafter, unless the time for which the vacancy exists expire sooner; and if the time of such vacancy has not then expired, it shall then be the duty of the Governor to fill such unexpired vacancy by appointment, by and with the consent of the Senate; and, if it be a municipal office, the vacancy must be filled by appointment by the Governor for the unexpired term of the person whose office is so vacated.

This the Governor construed as giving him the power of appointment even when vacancies occurred by the expiration of the term of office. A new charter for Jefferson City had been enacted in 1868, under which the Governor was authorized to appoint a mayor and council to act until an election should take place, which was ordered to be held in January, 1869. The Governor neither made the appointment, nor caused the election to be held, and the old mayor and common council continued in office. In the month of May, however, Governor Warmouth, assuming that the municipal offices of Jefferson City were vacant, appointed Felix J. Leche mayor, at the same time naming a full board of councilmen. The old officials refused to give up their positions, and the new board was installed by force on the 19th of May, by the aid of the metropolitan police, which also existed by appointment of the Governor. This act was accompanied by some violent demonstrations on the part of the citizens and the police, but resulted in no serious disturbance, it being agreed to leave the whole matter to the decision of the courts. An action was accordingly brought in the name of the State, against John J. Kreider, the mayor of the city, and the council associated with him. In the mean time, by an order of the District Court, the old board of officials was restored, and the metropolitan police enjoined from interfering with their action. The decision of the Supreme Court was rendered on the 30th of July, when it was declared that the Governor had no power of appointment in the premises, there being no vacancy in the offices of the city government.

A similar question came up in the city of New Orleans. The term of office of one half of the Common Council, known as the short-term members, having expired, a special election was held on the 19th of May to fill the vacancies. The Governor, on the other hand, held that under the law above quoted he had the right to fill these vacancies by appointment, which he accordingly proceeded to do. The old Board claimed that there were no vacancies at all, as according to law they were to hold their offices until their successors were duly elected and qualified, and that could not be until the next regular election. In this three-sided form the case went before the District Court. First, an injunction was granted by Judge Collens against the old Board, and the "newly-elected" members were admitted to seats in the Council. Subsequently an injunction was granted by Judge Leaumont, restraining the "newly-elected" members from acting, and placing the "Governor's appointees" in possession; and, finally, the Governor's appointees were enjoined by Judge Cooley, and the elected members restored. This last injunction, however, was dissolved on the 25th of December, and at the close of the year the power of the Governor to fill such vacancies as had occurred in the City Council of New Orleans appeared to be sustained. Whether the matter would be allowed to rest here, or not, remains to be seen.

A bitter warfare was carried on throughout the year between Governor Warmouth and G. M. Wickliffe, the Auditor of the State. The Governor accused the latter official of extortion and of corruption in the administration of the office of Auditor, and had him arrested on several specific charges. No less than fourteen indictments were found against Wickliffe by the grand jury. Pending the trial of these indictments, the Governor suspended Wickliffe from the exercise of his functions as Auditor, and appointed L. T. Delassise in his place, using the power of the metropolitan police to take possession of the office, and installed his appointee. An injunction was sued out in the Seventh District Court, prohibiting Delassise from performing the duties of Auditor, on the ground that the Governor had no power to make the appointment, that officer being elected by the people for a certain term not yet expired. A counter-injunction was granted by Judge Leaumont, of the Fifth Judicial District, restraining Wickliffe from acting as Auditor, and ordering Delassise to proceed with the duties of that office. This involved a conflict of jurisdiction, which was carried before the Supreme Court, but, before any decision was

rendered, two of the criminal cases came on for trial. In both these the Auditor was acquitted, but in one of them the verdict was regarded by the judge as so palpably in defiance of the facts, that he dismissed the jury with a reprimand. The remainder of the cases were dismissed by the Attorney-General on the ground that a constitutional officer could not be tried by a jury until after impeachment. Thereupon the Governor withdrew his opposition to the possession of the Auditor's office by Mr. Wickliffe, and gave the key into his hands. The matter did not, however, stop here. On the assembling of the Legislature, on January 4, 1870, the Governor submitted a special message to that body, in which he said:

> It becomes my duty to communicate to your honorable body grave charges against George M. Wickliffe, Auditor of Public Accounts. His offences against the constitution and the laws of the State have seriously embarrassed the government, and rendered it difficult to pay the interest on the State bonds. He has been guilty of numerous acts, involving extortion against individuals, and against the charitable institutions of the State; also involving fraud against the Commonwealth, and collusion with evil-disposed persons to defraud the same. He has extorted sums of money from the creditors of the State as a condition precedent to the issuance to them of the certificates of indebtedness or warrants to which they were entitled by law.

He then proceeded to give numerous instances in detail to support these charges. After giving an account of his attempt to bring the Auditor to punishment through the criminal courts, he closes with these words:

> Love for your State and fidelity to the people whom you represent demand rigid scrutiny into the conduct of the officer herein complained of, and prompt punishment should follow if it is ascertained that guilt exists. Permit me to say that the mortification I feel as the Executive of the State, in view of the criminal conduct of this officer, is increased and aggravated by the fact that the offender is a member of the party to which I belong. No party is worthy the confidence of the people, or can retain the same, who will permit such conduct to pass uncensured and unpunished. I submit this matter, gentlemen, to your grave, candid, and immediate consideration, and request that such action be taken as the ends of justice and the public interest require.

The subject was referred by the Legislature to a special committee for investigation, whose action forms a part of the history for 1870.

The commercial progress of Louisiana and of the port of New Orleans throughout the year can hardly be regarded as satisfactory. There are two works of public improvement intimately connected with the commercial prosperity of the State, which have been much discussed but about which little has been done. These are the construction of an adequate series of levees on the banks of the Mississippi River, and the removal of obstructions to navigation at the mouth of that stream. These are both works which will require a large outlay of money and be a decided benefit to the commerce of the entire West. They are indeed regarded as national works, and assistance is expected from the General Government for their accomplishment. A State loan was provided for in 1868 to raise funds for the rebuilding of the levees, but the bonds have not been so readily disposed of as was anticipated; and, although contracts were made for a large amount of work in this important department, it was not carried out for want of the necessary means. Important soundings and surveys have been made in the passes at the mouth of the Mississippi, and preparations made for deepening and widening the channels, provided appropriations for the purpose can be obtained.

The credit of Louisiana has been somewhat injured by the financial embarrassments of her treasury, and the feud existing between the Governor and Auditor. Although the bonded indebtedness of the State at the beginning of the year was less than $7,000,000, no adequate means was provided by the last Legislature for the payment of interest, and the State bonds have materially depreciated in value.

The State charitable institutions are numerous, and have in the past held a high rank. There is need, however, at present for renewed attention and care from the Legislature in order to maintain their high character. The following is a list of institutions in or near the city of New Orleans, including a few which are supported wholly by private benevolence: The Insane Asylum, 175 inmates; the Charity Hospital, 650; Poydras Asylum for Girls, 125; St. Mary's Male Orphan Asylum, 380; St. Vincent's Home for Boys, 65; St. Elizabeth's Female Orphan Asylum, 170; the Orphans' Home, 125; St. Vincent's Infant Asylum, 150; St. Joseph's Orphan Asylum, 215; German Orphan Asylum, 16; St. Anna's Asylum, 76; Southern Hospital Association, 50; Childrens' Home, 75; Louisiana Retreat, 45; the Widows' Home, 100; Asylum for Destitute Orphan Boys, 75; St. Croix Asylum, 80; Home for the Aged and Infirm, 50; Marine Hospital, 360; New Orleans Orphan Asylum, 220; Orphans' Home Society, 103; Jewish Widows' and Orphans' Association, 90; House of Refuge for Boys, 106; House of Refuge for Girls, 32.

The lessees of the State Penitentiary have within the last year placed 200 looms in that institution for the manufacture of cotton and woollen goods. The schools of the State have not yet reached a high degree of prosperity under the new system, and it is probable that a substitute will be adopted, or at least some important modifications made in the present law.

LUTHERANS. The *Lutheran Church Almanac*, for 1870 (published at Baltimore), gives the following statistical view of the Lutheran Church, in North America, in the year 1869:

SYNODS.	Ministers.	Churches.	Communicants.
I. *Synods connected with the "General Synod" of the United States.*			
1. Synod of New York	19	10	1,445
2. Hartwick Synod (N. Y.)	28	31	3,994
3. Franckean Synod (N. Y.)	21	26	1,782
4. Synod of New Jersey	9	13	1,021
5. Synod of East Pennsylvania	58	90	9,828
6. Susquehanna Synod (Penn.)	35	48	4,661
7. Synod of West Pennsylvania	49	97	13,961
8. Synod of Central Pennsylvania	35	90	7,456
9. Alleghany Synod (Penn.)	44	112	7,893
10. Pittsburg Synod (Penn.)	17	50	2,800
11. Synod of Maryland	48	77	13,950
12. East Ohio Synod	43	65	4,333
13. Wittenberg Synod (Ohio)	36	44	4,214
14. Miami Synod (Ohio)	30	39	3,068
15. Synod of Northern Indiana	31	76	3,210
16. Olive Branch Synod (Ind.)	17	30	1,556
17. Synod of Northern Illinois	30	48	2,105
18. Synod of Southern Illinois	21	20	1,302
19. Synod of Central Illinois	21	27	1,578
20. Synod of Iowa	11	17	731
21. Synod of Kansas	10	12	500
	598	1,022	90,928
II. *Synods of the "General Council."*			
1. New York Ministerium	50	50	13,000
2. Synod of Pennsylvania	141	205	51,800
3. Pittsburg Synod (Penn.)	58	108	8,605
4. English District Synod of Ohio	38	90	10,000
5. English Synod of Ohio	12	26	2,280
6. Synod of Illinois	35	48	4,746
7. Synod of Michigan	15	27	3,300
8. Synod of Iowa	60	105	8,000
9. Synod of Minnesota	26	60	3,742
10. Scandinavian Augustana Synod	48	96	12,208
11. Synod of Texas	20	28	2,220
12. Synod of Canada	24	60	7,220
	527	998	129,516
III. *Synods connected with the (Southern) General Synod of North America.*			
1. Synod of Virginia	30	61	3,200
2. Synod of Southwest Virginia	21	40	2,179
3. Synod of North Carolina	18	34	3,716
4. Synod of South Carolina	33	44	4,817
5. Synod of Georgia	5	10	750
6. Holston Synod (Tenn.)	14	25	2,000
	121	214	16,662
IV. *Synods not connected with any General Synod or General Council.*			
1. Joint Synod of Ohio	142	295	35,500
2. Joint Synod of Missouri	335	362	50,000
3. Synod of Wisconsin	52	106	15,200
4. Norwegian Synod (Wis., etc.)	50	220	31,480
5. Tennessee Synod	30	82	7,000
6. Ellson's Synod	9	25	2,000
7. Union Synod (Ind.)	17	17	2,110
8. Buffalo Synod (N. Y.)	15	22	1,850
9. German Synod of New York	10	11	1,800
10. Concordia Synod of Virginia	9	15	1,000
11. Synod of Mississippi	7	11	2,000
12. Missionary Synod of the West	11	20	700
	687	1,183	150,640
Grand total	1,933*	3,417	387,746

Under the patronage of the Lutheran Church in the above divisions taken together were 14 theological institutions, 16 colleges, 9 female seminaries, 16 academies, 14 orphan homes, and other eleemosynary institutions. Twenty-eight Lutheran periodicals are published, namely: 9 English, 15 German, 2 Swedish, and 2 Norwegian.

The *General Council* of the Lutheran Church met in Chicago, in November. A response was received from the Missouri Synod, in answer to an invitation of the previous General Council for that synod to send delegates to the General Council; it said in reply that it would not deal with the General Council, as such, but that, if a free conference could be held, at which all who, without reservation, confessed the unaltered Augsburg Confession may be admitted, "we, on our part, would, without doubt, largely attend the same, not as representatives, but as individuals."

The Council, in reply to this action, passed resolutions regretting that the Missouri Synod could not see its way clear to the official correspondence invited; and expressing a readiness to receive and entertain any proposals in accord with its basis, either from the venerable Synod of Missouri, or any others.

The committee appointed to frame a reply to the letter of the Pope, addressed to "all Protestants and non-Catholics," reported, and the Synod adopted the following resolutions:

1. The Pope's letter repudiates, in its only address, all recognition of any part of the Protestant world as having an organic existence as a Church—even *de facto*. It is addressed to individuals, as such, and may be properly replied to by individuals at their personal discretion. The idea, for some time current, that Protestants are to have any rights, or are invited to any privileges, in the "Œcumenical Council," is entirely groundless. Whatever may be the suavity of the manner, the Pope is as inflexible in the thing as if he were in the middle ages. He simply invites individuals—of whom he affirms that they "do not profess the true faith of Christ," and for whom collectively he has no better name than that of "societies" and "sects"—to abandon their convictions and make their submission to the particular communion of which he is head.

2. The individuals thus addressed are not of a class to which the members of the Lutheran Church belong. Though the Lutheran Church is a Protestant Church, and, in the strict, original, historic limitation of the word, the only Protestant Church, yet, as the Pope addresses Protestants who are "non-Catholics," he uses the term in a sense in which it does not embrace the members of our church. They are not non-Catholic Protestants, but are Protestants against Rome only, because Rome herself is non-Catholic. Our church believes in the Holy Catholic Church, the Universal Christian Church, the Communion of Saints, whose faith she confesses, and of which she is a pure part, and her true people living members. The very address of the letter makes a fictitious assumption, and to acknowledge that it is meant for us would be to grant an untruth and to fix a stigma upon ourselves. If there be those called Protestants who concede that they are non-Catholics, they, and they only, can properly consider the Pope's letter as addressed to themselves.

3. The Pope raises no pretensions in this letter which have not been officially rejected by our Church, again and again, and offers no arguments which have not been repeatedly confuted in our Confession, and by our great divines.

4. The record of the Lutheran Church against the

*The statistics given by the *Lutheran Church Almanac* for 1870, published at Allentown, by the Rev. S. K. Brobst, somewhat differ, as, according to it, the preachers number 2,016, the congregations 3,330, and the communicants 376,567.

errors of Romanism, written, not only in her own literature and life, but in the history of the whole civilized world for more than three centuries, is so clear, before heaven, earth, and hell, that any new official protest against those errors, on so slight an occasion as the letter of the Pope, is more than needless, and might almost excite the suspicion, or prompt the insinuation, that the body which made it was hazarding its dignity by seeming to catch at an opportunity for cheap declamation, to swell the sensation of the hour, or to court popular applause.

5. What is here true of all genuinely Lutheran bodies is preëminently true of this General Council. We have so recently and unreservedly accepted those great Confessions of our Church, in the principles of which alone Romanism can be successfully resisted, and which have proved for ages the mightiest bulwark against it, that any official act on our part would seem specially an act of supererogation. In view of these and other weighty reasons your Committee made no reply, and would recommend that none be made, to the Pope's letter.

A question, which was sent up from the Minnesota Synod, concerning the declaration of the General Council on "the Four Points,"* whether it is the right interpretation of them that heretics and "fundamental errorists" cannot be admitted to Lutheran altars as communicants, nor into the pulpit as teachers of the congregation, and whether the principles enunciated in them are intended to apply to all who differ upon the distinctive doctrines of the Lutheran Church, was made the subject of a report, which declared that there could be no question with regard to the universal adherence of the Council to the full and entire faith of the Evangelical Lutheran Church, and that the Council means to make a distinction between "fundamental errorists" and "heretics," as between the greater and the less. All "heretics" are fundamental errorists, but not *vice versa*. "By heretics we mean those who reject our common Catholic Christianity; by fundamental errorists we mean those who reject any part of the pure Gospel, as set forth in our Confessions." The report goes over another year, for consideration.

The Council decided to undertake the building of a theological seminary, and a committee was appointed to select a location. The domestic missionary work of the Council, particularly in the Northwest and West, and with the immigrants arriving at New York, was reported as prosecuted with as great energy as the means of the society and the available missionary force would permit. An Executive Committee of Foreign Missions was instituted, and instructed to correspond with the missions of Leipsic and Hermansburg, with the view to secure their active coöperation, and with the Finnish Lutheran Missionary Society, in reference to the establishment of a mission among the Indians in Alaska, and to take the question of the Chinese population in the United States into consideration.

The twenty-fourth Annual Convention of the *General Synod* of the Evangelical Lutheran Church met in Washington, D. C., on the 13th of May. A new synod, that of Kansas, applied for admission, and was received. The new constitution was reported as adopted by all the District Synods, and the General Synod declared to be acting under it. During the session an address was delivered by the Rev. Dr. Pohlman on "The History of the Lutheran Church in the State of Maine," which detailed the efforts of German immigrants in the last century to found a church on the Broad Bay, in New England, the establishment of a church at Waldoborough, its history, and its final extinction, which was ascribed principally to the tenacious adherence of the German immigrants to their own language, preventing the propagation of their faith and their assimilation with the English-speaking residents. A series of resolutions on the reunion of the Lutheran churches and a proposition to appoint a delegate to the General Council were laid on the table, on the representation that the latter body had closed its doors against the reception of delegates from any bodies not in full harmony with itself on all theological points. A committee was appointed, however, to correspond with the Southern synods, who have become separated from the General Synod by political events, and not upon doctrinal points, in behalf of the restoration of the former relations. The following resolution was also adopted:

Whereas, Our principles not merely allow, but actually demand, fraternal relations with all Evangelical Christians, and especially with other Lutheran bodies in this country: therefore,

Resolved, That we cherish the spirit of Christian fellowship, especially toward the brethren of Lutheran Synods, not now in connection with us, and will cheerfully enter into an interchange of delegates with them, as soon as we have evidence that this can be done in accordance with the wishes of these Synods.

The Synod recommended a more strict regard for the Sabbath, and approved of all movements to arrest the ravages of intemperance, including judicious legislation. Amendments to the liturgy were agreed upon, to be recommended, not commended, to the churches. Delegates were appointed to corresponding bodies. The Synod paid a visit to the President, and also to Mount Vernon. The next meeting was appointed for 1871, two years from the present one, and is to be held in Dayton, Ohio.

The body which was formerly known as the *Missouri Synod* has now assumed the official name of the "*General German Lutheran Synod of the United States and Canada.*" The organization embraces four particular synods. At its recent convention, at Fort Wayne, Ind., a series of resolutions was adopted, of which the following is the most important:

The sum of the matter is this: love to our neighbor requires the Christian (1) to give to the poor; (2) to lend money to those who find themselves under the pressure of temporary need; (3) also to make no contract with those who have means, with a view to get interest on loans; (4) either to work with his own money, or to join himself in partnership with others, by which profits and losses shall be justly divided;

* *See* the text of the "Four Points" in the ANNUAL CYCLOPÆDIA for 1868, p. 443.

(5) and, before entering into any loan-contract in the improper sense, to see that every thing unjust and oppressive is unequivocally removed.

The Synod of Wisconsin, which was one of the first synods originally to unite with the General Council, resolved, at its last meeting, to leave that body, and unite with the Missouri Synod. They also voted at once to discontinue their theological seminary at Watertown, and send their professor with all his theological students to St. Louis, to the seminary of the Missourians. But the college at Watertown, Wis., will be continued, and the Missouri Synod will send two professors to the college.

Before the New York Ministerium was divided at Albany, a number of ministers, under the lead of the Rev. Mr. Steimle, of strong symbolical tendencies, seceded and formed a separate synod. Their views having been found to accord in many respects with those of one branch of the Buffalo Synod, the latter, under the leadership of Rev. Mr. Von Rohr, appointed delegates to attend their next General Convention for the purpose of establishing a closer union between the two bodies, and thus forming another Lutheran General Synod. The ecclesiastical strength of the two bodies are as follows: Steimle Synod, 10 ministers, 11 congregations, and 1,800 communicants. Von Rohr Synod, estimated at one-half of the fragment left of the Buffalo Synod, 7 ministers, 11 congregations, and 925 members.

The General Synod of the Church, in Wurtemberg, had a very harmonious session. The question of preventing the growing secession to Methodists and other dissenters, without intrenching on religious liberty, was discussed. It was agreed that it was only possible by satisfying all the religious wants of the people in their own Church. The question of intercommunion between Lutherans and Reformed is beginning to be agitated in Wurtemberg. The exclusive Lutheran theory has heretofore not been practically carried out, but its advocates are now beginning to insist upon it.

Reports from the Lutheran churches in Norway represent a decided religious awakening of "more real earnest spirituality" as taking place. The people are seeking more freedom and independence of governmental restraint in the inner organization of their individual congregations; great activity is evinced in the Missionary, Bible, Tract, and other religious societies, whose agents and colporteurs are at work.

M

MAINE. The Legislature of Maine met on the first Wednesday of January, and continued in session for sixty-six days, during which period 350 acts and 99 resolves were passed. Many important measures occupied the attention of this body at this session, among which were the bill to repeal the death penalty, the dissection bill, the bill to abolish the six per cent. usury law, and the bill for the establishment of a State police. The dissection bill as passed provides that no hinderance shall be put in the way of physicians obtaining the bodies of those who, before their death, consented to have their bodies used for the purpose of dissection. The principal change made in the capital-punishment law was that requiring the Governor, at the expiration of a year after sentence, to execute the sentence of death, commute, or pardon the criminal. The consideration of the constabulary bill was referred to the next Legislature. At this session of the Legislature, the fifteenth amendment to the Constitution of the United States was ratified. In the Senate there were 25 votes for and 1 against its ratification. In the House there were 141 votes for its ratification. Hannibal Hamlin was chosen to represent the State in the United States Senate for the full term from the 4th of March, 1869.

The advocates of the cause of temperance, whose proceedings heretofore have attracted such general attention, were unusually active during the present year endeavoring to secure a rigid execution of the prohibitory law. On the 26th of January, the Maine State Temperance Convention assembled at Augusta. The meeting was large and enthusiastic, and the principles of the cause were expressed in the following resolutions which were adopted:

Resolved, That with devout and heartfelt thanksgiving to Almighty God for the guidance and success by Him accorded to our cause in the past, the friends of temperance in Maine, in mass convention assembled, reaffirm the principles so often heretofore enunciatod, and by experience established, that all hope of progress in the temperance reform rests in total abstinence from intoxicating liquors by the individual, and the prohibition of the liquor traffic by the State.

Resolved, That in the early history of the temperance reformation its success was due more to the Christian Church than to any other agency, and we do now most sincerely and earnestly invoke the renewed activity of ministers and church-members in a cause so calculated to remove the greatest obstacle to the diffusion of the Gospel of Jesus Christ and the promotion of the temporal and spiritual welfare of our fellow-men.

Resolved, That while we place our main reliance on the constant and faithful moral efforts which by the intelligent and good are exerted for the elevation of the standard of public sentiment in relation to the danger and the immorality of the use of intoxicating liquors, and the criminality of their sale, yet the impressive logic of facts and experience has demonstrated that the legal prohibition of the traffic in alcoholic drinks, coming in as an aid to moral effort, by protecting the inexperienced and the weak against temptation to vice, is essential to secure any permanent progress in the cause of temperance.

Resolved, That inasmuch as the value of a law prohibiting drinking-houses and tippling-shops depends upon the faithfulness with which it is executed, we view with alarm the open, organized, and defiant

manner in which prohibition is set at naught in many parts of the State, in consequence of the unfaithfulness of legal officers, by combinations of liquor-dealers and their sympathizers, and, in too many cases, influenced to this dereliction of duty by wealth and social power; such defiance of law not only secures license under the name of prohibition, and opens the flood-gates of intemperance, but also tends to undermine all law, and to destroy the foundation of good government, by encouraging the lawless to believe that the authority which makes laws does not possess the power to execute them.

Resolved, That while it is the duty of every good citizen to assist those in authority in executing the laws, yet we regard it as much the duty of the State to see that the laws for the protection of its citizens are enforced as it is to enact them, and that the State government which should look on and see its laws openly defied, through the power of criminals or the inefficiency of local officers, would be faithless to the trust reposed in it, and unworthy the confidence of the people. We can, therefore, but regard it as not only the right but the duty of the power that makes criminal laws to provide some means for their enforcement in cases where it is not secured by local officers, and we most respectfully pray the Legislature of the State to provide such a system of State police as shall secure the faithful, impartial, and constant enforcement of all the criminal laws of the State, and particularly those against which are the cupidity and the immense influence of panderers to vice, and the depraved appetites of the vicious.

Resolved, That while it is our earnest desire that the necessity for the existence and enforcement of laws prohibiting the liquor-traffic should be so generally recognized by all parties that there may be no necessity for friends of temperance to organize politically in defence of cherished principles, and much as we should deplore the arraying of any political organization against those cherished principles, whether through platforms or nominees for office, yet, should this be done, it would be our solemn duty to meet such an attempt to overthrow or disarm prohibition with counter-organizations, and counter political efforts. We trust, however, that all political organizations will recognize the vital necessity of advancing the principles underlying the temperance reform, by supporting and encouraging the execution of the laws against the liquor-traffic, and by nominating for office such men as not only sympathize with those principles, but also give to them the important support of example.

Resolved, That the sincere thanks of every friend of temperance are due to General U. S. Grant, President-elect, and the Hon. S. Colfax, Vice-President-elect, for giving the weight of their powerful example against the use of wine, and other intoxicating liquors, on social and public occasions. We hail such an example as the indication of a new and vital step in the temperance reformation, whereby the virtue of strict total abstinence shall be added to the other qualifications regarded as desirable, and we trust as indispensable, to commend a candidate for office to the suffrages of the people.

It does not seem to have been the intention of the convention assembled at Augusta to organize a separate political party in order to secure the success of their principles. But subsequently the expediency of organizing a third political party was discussed at the annual session of the "Grand Lodge of Good Templars," which opened at Richmond, on the 14th of April. This meeting was reported to be one of the largest and most enthusiastic temperance gatherings ever held in the State. The reports of committees were to the effect that there was much intemperance in all parts of the State, except in a few counties; that there was almost an entire neglect to execute the law against "tippling-shops;" that a large majority of the political leaders of both parties were using their influence, either directly or indirectly, to discourage the execution of the law; and that, unless the State should provide a police to execute the prohibitory law, most of the communities would soon be overrun with liquor-saloons. It being necessary, in the judgment of the convention, to take some action looking to a remedy for these evils, the following resolutions were adopted:

Resolved, That the exigencies of the cause of temperance at this time require that its friends should make organized resistance at the ballot-box, to all candidates for public office, of whatever political party, who are not practical supporters of the cause, or who in the discharge of their official duties would ignore the temperance sentiment of their constituents.

Resolved, That the Grand Lodge respectfully request the general State Temperance Executive Committee to immediately call a State Convention of the friends of temperance for the purpose of consulting with reference to the present condition of the cause, and of deciding upon such measures as may be deemed necessary to advance the interests of a movement more important in its financial, social, and moral bearings, than any other question before the public.

The action of this convention caused much comment on the part of the press of the State, and many journals, which were not hostile to the cause of temperance, opposed the formation of a new party, on the basis of temperance alone. The sentiments of many who favored the cause of temperance were expressed in the words of one of the local papers: "Whatever the object of the temperance men may be, their wisest and best policy is to seek it through the Republican organization, and by educating the people up to their ideas. Let them work through the caucuses and conventions in a legitimate way to secure representative men, and, when they have convinced the mass of the people that a State police or any other measure proposed in the interest of temperance will be salutary, they will have no difficulty in getting such measures enacted by the Legislature."

As both the temperance advocates and the Democratic party were waiting to see what action the Republicans would take in their coming convention, great interest centred upon this event. On the 24th of June the Republican State Convention assembled at Bangor, and was attended by 1,172 delegates—nearly every town in the State having a full representation. Lot M. Morrill was chosen as president of the convention. There were two candidates for the nomination of Governor. Joshua L. Chamberlain received 694 votes and Sidney Perham received 375. Mr. Chamberlain, therefore, was the choice of the party as candidate for Governor. The following resolutions were unanimously adopted:

1. That we hail with joy the restoration of peace, and the supremacy of the Constitution.

2. That with the restored Union the thanks of the nation are first due to the noble men who mindless of life braved the dangers of the field and the ocean for its preservation, and it is a source of gratification to patriotic citizens that an army of more than a million of soldiers have returned to their homes and their industrial pursuits without disturbance, and are now mingling with their fellow-citizens in the ordinary associations of life, without distinguishing marks save the glory of their wounds.

3. That we have entire confidence in the national Administration. It is entitled to the confidence of the country. Its patriotism and integrity and pure motives commend it to all good men. Its wise statesmanship has already been shown and its ability will continue to be illustrated, and we rejoice that there has been placed at its head, and by so general a suffrage, the great chieftain upon whom a grateful republic has thus hastened to confer its highest honors, and to whom, by general acclaim, it concedes its greatest indebtedness.

4. Maine has great natural resources, and a climate giving vigor to her people. Her soil is the best, and her forests the largest, in New England. Her frontier upon the ocean invites to commerce, and no State has greater advantages for shipbuilding or equal facilities for successfully competing for the carrying-trade of the country. Her ample water-power waits only to be used, to supply the world with fabrics and manufactures; and, when her railroads are completed that are now in progress, she will have a new vantage-ground in the race for growth and prosperity, by her nearer proximity to commercial centres and her easier access to the markets of the East and West.

Resolved, therefore, That the policy of the State government should be marked and distinct in favor of the development of her material interests; and,

Resolved, further, That the Republican party of Maine has no more pressing mission intrusted to its care, as the dominant power of the State, than to make the most it can of these great resources for the aggrandizement of its citizens and the enhancement of their welfare.

Resolved, That, in legislative appropriations, an enlightened forecast will bear in mind always our present indebtedness, and that in municipal expenditures and official disbursements the strictest personal accountability should be exacted.

Resolved, That, we emphatically renew our adhesion to the principles of prohibition and a vigorous enforcement of the laws to that end.

Resolved, That Joshua L. Chamberlain, the nominee of this convention for Governor of Maine, is one of our most eminent citizens, distinguished for his scholarship, his patriotism, and his undying military record. We commend him, with confidence in his integrity and ability, and pride in his record, to the suffrages of the people, and with an assurance of his triumphant election.

Prior, however, to the assembling of the Republican Convention, the State Executive Committee had issued a call for a State Temperance Convention to assemble at Portland, on the 29th of June; to which "all temperance men, without regard to past party associations, who regard the vigorous and impartial enforcement of the legal prohibition of the liquor-traffic as the paramount issue in the approaching gubernatorial campaign, and who, in the absence this year of other political issues of greater importance than the perfection of the schemes of aspiring politicians for future aggrandizement and position, are prepared, in the event of unsatisfactory nominations for Governor being made in the State Convention by both political parties, to present and support an independent temperance candidate for that position, are invited * * * to decide upon such measures as the exigencies of the cause may demand, and to prepare, if necessary, for systematic, independent action at the polls."

In pursuance of this call, the convention assembled at Portland, on the 29th of June, and organized with Henry Tallman as president. About 200 delegates were present, among whom there was a difference of opinion as to the policy of forming an independent ticket. Some of the leading temperance delegates were satisfied with the prohibition resolution in the Republican platform, and were of opinion that the temperance cause could be best promoted through the agency of the Republican party. These were, however, in the minority; and N. G. Hitchborn, of Stockton, was nominated by the convention as candidate for Governor. The resolutions adopted were as follows:

Recognizing the responsibility we take in placing a candidate before the people for their suffrages, in opposition to the two great parties now existing in the State, we deem it proper to make the following statement of principles:

We are in favor of equal rights, and even and exact justice to all. We are in favor of sustaining the public credit, and to this end will use our endeavors to have the national debt and interest paid as fast as the resources of the country will warrant. We are in favor of State legislation to develop the resources of the State, and to aid and encourage its productions and manufactures.

And, believing that temperance will best promote all these causes, and aid in all these endeavors, we are in favor of the total prohibition of the liquor-traffic, except so far as recognized by the laws, and of a State police as an efficient auxiliary toward that object; therefore,

Resolved, That we view with pleasure the peace and prosperity of our country, and acknowledge with gratitude our obligations to those patriotic men and wise statesmen who have been instrumental in producing it.

Resolved, That we will aid by our influence and votes in sustaining the public credit by meeting all its obligations honestly and fully.

Resolved, That we are in favor of developing by State legislation, so far as consistent with true economy, all the vast resources of our State.

Resolved, That we believe that temperance will best conserve the true interests of our State and our country; and that we believe in the total prohibition of the liquor-traffic, and in a State police as an effective auxiliary to this end.

Resolved, That we confidently offer to the suffrages of our fellow-citizens Hon. N. G. Hitchborn as a man who is fully identified with our industrial interests, one, also, who has always been faithful to his trust wherever placed, a friend of the working-man, an encourager of manufacturing, and a man every way worthy the public confidence and support.

It was also voted that the State Committee be authorized to call County Conventions for the purpose of nominating county officers.

On the same day, the 29th of June, the Democratic Convention was held at Bangor, and was attended by 616 delegates. Charles P. Kimball was chosen as president of the convention, and was subsequently nominated as candidate for Governor, which nomination was declined by him. Franklin Smith then received the nomination as candidate for Governor.

The principles of the party were expressed in the following resolutions:

Resolved, That the Democratic party of Maine are unalterably opposed to the present protective tariff system, so destructive to the commercial, shipbuilding and general business interests and prosperity of the country; and we reaffirm our adherence to the doctrine of free trade; the maintenance of the rights of the States unimpaired; equality in taxation, including United States bonds; a uniform currency; opposition to the centralization of power in the General Government; and in favor of an economical and just administration of the public affairs, in accordance with the principles of the Constitution of the United States; and we believe that the history and record of the Democratic party furnish a sure guarantee that in the event of their ascendency they will settle all questions which agitate the public mind in such a manner as to conduce to the welfare of the people.

Resolved, That our gallant soldiers and sailors who fought the battles of the Union from patriotic motives are entitled to the gratitude and support of the people.

Resolved, That we take pride in presenting to the people of this State General Franklin Smith as our candidate for the high office of Governor.

After a vigorous campaign, the election was held on the 13th of September, and resulted in a Republican success. The whole number of votes cast was 95,275, of which 20 were scattering.

There were cast for Chamberlain, 51,439; Smith, 39,033; Hitchborn, 4,783.

Chamberlain therefore received 12,406 votes more than Smith, and 7,628 more than Smith and Hitchborn.

In 1868 the whole number of votes cast for Governor was 131,266, of which Chamberlain received 75,835, and Pillsbury, the Democratic candidate, received 55,431. Chamberlain's majority in 1868 was 20,404.

The political complexion of the Legislature for the year 1870 is:

	Senate.	House.
Republicans	28	121
Democrats	3	30
Republican majority	25	91

There has been a marked improvement for the past year in the success of the common schools, which have been in a most flourishing condition. A bill was passed by the Legislature in January, providing for the appointment in each county of a supervisor to visit the schools of the county and exercise a general superintendence over them; also that the State Superintendent and the County Supervisors should constitute a State Board of Education, which should hold at least one session a year, to mature plans for the operations of the schools. Provision was also made for holding annually, in each county, a Teachers' Institute, to remain in session for ten days, for the purpose of affording instruction to teachers by means of lectures and addresses, with a view to prepare them for a more successful discharge of their duties.

During the year, $1,100,000 have been expended for school purposes, of which the sum of $800,000 was raised by direct taxation. The number of scholars in attendance upon the public schools, for the year 1869, was 226,143, being an increase of 943 over the attendance of 1868. The average attendance in 1869 was 50 per cent. of the whole, while in 1868 it was 42 per cent., showing a gain of 8 per cent. in the attendance of last year. There were 121 new school-houses built during this year, at an aggregate cost of $175,094; in the year 1868 there were 93 built, at a cost of $272,744.

The sanitary and reformatory institutions of the State are reported to be under efficient management. The hospital accommodations for the insane are not adequate to the number of applicants. It is estimated that there are from 1,200 to 1,500 insane persons in the State, who need the care and comfort of an asylum, while the accommodations are sufficient for only about one-third of that number. The construction of another hospital is recommended, to be devoted exclusively to one sex. The Maine Insane Hospital has been full during the year. In this institution there were remaining at the close of the fiscal year—30th November, 1868—339 patients, 156 males and 183 females. Since then, there have been 150 admitted—78 males and 72 females, making the whole number under treatment 489—234 males and 255 females. 152 have been discharged, 75 males and 77 females, leaving in the hospital on the 30th November, 1869, 337—158 males and 179 females.

The following appeared to be the condition of those discharged: recovered, 68—32 males and 36 females; improved, 28—14 males and 14 females; unimproved, 14—7 males and 7 females; 23 males and 19 females have died.

The assigned causes of insanity of those admitted during the year were as follows: Ill-health, 24; intemperance, 15; epilepsy, 10; domestic affliction, 11; over-exertion, 8; disappointed affection, 6; injury of head, 5; critical period of life, 5; puerperal, 5; decay of old age, 4; religious excitement, 4; masturbation, 3; pecuniary embarrassment, 3; paralysis, 3; fright, 1; sunstroke, 1; suppressed eruption, 1; unknown, 37.

There has been an increase of crime for the year 1869. The report of the Warden and Inspectors of the State Prison shows that at the close of the year ending November 30, 1869, there were 174 convicts in that institution, the largest number ever confined there, and an increase of 11 per cent. over the number incarcerated the previous year. Of the number confined, 116 are natives of Maine, 26 of other States, and 32 of foreign countries. The counties of Penobscot and Cumberland furnish the largest number, 24 and 32 respectively. Seven per cent. of the committals the past year have been recommitments of those who were only in for a term averaging little over a year, which leads the Warden to be adverse to short sentences, or less than three years. The earnings of the prison have been increased, which

is a direct result of a more extensive and profitable employment of the inmates.

The finances of the State are in a prosperous condition:

Receipts for the year 1869	$939,814 50
Cash in the Treasury, January 1, 1869	215,725 93
Total	$1,155,540 43
Expenditures for the year 1869	919,609 80
Cash balance in the Treasury December 31, 1869	$235,930 63

The whole public debt on the 1st of January, 1870, including the civil and war debt and the municipal reimbursement loan, amounted to $8,100,900. The amount of the civil debt was $384,000; and that of the war debt, $4,632,500. Of the war debt $800,000 falls due in 1871. The sinking fund arising from the tax of three-fourths of a mill on the dollar now amounts to $972,530, which will be more than sufficient to pay the funded debt falling due in 1871.

The number of savings-banks in Maine is thirty-seven. The deposits in these, for the year 1869, amounted to $10,839,955, and were made by about 40,000 depositors, making an average of a little over $250 for each depositor. The Executive of the State does not approve of taxing these savings-banks.

The consideration of the bill for establishment of a State police, to secure a more rigid execution of the prohibitory law, having been postponed from the last Legislature, Governor Chamberlain took occasion, in his annual message to the Legislature, to speak of the inexpediency of such a measure. "It is proper," he says, "that I should inform you that there seems to be a general falling off in respect for our liquor laws. The enforcement of these laws comes in no manner within the power of the Executive. It very properly devolves upon municipal officers, and the degree of their zeal and efficiency is measured by the prevaling local sentiment. It is not an unreasonable theory that the State should secure the even and impartial execution of her laws throughout her jurisdiction. So far probably all good citizens would agree; but the erection of a special police for the purpose mainly of enforcing the liquor law beyond, certainly, if not against, the wishes of the municipalities, has been urged by some as a proper measure and proclaimed by a few as a test of allegiance, to the cause of temperance. But, in a government like ours, one of the most delicate things which a State could be called upon to do is, to invade the ancient rights and dignities of towns, which the historian and statesman know are at the foundation of our liberties. It is still more difficult when the issue is upon a contested question of social ethics, or public morals, on which even good men might be divided, and bad men find pretext for giving the most dangerous passions way. The antagonism to excessive measures is likely to react against a virtue which all good citizens hold high. Unfortunately we have made the experiment our own; and the salutary lesson to be learned from it may warrant me in taking public notice of it here."

MARCH, ALDEN, M. D., LL. D., an eminent surgeon and medical professor, born in Sutton, Worcester County, Mass., in 1795; died at Albany, N. Y., June 17, 1869. His early life was passed on a farm, and the rudiments of his education acquired in public schools, in which, for a short time, he was a teacher. Having studied medicine with an elder brother who was a surgeon in the U. S. Army, he attended medical lectures in Boston, and subsequently graduated at Brown University, Providence, which, at that time, had a Department of Medicine. While a student, he was distinguished for his zeal and industry in the study of anatomy, and thus laid the foundation of his future surgical renown. In 1820 he went to Albany, and entered upon the practice of his profession, in which he continued actively engaged up to the period of his death. No improvement in his profession escaped his attention and investigation. His bold and independent habits of thought and action were always conspicuous, and he originated many new and important improvements in surgical science. As a bold, dexterous, and skilful operator, Dr. March had no superior in this or any country. Few persons ever combined so many of the elements of a great and successful surgeon. He had a frame of wonderful power and endurance, a mind of electric quickness and ceaseless activity, with skill in discrimination and tact and dexterity in execution, which carried him successfully through the most difficult and trying ordeal of surgical practice. He was never dismayed by the magnitude or danger of a surgical operation, upon which, perhaps, the safety or life of his patient depended. Having prepared himself for every emergency, he would commence an operation with calmness and self-possession, which inspired hope and confidence in his patients, and excited admiration and astonishment among his assistants and associates. Dr. March was the father and one of the founders of the Albany Medical College, at the head of which institution he continued for thirty years, having previously labored eighteen years to prepare the way for its establishment. He was also identified with the foundation of the Albany City Hospital, and among the last acts of his life donated to each of these institutions the sum of $1,000, and to the college he bequeathed his pathological museum, the most valuable in this country. He received his degree of LL. D. from Williams College, and was an honorary member of most of the leading medical societies in the United States.

MARYLAND. The sessions of the Legislature of the State of Maryland are biennial, and occur only on the even years; there was, therefore, no meeting in 1869.

The Comptroller's annual report shows that the total receipts into the treasury for the fis-

cal year ending 30th September, 1869, were $3,002,090.58, which, added to the balance in the treasury 30th September, 1868, $482,551.01, makes the aggregate for the fiscal year $3,484,641.59. The total disbursements of the same year were $3,039,301.18, leaving a remainder in the treasury September 30, 1869, of $445,340.41. The aggregate debts of the State, for which interest has to be provided, were, on the 30th September, 1869, $12,692,938.96.

As an offset to this debt, and to liquidate which, if it is deemed advisable to dispose of any part of them, the State holds bonds and stocks, on which the interests and dividends are promptly paid, to the amount of $7,228,413.18, leaving a balance of debt, due by the State, of $5,464,525.74, against which, however, she holds present unproductive stocks and bonds in the different works of internal improvements, amounting (including an insignificant sum of bank, bridge, and penitentiary indebtedness) to $19,676,632.08. But there is also due to the State from incorporated institutions, collectors of taxes, sheriffs, inspectors, registrars of wills, clerks of courts, and such other State officers, $1,562,151.89. Of this large sum it may be estimated that one million dollars will be returned into the treasury, leaving the debt of the State over its productive assets less than four and a half million dollars. It will thus be seen that the total actual debt of the State, after deducting the sinking fund and her reliable assets, is considerably less than one-fourth of her temporarily unproductive assets.

Of the funded debts contracted by the State, $988,622 matured in 1865, to cancel which no arrangements have yet been made; $1,403,146.86 will mature in 1870; $100,000 of "Southern Relief Bonds" become due in 1873; and all other loans of the State have from ten to twenty years to run. During the years 1866, 1867, and 1868, the increase of crime was so rapid in Maryland that the necessity of a new penitentiary was deemed immediate, but the records of 1869 show that there was no increase during that year; the average number constantly in the prison was the same as 1868, while the total number committed (317) was 26 less than the average of the three preceding years.

The gross cost for maintaining the prison for the fiscal year ending with the 30th of November, 1869, was.....	$72,716 12
The sum received during the same period for hire of convict labor, etc., was.....	38,953 45
Expense to the State.....	$33,762 67

The statistics constituting a part of the report of the Directors exhibit the fact that, on the 30th of November, 1869, there were four hundred and fifty-seven colored and but two hundred and twenty-three white prisoners.

The General Assembly, at its session in 1867, passed an act to establish and incorporate an asylum for the deaf and dumb of the State of Maryland. By the provision of this act, "the armory-grounds at Frederick City, with the buildings thereon, are set apart for the occupation and sole use of the said institute, with full power and authority to erect thereon such additional buildings as may be needed," etc., "the sum of twenty-five thousand dollars, to be used in the construction of the buildings hereinafter provided for, is appropriated," and a further annual appropriation, of so much of five thousand dollars as is necessary for the support and maintenance of the society, is made. The institution is now in successful operation, and has been for more than a year. By the terms of the act creating it, it is required to "receive and educate all deaf and dumb persons sent to said institution, free of charge, who present a certificate of the Orphans' Court or County Commissioners, that they, their parents or guardians, are unable to educate or support them, and in all other cases they are permitted to charge a sum not exceeding two hundred and fifty dollars per annum."

The question of railroads and canals was one of engrossing interest throughout the State, and entered largely into the political history of the year, the position of each candidate in reference to the building of new avenues of communication being made a test question at the polls. The influence of the Baltimore and Ohio Railroad was brought to bear against all lines likely to interfere with their monopoly; but the complexion of the Assembly is of a liberal character, while the Governor is avowedly in favor of all public works calculated to further the prosperity of the State. He defines his position in the following language:

> It is no hostility to any railroad which has led me to favor the construction of all roads and canals which can be built in Maryland, and to favor their independent operation after they are built. It is because I would extend the same railroad facilities to the people of Southern Maryland, for which they have been so grievously taxed to afford them to all other sections of the State, that I have alike urged the building of the Baltimore and Potomac road, to which the Baltimore and Ohio is so hostile; the Metropolitan, which is one of its own branches, and the Southern Maryland and Drum Point roads, which the Baltimore and Ohio has the opportunity of building, as it had that of the Baltimore and Potomac offered it, and which it contemptuously rejected. It is because I would aid the prosperity of the city of Baltimore by giving it cheap coal for its purposes of fuel, of manufactures, and of steamship uses, and, by pouring into its markets the agricultural and mineral wealth of the counties of Baltimore, Carroll, Frederick, Washington, and Alleghany; because I would increase the prosperity of the people of these counties by giving them increased facilities, and thus enhance the value of their lands and decrease proportionately the taxes of other parts of the State; and because I would open up, in every practical way, to the markets of the world, the immense coal-fields of Alleghany.

By the act of incorporation of the Baltimore and Washington road, a branch of the Baltimore and Ohio Railroad, it is required that

the company "shall pay to the Treasurer of Maryland, on the first Monday of January and July, in each and every year, for the use of the State, one-fifth of the whole amount which may be received for the transportation of passengers on said railroad, by said company, during six months last preceding." It is further required that "the president shall exhibit, on oath, to the General Assembly, on the first day of January, or as soon thereafter as the said Assembly shall convene, in each and every year, an account showing the gross amount received by said company for the transportation of passengers on said road, and the State's proportion thereof." This amount has been withheld from the State since the middle of 1868, and it is stated that the directors of the Baltimore and Ohio road, at a meeting held in December, resolved to refuse compliance with the terms of the charter, for the following reasons:

1. The Baltimore and Ohio Company had, by its charter, the right to build lateral roads, and therefore the Washington branch, without the condition subsequently enacted by the State in granting the charter of the Washington road.

2. The large returns made to the State had compensated the State for the risk she took by her aid.

3. That the decision of the Supreme Court of the United States, in the case of Crandall *vs.* the State of Nevada, would exempt the company from an enforced payment.

4. The building of the Baltimore and Potomac road, which would be a competing road for travel between Baltimore and Washington.

If the company succeeds in maintaining the position its officers have taken, it will cut off one important source of revenue to the State, and compel the Legislature to provide for the deficiency by increased general taxation.

Among the public works of the State yet in course of construction is the Western Maryland Railroad. Its importance to the western portion of the State, and to the city of Baltimore, can scarcely be exaggerated. It will, when completed, develop one of the most productive, yet hitherto one of the most inaccessible, parts of the State; will regain a valuable trade which legitimately appertains to the city of Baltimore, but which has been wrested from it by the superior energy of its Pennsylvania neighbors, and will contribute very largely to increase the facilities for moving coal and other minerals, especially iron ore, which abounds in great quantities on and near the line of this road. The grading of the road to Hagerstown is, to a great extent, finished, and but comparatively little remains to be done to complete the work and lay the rails, and the Chesapeake and Ohio Canal can be reached at Williamsport by a short route, with easy grades. The unprecedented high prices of materials and labor, however, and other unforeseen causes, have brought upon the company serious embarrassments, and it can look only to the mayor and City Council of Baltimore for extrication. That city has already become a subscriber to $2,000,000 of the stock of the company, and has indorsed its bonds to the extent of $500,000 more. The mayor and City Council, appreciating the importance of prompt assistance in the unfinished and exposed condition of the road, and desirous of avoiding the necessity of waiting for the session of the General Assembly, in June, passed an ordinance providing that the sum of $1,000,000 should be raised by the hypothecation of a sufficient amount of the Baltimore and Ohio Railroad stock belonging to the city, and invested in bonds to be issued by the company. The constitutional validity of the ordinance was tested by certain taxpayers of the city, because it was believed by them to create a debt within the sense of the constitution, without the previous requisites of an act of Assembly and vote of the people, and the Court of Appeals, without expressing any views adverse to the sound policy of the measure, arrived at the conclusion that the ordinance was in that form unconstitutional. The mayor and City Council, appreciating the renewed importance of immediate action, again moved in the matter, and an ordinance was reported in the Councils by which the aid can be given in accordance with the views expressed by the Court.

The Legislature which was to meet January 5, 1870, will probably perfect the necessary legislation for its submission to a popular vote.

The Baltimore and Potomac Railroad is rapidly progressing. Forty miles of it were graded during the last year; the rest of the grading is already under contract or will be immediately. Much heavy bridging has been constructed; many cross-ties have been purchased and delivered along the line; and the completion of the whole road from Baltimore to the Potomac River, in Charles County, within two years, is confidently predicted. The importance of this road to the State, opening, as it does, another communication between the capital of the country and the great commercial metropolis of the State, and establishing direct railway, and the shortest connection between Baltimore and the South and Southwest, cannot be overestimated.

The Metropolitan Road has been commenced. The Southern Maryland Railroad has been surveyed, its Board of Directors organized, and it is said the road will soon be placed under contract; the Drum Point road has also been surveyed and favorably reported on; and the Maryland Central road is in active and interested hands. The work on the Frederick and Pennsylvania Line Railroad is progressing finely, and according to the terms of the contracts must be finished by May 1, 1870. The work on the Parkton and Manchester Railroad was commenced about the middle of October,

and it is expected that the grading will be completed by August, 1870.

The Kent County Railroad, from Massey's Cross-roads, in Kent County, toward Deep Landing on the Chesapeake Bay, was finished to within nine miles of Massey's in December, and it is proposed, if aid can be secured in Baltimore, to extend it to the Chesapeake. The proposed road would cross or connect with all the branch roads which are now tributary to the Delaware Railroad from the Eastern Shore counties, by diverting the trade and travel of the Eastern Shore (which is going to Philadelphia) to the city of Baltimore.

The people of Middletown Valley are agitating the building of a railroad from the Point of Rocks on the Baltimore and Ohio Railroad to Middletown, and thence by way of Smithsburg to Waynesboro' and Chambersburg, Pa. This road would traverse a rich and populous country, and it is said could be easily and cheaply constructed.

The annual report of the Superintendent of Public Schools shows that there are 1,347 schools in the State, and 75,402 pupils enrolled. The total expenditure for school purposes during the year was $751,310, or $239,504 more than in 1867. The school system is growing in favor with the people. The schools have been open for a longer time; a greater number of scholars have been in attendance; a larger sum has been raised by local taxation; higher salaries have been paid to teachers, and more money has been spent in building, repairing, and furnishing school-houses.

There are 123 colored schools in the State, numbering 5,448 scholars, of which 65 of the schools, numbering 2,489 scholars, are under the care of the Baltimore Association. There is also a flourishing Normal School in Baltimore, for colored people, with an average attendance of 210 scholars.

The oyster-trade of Maryland is one of its great sources of wealth. The extent of the oyster-beds is about 373 square miles, 92 of which are closely covered and the remainder scattering. This field could be made to give profitable employment to 20,000 laborors in a few years from this, under the administration of proper laws. Last season there were 563 vessels licensed to dredge for oysters, averaging 23 tons each, carrying about 800 bushels at a load, and making two loads a month to market for say seven months of the year, summing up 6,305,600 bushels taken by the dredgers. During the same period there were 1,907 canoes licensed, each taking about five bushels per day for twenty-six days of the month, and seven months of the year, making 1,735,370 bushels taken by the tongmen, for sale, which, with say 2,000,000 bushels taking during the season for "private use," will give an aggregate of about 10,000,000 bushels taken from the beds of Maryland annually. These oysters will average not less than thirty-five cents per bushel, which gives, in round numbers, $3,500,000 as the annual value of the oyster product, from which the State derives an income of $40,000 above expenses. The 563 dredging-vessels employed 2,107 white men, and 1,453 negroes. The canoes employed about 3,325 in all, with the same proportion of white and negro labor; making a total of 6,885 men, independently of the labor employed in the carrying-trade, which would probably swell the number to between 9,000 and 10,000 hands employed *afloat* in the oyster business.

The great coal-fields of Maryland are almost inexhaustible. What is known as the "Big Vein" has, it is calculated, 200,000,000 of tons still untouched. During the year, 2,000,000 tons were mined, at which rate, the vein will last one hundred years. The four and six feet veins are estimated to contain about twice as much as the "Big Vein."

The coal produced during the year 1868 was 1,330,000 tons, while the amount actually removed from the mining district was as follows:

	Tons.
By Cumberland and Pennsylvania Railroad	1,575,000
By Cumberland Coal and Iron Company's Railroad	200,000
By Hampshire (Tram) Railroad	125,000
Total	1,900,000

The harbor of Baltimore has been greatly improved by the opening of a new channel, which has been named the Craighill Channel. By this channel, which is at the mouth of the Patapsco River, vessels drawing nineteen or twenty feet at average low water will save from three and a half to five miles of distance, and avoid much if not all of the danger usually experienced from the accumulation of ice in the lower part of the Brewerton Channel during the winter. This new channel deflects from the Brewerton Channel at a point three-fourths of a mile to the eastward of the Seven-foot Knoll Light (this light bearing southwest three-quarters west), and runs from said point in the Brewerton Channel south, one-quarter west, directly toward the end of Sandy Point, a distance of about five miles, to the deep water of the bay. The channel has been opened at the present time to a least depth of 21 feet at mean low water, and a least width of 200 feet, though it is in contemplation to widen it to a width of between 300 and 400 feet.

On the 1st of June, a State Convention of Colored Republicans, representing nearly every county in the State, was held in the city of Baltimore, in view of the anticipated extension of the right of suffrage to them. The convention was marked by great confusion, and much dissatisfaction was expressed by large numbers of the persons supposed to be represented.

The following were some of the resolutions adopted as the platform of the party:

Whereas, There do exist throughout these United States certain monopolies known as trades-unions and other organizations of mechanics, whose known opposition to the introduction of colored apprentices

into all the mechanical branches of business does exist even as one of the fundamental principles of their organization; and

Whereas, We claim that the colored American in his relationship to national industry is identical with that of the white American, this idea is in harmony with the great declaration of principles made by the fathers that all men were created equal, free, and endowed by their Creator with certain inalienable rights; that among these are life, liberty, and the pursuit of happiness: therefore

Resolved, That we hold these truths to be self-evident, that any exclusion in the admission of apprentices in the workshops of the country, on account of race or color, is unjust in its interest and anti-republican in its form.

And further resolved, We pledge ourselves to make this question of the exclusion of colored apprentices from the workshops of the country our political watchword, and that we will support no man and no party that supports these exclusive principles.

Resolved, That this convention return a vote of thanks to President Grant for his hearty indorsement of the fifteenth amendment to the United States Constitution on colored suffrage.

Resolved, That we regard it as an innovation on the rights of our people in excluding them from our city public schools as teachers for the great crime of being black.

Resolved, That ladies and gentlemen have the right to enjoy what they pay for, regardless of color.

Resolved, That the colored Republican citizens of the State of Maryland in State Convention assembled this 1st day of June, 1869, return our sincere and united thanks to that Supreme Being who ruleth the destinies of the universe, her people and nations, for having permitted us to see this, the long-hoped-for time, when we can assemble beneath the protecting folds of our country's starry emblem of protection and grandeur, and there openly and boldly assert that we are free American citizens, and that the flag floats over none other than freemen on American soil.

Resolved, That we return our sincere thanks to the Federal officers throughout the country for their appointments, to offices of trust and profit, of colored citizens; for that has demonstrated to us that they have acted irrespective of race or color, and we assure them that when Maryland's 40,000 colored Republican citizens can wield the ballot, that they who have taken the front in doing our brothers justice shall not be forgotten; we will likewise remember those gentlemen in this our native State that have defined the word office so as to mean position.

Resolved, That we maintain and recognize the justice and expediency of according to all men equal political rights.

Resolved, That we pledge ourselves to support at all times the regular nominee of the Republican party.

Whereas, President Ulysses S. Grant and his Cabinet have nobly recognized the ballots of 700,000 colored Republicans who aided in securing their triumphant election, by appointing colored men to high positions as foreign ministers, consuls-general, assessors of internal revenue, one judge of court, postmasters, justices of the peace, etc.: therefore,

Resolved, That we, the colored Republicans of Maryland in State Convention assembled, do fully realize the healthful influence of these humane and practical acts for which our hearts and the hearts of our long-neglected and patient race shall ever burn with indelible gratitude to them for their just recognition and impartial manifestation in acknowledging the claims of all American citizens.

Resolved, That the colored people are citizens and men, and having always by taxation borne their portion of the public expense; always conducting themselves in obedience to the laws of the State, even to degrading and oppressive laws; always ready to render patriotic aid to the State in times of peril; ready to contribute our means for internal improvement to beautify the Commonwealth equally with other citizens; ready to do our whole duty to our State in the most important sense in which duty can be practised, still, with all this and more, we are denied the commonest immunities of manhood already granted in the other States through the progress of liberal public sentiment.

Resolved, That it is the duty of the State to see that we get that which we pay for, by educating all of its citizens at the public expense throughout the State, that we may be better able to discharge the new duties devolving upon us with discretion; that if the Government, as it did during the recent civil war, expects us to bear arms, there is no reason why we should not be allowed, in a time of peace, to organize volunteer companies to acquaint ourselves with military service, and, therefore, we recognize the order of the police commissioners, which discriminates between us and other citizens by forbidding such organizations among us, as an outrage upon our liberties and totally without force of law.

Resolved, That we are, and have been for a long time, in the history of Maryland, submitting patiently to innumerable and constantly-repeated outrages (to some of which we have just referred), as citizens and human beings, excluded as we are from every humanizing privilege pleasantly enjoyed by the citizens of our native State; our females degraded; our wives, children, and ourselves lessened to the level of brutes by being crowded, men and women, together like four-footed animals in the same sleeping apartments, and dirty, filthy cabins of nearly every steamboat running from our native city, on some of which there is not even a division between the sleeping apartments of the men and women; and still more, not even a private place into which the females may retire.

Resolved, That a similar condition of oppressive injustice meets us on nearly every railway train which leaves Baltimore, in being compelled to pay for that which we do not receive by forcing the most respectable colored ladies and gentlemen into smoking-cars, where they are insulted, not only by making them pay for first-class tickets and giving second-class fare, but the obscene language often used by white men in such cars, in the presence of our females, adds another item to the crimes used against us by railway and steamboat companies.

On the 11th of June a mass meeting of colored Republicans was held in Baltimore, at which a long series of resolutions was adopted, the most important being the following:

Resolved, That we, the colored Republicans of Baltimore city, *totally ignore* the so-called Convention of June 1, 1869, believing its acts destructive of the best interests of the colored people of Maryland, and infamous and subversive of the cardinal principles of the great Republican party, viz., freedom of speech and action.

Be it further resolved, That we *particularly* reprobate and ignore that portion of the proceedings of the so-called Convention that arrogates to *men without votes* the control of the political future of our State, even in contemptuous disregard of Divine power, and repudiate this dictatorial action as foreign to the wishes of the masses of the colored people of our State.

June 18th, the colored Republicans of Frederick County assembled in the city of Frederick, and adopted a series of resolutions utterly repudiating the action of the convention of June 1st. The two most important resolutions were the following:

Resolved, 1, That we repel the idea that we have met in the interest of any wing of the Republican party; and aver that we acknowledge allegiance to

no faction, and that we are the firm and unswerving supporters of the great Republican party of the United States. And, so far as the Republican party of Maryland is concerned, we most sincerely hope that all of its deliberations may be characterized by great unity of action.

2. That we feel called upon to ignore the action of the Baltimore Convention of June 1, 1869, and unhesitatingly condemn it as ill-timed, unwise, and calculated to engender a spirit of contention among the colored Republicans, and lead to the formation of petty factions of a most disturbing and mischievous character.

On the 7th of October the Democratic Convention, called to nominate a candidate for the office of Comptroller of the Treasury, met in the city of Baltimore, and, without adopting any "platform," proceeded to ballot for a candidate. There were six contestants, of whom Levin Woolford was the successful one.

The Republican Convention met on the 12th of October, for the purpose of nominating a candidate for Comptroller, and, after adopting a platform, nominated W. A. McKellip.

The following are the resolutions adopted as the platform of the party in the election of Comptroller and members of the State Legislature:

Resolved by the Republicans of Maryland, in General Convention assembled, That we have undiminished confidence in the Administration of President Grant, devoted as it is to the maintenance of the national credit and the enforcement of economy and honesty in all branches of the public service.

Resolved, That repudiation of our national indebtedness is exclusively a Democratic doctrine, and should be, in whatever guise presented, utterly scouted and denounced by every man who cares to preserve either his country's honor or his own.

Resolved, That we are in favor of the enactment of a free railroad law, and the removal of all legislative restrictions upon the development of the agricultural and mineral resources of the State.

Resolved, That as the militia law of the State was enacted for purposes of doubtful loyalty, is unnecessary and produces a wasteful expenditure of the public money and an oppressive capitation tax on the people, it ought to be repealed.

Resolved, That the oyster law recently enacted is, in the opinion of the convention, a mere machine for furnishing place for political partisans, oppressive alike to all engaged in this laborious business, and in no wise calculated to protect the oyster interests or to benefit the treasury of the State, and ought to be repealed or essentially modified.

Resolved, That we are in favor of a comprehensive system of public schools that will give to all classes of our citizens the advantages of education for their children.

Resolved, That we, as national Republicans, stand pledged to the adoption of the fifteenth amendment to the Constitution of the United States, which gives equal rights to all men, without distinction of race or color.

On the 20th of October the Republican State Central Committee issued an address, reviewing the financial history of the State for the years 1868 and 1869, from which it appears that the appropriations made by the Legislature in March, 1868, were as follows: Special appropriations, $5,307,404.10; general appropriations for 1868, $1,696,998.11; general appropriations for 1869, $1,614,488.11. Total, $8,618,890.32.

The election, held on the 2d of November, resulted in the choice of every candidate on the Democratic ticket, and therefore the Legislature which assembled January 5, 1870, consisted entirely of members of the same political party, a circumstance which has never occurred but once before in any State in the Union, and that was as now in Maryland.

The vote polled was 23,412 for McKellip, Republican; and 52,754 for Woolford, Democrat. Woolford's majority was 29,342.

MASSACHUSETTS. The Legislature assembled on the 5th of January, and remained in session until the 25th of June, thus consuming 171 days—a longer time by one week than that of 1868, which was the longest ever held in this State.

The business accomplished may be briefly summed up as follows: The fifteenth amendment to the Constitution of the United States was adopted. A number of new branch railroads were chartered. An ocean telegraph company was authorized. Twenty new savings-banks and two or three insurance companies were chartered. A railroad commission and a bureau of statistics were established. The Boston (Methodist) University was chartered. New and stringent game-laws were passed, and about fifty private and miscellaneous corporations were authorized.

The three great measures of the session were: 1. The establishment of a State Board of Health. 2. The abolishment of the district system of public schools, and the revision of the educational system of the State. 3. The enactment of the prohibitory liquor law.

The new school law, in abolishing the old "district system," required the towns where it still existed to take immediate possession of all the school-houses, land, and other property owned and used by the district, to appraise the property and levy a tax for it, and remit the amount to the tax-payers of the several districts. Hereafter the schools will be managed directly by the towns, through the general school committee. The result will be fewer schools and better. There will no longer be schools of one, two, or three scholars, as has frequently been the case in some of the sparsely-populated hill-towns for the last few years. By a supplementary act, union districts and contiguous districts in different towns are also abolished, and the way of appraising the property of such districts is prescribed. Towns shall assume all the debts of districts, and deduct their amount from the amount to be remitted to the districts. By another act, towns may appropriate money for the purpose of providing conveyance for children to and from school. In accordance with the resolves of last year, there have been appropriated $25,000 each to Williams College and the Agassiz Museum of Comparative Zoology. The new appropriations are $1,000 for the purpose of instructing the convicts in the State Prison in reading, writing, and other branches; $10,000

for the new Salem Academy; $50,000 each to the Worcester Free School of Industrial Science and to the Agricultural College; and $80,000 to the Perkins Institute for the Blind. Amherst College and the Institute of Technology had leave to withdraw their petitions for aid.

The liquor law, which was passed, was a revival of the one previously in force. The first eleven sections treat of the commissioner, who shall be appointed by the Governor, give bonds in the penal sum of $20,000, have an office in Boston, where he shall analyze liquors and sell them to the authorized agents, keep record of sales and purchases, and seal all packages of liquor. He and his agents are forbidden to adulterate, or sell adulterated liquor, under pain of imprisonment. The next five sections authorize county commissioners to license the manufacture of liquors, to be exported or sold in thirty-gallon packages for chemical and mechanical purposes, the manufacturer to give bonds in the sum of $6,000, and keep his books open for inspection. The next eight authorize the appointment of bonded agents by cities and towns "to purchase and sell," at some convenient places, spirituous or intoxicating liquors, to be used in the arts, or for medicinal, chemical, and mechanical purposes, and no other. Every agent shall receive a fixed salary, keep open and accurate books, under penalty, purchase of the commissioner only, and make true annual returns. The next two sections provide for an assayer and inspector of liquors. Bond, $10,000. The next three apply to importers, druggists, and chemists. An importer of foreign liquors is allowed to sell the same, unadulterated, in the original packages in which they were imported. Druggists may sell for medicinal purposes to each other; and a chemist, artist, or manufacturer, may keep liquors for use, but not for sale; and any person may manufacture and sell cider for other purposes than as a beverage, and unadulterated wine for sacramental purposes. The next thirty-five sections forbid the manufacture or sale, except as above provided, or the keeping with intent to sell. Whoever by himself or by another person, directly or indirectly, or by any device, parts with liquor for a consideration in violation of the above provisions, is liable for the first offence to a fine of $10 and thirty days' imprisonment; for the second, $20 and sixty days'; for the third and every subsequent one, $50 and six months'. The whole machinery of evidence, search, and forfeiture, is then minutely detailed, and provision is made for searching any house where liquor is suspected to be sold, or concealed for purpose of sale. The last section provides the legal forms that are to be used. Cider is stricken from the lists of intoxicants.

The financial condition of the State is given in the following statement, which was carefully prepared for the information of the Legislature of 1870, and was incorporated in the Governor's message:

Funded debt	$29,737,259 90
Temporary loans	1,086,130 12
Total amount of debt January 1, 1870	$30,823,390 02
Increase during the year	$2,087,509 97
The sinking funds established for the redemption of the debt amounted on the 1st of January, 1870, to	$11,476,351 27
Cash on hand, applicable also to the payment of the debt	1,054,710 51
Back Bay lands fund in the Treasury (which may be used for this purpose)	286,922 62
These sums deducted leave an indebtedness of the State, for which still further provision is to be made, of	18,055,395 56
From this last item there must be deducted the loan to the Western Railroad (not provided for in the sinking funds), of	1,621,239 30
Loan to the Boston, Hartford and Erie Railroad (unprovided for in the sinking funds)	2,832,154 00
Loan to the Norwich Railroad (unprovided for in the sinking funds)	146,864 00
Loan to the Eastern Railroad	125,000 00
Total	$4,725,250 30
Which leaves to be provided for by the State, principal and interest, the sum of	13,330,145 26
There are several other items which will ultimately reduce the debt. Among these may be mentioned the receipts for the Back Bay lands, which are estimated at	1,500,000 00
Land sold to the Boston and Albany Railroad	435,000 00
And the balance of the unsettled claims against the United States Government, which are estimated at	400,000 00

This shows that the State is obliged to pay, from current revenue and taxation, interest on about $13,500,000. A large portion of the loan is issued at five per cent. interest, payable in gold. This indebtedness will be increased annually for the next four years about one million dollars, by payments to the contractors for the work on the Hoosac Tunnel, under their agreement with the Commonwealth.

This amount, with that still to be issued to the Boston, Hartford, and Erie Railway, will swell the liabilities of the State to $35,000,000.

The following statement shows the Treasurer's balance-sheet for the year:

Revenue receipts for the year 1869	$5,722,394 91	
Receipts on account of sinking funds, loans, etc	11,329,353 84	
Cash on hand, January 1, 1869	1,161,933 80	
		$18,213,681 55
Ordinary expenses, 1869	$5,450,227 47	
Payments, sinking funds, etc	10,620,645 27	
Cash on hand, January 1, 1870	2,142,808 81	
		$18,213,681 55

The revenue receipts for 1869 exceed those of 1868 in the sum of $612,458.68, while the ordinary expenses are less than in 1868 by $459,451.01. The revenue account of 1869 shows a surplus of $272,167.44, while in 1868 there was a deficiency of $798,742.25. The estimated expenses for 1870 are $5,754,320, and the revenue, $2,905,162, leaving a deficiency of $2,854,157 to be supplied by taxation. The interest on the Troy and Greenfield Railroad loan will make up $810,000 of this, and the conditional advances on the Hoosac Tunnel contract $840,000, reducing the amount of deficiency on the ordinary running expenses to $2,204,157.

The taxable property of the State, for the years 1868 and 1869, was as follows:

	1868.	1869.
Assessors' aggregates of real and personal property	$1,220,305,939	$1,341,169,403
Savings-banks deposits	94,838,336	112,119,016
Taxable excess of corporations	92,326,758	95,167,745
Total	$1,407,471,033	$1,548,456,164
Increase in 1869		140,985,134

The principal items of the Tax Commissioner's report are the following:

Amount of tax assessed on general list	$1,477,003
Amount assessed on oil companies, etc.	15,911
Total	$1,492,914
Taxes of 1869 paid	1,429,495
Taxes of former years paid	28,420
Remaining unpaid of taxes of former years	56,708

	1868.	1869.
Aggregate valuation of corporate stocks	$181,173,768	$193,742,793
Value of real estate and machinery	92,328,420	100,801,756
Excess on which a tax was laid.	92,326,758	95,167,726
Whole number of corporations taxable		1,261
On general list		1,084
Oil companies, etc.		1797
Made returns		103
Authorized increase of corporate capital by special act		$96,610,000
Under general laws		6,804,365
Reductions		1,278,000
Net increase		$75,136,365

The State Reform School is doing a noble work in the redemption of boys from the paths of vice, and fitting them for lives of usefulness. The report of the superintendent shows the number of boys in the school, September 30, 1868, to have been 321; number received during the year, 167; whole number, in school during the year, 488. There were apprenticed, released, discharged, etc., 193, leaving in school, September 30, 1869, 295. The total receipts of the school were $75,-364.73; the .expenses were $56,901.59.

The Massachusetts School for Idiotic and Feeble-minded Youths is too small for the demands upon it. The whole number of inmates at the close of the last year was 85. Since then 23 have been admitted, 17 have been discharged, four have died, and the present number is 87. The whole number treated has been 108. Seventeen have been discharged, and, among these, four are already known as doing so well that they can earn their livelihood. The new wing has been entirely completed during the year, and proves to be very convenient and advantageous in all respects. The superintendent of the State Almshouse at Tewksbury reports the whole number supported during the year to have been 2,140 The actual average weekly number supported is 710, at a gross cost of $78,331.19—which is $2.12 for the support of each one of the 710 persons, per week. It must be understood that this amount covers the entire cash expenditure for all purposes for the year.

The report of the Inspector of the State Almshouse and Primary School at Monson shows that at the time of the last report the number of inmates of the institution was 137; admitted during the year, 756—total, 893. The number of children actually attending school at the present time is 285, of whom 226 are boys and 59 girls. The average age of pupils has been nine years, and the average days of attendance for each has been 130. The superintendent of the institution says: "Dividing the actual amount drawn from the treasury of the Commonwealth, $45,663.11, by the average number of inmates, 500, gives an annual cost of $91.32, and a weekly cost of $1.75 for each inmate."

Dividing the current expenses, minus the increase of the personal assets, $3,379.35, we have the annual cost, $84.56, and the weekly cost, $1.62½. If to the current expenses be added the extraordinary expenses, $4,563.79, and the balance of the special appropriation expended, $3,047.77, the weekly cost will be $2.05 against $3.84 for the last year, made on the same basis. Whole number of deaths since the opening of the institution: males, 523; females, 485—total, 1,008.

The inspectors state that the whole number of inmates of the State Almshouse and Workhouse at Bridgewater was unusually small during the year. At the date of the report the following was the condition of the institutions:

Whole number in the almshouse	81
Whole number in the workhouse	23

By the superintendent's statement it is ascertained that—

The total current expenses were	$35,511 88
Receipts from State Treasury	35,511 88
" " labor of inmates	4,973 35
" " farm sales	726 12

From the report of the superintendent of the State Lunatic Hospital at Worcester, it appears that 337 patients were admitted during the year just closed, of whom 171 were males and 166 were females.

At the close of the previous year there were 382 patients remaining in the hospital, of whom 188 were males and 194 were females; so that there were 719 persons under treatment in the course of the year, of whom 359 were males and 360 were females.

The number of patients discharged was 343, of whom 169 were males and 174 were females. Of the 343 patients discharged, 149 were restored to their usual health of body and mind, 186 were improved, many of them so much so as to be able to return to their ordinary duties, and 11 were discharged as not improved.

The trustees state that on the 30th of September, 1868, the number of patients in the State Lunatic Hospital, at Northampton, was 421. In the course of the official year 169 have been admitted; 163 have been discharged; and 25 have died; leaving 402 in the house at the present time. The largest number on any day was 422; the smallest, 389; and the daily average for the year, 405. This average is larger than in any foregoing year except the next preceding. The superintendent thus gives the condition of the patients discharged: recovered, 49; improved, 51; unimproved, 63; died, 25—total, 188.

The statistical tables of the warden of the State Prison show a steady increase in the

number of prisoners, the largest number at any one time during the past year being 600, an increase of 36 over the largest number of 1868. The receipts in cash for the financial year ending September 30th were $132,466.74, which, with stock on hand of $7,290.87, makes a total of $139,757.61; and the expenditures in cash have been $104,020.84, which, with stock on hand, October 1, 1868, of $7,161.40, makes a total of $111,182.24, and a balance of $28,575.37 in favor of the prison. The labor of the convicts is hired out by contract, the present prices obtained varying from 83 cents to $1.07 per day.

The total number of girls cared for at the State Industrial School for Girls at Lancaster, during the year, was 252, of which number 189 remained in the institution October 1st.

The report of the superintendent of the State Nautical School shows the number of boys in the ship, October 1, 1868, to have been 381; committed and received from other sources during the year, 195; total, 476. Number shipped, discharged, escaped, etc., 206; remaining in school, 270.

The Treasurer's report shows the receipt of $5,939.40; amount expended, $5,618.89; cash on hand, $320.51.

The following is a condensed abstract of the report of the State Constable of the operations of the force during the year:

Prosecuted during the Year 1869—*Criminal Cases.*

All classes	3,459
Liquor prosecutions	6,808
Total	10,267
Number of officers on duty	150
Violations of license law	2,080
Violations of prohibitory law	3,353
Liquor seizures	1,395
Total	6,808
Gallons seized—alcohol	10,376¼
" " ale	25,533¾
Total	35,910
Stolen property recovered and restored to owners	$18,975 25

Expenses of State Police.	Fines and Costs paid in to County Treasuries.
1866... $81,939 14	$52,486 65
1867.... 129,660 99	226,427 19
1868.... 100,284 96	72,497 49
1869.... 161,253 76	141,277 68
$473,138 85	$492,678 95
Deduct expenses	473,138 85
Balance in favor of State Police	$19,540 10

Appropriations.	Expenditures.
1866.... $85,650 00	$81,939 14
1867.... 154,800 00	129,660 99
1868.... 114,800 00	100,284 96
1869.... 199,304 90	161,253 76
$557,554 90	$473,138 85
473,138 85	

$84,416 05 unexpended balance.

Number of liquor dealers abandoned the traffic	1,094
Witness-fees earned during the year	$20,290 16
" " received " "	5,881 09
Retained for use of counties	14,409 07
Pedlars' license fees	45,000 00
Paid over to Surgeon-General Dale, for benefit of sick and disabled soldiers and sailors, half fines and costs imposed on unlicensed pedlars prosecuted	1,270 00

The report of Colonel Gardiner Tufts, Massachusetts State agent at Washington, can be summed up as follows:

Whole amount claimed from United States	$3,744,044
Received prior to 1867	2,555,750
Received between 1867 and 1869	982,173
Received in 1869	84,790
Expected in a month	216,464

The final report of the agency, to which Colonel Tufts alludes as not far distant, will show a collection of 99 per cent. of all the claims of the State, against the General Government. The question of the liability of the United States, for the interest on money borrowed by the States to carry on the war, is now in controversy, and its decision will affect the final settlements. The State has also an unsettled claim for $280,000 for money expended in coast defence, which will probably be favorably decided. The expenses of Colonel Tufts's agency, last year, were only $6,384.

The 26th registration report of the Secretary of the Commonwealth for 1867 was published during the year, and gives the following statistics:

	Total.	Males.	Females.
Born	35,063	17,891	17,171
Married	28,902	14,451	14,451
Died	22,773	11,376	11,396

Of the marriages, 8,488 were between parties altogether of American birth; in 5,878, one or both of the parties were of foreign birth, and the nativity of 135 couples was unknown. The number of births increased by 977 over the year 1866, and was up to the average of the six years preceding the war; the marriages increased by 23, and were the most numerous ever recorded; the deaths were 865 less than during the preceding year, and were less than in 1860. The natural increase of the population during the year was 12,290. The average age of those who died was 30.05 years, which was somewhat less than in 1866.

The report further states that, by estimating the increase of population by immigration at one per cent. of the whole population, for the two years since the census of 1865, and adding it to the 23,000 natural increase, it is supposed that the total population of the State at the close of 1867 was 1,300,000.

During the year there were 1,007 stillborn children. The birth-rate, excluding these, was 2.76 per cent. At the rate of increase shown by the year 1867, it was supposed that by 1869 the old rate of 2.87 to each hundred persons would be reached. The proportion of male births to females ranged from 116 to 100 in Franklin, to 92 to 100 in Barnstable, only the latter county and Plymouth exhibiting an excess of females. An interesting table is that showing the parentage of the children born. It appears that the births from wholly American parents have decreased by 318, the births from mixed parentage have increased by 289, and those from wholly foreign parentage have increased by 922. The children born of foreign parents exceed those of American parents by 2,215. The fact appears that the marriage-

rate was one to 43.83 of the whole population. The highest marriage-rate was in Suffolk County, the lowest in Dukes. The average age of the new-married during the year was 29.1 years; of women, 25.1 years. The percentage of nativities of those married is as follows: wholly American, 58.94 per cent., wholly foreign, 29.24 per cent., mixed, 11.82 per cent. This shows a small diminution of purely American marriages and a marked increase of foreign marriages from the preceding year, when the proportion was 59.72 and 28.27.

The number of deaths, 22,772, was 2,301 less than the average of the six preceding years, and but 2,038 larger than the smallest number during the past eleven years. The death-rate in 1867 was 1.797 to 100 persons living, which is smaller than the average for the twelve years preceding the war. The highest rate was in Boston, the lowest in the coast counties south of Boston, of which the record of Dukes is the most satisfactory. The highest rate in the large cities and towns was in Somerville, 2.48; the lowest in Haverhill, .88. The nativities of those who died were as follows: American, 18,278; foreign, 4,126; not stated, 368—the percentage of those known being 81.58 Americans, 18.42 foreign. The leading causes of death were consumption, 4,362; pneumonia, 1,378; cholera infantum, 966; typhus, 965; scarlatina, 828; dysentery, 658; croup, 356; teething, 275; diphtheria, 251; measles, 194; erysipelas, 144.

The report of Mr. Stockbridge for the Commissioners on Cattle Diseases states that the pleuro-pneumonia has not appeared during the year, and "we would fain hope to be exempt from its scourge in the long future." The Spanish fever also failed to break out again last spring, as it had been feared, and the only serious malady among cattle was that which first made its appearance in October last in Great Barrington and Egremont. The facts regarding this malady are given at some length in the report of Dr. Beebe, who was called to take charge of the cases. The symptoms first appeared, after the great fall freshet, among cattle which had been allowed to feed on the meadows and marshes, but it is not regarded as certain that the undue moisture or malaria from them was the cause of the disease. The cattle appeared to be perfectly well, up to within a very few hours of death. They then became stupid, their horns were cold—in milch-cows the quantity of milk was largely diminished—and in a few hours the animal would die, invariably in great agony. *Post-mortem* examinations showed the spleen to be inordinately disturbed, the blood to be entirely free from coagulation and to lack fibrin, and a healthy state of the lungs and most of the other organs of the body. Dr. Beebe prepared a prescription which was used with great success. It consists of rosin, elm-bark, ginger, and cayenne, each one drachm, and cinchona two scruples. Mix in a half-pint of warm water, and give every two to four hours. The disease has been eradicated, it is believed, but it has caused a great loss to the farmers of the two towns to which its ravages were mostly confined. Both Mr. Stockbridge and Dr. Beebe believe that the disease is not contagious.

The report of the Board of Assessors of the city of Boston gives the following statistics in reference to the valuation of property:

Real	$332,051,900
Personal	217,459,700
Total	$549,511,600

The report shows a gain on real estate of $44,416,100, and on personal estate of $11,531,800, making a total gain of $55,937,900.

The annual report of the State Liquor Commission has the following recapitulation:

Amount of sales from July 31st to October 1, 1869	$53,922 67
Of commissions	3,381 39
	$57,304 06

The Messrs. Shanly, contractors for the completion of the Hoosac Tunnel, commenced work March 31, 1869. On the 23d of December they had made 1,199 feet of progress at the east end, 205 down the central shaft, 415 at the west end, and 221 with the brick arch. The work, on the whole, is not up to the contract requirements; but at the east end it has averaged 12 feet per month in excess, and is rapidly coming up at all points. The contractors are steadily perfecting and increasing their means of operation, having nearly doubled the monthly quantity of work, and do not anticipate the full development of their efficient strength before May or June, 1870. It is predicted by sanguine observers, long familiar with the tunnel, that the Shanlys will be through the mountain a year and a half before the contract time expires, March 1, 1874. The rock encountered at the west end has been of the hardest character, almost of the quality of flint, and that portion of the work has progressed slowly. The machinery has been increased, and now the advance is gaining in rapidity. They have added a good deal of valuable machinery to the working appliances, worth in the aggregate $100,000. During the month of November the number of workmen employed was 847—nearly twice the force ever employed by the State at any one time. The monthly disbursements for wages average over $60,000.

By the terms of the contract the Shanlys cannot draw any thing from the State Treasury until they have performed work enough to amount to $500,000, at the stipulated price per lineal foot and per cubic yard, which must be approved and certified by the State Engineers.

By the act of the Legislature, entitled "An Act to enfranchise the Indians of the Commonwealth," that class of persons, held, since the landing of the Pilgrims, under political and civil disabilities, is endowed with equal civil rights; and henceforth every inhabitant of the

Commonwealth, without distinction of race or color, is equal before the law. Until the passage of that act, the Indians of the Commonwealth, and people of color residing on Indian lands, though recipients of the liberal charities of the Commonwealth, were the subjects of civil and political proscriptions.

On the 14th of July the French Atlantic cable was landed at Duxbury with imposing ceremonies.

The State Temperance Convention was held in Boston on the 17th of August. The design of forming a new political party was distinctly disavowed, and a platform embracing twenty resolutions was adopted. The first eleven are of the usual style of temperance resolutions, reaffirming the belief in the policy of prohibition; and several others are of no consequence. Those that have any particular point or saliency are the following:

12. We hereby call on the political parties of the Commonwealth to insert in their platforms the approval of prohibition, as a principle right in itself, of the highest benefit to the people, that has been approved by the State for the last thirty years, and in its present form for the last fifteen years, except a single year of falling away. It is, therefore, so completely the policy of the State, that its representative parties should indorse it, and adopt it as their own.

13. The party that for nearly twenty years has controlled the administration of our State government is especially bound to recognize this principle, if it would continue to direct the counsels of the State. To its successful controversy with a gigantic national crime should now be added its controversy with another crime, national no less than local; and in which, if it is as faithful as it has been in that duty, still larger success awaits it than any it has received from a grateful people emancipated from the thraldom of rum.

14. The Democratic party, professing as its original corner-stone the equal rights of all men, should approve of a law which keeps men of every class from becoming slaves of the rum-seller, and which insures that freedom from temptation that alone can make all men happy and virtuous; and we, therefore, urge upon these, our fellow-citizens, to declare themselves in favor of the prohibitory law.

16. We thank the Constable of the Commonwealth for the faithfulness and progress evinced in the execution of the law; and, recognizing the difficulties in securing as deputy constables reliable men throughout the State, the obstacles which the far more numerous policemen of our several cities, who are under concurrent obligations to execute the laws, may throw in their way, and the brevity of the period within which the law had been operated, we call upon the citizens and officers of our cities and towns to cooperate with the constable in its more complete execution.

17. We gratefully recognize the various services of his Excellency, Governor Claflin, to the cause of prohibition, especially in the appointment of judges by whom we may expect a faithful administration of the laws; and we hereby pledge his Excellency our hearty support in the discharge of all those onerous duties of which these services are the harbinger.

The Democratic State Convention met in the city of Worcester on the 24th of August, for the purpose of nominating candidates for State officers.

John Quincy Adams was unanimously nominated for Governor by acclamation.

The other nominations were: For Lieutenant-Governor, S. O. Lamb, of Greenfield; Secretary of State, John K. Tarbox, of Lawrence; Treasurer, —— Heywood, of Gardiner; Attorney-General, Josiah G. Abbott, of Boston; Auditor, Phineas Allen, of Pittsfield.

The following resolutions were adopted as the platform of the party:

Resolved, That the Democratic party of Massachusetts have no new theories to advance upon national subjects. Recent events, as well as the experience of our earlier history, serve to convince us that the further the nation wanders from the old and cherished principles of the Democracy, the more urgent grows the need of a speedy return to them. But we nevertheless deem it a political duty to acquiesce in settled results, and postpone fruitless opposition to the accomplished facts of yesterday, in order to secure effective action upon the pressing problems of to-day.

Resolved, That we repeat our demand for assured honesty and ascertained ability in public servants, rigid economy in public expenditures, and an opportunity for all to buy in the cheapest market and with honest coin, so that taxes may no longer utterly consume wages; and renew our declaration in favor of the Monroe doctrine, and in favor of protecting the rights of our naturalized citizens at home and abroad; and our sympathy with every people now struggling for independence and self-government; and now, as heretofore, acknowledge our obligations and indebtedness to the courage and bravery of our fellow-citizens who, in the hour of peril, defended the flag of our country on land and sea.

Resolved, That we condemn the increase of the State debt, by extravagance and improvident grants of the public funds, as intolerably onerous to the taxpayer, unequal, unjust, and undemocratic; and we protest against the undue length of the sessions of the Legislature. If the public scandal of three hundred men spending more than five months and a half in making laws to govern the people the other six months and a half, thereby increasing the burden of taxation by $300,000 a year, cannot be otherwise removed, we are in favor of doing it by a constitutional limitation.

Resolved, That the constitutional and statutory provisions now in force in this Commonwealth, limiting the exercise of the elective franchise, aimed at certain classes of citizens, and intended to deprive them of the free exercise of that right, are unjust, pernicious, and at variance with the principles of true democratic government, and should be summarily repealed.

Resolved, That this convention, in presenting the name of John Quincy Adams for Governor of Massachusetts, and his associates upon the State ticket this day nominated, confidently ask for them the suffrages of all liberty-loving voters of the Commonwealth.

Resolved, That equal rights and equal privileges to all classes of the people, the laborer equally with the capitalist, is the cherished doctrine of the Democratic party; that, while capital is encouraged to organize for the increase of its prosperity, the prayer of labor for chartered privileges, in its effort to secure its rights and elevate its condition, should not be denied; that the present Republican Legislature of this State, in refusing to grant charters to the labor organizations which petitioned for acts of incorporation, outraged justice, and robbed the working-man of his just right; and that the working-classes of the country should have prompt relief from the oppressions of the pernicious system of legislation and administration in State and nation which, under the rule of the Republican party, pampers capital and degrades labor.

On the 22d of September the Republican Convention assembled in the city of Worcester, and made the following nominations: For Governor, William Claflin; Lieutenant-Governor, Joseph Tucker; Secretary of State,

Oliver Warner; Attorney-General, Charles Allen; Treasurer, Jacob H. Loud; Auditor, Charles Endicott. The following resolutions were adopted as the platform of the party:

Resolved, That we reaffirm our devotion to the principles and policy of the Republican party, which arrested national degeneracy, proclaimed liberty to all the oppressed of the land, vanquished a most formidable rebellion, preserved the integrity and unity of the Republic, and placed on an enduring foundation its safety, prosperity, and glory.

Resolved, That the Democratic party, by its close alliance with the slave power during a whole generation, its sympathy with the public enemies during the late civil war, its constant endeavors to perpetuate disorder in the rebel States, and by the enunciation of the doctrines of practical repudiation, has forfeited forever all claims to the confidence of the people, and cannot without great peril to their liberties and fortunes be intrusted with the government of the nation or of this Commonwealth.

Resolved, That the reconstructed States are not yet beyond the watchful care of the National Government, and that the Legislative and Executive Departments should take all lawful and constitutional measures to guarantee liberty, personal security, and equal rights to all the people thereof. "With malice toward none and charity to all," we welcome the truly repentant rebels back to the privileges of fellow-citizens, while we insist upon complete protection of all loyal men, white and black.

Resolved, That the Administration of President Grant, by its moderation and firmness, and its foreign and domestic policy, its scrupulous regard for the public faith as pledged to public creditors, its reforms in the direction of economy, and its able management of the public revenue, whereby the debt has been reduced and the national credit maintained and raised, has fully justified the confidence reposed in it, and gives promise of great and lasting benefits to the country.

Resolved, That as we contemplate the high place which our country, now relieved of slavery, holds in the family of nations, the widening influence of its example, and the marvellous development of its resources, it is becoming to remember gratefully the patriotic soldiers and sailors, living and dead, by whose toils and blood in our civil war this precious land was kept one and indivisible. The commemoration of their deeds by fitting rites and memorials, and the care of their disabled survivors and of their bereaved families, will remain a perpetual duty.

Resolved, That we regard as political aims of prime importance, the encouragement of the moral, educational, and industrial interests of the State, a just distribution of the burdens of taxation, so that they shall fall where they can be most easily borne, a rigid economy in public expenditures, less special legislation for private and corporate interests, a material abridgment of the sessions of the Legislature, and the requirement of high personal character in all public officers.

Resolved, That the Republican party recognize all the rights and privileges that belong to labor, and that the same chartered rights and privileges which are extended to organized capital, by legislation, should also be extended to organized labor.

Resolved, That the Republican party is a national party, coextensive with the country; that in this Commonwealth it applies no tests not exacted in other States or sections; that it ought not here to add or subtract from its national creed; that diverse views upon the best method of suppressing intemperance are honestly held among its members, and that the decision, as to what legislation upon the sale of intoxicating liquors is likely to prove most salutary, shall be left entirely to the will of the people, as indicated by the Senators and Representatives elected by their votes.

Resolved, That Governor Claflin has, in his official term, demonstrated the same integrity of purpose and capacity for affairs which have always been conspicuous in his private life, and we commend him and the other nominees of this convention to the suffrages of the people of this Commonwealth.

A convention was held in Worcester on the 28th of September, at which the Labor Reform party of Massachusetts was organized, and the following ticket put in nomination: For Governor, E. M. Chamberlain; Lieutenant-Governor, James Chattaway; Secretary of State, S. B. Pratt; Treasurer, N. W. Stoddard; Attorney-General, Thomas Crawley; Auditor, J. L. Glines.

The principles of the party were announced in the following resolutions:

Resolved, That we reaffirm the principles of the Declaration of Independence, that "all men are created free and equal," and have certain inalienable rights, to secure which is the only just and true purpose of government. Therefore all laws creating distinctions in favor of their condition, nationality, or pursuit, are a clear violation of the fundamental principles of democratic government.

Resolved, That, as labor lies at the foundation of all national prosperity, it is the duty and the interest of both the State and the nation to foster and protect it. Therefore, all associations of working men or women, formed with a view of promoting their moral or material interests, should receive the same chartered rights and privileges at the hands of legislators, State and national, as are granted associated capital, especially as all the chartered rights of associated capital are derived solely from the people who are the true source of power under democratic institutions.

Resolved, That a cardinal principle of the labor-reform movement is reduction in the hours of labor; therefore, be it resolved, that we insist upon the reduction of the hours of labor to eight hours for all labor employed at the public expense by State, counties, cities, and towns, as experiments which the public is able to make and is interested in making, since they will establish the preliminary claim necessary to prove finally that they mean a better-paid and better-educated laborer.

Resolved, That we will demand of every candidate who seeks our suffrage for political honors in the coming campaign, a faithful pledge and guarantee that he will advocate, and, if elected, vote for the enactment of a law, prohibiting all incorporated and other manufacturing establishments in this Commonwealth from employing females and minors more than ten hours per day, and we pledge ourselves to use all honorable means to defeat every candidate for office who will not pledge himself unreservedly to the enactment of such a law.

Resolved, That the exemption from tax of bonds or securities is a violation of the just principles of revenue laws, and lays an unjust burden upon the producing classes of the country.

Resolved, That we view with pride the fact that the soldiers and sailors were enlisted mainly from the ranks of the working-classes, and that they fought heroically to maintain the national integrity and uphold the honor of Massachusetts, and we claim that, if true to her promises and to herself, she should provide means for equalizing the bounties to her soldiers and sailors on just and equitable principles.

Resolved, That we heartily indorse the demands of the mill operatives of Massachusetts for a reduction of the hours of labor to ten per day.

Resolved, That the power, honor, and prosperity of the country rest upon the skill, intelligence, and welfare of the industrial classes.

Resolved, That we welcome to our shores indus-

trious sons and daughters of other countries upon equal terms with ourselves; but are opposed to the appropriation of our substance and labor for the purpose of introducing into this country a servile race to degrade and cheapen labor.

Resolved, That we indorse the demand of the National Labor Congress, for the creation of a Department of Labor at Washington to aid in protecting the rights and interests of labor as the most important interest of the country.

Resolved, That we earnestly urge the friends of labor in this State to use all their influence, individually and collectively, to secure the election to public office of candidates who are unequivocally committed to the principles embraced in this platform.

Resolved, That the recognition of any party of the claim of the bondholders, that the national debt is payable only in coin, is a clear repudiation of the national faith pledged in the act making the greenback a legal tender in payment of "all debts, public and private, except duties on imports and interest on the public debt," inasmuch as the national debt is a public debt, secured by the entire property of the nation. We therefore demand that the national faith shall be sacredly kept, and denounce all parties who would violate the promise on the greenback or in the bond.

Resolved, That we recommend that the constitution be so amended that the sessions of the Legislature be limited to 100 days, each year.

The election held the 2d of November resulted in the choice of all the Republican candidates for State officers—the following being the vote on Governor: Claflin, Republican, 74,106; Adams, Democrat, 50,701; Chamberlain, Labor, 13,567. The Legislature for 1870 stands:

	Senate.	House.	Joint Ballot.
Republicans	29	160	189
Democrats	10	58	68
Labor Reform	1	22	23
Republican majority	18	80	98

On the liquor question the majority of the Legislature is supposed to be in favor of the sale of liquors under proper restrictions.

In 1867 Patrick S. Gilmore conceived the idea of celebrating the return of peace by a monster musical festival, to be called the "Peace Jubilee," and on the 15th of June, 1869, his ideal was realized. A wooden building 500 feet long and 300 feet wide was erected for the purpose of holding the immense crowd expected to be present. The arrangements for lighting were ample, the building containing 25,000 feet of gas-pipe (over four miles) with 2,400 burners, consuming 14,000 cubic feet of gas per hour. A grand chorus organ with 1,011 pipes was built for the occasion. One hundred and eight societies were represented in the chorus, which consisted of 10,371 singers.

The first leading violin was played by Ole Bull, and the second by Carl Rosa, while the total number of instruments in the orchestra was 1,094. As adjuncts to be used in certain pieces, 12 cannon were provided, which were discharged by electricity. All the bells in the city were rung by the same means, and 50 anvils were beaten by 100 men. The Jubilee lasted five days.

On the 8th of September the New-England coast was visited by a fearfully violent and destructive hurricane. Boston suffered very severely. Branches of trees were swept through the streets, houses were unroofed, steeples were blown down, the shipping in the harbor was damaged, and some lives were lost. The most remarkable freak of the storm was the destruction of the Coliseum, of which only a fragment was left standing.

MASSIE, Rev. James William, D. D., LL. D., a Nonconformist clergyman, missionary, and author, born in Ireland in 1799; died at Kingstown, Ireland, May 8, 1869. He was educated for the ministry by Dr. Bogue, and went out as a missionary to India. After laboring there a few years he returned to Great Britain, was pastor for a time at Perth, Scotland, and subsequently at Dublin, Ireland, and Salford, England, from which latter place he removed to London to act as secretary to the Home Missionary Society. He was deeply interested in all the public movements of the day; was a prominent advocate of free trade during the anti-corn-law agitation, a supporter of the antislavery movement, and of the union and emancipation societies formed during the late war in the United States. He visited the United States several times, and within the past ten years had twice been a delegate from the Independents to the Congregationalists and Presbyterians of this country. He was the author of several works, among which were: "Continental India, Travelling Sketches;" "Recollections, illustrating the Religion, etc., of the Hindoos," 2 vols.; "The Nonconformist's Plea for Freedom of Education," 1847; "The Evangelical Alliance, its Origin and Development," 1847; "Recollections of a Tour in Belgium, Germany, Switzerland," etc., 1846; "Liberty of Conscience, illustrated, etc., Lectures," 1847; "Social Improvement among the Working-Classes, affecting the Entire Body Politic," 1849; "Slavery the Crime and Curse of America," 1852; "The Contrast: War and Christianity—Martial Evils and their Remedy," 1854; "Christ a Learner," 1858; "Revivals in Ireland: Facts, Documents, and Correspondence," 1859–'60; "Ireland in the Summer of 1860;" "Revival Work," 1860; "The American Crisis, in relation to the Antislavery Cause," 1862; "America: the Origin of her present Conflict; her Prospect for the Slave, and her Claim for Antislavery Sympathy, illustrated by Incidents of Travel during a Tour, in the Summer of 1863, throughout the United States," 1864.

MEIGS, Charles D., an eminent American physician, professor, and author, born in Georgia in 1792; died at his residence in Delaware County, Pa., June 22, 1869. His academic education was obtained at the South, and his medical studies were conducted in Philadelphia, at the Medical Department of the University of Pennsylvania, where he graduated M. D. in 1814. After graduation he returned to the South, and practised there for a few years, but in 1820 returned to Philadelphia, and since that

time had resided in that city or its vicinity, where he attained in few years to a large and lucrative practice in his specialty—obstetrics and diseases of women and children. He early manifested a taste for medical literature, and began his career, as a medical writer, as editor of the *North American Medical and Surgical Journal*. He subsequently translated and edited Velpeau's "Elementary and Complete Treatises on Midwifery." His thorough mastery of his own special department of the profession was already well known, and his reputation was greatly enhanced by the publication in 1838 of his "Letters on the Practice of Obstetrics." In 1840 he was called to the chair of Midwifery in the Jefferson Medical College of Philadelphia, and filled the position with great credit and acceptance till 1862, when he resigned and removed to his country-seat in Delaware County. In 1841 he published his very popular "Letters on the Diseases of Females," which was highly prized by the medical profession. This was followed in 1847 by "Lectures on some of the Distinctive Characteristics of the Female;" in 1848, by "Remarks on Spasmodic Cholera;" in 1849, by "Obstetrics, the Science and the Art;" and in 1850, by "Observations on Certain Diseases of Children." Besides these, he published a number of lectures on medical and other subjects. His last work, issued in December, 1868, was a translation from the French, entitled "Typhaines Abbey," a novel.

MENTSCHIKOFF, PRINCE ALEXANDER SERGUWITSCH, a Russian noble, Admiral of the Fleet, Governor of Finland, Minister of Marine, and Commander-in-Chief of the Russian forces in the Crimean War, born in St. Petersburg, in 1789; died in that city, May 3, 1869. He was descended from a noble family which had attained to the highest dignities under Peter the Great. He entered the public service, after receiving a military education, at the early age of sixteen, and was for some time attached to the embassy at Vienna. From 1812 to 1816 he saw much service as an aide-de-camp of the Emperor Alexander, and was promoted to the rank of general. After the Peace of Paris, he was actively engaged in the promotion of the Greek *hetairia*, or brotherhood, which aimed professedly at the restoration of the old Greek empire. These movements being regarded with disfavor by the Emperor, he resigned his connection with the Government in 1823. On the accession of the Emperor Nicholas, he was recalled to court, and made ambassador extraordinary to Abbas Mirza, then the Shah of Persia, to conclude an alliance with him against the Sultan. But the Shah proved treacherous and endeavored to seize Prince Mentschikoff, who effected his escape with great difficulty, and took a high command in the war which immediately followed. In 1824 he made himself master of Anapa, entered Europe as general-in-chief, and undertook the siege of Varna. In conducting this siege he was severely wounded, and was for a long time unfit for active employment. After his recovery he was made vice-admiral and chief of staff of the Russian navy, and coöperated very ably with the Archduke Constantine in the creation of the Baltic fleet. In 1831 he was appointed Governor of Finland, and proved very harsh and cruel in his treatment of the inhabitants who were of Swedish birth or affinities. In 1834 he was advanced to the rank of Admiral of the Fleet, and in 1836 made Minister of Marine. In 1853 the Czar sent him on an embassy to Constantinople to demand of the Sultan the right of protectorate over all the Greek Christians of the Turkish empire. Resolved to bring on a war with Turkey, he came before the Sultan in a dress and with a manner purposely so offensive, that he was summarily dismissed. On his return to St. Petersburg he was received with coldness, but was, nevertheless, a few months later appointed to the supreme military and civil command in the Crimea. He proved an energetic, and, for some time, a very successful commander; now stirring up insurrections in Thessaly and Epirus, making careful observations of the movements of the Turkish fleet, and presently annhilating it at Sinope; offering a stubborn though not successful resistance to the allies in the Alma, and sustaining severe a defeat at the Alma, without losing his *prestige*, and preventing for many months the fall of Sevastopol. On the death of the Emperor Nicholas he was deprived of all command, being personally obnoxious to Alexander II., but continued to sit in the Council of the Empire till his death, and to advocate the views of the Panslavists.

METALS. *Making Lead Pipes with a Tin Lining.*—M. J. Grand, Jr., is the inventor of a new way of manufacturing lead pipes with a lining of tin. The first step is the formation of a muff coated with tin on the inside. This is made in a horizontal mould, which is caused to revolve with great rapidity, and is provided with a hollow axle, through which the metals are introduced. The metals are fused in a crucible furnished with a stop-cock or a clack-valve opening into the hollow axle of the mould. One crucible will suffice, the lead being placed at the bottom and the tin on the top, the two being separated by an iron grating; or the tin may be melted in a separate crucible provided with a valve, and placed above that in which the lead is melted. The lead is run into the mould first, and the tin follows, while the former metal is still liquid. A rapid movement of rotation keeps the two metals from mixing, while a perfect junction is formed as they solidify. When sufficiently cooled, the muff is transferred to the press, and the pipes are squeezed out in the usual way.

Reducing Aluminium from its Ores.—Mr. A. L. Fleury, of Boston, Mass., claims to have discovered a method of reducing the metal aluminium from pure alumina. He first mixes

it with gas-tar, resin, petroleum, or some such substance, making it into a stiff paste, which is divided into pellets, which are dried in an oven, then placed in a strong retort or tube, which is lined with a coating of plumbago. They are then exposed to a cherry-red heat. The retort must be sufficiently strong to stand a pressure of from 25 to 30 lbs. on the square inch, and be so arranged that, by means of a safety-valve or tube, the necessary amount of some carburetted hydrogen gas can be introduced into the retort among the heated mixture, and the pressure of from 20 to 30 lbs. on the square inch be maintained. The gas alluded to is forced into the retort by means of a force-pump. By this process the alumina is reduced, and the aluminium remains as a spongy mass, mixed with carbon. This mixture is remelted with metallic zinc, and, when the aluminium has collected in a metallic state, the zinc is driven off by heat. The reduction is due to the carburetted hydrogen gas under pressure. The time required for reducing one hundred pounds of alumina earth, cryolite, or other compound of alumina, should not be more than four hours; when the gas can be applied in a previously-heated as well as strongly-compressed state, the reduction takes place in a still shorter period.

Platinizing Copper.—The *Quarterly Journal of Science* publishes the following:

In order to obtain a platinizing fluid capable of platinizing copper, yellow metal, and brass, add, to a moderately-concentrated solution of chloride of platinum, finely-powdered carbonate of soda, until effervescence ceases; next some glucose, and afterward just so much common salt as will cause a whitish-colored precipitate. When it is desired to apply this mixture for platinizing, the objects to be treated are placed in a vessel made of zinc and perforated with holes. The vessel is then placed, with its contents, for a few seconds, in the mixture just described, which, just previous to using, should be heated to 60° C. On being removed from the zinc vessel, the objects are to be washed with water and dried in sawdust.

Preventing Silver Waste.—The loss of silver, from the formation of a sulphide of silver on the surface of plate and its subsequent washing off, is enormous. The cause of the formation is well known to be the sulphurous products of the combustion of gas in streets, houses, and shops, which products unite with the exposed silver, causing a black appearance on its surface—not only tarnishing it, but diminishing the quantity of metallic silver in the articles so affected. Various expedients have been tried by silversmiths to prevent this discoloration of their wares, and also the loss in their weight, but without complete success, until Herr Strolberger, of Munich, hit upon the thought of coating his goods with a thin film of collodion, which effectually prevents the sulphur formations, and keeps silver, no matter how freely exposed to the deleterious influences of gas-lights, bright for an indefinite time. He first warms the article to be coated, and then, with a wide, soft brush, gives it a coating with a thin collodion diluted with alcohol. One operation generally suffices to produce the result.

Tinning Brass and Copper Vessels.—Dr. Hiller proposes the following method of tinning vessels of copper and brass: A solution is made of one part of crystallized protochloride of tin and ten parts of water. Another solution is prepared with two parts of caustic soda or potash, and twenty parts of water, and the two solutions are mixed together. The mixed liquor will be milky at first, but becomes clear after a time. The objects to be tinned are placed in a proper vessel with a sheet of pure tin perforated with many small holes. The alkaline solution is poured over them, and then heat is applied while they are occasionally moved about with a rod of zinc. The tinning is effected very rapidly, a few minutes being sufficient for a deposition of a bright coating of the metal.

Plating Steel, etc., with Nickel.—There were recently exhibited before the Polytechnic Association of the American Institute several specimens of iron and steel, upon which nickel had been deposited by the battery by a process devised by Dr. Isaac Adams, of Boston. It was claimed for this process that, while nickel is a much cheaper metal than silver, it is much harder, and is not affected by atmospheric influences, while, at the same time, the color is nearly equal to that of silver. Nickel is admirably adapted to the engraver's purposes, as, from its extreme hardness, a plate of nickel will outwear several plates of copper. Hitherto it has been found impossible to deposit nickel to a greater thickness than a mere film. The mere deposition of nickel on steel is nothing new. Directions for the process will be found in Smee's work, published many years ago. But thus far it has been found impossible to deposit nickel in thick plates, for, as soon as a film has been thrown down, the nickel is deposited in the form known as the "black deposit," which is friable and worthless. Hitherto it has been thought necessary to use pure nickel for the pole or anode that is to be dissolved, but Dr. Adams has succeeded, even when the metal employed did not contain more than 75 per cent. of nickel. The solution employed is the double sulphate of nickel and ammonia; but it must be prepared in a special manner, in order to insure success.—*Van Nostrand's Magazine.*

Alloys of Copper and Tin.—In a note to the French Academy, M. Riche submits the following facts concerning the alloys of copper and tin: He first considers the question of density. Some determinations were made upon bars of the two metals, weighing from fifty to sixty grms., but the results obtained were unimportant, owing to the great difference which exists in the alloys. The same metals reduced to fine powder were afterward operated upon, when it was observed that the contraction increases very regularly, from the very rich alloy in tin to the mixture $SnCu_2$,

and from this point it increases suddenly, arriving at a maximum, when the copper and tin are united in the relation of one to three. The density diminishes from this point, then rises again nearly regularly; the density of the richest copper alloys is inferior to the mixture $SnCu_3$, which only contains 62 per cent. of copper. Besides, this alloy may be distinguished from all the others by its properties; it is brittle enough to be pounded in a mortar, and forms crystals of a bluish tint, not resembling in the least either copper or tin. M. Riche gives a number of formulæ, expressing the composition of the definite compounds which copper forms with tin, and their properties. Referring to liquefaction, he then observes, "In order to separate these alloys, the mass should be moved about when becoming solid, to separate the crystals while forming." The fusibility of these alloys has been determined by the thermo-electric pyrometer. M. Riche has operated comparatively with these alloys, and with metals whose fusing-points have been settled by various experimenters. Numerous determinations show that the solidification of the alloys $SnCu_3$ and $SnCu_4$ takes place at a temperature somewhere between the fusion-point of antimony and the boiling-point of cadmium.

Alloy of Iron and Zinc.—One of the German scientific journals says that Dr. Oudemans, Jr., obtained for analysis a piece of metal which had been formed in an iron vessel wherein zinc had been fused for several weeks continually; this metal was found deposited at the bottom of the vessel, and became an impediment to the melting operations, in consequence of the relative infusibility of the alloy. In physical aspect this latter was of very much whiter color, and entirely different crystalline structure, than zinc; the alloy dissolved very readily and briskly in dilute sulphuric or hydrochloric acid, and was found, on analysis, to contain 4.6 per cent. of iron. Taking for granted that this alloy is a definite compound of the two constituent metals, its formula would be:

$$FeZn_{28}\ (Fe=56;\ Zn\ 32.75).$$

Fusibility and Volatility of Metals.—Dr. A. Von Riemsdyk, while engaged with experiments on the intrinsic composition of various pieces of silver money coined at the Royal Netherlands Mint, at Utrecht, investigated the fusibility and volatility of certain metals. The following is an abstract of his record of results:

The metals tin, bismuth, cadmium, lead, and zinc, as chemically pure as they can be obtained, were molten, in order to prevent their oxidation, in a feeble but constant current of pure and dry hydrogen gas. The author found that—(1) the melting of these metals does not, either mechanically or by evaporation, give rise to any loss at all; (2) that *tin*, *lead*, and *bismuth*, when kept in a liquid state, are not volatile at temperatures greatly in excess of their melting-points, and that, at a bright-red heat, quantities of 2.3433 grms. of *bismuth*, and 4.5183 grms. of *lead*, did not lose, by being kept at that temperature for one hour, more than 1 and 0.5 m.m., respectively, by evaporation, while *tin* did not exhibit any volatility at all; (3) that *cadmium* and *zinc*, though completely fixed, non-volatile at their melting-point, begin perceptibly to volatilize at a few degrees above that point; (4) that there does not exist any relation at all between the fusibility and volatility of these metals, which may be arranged in the following manner, beginning from the most fusible and most readily volatile:

Fusibility.		Volatility.
Tin	228.5° C.	Cadmium.
Bismuth	268.3° "	Zinc.
Cadmium	320.0° "	Bismuth.
Lead	326.0° "	Lead.
Zinc	420.0° "	Tin.

(5) that the so-called Rose's fusible metal, an alloy of tin, lead, and bismuth, the melting-point of which is about 97.5°, and certainly not higher, is not perceptibly volatile when heated to a bright-red heat in a current of pure hydrogen gas. Silver, unalloyed, melts at 1,040° C., pure gold at 1,240° C., while the author found that chemically pure copper requires a temperature of 1,330° C. to become liquid. Neither pure silver, nor pure copper, nor also the alloy of silver and copper containing 945-1000ths of the former metal (this alloy is the standard alloy of the Netherlands silver coins), loses any thing at all by volatilization, when kept for a considerable time at temperatures higher than the melting-points of both these metals, and in a feeble current of pure hydrogen to prevent their oxidation. The author has made some of these experiments on a large scale, having at his disposal several hundred kilos of these metals in pure and alloyed state.

Bronze Manufacture.—The great bronze founderies of France are well described in a paper in the *Practical Mechanics' Journal*. The following account is given of some of the processes employed in the celebrated establishment of M. Barbedienne, at Paris:

The bronze for all moderate-sized objects, say up to 250 kilos., is melted in clay crucibles, which are made in the neighborhood of Paris, and hold about 30 kilos. each. These are not extremely refractory, but stand three or four meltings.

There are eight crucible furnaces, in form very much that of the ordinary brass furnace, but differing from usual practice, in England at least, in that they are not wind-furnaces, but are fed with blast, from a small fan (about 20 in. diam.), driven by a strap from the engine of the "*marbrerie*;" the fuel is coke. As the advantages seem to be patent of this arrangement. The metal is "brought down," i. e., melted very much faster, the "heats" can be repeated much more rapidly, and the consumption of coke is greatly less than with wind-furnaces. Then, again, when the crucibles are about to be "drawn," the blast is thrown off, and there is much less flare and heat to be endured by the man who lifts them out. The tops of these furnaces are of cast iron, the covers iron-bound square fire-tiles, and the tops are about 22 in. above the floor-level.

The large air-furnace is fed with dry-wood fuel, and will melt upward of 1,000 kilometres.

In olden times statues were always cast in a loam-mould, put together piece by piece in the excavated pit, and, as fitted in place and jointed up, the pit was rammed up round them. This was but a make-shift mode, and had several serious evils: the mould never could be dried with perfect uniformity; and, even when dry, it stood so long in the pit while being got ready, that it imbibed moisture anew, and hence so many "miscasts" of old. Under the heavy head of liquid bronze, too, the ramming-in of the pit sometimes proved soft and deceptive, so that here or there the walls of the mould partially bulged, and the casting was either lost or damaged.

All M. Barbedienne's statues or large objects are cast therefore in cast-iron flasks or boxes, so that the pit is what iron-founders call a "naked pit," i. e., no ramming-up is practised.

A "pool," or reservoir of sand, with charcoal facing, is employed for all large castings, into which the contents of the crucibles are "teemed," or into which the air-furnace is tapped. When the full quantity of metal is in the pool, an iron conical plug, which had been inserted into and stopped the main "gait," or "*coulie*," is drawn up, and the metal enters the mould.

It passes off (as overplus) by "rising heads," as in cast-iron moulding, and "the gas is fired" at these by a lighted torch in the same way. From the low temperature of the liquid bronze, however, as compared with cast iron, but a small volume of gas is evolved from either moulds or cores.

The head of surplus pressure employed is always very small, for fear of distortion; a practice exactly the reverse of that of bronze-gun founding, where the "*masselot*," or "rising head," is often nearly as long as the gun itself above its muzzle, which is uppermost in the mould. It may be very much doubted, or even on plausible grounds contested, whether any advantage is obtained by those very long "gun-heads," and whether some positive evils in the increased segregation of the alloy be not thus introduced. Bronze-gun founding, however, is now, in these days of huge wrought-iron artillery, somewhat an art of the past, it may be said. We must remember, however, that Prussia is returning to bronze rifled field-guns, and that our new rifled Indian artillery is also to be of bronze.

The metals employed by M. Barbedienne for his bronze are very pure "tile-pitch" copper, and English or Straits tin, also of best quality. The copper is usually South American, again melted in France, purified by "liquation," and run into small pigs of about the size and form of ours known as "best selected copper."

Whitworth Metal.—Mr. Whitworth, the distinguished inventor of the ordnance bearing his name, has long been engaged in testing a new process of making and casting iron and steel, with a view of preventing the occurrence of air-bubbles in the castings, which are the frequent cause of the explosion of cannon. These bubbles are formed in the molten steel before it is set, and are retained in the metal, no matter how severe a hammering it receives. Of two pieces, manufactured at the same place, about the same time, and by the same workmen, one may stand a thousand rounds, and the other burst destructively at the first or fiftieth round—the difference in the strength of the pieces arising, for the most part, from the presence or absence of air-bubbles. The details of Mr. Whitworth's process are not published, but it is said to consist in the application of immense pressure to the molten metal while cooling. He has four qualities of this steel, or Whitworth metal, as he calls it. They are known as yellow (having most carbon), blue, brown, and red, the red being the most ductile. Having tried many experiments, on a small scale, he feels justified in declaring that he will now be able to make heavy guns perfectly trustworthy, at a price of about £120 a ton. He is making preparations for the construction, on this plan, of guns weighing as high as 43 tons and over.

Casting Steel under Pressure, by Use of Gunpowder.—Cast steel run into moulds is subject to blister, and is otherwise porous, which defect reduces considerably its toughness. In order to give the metal its requisite tenacity it is subsequently reheated, and then rolled and hammered. A writer in *Van Nostrand's Magazine* says that, as many articles, such as cannon, cannot be treated in that manner, he has devised a plan of submitting them to a higher pressure while in a liquid state, enclosed in their moulds maintained in iron flasks. For this purpose, immediately after running a cannon, he covers hermetically the lead by a metallic cap, by means of bolts or other devices attached to the flask; this cap is fitted in its centre with a vertical pipe, and provided with a cock at its lower extremities, while its upper extremity is closed by a washer, pressed by a bolt in such a manner as to act as a safety-valve. Before attaching the cap at, say, one inch from the surface of the liquid metal, he introduces in the vertical pipe, and between the cock and the washer, about one-quarter of an ounce of powder, prepared in the proportions of 80 parts of saltpetre and 20 parts of charcoal. On opening the cock, this powder falls on the metal, ignites and engenders about one-third of a cubic foot of gas, at 3000° F. These gases exert on the liquid metal a pressure which is transmitted throughout the entire mass, thereby condensing the same and expelling the blisters. The effect thus produced is equivalent to the pressure of a head of liquid metal 90 ft. high, admitting that the capacity between the cap and the surface of the metal contains 30 cubic inches. By making the flasks sufficiently strong these charges of powder may be varied so as to produce, by its ignition, a uniform and general pressure, which is preferable to the partial, irregular, and momentary action of a hammer.

The Ellerhausen Process.—The general results of the Ellerhausen process, which consists in the mixing of from 30 to 33⅓ per cent. of fine ore with pig-iron, previous to its treatment in the puddling-furnaces, are stated by *Van Nostrand's Magazine* to be a large loss of ore as compared with puddling, but an improvement of the iron, especially of a cold, short iron made from hematite, when treated with magnetic ores. An important experiment was recently made at the works of Henry Burden & Sons, Troy. The pig-iron was melted in a puddling-furnace, fettled with about half the usual

quantity of lump-ore, and 30 per cent. of fine ore scattered over the iron and stirred in. The heat was then lowered slightly to give the iron and ore time for reaction, when it was raised, and the charge balled in the usual manner. In this experiment there was a saving of some 30 per cent. in time, and an improvement in quality of product. The following summary of results is presented, contrasting the old with the new (or Ellerhausen) system of puddling:

OLD SYSTEM.

Coal consumed per ton of puddled bars	2,698 lbs.
Fettling ore consumed per ton of puddled bars.	1,374 lbs.
Average turn six heats	2,667 lbs.
No waste.	

NEW SYSTEM.

Coal consumed per ton of puddled bars	2,213 lbs.
Fettling ore consumed per ton of puddled bars.	682 lbs.
Fine ore consumed per ton of puddled bars	646 lbs.
Average turn eight heats	3,552 lbs.
Saving by new system in coal per ton of puddled bars over old system	485 lbs.
Increase in consumption of ore per ton of puddled bars over old system	46 lbs.
Increase in product of puddling-furnace over old system	34 p.c.
Gain in yield of both furnaces over old system during the week	2,512 lbs.

The Siemans-Martin Process. — *Van Nostrand's Magazine* gives the following particulars of a change of Siemans-Martin steel, produced at the works of Messrs. Cooper, Hundt & Co., Trenton, under the superintendence of Mr. F. J. Slade, who first introduced the process into this country. The editor says that he has experimented with a bar of steel made by this process, exactly as represented in this table annexed, and has found it to be very soft and tough, and capable of sustaining a very high heat:

Martin Steel Process, April 21, 1869, 6.25 A. M. to 6.22 P. M.

Coal for producers, from 7 A. M., April 21st to 7 A. M. April 22d, soft, 6,864: duration of charge, 11 h. 57 m.

A correspondent of *The Engineer* thus mentions one of the results of the process as adopted in France: "The Terrenoire Ironworks have now four Martin furnaces in operation. Ere now this process has been carried on, introducing scraps of Bessemer steel into cast iron. It is necessary, of course, that this cast iron be entirely free from phosphorus. Some trials have been made in the use of worn-out rails instead of Bessemer steel, but that has been a complete failure. The rails were exceedingly brittle, and the railway companies have forbidden the mixture of old iron rails with the Bessemer steel used in the Martin process. This difficulty might be avoided with good iron obtained from a cast iron free from phosphorus, but the price of the steel would be greatly increased. This process will be very useful to the makers of Bessemer steel, enabling them to get rid of their scrap."

Berard's Process. — The Paris *Presse* makes mention of a successful test of M. Aristide Berard's plan of changing second-class metal, in course of refining, into steel of at least ordinary quality, by means of a process which is no further described than by saying that it is "alternately oxidizing and reductive." The product obtained by his process, in presence of two competent judges, proved to be steel of good quality, suitable for all purposes, and made with the facility necessary to its application to practical industry. The operation was effected in a reverberatory furnace, lasted about an hour and a half, and was accomplished with as much facility as puddling. In this process, instead of acting on 480 pounds of metal, to obtain iron of number-one quality, from 6,600 to 11,000 pounds of metal are made by only one operation into steel ingots ready for the workshop, and with an unexpected economy.

Ponsard & Boyneval's Process.—The *Mining Journal* gives the following account of a process, patented by Messrs. A. Ponsard and F. E. Boyneval, of Paris, for dispensing with the costly blast-furnaces hitherto employed in the manufacture of cast and wrought iron and steel.

The furnace is constructed similar to a reverberatory furnace, with a double sloping hearth for the collection of the molten metal. The hearth is heated either by an ordinary furnace or by gas. Upon each of the sloping sides of the hearth rest the lower ends of a number of vertical fire-clay tubes or crucibles, without bottoms, such tubes entering at their upper ends with holes in the roof of the furnace, which roof is covered by a cast-iron plate, forming a platform, and being provided with movable lids, which fit over the mouths of the different springs leading down into the tubes. The ore, fluxes, and fuel, are fed into the several tubes from the platform; the flames circulating round the exteriors of the tubes effect the fusion of the ore without coming into contact therewith. The small amount of fuel contained inside the tubes along with the ore and flux, in order to effect the deoxidation of the ore and the carburation of the metal, should be of the best quality. It will thus be seen that two distinct kinds of fuel are employed — the ordinary fuel, for the purpose of fusion, and a superior fuel, of which only a small proportion is required. The molten cast iron runs out of the bottoms of the

vertical tubes and down the sloping sides of the hearth; and, as fast as the contents of the tubes subside or descend, fresh supplies of ore, fuel, and flux, are added, thus rendering the process continuous. The molten metal is run off through a tapping-hole in the side of the furnace, and the slag is removed through a separate opening, from time to time, as required.

In making wrought iron, the same apparatus is employed, and the wrought iron is obtained direct from the ore. The ore employed should be first reduced to a metallic state, by subjecting it to an elevated temperature in a furnace in contact with the fuel. The ore thus reduced is introduced into the vertical fire-clay tubes, and the process continued as for the production of cast iron, taking care, however, that no coal be mixed with the ore, which would in such case become carburetted, the result being cast iron or steel. In making steel, the process is substantially the same as for cast or wrought iron.

M. Schinz says of this patent that it "is not much more than the ordinary test-process of the laboratory on a larger scale; the only difference being, that, whereas in the ordinary trials a surplus of carbon and scoriæ is added, he, M. Ponsard, used merely the exact quantity requisite for carbonizing and smelting. This process, however, is the same as that going on in the hearth of the blast-furnace when the ores arrive there unreduced. The peroxide of iron (or sometimes the oxide) is reduced by the contact with solid carbon. This reduction, however, is not confined to the oxides of iron alone; other substances contained in the scoriæ are affected in the same manner, and yield sulphur, phosphorus, silicium, etc., which are by no means desirable companions for the produced article. In the blast-furnace, hot air, and an insufficient supply of scoriæ, generally produce this bad effect partly; while Ponsard's apparatus is so arranged as to have it throughout. The resulting inferior material will have to be refined, and, in that case, the inventors can hardly claim to have saved any thing by their so-called direct production."

The Heaton Process.—An English translation of a long and able memoir on this process by M. Gruner, Professor of Metallurgy in l'École des Mines, Paris, appears in *The Engineer*. The more important details of the process are thus described:

The purification of pig-iron by the Heaton process is based on the reaction of nitrate of soda, which is at once basic and oxidizing. The nitric acid oxidizes the silicon, the phosphorus, and the sulphur; the soda seizes on the acids so formed, and withdraws them from the reducing action of the iron. These reactions are known, but the difficulty in operating on large masses is to obtain a sufficiently intimate contact between the molten metal and the nitrate, to produce an efficient purification, without, however, causing an action so energetic as to result in violent explosions. Mr. Heaton adopted several contrivances in succession, which I need not review. It will be sufficient to describe his latest improvement, which has the great merit of being both simple and cheap.

This apparatus consists of a cylindrical vessel with a movable bottom, a kind of cupola without *tuyères*, into which is run the molten metal to be purified. In England it is called a Bessemer's converter. The movable bottom is a cylindrical caldron of sheet-iron, provided with two trunnions, which allow of its being held by a forked lever mounted on a wheel carriage. By this means it is removed and replaced after each operation. The interior of the caldron is lined with bricks, or refractory clay worked into the shape of a hemispherical basin.

The converter and its movable bottom are provided with flanges, which are held together by clamps and wedges for each operation. The converter itself is lined with fire-bricks, and provided with a sheet-iron chimney like a cupola; on the top of the chimney is a sheet-iron cup, intended to stop the projection of incandescent slag and metal, which might take place in the event of a too violent deflagration of the nitrate. The molten pig is poured into the converter through a lateral aperture, a sort of box funnel, which can be closed at will by a wrought-iron lid, or simply by a brick. The dimensions vary with the weight of metal to be treated at each operation. There are four converters at Langley Mill, two large and two small ones; the latter are used for charges of about fifteen cwt., the former for more than double that quantity. But that is not the necessary limit of their capacity, like the Bessemer converters. The essential feature of Mr. Heaton's invention lies in the arrangement of the nitrate-chamber. To insure the gradual decomposition of the salt by the molten metal, the nitrate must be tightly packed into its chamber, and further protected by a perforated cover. If the stream of molten metal fell directly on the nitrate, it would at once penetrate and force its way to the bottom of the mass. The action would be most violent and instantaneous, and the alkaline salt would soon float without efficiently permeating and reacting on the molecules of metal to be purified. To avoid this, the above-mentioned perforated cover is placed over the nitrate when it has been packed into the movable bottom; it is a thin plate of cast or sheet-iron, perforated with a great number of holes about ½ in. in diameter. The principal reagent used by Mr. Heaton is Peruvian nitrate of soda; but he habitually mixes with it a certain proportion of quartzose sand, sometimes lime, peroxide of manganese, fluor spar, etc. We shall see that quartzose sand and lime are more generally detrimental than otherwise, but peroxide of manganese, carbonate of soda, and sea-salt may advantageously be added to the nitrate. Indeed, Mr. Heaton himself has abandoned the use of lime, and now generally uses from six to twelve per cent. of nitrate with one to one and a half per cent. of sand.

These two ingredients are thoroughly intermixed, and then closely packed into the nitrate-chamber, which has been previously dried.

The nitrate used is the ordinary nitrate of commerce; it contains from five per cent. to six per cent. of water, and three per cent. to four per cent. of foreign substances. A sample which I brought back from Langley Mill was analyzed at the School of Mines with these results: water, 5.88; sand, 0.28; sulphate of lime, 0.22; chloride of sodium, 2.78; pure nitrate of soda, 90.89. It was tested for phosphoric acid, but it only contained the merest traces of it. According to this, 100 of crude nitrate contains 33.27 of soda, or rather 34.7, if we reckon in that which is found in the condition of chloride of sodium.

The molten pig to be converted is tapped out of the blast-furnace or the cupola into a ladle of sufficient capacity to contain the weight of metal to be converted. By means of a crane or a traveller the ladle is brought up to the box funnel of the converter, and the molten metal is poured into it. If the molten metal be hot and fluid, the reaction begins at once; the perforated plate lets the metal pass, the nitrate is gradually decomposed, the oxidizing gases, mingled with streams of soda, rise through the bath of pig, and cause an ebullition more or less violent, which sometimes makes the whole converter tremble, and

is accompanied invariably by a roar similar to that which is heard in a small Bessemer converter.

The conversion seldom takes more than from two and a half minutes to five minutes, but occasionally, when the molten metal is not at a high temperature, and cannot at once pass through the perforated plate, it lasts eight or ten minutes.

Krupp's Bessemer Rails.—The manufacture of Bessemer steel rails is now very extensively conducted in the great works of Herr Krupp, at Essen.

The *Engineer* says: There are four converters used only for rail-making. The steel ingots obtained are cylindrical, 1 foot 6 inches diameter, and 5 feet high. These ingots are hammered under a steam-hammer of 8 tons, and reduced to an octagonal section 12 inches wide. They are then rolled through a rolling-mill worked by a 100-horse-power horizontal and direct-acting engine. This engine, which is not condensing, runs at 50 revolutions per minute, and has a fly-wheel 46 feet diameter, weighing 60 tons. The ingot is thus converted into a rectangular bar 5¼ inches thick and 7¼ inches wide; this bar is divided into six or eight pieces, under a steam-hammer of 4 tons. Each of these pieces is used for making rails; they are rolled through a steam rolling-mill worked by a 500-horse-power steam-engine to the speed of 60 revolutions per minute. This system of manufacture enables us to get rid of the globules which have been ere now the most grievous defect of the steel rails, and which are more easily expelled from a large ingot than a small one.

Tungsten Bessemer Steel.—The idea of alloying steel with tungsten is not a new one. Mr. Mushet proposed it many years ago. At a later date M. Leguen, of France, made experiments with the alloy, employing iron converted into steel by the Bessemer process. With a common gray pig, which he used then, he produced an alloy of very good quality. Recently he has continued his experiments, now employing a good white cast iron, and producing an excellent steel. A portion of the iron is first alloyed with one-tenth of wolfram in a cupola furnace, and is added to the rest in the converter. The conversion is carried further than usual, so that the carbon is reduced to one-half the ordinary proportion. The steel made by this process is soft, but very tough, and tempers remarkably well. Mr. Leguen mentions that it will be found extremely useful for machines, some parts of which require to be tempered, while others are kept soft. The amount of tungsten used to make the alloy is only 0.55 per cent., so that the additional cost of the steel cannot be very high. Rails have been made from this kind of steel—the alloy containing .558 per cent. of tungsten. M. Leguen says of this part of his experiments:

"The rolling of the tungsten-steel ingots did not exhibit any peculiar feature. They were rolled into rails for the French Eastern Railroad. The rails, when finished, were laid into the track of the Strasbourg depot in Paris. They were also tested by a breaking strain and by concussion, as well as by forging and hardening. The engineer who was intrusted with this testing reported to me on the result as follows:

"'The tungsten-steel rails tested at the depot of the Eastern Railroad were highly flexible and tough. The steel worked perfectly well in being hammered and jumped. In turning it off, chips of remarkable strength were obtained. To investigate into its capacity of hardening, several bars, 25 millim. square, were forged and hardened at a cherry-red heat. The grain in the fracture of the metal was, before this operation, large, white, bright, and somewhat hookey; after being hardened, it was very fine, gray, and showed a peculiar lustre, like velvet. Any steel made at Terrenoire by the ordinary method, and hardening so well, would be too brittle to be used for rails. But the tungsten Bessemer steel combines the highest degree of toughness with an eminent capacity for hardening.'"

Durability of Steel Rails.—*Van Nostrand's Magazine* alludes to the fact that, out of the 11,000 tons of steel rails in use on the Hudson River Railroad, some of which had been down over three years, only eleven had broken, up to January 1, 1869. On the Erie Railroad only ten steel rails had broken, up to the same date, out of the 8,000 tons in use. Some thousands of tons of these rails were made at Troy, N. Y.; the rest are of English manufacture. Other railroad companies using steel rails bear witness to their great superiority in all respects over the old iron ones.

Tests of Steel and Iron Car-wheels.—The *American Railway Times* publishes the following minutes of some tests made upon steel and iron car-wheels at the shops of the Pennsylvania Railway at Altoona, in June. A steel wheel made on Tarr's patent, at the "Black Diamond Steel Works," Pittsburg, was first tried. The test was that of the drop, weighing 1,200 lbs., falling upon the wheel, on bearings two feet apart, the blow on the hub:

1st blow, 9 feet fall, no apparent injury.
2d " 11 " "
3d " 14½ " "
4th " 16 " "
5th " 20 " "
6th " 23 " "
7th " 28 " cracked at hub.
8th " 28 " drove hub through the plate of the wheel, leaving the whole tread and guard around the circumference of the wheel perfectly sound. The steel wheel weighed 444 lbs.

At the same time and place the following tests of the best iron wheels in use were made:

Ramapo,	1st	blow,	10	feet,	broke	in	many pieces.
Lobdell,	1st	"	7	"	"	"	
"	2d	"	10	"	"	"	
German,	1st	"	7	"	"	"	
Whitney,	1st	"	5	"	"	"	
"	2d	"	7	"	"	"	
Whitney,	1st	"	7	"	"	"	

The cast-iron wheels weighed 550 lbs. each. These tests are rather crude in character, but they establish the fact, pretty well known before, of the superiority of cast steel over cast iron, in resisting the effect of hard blows.

The Protection of Iron Ships.—The latest invention for the protection of iron ships from oxidation is that of Messrs. Demanel & Bertin, who distribute about the inner side of the shell tubular reservoirs made of zinc, which are riveted to the plates, and place the metal in perfect communication with the iron hull. These reservoirs are charged with sea-water, which is changed every day. Bands of zinc carried in all directions connect the various reservoirs, and strips are here and there brought to the outer side and made to communicate with the sea. An electrical action, it is asserted, is thus produced, which protects the iron from oxidation. The authors say that experimental boats kept in very salt water for a year, with these appliances attached to them, do not exhibit a trace of oxidation in any part.

Chromium and Titanium in Pig-iron.—Messrs. A. N. and S. D. Hayes, of Massachusetts, contributed a paper to the *Scientific American*, reporting the results of frequent chemical investigations made by them upon the altered character of some pig-irons, resulting from the presence of the oxides of chromium and titanium. They say:

Both the oxide of chromium and oxide of titanium seem to act in the furnace or the crucible in a way to withdraw a portion of the carbon, or prevent that true union of carbon with a portion of the iron, which constitutes gray pig-iron, without the metals of these oxides really alloying with the iron, and thus indicating the cause of change. We have analyzed samples of pig-iron where the alloys of chromium or titanium existed in the pigs, and where the oxides accompanied the ores in the beds, but we were not prepared to find an influence exerted on the quality of the pig-metal without the refractory metals forming a part of the composition.

The occurrence of oxide of manganese with iron ore is common, and titanium compounds are often found in both magnetic and brown iron ores, as insoluble substances, in small proportions, and these compounds combine with and are removed by the fluxes without injury to the pig-metal. These compounds of titanium are the cause of the often superb blue color of the cinder, produced under varying conditions of glassy or stony character, and must be carefully distinguished from those we regard as more detrimental in their influence on the metal.

In a number of analyses of iron-ores we had found both oxide of chromium and oxide of titanium in a state rendering them soluble in diluted acids, and in a condition to escape detection in the ordinary modes of analysis. Both magnetic and brown iron ores have been found to contain either oxide of chromium or oxide of titanium in this soluble state. Among the samples from contiguous beds, this diversity in composition made by the presence of some oxide of chromium or oxide of titanium existed; and, while the bulk of a bed of ore was pure, continuations of the bed or associated ore yielded notable weights of oxide of chromium or oxide of titanium in the different samples.

The suggestion we would make to the iron-master, in view of these facts, is the possibility of the quality of the pig-metals in anomalous cases being greatly influenced by the admixture of some ore containing the oxides of chromium or titanium with the basis ore of good quality. This may take place by the main bed being crossed by veins of mixed ore, or by the workings passing into contiguous beds where one kind of ore is used. In other cases, where the iron-master can gain a great advantage arising from mixing ores, one of the kinds may contain the contaminating oxides and injure the iron.

We subjoin some results of analysis, showing the proportion of oxide of chromium to the metallic iron contained in the ores:

1. Magnetic ore—iron, 49; oxide of chromium, 1.40. 2. Hematite ore—iron, 42.47; oxide of chromium, 1.60. 3. Brown massive ore—iron, 54.32; oxide of chromium, 1.90. 4. Same—iron, 46.70; oxide of chromium, 1.04.

More traces have been discovered in some cases, while in other instances a larger proportion of chromium formed an alloy with the iron produced from the ore.

Malleable Cast Iron.—An account of the manufacture of this article, as now carried on in the most celebrated German founderies, is supplied by *La Génie Industrielle*. We quote: "The makers keep secret the brand of iron which they employ, but it is well understood that the brands are not the same in different establishments. The iron is melted in plumbago crucibles, holding about 30 kilog. They are covered with porcelain lids, to keep out impurities and cinders, which reduce the high heat requisite for the process. The fire in which the crucibles are placed is from 630 m. to 940 m. square, and is surrounded with bricks of porcelain earth. The use of blast is not advantageous, since the economy of time is offset by a greater consumption of coke. The natural draught of the chimney is sufficient when the furnace is properly constructed. An essential condition of success is a high heat at the moment of pouring. Practice enables the caster to estimate the heat of the furnace, and he recognizes the precise moment by plunging a bar of red-hot iron into the crucible, from which, upon being withdrawn, the metal flies off in sparks. The crucibles are raised with tongs with curved jaws, and the pouring is done with all possible speed—the surface being first cleaned. By cementation the casting acquires the properties of wrought iron, having some analogy to steel. The operation consists in subjecting the castings to a prolonged red-heat in a bath of pulverized red hematite. They are arranged in boxes of cast iron called muffles. These are square, and with air-tight covers. In arranging the castings in the boxes, they are placed in layers alternately with layers of hematite. The cementing furnace is very simple. The grate is in front, and the draught of the chimney carries the hot air around the boxes. The heat should be conducted with care, starting rather vigorously, in order to reach the desired temperature quickly; then, supplying the furnace at regular intervals. The cementation lasts three, four, and five days, according to the size of the pieces. A charge is about 350 to 450 kilog. of castings. In arranging the charges,

large pieces should not be mingled with small, and those muffles containing the larger pieces should be placed in the furnace first. On the other hand, the smaller objects are placed on the sole of the furnace. Without these precautions, many pieces may be burned, or badly decarburized—the latter becoming something intermediate between iron and steel. When the operation is deemed complete, the fire is allowed to fall, but the furnace is not uncharged until it has gradually cooled. Practice plays an important part in the management of the firing, as the temperature can be judged of only after prolonged experience."

Special Method of Blooming.—The American *Exchange and Review* gives the following description of a modification of the Catalan process in the old form of the forge-hearth at the Logan Iron-works, Bellefonte. The writer regards the plan as extremely simple and direct, and resulting in the production of a very superior iron:

The furnace is a few inches above the general floor of the forge-house, and the size about large enough to make one bloom of 200 or 225 lbs. It is about three by four feet, the long way running back from the workman. The instrument for turning, lifting, and aggregating the iron is called a "furgeon," and answers to the rabble of the ordinary puddling-furnace. The waste-heap passes up and through a chamber immediately over the forge-hearth, where the pigs are placed, which become red-hot before they are ready to be drawn down upon the bed of charcoal previously prepared. The pigs thus drawn down upon the charcoal bed are covered, and the blast turned on into both *tuyères* right and left. After a few minutes the iron begins to melt; it is decarbonized by the blast, is worked into shape by the furgeon, and then lifted up clear of the bed and laid upon the top of the same bed again, some additional charcoal put around, and the blast turned on. The iron now is melted in what is called the sinking process, wherein the iron drops through the coal into the hearth until entirely passed into the hearth; there it is again agglomerated into the ball, or "loup," by the furgeon (pronounced *furgun*), the blast having previously been turned on fully; it is then lifted out a balled loup and carried to the hammer. The cinder is tapped off through a hole in the front iron plate, and is rich in iron, with so much silex that it easily emits sparks when the penknife-blade is struck against it. Of course, this process is attended by a large loss of iron, while the loup, which gives rise to the cinder, is not thereby improved, as in the puddling-furnace. But in this particular instance the iron is singularly pure, and the blooms command $85 per ton at the forge. One ton and a half of pig yields 2,464 lbs. of bloom. The charcoal-furnace yielding the iron is nearly adjoining the bloomery.

This furnace is only 32 ft. high, about 26 in. across the tunnel-head opening, 8½ ft. bosh, and the slag is allowed to flow out from the hearth whenever it rises above the fore-hearth. The breast is covered with a simple plate of iron; the cinder is always in sight; as soon as the iron appears, the crucible, or tapping-hole, is opened, and the iron is tapped off into iron moulds. There are three casts per twenty-four hours, two tons per cast; 150 bush. hard coal (18 lbs. to the bushel) to the ton made. Charges, 700 to 750 pipes ore (brown hematite), 27 bush. charcoal, 80 lbs. gray limestone of good quality: pressure, a half to three-quarters of a pound per inch; nozzle, two and a half; two wooden blowing cylinders worked by water-wheel. Some finery cinders, about 30 to 40 lbs., are added to the charges, and said to improve the iron, which at present (May 26, 1869) is all forge-iron, and used at Stewart & Co.'s wire-factory, and reported as a very fine iron.

Smelting, carburizing, and purifying Iron.—Some processes for facilitating this work have lately been patented by Mr. Isham Baggs, of London. In charging the furnace he dispenses with coal or coke, using instead coal-gas, hydrogen, carbonic oxide, or other combustible gas, or the vapor of any hydrocarbon under pressure, and in combination with a hot or cold air blast. In the case of the inflammable hydrocarbon vapors, the same may be forced into the furnace under the pressure of their own atmospheres, or by means of mechanical appliances. The gases and vapors which are employed for the purposes of this invention may be previously mixed with the air furnished by the blast, or may be caused to meet the air in the furnace or at the tuyères. The proportions of the mixture, when a combination of gas or vapor and air is employed, are subject to constant regulation by valves. One very convenient mode of obtaining combustible gases for the purposes of this invention is to generate coal-gas in the usual way, and then carbonic oxide, and to blow air or carbonic-oxide gas under pressure through the retort containing the residual coke.

For the purpose of carburizing the iron, whether in or out of the furnace, as may be desirable, coal-gas or other carbides, or other materials containing carbon, are blown through the furnace, or brought into contact with the molten metal by blowing them through it. Carbon in any suitable form or combination may also be directly introduced into the furnace for the purpose of carburization; and, although generally for smelting purposes it is desirable to exclude all solid mineral fuel from the furnace as part of the charge, yet, where a suspension of operations is necessary, such a charge of coal, coke, or other fuel, may be introduced into the furnace as will prevent the materials, on renewal of work, from falling through the crucible or any iron remaining therein or below it, from being permanently solidified. When purification is required, hydrofluoric acid is blown through the molten metal on its way from the furnaces, the gases being mixed with common air, or with some gaseous diluent.—*Mechanics' Magazine.*

Iron Analysis.—Gintel gives an easy method of determining the impurities in cast iron. The iron is reduced to as minute a state of division as possible, and is then treated with a strong solution of perchloride of iron, as nearly neutral as possible. The mixture is kept heated for ten or twelve hours, at the end of which time almost all the iron will be found to have dissolved, leaving, as a residue, the carbon, sulphur, phosphorus, and silica, together with the little iron left undissolved. This residue has only to be well washed, oxidized and dissolved, and the sulphur estimated as sulphate of baryta. The exact plan directed

by the author is to introduce the residue, and filter into a porcelain crucible, having at the bottom three parts of nitrate of potash and one part of hydrate of potash; heat to fusion, dissolve and precipitate with chloride of barium. The phosphorus and silica will be contained in the same solution, and can be determined separately.—*Jour. Franklin Institute.*

How to determine the Carbon chemically combined with Iron.—The American *Journal of Science* for May contains a translation of a paper presented to the Chemical Society of Paris, by Prof. Eggertz, Director of the School of Mines, Falena, Sweden, on a new process for determining the amount of carbon chemically combined with iron. We quote:

When steel or pig-iron containing carbon in chemical combination is dissolved in nitric acid, a soluble brown coloring matter is formed whose coloring power is quite intense, and the solution assumes a tint which is dark in proportion to the quantity of the chemically-combined carbon.

Iron and graphite (or free carbon) do not influence this coloring; for the solution of nitrate of iron is colorless, or at most slightly greenish, unless extremely concentrated, and graphite is insoluble in nitric acid.

Thus in dissolving two pieces of different steels of the same weight in nitric acid, taking care to dilute the darker solution until the two liquids present exactly the same color, it is very evident that the more highly carburetted steel will furnish the larger quantity of liquid, and the proportion of the volumes will indicate the relative proportion of color in the two steels.

If, now, the composition and content of carbon of one of the steels is known, the absolute percentage of carbon in the other steel may be immediately deduced.

Suppose that 1 gram. of each of two steels (*a* and *b*) have been dissolved, and that the volumes of the two solutions brought to the same degree of coloring bear the relation to each other $a : b :: 5 : 7$. Knowing that the steel (*a*) contains 1 per cent. of carbon, you at once deduce that the steel (*b*) contains 1.4 per cent. of carbon.

In applying this method of analysis, certain precautions must be taken, which we proceed briefly to point out.

In a cylindrical test-tube dissolve gradually in the cold 10 centigrams of wrought iron, steel, or cast iron reduced to a fine powder, in 1½ to 5 cubic centimetres of nitric acid of 1.2 specific gravity (about 25° Baumé). The use of nitric acid containing hydrochloric acid must be avoided, because the solution of iron would have a yellow tint.

In proportion as the metal contains more carbon, more nitric acid must be used. After some time, when the chief part of the metal appears to be attacked, place the tube in a water-bath to the depth of about fifteen millimetres, and warm it to 80° Centigrade. In this position only the lower part of the tube is in contact with the warm water; a movement takes place in the acid which favors its reaction upon the metal; a slight disengagement of carbonic acid from all the particles of carbon may be observed. The operation should always be conducted under the same circumstances as to heat and length of time.

The evolution of gas having ceased (in operating upon steel the reaction must continue two to three hours), place the tube in a large vase filled with water, to bring the solution always to the same temperature. This precaution is indispensable, because the same liquid is darker when warm than when cold. Afterward, pour off as exactly as possible the clear liquid into a graduated burette. Upon the black residue remaining in the tube pour some drops of nitric acid, and heat carefully over a lamp. If there is no further liberation of gas, the residue consists of nothing but graphite or silica. Cool the new solution, and add it to that which is already in the burette.

The liquid is then diluted with water until its color corresponds exactly with that of the normal liquid, which latter should be of such a degree of concentration that each cubic centimetre represents .0001 gram of carbon.

If, for instance, this normal liquid is prepared from cast steel containing exactly $\frac{1}{100}$ of one per cent. of carbon, one decigram of that steel must be dissolved in 8.5 cubic centimetres of nitric acid; 100 grams of steel containing 85 centigrams of carbon would thus be dissolved in 8,500 cubic centimetres of the normal solution, 100 cubic centimetres of that solution would represent one centigram of carbon, and consequently one cubic centimetre of the normal solution would represent .0001 gram of carbon.

The normal solution does not keep, and should be often renewed, since it becomes perceptibly paler even within twenty-four hours. For it, however, may be substituted a dilute alcoholic solution of sugar, properly caramelized, brought to exactly the same tint; this solution keeps much longer without sensible change.

As one gram of iron cannot readily be dissolved in less than 15 cubic centimetres of nitric acid, it follows that a proportion of carbon less than $\frac{1}{150}$ of one per cent.* cannot be estimated by means of the normal liquid, but this minimum is seldom found in practice.

If the proportion of carbon exceeds $\frac{8}{10}$ of one per cent., the ferruginous solution is so concentrated that it has a light greenish tint, which renders its comparison with the normal liquid difficult. It that case a normal liquid of one-third the strength is prepared by diluting the normal liquid with twice its volume of water; then each cubic centimetre of the liquid represents only one-third of the ten-thousandth part of a gram of carbon. When the proportion of carbon in the specimen to be analyzed is very large (as, for instance, in white cast iron), only .05 gram of the metal must be taken for analysis, and in that case half a cubic centimetre of its solution corresponds to a cubic centimetre of the normal solution. If the metal to be analyzed contains graphite, the latter must be collected on a filter before the solution is put into the burette.

This method is more exact in proportion as the percentage of carbon is smaller. With an accurate balance, and with suitable arrangements, a great number of determinations of carbon close enough for practice can be effected in a time relatively very short.

All the Bessemer steel made at Edskin, in Sweden, is marked after hammering (*apres l'étirage*) by figures expressing its hardness as ascertained by this color-measuring analysis of Prof. Eggertz.

It is obvious that only burettes of perfectly colorless glass must be used, or at least they must all have exactly the same tint.

Chemical Nature of Cast Iron.—A committee of the British Association, appointed to investigate this subject, reported that they have been enabled to prepare iron of such purity, that it contained in 100 parts only 0.00025 parts of sulphur, and was entirely free from phosphorus and silicon. The amount of the iron taken for each analysis was about thirty grammes. The committee expressed a hope that in another year a great deal of very

* O. D. Allen, of the Freedom Iron-works, Penn., has found it quite practicable by a modification of this method to distinguish between irons containing respectively $\frac{1}{100}$ and $\frac{1}{150}$ of one per cent. of carbon.

useful information will be obtained on the chemical nature and physical properties of pure iron and its alloys. At the same meeting, Dr. Jacobi read a paper on the electro-deposition of iron, illustrating his remarks by a series of plates of extreme beauty. The solution from which the metallic iron was deposited consisted of a double salt, the sulphate of iron and magnesia. It was found desirable to coat the article receiving the deposit with a thin film of nickel or copper. Specimens illustrating the application of the electro-deposition of iron to purposes of engraving (aided by photography) were also exhibited.

METEORS. A meteor of great size and brilliancy was seen at the principal points along and near the Atlantic coast, between Boston and Philadelphia, and doubtless at many other places, from which no reports have come, on the night of May 20th, about 11 o'clock. Its light is described as surpassing that of the full moon, which was shining at the time, and in effect was like that of a flash of lightning. It left behind a brilliant train of light, and finally exploded. The duration of its passage was estimated at five seconds. Seen from New York its point of origin was about east, at an elevation of 30°, and its termination about north 60° east, at an altitude of 15°. At Poughkeepsie its course was from the south toward the east, making an angle of about 30° with the horizon. At New Haven it moved from a point somewhat west of south to a point somewhat north of east, and its altitude at the time of explosion was about 30°. At Hartford its course was from south-southwest to east-northeast. Prof. Elias Loomis, in a notice in the *College Courant*, sums up the results of the imperfect data with regard to this meteor as follows:

"From these observations it is not possible to assign the actual path with much precision, but it is inferred that the meteor moved nearly horizontally at an elevation of fifty miles above the earth's surface, and the length of its visible path was about two hundred miles. The point where it exploded was over the Atlantic Ocean, somewhat north and east of Boston. The time of flight was estimated at five seconds, which would indicate a velocity of forty miles per second. Several observers have stated that the explosion of this meteor was followed by a sound which resembled distant thunder. The distance of the meteor from New Haven at this time was about one hundred and seventy miles, and sound would require more than ten minutes to traverse this distance. Any sound which followed soon after the explosion must therefore be ascribed to some other cause than this meteor."

Mr. E. N. Smith, of Moriches, Suffolk County, N. Y., sent the following interesting communication upon the subject to the American *Journal of Science:*

I have obtained the following facts, respecting the meteor of May 20th, from two persons, Mr. and Mrs. Fling, residing at the time at Cutchogue, thirteen or fourteen miles east of Riverhead. Mrs. Fling compared the light to the Drummond light which she had seen in Broadway. The meteor passed from southwest to northeast, parallel with the front of the house (which she says points to the southeast), and at an altitude half-way between the horizon and the zenith. She thought the body of the meteor, which sent off constant scintillations, was about the apparent size of the moon. Mr. Fling thought it might be a shade less. The color varied from reddish to purple, though different in different parts and times. In about three minutes after the passage of the meteor, a terrific sound was heard. Not realizing the character of the meteor, Mrs. Fling said she first thought it was an earthquake; but, on second thought, concluded it must have come from the meteor. It jarred the whole house, doors, windows, etc., to the very foundations. Rev. Thomas Owen, half a mile east of us, says he was just about retiring for the night, when he heard a tremendous jarring sound, and thought it must be a cannon fired from a ship in distress; others corroborate the statement of great noise. I have since conversed with Mr. and Mrs. Clark, very worthy people in Centre Moriches, and their account agrees, in all important particulars, with the former by Mr. and Mrs. Fling. Taking the diameter at 9′, and the distance (from the time 3ᵐ.) thirty-nine or forty miles, the altitude above the earth must have been twenty-eight miles; and the diameter of the body 1,843 feet. The velocity must have been very great, probably equal to that of the noted meteor which traversed Europe from northwest to southeast, about 9½ P. M., August 18, 1783, which it seemed to resemble. The time of occurrence of the late meteor was about 11ʰ. 20ᵐ. P. M. (some say 11½).

The shower of meteors looked for, on the morning of November 14th, was not seen throughout the greater part of the United States, owing to the thick weather. But at Pensacola, Florida, and at a few other points, where the sky was fortunately clear, a fine exhibition of the phenomenon was witnessed. Commander William Gibson, United States Navy, stationed at the Pensacola Navy Yard at the time, gave the following graphic account of what he saw, in a letter to the Superintendent of the Naval Observatory at Washington:

NAVY YARD, PENSACOLA, *November* 15, 1869.

SIR: The meteoric display of the night of the 13th and 14th instant was seen here under favorable circumstances, and in great brilliancy, and I send you a brief description of it, for the sake of calling attention to one or two of its features.

The night was still and cloudless; and, after the moon was down, the beauty and transparency of the sky, with its broad belt of equatorial constellations culminating in Orion, with Sirius and the planet Jupiter, Capella, and Canopus, confronting each other in opposite quarters, or "rival houses of the heavens," and with a clearly-defined pyramid of zodiacal light, shining wonderfully bright and reaching high toward the zenith, were something remarkable, independent of the showers of the shooting-stars. These were observed in extraordinary numbers from 1.15 A. M. until lost in the dawn, swarming most between the hours of three and four. It is difficult to give an average of the number per minute. It varied from two or three to twenty or thirty, or more, and it was never uniform for equal spaces of time, the star-showers flashing and intermitting like the bursts and pauses of the gusty rain.

Their paths were dispersed pretty freely over the whole heavens, but the principal point of divergence was in the constellation Leo. Few or none were observed to radiate from Perseus. We saw every variety of these "meteoric asteroids," from fine

spidery threads and mere moving points of light, to great meteors, which exceeded the apparent diameter of Jupiter, and burst in splendors of orange and crimson fire. Two of the larger class, after apparent combustion, remained for fifteen minutes visible as small nebulous or cometary stars of the second or third magnitude, with distinct nuclei in misty rings. One of these was near the outer of the index stars or pointers in Ursa Major, and one far to the southward, near or in Argo. But the most remarkable exhibition of all was that of a large "fire-ball," which fell rather slowly from near Aldebaran, and burst in Aries. For many minutes a portion of its tail (about five degrees in length) remained printed on the sky, forked in form like the conventional representation of a thunder-bolt—the lightning fixed where it had finished. This apparition finally changed, and spread horizontally into a small white cloud or vapor-wreath (about four degrees by two) of nebulous phosphorescent lustre, which drifted slowly to the northward, and remained visible and luminous for at least fifty minutes. Its apparent substance differed in no respect from that of the tail of a comet.

Very respectfully, your obedient servant,
WM. GIBSON, Commander, U. S. N.

The London *Daily News* gives the following summary of observations of the November meteors at different points on the Continent of Europe, where the shower was seen to the best advantage:

Although in England we had no noteworthy display of the November meteors, yet gradually news is coming in from various places which suffices to indicate that the earth passed in reality through a very widely-extended and tolerably dense portion of the meteor-stream this year. The display in 1866 lasted but a few hours; that in 1867 was even briefer; while, in 1868, falling stars were seen on two nights in succession (in America), a fact which indicates that the earth was upward of twenty-four hours in passing through the meteoric stream. But now observe what Lieutenant Tupman reports from Port Said, in Egypt. As early as November eight small meteors were noticed, whose motion, directed from the well-known "radiant" in Leo, showed that they belonged to the true November meteor-stream. Again, on the morning of the 10th, between one and four, meteors were observed to radiate from the constellation Leo at the rate of eight per hour. On the following morning they were still falling, but in fewer numbers; while, on the 12th, no stars were seen to travel from Leo, though many shooting-stars not belonging to the November system were observed.

Here, then, we find that there had been a vast outlying branch of the November meteor system, so perfectly distinct from the main stream as to leave a complete gap, so to speak, which the earth occupied a day and more in traversing, and yet unmistakably associated with that stream, since the radiation of stars from Leo could bear no other interpretation. On the 12th, however, there was a lull, and even on the morning of the 13th very few stars were seen to radiate from the sickle in Leo. The morning of the 14th was that on which the true display was expected; and the event corresponded to the anticipations which had been formed by astronomers. The morning was not very clear—half a gale of wind was blowing from the northward, and heavy clouds, continually passing, rarely left a third of the sky visible. Nevertheless a brilliant display was seen, of short duration, corresponding in this latter particular more with the shower of 1867 than any other recent showers. From half-past twelve to a quarter past one A. M., a large portion of the sky being clear overhead at times, only two small meteors were seen, neither of which radiated from Leo.

At half-past two the watch was resumed, and between large openings in the clouds the shower was seen at its height. Most brilliant meteors, many of which illuminated the view around like flashes of lightning, often of a bright-green color, shot with astonishing rapidity at the rate of one or two every minute. This continued at about the same rate until four o'clock, when there was a sudden diminution in the numbers, and before five o'clock all was over.

The news received from Father Secchi, at Rome, shows that the particular part of the November meteor system which gave the brilliant display witnessed by Lieutenant Tupman was the same which the Roman observer watched. He counted no fewer than 183 meteors in half an hour.

The *News* adds:

Undoubtedly the most remarkable result of these observations is the confirmation they afford of the view recently brought forward by Mr. Alexander Herschel, that the November meteor-stream is not single. This view points to the existence of no fewer than three distinct branches, of which the central one is the largest. But, at the part of the system crossed this year by the earth, the branches must be very much farther apart than at the portions crossed in the years 1866–'68. Lieutenant Tupman, in fact, only recognized two branches, of which the second was obviously the bright or central one, and, as his letter is dated November 15th, it follows that, if the third outlying stream is as far separated from the middle one as the first has been shown to be, the earth had not yet reached it when the last observations were made. But, taking only the results we have to hand, and noticing that the meteors belonging to the first stream were seen on four successive days, we have this astounding result, that the branch stream in question was no less than 1,700,000 miles deep (measured square to the direction in which it lies). Then came a gap which the earth took more than a day in passing—corresponding to a distance of some 500,000 miles; and then the earth plunged through the more compact central stream, whose thickness would seem to have been about 70,000 miles only.

These figures are surprising enough; but when we consider the enormous extension of the meteor-stream we are even more astonished. It has now been rendered all but certain that each of two great branches at least extends without break or interruption from the portion crossed by the earth in November, 1866, to the part crossed this year; and, knowing what we do of the path followed by the meteors, we are absolutely certain that the part traversed in 1866 is now about a thousand millions of miles away from us—is, in fact, passing not far from the orbit of distant Saturn. Along the whole of that enormous distance these two meteor-streams extend, with a depth varying from 40,000 or 50,000 miles to the enormous depths mentioned above, and with a breadth which, though unmeasured, may be safely assumed to exceed the depth tenfold at least.

In the American *Journal of Science*, for May, Dr. J. Lawrence Smith, of Louisville, Ky., gives an account of masses of meteoric iron lately discovered in Cohahuila, Mexico, near the Texas border. At different times very large specimens of this iron have been found in that region—one, described in 1854 as weighing a ton, and another at an earlier date, of a cylindrical form, a yard long, and ten inches in diameter. The irons referred to in the annexed narrative were discovered by Dr. H. B. Butcher, who communicated the facts in letters to his father, which were afterward placed at the disposal of Mr. Smith, who made an analysis of a fragment of one of the masses. The Santa Rosa iron, to which the author refers (and of which he gave a description in

the *Journal of Science* in 1854), was the cylindrical mass previously mentioned, found about 60 miles north of Santa Rosa. Mr. Smith says:

In a letter dated September 8, 1868, Dr. Butcher writes, from information received from the son of Dr. Long, who had resided many years at Santa Rosa, that, in the fall of the year 1837, there appeared over the town a most brilliant meteor, having a northwest direction. He describes it as most beautiful, lighting up the whole horizon, with a trail of brilliant light following in its progress. Shortly after its disappearance among the distant mountains, they heard a rumbling sound, immediately followed by a tremendous explosion.

From the report he thought it fell and exploded as it reached the earth, somewhere between Santa Rosa and the mountains, a distance of some 35 miles, and the next day he started with friends to examine the route, hoping to find it. After two days' severe and rough riding they abandoned the search, and returned to town. Shortly afterward, an Indian brought a piece weighing 10 or 12 lbs. into Santa Rosa, supposing it to be silver, having found it some 90 miles northwest of the town, being in the same direction in which Dr. Long and his friends had been exploring, the doctor having been deceived as to distance, he only going to the base of the mountain, instead of crossing it and then following the valley for some 40 miles farther, where I think his search would have been a success.

Dr. Butcher now undertook the search, after which he writes: "I have returned fully successful, and am making preparations to send on the iron. In making my arrangements, I hired eight Mexicans and two Indians as guides, and started into the mountains in a northwest direction, the same as taken by Dr. Long, and found the iron about 90 miles from Santa Rosa. As no vehicle could go into the mountains by the route we entered, I spent two days in exploring a new road, whereby the ox-teams could bring them out, and get them to Santa Rosa. They consist of eight pieces, varying from 290 lbs., which is the smallest, to 654 lbs., which is the largest, making a total of nearly 4,000 lbs. Before the explosion the weight must have been much greater, as it is not probable that I have secured the whole, and we know some was taken away by the Indians, who thought they found large masses of silver, and carried their specimens to Santa Rosa. It appears there is on record a statement of the meteor having passed over the city in 1837, and one of my guides relates as a fact that, at that time (1837), a Lepan Indian was riding one of their small ponies through the valley, when his stirrup struck against one of the masses, causing a ringing sound like silver. He dismounted, and was confirmed in his opinion of silver, and took away a piece 10 or 12 lbs. in weight, which he carried to Santa Rosa to sell. I have received, from various sources, information relative to this meteor, and all confirm me in the opinion that the autumn of 1837 is about the time of its fall. My party were in considerable danger while in the mountains, as we were encamped two miles from the regular trail, when some 300 Indians went through with a large number of their stolen horses."

Whether or not the time above specified is that of the fall of one or more of these irons, is a matter of little moment; the probabilities are, however, strongly in favor of it; nevertheless, it forms one of the most interesting groupings of meteoric irons known in any part of the world; especially, as the masses are solid and compact masses, and not fragile and half stony, as the Atacama iron, that may have been broken artificially after its fall, and the fragments scattered by Indians and explorers in search of silver. Each one of these masses merits a separate examination, which I hope to be able to give, sooner or later, to satisfy my mind on one or two points connected with their common physical structure and chemical composition. But I will not delay this paper until then.

Six of these masses have been brought to this country, weighing respectively 290, 430, 438, 550, 580, and 654 lbs. They are irregular compact masses, without any evidence of stony minerals. They belong to the softer irons, not very difficult to cut with a saw; as yet there has been but about one ounce detached from one of the masses, which has enabled me to make out the following description:

Specific gravity 7.692. It contains—

Iron	92.95
Nickel	6.62
Cobalt	.48
Phosphorus	.02
Copper	very minute quantity.

This composition differs somewhat from the meteoric iron called Santa Rosa; but since examining that I have reason to believe that the quantity of nickel given is too small, some portion of it having remained with the iron; it being far more difficult than is usually supposed to separate accurately minute quantities of nickel from iron. Future examinations may prove that the Santa Rosa belongs to the group of irons under notice.

The same author gives, in the *Journal of Science*, the result of his examination of the "Wisconsin meteorites" (so called by Mr. Smith), which were picked up in Trenton, Washington County, Wisconsin. They were found within a space of ten or twelve square yards, so near the surface as to be turned up by the plough. They weighed respectively 62, 16, 10, and 8 lbs., and presented the usual pitted and irregular surface of meteoric irons. The largest piece was 14 in. long, 8 in. wide, and 4 in. thick, of specific gravity 7.82, and of composition as follows:

Iron	91.06
Nickel	7.90
Cobalt	0.53
Phosphorus	0.14
Copper	minute quantity.
Insoluble residue	0.45

Prof. George J. Brush furnishes to the same magazine, for September, an interesting paper on the "meteoric stone" which fell, December 5, 1868, in Franklin County, Alabama. It was found by Mr. Benjamin Pybas, about four miles south of Frankfort, in that county, and when taken out of the ground weighed 1 lb. 9½ oz. Accounts of the meteor from eye-witnesses are these:

Mr. James W. Hooper witnessed the fall, and describes it in a note to Dr. T. D. West, which I copy. "About 3 o'clock P. M., the afternoon being cloudy and cold, we heard a strange, harsh, roaring noise up in the air. Three distinct reports were heard: at first these were supposed to be cannon, but the noise immediately changed into a series of bursting sounds, like a great fire blazing and crackling through the air. It appeared to pass from the north toward the south. Immediately after the first sound or roaring had passed over, another was heard coming from the same direction, like the whizzing of a bomb-shell as it cuts through the air, making a loud humming noise. I gazed intently in the direction of the noise, and found that something was coming downward at a rapid rate. I looked, with my hand up, standing in a dodging position, for fear of its striking me, until I saw it strike some willow saplings about seventy or eighty yards from where I was, and fall thence to the ground. Upon going to the spot I found a strange-

looking rock, nearly buried in the ground, and still warm."

Major Slass, editor of *The Alabamian and Times*, in this place, has taken considerable trouble to collect all the information he could on the subject. He says that "the noise was heard for several miles around, before the final explosion. It burst, apparently, over the heads of twenty men, who were at work felling wood, one and a quarter miles from Mr. Hooper's house. One piece appeared to go southeast, another southwest, and the third northwest. There were afterward heard the reports, resembling the bursting of shells. One piece was heard to fall some distance from Mr. Hooper's, making a loud, crashing noise, and frightening a lot of hogs near by.

The reports resembling artillery were plainly heard for twenty or twenty-five miles east and west of Frankfort, and from fifteen to twenty north. I have no information as to the south. Mr. Hooper deserves much credit for noting the particulars of the fall, and for sending the meteorite for analysis and description. He refused, with scorn, money offers that must have been tempting to a person of limited income, preferring the advancement of science to dollars and cents.

In a personal interview he told me that he was sitting by a fire with his family when he heard the first noise. He instantly arose and walked forty or fifty yards from the house before the meteorite fell. His sister, Miss Hooper, living near, called to her brother, to "run quickly, the house is on fire—don't you hear it?" Mr. H. thinks it was three or four minutes from the first noise until its fall. The place where it struck the ground is a partially-decomposed conglomerate, mixed with vegetable mould. The fracture was made by striking a fragment of limestone rock.

Prof. Brush, assisted by Mr. Wm. G. Mixter, made an analysis of portions of the stone, with the following result, from which it appears that silica and alkalies constituted the mass of the material, and that iron was present in a comparatively small quantity:

		Oxygen.	
Silica	51.33	26.37	
Alumina	8.05	3.75	
Ferrous oxide	13.70	3.04	
Chromic oxide	0.42		
Magnesia	17.59	7.04	12.28
Lime	7.03	2.06	
Soda	0.45	.11	
Potash	0.22	.03	
Sulphur	0.23		
Nickeliferous iron	tr.		
	99.02		

Prof. Brush remarks that, in general physical characters, this meteorite very much resembles the Petersburg (Tenn.) meteoric stone analyzed and described by Prof. J. Lawrence Smith. It has the same lustrous coating, and the constituent minerals are very much the same in character. It seems to belong to the class of meteorites that Prof. G. Rose calls "Howardite," and which he describes as being granular mixtures of olivine, with a white silicate (*anorthite?*) and a small amount of chromite and nickeliferous iron. This class, according to Rose, includes the stones from Loutalox, Bialystok, Mässing, Nobleborough, and Mallygaum.

The most remarkable meteorite chronicled during the year was that seen in a portion of Western Ohio, and most clearly near the town of Forest, latitude 40° 50′, longitude W. 84° 40′. About 3 A. M. of October 27th, the citizens of Forest, and for a region miles around, were roused from sleep by a series of loud reports like the discharge of artillery. The intervals between the sounds were from one second to two or three seconds. Houses were shaken and windows rattled by the concussion. At the same time the sky was brilliantly lighted up. Mr. Pierson, of Patterson, a village about one mile west of Forest, looking out to discover the cause of these strange phenomena, saw what looked like a ball of fire, "apparently about as large as a bucket," approaching from a direction nearly south 35° west. It was exceedingly bright and dazzling, and had a luminous tail, seemingly thirty feet long and three feet wide. It vanished or exploded nearly overhead. In a paper upon the subject in the November *Journal of Science*, Prof. J. L. Smith, the indefatigable investigator of this class of wonders, sums up the evidence which he had been able to collect with reference to it. He says:

At Findlay, twenty miles northwest of Forest, the statement is, that there at about three o'clock on Wednesday morning, October 28th, the inhabitants were aroused by a terrific explosion somewhere in the upper regions.

The night was one of clear moonlight, and exceedingly cold for the season. The night watchmen had witnessed it; and one says that he first saw it in the southeast, in size, seemingly, as large as a beer-keg, and of intense brightness; that it descended, leaving a luminous streak behind, and that, when near the earth, it exploded with a terrific sound, and fierce brightness; that the light, after the explosion, took a southerly course, and disappeared. Another watchman reports that at the time of the explosion it appeared as large as a load of hay, and that the sound of the explosion was stunning, not like a quick, sharp report of thunder, but, as he termed it, more like the coming together of railroad-cars, but much louder, and that the light was brighter than that of the sun. The direction of the meteor from Findlay, as given by the watchman, with the bearing of the meteor's path, as described by Mr. Pierson, of Patterson, and the fact that to many the sound seemed nearly overhead, would indicate that it exploded or terminated its course in the vicinity of Forest; yet a careful investigation might prove its terminus to be many miles from that place. The sound seems to have been heard for perhaps fifty miles around, if not more. The stones or fragments that have fallen may never be found, owing to the fact that the explosion was at night, and the consequent difficulty of determining its exact locality. In Kenton, Ohio, the phenomena are said to have occurred a few minutes before three o'clock, and, consequently, they were not well observed; many persons saw the light but not the meteor, and all were sensible of the shock and sound. The meteor did not pass this place nearer than twenty miles, and the best judges give its duration at from two to three minutes from the flash to the explosion. The sound was of such force as to shake the houses, and many believed it to be an earthquake.

These are all the statements I have been able to obtain in regard to the appearance of this meteor and its accompanying phenomena. It was beyond all doubt a meteorite, and I am using all possible means to discover any fragments that may have fallen.

METHODISTS. I. METHODIST EPISCOPAL CHURCH.—At the close of the year 1869, the statistics of the Methodist Episcopal Church were as follows:

CONFERENCES.	Travelling Preachers.	Local Preachers.	Members.
Alabama	53	194	9.756
Baltimore	185	171	29.397
Black River	99	68	10,273

Total	8,830	10,340	1,226,998
Last year	8,481	9,899	1,255,115

Of the members, 1,114,712 are in full connection, and 184,226 are "probationers." The number of churches is 12,048½, against 11,692 the preceding year. Their value is $47,253,067. The number of parsonages is 3,968, against 3,811 the previous year. Their value, $686,230.

The number of Sunday-schools is 16,393½, against 15,885½ last year; officers and teachers, 184,596; scholars, 1,179,984; volumes in libraries, 2,781,480. The number of adult baptisms was 61,147; of children, 47,509. Conference claimants, $129,777.06; Missionary Society, $630,163.20; Church extension, $61,565.79; Tract Society, $21,312.28; American Bible Society, $93,048.35; Sunday-school Union, $21,271.45.

A correspondence was held, during May, between a committee of the bishops of the Methodist Episcopal Church and the bishops of the Methodist Episcopal Church, South, in reference to an eventual reunion of the two branches of the Church. In introducing themselves to the bishops of the Church, South, the Northern bishops said:

It seems to us that, as the division of those Churches of our country which are of like faith and order has been productive of evil, so the reunion of them would be productive of good. As the main cause of the separation has been removed, so has the chief obstacle of the restoration.

It is fitting that the Methodist Church, which began the disunion, should not be the last to achieve the reunion; and it would be a reproach to the chief pastors of the separated bodies if they waited until their flocks prompted them to the union which both the love of country and of religion invoke, and which the providence of God seems to render inevitable at no distant day.

Another letter thus stated the origin and object of this proposition, and the position of the Methodist Episcopal Church in reference to it:

At a meeting of the Board of Bishops of the Methodist Episcopal Church, held in Erie, Pa., in June, 1865, we made and published the following declaration: That the great cause which led to the separation from us of both the Wesleyan Methodists of this country and of the Methodist Episcopal Church, South, has passed away, and we trust the day is not far distant when there shall be but one organization which shall embrace the whole Methodist family in the United States.

This declaration was made in good faith, and shows what were then our sentiments and feelings, and was deemed by us as the utmost we were authorized to say or do on the subject at that time.

Although our late General Conference did not directly authorize us to take further specific action in the matter, yet we judge that some of its acts justify advanced steps on our part.

In our quadrennial address to the General Conference we referred to the declaration above quoted, and no exception was taken to it by that body.

The General Conference, to promote the union of Methodistic Churches, appointed a commission consisting of eight members of that body and the bishops of the Church, who were "empowered to treat with a similar commission from any other Methodist Church" that may desire a union with us.

We have understood that there were in the minds of many of the members and ministers of the Methodist Episcopal Church, South, reasons why they consider it unsuitable for them to initiate measures to effect a reunion of the two Churches.

Believing, as we do, that if they were one in both spirit and organization, much more could be accomplished for the interests of humanity and for the glory of God, we are desirous of doing all we consistently can to promote a reunion on terms alike honorable to both Churches and in the spirit of our Divine Lord.

The bishops intimated that the commission spoken of would probably be ready to treat with a similar commission which might be appointed by the Southern General Conference.

The reply of the Southern bishops was quite long. It recited their regret for the controversies that have prevailed, and their disposition to coöperate in bringing about a better state of things, even greater, they intimated, than that of the Northern Church. It suggested that the establishment of fraternal feelings and relations between the two Churches would be a necessary precedent to reunion. It called attention to a measure to effect fraternal relations, which was started several years ago, by the Southern Church dispatching a visiting delegate (the Rev. Dr. Pierce), to the Northern General Conference, to offer the establishment of fraternal relations and intercourse; to the failure of his mission, and his declaration, consequent thereupon, that that effort was the final advance that would be made by the Church, South, toward reunion, but that it would be ready to receive a renewed proposition for fraternal relations at any time, and cordially entertain one based on the plan of separation adopted by the General Conference of 1844. The Church adhered to the words of his declaration. It continues:

You say "that the great cause which led to the separation from us, of both the Wesleyan Methodists of this country, and of the Methodist Episcopal Church, South, has passed away." If we understand your reference, we so far differ from you in this opinion, that it may help any negotiations hereafter taking place, to restate our position. Slavery was not, in any proper sense, the cause, but the occasion only, of that separation, the necessity of which we regretted as much as you. But certain principles were developed in relation to the political aspects of that question, involving the right of ecclesiastical bodies to handle and determine matters lying outside of their proper jurisdiction, which we could not accept; and in a case arising, certain constructions of the constitutional powers and prerogatives of the General Conference were assumed and acted on, which we considered oppressive and destructive of the rights of the numerical minority represented in that highest judicatory of the Church. That which you are pleased to call, no doubt sincerely thinking it so, "the great cause" of separation existed in the Church from its organization, and yet for sixty years there was no separation. But when those theories, incidentally evolved in connection with it, began to be put into practice, then the separation came.

We cannot think you mean to offend us when you speak of our having separated from you, and put us in the same category with a small body of schismatics who were always an acknowledged secession. Allow us in all kindness, brethren, to remind you, and to keep the important fact of history prominent, that we separated from you in no sense in which you did not separate from us. The separation was by compact and mutual, and nearer approaches to each other can be conducted with hope of a successful issue only on this basis.

It is our opinion that the controversies and tempers which so disturb the Churches, and are so hurtful to the souls of those for whom Christ died, are due in a large measure to irritating causes which are not entirely beyond the control of the chief pastors of the separated bodies. To this end we invite your concurrence and coöperation.

It reprehended the conduct of the Northern missionaries and agents who have been sent South, and engaged (as it alleges) in disintegrating and absorbing their societies, and have taken possession of their houses of worship, and expressed readiness to remedy any offences "against the law of love" committed by those under the appointment of the Church, South. It concluded by saying:

"We have no authority to determine any thing as to the 'propriety, practicability, and methods' of reunion of the Churches represented by you and ourselves."

The commission appointed, in pursuance of the action of the late General Conference of the Methodist Episcopal Church, to confer with the representatives of other Methodist bodies, met by appointment, in the city of Philadelphia, November 23, 1869. A commission from the African Methodist Episcopal Zion Church also met in conference with this commission, and presented a paper containing a proposition for the union of the two churches represented, with a draft of the terms and conditions upon which it should be made. Most of the terms and conditions proposed by the commissioners of the Methodist Episcopal Zion Church were accepted by those of the Methodist Episcopal Church, when, at the suggestion of the latter, the paper was withdrawn, for modifications.

At the subsequent meeting the paper was presented again, modified. The subject was canvassed, and both parties seemed to feel that there would probably be found no insuperable obstacles in the way of consummating the proposed union. But, as neither of the commissions had any power either to consummate the union or to commit their several churches to any definite line of action, and as the time of the sessions of the General Conferences of both bodies is somewhat remote, it was deemed not advisable by either party to proceed further at this time, but to adjourn, to meet again at or before the sessions of the two General Conferences in May, 1872.

The spirit of the proceedings on both sides was kind, conciliatory, and frank. It was conceded by the commission of the African Methodist Episcopal Zion Church that, in case of a union being consummated, their organization, as the lesser body, would be absorbed into the greater, thus losing its identity. To this they did not object, provided proper assurances were given that the colored element in the consolidated body should be duly recognized in all the departments of the Church, and to that condition the commissioners of the other party made no objection. In separating, the members of the two commissions seemed to feel assured that, unless some unforeseen hinderances shall arise, it will be found possible at their future meeting to satisfactorily arrange all the terms of union, and to bring the two bodies into one, by the concurrent action of the two General Conferences.

In accordance with the provisions of the plan which was adopted by the General Conference of 1868, of the Methodist Episcopal Church, the vote of the laity on the question of the adoption of lay representation was taken during the month of June, and the vote of the clergy was taken in the conferences which subsequently met during the year. The vote was much smaller than either party had anticipated it would be, calling out hardly a fourth of the voting strength of the Church, although men and women among the laity, who had attained the age of majority, were alike admitted to vote. Owing to the fact that only a part of the conferences have yet held their session, through which only the complete official returns of the vote could be obtained, the full statement of the vote has not yet been made. It is known, however, to be overwhelmingly in favor of lay representation. In November the full vote of 42 conferences footed up for lay delegation, 108,571; against it, 53,025. The full vote of the whole Church is estimated at over 200,000, of which the proportion of votes in favor of and against the new rule maintains about the proportion observed in the above footing.

The plan submitted by the General Conference called for approval, not only by the vote of a majority of the laity voting on the question, but also by three-fourths of the ministers voting in the annual conferences. The following is the statement of the voting in the conferences which met previous to the close of the year:

This gives, so far, three-fourths and 172 votes to spare.

The fiftieth anniversary of the parent Missionary Society of the Methodist Episcopal Church was held in the city of Washington, D. C., on Sunday and Monday, January 10th and 11th, and was an occasion of universal interest. Appropriate discourses were preached in all the Methodist churches.

The Rev. Bishop Ames, reviewing the history of the Society, in his address, said:

There is much in the past history of our missionary organization that calls for thankfulness. Just about fifty years ago this society was organized. Its income for the first year was only eight hundred dollars. We have collected and expended from the commencement about eight millions, and not one dollar has been paid into the treasury that has not been satisfactorily accounted for. No draft has ever been protested, nor has the society ever lost a dollar by the dishonesty of any agent. This great revenue—for it is now the largest revenue collected by any religious organization in the United States—is collected by the voluntary action of the pastors of the churches. We have no financial or soliciting agents. In virtue of his office as pastor, the minister is charged with the responsibility of looking after the interests of the missionary cause, and making collections to sustain it, and in the administration of the affairs of the society hardly three cents out of a hundred are expended to pay those who perform executive duties. We have three secretaries at New York, and we pay a bookkeeper, for keeping the accounts of the general treasury, five hundred dollars a year. That, with the necessary incidental expenses connected with the office, is the sum total of the charge brought against the general treasury for the administration of the affairs of this great society.

The General Conference of 1868 appointed a commission of ministers and laymen, with full authority to purchase grounds and erect on it suitable buildings, to afford more spacious accommodations for the use of the Book Concern, Missionary Society, and other connectional institutions in the city of New York, at a total cost not to exceed a million of dollars. The commission, after a careful survey of sites and buildings, purchased a building, just erected on the corner of Broadway and Eleventh Street. The building is a very large and elegant one. The price paid was $900,000.

The Church Extension Society of the Methodist Episcopal Church was organized by direction of the General Conference of 1864, and incorporated during the following year by the Pennsylvania Legislature. It depends for its income on annual collections in the churches, which go to form a general fund, subject to annual distribution, and on donations and bequests, which are applied to create a perpetual loan fund, to be loaned without interest to church societies, in sums not exceeding $5,000. The receipts and disbursements from the organization of the society till November, 1868, were about $125,000. The receipts for the year ending November 16, 1869, were $66,592.93, and the disbursements $59,741.34. During that year aid was extended by donation to sixty-five churches, in twenty-three different States and Territories, and by loans to fourteen churches in eight different States and Territories.

Additional subscriptions and pledges to the loan fund of the Society have been secured to the amount of $100,000, and additional cash to the amount of $10,000. The methods and plans of the Society (says the Treasurer), especially in connection with the loan fund, are winning the confidence and interest of friends of the Church everywhere. The foundations of the Society are secure, and the growth, though less rapid than the demands upon the Board require, is healthy.

The contributions asked to meet the appropriations for 1870 are fixed at $112.900. The Society resolved, at its last meeting, that no resolution passed by the General Committee, shall be so construed as to prevent twenty per cent. of all the collections received being reserved for a special relief fund, to be used for the benefit of the most necessitous cases, as they may occur in any part of the work.

The Society is about issuing registered six per cent. bonds, and claims that, with no business indebtedness to speak of, it has an annual income from collections of over $50,000, bonds and mortgages amounting to over $40,000, pledges on the loan-fund to over $100,000, all of which will be constantly increasing.

The Boston Theological Seminary at Boston, the Garrett Biblical Institute, at Evanston, Ill., and the Drew Theological Seminary, at Madison, N. J., have together fourteen instructors, ten lecturers, and five special instructors (in the Boston Seminary). The number of students was, by the last catalogue, 206; volumes in library, 17,000; property and endowments, $1,109,684. The Baker Theological Institute at Charleston, S. C., has three professors and twenty-six students; the Martin Mission Institute, at Frankfort-on-the-Main, Germany, has two professors, and buildings worth $25,000. The Thomson Biblical Institute, at New Orleans, was opened in 1866.

The latest statistics of the literary institutions of the Methodist Episcopal Church make the number of universities and colleges 28, and of academies and seminaries 85; instructors in universities and colleges, 153; students, 5,200; instructors in academies and seminaries, 504; students, 14,100. Value of university and college buildings, libraries, etc., $1,824,774; endowments, $3,015,100; property invested in academies and seminaries, over $2,000,000; making the total capital invested in education nearly $7,000,000.

The Board of Education of the Methodist Episcopal Church was organized by the General Conference of 1868. Its duty is to take charge of property given for educational purposes, and particularly of the Centenary Educational Fund, to invest it, and appropriate the interest only to: first, aid young men preparing for the foreign missionary work of the Church; second, to aid young men preparing for the ministry of the Church; third, to aid the theological institutions; fourth, to aid the universities, seminaries, and academies. It also takes care of the Children's Fund, appropriating the interest to assist meritorious Sunday-school scholars in obtaining a more advanced education. The Centenary Fund amounts to $24,325.44, and the Children's Fund to $56,674.40.

The Methodist Episcopal Tract Society held its annual meeting on Wednesday, December 10th. The grants in tracts and money made during the year amounted to $5,689. The circulation of *The Good News*, a monthly Sunday-school paper, had reached an average of 72,200 copies. The total receipts, including a balance on hand, January 1, 1869, of $444.17, were $13,975.71, and the expenditures, $11,869.46; balance on hand, $2,606.25. A discrepancy of $2,000 appeared by comparing the minutes of the last annual report with the present report of the treasurer. The bookkeeper explained that the discrepancy was owing to the inappropriate time of holding the annual meeting, which compelled the leaving out of the receipts and expenditures for December in each year; but that the quarterly or the printed annual report would show every thing complete.

The Anniversary of the Sunday-school Union of the Methodist Episcopal Church was held in Columbus, Ohio, from October 30th to November 3d. The statistics are as follows: Sunday-schools, 16,084; officers and teachers, 191,869; scholars, 1,165,914; volumes in library, 2,749,547; Bible classes, 24,232; infant scholars, 169,877; total expenses for schools, $424,696.59; raised for Sunday-school Union, $21,286.02; conversions, 41,708.

Reports were current in September, apparently founded upon examinations which had been instituted by one of the agents into the accounts of his predecessors, of irregularities in the management of special departments of the Methodist Book Concern, through which it had failed to realize as large profits to the benevolent funds as the Church was entitled to expect from it. The matter was brought to the attention of the committee appointed by the General Conference (called the Book Committee), who, after an examination of two weeks, availing themselves also of a previous examination by a sub-committee, reported in November:

1. That it is our deliberate judgment that the last exhibit of the agents is a true and reliable statement of the financial responsibility and solvency of the Book Concern at New York.

2. That though the agents have bought paper and other materials for the printing department mainly through paper-dealers or middle-men, yet it does not appear by any facts before the committee that the Concern has suffered any serious loss by such mode of making purchases.

3. That the investigation of the affairs and business of the bindery has satisfied the committee that there has been great mismanagement in this department, and that serious losses have occurred therein.

4. That the general management of the business of the Book Concern, in all matters involving its credit or integrity, is such as to meet the approval of the committee and command the confidence of the public.

The investigation will be continued.

II. Other Methodist Bodies in the United States.—The statistics of other Methodist bodies in the United States are given in the *Methodist Almanac* for 1870 as follows:

M. E. Church South, about	2,540	3,952	535,040
African M. E. Church	560	1,500	200,000
African M. E. Zion Church	694	.....	164,000
Methodist Protestant	423	.....	72,000
The Methodist Church	694	444	49,080
Wesleyan Methodist	220	.....	20,000
Free Methodist	85	.....	4,889
Bible Union	....	.....	.....
Primitive Methodist	20	.....	2,000

III. Evangelical Association.—The statistics of the Evangelical Association, in 1869, were as follows: annual conferences, 15; Itinerant preachers, 531; local preachers, 390; church members, 65,155; probationers, 2,445; adults baptized, 1,062; children baptized, 6,251; sunday-schools, 962; sunday-school scholars, 48,888.

IV. Methodist Episcopal Church in Canada.—The Methodist Episcopal Church in Canada comprises three conferences: Niagara, Ontario, and Bay Quinte. The statistics of the three conferences are as follows: Niagara, members, 7,550—ministers, 76; Ontario, members, 5,382—ministers, 59; Bay Quinte, members, 6,627—ministers 73; making a total of 19,559 members and 208 ministers. There are 228 Sunday-schools, 1,787 officers and teachers, and 11,207 scholars, among whom there have been, during the year, 292 conversions.

V. Wesleyan Methodists in Canada.—The Canadian Wesleyan Methodist Conference closed its session in Toronto, Canada, June 11th. The membership was reported to be 62,000—an increase over last year of 2,156. There are 53,024 Sunday-school scholars—an increase of 1,703. Of these scholars, 4,467 are members of the church. Of the Sunday-school officers and teachers (7,691 in number), 5,684 are church-members.

The report of the Missionary Society of the conference shows that the amount of the receipts, including £1,000 from the parent Society, was $82,474. The missions under the care of the Society are: Indian missions, 23; missions in British Columbia and Red River, 6; German, 5; French, 4; domestic missions, 136. The membership of the various missions embraces 4,113 Indians, 237 Germans, 53 French, 14,497 on the domestic missions, 35 in Red River and the Saskatchewan, and 156 in British Columbia—making a total of 17,091 in church-fellowship. These are supplied by 186 missionaries, besides which there are on the Indian mission 15 interpreters, 16 day-schools, and 16 teachers—making a total paid agency of 223.

This body is a branch of the British Wesleyan Methodist connection, and the conference is subordinate to the British Conference.

VI. Wesleyan Methodist Connection of Great Britain.—The following are the general statistics of Wesleyan Methodism:

	Members.	On trial.	Total Ministers.
Great Britain	345,526	20,596	1,608
Ireland, including the missions	19,639	697	174
Foreign Missions	65,803	5,906	292
French Conference	1,966	170	35
Australasian Conference	52,222	8,268	319
Canada Conference	57,860	3,017	880
Eastern British American Conference	14,988	1,253	149
Total	557,995	40,619	3,157

The amounts raised from all sources for the funds of the Wesleyan connection of England, according to the last published reports, were as follows:

	£	s.	d.
Foreign Missions	146,249	7	8
Theological Institution	10,530	15	9
Contingent Fund:			
Yearly collection	7,467	12	2
Congregational collection	6,456	7	6
Meetings and subscriptions	6,125	16	2
Circuits toward the support of their Home missionaries, legacies, etc.	5,677	11	2
General chapel fund	7,576	19	11
Education fund	10,974	14	8
Worn-out ministers	15,226	0	8
Kniwood & Woodhouse Grove Schools	15,748	14	7

The anniversary of the Wesleyan Missionary Society was held in Exeter Hall, May 3d, William McArthur, Esq., M. P., in the chair, who made a brief but comprehensive address. He stated that the Society had 704 stations, 5,701 preaching-places and chapels, 987 missionaries, and in their schools upward of 174,000 scholars. "What a wonderful machinery is this!" he said. "In looking at our various stations throughout the world, we cannot form a sufficient estimate of the amount of work that is going on in this respect. Take, for instance, Sierra Leone; we have 9 missionaries there, but we have 125 local preachers, and we have 222 Sabbath-school teachers. In the Friendly Islands we have only 19 regular missionaries, but we have 841 local preachers and 747 Sunday-school teachers. In Feejee we have 58 missionaries and assistants, but we have 477 local preachers and 1,730 Sunday-school teachers. It has been the peculiar glory of Methodism that it has enlisted an amount of lay agency that no other church in the world has ever done." The Rev. G. T. Perks read the report, showing that the receipts of the Society for the year have been £146,249 7s. 8d. The expenditures have been £146,071 13s. 2d.

The missions of the Wesleyan Methodist Missionary Society occupy extensive districts in Europe, Asia, Africa, America, Australasia, and the islands of the sea. The missions under the direct charge of the Society are classified in twenty-seven districts, and include 195 churches, 1,978 chapels and other preaching places, 283 missionaries and assistants, 5,591 subordinates, paid and unpaid agents, 65,802 members, 5,903 "on trial," and 51,930 scholars in the Sunday-schools.

A large portion of the missions, however, have relation to the local conferences. These have 504 churches, 4,342 chapels and other

preaching-places, 711 missionaries and assistants, 18,949 subordinates, paid and unpaid agents, 88,385 members, 10,000 "on trial," and 122,791 Sunday-school scholars.

The jubilee fund is now closed, £175,000 having been collected upon it.

The number of Wesleyan Sunday-schools in Great Britain is 5,328; of teachers, 103,411; of scholars, 601,801—an increase on the previous year of 19,781. The number of week-day schools is 698, with 119,070 pupils. The amount of Government aid to Wesleyan day-schools was £32,611. The Normal Training-School, at Westminster, numbers 132 students.

The Wesleyan Methodist Local Preachers' Mutual Aid Association of Great Britain numbers 2,110 members. Its objects are to afford relief to its members during periods of sickness and old age, and also to provide a sum of money for their decent interment at death. The total amounts paid for these objects since the formation of the association, in 1849, is £33,492 19s. 2d. There is this peculiarity about the Association, that while there are self-help and mutual aid in the members, their own contributions are supplemented by the free-will offerings of the churches to which they minister.

VII. METHODIST NEW CONNECTION.—The statistics of the Methodist New Connection are: 11 districts, 60 circuits, 9 missions, 155 preachers, and 26,309 members, in England; 7 circuits and stations, 8 missionaries, and 678 members, in Ireland; and 97 missionaries and 8,719 members in the missions.

VIII. UNITED METHODIST FREE CHURCHES.—The statistics of the United Methodist Free Churches are: Itinerant preachers, 312; local preachers, 3,445; members, 68,062; Sunday-school scholars, 152,315.

IX. PRIMITIVE METHODISTS.—The statistics of the Primitive Methodist Connection are: Travelling preachers, 943; members, 161,229; Sunday-school scholars, 258,857.

X. BIBLE CHRISTIANS.—The statistics of the Bible Christian denomination are: Itinerant preachers, 254; local preachers, 1,759; members, 26,241; "on trial," 804; Sunday-school scholars, 44,221; teachers, 8,913. The missionary report shows an increase of 9 itinerant preachers, 17 chapels, 434 members, 66 teachers, and 1,173 scholars. The income of the society amounted to £5,599 16s. 4d., and the disbursements to £6,039 18s. 1d.; thus leaving a deficiency of £440 1s. 9d.

MEXICO.* President, Benito Juarez, a descendant of the Indian race of Tapatecos, born at Ixtlan, State of Oajaca, 1807; elected deputy to the House of Representatives, 1846; Governor of Oajaca, 1848–1852; exiled by Santa Anna, 1853; returned to Mexico, 1855; Minister of Justice, 1856–1858; of the Interior, 1858; head of an insurrection against President Zuloaga, 1858–1859; and against President Miramon, 1859–1861; elected President, 1861; reëlected 1867, for the term from 1867 to 1871; Vice-President, Lerdo de Tejada.

The area is about 773,144 square miles. The population, according to the census of 1869, amounted to 9,089,254, distributed among the different States as follows:

Federal District	286,500	Michoacan	618,039
Aguas Calientes	86,176	Morelos	121,409
Baja (Lower) California	21,000	Nuevo Leon	171,000
Campeche	86,463	Oaxaca	601,850
Chiapas	193,987	Puebla	997,789
Chihuahua	179,971	Queretaro	166,643
Coahuila	67,691	San Luis Potosi	397,735
Colima	48,649	Sinaloa	161,157
Durango	173,942	Sonora	147,133
Guanajuato	874,000	Tabasco	83,703
Guerrero	270,000	Tamaulipas	107,547
Hidalgo	404,207	Tlascala	177,944
Jalisco	924,580	Vera Cruz	380,971
Mexico	599,810	Yucatan	283,686
		Zacatecas	399,977

The number of public and private schools in the year 1869 was reported as 3,742, with 276,854 pupils, and showed a proportion of about one pupil to every 32.78 of the population. The Federal District has 248 schools, with 18,195 pupils. The city of Mexico has one pupil to every ten inhabitants. In 1795 the Mexican territory had only 12 schools for a population of 5,270,209 inhabitants.

The population of the city of Mexico was, according to the census of 1869, only 140,000; although a Mexican statistician, Orozco y Berra, in 1865, estimated it at 200,000. The other large cities of the republic had, according to Orozco y Berra, in 1865, the following population: Puebla, 75,000; Guadalajara, 70,000; Guanajuato, 63,000; Queretaro, 48,000; Matamoras, 41,000; Jalapa, 37,200; Vera Cruz, 37,040.

The budget for the year 1868 to 1869 estimated the revenue at $18,219,708, and the expenditure at $18,694,438. In the budget for the year 1869–1870, the revenue is estimated at $18,235,513. The public debt, on August 1, 1865 (according to Martin's *Statesman's Year-Book*), amounted to $317,357,250. The imports from England, in 1867, were valued at £320,000 sterling; the exports to England at £810,000; the commerce with England constituted more than one-half of the foreign trade. The movement of shipping amounts to about 1,000 vessels annually, together of about 100,000 tons.

The telegraph now connects Manzanillo with Vera Cruz *via* Colima, Guadalajara, and Mexico, thus opening interoceanic communication.

There are now 2,000 miles of telegraph and 240 miles of railroad in operation. The petroleum-springs near Espinol, on the Tuxtla River, prove very abundant. A rich silver-mine has been discovered in Tamaulipas. Manufacturers are increasing in wealth.

The second session of the Mexican Congress, which commenced on September 16, 1868, ended January 21, 1869. Congress five times resolved itself into a grand jury for the purpose of judging of the guilt of the following distinguished Mexican officials, against whom charges were made: General Cauto, for the crime of as-

* For full geographical information of the republic, *see* AMERICAN ANNUAL CYCLOPÆDIA for 1868.

sassination; Ministers Mejia and Romero, for exceeding the authority granted them by the Constitution or Congress; General Huerta, for conspiring to overturn the present Government, and General Diego Alvarez, for a similar crime. The charges in each case were dismissed, except the first. General Cauto having been surrendered to the criminal courts for trial and punishment, the laws granted to him inviolability of person and property as to members of Congress until that body shall examine the charges and pronounce thereon. In addition to other laws passed, two of the treaties made and signed by Mr. Romero and Mr. Seward were confirmed, thus settling the question of claims for the present and also that of the naturalization of people moving from one country to another.

Congress passed also three railroad bills, the most important of which relates to the concession made to the English Mexico and Vera Cruz Railroad Company. It was finally approved by Congress, having been materially modified. This great national enterprise had been promptly acted upon by the Executive under the authority of the "Ample Faculties," but subsequently interfered with by Congress, to such an extent as to materially injure all parties interested, including capitalists, contractors, and workmen. Congress finally becoming conscious of the necessity of the completion of the road, and convinced of the unwise policy of their interference and their procrastination, although at a late hour, apparently desired to make amends therefor, and on the 10th of November passed the bill which enabled the work to be recommenced.

Next in importance was the passage of a bill for the construction of a railroad from the Rio Grande to Guaymas on the Gulf of California, with a view of opening the agricultural and mineral resources of the adjacent country.

At the session of Congress commencing in April, President Juarez was authorized, by a vote of 100 to 12, to recognize the Cuban revolutionists as belligerents. Congress closed its session May 31st. The labors and the views of the General Government, as well as the situation of the country at large, are given in the following addresses of President Juarez to the Mexican Congress and the President of Congress:

Citizen Deputies: After having consecrated yourselves to your elevated functions with laudable assiduity, and, for the public benefit, having previously prorogued as far as possible the duration of those labors, you have now reached the end of the last period of your session. Believing that in accordance with your opinion, not anticipating in the present state of things that there is any grave motive which makes an extraordinary session necessary during the legal recess, the fourth constitutional Congress terminates definitely its labors to-day. This new proof of the regular course of our institutions is very satisfactory. At the same time there is no occasion to be restless, but rather to look with confidence upon the future of the relations of the republic with the world abroad.

With the United States we preserve the best relations of amity and neighborly friendship, which must always be beneficial for the better development of the commerce of both countries. Although our relations have been interrupted with European powers, in consequence of the late war, yet, as soon as military operations ceased, we immediately declared that if, by reason of the war brought upon the republic, it were not possible to consider the late treaties as being longer in existence, still we should be disposed to celebrate other new ones upon just and convenient terms, whenever such nation should desire to propose them. No other cause for dispute with those nations has occurred, which can possibly give rise to further difficulties. Their citizens have continued to live with us without having any motive for complaint, under the just protection of our laws. A new and grand European power has already opened relations with the republic, proposing the celebration of a commercial treaty. The North-German Confederation has sent a representative to Mexico, who has been received with the proper consideration and good-will. It has been justly observed that upon the termination of the late warlike operations the administration of the republic was soon reorganized, without having suffered all of those evils which have befallen other countries under similar circumstances. Unfortunately, several instances of crimes against individual security occurred, which have made necessary the recent law of Congress, in order that such disorders may be suppressed promptly and justly. The Government has made use of the authority which this law concedes, dictating such arrangements as it has believed fit, for the purpose of securing efficacy in its enforcement, and at the same time, the prevention of an abuse thereof. The Government has already succeeded in setting in operation all possible measures, in order that there may be the least necessity for the severe suppression of these crimes through the most earnest care in its attempts to prevent their occurrence. Upon the initiative of the Government, Congress has discussed and decreed the establishment of juries in the Federal district. This important measure of improvement will facilitate the prompt and good administration of justice very much. In accordance with the requirement of the Constitution, Congress has been engaged during the session, by preference, in acting upon the Appropriation Bill for the coming fiscal year. The Government will see that the expenses of its administration be in accordance therewith, promising that, as heretofore, every thing shall be looked after with regularity. The rebellion which occurred in Sinaloa against the authorities of the State having been suffocated, there results the peace of the republic. There are to be excepted some places in Tamaulipas, very sparsely populated, where some rebels are still left, who, by the fewness of their number, and by their moving about incessantly, have been able to escape from the troops sent in their pursuit. The law in regard to recruiting, which Congress has just passed, will permit the preservation of a fixed number of the forces of the army which, with valor and discipline, has combated all of the rebellions—showing that it is the worthy defender of the Constitution and the laws. It pleases me, citizen deputies, to repeat at the end of your office the congratulations which I have at other times offered you for the illustrious patriotism with which you have fulfilled your high duties. You have the satisfaction of meriting the national gratitude, because with your prudence and wisdom you have contributed most efficaciously, after the profound disturbance caused by the foreign war, to the march of the republic upon the road of peace and true liberty, which constitute the basis for its aggrandizement and prosperity.

The President of the Congress replied:

Citizen President: It is highly satisfactory for the Fourth Constitutional Congress to have reached the regular end of its functions, and to retire, convinced that its labors have not been sterile for the people,

who trusted them with not a small portion of their destiny. Chosen under circumstances truly exceptional, called to preside over the reorganization of a country in which not only the political institutions had been destroyed, but also its national life cruelly attacked, it became necessary to establish the bases of government and of public administration; to change, in a country rich and capable of supporting itself, the inert quietude produced by the fatigue of prolonged and gigantic struggles; to give new birth to confidence and the spirit which it inspires in the honored majority of the nation; and to give all those labors and useful enterprises the impulse which they derive from security conceded as a right, and from the guarantee made effective to every legitimate interest. This noble and arduous task imposed upon Congress by the era in which it happened to exist, was at once admirably comprehended thereby, which consecrated itself most effectually to the performance of its duty, with the most entire good faith and the most sincere mind. It has not been the pretension of this assembly to endow the nation with huge and wise legislative documents, nor to introduce great novelties in the national codes. Accepting the mission—much more useful, if less ostentatious—of aiding the republic in raising itself from material ruins, the price of its glorious moral triumph, and of repairing the immense losses suffered in so many and so obstinate wars, it has preferred to occupy itself in resolving those questions of the moment, which have arisen day after day from the abnormal state in which society found itself, and in dictating regulations for the understanding, the application, and the development of the eminently wise and beneficent institutions which together form our fundamental law. Although twelve years have already passed since its promulgation, it may be asserted that it has only been possible to make a regular application of this law since the republic triumphed in the foreign war, which was nothing more than the continuation of that which servileness and retrocession had stirred up against our Constitution. In order that those luminous principles which this Constitution contains may be practical truths, great legislative labors have been and are still necessary. Although in the native representative system there is wanting efficacious action, and although even the possibility exists of the executive power not moving in harmony with the national representation in a country which is being reorganized, and which is passing through the exceptional situation in which ours has found itself for two years past, still there exists that which is better and more consistent—namely, a concurrence between the public powers. Under such circumstances the first, or, better said, the only acceptable rule of public conduct is that of maintaining the order of things derived from previous events, proving to the Government that the people will be conformable, aiding it in its march over terrible obstacles, and in expediting its action, provided it has for its ultimate object and final tendency the establishment of peace and of public security. Such has been the guide adopted by Congress, established as the first rule of its decisions, and applied with admirable good feeling and with rigid consequences. By chance it may not be known to-day what an immense good such prudent and well-inspired conduct has brought to the country; but when the impartial gaze of the historian shall examine how diligently the Congress which terminates to-day performed its functions, he will undoubtedly do justice to your prudence and patriotism; neither will there be denied the earnest desire manifested to organize and bring upon practical ground those constitutional principles whereof the various organic laws passed in this Congressional hall give testimony, as well as those chosen from among those laws found in force. Although through the electoral right and that of the free expression of thought, the press have received rules sufficiently proper to enable them to be accepted and put in force, there was still wanting the fixing of those important principles by which the States should harmonize in determining their duties. There did not exist in the Federal compact the just and proper prohibition with regard to the establishment of local and differential duties, although a multitude of contributions as materially grievous as they are repugnant to our political system have not been extinguished. The grand and beneficent innovation of the judicial "amparo" against the violation of guarantees was sterile, and without a law which should regulate it; the trial by juries, so ardently desired, could not be enforced in a most important part of the republic; there were wanting bases for the regulation of public instruction; some lesser reforms in the system of military juries were rejected; many people have clamored in vain for the erection of new States; finally, the indispensable custom of a sovereign people of dictating to its administrators how they should dispose of the fund derived from their sweat and blood, and how much of it and in what manner it should be applied to the public necessities, was ignored.

Congress has endeavored to provide for all these exigencies, the importance of which is notorious, and if experience shall demonstrate that it has not succeeded fully, it will be well entitled to the glory of having intended to have done so. That which has been accomplished with care by the way of planning and promoting public improvements, is not to be despised. The privileges and subventions for turnpikes, railroads, and telegraphs, have only been limited by the resources which it has been possible to dedicate to these works, and the day when the Vera Cruz, Tehuantepec and Paso del Norte railroads shall give prosperity and life to our country, there will be acknowledged how much is due in this respect to the assembly which to-day closes its sessions. The state in which our foreign relations exist, on account of the war of intervention, has been the reason why Congress has had very little to do in that respect; but scarcely on any subject has the opinion of its members been so uniform and so well known. It has associated itself decidedly and without reserve to the opinion of the Executive, whose attitude, full of decorum and dignity, has only met with sympathy and decided aid in the House. To welcome with friendship and kindness every honest foreigner; to give him protection and guarantees in exchange for obedience to the national law; to maintain commercial, scientific, and literary relations with all the nations of the globe, are international obligations which Mexico fulfils with pleasure, and to which she will never be wanting. But to renew relations with the governments of those countries which brought her ruin and desolation, and endeavored to deprive her of her independence, does not suit her interests, nor does it become her to take the initiative step. She has never derived any benefit from her treaties with European nations, and it is natural that her desires no more relations than those required by the strictest and most rigorous justice when the actual state of war has been changed into that which exists between nations which have ceased to be enemies.

Relative to this important point, as well as the other culminating points in our foreign policy, Congress has seen with delight that the Executive has marched forward, inspired by an elevated sense of his obligations, and guided by a sincere desire to procure the happiness of the republic. For this reason he has met with a constant and efficacious aid from the national representatives.

The members, that have composed Congress, will be soon changed, but their spirit, which is that of all elevated and patriotic Mexicans, will continue the same, and, free from many obstacles, can express itself in a manner most suitable to the happiness and prosperity of our country.

The subject of the claims made and to be made by citizens of the United States against the Mexican Government began to alarm the

people. The internal situation becoming worse, a general gloom began to pervade the country. "Every thing," says a local paper, "indicates that there will be no remedy. When revolution has destroyed the republic, when our fields, laid waste, shall be saturated with the blood of our brothers, and the eagle of the North shall swoop down upon the corpse of our country, the men who to-day have brought this abyss will forget at once the land of their birth, and go abroad to enjoy the pleasures which riches purchase, while the sons of Mexico will be dragging in the dust the chains of slavery."

A treaty of amity, commerce, and navigation, in September, signed by the Minister of Foreign Relations and the *chargé d'affaires* of the North-German Confederation between the United States of Mexico and the King of Prussia, in the name of the Confederation and the States of the Zollverein, was sent to Prussia, and submitted to the ratification of the national Congress.

A proof of the feelings entertained by the *chargé d'affaires* toward the Government appears in a note sent to the Minister of Foreign Relations relative to the design of a few malcontents, who wished to bring about a sedition on the 20th of August.

MEXICO, *August* 23, 1869.

MR. MINISTER: I have just learned, through the *Opinion Nationale* of to-day, that the rumors in circulation in the city since Friday, and to which I attributed no importance, were nevertheless well founded.

I hasten, therefore, Mr. Minister, to congratulate most cordially and sincerely your Excellency, and also in the name of my fellow-countrymen, for the activity with which the Government has checked the dangerous projects of the enemies of the republic.

In one of my first reports to M. Bismarck, in the month of May I stated, that your Excellency had then said to me, in a conversation relative to the affairs of Mexico—

"We fear no revolution. The Government is sufficiently strong to suffocate all revolutionary movements."

It is very pleasing and satisfactory for me to be able to forward by the next packet a new report to M. Bismarck, informing him that those words of your Excellency have just happily been fulfilled.

All the German inhabitants of Mexico entertain the same feelings, and will thus inform their correspondents in Europe.

If an opportunity offers, I beg your Excellency to be pleased to be the interpreter of my feelings, thus expressed, to the President.

Accept the assurance of the distinguished consideration of your obedient servant, SCHLOZER.

To Señor SEBASTIAN LERDO DE TEJADA, Minister of Foreign Relations.

OFFICE OF FOREIGN RELATIONS,
MEXICO, *August* 24, 1869.

SIR: I have the honor to state to you, in answer to your note of yesterday, that I have communicated to the President of the republic the sentiments you have seen fit to express, in your own name and in that of all the German residents of the capital, relative to the fact that the Government has avoided the realization of the projects of some who desired to disturb the public peace.

Indeed, as I have told you before, the Government, emanated from the people, has had and still has confidence that, by the authority of the law, and the aid of public opinion, peace may be preserved, suppressing all kinds of revolutionary movements.

It is very satisfactory for me to state to you that the President appreciates your kind feelings and those of your countrymen residing in Mexico, who are so worthy of praise, on account of the intelligence and probity with which they dedicate themselves to the exercise of their professions, industries, and commerce.

I embrace this opportunity to renew to you the assurance of my distinguished consideration, with which I am your obedient servant,

S. LERDO DE TEJADA.

M. KURD DE SCHLOZER, Chargé d'Affaires of the North-German Confederation in Mexico.

On September 16th the Fifth Congress of the Mexican Union met and was opened by President Juarez, who read the following message:

Citizen Deputies: It is very satisfactory, in compliance with the precepts of our fundamental code, to meet to congratulate the representatives of the people in the Fifth Constitutional Congress, which to-day commences the first period of its august functions. As in the union which exists among the States, so the periodic and regular renewal of the public authorities, for two years past, since the termination of our war, is demonstrating each day more and more the consolidation of our institutions. We are also, with good reason, able to hope that the relations of the republic with some European powers, interrupted by the late war, would very soon be re-established in a just and proper manner in a short time. Those which the republic have maintained with the United States of America will be preserved on the best terms of amity and friendship.

The treaty of commerce, friendship, and navigation, recently concluded with the North-German Confederation, will be immediately submitted to Congress for its approval. In consequence of the disposition which Spain and Italy have manifested, and which has been equally expressed by the Government of this republic, there is reason to believe that the relations with these two powers will be soon re-established.

In the mean time, the citizens of those nations, and whatever may be their foreign origin, residing in Mexico, have no reason for complaint, as they are enjoying the most ample and secure protection in their persons and interests. I hope that this just and benevolent conduct on the part of the republic will be duly recognized abroad. The forces which won the revolution against the State authorities of Tamaulipas having submitted, the blessings of peace are now being enjoyed by the whole nation.

It has been seen that public opinion has resisted those few unquiet spirits who have proposed to disturb the peace. The Government has depended entirely upon the forces which the fundamental law of the nation gives to it, and the solid support of public opinion, which condemns the thought of appealing to arms against the authorities elected by the people. It has calculated also upon the respect and obedience to the laws which distinguished our republican army, composed of good citizens, who defended with so much patriotism our independence and our national institutions.

The Executive will omit nothing in preserving the peace, which is his first duty, not doubting that, in order to comply therewith, Congress would lend him, if it may be necessary, its most efficacious cooperation.

The application of the law against robbers and kidnappers, intended to reduce the number of such cases, has already had its proper effect, by putting to flight these criminals, and contributing to the re-establishment of public security.

Our society being profoundly disturbed by the effects of a war so prolonged, many objects of interest and various branches of our administrative affairs yet require the urgent attention of our legisla-

tors. With the desire of coöperating with Congress in its important task, the Executive will present some initiatives.

One of them will refer to reforms in the ordinance relative to maritime and frontier custom-houses, recommended by experience. Another will be proposed for the purpose of facilitating the transfer of nationalized property, admitting as a part of its price credits of the public debt. Another initiative will be proposed—indispensable modifications in the laws regarding mortgage which are now in force in the Federal District, in order to facilitate the interchange of riches, and that property shall not remain immovable. The Executive recommends also the initiation, which was presented in the last period of the last Congress, referring to colonization and the clearing up of uncultivated lands.

I do not doubt that the public credit will likewise deserve the special attention of Congress, it being so important a matter that a great number of values should have their deserving circulation.

We have to congratulate ourselves, citizen deputies, in the just anxiety which we have shown for the progress of our country, that, following the solemnity of our reunion, we are to-day to celebrate, in the city of Puebla, the conclusion of the railroad which unites it with that city. It is also a very satisfying act to solemnize to-day the anniversary of our independence, and to affirm our proposals for progress, in order to realize other improvements like those, so important for our national prosperity. Under these happy auspices receive, citizen deputies, the sincere prayer that, by prudence in your deliberations, the Executive may, at the end of the two years of your labors, congratulate you upon the benefits which you shall have conferred upon the republic.

A journey of Mr. Seward through Mexico was the occasion of a manifestation of good feeling and respect on the part of the Mexican Government. Before and on his arrival at Manzanillo, the following dispatches were interchanged:

MEXICO, *October* 6, 1869.

To the Governor of the State of Colima, Manzanillo:

I beg of you that, on the arrival of the Hon. Mr. William H. Seward at Manzanillo, you will be pleased to welcome him, in the name of the President, expressing his desire that he may be pleased in his visit to the republic.

SR. LERDO DE TEJADA.

MANZANILLO, *October* 7, 1869.

To the Minister of Foreign Relations:

I have the pleasure to inform you that the Hon. William H. Seward arrived to-day at three o'clock in the morning, and that I had the honor to welcome him in the name of the President, expressing his desire that the visit of Mr. Seward to the republic should be an agreeable one.

FRANCISCO JAVIER CUERVA.

His tour through Mexico was a great ovation, and regarded by the Mexicans as an important event. Mr. Seward was received with marked honors in the capital by the President and his entire Cabinet. On the 8th of December, a grand ball, attended by 4,000 citizens, was given at the Theatre National.

The year 1869 began with the outbreak of dissensions in the State of Jalisco, under Lozada. Quiroga and other generals pronounced in favor of Santa Anna. In February, General Negrete, ex-Minister of War, was marching at the head of a revolutionary army on the capital; while General Doreo, commanding the national forces, defeated the rebels at Pachuca. Negrete was, however, checked, on February 22d, at Atexcal, in the State of Puebla, by the loyal troops under the command of Generals Alatorre and Garcia. The revolutionists in Tamaulipas were routed by General Escobedo, and Canales fled across the Rio Bravo. The order of the General Government to pass the government of San Luis to Bustamente caused a pronunciamiento in that State in favor of the actual Governor. General Alatorre defeated Negrete again at Tlascala. General Malo was killed in the action, and many of the rebels were taken prisoners, Negrete himself escaping with a few adherents, and going in a southerly direction. The merchants of Mexico City made a present of $80,000 to the troops that saved the conducta of $2,000,000 from being captured by Negrete. In March, Colonel Palacios escaped from Mazatlan, and pronounced, at the head of the troops in Culiacan, against Juarez and for Placido Vegas. He failed, however, to revolutionize the State of Sinaloa. The state of affairs in Guerrero continued threatening, and culminated in a revolution in April. The feeling of dissatisfaction with the present Government extended throughout the republic, and the political struggle between the Government and opposition was severe, each party using all means in its power to gain the supremacy. Charges of corruption were freely made on both sides.

In May a vigorous campaign was carried on against robbers and kidnappers in the States of Jalisco and Michoacan; numerous engagements took place, in which the robbers were worsted and many of them killed. The revolution in Sinaloa assumed a serious aspect. Palacio captured the town of El Fuerto, the Government troops offering but slight resistance, and 300 troops from Sonora joining Palacio. Meanwhile the Apache Indians, having been driven from Arizona, made terrible inroads upon Sonora, devastating the whole interior. Queretaro threatened revolution, and 1,000 men went there to support the Legislature against the Governor. Troops were also sent to Iguala and Guerrero. The outbreak in Sinaloa was subdued; the disturbances in Queretaro increased, the Federal party displacing the State officers and executing part of the prisoners for treason, and the Federal forces from Michoacan and Guanajuato were sent to reënforce those in that State. General Alatorre, unable to suppress the revolt in Puebla, resigned his command. The revolution in San Luis Potosi increased in strength. The insurgents in Puebla captured several cities, defeated the Government troops, and captured and executed General Bocardo. The fear of a general revolution increased. The entire republic was full of pronunciamientos in December, 1869. Armed insurrection existed in Michoacan. On December 15th, General Aguirre, with a force of troops, captured and imprisoned the Governor and the entire Legislature of the State of San Luis. The

Federal troops at Potosi, though claiming to be neutral, virtually sustained the revolutionists. The Federal commander declared himself unable to cope with the spreading revolution.

On finding that the customs regulations in reference to goods shipped to Mexican ports were but rarely complied with, the Government determined to enforce the law. The Minister of Finance issued a circular under date of Mexico, Aug. 5, 1869, containing the following clauses:

MEXICO, *August* 5, 1869.

ARTICLE 1. All captains of vessels carrying freight from Europe to the ports of the republic must formulate their manifests, and the shippers their respective invoices, as stipulated in paragraph two of article twenty-one of the ordinance bearing on these matters, with the only difference that they are relieved from presenting the receipt drawn up by the Mexican consul, which should be remitted to the customs on the arrival of the vessels.

ART. 2. The manifest and the invoices will be considered sufficient by the customs authorities for the dispatch of the goods, and therefore must contain the same requisitions expressed in the existing regulations.

ART. 3. The absence of such documents or of any formality in their concoction will be subject to the penalties mentioned in the ordinance in paragraph two of article twenty-eight and others having reference to this subject.

ART. 4. The copies of manifest and invoices that formerly were submitted to the Mexican consuls shall henceforth be posted at the port of sailing of the vessel, duly addressed to this ministry.

ART. 5. The stipulations mentioned in the foregoing shall take effect after the lapse of six months from the date of the present circular.

ART. 6. The consular certificate will not be dispensed with for vessels proceeding from the United States or other ports where there are consuls of the republic. The penalties of the law will be strictly applied to all omissions, to which effect all consuls and vice-consuls, respectively, are ordered to comply with the conditions imposed by virtue of the existing ordinance.

Independence and liberty! ROMERO.

MICHIGAN. The only general election held in 1869 was on the first Monday of April, for one Justice of the Supreme Court and two Regents of the University. The result of the canvass for the first-named office was as follows: Thomas M. Cooley (Rep.) 90,705; D. Darwin Hughes (Dem.) 59,886—Republican majority, 30,819.

Jonas H. McGowan and Joseph Estabrook, the Republican candidates for Regents of the University, were elected over John M. B. Sill and John F. Miller, by an average majority of 28,204. At the same time Circuit Judges were chosen as follows:

1st	Circuit	Daniel L. Pratt	Republican.
2d	"	Nathaniel Bacon	"
3d	"	Jared Patchen	Democrat.
4th	"	Samuel Higby	"
5th	"	George Woodruff	Republican.
6th	"	James S. Dewey	"
7th	"	Josiah Turner	"
8th	"	Louis S. Lovell	"
9th	"	Charles R. Brown	"
10th	"	Jabez G. Sutherland	Democrat.
11th	"	Daniel Goodwin	"
12th	"	James O'Grady	"
13th	"	Jonathan G. Ramsdell	Republican.
14th	"	Moses B. Hopkins	"
15th	"	Charles Upson	"
16th	"	William T. Mitchell	Democrat.

Later in the year Judge Bacon died, and Daniel Blackman, Democrat, was elected to fill the vacancy. Judge Hopkins also died within the year, but the vacancy had not been filled on the 1st of January. Of the County Boards of Supervisors the Republicans elected majorities in 44 counties, the Democrats in 9, and 4 were equally divided.

The Legislature ratified the proposed fifteenth amendment to the Constitution of the United States, and they also proposed several amendments to the State constitution, which will be voted upon by the people at the general election in 1870. The first increases the power of the Board of Supervisors to raise money for the repair of public buildings, highways, etc.; the second, third, and fourth, establish impartial suffrage and representation without regard to color; and the fifth increases the salaries of the State officers—the Governor's, from $1,000 to $2,500; the Circuit Judge's, from $1,500 to $2,000; the State Treasurer's, Auditor-General's, and Superintendent of Public Instruction's, from $1,000 to $2,000; the Secretary of State's, the Commissioner of the Land-office's, and the Attorney-General's, from $800 to $2,000. The most important legislation was the creation of two new judicial circuits; an act giving interest on overdue instalments of interest upon written contracts; an act making permanent provision for a soldiers' aid-fund for infirm, maimed, and needy Michigan soldiers; an act to punish with imprisonment in the State Prison persons who shall engage in a prize-fight, or in the training of parties therefor, or shall assist therein, or knowingly carry persons to or from a prize-fight, and punishing less severely any person attending such a fight; an act providing for the further geological survey of the State; several acts for the preservation of fish, game, and birds, one of which provides that no person shall, at any time, within the State, kill any robin, nighthawk, whippoorwill, finch, thrush, lark, sparrow, cherrybird, swallow, yellowbird, bluebird, brownthrasher, wren, martin, oriole, woodpecker, bobolink, or any song-bird, nor rob the nests of such birds, under a penalty of five dollars for each bird killed or nest robbed; an act authorizing townships, cities, and villages to aid in the construction of proposed railroads to the extent of ten per cent. of their assessed valuation, on a vote of a majority of the electors voting on the question at a meeting called for the purpose. Under this last act aid was voted during the year to the amount of more than $2,000,000.

The total receipts into the Treasury for the year were	$2,116,556 29
Balance in the beginning of the year	1,130,257 15
Total available funds	3,246,813 74
Warrants drawn during the year	2,412,734 02
Balance on hand	834,079 72
Total bonded State indebtedness Nov. 30, 1868	3,614,073 49
" " " " 1869	3,043,573 49
Reduction during the year	$570,500 00

This reduction was accomplished by payment in anticipation, as follows:

By payment of bonds	$432,500 00
By purchase of bonds not matured	88,000 00

Of the bonds paid, only $3,000 were due; the balance was paid in anticipation of maturity, being drawn for that purpose in pursuance of authority reserved for that object under the law providing for their issue. $84,078.49 of the bonds called in had not been presented at the end of the year, but will be paid on demand, interest thereon having now ceased. The bonded debt is payable at different dates, ranging through a period of seventeen years, the most distant of which is twenty years, as follows:

January 1, 1873	$469,000 00
" 1, 1878	450,000 00
July 1, 1878	192,000 00
" 1, 1879	84,000 00
January 1, 1883	750,000 00
May 1, 1890	463,000 00
January 1, 1886, or, at the option of the State, sooner	551,500 00
On presentation	84,078 49
Total	$3,043,578 49

The Auditor-General estimates that it would be possible, could the State bonds be reached by the Treasurer, to reduce the indebtedness by the use of funds pledged to that purpose, as follows:

Balance to credit of $2,000,000 sinking fund	$119,101 51
Receipts by fund during year, one-eighth-mill tax	38,495 73
Receipts from trust funds, estimated	155,000 00
" " surplus of interest, estimated	100,000 00
Total amount available to purchase of bonds during ensuing year	$412,597 24

The sum falling due in 1886, together with $45,100 of the bonds already called in, constitutes the final balance of the war-loan bonds, and funds are now on hand waiting their presentation for payment. The present is, therefore, a fit occasion for showing the progress of this loan for each year, from the issuing of the bonds to the retirement thereof. The first table shows the face of the bonds and the amount realized on the sale thereof; the second, the amount of bonds outstanding on the 30th day of November of each year, also the interest thereon falling due, the amount of bonds retired, and aggregate payments made for principal during each year. Combining the results of these tables with the amount of interest that had accrued on the bonds prior to the date of sale thereof, the actual expenditures from the legitimate revenue of the State, in retiring the war-loan, and paying the current interest thereon, may be determined as follows:

STATEMENT I.

YEAR.	Face of bonds issued.	Premium.	Discount.	Amount realized on sale of bonds.
1861	$449,100 00	$106 87	$22,468 50	$426,738 37
1862	158,200 00	31 88	7,660 06	150,571 82
1863	71,100 00	.....	.....	71,100 00
1864	571,000 00	10,058 00	.....	581,058 00
	$1,249,400 00	$10,196 75	$30,128 56	$1,229,468 19

STATEMENT II.

YEAR.	Bonds outstanding Nov. 30.	Interest falling due each year.	Amount of bonds retired each year.	Aggregate payments in each year.
1861	$449,100 00	.....	.....	.....
1862	607,300 00	$40,687 50	.....	$40,687 50
1863	569,200 00	41,114 50	$109,100 00	150,214 50
1864	1,123,150 00	54,015 50	17,150 00	71,165 50
1865	1,122,400 00	78,540 00	750 00	79,290 00
1866	1,113,600 00	78,172 50	9,800 00	87,972 50
1867	1,100,600 00	77,430 00	12,000 00	89,430 00
1868	1,082,100 00	76,870 00	18,500 00	94,870 00
1869	596,600 00	68,540 30	485,500 00	554,040 40
1870	.....	19,953 93	596,600 00	616,553 93
	.....	$584,813 33	$1,249,400 00	$1,784,213 33

Aggregate payments, principal and interest, as shown above		$1,784,213 33
Discount, as shown above		30,128 56
		$1,814,341 89
Accrued int. on bonds sold in 1861	$4,338 14	
" " " " 1862	2,578 80	
" " " " 1864	5,258 86	
Premium, as above	10,196 75	
		22,372 05
Giving for total payments from State revenue on account of the war loan		$1,791,969 84

The retiring of the war loan has rendered it possible to determine, with a certainty not before attainable, the sufficiency of the present provisions for the payment, at its maturity, of the yet outstanding unmatured portion of the bonded State debt. The Auditor-General estimates that further than the ½-mill tax, taxation, for the purpose of paying the bonded State debt as fast as it matures, need not be imposed; that after the levy of 1870 the ½-mill tax may be abolished; and that the trust fund receipts will be sufficient to pay the instalments of the debt as fast as they may become due. In his annual report the Auditor-General also demonstrates, by carefully-prepared tables, that taxation for the purpose of paying the accruing interest on the outstanding State indebtedness will need to be resorted to but a short time; three years at the farthest. The military tax now levied under an act passed in 1862, ostensibly for the payment of expenses incurred in the maintenance of the military forces of the State, but only partially expended for that purpose, the Auditor-General thinks might properly be repealed. The amount is 15 cents for each person voting at the last preceding election for Governor.

The amount received from taxation during the year was as follows:

Direct taxation		$722,409 57
Specific taxation on railroad and railway corporations	$176,487 70	
Specific taxation on State banks	900 00	
" " National banks	1,865 00	
" " telegraph companies	1,160 00	
" " express companies	983 88	
" " insurance companies	77,207 04	
" " mining companies	9,426 89	
		268,030 51
Total		$990,440 08

The specific taxes collected exceed those for 1868 by $16,999.54, and direct taxes are $142,688.86 less. The direct taxes apportioned for the ensuing year are $465,264.97; being $248,482.87 less than for 1869, and little more than one half the amount for 1868.

The following are the payments made during the year for the several State institutions:

ASYLUM FOR THE DEAF, DUMB, AND BLIND.	
For arrearages	$15,000 00
" current expenses	36,500 00
" building	30,000 00
Total	$81,500 00
ASYLUM FOR THE INSANE.	
For current expenses	$18,000 00
" building	45,500 00
Total	$63,500 00
AGRICULTURAL COLLEGE.	
For current expenses	$20,000 00
" building	25,000 00
Total	$45,000 00
UNIVERSITY.	
Special appropriation	$38,187 02
From University interest fund	38,400 00
Total	$76,587 02
NORMAL SCHOOL.	
Special appropriation	$2,500 00
Normal School interest fund	16,000 00
Total	$18,500 00
State Reform School—in all	$56,025 53
State Prison	$2,000 00

This last institution for the first time in its history has more than paid its current expenses from its receipts, and it was not found necessary to call for the whole amount of the sum of $20,000 appropriated by the Legislature for repairs and building.

The following are the trust-fund balances at the end of the year:

University fund	$313,779 66
" interest fund	742 26
Normal School fund	46,087 18
" " interest fund	13,041 27
Primary School fund	1,603,190 26
" " interest fund	90,187 02
" " five per cent. fund	210,011 07
Agricultural College fund	14,185 00
" " interest fund	58 96

The total expenses of the Judiciary for the year, including the publication of the reports of the Supreme Court, were $88,184.80.

The Legislature of 1869 made provision for the appointment of an immigrant agent, to reside abroad, and the Governor has made an appointment of one, who has taken up his residence at Frankfort-on-the-Main. One is also appointed to reside in the United States. And plans are being perfected under which, it is believed, the State may receive a large increase of a good class of immigrants.

There are published in the State 11 daily newspapers and 181 other periodical publications, mostly weekly newspapers; of the weekly papers, 4 are published in the German language, and 4 in Dutch.

The State Geological Survey has been put in the general charge of Prof. Alexander Winchell, of the university, as director, with a large corps of assistants; among whom are Major T. B. Brooks, in charge of the survey of the Marquette iron region; Dr. S. S. Garrigues, the salt manufacture; D. Darwin Hughes, ornithology; and others equally competent.

To the agriculturist the year was generally very prosperous, so far as production was concerned, but with some exceptions. The low price of wool continued the tendency among farmers last year to kill off sheep, and the whole clip of the State marketed reached only about 9,500,000 pounds; the total clip would be, perhaps, a million more. The corn crop was to a considerable extent a failure, owing to excessive rains. Wheat was a large crop, and generally secured in good condition. The fruit crop was generally excellent, and throughout the State is increasing in value and importance. The following were the shipments from two ports of fruits gathered in their immediate vicinity:

	St. Joseph.	Benton Harbor.
Apples, bushels	34,508	9,500
Peaches, baskets	687,126	495,000
Pears, "	3,000	2,000
Plums, "	400	.....
Cherries, "	600	.....
Quinces, "	300	600
Grapes, pounds	27,000	35,000
Blackberries, bushels	23,350	8,000
Raspberries, "	10,030	5,000
Strawberries, "	3,250	12,000

During the year the manufacturers of salt in the State secured a satisfactory arrangement of interests, under which sales for the most part are made by a corporation, in which all have shares. They also secured the passage of a law for the appointment of a State Inspector of Salt, and Dr. S. S. Garrigues was appointed. The production of the Saginaw Valley for the year was 41,183 barrels larger than last, reaching 596,873 barrels. The manufacture has extended but slowly since 1863. The following statistics will be of interest:

Number of companies in operation in Saginaw Valley	59
Number of salt blocks	119
Number of covers	4,796
Number of kettles	4,045
Number of graniers	128
Men employed directly or indirectly	3,800
Capital invested	$2,982,300
Salt on hand at the end of the year (bbls.)	126,867

Average cost of producing one bushel, 30 cents.

The production elsewhere than in the Saginaw Valley is slight; it being of importance only at Port Austin, where 14,000 bbls. were manufactured.

The following estimate of pine-timber manufactured is from figures compiled by the Detroit *Tribune*, Saginaw *Enterprise*, and Muskegon *News and Reporter*, and is probably not far from correct:

	Feet.
Saginaw Valley, proper	588,500,930
The Huron shore, exclusive of Sheboygan	116,615,333
Sheboygan	25,000,000
Genesee County	91,127,713
Tuscola "	11,100,000
Gratiot and Isabella Counties	19,980,000
Huron County	40,000,000
St. Clair "	51,000,000
Lapeer "	22,000,000
Sanilac "	14,500,000
Detroit	55,500,000
Muskegon and vicinity	419,230,555
Ottawa County	225,000,000
Oceana "	85,000,000
Manistee "	125,000,000
Other parts of Lower Peninsula	80,000,000
Upper Peninsula	80,000,000
Total	1,999,804,431

The stock on the Saginaw River at the close of the season is much greater than ever before. The following is a comparison for a few years past:

Year.	On dock, sold.	Unsold.	Total on dock.
1865..........	22,362,000	19,091,000	41,453,000
1866..........	14,211,000	30,204,700	44,415,700
1867..........	19,435,571	50,534,200	69,970,200
1868..........	13,402,990	58,998,027	67,401,017
1869..........	14,526,000	78,805,614	93,331,614

A similar relative comparison might be made in other parts of the State, indicating that the production for the year was in excess of the demand; and at the end of the year it was found that the preparations for the ensuing season were on a less extensive scale than for the last.

The iron-mining interests of the Lake Superior region were generally prosperous. Tons of ore produced, as estimated by the Marquette *Mining Journal*, 709,387, at an average cost, delivered on the cars, of $2 per ton. Production of the furnaces, 39,504 tons. Iron-ore is delivered in Cleveland at a net cost of $6.25 per ton, and sold at an average profit of $1.25. The transportation employs two hundred vessels, including steamers, which make this their main business. The *Journal* says that within the last thirteen years "the mines have been developed into an inexhaustible source of wealth, the neighborhood of the mines improved and built upon, railroad tracks constructed, extensive docks, with trestle-works, 'shoots,' 'pockets,' and other improved conveniences for loading vessels erected, and Marquette itself expanded from a few lonely houses into a large and flourishing village, with an extensive business. The total shipments of ore increased from less than 1,500 tons, in 1855, to considerably over half a million tons in 1869. Last year it was impossible to supply the demand, and this year the increased number and facilities of the mines will be taxed in vain to meet all the requirements of the hundreds of furnaces that run almost exclusively on Lake Superior ore."

There was general depression in the copper-mining business during the year; the increased copper-tariff not answering the expectations of those who favored it. The *Portage Lake Gazette* gives the following statistics:

Copper mined in the three Districts for 1868 *and* 1869.

	1868.		1869.
Portage Lake............	8,288¼	tons	11,730¼
Keweenaw...............	3,503	"	2,656¼
Ontonagon..............	1,257¼	"	901¼
Total..................	13,049		15,288¼

Increase for 1869, 2,230¼ tons.

From 1845 to the present time there have been 128,275 tons of copper mined, yielding 99,440 tons of ingot copper, worth $56,661,000.

There were made assessments to the amount of $176,000 during 1869, while only three mines made dividends, viz.: the Quincy, of $6 per share, $120,000; the Hecla, of $5 per share, $100,000; and the Central, of $4 per share, $80,000. The Quincy also transferred $10,000 to the reserve fund, which is now said to amount to $200,000. The total assessments levied since 1845 aggregate $16,646,500, and the total dividends $6,370,000. These figures will then sum up, as the result of the copper business of Lake Superior since 1845, as follows:

Proceeds of sales of copper.............	$56,661,000
Proceeds from assessments.............	16,646,500
Total proceeds......................	$73,307,500
Returned by dividends.............	6,370,000
Balance...........................	$66,937,500
Percentage of dividends to total proceeds......................	8 07
Percentage of dividends to copper sales......	11 24
Percentage of dividends to assessments......	38 26

Immediately back of the lake ridge, along the eastern border of Michigan, the country is considerably undulating, and in some portions the little lakes of pure, cool, and wholesome water, and fed by constant springs, are almost innumerable. This is particularly true of some portions of Oakland, Shiawassee, and Genesee Counties, and Mr. C. N. Clark, of Clarkson, a little village in the county first named, situated in the midst of a fertile country, and surrounded by beautiful and picturesque landscape views, has commenced an enterprise which contemplates making these delightful waters profitable. They are already, as a general thing, well stored with the more common varieties of fresh-water fish—sunfish, perch, bass, pickerel, pike, etc., and legislation has been adopted to prevent their wholesale depopulation by seine-fishing; but Mr. Clark, who is a man of wealth, enterprise, and energy, believes they may be readily stored with the more prolific and profitable varieties of market fish. He has accordingly constructed a hatching-house near Clarkston Station on the Detroit and Milwaukee Railroad, at the head of a beautiful and shaded glen, where several large springs flow from the base of the hills which environ it. These springs are all combined a few rods below their source, and furnish a constant and never-varying supply of about 200 gallons per minute of the purest cool water. On November 15, 1869, Mr. Clark went to Detroit, and, in company with Seth Green, the noted ichthyologist of Caledonia, N. Y., succeeded in expressing a large quantity of the spawn from the Detroit River white fish, and impregnating them with the milt from the male. These were then transported to and placed in the hatching-boxes already prepared at Clarkston. After they had been about fifty days in water at 47° Fahrenheit, Mr. Clark succeeded in hatching large numbers of these spawn, which he believes are the first white fish ever hatched artificially west of Caledonia. Unfortunately, screens sufficiently fine had not been provided to prevent their escaping as fast as hatched into the little lake a quarter of a mile below, but a sufficient number were afterward captured to enable Mr. Clark to learn their nature and wants when young, and better prepare him to propagate them successfully in

the future. About the same time he procured from the establishment of Mr. Green, at Mumford, N. Y., about 18,000 trout-spawn, which had been some twenty days in his hatching-troughs; these Mr. Clark, after transporting them some four hundred miles, placed in a separate trough, where a constant stream of water was flowing over them, and in about fifty days over ninety per cent. of them were hatched, and at the date of this writing (February 15, 1870), are doing finely; their yolk sacks being nearly consumed by their growth, so that they will soon require food. The experiment thus far strengthens the hopes and predictions of those who believe that within a few years pisciculture will be an important branch of industry in this beautiful and healthy region.

The following are the primary school statistics for the year: number of counties reporting, 63; of towns, 828; of districts, 3,891 whole, and 1,161 fractional. Number of children between the ages of 5 and 20, 374,774; increase over preceding year, 20,021; number attending school, 269,587; number of these over 20 or under 5, 5,869; average time school was taught by qualified teacher, $6\frac{2}{16}$th months; volumes in district libraries, 96,580; added during the year, 7,635; cost of same, $10,727.61; number of stone school-houses, 74; brick do., 459; frame do., 3,767; log do., 621; value of school-houses and lots, $5,331,774; number of graded schools, 236; number of visits by county superintendent, 5,744; number of visits by directors, 10,670; qualified male teachers employed, 2,354; do. female, 7,898; aggregate months taught by male teachers, 9,021; do. by female, 30,443; wages of male teachers, $430,389.36; do. of female, $747,458.50; volumes in town libraries, 40,254; added within the year, 2,370; paid therefor, $3,567.42; voted at spring elections for libraries, $2,056.50; fine-moneys received for libraries, $27,413.38; number of new districts organized, 141; number of private schools in State, 173; pupils attending same, 8,807; paid school inspectors for services, $4,235.55. The resources of the districts for the year were as follows.

On hand at beginning of the year	$264,446 22
Received from two-mill tax	293,946 12
" " primary-school fund	165,960 51
" " rate bills	94,752 25
" " non-resident scholars	24,659 00
District taxes to pay teachers' wages	571,554 11
Other district taxes	737,054 67
Tax on dogs	25,327 63
Raised from all other sources	490,076 12
Total resources for the year	$2,771,853 92
Paid teachers	$1,159,490 86
" for building and repairs	776,074 00
" " all other purposes	465,963 60
On hand at end of the year	368,543 97

Total indebtedness of districts at end of the year, $917,027.87.

The gift made by the State to the university in 1867, on condition that there should always be one homœopathic professor in the medical department, was so far modified this year as to dispense with the condition, and make the donation $15,000 annually. The Legislature also passed a joint resolution, in favor of the admission of females to the university on the same terms as males. The institution was prosperous during the year. The following degrees were conferred: pharmaceutical chemist, 23; mining engineer, 7; civil engineer, 9; bachelor of science, 9; bachelor of arts, 23; master of arts, 20; master of science, 1; doctor of medicine, 97; bachelor of laws, 129. The Normal School was also well attended and prosperous, and for the Agricultural College the Legislature made provision for the erection of a new and spacious building, largely increasing its accommodations.

The following table shows the number of convicts in the State Prison at the commencement of each year, the average number for the year, the number received, and the average amount to each convict disbursed during the year, omitting the amount expended for buildings and repairs:

Year.	No. at beginning.	Average No.	No. received.	Average Expense
1846	119	120.0	40	$80.00
1847	122	120.0	40	120.73
1848	119	124.5	33	90.45
1849	128	117.0	31	104.57
1850	110	119.5	50	122.65
1851	131	141.0	84	122.65
1852	176	186.5	87	98.77
1853	209	210.0	71	97.25
1854	205	219.1	103	115.15
1855	246	278.8	141	134.57
1856	304	316.5	186	117.14
1857	349	375.8	170	122.62
1858	411	443.6	195	111.96
1859	473	464.8	212	87.29
1860	585	597.5	272	79.81
1861	621	578.6	140	63.44
1862	581	559.6	110	100.21
1863	410	358.2	104	177.36
1864	333	319.15	105	143.63
1865	339	280.2	161	202.30
1866	315	412.2	305	221.73
1867	502	531.1	254	143.69
1868	562	609.7	256	143.68
1869	622	625.3	250	137.70
1870	644			

The receipts and expenditures of the prison for the year were as follows:

Balance on hand at beginning of year	$11,125 57
Received from convict labor	78,192 73
" from United States for keeping convicts	6,851 68
Received from visitors	2,945 49
" " miscellaneous sources	1,747 21
Total	$95,282 44
Expenses for the year	94,219 79
Balance on hand	4,062 65
Add to this expended for building and repairs	8,114 78
	$12,177 43

And it will be seen that the receipts for the year exceed the current expenses for other than building purposes $1,032.12; a result which has appeared this year for the first time in the history of the institution.

The number of prisoners discharged, etc., during the year was as follows: by expiration of sentence, 195; by reversal of sentence, 3; by pardon by the Governor, 7; by pardon by

the President, 2; by death, 10; by escape, 11; total, 228; increase of convicts during the year, 22. The following will show the crimes for which the new convicts were sentenced: adultery, 2; administering poison, 1; aiding escapes, 1; assault with intent to murder, 7; assault with intent to rape, 4; other felonious assaults, 4; attempt at larceny, 5; bigamy, 7; burglary, 25; burglary and larceny, 7; breaking jail, 1; buggery, 1; embezzlement, 2; false pretences, 12; forgery, 3; fornication, 1; horse-stealing, 1; larceny, 123; larceny and jail-breaking, 2; making counterfeit coin, 1; mingling poison with drink, 1; manslaughter, 4; murder in first degree, 4; murder in second degree, 4; passing counterfeit money, 9; perjury, 1; poisoning animals, 1; polygamy, 1; presenting forged vouchers, 1; rape, 3; receiving stolen property, 2; resisting officer, 1; robbery, 4; setting fire to jail, 1; uttering forged instrument, 3: total, 250.

The following will show the terms of sentence of prisoners received: Under one year, 1; one year, 49; over one and not exceeding two years, 71; over two and not exceeding three years, 53; over three and not exceeding four years, 17; over four and not exceeding five years, 21; six years, 1; seven years, 5; ten years, 10; twelve years, 2; fourteen years, 1; fifteen years, 3; twenty-five years, 1; for life with hard labor, 3; for life, with solitary confinement, 2; average term of sentence, excluding life sentences, $3\frac{1}{10}$ years; average age of convicts, $26\frac{8}{10}$ years.

The following shows the nativity of convicts received: born in Africa, 1; Germany, 8; Canada, 31; England 7; France, 1; Isle of Man, 1; Ireland, 22; Malta, 1; Poland, 1; Scotland, 3; Spain, 1; Sweden, 1; West Indies, 1; Michigan, 36; other States of American Union, 135.

The number of persons who have hitherto been sentenced to solitary confinement in State prison for life, beginning with the year 1848, is 58. Of these two died in one year, one in two years, one in three years, one in four years, one in five years, one in seven years, three in ten years, one in thirteen years, and one in fifteen years, two escaped, six had new trials granted them, four were pardoned, and the sentence of one was commuted. Two are now reported insane. The number remaining in solitary confinement at the end of the year is thirty-two.

The number of female prisoners is nine, of whom five are imprisoned for life. Females sentenced for a term of years are now sent to the Detroit House of Correction.

The inspectors of the State Prison report that during the year they have made a careful examination of such prisons in Massachusetts, Connecticut, New York, Illinois, and Canada, and they add: "In the discipline of the prison, we have aimed at the improvement and reform of the prisoners. We have not forgotten that they were human beings, and have endeavored in every way to have them treated as such. While firmly insisting upon strict subordination to the rules and regulations prescribed for their conduct, we have insisted that punishment shall not be inflicted while it is apparent that the offender can be influenced by other means. Observation leads us to believe that kindness and love, with appeals to reason and manhood, are far more potent to secure obedience than harshness and severity; and with this view we have been careful to see that the convicts are properly clothed and supplied with a sufficient quantity of food; by religious teaching and interesting books; by manifesting an interest in them, and assuring them that it is still within their power to reform and become useful citizens, and that in such efforts they have had the hearty coöperation of the agent and his subordinates. We have tried to inspire them with new determination to become better men. The good effect, we believe, is already perceptible in the diminished number of infractions of rules and punishments; in the good feeling toward the officers, and in the general order and harmony which prevail in the prison. We think we can say, within the limits of strict truth, that we have found no body of convicts, in any prison which we have visited, better fed, better clothed, under better discipline, or, all things considered, looking so hearty and vigorous as those in the Michigan State Prison."

The expense of supporting the State Reform School for the year was $41,000. Received during the year, 121; discharged, 83; increase for the year, 38; present number of inmates, whites, 262; colored, 23: total, 285. Offences of those received during the year, larceny, 95; burglary, 8; assault, 8; malicious trespass, 3; vagrancy, 3; rape, 1; arson, 1; returned, 2; number born of American parents, 60; English, 5; Irish, 28; German, 4; colored, 6; Canadian, 6; Scotch, 1; unknown, 11. Number ten years old, 12; eleven, 10; twelve, 15; thirteen, 21; fourteen, 28; fifteen, 13; sixteen, 22. Of those discharged, 44 were permitted to go as reformed, and 29 on trial. The inmates, when at work, are mostly employed in making chairs. Sales of products for the year, $11,544.82, diminishing by that amount the net cost of support. The superintendent in his report says that many hardened criminals find their way to this institution, and adds: "The deception used by friends to secure commitment to avoid confinement to a more penal institution, is proof of the duplicity and want of thoughtfulness and integrity in which they have been reared. As proof of this last statement, quite a large percentage of the commitments of the past year as of fifteen and sixteen years of age, obtained from the courts through the perjury of themselves and friends, range from the ages of seventeen to twenty-four, and have had experience of the most baneful nature."

MINNESOTA. The Legislature met at St. Paul, as usual, on the beginning of January,

1869, and held their eleventh annual session, which continued for about two months, both Houses having adjourned on the 5th of March. During this period a great multitude of acts were passed and resolutions concurred in, affecting directly the common interests of the State, or the local ones of the counties, cities, and towns. The general enactments refer to important matters of various kinds; but, for the most part, they have in view to provide for internal improvements, or what seems calculated to promote them, as well as for the maintenance and beneficial management of public institutions—penitentiary, charitable, and educational, especially the last named.

A new law, which is likely to prove of great service to the State, was enacted, providing for the compilation of annual statistics pertaining to its agriculture, manufactures, and population, including all useful facts bearing upon the material and social interests of the State, and tending to afford at home and abroad a correct knowledge of its resources and progress.

One of the most important acts passed, though not signed by the Governor, was that ordaining the liquidation and payment of the public debt known as the "Minnesota State Railroad bonds." These were issued in 1858 to parties who undertook the construction of certain railways within the State, but have, till now, been left unpaid, as it were ignored. Bankers and private persons who hold them in amounts more or less great, and chiefly those who actually expended their means in the works of the roads before the late war, repeatedly urged upon the Governor the final settlement of their claims. He transmitted these documents to the Legislature, with a special message requesting them, for the good name of the State, as well as for justice' sake, to defer no longer the adjustment of those claims, and he strongly recommended to set apart and assign for this transaction the 500,000 acres of land formerly granted by the Federal Government to the State for internal improvements, as the use of this means would obviate the otherwise indispensable necessity of levying a special tax for the same end. An appropriate bill was hereupon introduced, ordaining that three special commissioners, to be appointed by the Governor, should divide the said lands into parcels of forty acres, and appraise each parcel separately according to its quality, but so that the aggregate value of the 500,000 acres thus appraised should be exactly equal to the whole amount of the State indebtedness on account of the bonds for principal and interest, computed up to the 1st of January, 1870. It prescribed also the manner as well as the times and amounts in which the said lands, with all the rights of the State upon them, should be ceded to the creditor, namely, on his surrendering at fixed periods a corresponding amount of bonds to the State for cancellation, so that the whole of them should be cancelled within the course of thirteen years. This bill passed both Houses, but failed to become a law, because the Governor did not sign it.

A similar fate was experienced by another act considered to be scarcely less important than the one just referred to, as it intended to revive and amend a previously approved act purporting to "incorporate the St. Paul and St. Anthony Railroad Company." The bill was favorably voted for in each House of the Legislature, but not sanctioned by the Governor.

Considerable excitement was created in the community by the introduction and subsequent passage of a bill designed for the removal of the seat of government from St. Paul, in Ramsey County, to a place in the county of Kandiyohi. But, though this bill passed both Houses, by large majorities, the Governor vetoed it as premature, inexpedient, and, in the present condition of the State, undesirable, on account of the great outlay to be necessarily incurred for the erection of suitable buildings, and other heavy expenses, indispensable to carry such a removal into execution. As soon as the Governor's message had been read in the lower House, where the measure had originated, a motion was made and carried to pass the bill over the veto. On its being put to the vote, however, the veto was sustained by a comparatively large majority, as appears from the fact that, while in its first passage the bill had been voted against by only seven members of the House, now the votes against it were twenty-one.

The city of St. Paul, however, on account of her position, which affords uncommon facilities of intercourse with other portions of the State, and with the neighboring States, by land and water, is likely to continue to attract people and become greater every day, even though the seat of State government were moved away. The city limits embrace a surface of 2,700 acres, well dotted with fair and commodious residences, she having been steadily increasing in wealth and population (which is reckoned as high as 25,000 already); and this growth seems progressing at the present time in a greater ratio than before. A large proportion of the State imports and exports takes place in her port. During the past season of navigation, 216 days (the Mississippi having been closed with ice on the 4th of December last, some days earlier than usual), "the number of different steamers reaching St. Paul was 45, with a tonnage of 13,484 tons. The whole number of steamboat arrivals was 792, with a tonnage of 188,253 tons. The custom-house enrolment of steamers registered at her port is 11,247, and of barges 8,956." The aggregate amount expended for the erection of new buildings, in the city, during the year 1868, was $1,005,050; in 1869 it was $1,395,727.

The population of the State at the close of

1869 was composed of about 470,000 persons; out of which number some 100,000 reside within the limits of incorporate cities and towns, attending to commerce in its various branches, and other avocations of city life; while the remaining 370,000 dwell in the country, and are connected more or less with the pursuits of agriculture. The extent of land put under cultivation in Minnesota, mostly for the raising of grain, is very remarkable, especially considering the paucity of its inhabitants. The acres tilled in 1868 were not less than 1,397,470, and the acres tilled in 1869 were 252,000 over and above that number. But the extent of their agricultural operations may be inferred from the amount and variety of the products gathered last year, as is shown by the following table, which presents some general results of the details contained in the official reports, namely:

Total tilled area	1,690,000
Area in wheat	1,000,000
Bushels of wheat	18,500,000
Area in oats	274,800
Bushels of oats	11,816,400
Area in corn	175,000
Bushels of corn	6,125,000
Area in barley	20,400
Bushels of barley	625,006
Area in rye	3,250
Bushels of rye	58,600
Area in potatoes	27,500
Bushels of potatoes	2,475,000
Area in buckwheat	1,700
Bushels of buckwheat	27,500
Area in hay	208,000
Tons of hay	410,000
Pounds of wool	425,000
Pounds of butter	5,750,000
Pounds of cheese	158,600

The estimated total value of the agricultural product of 1869 is $25,000,000.

The average yield of almost every species of product named in the foregoing table was in excess of that respectively obtained in 1868, although this abundance has probably proved of little or no benefit—in some cases of actual loss to the farmer—on account of the exceedingly low price of his crops, especially wheat. The amount expended for raising and gathering this grain was ascertained by actual reckoning, in several instances, to have been considerably greater than what could be realized by selling it. In consequence of so depressed a market, not a few farmers were represented to be largely in debt for supplies of provisions and implements used, as well as for money borrowed at high rates of interest for the regular carrying out of their agricultural operations, and likely to continue in that condition, if they did not get into a worse one. This state of things was generally considered to be the result of the high protective tariff in force for several years, and the rate of transportation. It is stated that the market-price of wheat at Milwaukee, in the neighboring State of Wisconsin, being only one dollar per bushel, the Minnesota farmer, who wanted to send his wheat thither for the purpose of selling it, was charged for its transportation alone at the rate of twenty-five cents per bushel.

The live-stock existing in the State at the end of 1869 was as follows: Horses, 98,980; cattle, 275,977; mules and asses, 2,450; sheep, 135,450; hogs, 109,000. This stock was estimated to be worth $15,561,887 in actual cash value.

In order to promote the interests of agriculture in all its branches, and reap the greatest benefits that may be realized from it, agricultural societies have been organized in various counties.

To the above-mentioned products of the soil, by tillage and pasture, there must be added those which are obtained from the extensive pineries and other heavily-timbered land—a vast amount of business being carried on in Minnesota in felling trees and preparing wood for logs and lumber of every description. The logs scaled last year in the two districts of St. Anthony and Stillwater, official reports aver to have exceeded three hundred and six millions of feet, which is above fifty millions of feet more than the logs scaled there in 1868. The gross amount of the log and lumber business in the State for 1869 is set down at four hundred millions of feet.

The State possesses also mineral wealth, which promises largely to employ the industry of her inhabitants, and by its results contribute in no small degree to her forward progress and general prosperity. Concerning the Vermillion mine, referred to in the CYCLOPÆDIA for 1868, quartz-mills and other machinery have been established there for the purpose of working its ores.

Still greater advantages than may be expected from other minerals, however, will accrue to the State from the working of coal, which is now ascertained to exist within her limits, it having recently been discovered near Red-wood Falls, in Renville County; and the same is probably the case with other localities. The mining operations which have been prosecuted there to a considerable extent, and with steadily-increasing prospect of final success, seem to have placed beyond the reach of doubt the fact that the coal existing near Red-wood Falls is both of good quality and in quantity large enough to become of general use.

What Minnesota needs most for her growth and speedy development is an adequate number of people apt and willing to work out her abundant resources. Were she to depend only on the natural increase of her present population, a long time would elapse in waiting, as such progress is exceedingly slow, and sometimes none. The marriages in the State last year were 3,569, which is twenty-six more than in 1868—about three-fourths of one per cent. of the entire population. With a view to a future rapid growth, she has recourse to the extraordinary means of inviting immigration.

Besides employing agencies, she causes pamphlets to be published and distributed among persons of different nationalities abroad, set-

ting forth the advantages accruing to the settlers upon her soil, the manifold resources of the country, the salubrity of its climate, and the readiness wherewith they may, on arrival, occupy themselves in their several callings. German and other immigration societies have also been established there for the purpose of forwarding and spreading such information among their respective countrymen. In the session of 1868, the Legislature appropriated ten thousand dollars for promoting immigration, and a Board was instituted to see that the money should be properly expended for the purpose intended, the Board consisting of the Governor, the Secretary of State, and the Treasurer, together with the presidents of the several immigration societies referred to above. The money expended for this end in 1869 appears in the report presented by the said Board, as follows:

For Hewitt's English pamphlets, 50,900 copies, printed and distributed	$3,565 00
For German immigration—an agent kept in Germany one year and 500 pamphlets in German, printed and distributed	2,035 00
For Scandinavian immigration—5,000 Swedish and Norwegian pamphlets printed and distributed—two agents kept for three months in Milwaukee and Chicago	1,802 93
For Irish immigration—condensed pamphlets and publications about Minnesota, circulated and sent to Ireland, and published in Irish papers	955 00
For Welsh immigration—pamphlets printed and distributed	369 25
To agent in New York	500 00
For general expenses	200 00
Total	$9,427 18

This report recommended a liberal appropriation for the present year also, and "that a State pamphlet be prepared by the Commissioner of Statistics, to be distributed by that officer, under the direction of the Board."

The most powerful inducement offered the immigrant for settling in Minnesota, seems to be found in the provision of her law which not only forbids any citizen to be imprisoned for debt, or deprived of every thing in his possession, but secures his property to him to a rather comfortable amount, by exempting it from attachment or execution for any debt, except for taxes; so that, in case of failure in business, or other contingencies, he and his family are sure not to be left destitute, but allowed still to live a comparatively easy life. The following extract from the *Minnesota Monthly* enumerates both the kind and the amount of property exempted by law from execution for debt, as follows:

The laws of the State of Minnesota allow to every resident thereof, free from attachment, levy or sale upon execution or any other process, except sale for taxes, the following:

A homestead, consisting of any quantity of land not exceeding eighty acres and the dwelling-house thereon; or instead thereof, at the option of the owner, one lot within an incorporated town, city, or village, and the dwelling-house thereon, with its appurtenances.

A homestead, like other property, may be mortgaged, but the mortgager being a married man his wife must join therein, unless such mortgage shall be given to secure the payment of the purchase-money or some portion thereof, in which case the wife is unnecessary.

Any person owning or occupying any house on land not his own, and claiming said house as a homestead, shall be entitled to its exception.

By recent decision of the Supreme Court, a homestead is declared exempt from operation of a mechanic's lien, and the filing of a lien becomes of no avail as against such homestead.

Also the following property is exempt, and none of the same is liable to attachment or sale on any final process issued from any court in this State, except an attachment issued in action for the purchase-money of the same, or for an execution issued upon judgment rendered for such purchase-money, viz.: One family Bible, family pictures, school-books, or library, musical instruments for use of family, and one sewing-machine, a seat or pew in any house or place of public worship, a lot in any burial-ground, all wearing-apparel of the debtor and his family, all beds, bedsteads, and bedding kept and used by the debtor and his family, all stoves and appendages put up or kept for the use of the debtor and his family, all cooking-utensils, and all other furniture not herein enumerated, to the amount of three hundred dollars in value. There are also exempt three cows, ten swine, one yoke of oxen, and a horse, or in lieu of one yoke of oxen and a horse, a span of horses or mules, twenty sheep and the wool from the same, either in the raw material or manufactured into yarn or cloth; the necessary food for the stock mentioned for one year's support, either provided or growing, or both, as the debtor may choose; also one wagon, cart, or dray, one sleigh, two ploughs, one drag, and other farming-utensils, including tackle for teams, not exceeding three hundred dollars in value. Also provisions for the debtor and his family necessary for one year's support, either provided or growing, or both, and fuel necessary for one year.

Also tools and implements of any mechanic, miner, or other person, used and kept for the purpose of carrying on his trade, and, in addition thereto, stock in trade not exceeding four hundred dollars in value, and the library and implements of any professional man.

During the last session of the Legislature five distinct memorials were resolved upon, requesting the Postmaster-General at Washington to establish, or increase, mail service on specified routes from place to place in different counties; and three more, petitioning Congress "for an appropriation of $100,000 to preserve the Falls of St. Anthony and to protect the navigation of the Mississippi above the falls;" "for the improvement of the St. Croix River;" and "to aid in the construction of the Northern Pacific Railway." The lands already donated by the Federal Government to Minnesota for the construction of her railroads are the following:

Roads.	Acres.
St. Paul and Pacific	66[illegible],000
St. Paul and Pacific	600,000
Branch of the St. Paul and Pacific	750,000
Branch of the St. Paul and Pacific	725,000
Authorized change of route	354,[illegible]
Minnesota Central	290,000
Minnesota Central	720,000
Winona and St. Peter	690,000
Winona and St. Peter	
Minnesota Valley	860,000
Minnesota Valley	150,000
Extends the time for completing said road seven years	

Roads.	Acres.
Lake Superior and Mississippi..... Authorized to make up deficiency within thirty miles of the west line of said road.....	800,000
From Houston, through the counties of Fillmore, Mower, Freeborn, and Faribault, to the western boundary of the State.....	735,000
From Hastings, through the counties of Dakota, Scott, Meeker, and McLeod, to the western boundary of the State.	550,000
Provides for two roads and two branches. (No map filed.).....	2,500,000

Over and above the land-grants exhibited in this list, exceeding 11,000,000 acres, Minnesota has her share in the 47,000,000 acres granted to the Northern Pacific Railroad; besides that, numerous bills have recently been introduced in the Federal Congress by her representatives, proposing to build new roads, or branches of old ones, and asking other land-grants for their construction respectively.

But the direct action of the State in forwarding the progress of her railroads has been so vigorous and efficient, that, during the four years last past, the extent of railway communication within her limits has quadrupled. The number of miles constructed and opened for traffic in 1869 was 224. These belong respectively to ten different lines, the aggregate length of which now in actual operation amounts to 780 miles. Several hundred miles more are now under construction, and others have been contracted for.

The public finances appear to be in a very satisfactory condition.

The aggregate amount of public revenue for 1870 is estimated at $433,224.04, and that of the current expenses at $395,407.12, leaving a probable balance in the Treasury of $37,816.97. The recognized funded debt of the State is $250,000, bearing interest at the rate of 7 per cent. It consists of the war loan of 1862, due in 1872, $100,000; ten-year loans of 1867, $100,000; 1868, $100,000, and 1869, $50,000 for State Institution Buildings.

Public instruction is remarkably well provided for, as both the State government and individual citizens bestow upon it no small share of their attention. The following summary of statements in regard to the number and cost of the common schools in the State, as well as their attendance and condition in 1869, has been taken from the last official report of the Superintendent of Public Instruction, and will prove not uninteresting to the reader:

The whole number of persons in the State between five and twenty-one years of age, on the 30th of September last, was 144,414, an increase for the year of 15,311. The whole number of persons attending the public schools during the school year was 102,086, an increase of 20,390 over that of 1868. The percentage of non-attendance in 1867 was 44, in 1868 it was 37, and in 1869, it has been but 29.

In the 2,377 school districts in the State, there was a winter school in 1,793 districts, of an average in months of 336. There was a summer school in 1,980 districts, with an average length in months of 321. It will thus be seen that quite four-fifths of all the districts supported each class of schools at an aggregate average length in months of 6.57.

This exhibit of attendance surpasses that made by many of the older States of the Union.

The whole number of teachers in 1869, in the winter and summer schools, was 3,775. The average wages of male teachers for the year have been $34.20, and of female, $21.92.

The whole amount of teachers' wages for the year was $360,697.50; the value of all the school-houses in the State is $1,339,690.88, the increase for the year being $248,141.46. The cost of the school-houses built in 1869 is $242,039.03; the whole amount expended for school purposes has been $823,571.82.

The permanent School Fund received last year an addition of $238,304.45, the proceeds from the sale of nearly 40,000 acres of school-lands. It amounts at present to $2,371,-199.31; and it is anticipated that from the sale of the remaining school-lands well managed it will be not less than $16,000,000. The interest of this fund, which was last year $148,-520.40, is semi-annually distributed among the counties, in proportion to the number of their children attending school, respectively. The rate in 1869 was $1.15 for each scholar.

The "Teachers' Institutes," and the "Normal Schools," which have been established for the purpose of fitly training and qualifying teachers for the peculiar duties of their arduous work, are steadily gaining in the sphere of their usefulness, and also in the people's favor. The Normal Schools are distributed into distinct departments, styled "normal" proper, and one "model." The attendance in the normal departments last year was 373, while in the "model" it was 444, numbering together, 817.

The State University, whose building was first erected at St. Anthony twelve years ago, is now completely organized. The students at present are about 150, some 50 young ladies being among the number. The male students wear a gray uniform called "university gray." "The attendance in the preparatory department for the year was 146; the aggregate attendance during the fall term was 154. It is hoped that, after the present year, the income from the permanent fund will suffice for the current expenses."

The charitable institutions are provided for by the State with highly-commendable interest. In the Hospital for the Insane the number of patients under treatment during the year 1869 was 238. Some of these died in the course of that time, while others were cured and discharged, in all 77, so that those remaining in the hospital on November 3d were 161: men 81, women 80. The current expenses of the institution for the year 1869 amounted to $40,179,80; and for 1870 they are estimated at $52,000.

The combined Institution of the Deaf and Dumb and the Blind, presents for the year 1869 the following relative statistics: "The inmates in the mute department were 55: males 33, females 22;" and the blind 11: males, 6, females 5. The current expenses

amounted for the year to $14,878.64, there remaining on hand a balance of about $4,000 from appropriations of the two previous years.

The Soldiers' Orphans' Home has a large number of children to provide for, although eight among the counties had made no returns and two only partial ones; there were "1,239 soldiers' orphans in the State, of whom 922 are orphans of soldiers who enlisted from Minnesota — 317 from other States." The Legislature appropriated $10,000 for the relief of the soldiers' orphans, which appropriation the Board of Trustees request, and the Governor recommends to be continued.

In connection with the Soldiers' Orphans' Home, it may be proper to mention here that the interests of the surviving soldiers themselves are not forgotten or neglected by the State. From the report of the Adjutant-General it appears that the Bureau of Claims, now forming part of his office, collected last year the sum of nearly $18,000 due them by the Federal Government "for back-pay, bounty, and pensions." The whole amount collected on such soldiers' claims by that Bureau since its establishment is $398,249.79.

The "State Reform School" has 48 inmates. The State Prison seems to be under very good management and conduct. The number of convicts therein confined in 1869 had increased in a comparatively large proportion above that of the previous year, though this does not invalidate the assertion lately made by Governor Marshall, that "Minnesota has, in proportion to population, fewer criminals than any other State in the Union." The dominant political party in Minnesota is the Republican, by great majorities, although the Democratic also possesses no inconsiderable strength with regard to number as well as influence.

The Republicans held their State Convention at St. Paul on September 9th, for the purpose of nominating the State officers to be voted upon at the election of November ensuing, their nominees being—for Governor, Horace Austin; for Lieutenant-Governor, W. H. Yale; for Secretary of State, Hans Mattson; for Attorney-General, F. R. E. Cornell; for State Auditor, Charles McIlrath, the present incumbent; for State Treasurer, Emil Munch; for Chief Justice of the Supreme Court, C. G. Ripley; and for Clerk of the Supreme Court, Sherwood Hough. Previous to adjournment, the resolutions reported by the committee were read, and all adopted without dissent, except the last one, which was tabled, as follows:

1. *Resolved*, That the Republican party of Minnesota, in convention assembled, reaffirm their devotion to the doctrines of liberty, equal and exact justice to all men, and that the complete triumph of these principles can only be attained by the adoption of the fifteenth amendment to the Constitution of the United States.

2. *Resolved*, That the retrenchment and economy, together with the gradual extinction of the public debt, which have so signally characterized the present national Administration in the conduct of public affairs, redeem our pledges to the people, and demand their cordial approbation.

3. *Resolved*, That the management of our State affairs, under Republican policy, have been marked by the fidelity of principle and true economy which have given us prosperity at home and consideration abroad, and that the true interests of the State are to be found in maintaining the Republican party in power.

4. *Resolved*, That we denounce all forms of repudiation of the national debt as a national crime, and that the national honor demands the payment of that indebtedness in accordance with the letter and spirit of the laws under which it was contracted.

5. *Resolved*, That the relations of the United States with other nations should be so adjusted in respect to the legal status of our naturalized citizens towards the governments in allegiance to which they were born, that those citizens while abroad shall be considered and protected by the Government of the United States, as fully as if they were native-born citizens of the United States.

6. *Resolved*, That the construction of a Northern Pacific Railway is imperatively demanded by the best interests of the entire country, and that to this end a wise policy dictates that this enterprise should receive liberal aid from the United States.

7. *Resolved*, That the Republican party of the State insist that the five hundred thousand acres of land granted to the State for internal improvements be set apart for the liquidation of the Minnesota State Railroad bonds, and that they be held for that purpose; that, when the holders of said bonds shall agree to take these lands and fully and finally surrender all the bonds to the State, said lands be made over to said holders or their assigns, or trustee, or trustees, as they may elect.

Notwithstanding the unanimity which characterized the proceedings of this convention, a strong conflict of views, and opposition amounting to disruption, seem to prevail in the ranks of the Republican party throughout the State. It occurred in numerous localities that, after the regular county conventions had been held by that party, and county officers nominated, other Republican residents of the same counties met together in separate conventions and nominated other candidates.

The Democratic State Convention met at St. Paul on the 23d of September, when they unanimously adopted the following resolutions:

Resolved, That the Democracy of Minnesota desire to act independently of mere forms and theories which have lost their substance, to consign settled questions to the past, and to appeal to the people of Minnesota upon the living issues of the present and future which concern the material interests of every citizen of the State.

Resolved, That the power to impose duties on imports is a power of taxation, which can only be used for the purpose of obtaining revenues, and that the present oppressive tariff laws should be so amended as to reduce the duties on imports to a strictly revenue standard.

Resolved, That we are in favor of the gradual reduction of the public debt by its payment in the lawful currency of the country wherever authorized by law, as fast as it can be done without disturbing the equilibrium of prices and values by too great an inflation of the currency.

Resolved, That we are in favor of the gradual reductions of all taxes under the internal revenue system, and the repeal of that system at the earliest practicable moment.

Resolved, That we are in favor of equal rights to all men, exclusive privileges to none; the bondholding wealth of the country to be taxed equally with the poor man's property.

Resolved, That, while we entertain a due respect for the opinions of those who differ with us, we are opposed to the enactment of sumptuary laws, as a violation of the personal liberty of the citizen.

Resolved, That the proper accountability of public officers to the people is inconsistent with extremely long terms in office by any individual; that the office of State Auditor should frequently receive a new, faithful, and competent incumbent, as the best protection of the State Treasury from spoliation; that transactions in school and other public lands by the State Auditor, or his agents and partners, are incompatible with the honest discharge of duty.

Resolved, That the long possession of power by any party or faction begets corruption, and is apt to transform a free republic into an oligarchy of office-holders, unless prevented by frequent changes in office; that it is the duty of the people in the towns and country, as well as in the State, to defeat the too frequent reëlection of office-holders, and thereby secure purity in the management of town and county affairs, prevent speculation in public funds, and defeat the formation of corrupt rings and cliques at the county seats and the State capital, to which end the Legislature should reduce the fees of office to the lowest rate that can secure the services of competent officers.

On motion to embody in their platform a resolution expressing the views of the party in regard to the proposed fifteenth amendment to the Constitution of the United States, after some debate, it was resolved to make no mention of the said amendment, but ignore it altogether. As candidates for State officers the Democrats nominated—Hon. George L. Otis, for Governor; J. A. Wiswell, for Lieutenant-Governor; T. G. Fladeland, for Secretary of State; Hon. Seagrave Smith, for Attorney-General; L. A. Evans, for State Auditor; Casper Baberich, for State Treasurer; Hon. Charles E. Flandrean, for Chief Justice of the Supreme Court; and W. T. Bonnivell, for Clerk of the Supreme Court.

A third party sprang up in Minnesota last year, under the title of "State Temperance" party, which, for earnestness and determination of purpose, and the means intended to be used for accomplishing it, would seem to bid fair to become a powerful engine in controlling the government of the State, even in civil matters. In its first organization its members had no intention to engage in the political arena as a separate body. Assuming a strictly neutral attitude, they resolved to stand by that one of the two existing parties which should support the cause of temperance, and to give each of them an official notice of their views.

This appeal was made to both Republicans and Democrats at the time they were assembled in State Convention respectively, but was made in vain. After hearing the proposal and considering the matter, each of these parties adopted an appropriate resolution, expressing its dissent from the views of the Good Templars on principle, and declining to coöperate in carrying them out. Hereupon the temperance men assumed a new position, by erecting their association into a political party, and, as such, held a State Convention at St. Paul on the 6th of October, when they proclaimed their purpose and policy in the following platform:

Whereas, Protection and allegiance are reciprocal duties, and every citizen who yields obedience to the just commands of his government is entitled to the full, complete, and perfect protection of that government in the enjoyment of personal security, personal liberty, and private property; and

Whereas, The traffic in intoxicating drinks greatly impairs the personal security and personal liberty of large masses of citizens, and renders private property insecure; and

Whereas, The existing parties are hopelessly unwilling to adopt an adequate policy on this question: Therefore we, in State Convention assembled, citizens of this free Commonwealth, sharing in the duties and responsibilities of its government, in the discharge of a solemn duty we owe to our country and our race, unite in the following declaration of principles:

Resolved, That we believe fully in the principle of free government, and securing at once the rights of the States severally and their inseparable union, by the Federal Constitution. We would not merely garnish the sepulchres of our republican fathers, but we do renew our solemn pledges of fealty to the imperishable principles of civil and religious liberty embodied in the Declaration of American Independence and our Federal Constitution.

2. That the traffic in intoxicating beverages is a dishonor to Christian civilization, inimical to the best interests of society, a political wrong of unequalled enormity, subversive of the ordinary objects of government, not capable of being regulated or restrained by any system of license whatever, but imperatively demanding for its suppression the passage of a prohibitory law both by State and national Legislature.

3. That in view of this, and inasmuch as the existing political parties either oppose or ignore this great and paramount question, and insolently refuse to do any thing toward the suppression of the rum-traffic, which is robbing the nation of its brightest intellects, and destroying its natural prosperity, and rapidly undermining its very foundations, we are driven by an imperative sense of duty to sever our connection with these political parties, and organize ourselves into a State Temperance party, having for its primary object the entire suppression of the traffic in intoxicating drinks.

Resolved, That we regard the sanctity of the Christian Sabbath as lying at the foundation of civil as well as religious liberty, and any infraction of the Sunday laws we hold to be an injury to the body politic.

Resolved, That we are opposed to any disposition of the 500,000 acres of internal improvement lands for any purpose, except the proposition be first submitted to the people.

Resolved, That the interest of the masses of the people requires a modification of the present exorbitant tariff, and that justice to the agricultural interests of the country demands prompt action, on the part of Congress at the next session, upon the subject.

Before appointing their State Central Committee, and adjourning, they also nominated their candidates for State officers, namely: Rev. Daniel Cobb, for Governor; John A. Stevens, for Lieutenant-Governor; J. H. Thompson, for Secretary of State; J. Ham Davidson, for Attorney-General; J. C. Randolph, for State Auditor; Robert Stewart, for State Treasurer; Hon. Edward O. Hamlin, for Chief Justice of the Supreme Court; and A. P. Connelly, for Clerk of the Supreme Court.

Minnesota seems unusually prolific in politi-

cal parties distinctly organized. Besides the three just mentioned, a fourth, styled "the People's party," had not only come into existence before the close of the year, but acquired sufficient strength of action to endeavor to make its power felt in the community. This may be inferred from the fact that, no sooner had the press made known the candidates named by the Republican State Convention of September 9th, than the People's party, regarding them as not advocates of the people's interests, summoned its members to assemble at St. Paul on the 7th day of October, in order to hold there a State Convention, "for the purpose of placing in nomination a State ticket, by the election of which the people might rebuke the abuses of party mismanagement, and reform the administration of State affairs." A local paper stated that on the previous day "quite a number of delegates from different counties were present in the city, although, upon consulting together at an informal meeting, they decided to hold no convention."

At the polls in November but little notice was taken by the people of the Temperance party candidates, the highest number of votes cast for any of them having been 1,764, given to Daniel Cobb, for Governor; while the votes cast at the same election for each of the Democratic and Republican nominees, through their whole tickets, exceeded 20,000. The Republicans came out of this contest victorious, all of their candidates having been elected by several thousand majorities. The votes, being classed under their respective heads, were as follows:

Chief Justice Supreme Court—C. G. Ripley, 25,899; Charles E. Flandreau, 22,216; Edward O. Hamlin, 1,430. Ripley's majority, 2,253.

Governor—Horace Austin, 27,848; George L. Otis, 25,401; Daniel Cobb, 1,764. Austin's majority, 183.

Lieutenant-Governor—William H. Yale, 29,456; J. A. Wiswell, 21,745; J. H. Stevens, 1,428. Yale's majority, 6,114.

The political complexion of the Legislature for 1870 continues to be Republican. The Senate consists of 14 Republicans and 7 Democrats; while in the Lower House the two parties are almost evenly balanced, it being composed of 26 Republicans and 21 Democrats.

MISSISSIPPI. At the beginning of this year the State of Mississippi was in the hands of the Reconstruction Committee of the national House of Representatives. She had rejected the constitution framed for her under the acts of Congress of March and July, 1867, by a decisive vote, chiefly on account of the harsh and proscriptive provisions which had been embodied in it on the subject of the elective franchise. Although the military commander had made his report on the election, stating this result as the final decision of a majority of the qualified voters, several representatives of the Republican party, including the late candidates for the principal State offices, were at Washington early in the session of 1868–'69, to urge Congress to throw out the vote of several counties and declare the constitution adopted notwithstanding the vote which had been taken. This action was recommended on the ground that the election had not been fairly conducted, and that violence and intimidation had in many parts of the State prevented a full and just vote. A large amount of testimony was taken by the Reconstruction Committee on this subject, and statements were received not only from those who favored the proscriptive policy, but also from the moderate Republicans and the Democrats. An address to the committee was made by several gentlemen who declared themselves to be "the representatives of a very large and most respectable and influential portion of the Republican party of Mississippi," and who entered their "earnest protest against the effort now being made to bring Mississippi back into the Union, under the constitution voted upon in June last, as an act of political suicide." After setting forth their objections to the proposed action at considerable length, they submitted their own plan for completing the reconstruction of the State, which was as follows:

We would therefore respectfully suggest:

1. That Congress shall declare all the offices in the State vacant.

2. Provide for the appointment of a provisional Governor, with power to fill all the offices thus declared vacant—with power also to remove from office his own appointees.

3. Provide that the proposed constitution shall be so modified or amended as to remove from it those features that are more proscriptive than is required by the reconstruction laws of Congress.

4. Provide for an election at the time designated by the proposed constitution for holding the annual election for the ratification of the constitution as amended, and for the election of all State, county, and municipal officers.

The Democrats were represented before the committee by ex-Governor Albert G. Brown. He declared that there was "profound quiet in all parts of the State," and that there was "not a State in the Union where the law is administered more impartially, or where the civil courts have a higher regard for the rights of all men of all parties and of all colors." The people, he said, not only submitted cheerfully to all the legitimate results of the late war, but were ready to acquiesce in the reconstruction policy of Congress, if it were fairly carried out. The constitution was defeated, "not, as these men allege, by fraud and intimidation, but distinctly for the reason that it was more vindictive in its spirit than the people, white or black, would tolerate, and more proscriptive in its provisions than the acts of Congress required; and the candidates were defeated, because they stood as the representatives of the tone and spirit of the constitution, and not because they were trying to reflect the will of Congress." The wishes of those whom he represented were expressed in the following words:

We desire to have Congress take up the rejected constitution of 1868, and so amend it as to make it conform in all its parts to the requirements of the "14th article" and the reconstruction acts, and in that form submit it to the people for ratification, and, my life upon it, the people will accept it with unparalleled unanimity.

Again, I am asked, if this is done, will we accept willingly the officers rejected with the constitution, but who still are claiming to have been elected under it. I answer, no; distinctly no. These men stood as the exponents and representatives of that constitution. They stood pledged to carry out all its vindictive, odious, and proscriptive features; and when the people rejected the one they rejected the other. If they were the choice of the people once, they will be so again. All we ask of them is, to try it.

Several bills were introduced into the House, for the completion of reconstruction in the State, before the accession of General Grant to the presidential chair, but none of them proved satisfactory to a majority of the members. That which occupied the largest share of attention was agreed upon and reported by the Reconstruction Committee, and provided for the reassembling of the Constitutional Convention, to which it delegated the power to appoint a provisional Governor. The Governor thus appointed was vested with authority to appoint and remove all the other State officials, and the convention was to provide for a new election, at which the body of the constitution and the passages to which greatest objection had been made were to be voted upon separately. After considerable debate, this measure was postponed until the next session of Congress.

Soon after the inauguration of General Grant, General Gillem was removed from the command of the Fourth Military District, and General Adelbert Ames, the Provisional Governor of the State, was assigned to that position. Some weeks before this time the following joint resolution had passed both Houses of Congress:

Resolved by the Senate and House of Representatives of the United States of America, in Congress assembled, That the persons now holding civil offices in the provisional governments of Virginia and Texas, who cannot take and subscribe the oath prescribed by the act entitled "An act to prescribe an oath of office, and for other purposes," approved July 2, 1862, shall, on the passage of this resolution, be removed therefrom; and it shall be the duty of the district commanders to fill the vacancies so created, by the appointment of persons who can take said oath: *Provided*, That the provisions of this resolution shall not apply to persons who, by reason of the removal of their disabilities, as provided in the 14th amendment to the Constitution, shall have qualified for any office in pursuance of an act entitled "An act prescribing an oath of office by persons from whom legal disabilities have been removed," approved July 11, 1868, and, *Provided further*, That this resolution shall not take effect until thirty (30) days from and after its passage: *and it is further provided*, That this resolution shall be and is hereby extended to and made applicable to the State of Mississippi.

On the 23d of March a military order issued from the headquarters at Vicksburg, to carry into effect the provisions of this resolution. After reciting the resolution itself, and the two oaths alluded to, the order proceeds:

IV. All civil offices in this district which have been held by persons whose legal disabilities have not been removed, and who cannot take the oath prescribed by act of Congress of July 2, 1862, are vacant.

V. Present incumbents of civil offices who can take the oath prescribed by the act of Congress of July 2, 1862, or whose disabilities have been removed, and who have not qualified under appointment from these headquarters, will at once take and subscribe the oath prescribed, forward the same to these headquarters, and continue in the performance of the duties of their offices.

VI. Late incumbents of offices rendered vacant by this resolution of Congress will retain custody of the books, papers, and property of their offices, and transfer them to their successors when they shall have qualified.

By command of Brevet Major-General AMES.
JOHN TYLER, 1st Lieut. 43d Inf.,
Brevet-Major U. S. A., A. A. A. G.

On the 7th of April, President Grant submitted a special message to Congress, in which he recommended that provision be made for holding elections in Virginia, Texas, and Mississippi, at which the adoption of their respective constitutions should be submitted to a vote of the citizens, a separate vote being taken "upon such parts as may be thought expedient."

A bill was immediately introduced with this object in view, and on the 10th of April received the approval of the President. It provides that the President may, "at such time as he may deem best for the public interests," submit the constitutions of these three States for ratification by the people, "and may also submit to a separate vote such provisions of said constitution as he may deem best." It provides, furthermore, for choosing members of the Legislature, State officers, and members of Congress, at the same election. The last three sections of the act are as follows:

SECTION 5. That if either of the said constitutions shall be ratified at such election, the Legislature of the State so ratifying, elected as provided for in this act, shall assemble at the capitol of said State, on the fourth Tuesday after the official promulgation of such ratification of the military commander in said State.

SEC. 6. That before the States of Virginia, Mississippi, and Texas, shall be admitted to representation in Congress, their several Legislatures, which may be hereafter lawfully organized, shall ratify the 15th article, which has been proposed by Congress to the several States, as an amendment to the Constitution of the United States.

SEC. 7. That the proceedings in any of said States shall not be deemed final, or operate as a complete restoration thereof, until their action respectively shall be approved by Congress.

After the passage of this act the State remained under military rule, though few cases occurred in which it was found necessary to exercise the authority of the commander in the administration of civil affairs. On the 27th of April, the following order was issued, making colored persons competent to serve on juries:

General Orders, No. 32.

HEADQUARTERS FOURTH MILITARY DISTRICT
(DEPARTMENT OF MISSISSIPPI),
JACKSON, MISS., *April* 27, 1869.

It is hereby ordered that all persons, without respect to race, color, or previous condition of servitude, who

possess the qualifications prescribed by article 135, page 499, of the Revised Code of 1857, shall be competent jurors.

For the purpose of giving this order immediate effect, the tax-assessors of the several counties in this State are hereby directed to proceed immediately, in the manner prescribed in article 135, page 499, of the Revised Code of 1857, to make out supplementary lists of the names of all persons found in their respective counties, qualified to serve as jurors, whose names are not now on the jury-lists, and deliver the same to the clerks of the Circuit Courts of their respective counties, on or before the time prescribed by law for the meeting of the next Circuit Court of the county.

The clerks of the Circuit Courts in the several judicial districts of the State are directed, immediately upon the receipt of such supplementary lists, to record and give effect to the same in the manner prescribed by article 136, page 499, of the Revised Code of 1857.

The provisions of this order are not intended to relieve the tax-assessors of the several counties from the performance of the duties imposed on them to make out, annually, the lists of persons qualified to serve as jurors in accordance with the requirements of article 135, page 499, of the Revised Code of 1857. Provided, however, that, in the preparation of such lists, no distinction shall be made on account of race, color, or previous condition of servitude.

By command of Brevet Major-General AMES.

WILLIAM ATWOOD, Aide-de-Camp, Acting Assistant Adjutant-General.

Official: JOHN EGAN, Aide-de-Camp.

A vigorous political canvass of the State was kept up throughout the summer and fall, commencing soon after the act of Congress providing for the new election, and several weeks before the time for that election had been proclaimed by the President. There were, virtually, but two parties, both Republican, the small minority opposed to these organizations, and clinging to the name and traditions of the Democracy, taking no active part in the struggle. The formation of a Conservative Republican party was the result of the opposition of a large portion of the people of the State to the course taken by Mr. B. B. Eggleston, the radical candidate for Governor in 1868, and his associates, who had attempted to have the constitution declared adopted in the face of the official report of the election. The action of these men, forming the "Committee of Sixteen," was, as we have already seen, vigorously opposed at Washington by ex-Governor Brown, and other prominent representatives of the conservative citizens of the State, and with perfect success. On his return to Mississippi, ex-Governor Brown was addressed by several leading citizens, and urged to give his views on the subject of the late act of Congress, and the proper course of the people under existing circumstances. He immediately complied with the request in a letter addressed to the gentlemen making it, dated April 22d, and published in the *Weekly Clarion* at Jackson. After discussing the state of affairs at some length, he sums up his conclusions in the following paragraphs:

First, then, let us have order and a rigid enforcement of the laws to the full extent of meting out equal and exact justice without stint to all men of all opinions, races, and colors; and to this end let every good man resolve to aid the civil and military authorities by every fair means in his power.

Second, let there be no factious or mere partisan opposition to the Administration of President Grant. But, as the President has shown himself kind to us, let us be generous to him. We cannot afford to be illiberal.

Third, we must stand by the issue as our opponents presented it at Washington. The convention, the constitution, and Eggleston and Co., on the one side, the people of Mississippi on the other. The President and Congress sat in judgment, and decided in our favor. We will not allow the issue to be changed.

Fourth, we accept the fifteenth amendment.

Fifth, we pledge ourselves one to another, disregarding color and former political opinions, to deal justly by all men, and to secure perfect equality of civil and political rights to every one before the law.

Sixth, that we set ourselves sternly against all men, of all races, and of every creed and color, who come among us to make mischief, and that we extend a cordial greeting and hearty good-will to all men, of all parties, opinions, races, or color, who come with the genuine purpose of living with us, and sharing in good faith our fortunes, whether they be good or evil.

This may be regarded as the starting-point of the Conservative Republican party of Mississippi. Ex-Governor Brown's suggestions were taken up by several leading newspapers, and conventions and mass-meetings were held in the different counties, to effect a thorough organization of the new party. Early in May the name of Judge Louis Dent, a brother-in-law of President Grant, was brought forward in the public prints as the person best fitted to lead the Conservative movement, and stand as its candidate for Governor. A circular was prepared in the early part of June, and sent to various prominent persons known to be in sympathy with the movement for a new party, inviting them to meet "in the city of Jackson on the 23d inst., for the purpose of taking steps necessary to promote the general interests of the State." The persons signing this circular formed no regularly-constituted committee, but were men who had been prominent in the opposition to the "Committee of Sixteen," and styled themselves simply "members of the National Union Republican party of Mississippi." They said:

Feeling as we do that the organization represented in this State by the "Committee of Sixteen" and the "Executive Committee" is not in sympathy and accord with the Administration of President Grant and the National Union Republican party, we earnestly desire your coöperation, as a Republican, in the contemplated movement. Believing that our State should be reconstructed in accordance with the acts of Congress and the principles enunciated by President Grant, and that toleration, liberality, and forbearance, will command respect, inspire confidence, restore harmony, and bring peace and prosperity, we ask the aid of every patriotic citizen of the State, be he white or black, high or low. The time for proscription has gone by, and, as we trust, forever.

We believe that all discordant feelings, engendered by the late war, should be eradicated; that the onward march of our great party should not be checked in its victorious career by selfish devotion to personal ends, or the display of an acrimonious asperity in the administration of public affairs; and that, "granting to all equal rights and privileges," harmony and fraternal feelings should be encouraged and cemented between men of all sections, races, and colors, of our

common country. We desire, in all sincerity, that "the dead past should bury its dead."

Feeling a deep interest in the welfare of our people, we desire to see such a condition of affairs as will best enhance and promote the material interest and prosperity of our Commonwealth. We do not understand that it is the mission of the Republican party to stir up strife; but, on the contrary, when truly interpreted, its highest aim, by according to every man his due, is to allay dissension, disarm prejudice, and restore law and order, by discouraging every useless and wanton attempt to array one class of citizens against the other. We can and must all live together as friends.

The proposed convention was held in the Senate-chamber, at Jackson, on the 23d of June, and elected Major J. L. Wofford as its president. An executive committee of six was elected and a platform adopted, but it was deemed inexpedient to make any nominations at that time.

The platform, as set forth in the following resolutions, received the unanimous approval of the convention:

Resolved, That this convention now proceed to organize the National Union Republican party of the State of Mississippi.

Resolved, That we express our unfaltering devotion to the great principles of the National Union Republican party, and that we look forward with hope and confidence to the early restoration of our State government in strict accordance with the reconstruction laws of the Congress of the United States.

Resolved, That the repeated failures of all former and existing organizations to restore the State and to meet the requirements of the republican spirit of our institutions, by insisting upon measures of proscription far exceeding the provisions of the Constitution of the United States and of the Reconstruction Acts of Congress, have rendered them unworthy of the respect and confidence of the voters of Mississippi.

Resolved, That, in the language of President Grant, "The question of suffrage is one which is likely to agitate the public so long as a portion of the citizens of the nation are excluded from its privileges in any State;" and, therefore, we sincerely favor the addition of the proposed fifteenth amendment to the Constitution of the United States.

Resolved, That we deprecate any attempt to impose upon the people of this State any greater disabilities than the Constitution and laws of the United States already recognize, and that we believe it to be the duty of all good citizens to use every effort to obliterate the animosities of the past, and to unite in the restoration of a State government based on the equal rights, civil and political, of men of every race.

Resolved, That we express our thanks to the President and the Congress of the United States for rejecting the scheme to impose the rejected constitution upon the people of this State, and affirm our unwavering support of the Administration of General Grant.

Resolved, That we announce ourselves unqualifiedly in favor of universal suffrage and universal amnesty upon the restoration of the State to her Federal relations, and pledge ourselves in good faith to urge upon Congress the removal of all political disabilities incurred by participation in the late rebellion.

Resolved, That the State Executive Committee be authorized and instructed to issue, in behalf of this convention, an address to the people of this State, declaratory of the principles and sentiments of the National Union Republican party of Mississippi.

Resolved, That the State Executive Committee be authorized and instructed to issue a call for a State Convention, composed of delegates representing the different counties of the State, to meet at such time and place as they may deem expedient, for the purpose of nominating a State and Congressional ticket.

The address to the people, alluded to in the eighth resolution, was subsequently issued, and the Executive Committee applied to Judge Dent for permission to use his name before the nominating convention to be held in September, as a candidate for Governor. In his reply to this communication, Judge Dent expressed his approval of the platform of the 23d of June, and granted permission for the use of his name "for any posititon within the gift of the National Union Republican party of the State." If it was supposed that the name of Judge Dent would secure the sympathy of the President of the United States for the movement which had been inaugurated, that delusion was dissipated by the following letter:

LONG BRANCH, *August* 1, 1869.

DEAR JUDGE: I am so thoroughly satisfied, in my own mind, that the success of the so-called Conservative Republican party in Mississippi would result in the defeat of what I believe to be for the best interest of the State and country, that I have determined to say so to you (in writing, of course). I know or believe that your intentions are good in accepting the nomination from the Conservative party. I would regret to see you run for an office and be defeated by my act; but, as matters now look, I must throw the weight of my influence in favor of the party opposed to you. I earnestly hope that, before the election, there will be such concessions on either side in Mississippi as to unite all true supporters, in the State, of reconstruction and of the Administration together, in support of one ticket. [Here follows a passage of a private nature. The letter then concludes as follows]: I write this to you solely that you may not be under any wrong impressions as to what I regard, or may hereafter regard, as public duty. Personally, I wish you well, and would do all in my power proper to be done to secure your success, but in public matters personal feelings will not influence me.

With kindest regards, yours truly,

U. S. GRANT.

A reply was made to this letter by Judge Dent, containing the following passage, which is interesting as showing the light in which the radical Republicans of the State were viewed by their opponents:

Is it reasonable to suppose that a people, having the free choice of their representatives, would elect for their rulers a class of politicians whose aggressive and hostile conduct hitherto has rendered them peculiarly obnoxious and disagreeable? This is the charge made by the people of Mississippi against the radicals, or "bitter-enders," as they are called.

This charge is not made because they fought against the South and secession, for many of that class fought on the side of the South. It is not made because they are of Northern birth and education, for many men of Northern birth and education and of the Northern army are with us in antagonism to this obnoxious party. It is not because they are Republicans, for their antagonists were among the first in the South to organize on the Republican platform and to advocate the civil and political equality of all men, were sent as delegates to Chicago, and for their consistency and constancy were rewarded by you with offices of trust and honor.

But this charge is made, as I have said before, because the proscriptive antecedents and aggressive policy of these politicians toward the people of Mississippi have made them the objects of peculiar

abhorrence. That policy consists not only in the continual advocacy of proscription, but, in a time of profound peace, such revolutionary doctrines as excite and direct against the white men of the South and their families a most dangerous animosity, such animosity, indeed, which, with continuation of the same fuel, would inevitably lead to a black man's party and a war of races.

Neither are such doctrines preached with an honest desire to ameliorate the condition of the freedmen, or promote the ends of peace, or strengthen the Republican party in the South, but solely to alienate from the planter the time-honored confidence and affection of this race, in order that the new political element, under the banner of Republicanism, might be entirely controlled and subordinated to their own purposes of power and aggrandizement; and to this class of men, whom you foiled in their attempt to force upon the people of Mississippi the odious constitution, rejected at the ballot-box, you now give the hand of fellowship and support, and spurn from you that other class who, accepting the invitation of the Republican party, in good faith, came *en masse* in Virginia and Tennessee, as they will come in Mississippi and Texas, to stand upon its platform and advocate its principles.

The nominating convention was held at Jackson on the 8th of September, and consisted of 320 delegates, representing forty counties. The principles set forth in the platform of June 23d were reaffirmed, and two resolutions added, to the following effect:

That we announce ourselves in favor of a liberal system of free schools, and of such equitable distribution of the public school funds as may secure the largest degree of harmony and good feeling among all classes of our citizens.

That we cordially invite the immigration of capitalists and manufacturers into our State, and pledge ourselves to such legislation as shall most effectually protect and foster all the industrial pursuits of our State, and thoroughly develop all its resources.

The nominations to State offices were as follows: For Governor, Louis Dent; Lieutenant-Governor, E. Jeffords; Secretary of State, Thomas Sinclair; Auditor of Public Accounts, A. W. Wills; State Treasurer, Joseph McCloy; Attorney-General, Robert Lowry; Superintendent of Public Instruction, Thomas S. Gathright. Mr. Sinclair, the candidate for Secretary of State, was a colored citizen.

The radical Republicans of the State, or, as they styled themselves, "the Republicans of Mississippi," held their first convention on the 2d of July, and adopted a platform of principles consisting of no less than seventeen resolutions, in which they by no means supported the position taken by Mr. Eggleston and his associates in the preceding winter. The first seven declarations of the platform were as follows:

1. Unfaltering devotion to the Union, first, last, and forever.

2. Faith in and fidelity to the principles, objects, and aims, of the great National Republican party, with which, and with the President and Congress, we are in full accord and sympathy.

3. A fair, impartial, just, and economical administration of the Government, national and State.

4. Full and unrestricted right of speech to all men at all times and at all places, with the most complete and unrestrained freedom of the ballot, including protection to citizens in the exercise of the suffrage.

5. A system of free schools which shall place the means of liberal education within the reach of every child in the State.

6. Reformation of the iniquitous and unequal taxation and assessments which, discriminating against laborers and labor, have borne so unjustly and unequally upon the people.

7. That all men, without regard to race, color, or previous condition, are equal before the law, and that to be a freeman is to possess all the civil and political rights of a citizen, are not only enduring truths but the settled and permanent doctrines of the Republican party.

The eighth recognized but two great national parties, under the rule of one of which the "material and industrial resources of the country will languish," while under the other the people of Mississippi will be "rich, prosperous and contented."

The ninth favors the removal of political disabilities as soon as "the spirit of toleration now dawning upon our State shall be so firmly established as to warrant Congress" in declaring them at an end.

The tenth is as follows:

10. That the present modified condition of public sentiment in this State renders it wise and expedient that the Republican party should embrace the opportunity, which is to be presented in the approaching election, of ratifying the new constitution, so far modified, in the franchise and general provisions thereof, as to conform to the Constitution of the United States, and the reconstruction laws; and that, as Mississippi shall be fully reconstructed according to the true intent of the laws, all disabilities imposed upon the late rebels should be entirely removed.

Then, after recommending the adoption of the fifteenth amendment of the Federal Constitution, declaring in favor of universal amnesty and universal suffrage, and inviting immigration to the State, the convention gives utterance to its approval of the Administration of President Grant, its confidence in and admiration for General Ames, and its belief that Congress is "the assembled wisdom and expressed will of the nation."

On the 23d of August, the radical Executive Committee issued an address to the people, calling upon them to support these principles and coöperate with the party. Their nominating convention met on the 30th of September, and adopted the following ticket: For Governor, James L. Alcorn; Lieutenant-Governor, R. C. Powers; Secretary of State, James Lynch; Auditor of Public Accounts, Henry Musgrove; State Treasurer, William H. Vasser; Attorney-General, Joshua S. Morris; Superintendent of Public Instruction, Henry R. Pease.

A platform was also adopted, made up of the leading declarations of that already given.

The Democrats did not enter into the campaign as a distinct party opposed to those which had already taken the field, but a large proportion of those citizens who had formerly acted with that party joined the forces of the Conservative Republicans. On the 5th of August an address to the people was published,

signed by a hundred and thirty-five prominent citizens of the State who had been previously identified with the Democracy, urging a hearty coöperation with the National Republican party. The adoption of the constitution was admitted "as a fixed fact." There would be no contest of parties on that question, but, said the signers of the address, there is to be "an issue as to the men who shall be elected to administer the reconstructed State government and represent us in Congress; and on that question we desire to give expression to our views, and to submit our conclusions to the consideration of the people. After stating briefly the character of the two Republican organizations according to their views, they announce it as their "deliberate and matured opinion" that "we should support the National Union Republican party and vote for the ticket which they present." The general views of these gentlemen may be gathered from the following paragraphs, with which their address closes:

All Mississippians agree that reconstruction, on the best attainable basis, and at the earliest possible moment, is essential to the great interests of the State. Reconstruction will bring peace, real peace to the country, and will restore to us pure civil rule, and a destruction of that gigantic military despotism under which we have so long suffered and languished, with all its terrible humiliations and oppressions. The present basis for reconstruction, although no mode of our selection (for we had no power to choose), is certainly as fair and just as we have any reason to hope for hereafter.

Reconstruction once effected, and the blessings of peace and civil rule secured, we shall speedily witness a marked change for the better in all our material interests. Capital, labor, and population, will flow into the State. Our natural advantages, the wonderful productiveness of our rich soil and genial climate, will command prosperity. Our paralyzed industrial pursuits will all revive, whenever we obtain certainty for the future, by the establishment of a fixed, enduring civil government. Our political history hereafter will, of course, be governed by the degree of prudence and wisdom our people may observe in meeting and directing unforeseen future developments.

We take it for granted that no true Mississippian, worthy of that honored name, can think for a moment of adhering to the radical Republican party as it exists in the State of Mississippi. From them we have received nothing but cruel tyranny, unjust persecution, and a degree of oppression and humiliation unequalled, as we conceive, in the sad history of conquered nations. Their odious principles, as ignobly illustrated by their past party history, and not *successfully* disguised even in their cunningly-devised and insincere platform of July last, are condemned by all intelligent and just men, North and South. The conservative sentiments *expressed* in their late platform cannot be confided in, having been forced from them, as a last desperate effort to seize the State government, with its offices and emoluments, after the party had been rebuked at the ballot-box, by the people of the State of both races; after they had been signally repudiated and rebuked by President Grant, and by a Congress composed of a large majority of Republicans.

The question of calling a Democratic Convention was considered by the Executive Committee of that party, and their conclusion was published on the 9th of September in the following resolutions, which had been unanimously agreed to:

1. That it is not expedient to hold a Democratic State Convention or to place a Democratic ticket in nomination.

2. That, in the opinion of this committee, the true interests of the people of the State will be consulted by supporting and electing the candidates of the National Union Republican party, this day put in nomination.

3. That the people of every county in the State who support the State and congressional candidates of this party should immediately meet in county conventions, organize the party by the appointment of all appropriate officers and committees, put Legislative candidates in the field, and enter upon the campaign at once.

Still there were members of the Democratic party bitterly opposed to the adoption of the constitution in any shape, and determined to resist the ratification of the fifteenth amend- to the end. One or two newspapers which represented this element of the party insisted that a convention should be held at Canton, on the 20th of October. A few delegates, who had been elected in response to this call, assembled at the appointed time and place, and, after full consultation, unanimously adopted the following resolutions, and then adjourned, subject to the call of the chairman:

Resolved, That the Democratic party of the State of Mississippi will retain its organization intact, and that the party cannot be, nor has it been, by any competent authority, committed to the support of either wing of the Republican party of this State.

Resolved, That we can offer to the people of Mississippi no suggestion or advice as to the course proper for them to pursue in the present contest; but, remaining firm in our devotion to the great doctrines of State rights, we agree to adjourn this convention, leaving the responsibility for the establishment of a Republican party in Mississippi to rest where it properly belongs.

Resolved, That, in view of the divisions and dissensions now existing among the people of Mississippi—the result, we cannot doubt, of the manœuvres of politicians—we deem it inexpedient for the Democratic party of the State to put a State ticket in the field during the present campaign.

All through the excited canvass, public meetings were held in various parts of the State, and leading men of all parties, including the prominent candidates for office, were engaged in heated discussions, which turned chiefly on the merits of the different men in nomination, and the general character of the two branches of the Republican party. On the 10th of July the President issued his proclamation, fixing the day of election, and specifying the sections of the constitution which were to be submitted to a separate vote. The following is the proclamation:

In pursuance of the provisions of the act of Congress, approved April 10, 1869, I hereby designate Tuesday, the 30th day of November, as the time for submitting the constitution adopted on the 15th day of May, 1868, by the convention, which met in Jackson, Miss., to the voters of said State registered at the date of such submission, viz., November 30, 1869, and I submit to a separate vote that part of section three of article seven, of said constitution, which is in the following words: "That I am not disfranchised in any of the provisions of the acts known

as the Reconstruction Acts of the Thirty-ninth and Fortieth Congresses, and that I admit the political and civil equality of all men, so help me God." Provided that, if Congress shall at any time remove the disabilities of any person disfranchised in the said Reconstruction Acts of the said Thirty-ninth and Fortieth Congresses, and the Legislature of this State shall concur therein, then so much of this oath and so much of this only as refers to the said Reconstruction Acts shall not be required of such person so pardoned to enable him to register, and I further submit to a separate vote section 5 of the same article of said constitution, which is in the following words: "No person shall be eligible to any office of profit or trust, civil or military, in this State, who, as a member of the Legislature, voted for the call of the Convention that passed the ordinance of secession, or who, as a delegate to any Convention, voted for or signed any ordinance of secession or who gave voluntary aid, countenance, counsel, or encouragement, to the persons engaged in armed hostility to the United States, or who accepted or attempted to exercise the functions of any office, civil or military, under any authority or pretended government authority, power, or constitution, within the United States, hostile or inimical thereto, except all persons who aided reconstruction by voting for this convention, or who have continuously advocated the assembling of this convention, and shall continuously and in good faith advocate the acts of the same, but the Legislature may remove such disability, provided that nothing in this section, except voting for or signing the ordinance of secession, shall be so construed as to exclude from office the private soldier of the late so-called Confederate States army;" and I further submit to a separate vote section 5 of article 12, of the said constitution, which is in the following words: "The credit of the State shall not be pledged or loaned in aid of any person, association, or corporation, nor shall the State hereafter become a stockholder in any corporation or association." And I further submit to a separate vote part of the oath of office prescribed in section 26 of article 12 of the said constitution, which is in the following words: "That I have never, as a member of any convention, voted for or signed any ordinance of secession; that I have never, as a member of any State Legislature, voted for the call of any convention, and which expressed any such ordinance." The above oath shall also be taken by all the city and county officers before entering upon their duties, and by all other State officers not included in the above provision. I direct the vote to be taken upon each of the above cited provisions alone, and upon the other portions of the said constitution in the following manner, viz.: Each voter favoring the ratification of the constitution, excluding the provisions above quoted, as adopted by the Convention of May 18, 1868, shall express his judgment by voting "for the constitution;" each voter favoring the rejection of the constitution, excluding the provisions above quoted, shall express his judgment by voting "against the constitution." Each voter will be allowed to cast a separate ballot for or against either or both of the provisions above quoted. It is understood that sections 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, of article 13, under the head of "ordinance," are considered as favoring no part of said constitution.

In testimony whereof I have hereunto set my hand and caused the seal of the United States to be affixed.

Done at the city of Washington, this tenth day of July, in the year of our Lord one thousand eight hundred and sixty-nine, and of the independence of the United States of America the ninety-fourth.

[SEAL.]

U. S. GRANT.

By the President:

HAMILTON FISH, Secretary of State.

A military order issued from the headquarters of the district on the 14th of October, directing the election to be held on Tuesday, the 30th of November, and Wednesday, the 1st of December, in pursuance of the President's proclamation. Full directions were given as to the revision of the registration lists, the conduct of the election, and the method of making the returns. It was ordered that a board of three registrars for each police district should meet on the 16th of November to revise the lists of qualified voters, and continue the work for five days. "To the end that the laws may be fairly and justly executed," it was ordered that "two white and two colored persons, of different political parties, registered voters of the county, will be selected by the Board to challenge the right of any person to be registered, who, in the opinion of the person challenging, is disqualified. Upon such challenge being made, the Board will examine the applicant on each point of alleged disqualification. Evidence shall be taken if offered. A careful record of all official action of the Board will be kept for information of these Headquarters."

The Board of Registrars was authorized to strike off the names of such persons as they were satisfied were not entitled to vote, and to add such as should establish their right to that privilege. A certificate of registration was to be furnished to every qualified voter whose name was added to the list, and to all persons previously registered, who should give satisfactory evidence of their identity and of the loss of their old certificates. Power was also given to the Boards of Registration, when in the performance of the duties of their office, to preserve the peace in the vicinity of the place of registration, and, if they deemed it necessary, to organize a special police force for that purpose. They were also authorized to call on the civil and military authorities for aid, if it should be necessary.

The registrars were directed to act as Commissioners of Election, and detailed instructions were given them with regard to their duties as such. Among the regulations for conducting the election were the following:

7. The Commissioners of Election will make such arrangements for voting as will permit all to gain access to the polls and deposit their votes without opposition or resistance. The commissioners, with the persons designated as challengers, shall be the only persons permitted to remain in the room where the voting takes place—nor will persons be allowed to occupy the windows or doors of the room. The voters will be admitted one at a time, to pass out at a door other than the one at which they enter, that there may be no interruption of the balloting.

Interference with the voters as they approach the ballot-box or await their turn, in such order as they may have been arranged, will not be tolerated. The Commissioners of Election and the regularly-appointed peace officers will take particular care to notice any and all such interference, and report all violations to these headquarters, with depositions, etc.

9. Every person presenting his ballot at the polls shall announce his name and exhibit his certificate of registration, and if upon examination it is found he has been registered as a voter, one of the commis-

sioners will take his certificate and across the face of it write his (the commissioner's) name, the date, and the word "*voted*." At the same time the name of the voter in the precinct-book will be checked off in such a manner as to clearly indicate the fact that a vote has been cast on that certificate at this election. (Check-marks, distinct from any heretofore used, will be adopted, and an explanatory note made on the inside of the cover of each precinct-book.) One of the commissioners will receive the ballot, and, without opening it, or allowing it to be opened or examined, will deposit it in the ballot-box.

11. Registration is evidence of the right to vote.

The commissioners will permit two persons from each political party, duly-registered voters, to act as challengers, by or through whom all challenges will be made, but they will be allowed to challenge only so far as may be necessary to prevent repeating or fraudulent personations of duly-registered voters.

If the person challenged is known to any of the commissioners to be the person he represents himself to be, his vote will be admitted; if not so known, one of the commissioners will administer the following oath: "You do swear that your name is ———, and that in such name you were duly registered as a voter in —— election precinct, and that you are the identical person you so represent yourself to be." If challenged for already voting, the commissioner will administer the following oath: "You do swear that you have not voted at this election, at this or any other polling-place." The cause of challenge shall be noted opposite his name. If he refuse to take the oath, his vote shall be rejected.

14. To the end that voters may, in the exercise of the elective franchise, be protected, so far as possible, from all interference or intimidation at the place of voting, the Board of Commissioners will not permit any persons to approach to within thirty feet of the building where the ballot-box is opened, except duly-registered voters, who shall successively approach the ballot-box, complying with such regulations and instructions as the Board may establish.

15. "Electors shall, in all cases, except in those of treason, felony, or breach of the peace, be privileged from arrest during their attendance on this election, and going to and returning from the same." All persons arrested at the polls shall be permitted to vote, if they have not done so, before being taken to a place of confinement.

16. All bar-rooms, saloons, and other places for the sale of intoxicating liquors, will be closed from sunset on the evening of November 29th, until sunrise on the morning of December 2d, and during that time the sale of intoxicating liquors at or near the polls is prohibited — nor will any person be permitted to distribute any gratuitously. The peace-officers will be held responsible for the strict enforcement of this prohibition, and will arrest and hold for trial all persons who may transgress it.

17. The use or exhibition of fire-arms, or other deadly weapons, at or near a polling-place, on the day of election is prohibited. Persons so offending may be brought before a military commission, or other tribunal, at the discretion of the district commander.

18. Boards of Commissioners shall have authority to compel compliance with all orders and directions necessary for a quiet and peaceable election. It shall be their duty to arrest, or cause to be arrested, by persons selected by themselves, or other peace-officers, all persons who shall attempt by force or intimidation to interfere with a free expression of opinion at the ballot-box, or who shall create or attempt to create disturbances during the canvass of the votes after the closing of the polls. Persons thus arrested will be held by the sheriff of the county for trial by a military tribunal, or until instructions regarding the case be received from these headquarters.

19. Sheriffs of counties are called upon to be vigilant and active in their efforts to preserve the peace and compel order. A special deputy will be selected by them to attend at each polling-place at which they cannot be present; and it shall be their duty to aid the Commissioners of Election, to the full extent of their power, in making arrests when necessary and compelling obedience to their instructions in their arrangements made at the ballot-box.

20. Military interference at the election is forbidden except when it may be necessary to keep the peace. Officers in charge of troops are required, should the necessity arise, to coöperate with the Commissioners of Election and civil authorities to that end.

21. Soldiers, citizens of the State, and duly-registered voters, will be permitted to vote, remaining at the polling-place only so long as may be necessary for that purpose.

22. Should the efforts of the Commissioners of Election and their assistants, to secure a full and free exercise of the elective franchise, prove ineffectual in any district—should frauds be committed—should voters be kept from the polls or compelled to vote through intimidation or fear of force—should the ballot-box or poll-lists or books of registration be destroyed, a new election will be ordered for the county of which the precinct forms a part.

When the ballots have all been received, the commissioners were to constitute Boards of Canvassers, and were directed in detail as to how the votes were to be counted, and the returns made to the military headquarters at Vicksburg. Finally, the order gave a list of the offices to be filled, including those of Representatives in Congress, and members of the State Legislature. Full Boards of Registration for all the districts in the sixty-one counties of the State were appointed by a military order issued on the 4th of November.

The election took place on the appointed days, and resulted in the ratification of the constitution, by a vote of 105,228 to 954. The provisions separately submitted were all rejected, with the exception of that which forbids the lending of the credit of the State to any person or corporation. The vote against the section disfranchising citizens for serving the cause of the Confederacy in the late war was almost unanimous. The whole number of votes cast for Governor was 114,283, of which Alcorn received 76,186, and Dent 38,097, giving the former a majority of 38,089. The persons chosen to represent the State in Congress were George E. Harris, J. L. Morphis, Henry W. Barry, George C. McKee, and Legrand W. Perce, all Republicans. The number of State Senators elected was 33, of whom 26 were Republicans and 7 Democrats. The representatives in the State Legislature are 107 in number, 82 Republicans and 25 Democrats.

The military order announcing the result of the election also directs the Legislature to assemble at Jackson on the 11th of January, 1870. Soon after this official announcement, the following military order was issued by General Ames:

HEADQUARTERS FOURTH MILITARY DISTRICT
(DEPARTMENT OF MISSISSIPPI),
JACKSON, MISS., *December* 23, 1869.

I. The following-named persons are hereby appointed to office in the State of Mississippi:

James L. Alcorn, Governor.

James Lynch, Secretary of State, *vice* Henry Musgrove, whose resignation is hereby accepted.

Henry Musgrove, Auditor of Public Accounts, *vice* Thomas T. Swann, whose resignation is hereby accepted.

Joshua S. Morris, Attorney-General.

* * * * * *

Appointees must file with the proper officer such bonds and other recognizances as may be required by the statute-laws of the State of Mississippi, and take and subscribe to the oath of office prescribed by the act of Congress of July 2, 1862.

Official notification from the officer who approves the bonds, that the law imposing has been faithfully complied with, and that the bondsmen are known to him as reliable and responsible men, together with the oath of office, will be forwarded to the Acting Assistant Adjutant-General at these headquarters. Upon their receipt, if satisfactory, they will be furnished with written authority from these headquarters to enter upon the discharge of the duties of the office to which they have been appointed.

* * * * * *

By command of Brevet Major-General AMES.
WILLIAM ATWOOD, Aide-de-Camp,
Acting Assistant Adjutant-General.

General Alcorn declined the position of provisional Governor, "coming from the military authority," he said, "and subject for its support to the military power; the fitness of things appears to me to forbid my acceptance of it while I hold in immediate prospect the position of civil Governor by that sanction most acceptable to my instincts as an American citizen—that of popular choice."

The Legislature assembled on the 11th of January, in pursuance of the order of the military commander, and proceeded to conform to the conditions precedent to the readmission of the State into the Union. Soon after the organization of the two Houses had been completed, on the fifth day of the session, a message was received from General Ames in his character of provisional Governor of the State, submitting the fourteenth and fifteenth amendments to the Federal Constitution for ratification. A vote was immediately taken, resulting in the adoption of the fourteenth amendment, by a vote of 23 to 2 in the Senate, and 87 to 6 in the House of Representatives. The fifteenth amendment passed the Senate unanimously, and received 93 votes in its favor to one against it in the House. The next important duty of the Assembly was the choice of United States Senators. It was determined to elect three, one for the term beginning March 4, 1871, one for the unexpired term beginning March 4, 1869, and finally, one to serve for the residue of the term beginning March 4, 1865, and ending in 1871. The election occupied two days, the 18th and 19th of the month, the contest being altogether on the candidate for the short unexpired term. For the full term, beginning in 1871, General J. L. Alcorn was elected by a unanimous vote in the Senate, and a vote of 91 to 2 in the House. For the unexpired term, beginning March 4, 1869, General Adelbert Ames received 22 votes in the Senate and 72 in the House, and was duly elected. After several ballots for a Senator for the short term, the choice fell upon H. R. Revels, a colored member of the State Senate, who received 81 votes on a joint ballot out of a total of 119. On the 20th of January the Legislature adjourned to the "second Tuesday after the admission of the State into the Union."

A bill to readmit the State of Mississippi into the Union was introduced into Congress on the 12th of February, 1870, and, after considerable debate, in which the question of imposing new conditions was discussed at length, passed into a law on the 17th, and the first colored member of the Senate of the United States was soon after sworn in and permitted to take his seat.

An important incident of the exercise of military authority in the State, during the year, occurred on the trial of Edward M. Yerger, before a military commission, for the murder of Joseph G. Crane, in the streets of Jackson, on the 8th of June. Mr. Yerger was a prominent citizen of Jackson, and had served as a colonel in the Confederate army, acting as a member of the staff of General Breckinridge during the war. Mr. Crane, on the other hand, was a lieutenant-colonel in the United States Army, and a member of General Ames's staff, and had recently been appointed by that officer as acting mayor of the city. It appears that Yerger had refused to pay certain taxes which had been levied on his property for street improvements, on the ground that his property had been injured by the elevation of the street in front of his residence. Thereupon Colonel Crane, as mayor of the city, issued a warrant of distress and levied upon a piano found in the house of Colonel Yerger, and caused it to be removed and advertised for sale. Yerger was absent from home at the time, but on hearing of this occurrence returned to the city, and meeting Colonel Crane on the street began an altercation which resulted in his stabbing that officer several times with a bowie-knife. Colonel Crane died almost immediately, and Yerger was arrested by the military authorities two days after the crime was committed, viz., on the 10th of June; a military commission was organized, with Brigadier-General R. S. Granger as president, and the trial of Yerger began. His counsel protested against the authority of a military tribunal to try him, as he was a citizen of Mississippi, not in the service of the army or navy of the United States, and, therefore, the courts of that State alone were competent to deal with his case on a regular indictment by a grand jury. As all their arguments and objections were overruled, they next applied to the Circuit Court of the United States for the Southern District of Mississippi, for a writ of *habeas corpus*, which was granted, and the prisoner brought before that tribunal by General Granger in obedience thereto. After hearing argument on the question of the jurisdiction of the military commission to try the case, the court decided that the imprisonment was lawful, and dismissed the writ of *habeas corpus*,

thus remanding the prisoner to the military authorities. A petition was then presented to the Supreme Court of the United States, praying for a writ of *certiorari* to remove the cause to that court, and a writ of *habeas corpus* to bring up the prisoner. This was demurred to, on the ground that the Supreme Court, under its appellate jurisdiction, had no power to issue a writ of *habeas corpus*. This question was argued before Chief-Justice Chase, at Washington, on the 14th of July. The decision of the chief justice was rendered on the 25th of October, and affirmed the power of the court to issue the writ, but did not touch upon any other question involved in the case. The hearing of the matter on the merits was postponed until the next session of the Supreme Court, and in the mean time the State passed from the hands of the military authorities into those of the civil officials elected under the new constitution, and on the 28th of February Mr. Yerger was given into the custody of the sheriff of Hinds County. Lieutenant William Atwood, adjutant-general of the Fourth Military District, immediately made affidavit before Judge Cabaness, charging the prisoner with the murder of Colonel Joseph G. Crane, on the 8th of June, 1869, and, his counsel waiving an examination, he was committed for trial without bail. Thus the authority of the military commission, involving the question of the constitutionality of the Reconstruction Acts, escaped a final adjudication at the hands of the Supreme Court.

The people of Mississippi have been so much occupied with the stirring events which have attended the reconstruction of the State, that little has been done to revive their material interests, and no reports have been made regarding the public institutions or the financial condition of the Commonwealth. Considerable attention has, however, been given to the subject of immigration, and several associations have been formed for its encouragement and promotion; and it is quite probable that the energies of the people will be directed, during the coming year, to the development of their resources, and the building up of their commercial and industrial interests.

MISSOURI. The natural advantages of this State, especially with regard to her geographical position, the variety and vastness of her resources, as well as water-power, the facilities of communication by land or water, affording to the inhabitants ample means of easy intercourse among themselves and with other States, are such as to rival other sections of the Union. Several of these advantages were noticed in the CYCLOPÆDIA for 1868. Her population, which, by the close of that year, was put at one million and a half, seems to have been underestimated; since Governor McClurg, in his message to the General Assembly, dated January 5, 1870, says: "One may reasonably calculate that the United States census of this year will disclose the fact that we number two millions."

The State being interested to maintain a constant tide of immigration flowing in from abroad, as the most effectual means of attaining that end, its authorities have recognized the necessity of placing before the millions of this and other countries correct information as to the climate of Missouri, her soil, agricultural products, minerals, timber, and water-power. A Board of Immigration has been organized to spread such information abroad, and the sum of two thousand dollars is annually appropriated by the Assembly for the purpose of meeting their expenses. Much praise is given the members of this Board for the amount of good which they have succeeded in effecting to the State, by the employment of so little money. As the efficacy of their work, however, depends in a great measure upon enlarging the sphere of their operations, a small increase of outlay for such a purpose would prove an investment making large returns, beneficial to the State beyond all proportion; it has been proposed to add $5,000 to the said appropriation of $2,000, and make it annually $7,000, in order to enable that Board, or any other selected for the work, "to send abroad printed letters, pamphlets, books, and circulars, with reliable information as to the resources of the State, * * with instruction that they should prepare and disseminate such information in the other States of the Union."

The leading object of this recommendation is to invite capital and labor into the State, chiefly for mining and manufacturing purposes. The occupation of the people at present is almost exclusively agricultural; whereas, the working of the minerals, especially coal, iron, and lead, and the establishment of manufactories for the purpose, as well as for using other raw materials, as wool, cotton, and timber, would not only prove of immediate benefit to the State, but would also greatly promote agriculture itself.

The assessed value of taxable property in Missouri, for 1868, was $470,778,119, which sum the Board of Equalization subsequently caused to be increased nearly four millions more. Its amount for 1869 was $508,278,860; and it is estimated that there will be an increase of five per centum per annum, in the future. The assessments on this amount are, "one-fourth of one per centum, under a constitutional provision for the payment of the interest and to form a Sinking Fund for the principal of the State debt, and one-fourth of one per centum for revenue; one-fourth of which is for a 'Public School Fund,' and one and three-quarters per centum of the remainder for a 'Seminary Fund.'"

The State finances are in good condition; at the same time it is urged, that no measure involving an expenditure of public money, though promising beneficial results, should be engaged in by legislative action until the State has paid her debt, and so improved her condition as to be able to lighten the burden of taxes.

The entire debt of the State, at the beginning of 1869, was $18,654,000, over $18,000,000 of which consisted of bonds given in aid of railroads, and maturing in 1872 and 1887, and the intermediate years. The sum of $61,000 was paid on the principal during 1869, for which reason the debt, at the end of that year, was $18,593,000; without including $8,000,000 of bonds of the Hannibal and St. Joseph Railroad, on which that road punctually pays the interest.

From the State Treasurer's statement, it appears that the receipts during the last fiscal year were, in the aggregate, $2,837,002.51; and the cash disbursements for the same period were $2,702,021.92. The State Auditor's report shows that the current expenses of the government, including $92,000, certificates of indebtedness last year, amounted to $1,024,467.23; while the total of warrants drawn on all funds amounted to $2,712,517.97, which includes the payment of interest of the State debt.

The principal of the railroad bonds mentioned above is to be paid at maturity, "in gold or silver," since the State in issuing them promised to do so in express terms. Concerning their interest, which is accruing in the mean time, and the payment of which falls due semi-annually on the first day of January and July, whether this also must be paid in coin, or not, the following letters were exchanged last year between the State Treasurer and Auditor, as State-Interest-Fund Commissioners, and the Attorney-General."

TREASURER'S OFFICE, STATE OF MISSOURI, CITY OF JEFFERSON, *May* 25, 1869.

Hon. Horace B. Johnson, Attorney-General of Missouri.

DEAR SIR: In view of the recent decision of the Supreme Court of the United States in regard to the effect of contracts made prior to the passage of what is popularly called the Legal-tender Act, and in view of the fact that the six per cent. bonds of the State issued to aid in the construction of the Pacific Railroad, the southwest branch of the Pacific Railroad, the Iron Mountain Railroad, the Cairo and Fulton Railroad, the Platte County Railroad, and the North Missouri Railroad, promise to pay the principal of said bonds in gold or silver to the undersigned Fund Commissioners of the State Interest Fund, we have the honor to request your opinion, whether or not the State is legally bound to pay the interest, due semi-annually on the first days of January and July of each year, in gold coin.

An early reply will much oblige your obedient servants,

WM. Q. DALLMEYER, State Treasurer,
DANIEL M. DRAPER, State Auditor,
And *ex-officio* Fund Commissioners.

REPLY.

STATE OF MISSOURI, OFFICE OF THE ATT'Y-GENERAL, JEFFERSON CITY, MO., *June* 1, 1869.

Hon. W. Q. Dallmeyer, and Honorable Daniel M. Draper:

Your letter of the 25th instant, asking my opinion in regard to the legal obligation of the State to pay the principal and interest in gold coin on bonds issued by the State, has been received. After carefully examining the decision of the Supreme Court of the United States, and the various laws under which bonds were issued by the State of Missouri to the Pacific Railroad, southwest branch of the Pacific Railroad, Iron Mountain Railroad, North Missouri Railroad, the Cairo and Fulton Railroad Company, and the Platte County Railroad Company, I have concluded that the State having sold all of said roads under the lien the State held on them for security of principal and interest in said bonds, and the State having by said sales assumed all the obligations of said railroad companies, is legally obligated to pay both the principal and interest of said bonds in coin as they become due. Very respectfully,

[SEAL.] H. B. JOHNSON,
Attorney-General of Missouri.

These letters, it is affirmed, were published directly in New York papers before their existence and purport had been made known in Missouri; whereupon the value of the Missouri State bonds suddenly rose in the New York stock-market, on the persuasion that the payment of their semi-annual interest, falling due after a few weeks then ensuing, would be made in gold. Missouri papers regarded this as a contrivance of speculators to enhance the value of the State bonds for the occasion. In his recent message of January 4, 1870, Governor McClurg declares to the General Assembly: "I am permitted by the Fund Commissioners to state that, from the records in their office, they unhesitatingly say there cannot be State bonds to the amount of more than $60,000 on which the holders are expecting interest in gold. But it is not known in whose hands they are, as the coupons have not been presented since the State resumed the payment of interest in 1867. No demand for interest in gold has been made of the financial agent of the State in New York."

Railway communication in Missouri is quite extensive, numerous lines crossing the State in all directions, and connecting her distant portions with each other as well as with the neighboring States. To her railroads, previously in operation, there was an addition made during 1869 of not less than 360½ miles, begun and completed within the year. At the close of this period, 1,035 more miles were in course of construction. A number of new lines had also been projected, and their actual construction was looked upon as near at hand.

It is expected that the State will reap great advantages from the Illinois and St. Louis Bridge, when finished, as a means of communication. The plan of this vast enterprise has been long maturing, and the 27th day of October, 1869, witnessed the beginning of its construction; the foundation of the eastern pier having been laid on that day, when 12 huge blocks, weighing 8½ tons each, were, by appropriate machinery, placed in their permanent position at the bottom of the river. The bridge is to consist of three arches, besides the abutments and approaches; the middle arch measuring 515 feet in length, the side ones 491 feet each. The materials, whereof the bridge will be composed, are wrought and cast iron and steel for the arches and other accessory parts of various description of work; while the piers will be of masonry-work, with facings of quarry-granite from Virginia. The bridge will be con-

structed of such capacity as to afford independent passage to railway-cars, vehicles of all descriptions, and foot-passengers at the same time.

Public instruction is well favored by the government and citizens of Missouri. The State constitution provides for it as follows: "A general diffusion of knowledge and intelligence being essential to the preservation of the rights and liberties of the people, the General Assembly shall establish and maintain free schools for the gratuitous instruction of all persons in this State between the ages of five and twenty-one years."

The Governor avers that "there is a most healthful school sentiment in the State," although there may have been injudicious and indiscreet taxation in some cases, and perhaps "too much power placed in the hands of school directors; with some other irregularities or defects that might call for a remedy." The people seem to be rather heavily taxed on account of schools. But the free-school system itself is spoken of with disapprobation, on principle, by many citizens, who regard it as inefficient, but only onerous to tax-payers, without their reaping from it the beneficial results which it was intended to produce. A public paper in Jefferson City, in its issue of December 8, 1869, makes some noteworthy statements in regard to the State Free School established in the capital, and the use, or rather no use, made of it by many residents, who, rather than send their children to the Free Public School in the city, prefer to send them to other paid schools. It says:

The Public School, with tuition free, has only 400 scholars. The two other schools, charging from 75 cents to $3 per month, have 237 scholars. The Catholic school 164, the Episcopal 73. Ninety-eight resident heads of families prefer the Catholic school to the Free School; twenty-nine heads of families prefer the Episcopal. Total 127.

We now come to the proof that the present mode of applying school-tax is sheer robbery. Nineteen individuals, sending their children to the Episcopal school, pay a school-tax, going to support the Public School, of $724. Fifty-one individuals, sending their children to the Catholic school, pay a similar tax of $1,204. In short, seventy persons pay $1,928 to a school which they derive no benefit from, and which they will not use. What is a school worth when a man will pay a premium to be exempt from sending to it? It will not do to say that there are denominational causes for this. Among the patrons of the Episcopal and Catholic schools are Unitarians, Lutherans, Presbyterians, Methodists, Baptists, and free-thinkers. Neither will it do to say that their patrons are enemies of the free-school system, for among them we count two of the school directors. The truth is, that all municipal laws, dictating a particular system of education, have no more foundation in good sense than the old sumptuary laws that regulated the length of a boot or the dimensions of a skirt. Parents are more interested in their own children than anybody else, and know more about their wants and necessities. The education of children should be adapted to their future vocations, needs, and capacities. It is for this reason that we say: "Let every parent select the teacher of his own child, and let the school-tax that he pays go to the school that he may select."

With regard to "Normal Schools," the necessity of providing for an efficient corps of teachers by legislative action has become evident.

The permanent Common-school Fund consists of

Six per cent. United States bonds (gold) held by the State Treasurer	$1,567,850 00
Six per cent. Missouri bonds, held by the State Auditor	20,000 00
Money in the Treasury, to be invested,	29,512 67
Total	$1,617,362 67

The sum of $100,000 in six per cent. United States bonds (gold), held by the State Auditor, constitute a permanent "State Seminary Fund." The amount of $218,740.64 was transferred last year to the School Fund, and $11,483.38 to the Seminary Fund.

To the School Fund belong also the swamp-lands, granted by the Federal Government for school purposes, though it has sold a portion of them to the amount of some 400,000 acres. Proof relating to 215,000 of these acres has been already given to the Federal Government in behalf of the State, and that for the rest will follow; the General Government agreeing to indemnify the State on account of the said lands, about one-fourth in scrip, and three-fourths in money. The Registrar of Lands has patented 1,033,000 acres of swamp-lands to the several counties of the State, and some counties have sold them. The Legislature is urged to cause the legality of these sales to be inquired into, as they are subject to strong suspicion of unfairness and malpractice. The sale of 10,000 acres was effected in Vernon County at the rate of one cent per acre.

By an act of Congress dated July, 1862, the Federal Government made a general donation of lands, for the purpose of encouraging and promoting agriculture and the mechanic arts throughout the Union; the leading object of the donation being to aid the States and Territories in the establishment of colleges, in which, "without excluding other scientific and classical studies, and including military tactics," such branches of learning should be taught "as are related to agriculture and the mechanic arts." This grant was made on the condition that "the previous assent of the several States shall be signified by legislative acts;" and further that "any State, which may take and claim the benefit of the provisions of this act, shall provide, within five years, at least not less than one college, as described in the fourth section of this act, or the grant to such State shall cease." By a joint resolution adopted by both Houses of the General Assembly, approved March 17, 1863, the State of Missouri accepted the grant "with all the conditions, restrictions, and limitations," but has not fulfilled the other condition of providing for such a college within the fixed period of five years, which expired March 17, 1868. With a view to replace the State in a condition to partake of the benefits of such a grant, the

Governor requested the General Assembly "to take prompt action, and, when such college is provided, have Congress properly informed that such general legislation may be had as will make valid the selections of land already made under the grant, and entitle the State to select the remainder."

The charitable institutions of the State appear to be in a satisfactory condition and managed by efficient officers, and their interests carefully attended to. The average number of convicts detained in the State Prison, during 1868, was 702; in 1869 it was 734; at the close of the year there were 740 (males), all of them confined at night in cells originally intended for 356. A new cell-building has been in progress of erection, and will be covered this year with a roof. A necessity of enlarging the prison-yard wall, and building an adequate number of workshops within, exists. By this means the establishment will be made self-sustaining through the accumulated earnings of the convicts, as all of them might then be working for compensation, either by hired contractors, according to the present system, or otherwise; whereas, now, only a part of their number can be thus profitably occupied; though the others also have been usefully employed in various works for the State, which, however, does not appear among the figures of income from convict-labor in the books of the Penitentiary. The receipts from the labor of convicts hired by contractors were $33,489.27 in 1868, and $34,716.19 in 1869. The financial condition of the prison on December 6, 1869, as stated in the Factor's report, was: "cash on hand and other assets, $23,588.54; and the amount due to individuals, $59,595.17," leaving the establishment in debt at that time $36,006.63.

A Reform School for the confinement and correction of young offenders seems to be much needed, but not yet established, in the State of Missouri.

Prize-fighting is apparently not favored but rather discountenanced in Missouri. On January 19, 1869, a member of the Lower House introduced a bill "for the suppression of prize-fighting in the State, providing that participators, seconds, umpires, and spectators, shall be deemed guilty of high misdemeanor, and punished by two years' imprisonment at hard labor, or a fine of $1,000, or both such fine and imprisonment." The bill was referred to the Committee on Criminal Jurisprudence, who modified it, especially as to the persons to be punished; these being "the prize-fighters for money or other valuable property," and the penalty, "imprisonment of from six to twelve months, or a fine of from $500 to $1,000, or both." The bill was so reported to the House on February 8th, when it passed with a unanimous vote.

The original seal of the State, which had disappeared from the seat of government in 1861, when those who had it in custody joined the secession, was restored to its proper place last year by ex-Lieutenant-Governor Thomas C. Reynolds, after his return home from Mexico, where he had resided since the close of the war. A correspondence took place on this occasion between him and Governor McClurg, as follows:

ST. LOUIS, MO., *May* 26, 1869.

To His Excellency J. W. McClurg,
Governor of the State of Missouri.

SIR: Any hesitation formerly felt on principles of general public law, or on account of conflicting opinions within the State, to deliver to its existing government the original great seal of the State of Missouri, was removed by the fact that in November last, for the first time since 1860, State officers were chosen in profound peace, at an election held throughout its territory. I therefore to you, as the chief magistrate chosen at that election, herewith transmit it.

Now of no official value, it is still interesting as a relic of the time when civil war had not yet divided the Missourians. May its return be an augury of the speedy oblivion of past strife, and the complete restoration of fraternal feeling among us all!

I remain, sir, with great respect, your obedient servant,

THOMAS C. REYNOLDS.

STATE OF MISSOURI, EXECUTIVE DEPARTMENT,
CITY OF JEFFERSON, *May* 27, 1869.

To Hon. Thomas C. Reynolds.

DEAR SIR: The good old seal of the State and your accompanying letter were received this morning. I believe I will express the feelings and sentiments of every good citizen in saying that it is gratifying to witness not only the return of the old seal to its original and legitimate place from which it had unwarrantedly strayed, but the return of an old and influential citizen to his legitimate duties.

We will preserve and respect the seal as the original government seal of the State of Missouri, and admire it for its value, being founded in law, and will respect you for your manly and honorable expressions, and will reasonably expect from you the reflection of the character of one tried as pure gold in the refiner's fire. Such expressions from such a source, being a virtual candid acknowledgment of the authority of the government, do more for a speedy oblivion of past strife than volumes of abuse.

Be assured the present State administration desires such a restoration of fraternal feeling that the day may be hastened for the restoration of every political privilege consistent with State and national safety.

I have the honor of transmitting the seal to the Hon. Francis Rodman, the Secretary of State, its legal custodian, together with your letter and a copy of this acknowledgment.

I am, very respectfully,
Your obedient servant,
J. W. McCLURG.

Much of the attention of the General Assembly at the last session was given to political matters. The fifteenth amendment to the Constitution of the United States was ratified, but the act is regarded as defective, by reason that the joint resolution of both Houses adopted for the purpose, "in reciting the words of the amendment, does not include the second section." On this account, the Secretary of State of Missouri, by a letter dated January 4, 1870, requested the Secretary of State of the Federal Government "to cause an official copy of the fifteenth amendment, as passed by Congress, to be transmitted to his office." to the end that the General Assembly might duly

vote on it again, during their session of the present year. The Governor says he will lay an attested copy of the amendment before them "at an early moment," and recommends its ratification.

In behalf of the negroes residing in Missouri, whose number is set down at one hundred thousand, and who are excluded from representation at the ballot-box, Governor McClurg warmly recommends that an amendment to the State constitution "be proposed and submitted to the people for ratification or rejection at the next fall election," although the ratification of the proposed fifteenth amendment to the Constitution of the United States would dispense with the necessity of a popular vote upon the former in the State. He insists the more upon the action of the General Assembly in this matter, because for the extension of the elective franchise to the negroes there is no constitutional provision in the State constitution, "and without one, in the absence of Federal legislation, the State Legislature cannot admit them." He suggests that "the amendment might be proposed in such form as to empower the Legislature to admit them after the first day of January, 1871."

On the other hand, he calls, in favorable terms, the attention of the Legislature to the propriety and expediency of removing the political disabilities under which those citizens are now laboring who took part on the side of secession. He says: "As wayward States have been restored by Federal laws to their proper places to support and strengthen the Federal fabric, so it may be desirable, with those who have a right to decide, that it shall not much longer be considered in our State inconsistent with its safety to receive back, as supports, individuals whose ability to uphold was but too well proved by their ability to pull down." For the removal "of such disabilities as are now imposed upon those who are otherwise qualified as voters," no amendment to the State constitution need be proposed, a special provision having already been made in it, enabling the Legislature to remove them by their action, "after the first day of January, 1871." For rehabilitating the citizens here referred to, and practically restoring to them the elective franchise, only the expediency remains to be considered. In this the Governor suggests a preparatory method, saying that the subject can be discussed in the canvass preceding the election of next fall. The present Legislature may invite such discussion if thought best. Candidates for the next General Assembly can in part run upon the issue of favoring or opposing the removal of such disabilities. The Senators and representatives can come here prepared to reflect and to vote the sentiments of their respective constituencies, and a majority can exercise the power already conferred, and suspend or repeal the parts of the constitution referred to."

A more radical measure had been already proposed in behalf of the disqualified white citizens during the last session of the General Assembly. In the Senate a bill was introduced on January 18, 1869, simply "providing for an amendment to the constitution, by striking out all provisions which place white men under disability for acts of disloyalty, the question to be submitted to the people at the general election of 1870," which bill was referred to the proper committee.

An amendment to the State constitution in regard to common affairs is strongly recommended by the Governor to the Legislature at the present session, namely, "striking out what is commonly known as the double liability clause, whereby, as the constitution now is, the stockholders in private corporations 'shall be individually liable for the stock, and a further sum equal to it;'" such a clause being at the same time unjust and greatly injurious to the interests of the State, as it tends to hinder capital from being invested in enterprises which would otherwise be entered into by such corporations to the advantage of the Commonwealth. This matter also had been taken in hand at the last session of the Legislature; a bill was introduced into the House, and referred to the Committee on Constitutional Amendments, "proposing to submit to the people, at the next general election, an amendment to the constitution, changing section 6, article 8, in reference to the double liability of stockholders; the amendment providing that no stockholder shall be liable for a greater sum than the amount of stock owned by such stockholder."

The calling of a general convention of the people, for the purpose of revising and amending the State constitution, seems to have been in contemplation with many citizens. The Governor makes it the subject of a strong appeal to the Legislature, deprecating that any step should be made in such direction, regarding it preferable to tolerate, at least for a time, any objectionable provisons now forming part of the constitution, rather than to attempt to amend them by a convention of the people. This could not be done without a heavy expenditure of money, which the State, in her present financial condition, could not well afford to bear; besides that, according to a provision inserted in the constitution, "all needed amendments can be separately submitted to and voted upon by the people at the next general election, without additional expense."

The registration law, of which we gave an account in the CYCLOPÆDIA for 1868, and the manner wherewith it is administered by those in whose hands its execution has been placed, are loudly denounced by a large portion of the people and the press, especially in reference to the voting at the general State election, held in November, 1868. As an evidence of the truth of their charges, they refer to the official lists returned to the Secretary of

State, but kept long unknown to the public. These lists represent the "qualified" voters at that election to have been 166,509, and the "rejected" voters only 11,016; but the accusers point to the fact that fifty counties in the State returned no lists of the "rejected" voters, though the registration law absolutely prescribes it, and that five counties more returned no lists at all. Whatever was the cause of such an omission, they aver that the official lists themselves, if duly returned, would show the "rejected" voters in 1868 to have been not fewer than 20,000. They affirm further, that, besides these citizens excluded from voting after they had been registered, a large number of others presented themselves to be registered, but were refused registration, even for subsequent rejection, and a much larger number did not present themselves for registration at all, only to avoid enduring the insults and mortification which they were sure to meet with had they offered their votes. This last description of citizens is so numerous that, in St. Louis County alone, they are reckoned at from 8,000 to 10,000—so that the citizens of Missouri, who, at the election of 1868, were legally entitled to the exercise of the elective franchise, but, by the working of the registration law and the action of its executors, were unlawfully either refused registration or excluded from voting after registration, or kept from offering themselves as voters at all, are represented to have been at least 80,000.

MORAVIANS. The General Synod of the Moravian Church met at Herrnhut on the 24th of May, 1869, and adjourned on the 8th of July. It was the first session of this body held since 1857. It had been the intention to hold it in 1867, ten years after the last, but the preliminary steps occupied two years longer. By a fortuitous and happy coincidence, the year in which it was actually held was the centennial of the Synod at Marienborn, in 1769, at which the constitution of the Unity of the Brethren was framed. According to the modifications effected in the composition of this body by the Synod of 1857, deputies from the congregations were no longer present, but only representatives of the provinces. Of these there were twenty-seven, nine from each province. Besides these, six brethren from the missions, members of the elders' Conference of the Unity, bishops, and official members, swelled the number of voting members to fifty-four. Among the subjects that were considered by the Synod were the Saviour's government of His Church; the doctrine, the liturgy, church discipline, the ministry of the Word, ecclesiastical orders, the constitution of the Unity and its several provinces, foreign missions, the home-work of the three provinces, etc. Little essential change was made in what was already established.

In reference to church work, the Synod decided that the diffusion of their views in Bohemia and Moravia, the birthplace of this church, is an incumbency of the whole Unity, to be performed as Providence may open the way. The subject of the missions received especial attention, and it was decided that the ultimate aim in all the mission-fields should be to raise up a native ministry, and the establishment of self-sustaining congregations. The Synod sanctioned the establishment of a training-school at Nisky, in Prussia; the erection of a house for the accommodation of visiting missionaries at Kleinwelke, in Saxony, where the children of missionaries are to be educated; and the publication of a missionary periodical for use in the West Indies.

The following are the chief points of Moravian doctrine, as revised by the General Synod of 1869:

We regard every truth revealed to us in the Word of God as an invaluable treasure, and sincerely believe that the loss of life itself would be a trifling evil compared with the denial of any one of them. But most especially is this the case with that truth which the Renewed Church of the Brethren has ever regarded as her chief doctrine, an inestimable jewel which, by God's grace, she still holds fast:

"That whosoe'er believeth in Christ's redemption
May find free grace, and a complete exemption
From serving sin."

From this great truth we deduce the following points of doctrine most essential to salvation:

a. The doctrine of *the total depravity of human nature*—that there is no health in us—and that, since the fall, we have no power to help ourselves out of the bondage of sin.

b. The doctrine of *the love of God the Father*, who "has chosen us in Christ before the foundation of the world," and who "so loved the world that he gave his only-begotten Son, that whosoever believeth in him should not perish, but have everlasting life."

c. The doctrine of *the real Godhead and real manhood of Jesus Christ*; that God, the Creator of all things, was manifest in the flesh, and has reconciled the world unto himself—that "he is before all things, and by him all things exist."

d. The doctrine of *the atonement and satisfaction of Jesus Christ for us*; that he "was delivered for our offences, and was raised again for our justification," and that in his merits alone we find forgiveness of sins and peace with God.

e. The doctrine of *the Holy Ghost and his gracious operations*; that it is he who works in us the knowledge of sin, faith in Jesus, and the witness that we are the children of God, and that without him we cannot know the truth.

f. The doctrine of *the fruits of faith*; that it must show itself as an active principle by a willing obedience to God's commandments, flowing from love and gratitude, and that genuine faith *will* ever be thus distinguishable."

The following are the General Moravian Church statistics for 1868:

	Members.	Congregations.	Communicants.	Total
German Province		20	4,895	7,2[illegible]
British Province		48	3,208	5,44[illegible]
American Northern Province		44	5,680	10,11[illegible]
" Southern Province		10	1,088	1,74[illegible]
Missionaries and their children			305	4[illegible]
			15,176	24,9[illegible]

Seventeen bishops were living at the close of 1869, of whom five were in the United States, four in Great Britain, seven in Continental Europe, and one in Antigua, West Indies.

Sunday-Schools.	Scholars.	Teachers.
British Province	3,912	700
American Northern Province	5,430	558
" Southern Province	529	65
Missions	9,871	1,323

The Moravians have 87 mission stations in various parts of the earth, with 319 missionaries, 1,009 native assistants, having the care of 20,518 communicants, 24,916 non-communicants, and 22,814 baptized children. The increase of the missions, in 1868, was £21,401, and the expense £17,113. The sums raised by contributions of members or by trade in the various stations, and the special donations for school purposes, amounted to about £25,000. The total number of missionaries employed from the commencement of the missions, 136 years ago, was 1,350.

A Home Missionary Society has lately been established in the British provinces, to which there is an auxiliary in Yorkshire. The Irish Scripture-reader's Society also does mission-work in connection with the Irish congregations. There are five boys' and ten girls' schools and boarding-schools in England; seven boys' and ten girls' schools are enumerated on the Continent of Europe. In the United States, besides the theological school at Bethlehem, Pa., there is a ladies' school at the same place; and there are schools at Chaska, Minn.; in Bartholomew County, Ind.; Lancaster County, Pa.; Nazareth, Pa.; and Salem, N. C. Theological institutions are located at Gnadenfeld, Prussia; Fulneck, England; and at Bethlehem, Pa. There are schools for the children of missionaries at Fulneck, and at Kleinwelke, Saxony. A training-school has been established at Nisky, Prussia. The leading Moravian periodicals are, the *Moravian*, at Bethlehem, Pa.; the *Messenger* and *Periodical Accounts* (Missionary), in England; the *Brüder Bote* and the *Herrnhut*, in Germany.

The following is the condition of the principal church funds in the British provinces: ministers' fund, £6,192 7s. 6d.; income, £418 14s. 10d.; sustentation fund, £5,156; ministers' children's fund, £4,998 13s. 4d.; training institution fund, £2,160 7s. 10d.

British societies in aid of the Moravian missions are, the London Association, the Edinburgh Association, and the Glasgow Auxiliary.

MOUSTIER, Léonel, Marquis de, a French statesman and diplomatist, born in Paris in 1815; died in that city, February 5, 1869. He was the eldest son of the Marquis Clemen Edouard de Moustier, Comte de Frotte. He was educated for the diplomatic career, elected member of the Legislative Assembly for the Department of Doubs, May 13, 1849; was ambassador at the court of Berlin from March, 1853, to November, 1859; ambassador at Vienna from December, 1859, to August, 1861; ambassador at Constantinople from August, 1861, to September, 1866; and appointed Secretary of State for Foreign Affairs on the 2d of September, 1866, which place he held up to December, 1868, when he resigned in consequence of his failing health, impaired by his long residence in the East, and was made Senator, and was succeeded by the Marquis de La Valette. While filling the Department of Foreign Affairs, the marquis was supposed, incorrectly it is now said, to represent the war policy of the empire, and, in particular, to have urged an aggressive interference in the affairs of Germany, with a view to preventing the consummation of German unity. His health since the period of his appointment to the Senate, had been steadily and perceptibly declining. His retirement from the Foreign Department was very generally, though perhaps erroneously, regarded as a manifestation on the part of Napoleon III. of his abandonment of a war policy toward Prussia, and the news of it was joyfully received at the Prussian court.

N

NAVY, UNITED STATES. The Navy of the United States at the commencement of the political year, on March 4, 1869, consisted of 203 vessels of all classes and in every condition. Their aggregate tonnage was 183,442 tons, and when in commission they were calculated to carry 1,366 guns, exclusive of howitzers. As regards steam or sailing vessels, excepting the iron-clads, which are all steamers, of the wooden ships 32 were sailing-vessels; 53 were steamers with some auxiliary sail-power; 44 were steamers without any efficient sail-power, and 22 were without sail-power of any kind. The whole force effective for immediate service at the beginning of the political year was 43 vessels, including storeships, mounting 356 guns of every calibre, and attached to fleets; six others, mounting 36 guns, were in commission for special service, besides six at the various stations used as receiving-ships, with fourteen tugs and small vessels. The remainder of the navy not in commission consisted of 46 iron-clads and monitors of every class, laid up at the various stations. Of this number 32 have been condemned and ordered to be sold as not adapted to the service, of which 26 have never been in commission. All of these iron-clads would require a thorough overhauling and expensive repairs to hulls, turrets, and machinery, before they could be got ready for service. There are 22 vessels on the stocks unfinished, and 66 laid up in ordinary, or unfit for active service in the future.

The North and South Pacific stations were combined into one, the Pacific station; the

others, known as the North and South Atlantic, the European, and the Asiatic, remain unchanged.

Within the limits of these stations are comprised most of the ports and sea-coasts of the known world. But the force assigned to afford protection to American interests is small compared with that which some other nations send on the same duty. Cruising upon the same seas, and with duties not more various and extensive, France has over 150 ships in commission, of a tonnage of 250,000 tons, while England has crowded into the same area no less than 191 ships, with a tonnage of 328,000 tons, with a flying squadron ready to rēenforce her power whenever occasion may require.

Of the 43 vessels which composed the American fleet, not more than 18 were in a condition for real service. And most of them were steamers without sufficient sail-power. With mere steam-vessels there exist the disadvantages of complicated machinery, worn by constant use, and exposed to derangement on foreign seas, more easily disabled in battle and storm, and they afford no school of seamanship to officers or men. Besides, only a few war-steamers can carry coal for more than ten days' use, and even a portion of this time must be consumed in seeking a new supply. The decay of the monitors has served to increase the weakness of the effective force. Little care has been bestowed upon them. Hulls, turrets, and machinery, the most costly and powerful, have been exposed to the direct action of the elements, and not one of the whole fleet could have been ready in time to resist a sudden attack. In the opinion of the Secretary, the condition of the Navy at the beginning of the year was at a low ebb. Calling into activity the best professional ability in every bureau and department of the service, the task of reorganizing the material, as far as consistent with present laws, was undertaken. Work was renewed at all the navy-yards, and, as fast as possible, the ships in ordinary were put in condition for service. Those in commission, as fast as they could be spared from their stations, were also repaired. More than half of the Pacific fleet have been repaired at Mare Island; and nearly all the vessels of the North Atlantic fleet have, from time to time, been sent home for that purpose. The work was also renewed, and actively pushed, on all the available ships at the several yards. By this means the various squadrons have been rēenforced to some extent. At the same time, to secure the greatest amount of efficiency with the greatest economy, all the steamers which have been repaired have been given full sail-power, and rerigged, so that, without interfering with their speed or effectiveness under steam, they are now entirely independent of it, and are enabled to cruise wherever required, or, if need be, to go round the world without deterioration of boilers or machinery, and without consuming their coal, which is thus reserved for times of necessity and danger. The ship-rig considered the most efficient for cruisers has already been given to 40 vessels of this class. The success which has attended this plan has illustrated its wisdom. The capacity of the vessels for every service is proved by trial to have been greatly improved without loss of speed or efficiency when under steam. Many of the foreign coal-stations have been discontinued, and orders were issued to the commandants of squadrons directing them not to permit the consumption of coal for any purpose which could be as well performed under sail.

The North Atlantic station embraces the entire eastern coast of North America, and that of South America as far as Cape Orange, near the mouth of the Amazon, extending eastward to the 43d degree of longitude west of Greenwich. The squadron on this station consisted, during the year, of the Powhatan, Tuscarora, Severn, Albany, Nantucket, Nipsic, Seminole, Swatara, and two heavy iron-clads, the Saugus and Dictator, with tugs, making 12 vessels, mounting 76 guns, and commanded by Rear-Admiral Hoff, who was relieved on September 15th by Rear-Admiral Charles H. Poor. In consequence of the imperfect condition of the vessels, a limited force was shown in the West Indies.

The present commander of the squadron has been directed, while preserving strict neutrality between the contending powers in Cuba, to permit no injustice to citizens of the United States, to prevent interference with American commerce, and to repel and punish any disrespect or violation of the flag. Some of the vessels cruised among the islands, more particularly in the waters of Hayti and St. Domingo. A part of this island being in a state of revolution, made a more important demand upon the service than it was fully able to meet.

The South Atlantic station embraces the east coast of South America, from Cape Orange to Cape Horn, extending across from the former point to St. Paul de Loando, and along the southwest coast of Africa to the Cape of Good Hope. This squadron consists of the Lancaster (flagship), Quinnebaug, Wasp, and Portsmouth —four vessels, mounting forty-three guns, and under the command of Rear-Admiral Joseph Lanman.

In consequence of the war existing between Brazil and Paraguay, the Navy has been frequently called upon to afford protection to American citizens and interests in that latitude, and the Department designs to send there, as soon as practicable, vessels of light draft, which will be able to ascend the rivers of the Argentine Confederation and Paraguay.

The Pacific station is one of great extent and importance, embracing the entire western coast of both North and South America, extending westward to the 170th degree of west longitude, and thence along the equator south of it

to the 115th degree east, taking in New Zealand, Australia, and New Guinea, together with the Feejee and other groups of the South Pacific Ocean. The naval force on this station is looked to for any needed protection to the interests of the Government and people in all the waters of the Pacific; along the great isthmus and the whole coast of South America; the whaling and fishing fleets in the North Pacific; the growing commerce with the Sandwich Islands, China, and Japan; the newly-acquired interests in Alaska and the adjacent islands; and to the traders, representatives, and missionaries, scattered among the barbarous or half-civilized tribes which people the Pacific groups.

This station was divided into two squadrons, denominated the North Pacific and the South Pacific squadrons, commanded respectively by Rear-Admiral Craven and Rear-Admiral Turner —the North Pacific squadron consisting of eight vessels, mounting in all 78 guns; and the South Pacific squadron, consisting of six vessels, mounting in all 49 guns. Since the coming in of the present Administration, for the purpose of readier communication, and to give to the small force in this extended field greater efficiency and facility for combined action, these two stations have been consolidated into one, with a single fleet of two divisions, each under the immediate command of a commodore, with the whole under the general command of a rear-admiral.

The Pacific fleet, under command of Rear-Admiral Turner, with Commodore William Rogers Taylor and Commodore D. McDougal commanding the respective squadrons, consists of 14 vessels: the Kearsarge, Lackawanna, Ossipee, Mohican, Resaca, Cyane, Jamestown, Saginaw, Dakota, Saranac, Nyack, Onward, and the Guerriere, with the Pensacola as flagship; mounting in all 129 guns.

A ship-of-war has been stationed on the coast of Alaska since that country was ceded to us, and the sloop-of-war Cyane, with a properly-equipped steam-launch, has also been sent there, as additional force during the winter.

An astronomical party was conveyed to Behring Strait in the Mohican, and an interesting account of their observations will be found in the report of the Superintendent of the Naval Observatory.

The rear-admiral commanding the station visited the Sandwich Islands during the summer, for the purpose of communication with our minister, and looking after American interests in that locality. He was also charged with the superintendence and completion of the surveys of the Midway Islands, for which and for the purpose of removing obstructions Congress made an appropriation at its last session.

The naval operations on the Pacific for the year will be found to have been well performed, covering the extent from Alaska to Cape Horn, and including the islands of the Pacific.

The trade on that ocean is constantly and rapidly increasing, and American citizens are found located everywhere on its shores and among its islands. All the groups are visited by whalers, and many Christian missionaries, who are entitled to the protection of the Government, are scattered among them. The regions of the South Pacific have not been visited by an American vessel-of-war since the exploring expedition under Captain Wilkes, and the great Polynesian Archipelago, holding out many inducements to our commerce, has been but partially explored and surveyed.

The sloop-of-war Kearsarge was sent to make a limited reconnoissance of the Pacific islands, with orders to extend her cruise as far as Australia, where she was last heard from.

The Jamestown was subsequently sent with orders to visit the Feejee Islands and the Caroline group, for the purpose of investigating reported outrages on American citizens, and looking after the interests of the United States in that quarter.

The European station embraces the Atlantic, with its connecting waters, north of the equator, and as far as the forty-third degree west from Greenwich, and includes the whole west coast of Europe, the Mediterranean and its communicating seas, and the coast of Africa as far as St. Paul de Loando.

The squadron, under command of Rear-Admiral Radford, has been reënforced by the Juniata and Supply, and the Sabine. It consists now of these vessels, with the Richmond and Plymouth, and the Franklin as flagship—six vessels, mounting 106 guns.

The Asiatic station embraces the eastern coast of Asia, around to Hindostan, and thence to the Cape of Good Hope, taking in Java, Sumatra, Borneo, the Philippine Islands, Japan, and the waters of Western and Southern Asia and Western Africa.

The squadron consists of the Piscataqua (flagship), Oneida, Monocacy, Iroquois, Ashuelot, Unadilla, and Maumee, and the Benicia, Colorado, and Alaska, are also fitting out for that station—making in all 10 ships, mounting 72 guns. It is commanded by Rear-Admiral Stephen C. Rowan. Three of these ships were condemned as entirely unseaworthy, unfit for cruising, except in rivers, and unsafe to be sent to the United States; and, as there was no opportunity of repairing them in those waters, the admiral in command recommended that they be sold on the station. The Department, therefore, directed that, when it shall be no longer possible to use them with safety, their armament and stores be removed and sent home, and the vessels themselves sold to the best advantage. This order has been carried out in the case of the Aroostook, which was also condemned.

During the civil war in Japan the presence of our war-vessels was felt to produce a very beneficial effect. Carefully observing a neutral policy themselves, they gave security to American citizens and prevented much threatened

injury to American interests. Rear-Admiral Rowan was directed to afford every facility at his command to citizens who are endeavoring to obtain from the Chinese Government permission to lay an electric telegraph. Should they obtain the desired permission, an officer was to be detailed to represent the United States in the undertaking.

The state of the active force of the Navy, and the service which it has rendered during the year, are shown in the preceding statements. The views of the Government relative to the future of this arm of national defence are stated in the report of the head of this Department. He says:

The time has come, I think, when we should begin to use the knowledge we have been seeking, and I therefore earnestly urge the propriety of commencing at once the building of seagoing iron-clads, suitable to cruise on foreign stations, and able to protect our commerce and vindicate our principles in any emergency. We should aim to have one or more of these ships on each foreign station, and to be prepared with the necessary reliefs. This will ultimately require no less than ten in all; and, without attempting to build them all at once, we should (admonished of the urgency of the case and of the time necessarily consumed in their construction) commence immediately on no less than four—one for the Asiatic, one for the Pacific, and two for the European squadron; following these, as rapidly as circumstances will admit, with those necessary for the other squadrons and their reliefs. I recommend that plans for the boilers and engines of these vessels be submitted by persons outside of the navy, the best of which may be adopted.

These, with some additions to our wooden vessels and the refitting on the plan adopted, and the proper employment of such effective ships as we now have, and with our monitors and torpedoes for harbor defence, will give us the nucleus of a navy—not, indeed, proportioned to our commerce or approaching the force of other maritime powers, but sufficient to command respect abroad, and to afford time, in case of sudden war, to organize and apply the resources of our country and the energies of our people.

During the year a torpedo corps was established under the Bureau of Ordnance, to make experiments, take charge of the apparatus, and perfect a system for the application of this means of defence to the coasts and harbors.

Enough experiments have already been made to show how valuable, as well as terrible, is this means of defence; and to convince all having knowledge of it that when it shall have been further perfected, and its use systematized, the torpedo will be one of the most effective weapons of marine warfare. The torpedo corps has been selected with care, and the experiments are conducted under the supervision of an officer of scientific ability. As soon as a torpedo is constructed, and the particular locality and manner of its use determined, it can be stowed away as an inexpensive but most effective weapon of war.

This means of defence, properly applied in conjunction with a system of harbor obstructions, backed by monitors and supported by the forts and water batteries which command the narrow entrances to the principal harbors, would defy any power which could cross the ocean to attack them.

These localities have been the subject of careful inspection by both branches of the military service, and both are thus prepared with the knowledge which only actual inspection can give.

There are seven regularly-established navy-yards, of which only four are capable of fitting out more than two or three vessels at a time. A board was appointed during the year to make an examination of their condition, which presented a very complete and instructive report to the Department.

The number of men in the service last year was 8,000. The estimates of the present year are made on a basis of 12,000. The expenditures during the fiscal year ending June 30, 1869, were $20,000,757.

During the year a board of officers was convened by order of the Department, to take into consideration the subject of assimilated rank between the officers of the various corps of the Navy. They made a report, which resulted in a bill that was laid before the Naval Committee of the House. The views of the Secretary on the subject, expressed in a letter to that Committee, were as follows:

It will be perceived that its provisions for the benefit of the various auxiliary corps of the Navy, while they are considerably more liberal than those of the bill which passed the Senate at the last session, do not include so great a number of officers in the higher grades as was agreed to by the Board of Officers, nor even so many as are suggested in the letter of the vice-admiral. This is a question of much personal interest, and calculated to excite considerable feeling; and he has hesitated long before differing in this point from so many experienced officers, but he felt that their views had been somewhat influenced by deference to the claims of individuals, and a desire to compromise a much-vexed and difficult question. While he was not authorized to yield for such reasons what seemed to him in this respect to be for the public good, he has been constrained, while recommending a much larger number of pay medical and engineer officers of the higher grades than was provided by the Senate bill, at the same time to reduce the number reported by the Board, believing the number to be larger than a fair adjustment of public or personal claims requires or will allow. The bill proposed by him gives the auxiliary corps twenty-eight captains in all, certainly a full proportion; also forty-five commanders ranking with lieutenant-colonels, which, with the thirty-one officers of higher grades, gives them seventy-six officers ranking with or above lieutenant-colonel in the Army. He has retained in the bill eight chief engineers and constructors of machinery, in view of the number required at the various navy-yards and stations, and also followed the recommendation of the Board in regard to officers on the retired list, as this seemed to manifest a proper respect for seniority and confer suitable reward for long-continued service, without doing injury to anybody. The Board made no recommendations in regard to the rank of assistant and past-assistant surgeons, paymasters, and engineers, and he recommends that this remain as it is now fixed by law—namely, with and next after lieutenants and with and next after masters. He has substantially followed the recommendations of the Board in regard to the precedence of the executive officer, because it seemed to him clearly right and necessary to discipline and efficiency. The recommendation of the Board and the bill proposed that this officer shall, as far as practicable, be next in line

of rank to the commanding officer, and confine his precedence to the officers attached to the organization of which he is the representative head, while they are in the discharge of his duty connected with such organization. In addition to other features, the bill recommends a reduction of officers of the marine corps, as well as a change in the proportions and a reduction of the number of line officers of the Navy. Thus, he has recommended a large reduction in the number of lieutenant-commanders and an increase of lieutenants; a diminution of the number of ensigns and an enlargement of the number of masters—endeavoring at once to promote a wise economy and to bear constantly in mind the actual necessity of the service, and the best method of insuring its efficiency.

The Board of Visitors to the Naval Academy at Annapolis made a report of much interest. It stated that the Board assembled on the 20th of May, and attended all the public exercises of the midshipmen. They carefully observed the general tone, bearing, and air of all connected with the institution, in all exercises and at all hours, whether on or off duty; examined into the condition of the grounds, buildings, vessels, apparatus, and appurtenances of all kinds, for evidence as to the thoroughness and vigor of its government. Since the late war the grounds have been enlarged, both by purchase and by filling upon the water-front. The chapel, new quarters, and several other buildings, have been erected. The former residence of the Governors of Maryland has been purchased and converted into a commodious library and superintendent's offices, and the grounds have been greatly improved. In whatever respect it is viewed, the institution exhibits clearly the effects of the interest Vice-Admiral Porter has felt in it, and of his very vigorous and able administration of its affairs.

Upon the inauguration of President Grant, he appointed Adolphe E. Borie, of Philadelphia, Secretary of the Navy, who held the position until June 25th, when he resigned, and was succeeded by George M. Robeson, of New Jersey.

Perhaps it may not be out of place to mention here the boat-race on the river Thames, in England, in which the competitors were students of Harvard College, Massachusetts, and Oxford University, England. The course was from Putney to Mortlake, on the Thames. It has been the scene of annual contest between students of Cambridge and Oxford for many years, with the following results:

Year.	Winner.	Course.	Time.	Won by.
1860..	Cam'ge.	Putney to Mortlake.	26m.	A length.
1861..	Oxford.	Putney to Mortlake.	23m. 27s.	48s.
1862..	Oxford.	Putney to Mortlake.	24m. 40s.	30s.
1863..	Oxford.	Mortlake to Putney.	25m. 45s.	42s.
1864..	Oxford.	Putney to Mortlake.	21m. 48s.	23s.
1865..	Oxford.	Putney to Mortlake.	21m. 23s.	13s.
1866..	Oxford.	Putney to Mortlake.	25m. 48s.	15s.
1867..	Oxford.	Putney to Mortlake.	22m. 39s.	Half l'gth.

The race took place on August 27th, and the Oxford crew were the winners by a length and a half—just 6 seconds. Time 22m. 41½ sec.

NEBRASKA. One of the central States of the American Union, having the Missouri River for its eastern and northeastern boundary, Dakota on the north, Wyoming on the west, and Kansas on the south. Area, 79,995 square miles, or 48,636,800 square acres. Population estimated at 100,000. Capital, Lincoln, Lancaster County. Real estate, in round numbers, $13,000,000. Personal property, $28,000,000. Annual product of skilled and unskilled labor for 1869, $18,000,000. For some years after the establishment of its Territorial government, Nebraska made a very slow growth, its sister Territory, Kansas, for a variety of reasons, attracting most of the immigration. It was not till the commencement of the Pacific Railroad in 1862–'63, that its active development commenced. In 1860 it had a population of only 28,842, and at the beginning of 1862 probably even a smaller number. Since the work of construction was actually commenced on the great trans-continental railway, the growth of the Territory (a State since February, 1867) has been steady and rapid, not only along the line of the railway, but in other sections of the State; and this growth is likely to continue and increase, from the rare advantages which it offers to immigrants in climate, soil, admixture of timber and prairie lands, and accessibility to good markets through its completed and projected lines of railway. Omaha, its principal town, though not now its capital, has had a wonderful growth, and, as the starting-point of the Union Pacific Railroad, must be a place of large business, and probably one of the most considerable cities created by that great thoroughfare. Its population, according to an enumeration made in 1869, exceeds 25,000, and is rapidly increasing, from the extensive business brought there by the Pacific road and other enterprises.

The State is for the most part well watered, not, indeed, with navigable streams, but with rivers which fertilize its soil, and add greatly to the beauty of its scenery and to its manufacturing facilities. The Nebraska, or Platte, with its northern and southern forks, divides the State from west to east into two slightly-unequal parts, discharging its waters into the Missouri, which, as we have already said, forms the entire eastern and northeastern boundary of the State. Besides the Platte, there are in Northern Nebraska two other important affluents of the Missouri, the Niobrara, called by the French *Eau qui court*, "the water that leaps," and the White Earth River. South of the Platte are the Great and Little Nemaha, and the two important tributaries of the Kansas River, the Big and Little Blue, while, farther west, we have the Republican Fork of the Kansas, a stream hardly inferior to the Kansas itself. To these are also to be added the larger affluents of the Nebraska or Platte itself, the Elkhorn, Loup Fork, Carrey's Fork, and Wood River, all fine, large streams. These and their numerous tributaries, with the abundant springs and branches which are found all over the State, make it any thing but a waterless desert, as a portion of it has been described. When it was the home

of the Omahas, the Sioux, and other Indian tribes, and the buffaloes in large herds roamed over its vast plateaus and prairies, the grass was burned almost every season, and the forest-trees were thus prevented from growing, except in the river valleys; but, with the checking of this practice, the trees are springing up over large districts of the as yet uncultivated prairie, and are causing a greater humidity of the climate. The settlers of the State are also planting forest-trees in large numbers.

The soil of Nebraska is very rich and arable. A fine vegetable mould, porous and friable, covers most of the surface, to the depth of two or three feet, and below it is a light and easily-cultivated loam. Beds of disintegrating limestone, plaster, and other lime and sand stones are to be found in different parts of the State. Quarries of excellent building-stone, limestone, magnesian limestone and brown sandstone abound. Southern Nebraska is underlaid, for the greater part of its extent, with coal of the best quality, at a depth never exceeding 500 feet, while the veins crop out near the surface.

Perhaps no State in the Union has so small a proportion of untillable land. There are a few patches of drift-sand and a small tract of what the French called the Bad Lands (*Mauvaises Terres*) in the western part of the State, but even these will yield moderate crops if irrigated. Much of the land is admirably adapted to the growth of cereals; wheat, in particular, yielding from 25 to 30 bushels to the acre, and of a quality so excellent that Nebraska wheat commands a better price in the markets than that grown in any other of the prairie States. Maize, or Indian-corn, is also a crop which will generally yield good returns. The western portion of the State, being considerably higher than the eastern, is a fine grazing-country, and immense herds of cattle from Texas, the Indian Territory, and Kansas, are already driven to its rich and nutritious pasture-lands, to be shipped, when fattened, eastward.

This young State is destined soon to be traversed in all directions by railroads. The Union Pacific Railroad, following, after the first few miles, the valley of the Platte, bisects the State from east to west, almost five hundred miles of its track being within the limits of the State, and furnishing ready communication with all its central counties. From Omaha, railroads extend to Chicago, to Sioux City, to St. Joseph, Mo., to St. Louis, to Hannibal, Mo., to Atchison and Leavenworth, Kansas, and other points south of that city. There are also already completed in the State, a road from Missouri Valley Junction, Iowa, to Fremont, called the Blair cut-off, on the Union Pacific, 37 miles in length, and shortening the distance from the Missouri River to the Union Pacific Railroad about 21 miles; the central branch of the Union Pacific, starting from Atchison, Kansas, and entering Nebraska in the valley of the Republican Fork, and pushing on toward Fort Kearney. It is now completed nearly to the State line. Of the projected or partly completed roads, one line will connect the Pennsylvania Central, through Iowa, across the Missouri at Nebraska City, along the valleys of the Weeping Water and the Wauhoo with the existing great line across the continent. A branch will run from Ashland up the valley of Salt Creek to Lincoln. This road is now in progress, and is to be in operation west to Ashland and Lincoln by the 1st of March, 1870. An extension of the Burlington and Missouri road will cross the Missouri at Plattsmouth, and thence continue through Lincoln westward to some point on the Union Pacific. It is now partly graded, and will be running to Lincoln early in the Spring of 1870. An extension of the Hannibal and St. Joseph Railroad is to cut diagonally across the whole State of Nebraska, passing through Lincoln, across the Union Pacific at Columbus, and eventually over the northwestern section of the State, to the extreme northern boundary-line at the mouth of the Niobrara River. Another line is to cross the Missouri at Brownville and continue on to the Pacific road at a point as far west as may be deemed desirable. Then there are lines projected west from Omaha, and along part of the valley of the Elkhorn into Northern Nebraska.

The State has granted 2,000 acres of land to the mile, to all new railroads, until the lands set apart for that purpose, 425,000 acres, shall be exhausted.

Large and bountiful provision has been made for the encouragement of education in the State, university, college, normal school, and public school lands being granted liberally. A normal school was founded at Peru, Nemaha County, in 1867, and is prospering. The Legislature in February, 1869, passed a very elaborate school law, covering all points of public-school education in its ninety-five sections. It provides for a State School Superintendent, county superintendents, who shall examine the teachers, granting certificates in three grades of attainment, and visit and superintend the schools of the county; and District Boards of three members, serving three years (one to go out of office each year), districts of over 150 children having six trustees in their Board. The district Board to have under their charge the assessment of the school-tax (all schools to be free), the erection of school-houses, and the providing for the schools. The District Boards to be elected by the tax-payers of the district, male and female, over twenty-one years of age. The County Superintendent to be elected by the legal voters of the county, and to hold office for two years. The State Superintendent to be elected at a general election, and hold office four years. Provision was made for holding Teachers' Institutes of high grade, in different sections of the State, besides the

county institutes, to be held by the County Superintendents under the supervision of the State Superintendent, who was also required to apportion school moneys, decide upon the text-books to be used, compile and distribute the school laws and acts relating to school lands, lecture at the Teachers' Institutes, make out an elaborate and complete report of the condition of the schools of the State each year, and perform such other duties as his position required.

There were no elections held in the State during the year 1869, for members of Congress, a Legislature, or State officers. The Legislature was in session at its new capital, and passed a number of excellent acts which cannot fail to promote the future interests of the State. The most important of these, after the school law already referred to, were:

1. An election law, the 29th and 30th sections of which define who may be an elector and how he shall vote; while the 46th makes the only reservation in regard to disqualification of voters. It will be seen that insane persons and idiots are not by this act excluded from suffrage, though this defect is remedied in the registration act. The sections named are as follows:

SECTION 29. Every male citizen of the United States and he who, in accordance with the laws of the United States, files his declaration of intention to become such, and who has attained the age of twenty-one years, and shall have been an actual resident of this State for six months, of the county forty days consecutively, and of the precinct or ward where he intends to vote, ten days next preceding the election, shall be entitled to vote at any election in this State, and the registrars of the several counties in this State, in determining the residence of a person offering to be registered, shall be governed by the following rules so far as the same may be applicable:

1. That place shall be considered and held to be the residence of a person in which his habitation is fixed without any present intention of moving therefrom, and to which, whenever he is absent, he has the intention of returning.

2. A person shall not be considered or held to have lost his residence who shall leave his home and go into another State or Territory, or county of this State, for temporary purposes merely, with the intention of returning, provided that six months' consecutive residence in this State shall be necessary to establish a residence within the meaning of this act.

3. A person shall not be considered and held to have gained a residence in any county of this State into which he shall have come for temporary purposes merely, without the intention of making it his residence.

4. If a person remove to another State or Territory intending to make it his permanent residence, he shall be considered and held to have lost his residence in this State.

5. If a person remove to another State or Territory intending to remain there for an indefinite time, and as a place of present residence, he shall be considered and held to have lost his residence in this State, notwithstanding he may intend to return at some future period.

6. The place where a married man's family resides, shall generally be considered and held to be his residence; but if it is a place of temporary establishment only or for transient purposes, it shall be otherwise.

7. If a married man have his family fixed in one place, and he does his business in another, the former shall be considered and held to be the place of residence.

8. The mere intention to acquire a new residence, without the fact of removal, shall avail nothing, nor shall the fact of removal, without intention.

9. If a person shall go into another State or Territory, and while there shall exercise the right of a citizen, by voting, he shall be considered and held to have lost his residence in this State.

SEC. 30. Each elector shall, in full view of the people assembled at the polls where he offers to vote, deliver in person to one of the judges of election, a single ballot, or piece of paper, on which shall be written or printed the names of the persons voted for, with a pertinent description of the office which he or they may be intended to fill.

* * * * * * *

SEC. 46. Every person who shall be convicted and sentenced to be punished by imprisonment in the penitentiary, as herein provided for, or who shall be convicted of, and sentenced for bribery, under the provision of this act, shall be deemed forever after incompetent to be an elector, or to hold any office of honor, trust, or profit, within this State, unless such convict shall receive from the Governor of the State a general pardon, under his hand and the seal of the State, in which case said convict shall be restored to all his civil rights and privileges. No person who shall have been, or who shall hereafter be convicted of any crime in any court of record in the United States, punishable by imprisonment in the State prison or penitentiary of any State or Territory in the United States, or of the United States, shall be eligible to, and is hereby prohibited and disqualified from holding any public office of honor, trust, or emolument, either by appointment or the suffrage of the people within this State, and any person so as aforesaid convicted is hereby disqualified from exercising the right of the elective franchise at any election held in this State, except he produce a full and complete pardon for the offence from proper authority.

2. A registration act, providing for a careful and just registration of voters, before each election, and declaring suitable penalties for fraudulent voting or the violation of its provisions by judges of elections.

3. An amendment of the marriage act providing for marriage licenses and a strict registration of marriages in the Probate Courts.

4. A new law preventing in the more densely-settled counties the running at large of stock, a great evil in all the newer States. The act was intended also to encourage the setting of hedge-rows, live fence, and forest-trees, by requiring that the party complaining of the trespass of stock upon his lands must have constructed a hedge-row not less than ten feet wide on all sides of the land which he desired protected, the first year in which he claimed such protection, and every year subsequently, set out not less than four rods of live fence and ten trees for every acre of land protected.

NESMITH, JOHN, one of the most enterprising and successful of New England manufacturers, born at Londonderry, N. H., August 8, 1793; died October 15, 1869. Mr. Nesmith commenced life a poor boy, and had only the common advantages of education at that time. At fourteen years of age he was placed in a country store, and served an apprenticeship of five years, after which, in connection with his brother Thomas, he went into business for himself. As soon as their cash capital and en-

larged credit would warrant the adventure, the brothers removed to New York and built up an extensive and highly-remunerative trade. In 1831, foreseeing the future importance of Lowell, Mass., as a manufacturing centre, they settled in that place, invested largely in real-estate, and identified themselves with every measure calculated to advance the growth and prosperity of the home of their adoption. Mr. Nesmith's peculiar tastes and talents soon enlisted him in the manufacture of blankets, flannels, printing-cloths, sheeting, and other textile fabrics, and from thenceforth that was his principal pursuit. He became agent for, or as owner was interested in, mills at Lowell, Dracut, Chelmsford, Hookset, and other places, and managed all those enterprises with almost unvarying success. In the celebrated Merrimack Woollen Mills Company he was a large stockholder. Appreciating more than any other man, the natural advantages of the water-power which has made Lowell what she is, he bethought himself of securing the supply of water in Winnipiseogee and Squam Lakes, in New Hampshire, as reservoirs for the Lowell mills in dry seasons, and letting it into the Merrimack by artificial channels. This brilliant conception was at first scouted as impracticable by manufacturers along the river; but Mr. Nesmith, satisfied that they would at last require the additional water, bought the right to use both those lakes for the purpose named, and the manufacturers were before long obliged to purchase it from him. Mr. Nesmith was the first to discern the natural fitness of the site now occupied by the flourishing city of Lawrence, on the Merrimack, for a manufacturing point, and made heavy purchases of lands there on both sides of the river, securing also the necessary charter to control the water-power. About 1844 his bold scheme attracted the attention that it deserved from Boston capitalists, and factories began to rise at Lawrence as if by magic, and that city has since most amply vindicated the wisdom of its real founder. While Mr. Nesmith was carrying on these multifarious and arduous undertakings, he devoted odd hours to philosophical and mechanical studies, in which he became much more than an amateur. Several of his discoveries and inventions were of great importance and value—among others the well-known machinery for making wire-fence and shawl-fringe. Though naturally averse to mingling in politics, and never stooping to the arts by which popularity is often won, he was elected to various offices in the city government of Lowell, where his sound, practical sense and extraordinary business capacity were acknowledged and prized by his fellow-citizens without distinction of party. He was presidential elector in the college which chose Mr. Lincoln for both terms, was Lieutenant-Governor of Massachusetts in 1862, declined a reëlection in 1863, and was afterward appointed United States collector of internal revenue for his district, which office he filled ably and acceptably until his resignation, twenty days before his death. His attachment to the principles of his party was that of the moralist rather than the partisan, and he never ceased to command the respect of his political opponents. The temperance cause in Massachusetts early engaged his hearty support and liberal contributions, and he was for some time a vice-president of the State Alliance. From the large fortune acquired by his tact and industry, he made generous donations to many objects of charity and benevolence which won upon his sympathy, and was invariably hospitable and kind to his friends and neighbors. In his domestic relations he was especially tender and affectionate. His will made handsome provision for the foundation of a "Nesmith Fund" for the aid, support, education, and maintenance of the indigent blind of New Hampshire, and also a public park in the town of Franklin in that State. The secrets of Mr. Nesmith's career may easily be found not more in his high mental endowments than in his unflagging industry, his indomitable perseverance, his strict integrity, and the concentration of all his faculties and energies upon the successive objects in hand, and those temperate and well-ordered habits of life, which, down to its close, preserved his mind in all its youthful strength and buoyancy. He offered a rare illustration of what an active intellect may accomplish, aided by courage and fixity of purpose, and animated by principles of truth, justice, and honor.

NETHERLANDS, The, a kingdom in Europe. King, William III., born February 19, 1817; succeeded his father, March 17, 1849. Area, 13,890 English square miles; population (according to the calculation of the Royal Statistical Bureau), at the close of 1867, 3,592,416; * on December 31, 1868, 3,628,468. The population of the large cities, in 1868, was as follows: Amsterdam, 271,764; Rotterdam, 118,837; the Hague, 90,058. The population of the Dutch colonies was, in 1867, as follows: East Indies, 20,523,742; West Indies, 84,486; coast of Guiana, about 120,000; total, 20,728,228. In the Dutch East Indies there was, in 1867, a European population of 35,845 (of whom 28,941 were born in the colonies); exclusive of 11,873 soldiers and their descendants (1,013). The number of Chinese in the same colonies was 248,347. The budget for 1869 fixes the expenditures at 96,657,781 guilders, and the receipts at 97,181,006 guilders. The public debt, in 1869, was 967,708,913 guilders. The army, in 1869, consisted of 61,775 men; the army in the East India colonies, of 26,922 men. The fleet, on July 1, 1869, consisted of 131 vessels, with 1,303 guns. The imports, in 1867, amounted to 439,030,000 guilders, and the exports to 450,220,000 guilders. The merchant navy, on December 31,

* The results of official censuses from 1829 to 1859.

1867, consisted of 2,159 vessels, together of 510,455 tons. The movement of shipping, in 1867, was as follows:

FLAG.	ARRIVALS.		CLEARANCES.	
	Vessels.	Tonnage.	Vessels.	Tonnage.
Dutch.....	3,268	599,087	3,267	626,087
Foreign.....	5,351	1,440,253	5,395	1,495,955
Total.....	8,609	2,039,310	8,752	2,121,992

The Scheldt, at its *embouchure* in the North Sea, is divided into two main branches called the East and the West Scheldt; the space between them, which is traversed by other less important branches of the river, is occupied by the islands of North Beveland and Walcheren—everywhere below the level of the sea, and protected by dikes against the surrounding waters—forming a part of the Province of Zealand. On the East Scheldt, between the island of South Beveland and North Brabant, an important embankment has been formed to carry the Bergen-op-Zoom and Flushing Railway, which unites the latter with the Continental system. The river here is two and a half miles wide; it is subject to all the fluctuations of the ocean, from which it is only a few leagues distant, and yet, in the face of these adverse circumstances, the embankment has been formed in three months. It was commenced in February, 1867, and the works of consolidation and completion have occupied the remaining period. The railway was inaugurated in January, 1869, with much ceremony. The embankment is more than 12,000 feet long, and the quantity of materials consumed amounted to 123 tons per metre, or 500,000 tons in all. The embankment was commenced by laying fascines on the bed of the river; upon this foundation the ballast was thrown, and the whole is protected by solid masonry. The embankment is ten metres in width, and rises five metres above ordinary high-water mark. It was a bold idea thus to make a narrow causeway from two to three miles long between what may almost be called two seas, and the result seems to be satisfactory. At low-water a curious spectacle is presented: the retreating sea leaves the bed of the river almost dry on one side of the embankment, while on the other the water is heaped up and kept back by this artificial barrier. The construction of this railway duct having cut off the means of communication with the Meuse, a canal has been cut for the navigation. This canal is six miles and a quarter in length, and traverses the island of South Beveland between Hansweert and Wemeldange; it is of sufficient width and depth for the largest merchant-vessels. The railway is carried over this canal by means of a swing-bridge.

The Government of the Netherlands is projecting a ship-canal which is to cut though the isthmus of North Holland, and will convert the city of Amsterdam into a North Sea port. Two piers, each 5,000 feet long, are being projected into the sea to form a harbor of refuge, to embrace an area of 7,200 acres. About 1,000 yards inland will be the basin, which is to form the entrance to the canal. It will be 26 feet deep and 197 feet wide—exceeding the dimensions of the Suez Canal. It will be carried through the midst of a sheet of water, or inland lake, the Wyker Meer, which will be dammed up, along with the river, which is so called from the shape of its course (Y), and afterward pumped dry and converted into pasture-land. The cost of these vast works will amount to 27,000,000 florins, and it will be completed in 1876.

NEVADA, a State of the American Union, lying on the Pacific slope, or rather between the Sierra Nevada and the Rocky Mountains, having California on the West and Utah on the East, Oregon and Idaho at the North, and California and New Mexico at the South. Its area is now settled as 112,090 square miles. Its population was estimated in 1869 at 60,000. Carson City is its capital, but Virginia City is the largest town. The assessed value of real estate in the autumn of 1868 was in round numbers $15,000,000, and of personal estate $10,000,000. The manufacturing capital of the State at that time was about $2,500,000, but has since materially increased. The amount of capital invested in quartz-mills, stamping and crushing machines, and smelting-works for the reduction of ores, is over $12,000,000. The great Comstock lode, the most productive of the silver lodes in the State has produced over $80,000,000 since its first opening; its present annual yield is about $16,000,000, and when the great Sutro tunnel which is in progress is completed, cutting the lode, as it will, about 3,000 feet below the mouth of the highest of the present shafts, and effectually draining it, the production must be vastly increased. The mines in the White Pine region, of which some account was given in the ANNUAL CYCLOPÆDIA for 1868, continue to prove largely productive, though the great elevation (about 8,000 feet) and the coldness and barrenness of the region make it an undesirable place for a civilized being to live in. What is known as the Base Metal-range in that vicinity, but at a less altitude (two or three miles west of Treasure City), has given indications of lodes equally rich with those of the Eberhardt mine. The Reveille district, 125 miles south of White Pine, in Nye County, is also attracting attention. The ore taken from this lode has assayed over $2,000 to the ton. The Eureka district in the Diamond range, east of the White Pine, on both sides of the Humboldt River, produces ores assaying $1,300 to the ton. All these ores have the same general character. They are mostly chlorides of silver, of the class known as horn silver, and can be reduced easily and unexpensively. The southern portion of Nevada has been but little explored,

and, except for its possible yield of the precious metals, is not a desirable region. The whole State has an altitude of 4,000 feet or more above the sea-level, but most of it forms a part of the great Utah Basin. Except the Virgin River and a few other inconsiderable streams in the South, which flow into the Colorado and thus into the Gulf of California, and some mere rivulets which fall into the Owyhee in the north, all the streams of the State fall into lakes or sinks within the boundaries of the Basin. Some of these are very remarkable—Lake Mono, one of them, fourteen miles long and nine miles wide, is another Dead Sea, whose waters are so acrid and nauseating as to be unfit for drinking, and deadly to all animal life. None but the strongest winds can move its heavy waters, and it is surrounded by a region completely sterile and desolate. The Pyramid Lake, so finely described by Fremont and afterward by the explorers for a Pacific Railroad site, is also in the State. Large tracts of land in the State are covered to a considerable depth with a pure salt, and still larger ones with the alkaline salts, so annoying and distressing to the traveller. It has been ascertained however, within the past year, that by irrigation, whether from Artesian wells or from the mountain-streams, these alkaline lands can be made to produce excellent crops of wheat and other grains. Hitherto not much attention has been paid to agriculture; but much of the land is well adapted to grazing, and the nutritious bunch-grass will grow even where the land seems most sterile. The valleys of the streams are skirted with considerable quantities of valuable timber, and are very fertile. Most of the fruits of the Eastern States do well, especially in the river valleys. Though Nevada can hardly become an exporter of agricultural products to any great extent, it is not improbable that within a few years she may raise a sufficiency for the supply of her own rapidly-increasing population. The climate of Nevada is generally healthful, and is specially commended, for its dry and bracing properties, to invalids of consumptive tendencies. The more mountainous sections are cold, and snow lies long upon them, but for the most part the winter is mild, and the summer not so hot as in the same latitudes in California.

During the year 1869 there were no elections in the State either for Legislature, State, or national officers. The Legislature, which consisted, in the Senate, of 16 Republicans and 3 Democrats, and in the House of 35 Republicans and 3 Democrats, met on the first Monday in January, 1869. Its legislation was not of special interest. The State debt is about $390,000, and includes bonds issued for the erection of a State Insane Asylum. The Legislature ratified the fifteenth amendment to the Constitution of the United States on the 1st of March, 1869.

For a new and sparsely-populated State, Nevada has made very creditable provision for education. Its public-school system is well organized and very efficient. It has received from the United States Government 3,661,680 acres of land for educational purposes, and these are carefully husbanded and sold only to actual settlers, on such terms as will eventually give her a very large school fund.

NEW HAMPSHIRE. The first nominating State conventions of the year were held in New Hampshire. The Republican delegates from various parts of the State assembled in response to a call of the General Committee of the party, in Concord, on the 7th of January. The Governor of the State, Walter Harriman, presided, and opened the convention with a speech, in which he congratulated the party for the triumphs of the past, and urged it to earnest effort for the future. Onslow Stearns, of Concord, was unanimously nominated for Governor, and Mr. Samuel D. Quarles, of Ossipee, for Railroad Commissioner. Congressional conventions were held the same day, and Jacob H. Ela was nominated for representative from the first district, Aaron F. Stevens from the second district, and Jacob Benton from the third. The State Republican Committee for the year was organized by the choice of E. H. Rollins as chairman, and Wyman Pattie, of Enfield, as secretary. The platform of the party, as adopted at the Concord Convention, was contained in the following resolutions:

Resolved, That the Republicans of New Hampshire, through their delegates in convention assembled, congratulate the loyal people of the country upon the recent glorious triumph of liberty, loyalty, and peace, in the election of Grant and Colfax. On the one side stand arrayed those who had been in armed rebellion against the Union, their Northern sympathizers, who, as far as they dared, had promoted the rebellion, and every man who wished to glorify the lost cause, to force again into political power the worst enemies of the country, and to revive anew the spirit of the rebellion and fan its flames into another civil war. On the other side were marshalled all patriotic citizens, who had sustained every measure designed to put down the rebellion, and were determined that those who had saved should control the nation, and thus make another rebellion impossible. Nine-tenths of the brave soldiers who fought under the stars and stripes rallied under the Republican banner, and declared that Union soldiers, and not rebel leaders, should stand foremost in the redeemed republic. By the combined assaults of Union citizens and soldiers the revolutionary platform of the New York Convention and all its supporters were defeated and utterly destroyed; and, as in Grant's triumph at Appomattox, so, by his election as President, was achieved a victory of the Union, the Constitution, and American liberty, over rebellion, oppression, and the worst forms of despotism.

Resolved, That the people expect and require, as the result of the election, that a patriotic President and a radical Congress shall put an end to the murders of Southern Unionists for no other offence than that of being Republicans and laboring for General Grant's election, and shall discover, arrest, and punish their murderers by military power, if necessary, and that they shall maintain to the fullest extent the right of suffrage to the loyal black man, and continue the disfranchisement of desperate and dangerous rebels, and enact and enforce martial law throughout the South until freedom of speech, of the press, and of political action, shall be secured to every citizen,

white or black; of Northern or of Southern birth, on every foot of Southern soil which has been conquered and dedicated anew to freedom by the valor of the soldiers of the Union.

Resolved, That we are in favor of impartial suffrage for all loyal citizens in the election of members of Congress and presidential electors, and we call upon Congress to secure it by enacting the necessary laws, or by sending to the Legislatures of the States the necessary constitutional amendment.

Resolved, That the very existence of republican institutions is endangered by frauds upon the ballot-box like those by which the electoral vote of the State of New York was wrested from Grant and Colfax and recorded for Seymour and Blair, and that it is the duty of Congress to investigate such frauds, to cause them to be punished, and to enact laws to prevent their future perpetration.

Resolved, That it is the duty of the Republicans of New Hampshire, by a majority on the 9th of March, equal to their unprecedented majority in November, to express their confidence in the Administration of General Grant, and their determination to sustain him in carrying out the principles vindicated by his election, and in endeavoring to economize, purify, and reform the public service, and restore peace and prosperity to the country.

Resolved, That the people have emphatically declared the inviolability and sacredness of the national debt incurred to save the Union, and that they will tolerate no form or device of repudiation; that, for the purpose of lightening the heavy burden of this indebtedness and of restoring the business of the country to a sound basis, the Government should adopt all possible means to make the paper dollar of the United States worth a dollar in gold, and to fund the outstanding obligations of the Government in new bonds bearing a lower rate of interest.

Resolved, That the people unmistakably demand the utmost economy in the administration of their State and national Governments; that all offices made unnecessary by the termination of the war shall be abolished; that all incompetent and corrupt public officers shall be driven out; that only the most limited and imperatively necessary appropriations shall be made for internal improvements, and that the taxation laws shall be revised and modified so as to assure the utmost fairness and justice in the imposition of their burdens.

Resolved, That the interests of New Hampshire require that the earnest attention of its people, of its Legislature, and of the public men, should be directed toward a fuller development of all the resources of the State, of its agriculture, of its mines, and of its manufactures. With the great West constantly increasing its agricultural products, and with the South opened to free labor and to manufactures heretofore excluded, it will be necessary to the continued growth of the New England States that they shall husband and develop their natural resources to the fullest possible extent. To this end we demand liberal legislation to encourage the investment of foreign capital in New Hampshire, the continued progress of our railroads within the State attended with economical management, the cheapest possible fares and freights, and the extension of every possible encouragement to all attempts at the improvement and development of the many natural resources of the State.

Resolved, That we cordially indorse the administration of his Excellency, Governor Harriman; his devotion to the best interests of the State, his efforts for its development, his patriotism as a citizen, as a soldier, and a Governor, merit and will receive the lasting gratitude of the people of New Hampshire.

Resolved, That we present with the utmost union and harmony our candidates for the coming election, Onslow Stearns for Governor, and Jacob H. Ela, Aaron F. Stevens, and Jacob Benton, for reëlection to Congress. We challenge criticism upon their character and fitness for the positions for which they are presented. We have faith in their integrity, their ability, and their patriotism. As the candidates of their choice, the Republicans of New Hampshire propose to elect them by overwhelming majorities.

The Democratic Convention met at Concord on the 20th of January, and selected Ira E. Eastman, of Concord, as its chairman. General John Bedel, of Bath, was nominated for the office of Governor, and General Michael T. Donohoe, of Concord, for that of Railroad Commissioner. The following resolutions were unanimously adopted:

Resolved, That the Democratic party of New Hampshire, in convention assembled, declare their adhesion to certain principles by them hitherto maintained, and which, in victory or defeat, they will never surrender: 1. The paramount and binding authority of the Constitution over all departments of Government and all States of the Union to the extent of the powers therein granted. 2. The exemption of every State from any interference or control not clearly warranted by the Constitution. 3. The right of every State to an equal participation in the Government as guaranteed by the Constitution. 4. The separation and proper independence of the Executive, Legislative, and Judicial Departments, as provided by the Constitution. 5. No privileged classes and no privileged capital. 6. An honest and economical administration of the Government for the good of the people, and not in the interest of monopolists, and thieves, and plunderers of the public treasury and the national domain.

Resolved, That, while all existing contracts entered into in good faith should be fully kept in the letter and spirit of the contract, Congress should impose such just and equal taxation upon all Government bonds and United States securities as will compel their holders to bear their just share of the burdens of the Government, and all bonds hereafter issued should be made subject to State and municipal taxation at the same rates as other property.

Resolved, That the Democrats of New Hampshire hereby pledge their earnest and united efforts to insure the election of the candidates this day nominated.

The election occurred on the 9th of March, and resulted in the choice of the Republican ticket. The whole vote cast for Governor was 67,781, of which 35,777 were for Stearns, and for Bedel 32,004, giving the former a majority of 3,773.

The Legislature of the State assembled at Concord on the 2d of June, and remained in session about six weeks. The 15th amendment to the Constitution of the United States was ratified on the 1st of July, by a strict party vote of 183 yeas to 130 nays in the House. The subject which occupied the attention of the Legislature more prominently than any other was that of railroads. There are now in the State about 750 miles of railroad, which was built and equipped at a cost of $30,000,000. The value of these roads is stated to have depreciated since their construction by nearly forty-five per cent. of their cost. Nothing has been done by the State to encourage its railroad interest, except to pass a law in 1864, enabling towns and cities to appropriate five per cent. of their valuation to aid in the construction of these important public works, and another in 1868 exempting from taxation

for a period of ten years all railroads thereafter constructed. At the time of the meeting of the last Legislature, about 250 miles more were required to complete the roads already begun or projected, and a strong effort was made to obtain direct aid from the State Treasury for this purpose. This, however, was not accomplished, though several new roads were chartered, among them the Concord and Rochester, and the Peterborough and Hillsborough Railroads. A report upon the condition of the Atlantic and St. Lawrence Railroad represented that line, which is the only one in Coos County, to be badly managed and in a very dilapidated condition. The railroads of the State constructed prior to the exempting act of 1868 paid a tax during the year ending June 1, 1869, of $215,615. The railroad from the foot to the summit of Mount Washington was completed in the early part of the summer. This road makes an ascent of 4,500 feet in a distance of a little less than three miles, the grade in some places being thirteen inches to the yard. The car is driven by an engine placed below it on the road, and having a cogged drive-wheel working in a cogged track. It travels at about the rate of three miles (the entire ascent) in an hour.

An act was passed imposing a tax of one per cent. upon the deposits and accumulations of savings-banks, requiring one-half the loans made by such banks to be to individuals and corporations within the State, and forbidding the payment of more than five per cent. interest to depositors. This act was prompted by the fact that the favors formerly granted to savings-banks led capitalists to invest their funds largely in them instead of employing them in other ways. Provision was also made for imposing a tax of one per cent. upon all the premiums of insurance companies not organized under the laws of the State. The general statutes provide for two parades of militia each year, at the expense of the State, but the operation of this provision was suspended for five years. Among the other propositions introduced was one for the formation of two new counties, to be called Amoskeag and Monadnock. Final action on this was postponed until the next session, to allow the people of the towns to be included in the new counties to vote upon the subject of their formation. Several petitions were received asking for an amendment of the constitution, which should allow women to vote.

A law was passed at this session of the Legislature, to establish a State constabulary force, intended particularly "to repress and prevent crime by the suppression of liquor-shops, gambling-places, and houses of ill-fame," subject, however, to the approval of the people at a special election to be held on the second Tuesday in November. This approval was not granted. A large majority was given against it on a small vote.

The entire debt of New Hampshire on the 1st of June was $3,137,000, which shows a reduction of $350,000 from the figures of the previous years. The State tax for the year 1868-'69 amounted to $625,000.

New Hampshire is chiefly an agricultural State, but there is at present a capital of more than $22,500,000 invested in manufactures within the State, about five-sixths of which, however, is owned elsewhere. The annual amount of local taxes paid by these manufacturing corporations is now about $235,000, and they pay out over $6,000,000 per year in wages to operatives.

With regard to the resources of the State yet undeveloped, the Governor in his last message says: "The great amount of the still undeveloped and unimproved resources of our State is not, I think, fully understood by the people. Thousands of acres of uncultivated land await the labor of the husbandman; large forests of valuable timber cover our hill-sides and skirt our valleys; the greater portion of our immense water-power is still unoccupied; while our mineral resources are as yet practically undeveloped."

Henry Adams Bellows, LL. D., of Concord, was appointed, in August, Chief Justice of the Supreme Court, in place of Ira Perley, whose term of office had expired by the constitutional limitation of age.

NEW JERSEY. The Legislature, which assembled on Tuesday, the 12th of January, was Democratic in its political complexion, the vote on joint ballot standing 47 to 34. The legislation of the session was principally of local interest only, the chief measures being the postponement to the next legislature of the consideration of the fifteenth amendment, and the abolition of all railroad transit duties, and the substitution therefor of a tax of one-half of one per centum upon the costs of their respective works, including all their property of every description not otherwise taxed, until the Legislature shall, by general law, impose a uniform State tax, equally applicable to all railroad and canal corporations of the State, providing, however, that no company formerly paying transit duties shall pay a less sum as tax to the State than that paid by it for taxes and duties of all kinds for the year 1868.

The finances of the State, as shown by the report of the Treasurer, are in the following condition:

STATE FUND.

Income		$673,908 73
Disbursements	$563,877 54	
Refunded to war fund	93,270 71	
Balance in bank	2,760 48	
		$673,908 73

WAR FUND.

The receipts of the war fund were:

From State tax	$280,000 00
From United States	27,549 45
Refunded from state fund	93,270 71
Balance received 1868	5,012 97
	$413,833 13
The disbursements were	415,833 13

The outstanding indebtedness of the State (war fund) on the 30th November, 1869, was	$3,096,200 00
From which deduct assets in hands of commissioners	1,044,929 93
Leaving an indebtedness beyond assets of the sinking fund of	$2,051,270 08

SCHOOL FUND.

The receipts of the school fund were		$137,681 11
Distributed to public schools	$100,000 00	
Invested for the fund	28,293 44	
Balance in bank	9,387 67	
		$137,681 11

The aggregate of the school fund, January 1, 1870, was five hundred and seventy thousand three hundred and twenty-one dollars and seventeen cents ($570,321.17), against five hundred and sixty thousand seven hundred and sixty dollars and one cent ($560,760.01) at the same time in 1869.

The receipts from all sources for the support of public education during the year were:

From State	$99,815 85
Township-school tax	423,868 85
District-school tax	915,354 89
Surplus revenue	27,559 46
Tuition fees collected	75,557 69
Appropriation Normal School	11,200 00
	$1,553,335 75

The buildings occupied by the State Normal School of New Jersey are two in number, one of which is devoted exclusively to the Normal School proper, the other to its adjunct, the Model School. The lot includes over four acres of ground. The original cost of lot and buildings was $72,000. They are now valued at $100,000, and are the property of the State. The receipts of the school for the year were $23,350.27, and the disbursements $23,344.18.

The number of pupils attending the Normal School and its adjuncts, the Model School and the Farnum Preparatory School, during the year, was as follows:

SCHOOLS.	Male.	Female.	Total.
Normal School	29	250	279
Model School	229	306	535
Farnum Preparatory School	155	144	299
Total	413	700	1,113

The following tables show the number of patients treated at the State Lunatic Asylum, and the expenses of the institution:

PATIENTS.	Men.	Women.	Total.
Patients in the Asylum November 30, 1868	234	286	520
Patients received since, to December 1, 1869	127	121	248
Patients under treatment during the year	361	407	768
Patients discharged and died	88	113	201
Remaining November 30, 1869	273	294	567

Cash on hand December 1, 1868		$1,942 74
Receipts up to November 30, 1869		145,216 72
Total		$147,159 46
Disbursements		144,911 68
Balance on hand		$2,247 78

There have been admitted to the asylum since it was first opened, 3,499 patients; of that number 542 have died, 1,322 have been restored to mental health, and 931 have been discharged more or less improved. The above statistics show that 65 per cent., or nearly two-thirds of the whole number of patients admitted to the asylum, are either completely cured or greatly benefited by the curative system pursued in the institution.

The valuation of taxable property, together with the amount of the State and county taxes for the various counties in the State, is given in the following table:

COUNTIES.	Valuation.	State Tax.	County Tax.
Atlantic	$4,362,871 00	$3,008 40	$14,000 00
Bergen	23,211,941 00	14,515 79	50,000 00
Burlington	29,069,991 00	18,093 70	149,999 69
Camden	16,914,700 00	11,489 20	120,000 00
Cape May	3,350,000 00	2,298 20	8,500 31
Cumberland	11,170,000 00	7,276 48	60,000 00
Essex	94,378,000 00	58,780 00	427,087 25
Gloucester	12,590,600 00	8,561 73	25,000 00
Hudson	85,133,272 00	54,908 88	350,000 00
Hunterdon	27,312,116 00	18,704 80	60,000 00
Mercer	26,803,050 00	19,664 03	67,616 00
Middlesex	22,053,000 00	15,266 19	140,561 40
Monmouth	27,780,147 00	18,574 93	63,265 32
Morris	23,760,000 00	16,106 40	60,000 00
Ocean	4,348,710 00	3,375 44	9,308 56
Passaic	24,205,000 00	15,198 39	120,000 00
Salem	17,150,394 00	12,085 49	92,914 51
Somerset	15,571,370 00	10,727 42	50,000 00
Sussex	16,435,526 00	11,670 97	35,000 00
Union	23,553,000 00	14,948 60	225,000 00
Warren	22,092,573 00	15,480 43	40,000 00
Total	$533,261,261 00	$350,000 00	$2,188,153 04
Returns for 1868	502,645,949 62	350,000 00	2,157,492 00
Increase in 1869	$30,615,311 38		$30,660 18

The report of the Adjutant-General shows that the entire militia force of the State amounts to 202 officers and 2,442 men.

The State Reform School for the Reformation of Juvenile Delinquents has proved remarkably successful. The number of inmates during the year was 98, the average number was 67, and the total expenses $19,989.46.

The geological survey of the State was actively prosecuted during the year, great attention being paid to the reclamation of the immense marshes of the State, which comprise 295,474 acres of land, of which 270,000 acres are still unimproved.

The Camden and Amboy Railroad and Delaware and Raritan Canal, after forty years of joint monopoly, have surrendered their reserved rights, and thrown open the carrying-trade from north to south across the State to the competition of rival lines, the Legislature having, as previously stated, repealed the transit duties. The companies have two main lines of railway between the two largest cities of the Union, which, with their lines, cover 165 miles of roadways, 104 of which are double and 61 single track, with 60 miles additional of sidings, and holds controlling interest in 260 miles of auxiliary railroads—in all 485 miles of track. Over and above all this they have ter-

injury to American interests. Rear-Admiral Rowan was directed to afford every facility at his command to citizens who are endeavoring to obtain from the Chinese Government permission to lay an electric telegraph. Should they obtain the desired permission, an officer was to be detailed to represent the United States in the undertaking.

The state of the active force of the Navy, and the service which it has rendered during the year, are shown in the preceding statements. The views of the Government relative to the future of this arm of national defence are stated in the report of the head of this Department. He says:

> The time has come, I think, when we should begin to use the knowledge we have been seeking, and I therefore earnestly urge the propriety of commencing at once the building of seagoing iron-clads, suitable to cruise on foreign stations, and able to protect our commerce and vindicate our principles in any emergency. We should aim to have one or more of these ships on each foreign station, and to be prepared with the necessary reliefs. This will ultimately require no less than ten in all; and, without attempting to build them all at once, we should (admonished of the urgency of the case and of the time necessarily consumed in their construction) commence immediately on no less than four—one for the Asiatic, one for the Pacific, and two for the European squadron; following these, as rapidly as circumstances will admit, with those necessary for the other squadrons and their reliefs. I recommend that plans for the boilers and engines of these vessels be submitted by persons outside of the navy, the best of which may be adopted.
>
> These, with some additions to our wooden vessels and the refitting on the plan adopted, and the proper employment of such effective ships as we now have, and with our monitors and torpedoes for harbor defence, will give us the nucleus of a navy—not, indeed, proportioned to our commerce or approaching the force of other maritime powers, but sufficient to command respect abroad, and to afford time, in case of sudden war, to organize and apply the resources of our country and the energies of our people.

During the year a torpedo corps was established under the Bureau of Ordnance, to make experiments, take charge of the apparatus, and perfect a system for the application of this means of defence to the coasts and harbors.

Enough experiments have already been made to show how valuable, as well as terrible, is this means of defence; and to convince all having knowledge of it that when it shall have been further perfected, and its use systematized, the torpedo will be one of the most effective weapons of marine warfare. The torpedo corps has been selected with care, and the experiments are conducted under the supervision of an officer of scientific ability. As soon as a torpedo is constructed, and the particular locality and manner of its use determined, it can be stowed away as an inexpensive but most effective weapon of war.

This means of defence, properly applied in conjunction with a system of harbor obstructions, backed by monitors and supported by the forts and water batteries which command the narrow entrances to the principal harbors, would defy any power which could cross the ocean to attack them.

These localities have been the subject of careful inspection by both branches of the military service, and both are thus prepared with the knowledge which only actual inspection can give.

There are seven regularly-established navy-yards, of which only four are capable of fitting out more than two or three vessels at a time. A board was appointed during the year to make an examination of their condition, which presented a very complete and instructive report to the Department.

The number of men in the service last year was 8,000. The estimates of the present year are made on a basis of 12,000. The expenditures during the fiscal year ending June 30, 1869, were $20,000,757.

During the year a board of officers was convened by order of the Department, to take into consideration the subject of assimilated rank between the officers of the various corps of the Navy. They made a report, which resulted in a bill that was laid before the Naval Committee of the House. The views of the Secretary on the subject, expressed in a letter to that Committee, were as follows:

> It will be perceived that its provisions for the benefit of the various auxiliary corps of the Navy, while they are considerably more liberal than those of the bill which passed the Senate at the last session, do not include so great a number of officers in the higher grades as was agreed to by the Board of Officers, nor even so many as are suggested in the letter of the vice-admiral. This is a question of much personal interest, and calculated to excite considerable feeling; and he has hesitated long before differing in this point from so many experienced officers, but he felt that their views had been somewhat influenced by deference to the claims of individuals, and a desire to compromise a much-vexed and difficult question. While he was not authorized to yield for such reasons what seemed to him in this respect to be for the public good, he has been constrained, while recommending a much larger number of pay medical and engineer officers of the higher grades than was provided by the Senate bill, at the same time to reduce the number reported by the Board, believing the number to be larger than a fair adjustment of public or personal claims requires or will allow. The bill proposed by him gives the auxiliary corps twenty-eight captains in all, certainly a full proportion; also forty-five commanders ranking with lieutenant-colonels, which, with the thirty-one officers of higher grades, gives them seventy-six officers ranking with or above lieutenant-colonel in the Army. He has retained in the bill eight chief engineers and constructors of machinery, in view of the number required at the various navy-yards and stations, and also followed the recommendation of the Board in regard to officers on the retired list, as this seemed to manifest a proper respect for seniority and confer suitable reward for long-continued service, without doing injury to anybody. The Board made no recommendations in regard to the rank of assistant and past-assistant surgeons, paymasters, and engineers, and he recommends that this remain as it is now fixed by law—namely, with and next after lieutenants and with and next after masters. He has substantially followed the recommendations of the Board in regard to the precedence of the executive officer, because it seemed to him clearly right and necessary to discipline and efficiency. The recommendation of the Board and the bill proposed that this officer shall, as far as practicable, be next in line

of rank to the commanding officer, and confine his precedence to the officers attached to the organization of which he is the representative head, while they are in the discharge of his duty connected with such organization. In addition to other features, the bill recommends a reduction of officers of the marine corps, as well as a change in the proportions and a reduction of the number of line officers of the Navy. Thus, he has recommended a large reduction in the number of lieutenant-commanders and an increase of lieutenants; a diminution of the number of ensigns and an enlargement of the number of masters—endeavoring at once to promote a wise economy and to bear constantly in mind the actual necessity of the service, and the best method of insuring its efficiency.

The Board of Visitors to the Naval Academy at Annapolis made a report of much interest. It stated that the Board assembled on the 20th of May, and attended all the public exercises of the midshipmen. They carefully observed the general tone, bearing, and air of all connected with the institution, in all exercises and at all hours, whether on or off duty; examined into the condition of the grounds, buildings, vessels, apparatus, and appurtenances of all kinds, for evidence as to the thoroughness and vigor of its government. Since the late war the grounds have been enlarged, both by purchase and by filling upon the water-front. The chapel, new quarters, and several other buildings, have been erected. The former residence of the Governors of Maryland has been purchased and converted into a commodious library and superintendent's offices, and the grounds have been greatly improved. In whatever respect it is viewed, the institution exhibits clearly the effects of the interest Vice-Admiral Porter has felt in it, and of his very vigorous and able administration of its affairs.

Upon the inauguration of President Grant, he appointed Adolphe E. Borie, of Philadelphia, Secretary of the Navy, who held the position until June 25th, when he resigned, and was succeeded by George M. Robeson, of New Jersey.

Perhaps it may not be out of place to mention here the boat-race on the river Thames, in England, in which the competitors were students of Harvard College, Massachusetts, and Oxford University, England. The course was from Putney to Mortlake, on the Thames. It has been the scene of annual contest between students of Cambridge and Oxford for many years, with the following results:

Year.	Winner.	Course.	Time.	Won by.
1860..	Cam'ge.	Putney to Mortlake.	26m.	A length.
1861..	Oxford.	Putney to Mortlake.	23m. 27s.	48s.
1862..	Oxford.	Putney to Mortlake.	24m. 40s.	30s.
1863..	Oxford.	Mortlake to Putney.	23m. 45s.	42s.
1864..	Oxford.	Putney to Mortlake.	21m. 48s.	23s.
1865..	Oxford.	Putney to Mortlake.	21m. 23s.	12s.
1866..	Oxford.	Putney to Mortlake.	25m. 48s.	15s.
1867..	Oxford.	Putney to Mortlake.	22m. 39s.	Half l'gth.

The race took place on August 27th, and the Oxford crew were the winners by a length and a half—just 6 seconds. Time 22m. 41½ sec.

NEBRASKA. One of the central States of the American Union, having the Missouri River for its eastern and northeastern boundary, Dakota on the north, Wyoming on the west, and Kansas on the south. Area, 79,995 square miles, or 48,636,800 square acres. Population estimated at 100,000. Capital, Lincoln, Lancaster County. Real estate, in round numbers, $18,000,000. Personal property, $28,000,000. Annual product of skilled and unskilled labor for 1869, $18,000,000. For some years after the establishment of its Territorial government, Nebraska made a very slow growth, its sister Territory, Kansas, for a variety of reasons, attracting most of the immigration. It was not till the commencement of the Pacific Railroad in 1862–'63, that its active development commenced. In 1860 it had a population of only 28,842, and at the beginning of 1862 probably even a smaller number. Since the work of construction was actually commenced on the great trans-continental railway, the growth of the Territory (a State since February, 1867) has been steady and rapid, not only along the line of the railway, but in other sections of the State; and this growth is likely to continue and increase, from the rare advantages which it offers to immigrants in climate, soil, admixture of timber and prairie lands, and accessibility to good markets through its completed and projected lines of railway. Omaha, its principal town, though not now its capital, has had a wonderful growth, and, as the starting-point of the Union Pacific Railroad, must be a place of large business, and probably one of the most considerable cities created by that great thoroughfare. Its population, according to an enumeration made in 1869, exceeds 25,000, and is rapidly increasing, from the extensive business brought there by the Pacific road and other enterprises.

The State is for the most part well watered, not, indeed, with navigable streams, but with rivers which fertilize its soil, and add greatly to the beauty of its scenery and to its manufacturing facilities. The Nebraska, or Platte, with its northern and southern forks, divides the State from west to east into two slightly-unequal parts, discharging its waters into the Missouri, which, as we have already said, forms the entire eastern and northeastern boundary of the State. Besides the Platte, there are in Northern Nebraska two other important affluents of the Missouri, the Niobrara, called by the French *Eau qui court*, "the water that leaps," and the White Earth River. South of the Platte are the Great and Little Nemaha, and the two important tributaries of the Kansas River, the Big and Little Blue, while, farther west, we have the Republican Fork of the Kansas, a stream hardly inferior to the Kansas itself. To these are also to be added the larger affluents of the Nebraska or Platte itself, the Elkhorn, Loup Fork, Carrey's Fork, and Wood River, all fine, large streams. These and their numerous tributaries, with the abundant springs and branches which are found all over the State, make it any thing but a waterless desert, as a portion of it has been described. When it was the home

EARNINGS.	
From passenger business	$14,835,689 21
From freight business	31,570 967 74
From other sources	2,886,548 48
Not allotted	64,584 61
Total earnings	$49,377,790 04

PAYMENTS.	
For transportation expenses	$35,737,830 13
For interest	4,771,556 72
For dividends on stock	5,634,800 09
Amount carried to surplus fund	220,524 65
Not included above	1,919,765 24
Total payments	$48,274,476 88

The total number of passengers carried on these roads for the year was 18,484,800; tons of freight, 11,961,592. In addition to these there are nearly 1,000 miles of new road projected.

There were before the Legislature at its last session a large number of propositions for giving the aid of the State to new railroad enterprises. In vetoing one of these schemes embodied in "an act to aid in the completion of the Whitehall & Plattsburg Railroad," Governor Hoffman gives the following summary of the appropriations from the State Treasury, which it was proposed to make for the benefit of railroad corporations by bills then pending:

Whitehall & Plattsburg	Senate	bill	121	$365,000
Albany & Susquehanna	Assembly	"	96	100,000
Ithaca & Tonawanda	"	"	665	150,000
Port Jervis & Monticello	"	"	666	100,000
Buffalo & Washington	"	"	667	250,000
Buffalo, Corning & Pittsburg	"	"	668	250,000
Northern Air Line	"	"	669	175,000
New York Northern	"	"	670	600,000
Gloversville, Mayfield & Northville	"	"	672	150,000
Lake Shore	"	"	673	700,000
Southern Central	"	"	674	400,000
New York & Oswego	"	"	675	600,000
Fonda, Johnstown & Gloversville	"	"	676	75,000
Erie Valley & Genesee	"	"	742	125,000
Walkill Valley	"	"	744	125,000
Rondout & Oswego	"	"	747	150,000
				$4,315,000

His general reasons for disapproving of these appropriations are stated in the following paragraph: "General laws have been passed for the incorporation of railroad companies. Liberal facilities are already extended (whether always wisely or not I need not here discuss) to the people in cities, villages, and towns, by the issue of their corporate bonds, to associate their corporate responsibility with individual capital, to construct their railroads. Under these circumstances it seems to me that almost any meritorious enterprise can succeed without State aid, and that such aid should only be granted, if at all, when the necessity is clearly apparent, and when the well-being of the State at large demands it."

Among the other railroad legislation of the year was the passage of the following:

SECTION 1. Section 3 of the act entitled "An act in relation to the Erie, New York Central, Hudson River, and Harlem Railway Companies," passed April 21, 1868, is hereby amended so as to read as follows:

No stockholder, director, or officer, on either the New York Central Railroad Company, the Hudson River Railroad Company, or the Harlem Railroad Company, shall be a director or officer, of the Erie Railway Company; and no stockholder, director, or officer of the latter company shall be a director, or officer of either of the three first-named companies. The board of directors in each of the said companies shall so classify the members of such board, by lot or otherwise, that, as nearly as may be, one-fifth of their number shall go out of office at each annual election; and, at the next election of directors in each of the said companies, directors shall be voted for only in place of those whose terms shall then expire under the classification aforesaid.

Another incident worthy of notice in connection with the railroads of the State is what was known as the "Susquehanna War." This arose out of a contested election for directors of the Albany and Susquehanna Railroad which took place in August, two different boards of directors having been elected by two parties of the stockholders, each claiming the right to control the road. One of these boards of directors had been chosen in the interest of the Erie Railroad Company, which desired to obtain a lease of the Susquehanna and Albany, and the other consisted of the old members. Each obtained injunctions restraining the other from acting, and, in the attempt of both to operate the road at the same time, an open conflict occurred at Binghamton on the 10th of August, resulting in the serious injury of several men employed by the different parties. The Governor of the State found it necessary to interpose and take possession of the road until the rights of the contestants should be settled in the courts. This he did by appointing General James McQuade as superintendent. General McQuade and Mr. Robert R. Banks were subsequently appointed receivers of all the property of the company owning the road, pending the action of the Supreme Court in the matter. The final decision of that tribunal had not been rendered at the close of the year.

The salt springs owned by the State, in Onondaga County, yielded during the year 8,534.661 bushels of salt, valued at $85,531.61. The expense of carrying on the work was $46,311.59, which leaves a revenue from this source of $39,220.02.

The number of insurance companies subject to the supervision of the insurance department was, on the 1st of December, 262, of which many are corporations formed in other States and doing business in this. The total amount of stocks and mortgages held by this department for the protection of policy-holders of life and casualty insurance companies of the State and of foreign companies doing business in the State, is $6,736,092, of which $4,061,142 are held for the security of policy-holders of the life-insurance companies of the State alone.

There are now fifty-seven banks doing business under the laws of the State, of which six have returned to the State system from the national under the ennabling act of 1867. The amount of State bank circulation outstanding

on the 30th of September was $2,639,059, of which $1,396,903 consisted of notes of individual bankers and of banking associations organized under the general banking law, and $1,242,156 the notes of incorporated banks. Of the circulating notes of State banks $315,316 had been returned and destroyed during the year. The total securities held by the Superintendent of the Banking Department at the end of the fiscal year amounted to $3,058,156, of which $2,138,517.23 were held for banking associations and individual bankers; $394,260.73 for incorporated banks, and $525,378.98 for incorporated trust companies.

There are in the State of New York nearly 1,500,000 children of the school-age, of whom 1,000,000 attend the public schools, and over 120,000 attend private schools. There are 11,698 school-houses, which, with the land connected with them, have a value of about $18,000,000. There are also six Normal Schools in full operation, with an aggregate attendance of 4,200 students. The entire sum paid during the past year for teachers' salaries is more than $6,000,000, while nearly $2,500,000 have been expended in new school-houses, sites, repairs, and furniture. The entire school expenditures of the year were $9,884,828.36, and the receipts of the school fund, from all sources, amounted to $11,310,852.22. A law was passed at the last session of the Legislature devoting 20 per cent. of the money collected under the excise law, in the metropolitan district, to the support of charity schools in that district. This measure has met with considerable hostility, owing to the fact that most of the institutions benefited by it are under the control of some religious system, the majority of them being in the hands of persons connected with the Catholic Church.

The public institutions of the State of almost every kind are in need of more extensive accommodation. The State prison at Sing Sing is greatly overcrowded, and riots and the escape of criminals are no uncommon occurrences. The expense of maintaining this institution has been for several years greatly in excess of its earnings, which is partly owing to defects in the contract system of labor now in vogue there. At the last session of the Legislature the Governor submitted a message to that body, in which he called attention to the overcrowded state of the prisons, and to many evils and errors which exist in the present system of management. He did not think it expedient to enlarge the present structures, but recommended the appointment of a commission to select a site for a new prison, report a plan for the construction of the building, with estimates of the cost, and make such suggestions as to the character and management of the institution as they deem wise. An act was passed in accordance with this recommendation, and commissioners appointed by the Governor, who are expected to make a report to the Legislature in the course of the session of 1870. Great need is also felt for establishments for the care of the insane poor. These unfortunate beings are now maintained in the county poor-houses, where no intelligent treatment adapted to their wants can be furnished, and their condition is deplorable in the extreme. The number of insane poor in the State outside of the counties of New York and Kings is not far from 1,500. The Willard Asylum, now in process of construction, will accommodate about 250 patients, and two other institutions of less capacity have been projected; but even when these are completed the want will be still in a great measure unsupplied.

The Home for Disabled Volunteer Soldiers at Albany has been closed for want of an appropriation by the Legislature for its support. A movement has been set on foot by the benevolent citizens of New York City, for the establishment of a new institution of the kind, which is greatly needed, as many of the veterans of the late war have been forced to seek support at the almshouses in different parts of the State.

Some progress has been made during the year in the construction of a new capitol building at Albany. The excavation and concrete for the foundations have been completed, and the foundations of the main walls laid to a height of seven feet. The stone for this work is obtained from the limestone and granite quarries near Lake Champlain, in the Mohawk Valley, and in the Adirondack region. It is furnished by Learned and Dixon, at the uniform price of $24.40 per cubic yard. It is not yet determined of what material the superstructure will be built. The amount of money already expended on this structure, including the purchase of the site, is $1,363,540, about one-half of which was paid for the land. The commissioners appointed in 1868 to supervise the work, are of the opinion that the building will be "so far advanced in three years as to allow its occupation by at least one branch of the Legislature, and that in two years thereafter it can be completed for all substantial purposes."

The militia of this State, known as the "National Guard of the State of New York," now numbers 25,085 men, including officers and privates. It consists of 3 regiments of cavalry, 1 battalion of cavalry, 4 troops of cavalry, 3 battalions of artillery, 8 batteries of artillery, 47 regiments of infantry, and 3 battalions of infantry. The last Legislature authorized a reduction of the maximum force to 20,000, and three regiments were mustered out of service during the year. About one-half of this militia force is organized in the city of New York.

The Legislature of New York assembled at Albany on the 5th of January, and continued its sessions until the 10th of May. In that time 920 bills were passed, which received the approval of the Governor, and 62 were vetoed. Among the latter were several which proposed

to give State aid to new railroads, and others which provided for the construction of railroads in the city of New York. Much of the legislation of the session had reference to the railroads and canals of the State, and has been already alluded to in connection with those important works. Vigorous and repeated attempts were made by the Democratic members to secure the repeal or modification of the metropolitan excise law, but without success. Among the proposed amendments was one exempting lager-beer from its operation, and another providing that "no arrests shall be made for a violation of the excise law except upon a warrant issued from a court of competent jurisdiction."

In connection with the important railroad legislation of the State, numerous charges of bribery and corruption are made from time to time. Accusations of this kind appeared in several public prints during the session of 1868, in connection with the passage of what was known as the "Erie Bill," and a resolution was passed providing for a committee to make investigations and ascertain "whether any party or parties interested in supporting or opposing any measures relating to railway companies have, either in person or by agent, directly or indirectly, paid or offered to pay any member or members of the Senate, during that session, any money or other valuable thing to influence their vote or action in Senate or committee." By a subsequent resolution this committee was authorized to sit during the recess, and report at the next session. They entered into an extended investigation, occupying several months, and examined as witnesses parties interested upon both sides in the alleged corrupt legislation, members of the "lobby," and the editors of the papers in which the original charges appeared. Their report was made on the 11th of March, 1869, and the conclusions at which they arrived were summarily stated thus:

"1. Large sums of money were expended for corrupt purposes by parties interested in legislation concerning railways, during the session of 1868.

"2. Lobbyists were thus enriched, and in some cases received money, on the false pretence that the votes of senators were to be thereby influenced.

"3. There is no proof of actual bribery of any senator

"4. The newspaper charges made in the instances that were brought to the notice of your committee, were founded upon rumor alone, and have been in no case sustained by the evidence of the writers or other proof."

They expressed their opinion, however, that, under the law as it then existed, it was almost impossible to prove the crime of bribery, because both parties to the transaction were liable to punishment. "True," they say, "the testimony given by one, on the trial of another, cannot be used against the person testifying. But the witness well knows that such testimony necessarily gives the clew to evidence by which he himself can be convicted and punished. The result is either a refusal to testify, or remarkable forgetfulness, or something worse." They therefore recommended a change in the law, by which the giver of a bribe which is accepted shall be exempt from prosecution. A bill had been already introduced by the chairman of the committee, Mr. M. Hale, "for the more effectual suppression and punishment of bribery," which embodied this provision; and also made it an indictable offence for any officer of a company or corporation to use the money of such company or corporation for purposes of corruption. This act subsequently passed both Houses of the Legislature, and received the approval of the Governor.

The amendment to the Constitution of the United States, known as article fifteen, was submitted to the Legislature for approval soon after its adoption by Congress, and a resolution, reported by the Committee on Federal Relations, to whom it had been referred, favoring its ratification, was made the special order of the day on the 17th of March. It met with a spirited opposition, and several substitutes were offered, but the original resolution was finally adopted on the 14th of April by a strict party vote of 17 to 15 in the Senate, and 72 to 47 in the Assembly. This action was not, however, transmitted to the proper authorities at Washington, and on the 30th of August J. C. B. Davis, at that time acting Secretary of State, wrote to Governor Hoffman, requesting him to forward "a certified copy in the usual form" to the State Department. To this request the Governor replied in the following terms:

STATE OF NEW YORK,
ALBANY, *September* 3, 1869.

To the Hon. J. C. B. Davis, Acting Secretary of State, Washington, D. C.:

SIR: I have the honor to acknowledge your letter of the 30th of August, received here yesterday, requesting me to forward to your department "a certified copy in the usual form of the action of the Legislature of New York, upon the fifteenth proposed amendment to the Constitution of the United States."

The action of the Legislature was, by concurrent resolution, not submitted to the Executive for approval, nor was he directed or requested to promulgate the same.

In all previous instances of proposed amendments, save one, a formal bill was passed, which, like all other bills, was submitted to the Executive, and in the exceptional instance I find no record in this department of any Executive action.

In accordance with your request, however, I enclose a copy of the resolution, signed by the clerks of the two Houses.

Very respectfully your obedient servant,
JOHN T. HOFFMAN.

At the opening of the next session of the Legislature the majority in both Houses had changed from the Republican to the Democratic side, and on the very first day the following resolution, introduced by Mr. Tweed, of New York, was adopted:

Whereas, at the last session of the Legislature of this State, a preamble and concurrent resolution were adopted in the word and figures following, to wit:

Whereas, at the session of the Fortieth Congress it was resolved by the Senate and House of Representatives of the United States of America in Congress assembled, two-thirds of both Houses concurring, that the following article shall be proposed to the Legislatures of the several States, as an amendment to the Constitution of the United States, which amendment, when it shall have been ratified by three-fourths of the said Legislatures, shall be valid to all intents and purposes as a part of the said Constitution, namely:

"ARTICLE FIFTEEN.

"SECTION 1. The right of citizens of the United States to vote shall not be denied or abridged by the United States, or by any State, on account of race, color, or previous condition of servitude.

"2. The Congress shall have power to enforce this article by appropriate legislation.

"*Therefore resolved* (if the Senate concur), That the said proposed amendment to the Constitution be, and the same is, hereby ratified by the Legislature of the State of New York."

And whereas the proposed fifteenth amendment above recited has not been ratified by the Legislatures of three-fourths of the several States, and has not become a part of the Constitution of the United States;

And whereas, the State of New York, represented in the Legislature here now assembled, desires to withdraw the consent expressed in the above-recited concurrent resolution;

Now, therefore, be it resolved (if the Assembly concur), That the above-recited concurrent resolution be and it is hereby repealed, rescinded, and annulled.

And be it further resolved (if the Assembly concur), That the Legislature of the State of New York refuses to ratify the above-recited proposed fifteenth amendment to the Constitution of the United States, and withdraws absolutely any expression of consent heretofore given thereto, or ratification thereof.

Be it further resolved (if the Assembly concur), That the Governor be requested to transmit a copy of these resolutions and preamble to the Secretary of State of the United States at Washington, and to every member of the Senate and House of Representatives of the United States, and to the Governors of the several States.

Before the opening of the political campaign and the holding of the party conventions, two organizations, which have acquired some strength in the State, held meetings, at which they attempted to discuss matters of public importance, and passed resolutions expressive of their views and purposes. The New York State Temperance Society held its annual meeting at Rochester on the 15th of January. Among the resolutions which were discussed and adopted were the following:

Resolved, That when the candidates of each of the political parties are favorable to the license system or liquor traffic, it is the duty of the friends of temperance to nominate one who is not favorable to it; and moreover that, if, after a year's further warning and delay, all the political parties shall still persist in the crime of upholding the sale of intoxicating drinks, it will be the duty of the friends of temperance to turn their backs upon such parties, and to organize one which shall go for all political righteousness, and especially for shutting up all dram-shops.

Resolved, That prohibition is a political necessity; that, in order to secure such amendment of our civil law, an independent political organization is demanded at the present time.

On the 1st of June, the State Temperance Convention assembled at Syracuse to consider the relations of the temperance question to civil government, and the duties of its advocates and supporters in the approaching canvass. About one hundred and fifty delegates were present; and, after considerable discussion, the duty of setting forth their views was left to a committee of sixteen. This committee met at Saratoga on the 13th of July, and adopted the following resolutions:

Resolved, That we earnestly urge the temperance voters of the State, as a sacred duty that they owe the cause, to attend the caucuses of their respective parties and secure the nomination of delegates pledged to vote for such men only as will carry out the wishes of the majority of the temperance people of the State.

Resolved, That we will demand of the next Legislature a law which will enable the majority of the legal voters of any town, city, or village, or ward, to prohibit the sale of intoxicating liquors or beverages therein.

Resolved, That we urge on temperance men to enforce the penalties for violation of the present excise law, and will demand of the next Legislature such an increase of penalties as will tend to prohibit the sale and manufacture of intoxicating beverages in the State.

An address to the people of the State was also issued, and an attempt made to give the cause of temperance some influence in the political campaign, but without much success.

The Woman's Suffrage Association of the State met in convention at Saratoga on the 13th of July, and, after two days of incessant talk, settled upon the following as its "platform:"

The convention of delegates from the State of New York assembled, without distinction of sect or party, in pursuance of a call upon all persons in favor of demanding suffrage for the women of the nation, and the passage of an amendment to the Constitution of the United States by which the ballot can be secured to them, resolve as follows:

Resolved, That the question of woman suffrage is the great moral and political question of the day, and we demand the ballot for women, because equal rights are a part of the great principles of justice, because the laws of justice precede the laws of States, and the rights of humanity underlie the rights of government.

Resolved, That as governments are instituted for the maintenance of principles of justice, and as every human being can do better for himself than another for him, the right of every human being to share in the government under which he lives should be recognized by that government.

Resolved, That we claim for woman the inherent right to share in the government of any country of which she is a citizen, by virtue of her existence as a human being and her natural capacity for self-government; that, while resting the responsibility of woman's present political disability upon man, we deny his right to define woman's sphere; that, as we deny the right of one class of men to define the rights and duties of another class of men, so do we as emphatically deny the right of one sex to define the rights and duties of the other sex.

Resolved, That we gladly recognize the advancement of our just principles, as shown by the action of the Irish Republican National Convention, recently held in Washington and Chicago, in which they demanded that suffrage should be extended to all not guilty of crime, irrespective of color, race, or sex.

Resolved, That we also rejoice at the course of the Methodist Episcopal Church of the United States, recognizing, as a step in the true direction, their recent action admitting women of that Church to vote on lay delegation.

Resolved, That, in recognition and furtherance of the principles of justice, the Constitution of the United States should be so amended as to secure the right of suffrage to the women of the nation, on the same terms that it is held by the men of the nation.

Resolved, That we invite the coöperation of every man and woman, no matter how differing as to party, politics, creed, color, or nationality, in securing such an amendment.

The Democratic Convention assembled at Syracuse on the 22d of September to make nominations for the coming election, and set forth the principles on which the party proposed to conduct the canvass. The highest office to be filled was that of Secretary of State, and the following was the full ticket of nominations as determined upon: For Secretary of State, Homer A. Nelson; for Comptroller, Wm. F. Allen; for Treasurer, Wheeler H. Bristol; for Attorney-General, Marshall B. Champlain; for State Engineer, Van Rensselaer Richmond; for Canal Commissioner, W. W. Wright; for State Prison Inspector, Fordyce Laflin; for Judge of the Court of Appeals (long term), John A. Lott; for Judge of the Court of Appeals (short term), Robert Earl. The following resolutions were adopted without debate:

The Democracy of New York, in convention assembled, report and reaffirm the pledge they have given to the people in regard to questions of public policy, and they point to the history of their connection with the Government from the day of its foundation for the record of their devotion to its interests, their fidelity to its honor, their nationality and patriotism, and their unswerving loyalty to the Constitution; that, as the party which derives its principles from Jefferson and Jackson we are ready to go before the country with the record of our conduct and our principles, and demand to be judged by them.

Resolved, That, in pursuance of these principles and faithful to these traditions, we demand the restoration of all States to their rights in the Union under the Constitution, the amnesty of political offenders, the reduction of the standing army, the abolition of that hybrid institution, the Freedmen's Bureau, the restoration of the rightful authority of the judiciary, and the subordination of the military to the civil power.

Resolved, That we arraign the Administration of President Grant as false to these principles and measures, and to its pledges to give the country peace. It has for partisan purposes prolonged the disunion of the States, and by military dictation and arbitrary penalties is endeavoring to coerce communities and States into assent to its measures; it has failed to protect the masses, and has given countenance and support to class interests, and, turning its back upon the people, has become in turn the pensioner and patron of accumulated wealth, and that, while thus abusing the standard of administration at home, it has lowered the tone of our diplomacy abroad by the character of its appointments; by its vacillations and hesitations in regard to our rights as a nation, its want of sympathy with the people struggling for liberty, and its indifference to the fate of American citizens, victims of foreign despotism.

Resolved, That the protection of American citizens, whether naturalized or native born, in all their rights and wherever they may go, is a sacred duty imposed upon the United States Government, which cannot be disregarded without incurring national dishonor, that protection and allegiance are reciprocal duties, and whenever or wherever the rights of American citizens are assailed, duty and honor require that this Government should promptly employ adequate means for the vindication of such rights; and that we therefore denounce the recent flagrant omission by the Federal Administration to perform its whole duty toward American citizens in Great Britain and Cuba.

Resolved, That the Democratic party is now, as it ever has been, in favor of the fulfilment of all legitimate contracts made with the Federal Government, with the same strictness and honesty that should attend the payment of contracts between man and man; that, in case of loans made to the Federal Government by authority of law, it is the right not only of the lender, but of the American people, from the fruits of whose labor such loans must be paid, that such obligations should be discharged when due in the manner provided for by the law in obedience to which they were created.

Resolved, That the multiplication of taxes, their complexity and uncertainty, and the inquisitorial process by which they are extorted from the people, and, still more, that unequal and unjust system by which a moneyed class is exempt from the burdens of State and municipal government and their share imposed upon their neighbors, is a constantly-increasing abuse; that it is the duty of the statesmen of the country to simplify our taxes, distribute them upon the property of the country, reduce the tariff to a revenue basis, and thus release industry from its heaviest burden, and give freedom to commerce.

Resolved, That the course of the executive and administrative officers of this State in enforcing economy and reforming abuses which have grown up under the fostering care of our political opponents commends itself to the approval of the people, and should be extended to all the departments of the Government; that if the registration and excise laws are to be imposed upon the people, they should at least be uniform in their operation throughout the State; that the canals of the State should remain the property of its citizens; that they should be improved by the enlargement of the channels and the doubling of the locks where necessary; that the tolls should be reduced to such an extent as to command the carrying-trade, and that, as soon as the existing canal debt (now in process of rapid liquidation) shall be paid, the canals should be opened to the navigation of the people of all the States, subject only to a charge to defray the cost of their annual maintenance and repair.

Resolved, That the fifteenth amendment of the Federal Constitution, proposed by the radical majority in Congress in a spirit of contempt of the people and of the right of the States to regulate the elective franchise, and in utter disregard of the pledges of the party, and attempted to be forced upon the States as a condition of their restoration to civil government and to their representation in the national Legislature, is intended to place the question of suffrage in the hands of the central powers and by debasing to demoralize the representative system.

Resolved, That the amended constitution of this State in its various schedules to be submitted to the electors does not commend itself to the favor of the Democrats of the State, either by the motives in which it was conceived, or by the manner in which it was presented, or by its intrinsic worth.

Resolved, That his Excellency John T. Hoffman, by his fidelity to the interests of the State, his high-toned assertion of democratic principles, his effective hostility to corrupt and special legislation, and the dignified and impartial manner in which he has dis-

charged his executive duties, has not only commanded the hearty approval of the Democracy of New York, but secured the confidence and respect of a large class of our political opponents who hold the honor of the Empire State dearer than partisan success. Our citizens owe it to themselves, as well as to Governor Hoffman, to elect a Legislature that will aid rather than thwart him in carrying into effect measures of administrative and legislative reform.

Resolved, That the State officers this day renominated command the confidence of the Democratic masses as cordially and as unanimously as they have that of this convention, and that to them and their colleagues on the ticket we pledge a united and enthusiastic and triumphant support.

The Republican Convention met at Syracuse on the 29th of September, and made its nominations as follows: Secretary of State, George William Curtis, of Richmond; Comptroller, Thomas Hillhouse, Albany; Engineer and Surveyor, General John C. Robinson, Broome; Canal Commissioner, Stephen T. Hayt, Steuben; Treasurer, Thomas I. Chatfield, Tioga; Attorney-General, Martin I. Townsend, Rensselaer; State Prison Inspector, Daniel D. Conover, New York. For the Court of Appeals, Judges Woodruff and Mason were renominated.

Subsequently Mr. Curtis and Mr. Hillhouse declined to stand as candidates for the offices to which they had been nominated, and the Central Committee placed the name of General Franz Sigel on the ticket for Secretary of State, and that of Horace Greeley for Comptroller. The platform of the party was embodied in the following resolutions:

Resolved, That the public debt, by principal and interest, shall be paid in coin as the same matures; and that repudiation of any part thereof, either directly or indirectly, or by any device or subterfuge, would bring dishonor upon the nation and demoralization and disaster upon the people.

Resolved, That taxation ought to be equal and simple, and rendered as little burdensome to the citizens as the nature of the case will possibly allow.

Resolved, That the Government is bound by the most sacred obligations to protect its citizens, whether native or foreign born, wherever they may go.

Resolved, That every American citizen, whether naturalized or native, should have an equal right to the suffrage without regard to nation, race, or religion.

Resolved, That the fifteenth amendment to the Constitution of the United States, as proposed, ought to be adopted.

Resolved, That we deeply sympathize with all people everywhere who are down-trodden and oppressed by a privileged class or by unjust rule.

Resolved, That the great success and prosperity of our Government, under the guidance of Divine Providence, imposes upon us duties toward our Cuban neighbors, who, imitating the example of our fathers, are struggling for liberty against an arbitrary and oppressive government in which they are allowed no representation, and in whose administration they have no share; that whenever the facts in possession of our Government will justify the recognition of Cuban belligerency, we shall heartily approve such recognition, and pledge our cordial support to any action on the part of the Government tending to the final annexation of Cuba, whenever she shall have achieved her independence, and her people desire such action.

Resolved, That we heartily congratulate our countrymen of all parties on the peace, order, and security, almost universally realized under the wise, firm, moderate, and frugal rule of President Grant and his chosen councillors, and we point with pride to the activity and prosperity of our national industry, to our abundant revenue, restored credit, and rapidly-diminishing public debt, as a demonstration of the patriotic wisdom the people evinced in their latest choice of President and Vice-President.

Resolved, That the maintenance of our system of public education and of common schools is essential to the preservation of a republican government, and to the advancement of intelligence and civilization, and that we are opposed to every attempt on the part of our State Legislature to appropriate any money of the people to the support of sectarian schools, or the diversion of the school funds to the maintenance of any sectarian institution.

Resolved, That the Republican party is now, as it ever has been, the true friend of the canals of the State, and we believe that it is the true policy so to increase the facilities for the navigation thereof as to insure to all connected therewith a sure and speedy transmission of property, and, with a consequent increased business, warrant a reduction of tolls to a point which shall simply secure their safe navigation, defray the cost of their proper maintenance, and insure the speedy extinguishment of the canal debt.

Resolved, That we request our next Legislature to pass laws which will secure the right of every legal voter, whether native or naturalized, against invasion and overthrow by such frauds as deprived Grant and Colfax of the electoral vote of the State, and John A. Griswold, and those upon the same State ticket, of the offices to which they were fairly elected.

An attempt was made to have the following resolution inserted in the platform, but without success:

Resolved, That—as the sale of intoxicating liquors is recognized by the laws of civilized countries, as well as by both political parties in this State, as a proper subject of legislative restraint; and, as there is a diversity of opinion in the Republican party as to the extent to which legal restraint ought to be carried, and, as the present State law outside of New York City requires the petition of twenty-five freeholders as a condition of license—whenever a majority of legal voters of any town shall remonstrate against such sale, no license ought to be granted until a similar majority petition therefor, and that this is in harmony with the great doctrine of the right of the majority to rule.

This was laid on the table by a vote of 223 to 153.

One of the issues involved in the State election in November was the adoption of the new constitution, framed by the Convention of 1867. The Legislature had provided for its submission to the suffrages of the people, a separate vote being taken on the provision relating to suffrages, taxation, and the judiciary.

The principal change proposed on the subject of the elective franchise was a removal of the restriction upon the right of negroes to vote, which is contained in the old constitution. The section respecting taxation, which was to be separately voted on, was in these words: "Real and personal property shall be subject to a uniform rule of assessment and taxation." The amended judiciary article introduced some important changes in the organization of the Court of Appeals, and provided for submitting to a vote of the people the question of having the

judges appointed instead of elected. The Court of Appeals is to consist of a chief judge and six associates, to be elected for a term of fourteen years; and a Board of five Commissioners is provided for to determine all causes pending in that court on the 1st of January, 1869. This Commission of Appeals is to be "composed of judges of the present Court of Appeals, elected or appointed thereto, and a fifth commissioner who shall be appointed by the Governor, by and with the advice and consent of the Senate." No judge is to be allowed to sit "at a general term of any court or in the Court of Appeals, in review of a decision made by him, or by any court of which he was at the time a sitting member. All judges of the Supreme and Superior Court are to be elected for a term of fourteen years, but no person "shall hold the office of justice or judge of any court longer than until and concluding the last day of December next, after he shall be seventy years of age." Judges of the Court of Appeals and Supreme Court may be removed by a concurrent resolution of both branches of the Legislature, if two-thirds of all the members concur, and other judicial officers are removable by a two-thirds vote of the Senate alone, on the recommendation of the Governor. The section relating to an appointment of the judges in the future is as follows:

SECTION 17. The Legislature shall provide for submitting to the electors of the State at the general election in the year eighteen hundred and seventy-three, two questions, to be voted upon on separate ballots, as follows: *First*, "Shall the offices of Chief Justice and Associate Judge of the Court of Appeals, and of Justice of the Supreme Court, be hereafter filled by appointment?" If a majority of the votes upon the question shall be in the affirmative, and said offices shall not thereafter be elective, but, as vacancies occur, they shall be filled by appointment by the Governor, by and with the advice and consent of the Senate; or if the Senate be not in session, by the Governor; but in such case, he shall nominate to the Senate when next convened, and such appointment by the Governor alone shall expire at the end of that session. *Second*, "Shall the offices of the judges mentioned in sections twelve and fifteen of article six of the constitution, be hereafter filled by appointment?" If a majority of the votes upon the question shall be in the affirmative, the said offices shall not thereafter be elective, but, as vacancies occur, they shall be filled in the manner in this section above provided.

The election took place on the 2d day of November, and resulted in the choice of the entire Democratic ticket, and the rejection of all the revised constitution, except the judiciary article, which was adopted by a vote of 247,240 to 240,442. The vote on the whole constitution was 223,935 for its ratification to 290,456 against it, giving a majority of 66,521 in favor of its rejection. The vote on the provision for equal assessment and taxation was 183,812 in its favor, and 273,260 against it. The amendment in favor of negro suffrage received 249,802 votes, while 282,403 were cast against it; the total vote being 582,205, and the majority against the change 32,601. This same proposition was voted on in 1860, and out of a total vote of 535,487 received 197,503 votes, 337,984 being cast against it. In 1846, 309,742 votes were cast on this question, 85,406 of which were in favor of granting the privilege, and 224,336 against it. The entire vote for Secretary of State at the last election was 641,707, of which Sigel received 310,733, and Nelson 330,974, which gives the latter a majority of 20,241. The Legislature of 1870 consists of 18 Democrats and 14 Republicans in the Senate, and 72 Democrats and 56 Republicans in the Assembly, giving the Democrats a majority of 20 on a joint ballot.

NIEL, ADOLPHE, Marshal of France, Senator and Statesman, born at Muzet, in the department of the Higher Garonne, October 4, 1802; died at Paris, August 13, 1869. At the age of nineteen he entered the École Polytechnique, and two years later was admitted to the École d'Application of Metz. In 1827 he received a commission as lieutenant of engineers, and four years afterward attained the rank of captain. During the Algerine War he distinguished himself at the siege of Constantine, and for his services on that occasion was promoted to the rank of major, became lieutenant-colonel in 1842, and colonel in 1846. In the expedition to Rome, in 1849, he acted as chief of the staff of engineers, and rendered such valuable services that he was appointed a general of brigade, and sent on a mission to Gaeta to carry the keys of the city to the Pope. On his return to Paris he was assigned to the head of the engineering department in the bureau of the Minister of War, and was also a member of the superior committees upon engineering and fortification, as well as one of the Council of State, and in 1853 was promoted to be a general of division. The Russian War next offered an opportunity for the employment of his abilities in military engineering operations. He commanded the engineers at the capture of Bomarsund, then went to the Crimea and reported upon the condition of the army and the state of the siege of Sebastopol, and finally took command-in-chief of the engineers and directed the siege. Soon after the final assault he received the insignia of the Grand Cross of the Legion of Honor and was created a Senator in 1857. The following year he published an illustrated quarto volume, entitled the "Siege of Sebastopol." On the outbreak of the Italian War, in 1859, he was appointed to the command of the Fourth Corps of the Army of the Alps; and after the victory of Solferino, June 24, 1859, he was made a Marshal of France. In 1867, Marshal Niel became Minister of War, and retained that position until his death, notwithstanding great changes in the Cabinet. His administration of military affairs was characterized by vigor and ability. In a short time he succeeded in removing the disadvantages under which the French army labored, and rendered it equal if not superior to any force

in Europe in point of arms and organization. In the Senate he ably and consistently sustained the policy of the Emperor, and, although openly opposed to Prussian ascendency in European politics, he yielded to the Emperor's decision against war. One of his latest measures as Minister of War was the intimation of his desire that no non-commissioned officer should be promoted to the rank of officer after the age of twenty-eight. This regulation was intended to secure greater efficiency in the army, as it was based on the opinion that the cases must be rare in which a man having served in the ranks for eight or nine years without having been marked as fit for a commission would make an efficient officer.

NORTH CAROLINA. The State government of North Carolina having been reorganized and restored to the civil authorities under the constitution adopted in the summer of 1868, there has been comparative quiet in public affairs during the past year. The Legislature in session at the beginning of the year continued its sittings until late in the spring, but the measures adopted were not of general importance. The fifteenth amendment to the Constitution of the United States was ratified on the 4th of March, by a vote of 40 to 8 in the Senate, and 87 to 20 in the House. An attempt was made to secure the passage of a bill requesting Congress to remove the political disabilities from all the citizens of the State; but, as the majority of the Legislature were of opinion that the time had not arrived when that policy could be adopted with safety to the interests of the State, the measure was defeated.

The question involving the constitutionality of the homestead law, which exempts "from sale under execution for any debt," real and personal property, to the value of $1,500, came before the Supreme Court during the year, and a decision was rendered in favor of the validity of that law. The question at issue was, whether this provision in the State constitution was not in violation of that clause in the Constitution of the United States, that "no State shall pass any law impairing the obligation of contract." The majority of the court held that the parties to contracts made before the passage of the homestead law were not entitled by law to "any particular or specific remedy, but only a substantial and convenient one;" and that this remedy was not changed by the homestead exemption. A dissenting opinion was delivered by Chief-Justice Pearson, who defined the obligation of a contract to be, "the means of compelling performance according to the laws in force, at the time the contract is made; by these laws the parties agree to abide, by these laws their rights are fixed. This is the obligation which must not be impaired by a State, whether acting in convention or in General Assembly." The Chief Justice was of opinion that a destruction or change of the remedy impaired the obligation of the contract, and that, as the remedy in preëxisting contracts was changed by the operation of the homestead law, he believed it to be unconstitutional. By another important decision rendered by the Supreme Court, the intermarriage of white and colored citizens was held to be unlawful. Intermarriage between the two races in North Carolina had been prohibited by law prior to the recent adoption of the State constitution, and in that instrument it was provided that "the laws of North Carolina, not repugnant to this constitution, or to the Constitution and laws of the United States, shall be in force until lawfully altered." It was, however, claimed that the law on this subject had been changed by the operation of the Civil Rights Bill of Congress, and that such marriages were valid. In pronouncing against this theory, the court said: "It is not necessary that we should decide whether the operation of that bill ended with the cessation of our provisional relations with the United States, or whether it is operative now, for by its terms it has no application to the social relations. Its object was, and its terms are, to declare equality between all citizens without regard to race or color, in the matters of making business contracts, suing in the courts, giving evidence, acquiring property and protection of persons and property. And this is nothing more than our own State constitution has done. But neither the Civil Rights Bill nor our State constitution was intended to enforce social equality, but only civil and political rights."

During the year a controversy arose between a portion of the members of the bar and the justices of the Supreme Court, which attracted much attention throughout the State. This difference was occasioned by the publication of a protest, signed by a hundred and ten lawyers, (about one-fifth of the whole number in the State) in which the judges of the Supreme Court were denounced for an alleged "active and open participation in the strife of political contests." The occasion referred to was the canvass for the presidential election of the preceding year; but for some unexplained reason the publication of the protest was not made until the month of April, 1869. The indignation of the remonstrants was expressed in unmistakable language. "Many of us," they said, "have passed through political times almost as excited as those of to-day; and most of us, recently, through one more excited; but never before have we seen the judges of the Supreme Court, singly or *en masse*, moved from that becoming propriety so indispensable to secure the respect of the people, and, throwing aside the ermine, rush into the mad contest of politics under the excitement of drums and flags. From the unerring lessons of the past, we are assured that a judge who openly and publicly displays his political party zeal, renders himself unfit to hold the 'balance of justice,' and that, whenever an occasion may

offer to serve his fellow-partisan, he will yield to the temptation, and the 'wavering balance' will shake.

"It is a natural weakness in man, that he who warmly and publicly identifies himself with a political party, will be tempted to uphold the party which upholds him; and all experience teaches us that a partisan judge cannot be safely trusted to settle the great principles of a political constitution, while he reads and studies the book of its laws under the banners of a party."

This attack upon the honor and dignity of the highest judicial tribunal of the State was regarded as having a pernicious influence, and as tending to "impair the respect due to the authority of the court," and an order promptly issued from the Supreme Court disabling the offending members from appearing as attorneys before the court unless they should appear on a specified day and show cause to the contrary. A number of the proscribed attorneys filed answers denying the authority and jurisdiction of the court in the premises.

The case of B. F. Moore, whose name headed the list of protestants, was first called, and argued on behalf of that respondent by a number of gentlemen distinguished for their legal attainments, and the satisfactory adjustment of this case suggested a happy solution for the entire difficulty. Among other defences set up in his answer, Mr. Moore not only disavowed, "in signing and publishing said paper, any intention of committing a contempt of the Supreme Court, or of impairing the respect due to its authority, but, on the contrary, he avows his motive to have been to preserve the purity which had ever distinguished the administration of justice by the courts of the State."

The court, moved by these sentiments, asserted that this frank avowal removed the only obstacle preventing a restoration of the most friendly relations between the court and the eminent gentlemen of the bar, and that the order would be withdrawn on the payment of costs by the respondent. That gentleman was gratified at the clemency of the court. Whereupon the court was moved to say: "We concur with his counsel in according to Mr. Moore high encomium for his ability, legal learning, integrity, devotion to the Constitution, unwavering love of the Union, and *hitherto* a most consistent and influential supporter of the judicial tribunals of his country."

The privilege was extended to all those who signed the protest, of regaining their rights by a similar disavowal.

The good order and peace of the community have been much disturbed during the past year by deeds of violence, committed by lawless men, against whose outrages the civil authorities failed to afford complete protection to peaceful citizens. These disturbances, however, were confined chiefly to four counties—Lenoir, Jones, Orange, and Chatham—each of which contained about an equal number of white and colored citizens. These localities were made the scenes of many bloody acts, committed by a secret organization of men in disguise, who inflicted outrages upon peaceful citizens, and in many instances wrested colored criminals from the custody of the civil authorities and subjected them to the most summary and cruel punishment. As these evils continued, despite the efforts of the civil authorities for their suppression, Governor Holden, on the 20th of October, issued a proclamation of "admonition and warning to all the people of the counties mentioned," calling upon them "to aid the civil power in a fearless enforcement of the laws." The condition of affairs in the disorderly districts was set forth in the proclamation as follows:

> Notwithstanding the existence of peace and good order in other portions of the State, I regard it as my duty to announce that in four counties, to wit, Lenoir, Jones, Orange, and Chatham, there is, and has been for some months past, a feeling of insubordination and insurrection, insomuch that many good citizens are put in terror for their lives and property, and it is difficult, if not impossible, to secure a full and fair enforcement of the law. Information has reached, and continues to reach the Executive, that in the above counties a state of feeling exists which is totally incompatible with the free exercise, by the friends of the Government, of that independent expression of opinion, and that freedom of action, which is the birthright of every American. In Lenoir and Jones, various thefts and murders have been committed; jails have been forcibly opened, and the prisoners taken thence have been murdered; an officer of the law has been waylaid and slain on the public highway, and another officer of the law has been slain in the open day while engaged in his ordinary avocations. Private dwellings have been entered and the occupants terrified, and some of them whipped or murdered; others have been shot, or hanged, or cruelly beaten; and the result is, that thus far the civil law, though firmly asserted and maintained, has not been adequate to bring the insubordinate and the wicked to condign punishment. In Chatham the jail has been forcibly opened, and a prisoner, confined under sentence of a court of the United States, has been liberated, and is now at large. In Orange the jail has been forcibly opened, and two prisoners (colored men) taken out and shot, one of whom has died of his wounds. Three other colored men have been hanged until they were dead, one has been cruelly mutilated, and others have been whipped. White citizens have been injured, insulted, and terrified. The university of the State, sacred to the cause of learning, has been repeatedly invaded by bands of armed men in disguise on horseback, and acts of violence have been there perpetrated on unoffending citizens and officers of the law. Many of the colored people in these counties, and no inconsiderable portion of the white people, though obedient to the law and good citizens, are living under constant apprehensions that they may fall victims at any moment to the malice of their enemies.

Before closing the proclamation, the Executive announced the course which he would pursue in case his admonition should be unheeded:

> I now give notice in the most solemn manner, that these violations of law, and these outrages in the aforesaid counties, *must cease*; otherwise, I will proclaim those counties in a state of insurrection, and will exert the whole power of the State to enforce the law, to protect those who are assailed or injured, and to bring criminals to justice. In a matter like

this there should be no party feeling. It is my fixed purpose to protect every citizen without regard to his antecedents, his color, or his political opinions; but to do this the law must be sacred, must be spread over all alike, and must be inflexibly maintained.

This action on the part of the Executive did not produce the desired effect of restoring order and tranquillity in these counties, and, after the assembling of the Legislature, Governor Holden applied to that body for "such amendments to the militia law as will enable the Executive to repel violence and disorder in certain localities in this State, and to protect the persons of citizens, their lives, and their property." In conformity to this suggestion, a bill "to secure the better protection of life and property" was introduced by Mr. Shoffner, which, among other things, provided for a suspension of the writ of *habeas corpus*. Amendments were, however, made, which eliminated this feature of the bill. As altered, it contained the following sections:

SECTION 1. The General Assembly of North Carolina do enact, That the Governor is hereby authorized and empowered, whenever in his judgment the civil authorities in any county are unable to protect its citizens in the enjoyment of life and property, to declare such counties in a state of insurrection, and to call into active service the militia of the State to such an extent as may become necessary to repress such insurrection. And in such case the Governor is further authorized to call upon the President for such assistance, if any, as in his judgment may be necessary to enforce the laws.

SEC. 2. That, upon motion of the solicitor of a district, it shall be the duty of the judge thereof to remove the trial of any person who has been, or who may hereafter be, indicted for murder, conspiracy, and for violation of an act ratified the 12th day of April, 1869, from the county where such offence may have been committed to such other county in his district or adjoining district as the solicitor may designate. And any judge before whom such case is pending may, upon his own motion, make such removal.

This measure met with bitter opposition from some members of the Legislature, who denounced it as being an invasion of the liberties of the people, by placing despotic power in the hands of the Executive, and contended that there was no necessity for such extreme measures, since order could be maintained anywhere in the State by the civil authorities. The opponents of the measure, however, were in the minority, as a majority of the Legislature asserted that the evils complained of had been increasing, and that unless these outrages were summarily repressed by prompt action on the part of the Executive, other sections of the State would be infected and the disorders become general. A final disposition of the bill had not been made at the close of the year, but the sentiment of the Legislature was in favor of its adoption.

The regular session of the Legislature commenced at Raleigh on the 15th of November, and proceeded without delay in the transaction of business. The members of this body had been chosen at the election of the preceding year, and were classified as follows:

	Senate.	House.	Joint Bal.
Republicans	41	82	123
Democrats	8	38	46
Republican majority	33	44	77
White	46	104	
Colored	3	16	
White majority	43	88	

A question arose early in the session as to the tenure of office of the members. They had been elected under a provision of the constitution which declared that the term of the members chosen in April, 1868, should "terminate as if they had been elected at the first ensuing regular election." By a further provision of the constitution, the terms of the members of the General Assembly were made biennial; and the first election was ordered to be held on the 1st Thursday of August, 1870. The language of the constitution was construed by some to extend the term of the present members to the year 1872; while, on the other hand, it was claimed that the period for which they had been elected was two years. After the matter had been discussed at some length in the Legislature, the question was referred to the justices of the Supreme Court for their opinion.

Upon the opening of the General Assembly the following joint resolutions were offered as expressing the policy of the Government in regard to the State debt, and were ordered to be printed:

Resolved, the Senate concurring, That, in order to remove any and all doubts as to the disposition and purpose of North Carolina to meet and discharge all her legal and just obligations to her creditors, whether at home or abroad, it is hereby solemnly declared to be the sentiment of the General Assembly of the said State, that honor and good faith, as well as sound policy, demand the payment of every dollar of the regularly-contracted State debt that has recently been pronounced by our highest judicial tribunal in accordance with the true intent of the constitution of the State.

Resolved, That the decisions of the said court are regarded as final, and are conclusive, not only as to the validity of the special tax debt, but equally conclusive on the other hand that the bonds pronounced illegal and irregular by said court have no binding force whatever.

Resolved, That North Carolina would regard the repudiation of a single dollar of her regular indebtedness as a violation of every principle of plighted faith, and as one of the greatest misfortunes that could befall her people.

The policy favoring a removal of the political disabilities imposed upon certain citizens of the State, gained strength during the year; for a resolution passed the House, by a vote of 59 to 24, requesting Congress "to remove from all citizens of this State the political disabilities imposed by the fourteenth amendment to the Federal Constitution." In the preamble, it was stated that "the time has fully come when, in the opinion of this General Assembly, political and civil equality before the law ought to prevail among all the men of North Carolina, without regard to race or to past political offences." The Senate, however, favored an

amendment of the measure, to the effect that Congress be urged to pass a general amnesty act. The prevailing sentiment of the community on this subject may be considered as expressed in the following passage from Governor Holden's last message to the Legislature:

By the fourteenth amendment to the Constitution of the United States, certain persons in the recently insurgent States are debarred the privilege of holding office at the hands of their fellow-citizens; but the Congress may, at pleasure, remove such disability. There are many citizens of States which did not engage in rebellion, who are technically exempt from this disability, but who were not more loyal to the Government, and are not now more loyal, than many citizens of this State who are only technically excluded from holding office. I am not able to perceive that a citizen of a State that did not engage in rebellion, who sympathized with the pretended Confederacy, and did all he could to discourage volunteering and to paralyze the national arms, is more loyal or more deserving of consideration than the Southern Unionist who occupied some small office, not with a view to aid the rebellion, but merely to escape conscription. There are several thousands of persons in this State of the latter class, who were at one time supremely attached to the national Government, and who endeavored in every conceivable way to avoid fighting against the Government of the United States, but who are now soured and distressed, because, by the fourteenth amendment, the very means they adopted to avoid doing violence to their judgments and consciences, have been used to exclude them from office. Every citizen of this class, and every loyal citizen, is entitled to be at once relieved by the Congress. There are several thousands of others in the State, who are either indifferent to the Government or opposed to the acts of Congress by which the State was reconstructed. These persons have been sorely punished for their acts of rebellion. Even if disposed to thwart the action of the Federal or State governments, they are powerless to do so. They are chafed by the reflection that their former slaves can hold office, while they are excluded, and this reflection is magnified in their minds into the belief that the national Government is disposed to pursue and punish them, simply because they had taken an oath to support the Constitution of the United States before they engaged in rebellion, while the obligation to support that instrument was equally binding upon all, and thousands upon thousands who never took that oath, but who were as deeply and as bitterly immersed in the rebellion as they were, are not banned or excluded. The nation can afford to be magnanimous. After nine years of rebellion, and strife, and civil discord, and social disruption and bitterness, a very large majority of the people of North Carolina long for peace, and harmony, and good-will, and security for life and property.

The total debt of North Carolina is stated at $34,095,045, all which bears interest at six per cent., payable half-yearly. Of this amount the sum of $17,215,045, known as the "old debt," is chargeable, principal and interest, on the general revenues of the State, and consists of ante-war bonds to the amount of $8,378,200, and post-war bonds amounting to $8,836,845. The post-war bonds are such as have been issued since the late war under funding acts, or such as were authorized by law before the war. The condition of the treasury has not warranted the payment of the interest on the "old debt," and it has been found necessary to fund the interest due thereon. Since October 1, 1868, the following bonds have been issued to railroad companies; and the payment of the interest accruing thereon provided for by special taxes:

Williamston and Tarborough Railroad..	$300,000
Western Division of the West North Carolina Railroad.....	6,367,500
Eastern Division of said road.....	273,000
Wilmington, Charlotte, and Rutherford Railroad.....	1,500,000
Northwestern North Carolina Railroad	1,060,000
Western (Coalfield) Railroad.....	1,320,000
Atlantic, Tennessee, and Ohio Railroad.	1,760,000
	$12,600,000
Bonds to be issued.....	4,280,000
Total.....	$16,880,000

The legislation of the State has been such as to make the new issue of bonds since October 1, 1868, a preferred charge on the entire assessable property of the State. The holders of the first class of bonds must rely on the future development of the industrial resources of the State for the means to meet the interest thereon, while those who hold the second class will receive prompt payment, if the valuation of the assessable property amounts to enough to cover the whole issue. The special tax authorized to be levied by the several acts of the Legislature is equal in the aggregate to 47.08 of one per cent. on the whole assessable property of the State, which amounts, on a close estimate founded on the last census, to over $250,000,000. The sum that will be applicable to the interest on the gross amount of special tax bonds is $1,777,000, while the interest is only $999,600, leaving a large surplus as a sinking fund.

The system of public schools contemplated by the constitution is not yet in complete operation. In most of the counties the requisite school-officers have been elected and qualified, and a few schools have already been opened. An apportionment of the school fund has been made for the year 1870, by the Superintendent of Public Instruction, to the amount of $165,290.50; and teachers will be engaged and schools opened as soon as the township and county authorities are notified of this apportionment. The sum of $100,000 was appropriated for school purposes by the General Assembly, in session, at the opening of the year, which amount is to be added to the capitation tax and apportioned among the counties of the State. The number of children among whom the school-money must be distributed is 330,581.

The Board of Public Charities appointed under an act of the Legislature have made diligent inquiries into the condition of the reformatory and charitable institutions of the State, in order to ascertain the wants of those institutions and the measures necessary for their improvement. A site for the penitentiary has been chosen near the city of Raleigh, and the necessary buildings are in process of construction.

O

OBITUARIES, AMERICAN. *Jan.* 1.—BATES, MARTIN W., formerly United States Senator from Delaware; died at Dover, Del., aged 83 years. He was born in Salisbury, Litchfield County, Conn., February 24, 1787, was educated for the medical profession, but subsequently devoted his attention to the study of law, and removed to Delaware, where he served several terms in the State Legislature, and in 1850 was a member of the State Constitutional Convention. After the death of John M. Clayton, he served in the United States Senate from 1857 to 1859.

Jan. 1.—WEBSTER, WILLIAM GREENLEAF, only son of the late Noah Webster, a resident of New Haven, and compiler of several of the dictionaries, spelling-books, etc., published in his father's name; died in New York City.

Jan. 5.—KIRKPATRICK, Rev. DAVID, a Presbyterian clergyman; died at Poke Run, Pa. He was born in Ireland in 1795; graduated at the University of Glasgow, studied theology in Belfast, and came to this country in 1819. In 1822 he became principal of Milton Academy, in Northumberland County, Pa., retaining that position for a period of twelve years, and preaching regularly during the whole time. Subsequently he was for thirty-two years pastor of the Presbyterian Church in Poke Run, and resigned his charge, on account of his health, a few months previous to his decease.

Jan. 6.—BRITTIN, Colonel WILLIAM, a prominent Whig politician; died in Madison, N. J., aged 91 years. He was for many years a leader of the old Whig party, filling various important offices under its auspices, as magistrate, member of both Houses of the Legislature, and for many years judge in the Court of Common Pleas.

Jan. 10.—CASSIN, JOHN, a distinguished naturalist; died in Philadelphia. He was born near that city, September 6, 1813. In 1834 he became a resident of Philadelphia, where for some years he was engaged in mercantile pursuits, but, having in his youth formed a decided taste for the study of ornithology, his later years were devoted mostly to that science. He contributed descriptions of new species of birds and synoptical reviews of various families to the Philadelphia Academy of Natural Science. His more elaborate publications are "Birds of California and Texas," a handsome octavo volume, containing descriptions and colored engravings of fifty species not given by Audubon; a "Synopsis of the Birds of North America;" "Ornithology of the United States Exploring Expedition;" "Ornithology of the Japan Expedition;" "Ornithology of Gillis's Astronomical Expedition to Chili;" and the chapters on rapacious and wading birds in the "Ornithology of the Pacific Railroad Explorations and Surveys." His works are the result of careful research, and are especially valuable for their descriptions and classification of many birds not given in the previous works of Wilson and Audubon. Mr. Cassin served many years in the city government, and was once the Democratic candidate for Congress from the first Pennsylvania district.

Jan. 11.—DUNNING, Rev. HALSEY, D. D., a Presbyterian clergyman; died in Baltimore, Md., aged 50 years. He was born in Wantage, Sussex County, N. J., and graduated at the University of the City of New York, and also at the Union Theological Seminary. Upon leaving the latter institution he was appointed chaplain to the State Prison at Sing Sing, and subsequently removed to Richmond, Va. For the fourteen years preceding his death he was pastor of the First Congregational Church in Baltimore, where he was highly esteemed for his ability, and for his genial and kindly nature.

Jan. 11.—LAW, Commander RICHARD LYMAN, U. S. N., a gallant naval officer; died in Philadelphia, aged about 46 years. He was appointed to the Navy from Indiana, February 17, 1841, and was in the service twenty-eight years, seventeen of which he spent at sea. At various times he was attached to the different American squadrons, and for two years and a half was employed upon the coast survey. During the late war he served upon several war-vessels, and participated in numerous engagements with credit to himself, and to the satisfaction of his superior officers. At the close of the war he was assigned to the command of the steam-sloop Suwanee, which was lost during a cruise between San Francisco and Alaska. In 1866 he was retired from active service, but was soon after restored to the list, and in September of that year received his commission as commander. His last cruise was completed in September, 1867.

Jan. 15.—KEY, THOMAS MARSHALL, an eminent lawyer and politician of Ohio; died at Lebanon, Ky., aged 50 years. He was a native of Kentucky, graduated at Yale College in 1838, studied law, and, having made his home in Cincinnati, rose to a high position as a member of that bar. He was repeatedly elected to the Ohio State Senate, where he wielded a powerful influence. Though at first strongly opposed to the late war, he became convinced that the Government should be supported, and from that time devoted himself to the interests of his country, being sent by Governor Denison as a commissioner to Governor Beriah Magoffin, of Kentucky, to persuade him not to render aid and comfort to the Confederates. After the appointment of McClellan as major-general, he accepted a position upon his staff. He was

the author of the first congressional bill for the emancipation of slaves in any part of the United States, and with his own hand wrote the bill for the emancipation of slaves in the District of Columbia, and urged it upon the attention of Congress. After the war he returned to Ohio, and took a prominent part in the political campaigns of that State. His death was the result of pulmonary disease.

Jan. 15.—LEONARD, JAMES, Inspector of Police in New York City; died suddenly at his residence, of rupture of an aneurism of the aorta. He was born in Plattsburg, N. Y., August 19, 1820. In 1845 he became connected with the police force, and in 1848 was appointed Captain of Police of the Second Ward. While here he became identified with the Democratic organizations of the ward, and was looked upon as a leader of great strength. Subsequently, under the police law, he was appointed to the position of inspector, which he filled with marked ability. In 1851, on the occasion of the World's Fair in London, he was, at the request of Sir Richard Mayne, Chief of the London Police, sent over to look after criminals from this country, and received a handsome reward for his services. To his duties as inspector was added the supervision of the School of Instruction for the Police, and to his capacity as instructor New York is mainly indebted for the efficiency of the present police force. He had just organized a class for sergeants, and superintended the exercises as usual on the day of his decease.

Jan. 17.—BLAND, HUMPHREY, a well-known actor and theatrical manager, died in New York City, aged 57 years. He was a native of England, and in that country won some distinction as a representative of the young heroes of tragedy and comedy. After coming to this country he achieved considerable success, and at the time of his death was manager of Wall's Opera-House, in Washington. He was a diligent and devoted student of his art, and a faithful, conscientious actor.

Jan. 17.—VOSE, Judge HENRY, an able jurist, died in Boston. He was born in Charlestown, in 1817, graduated at Harvard College in the class of 1837, studied and practised law in Springfield, Mass., and represented that city in the Legislatures of 1857 and 1858. He was appointed Judge of the Superior Court on its organization in 1859, and remained on the bench till his death. He was a man of sterling qualities, and greatly beloved and respected in all the relations of life.

Jan. 18.—PERCE, ELBERT, an author and inventor, died in Brooklyn, L. I., aged 37 years. He was born in New York, August 17, 1831, but the early part of his life was spent in Buffalo. Returning to New York, he devoted himself to literary pursuits, and in 1851 published "Gulliver Joi," in the succeeding year, "Old Karl, the Cooper, and his Wonderful Book," and many translations from the Swedish novelist, Madame Carlen. In these he met with remarkable success, and subsequently compiled "The Battle Roll," a work giving statistics of all the important battles ever fought. He added to his literary taste and ability a decided genius for mechanics, and was the inventor of the Magnetic Terrestrial Globe which bears his name. He was a man of fine literary ability and wide popularity.

Jan. 20.—RODNEY, HENRY F.; died at Lewes, Delaware, aged 69 years. He was repeatedly chosen a member of the State Legislature, and was a delegate to the Constitutional Convention of 1832, in which he advocated the right of colored citizens to suffrage.

Jan. 21.—CALLIGHAN, Rev. JOSEPH, S. J., a Roman Catholic priest, rector of the novitiate of the Society of Jesus at Frederick, Md.; was killed by the disaster to the steamship Pereire, off Brest, France, aged 45 years. He was a native of Boston. He was for four years president of Loyola College, Baltimore, and, at the time of his death, was returning from Rome, whither he had gone as a representative of the Roman Catholic Societies of Maryland.

Jan. 23.—LEACH, Rev. BEBIAH N., D. D., a Baptist clergyman, died in Middletown, Conn., aged 67 years. He was a native of Vermont, graduated at Hamilton Literary and Theological Institution, now Madison University, Hamilton, N. Y., in 1828. He had been forty years in the ministry, and was the author of several religious works.

Jan. 24.—OLDS, Dr. EDSON B., member of Congress from Ohio; died at Lancaster, Ohio, aged about 66 years. He was a native of Vermont, and was a Representative in Congress from Ohio, from 1849 to 1855, in the Democratic interest. He had also been for six terms a member of the Ohio Legislature, and one term Speaker of the State Senate. He had taken strong ground in his denunciations of the Government while in the Ohio Legislature, and in 1862 was arrested for disloyalty, and imprisoned for a few months in Fort Lafayette. A short time previous to his death, he erected a new church, with the understanding that it should be free from "the heresy of regarding slavery and rebellion as sins."

Jan. 26.—WRIGHT, F. M., a prominent and popular politician of Central Ohio; died at Urbana, Ohio. He was Auditor of the State from 1856 to 1860, under the Chase administration, and in 1862 was appointed Collector of Internal Revenue for the Fourth Congressional District of Ohio. He was very much beloved in Urbana and its vicinity, and had a high reputation for business ability.

Jan. 27.—WALBRIDGE, HENRY S., formerly member of Congress from New York; was killed on the railroad in Bergen tunnel, Hoboken, N. J., aged about 60 years. He was a brother of General Hiram Walbridge; was a Representative in Congress from New York, from 1851 to 1853, and had also been a Judge of the Supreme Court of that State.

Jan. 29.—MCMAHON, Colonel JOHN H., a

prominent editor of West Tennessee; died in Memphis, aged 59 years. He was a strong Whig during the old political struggles, and was editor at different times of the West Tennessee *Whig*, the Memphis *Eagle and Enquirer*, and other papers in the same State. Before the late war broke out, he defended the Union against the more violent secessionists, but finally joined the Southern cause. When the Memphis *Appeal* was revived after the war, he became editor-in-chief, holding that position about one year, when he retired from editorial life.

Jan. —.—STOUGHTON, EDWIN H., Brigadier-General Vermont Volunteers; died in Boston. He was a native of Vermont, and appointed from that State to the Military Academy. He graduated at West Point with the class of 1859, seventeenth in a class of twenty-two, and was immediately assigned to the infantry service. He served in New Mexico for two years, but resigned in March, 1861. In the summer of the same year, Governor Fairbanks, of Vermont, commissioned him colonel of the Fourth Vermont Volunteers, with which organization he forthwith joined the Army of the Potomac. He commanded his regiment throughout the Peninsular campaign under General McClellan, rendering such efficient service as to secure for him the commission of a brigadier-general. He was assigned to the command of the Second Vermont Brigade, with which command he was stationed for some time at Fairfax Court-house. While here he was captured by Mosby, the guerrilla, March 8, 1863, who made a night raid upon the camp, apparently for the express purpose of effecting the general's capture. After being confined for some weeks in Libby Prison, General Stoughton was released, his commission having expired by constitutional limitations four days before his capture. He resigned his connection with the Volunteer Army on his release. He then entered upon the practice of the law in New York City, and continued to follow his profession until his disease compelled him to retire to Boston, where he died.

Feb. 3.—CAULKINS, Miss FRANCES MANWARING, authoress and antiquarian; died at New London, Conn., aged 73 years. She was born in New London in 1796, and had spent most of her life in that city and Norwich. She was highly educated, and early manifested a taste for literary and antiquarian pursuits. She had published excellent histories of the two cities (New London and Norwich), as well as some other historical works. She had also for some years edited the *Christian Almanac*, and some other publications of the "American Tract Society."

Feb. 6.—HUBBARD, JOHN, M. D., LL. D.; died in Hallowell, Me., aged 78 years. He graduated at Dartmouth College in 1816, studied medicine, and graduated M. D. at the University of Pennsylvania in 1822. In 1849 he was elected Governor of the State, by the Democratic party, and remained in office by annual reëlection till 1852. He was a hearty supporter of the law prohibiting the sale of ardent spirits as a beverage, generally known as the "Maine Law." His death was the result of disease of the heart.

Feb. 7.—ANGELL, WILLIAM PITT, a prominent politician of New York; died at Morrisania, N. Y., aged 56 years. He was born in Otsego County, February 2, 1813, studied law in the village of Cuba, and was admitted to the bar in 1830. A few years after, having removed to Cattaraugus County, he was chosen District Attorney of that county. In 1845, President Polk appointed him Indian Agent, and he filled that office with credit for four years. In 1849 he was elected State-Prison Inspector, and at the end of the three years' term was chosen a member of the New York Legislature from Cattaraugus County. In 1856 he supported General Fremont for the presidency, and in 1860 and 1864 Mr. Lincoln. In 1865, however, he supported President Johnson, and returned to the Democratic ranks, but held no office.

Feb. 7.—BURRILL, ALEXANDER M., an eminent lawyer and legal writer; died at Kearny, N. J., aged 62 years. He graduated at Columbia College, N. Y., in 1824, with the highest honors of his class, after which he entered the office of Chancellor Kent, and devoted himself for several years to the study of law. He was remarkable for his scholarly precision and discrimination in the use of language, and was the author of several valuable legal works, among which may be mentioned "Circumstantial Evidence;" "Assignments;" "Practice;" and a "Law Dictionary." He also aided in the compilation of Worcester's Dictionary.

Feb. 7.—HAYDEN, General WILLIAM, an eminent and respected citizen of Hartford, Conn.; died there, aged 75 years. Originally by profession a builder, he had identified himself with many of the public buildings of the city and State. He had also been brigadier-general of the Connecticut militia, Chief of the Fire Department, Collector of the Port, a member of the Legislature, and for a long time a member of the Municipal Council.

Feb. 8.—DUNCAN, JAMES H., LL. D., an eminent citizen of Massachusetts; died at Haverhill. He was born in that town, December 5, 1793, graduated at Harvard College in 1812, studied law, and in 1815 was admitted to the Essex bar, entering upon the practice of his profession in his native town. He served four years in the State Legislature; was State Senator from 1828 to 1831; State Councillor in 1840 and 1841; and a Representative in Congress from 1849 to 1853, all of which offices he filled in a manner highly satisfactory. He was also for a long period an active member of the Executive Committee of the American Baptist Missionary Union, and chairman of its Board of Managers, and was a trustee of the Newton Theological Seminary. At the

time of his death he was the senior member of the Board of Fellows of Brown University, which Board, in 1861, conferred on him the honorary degree of Doctor of Laws.

Feb. 8.—SMITH, JOTHAM, a scholar and journalist; died in Yonkers, Westchester County, New York, in the 55th year of his age. He was born in Bedford, Westchester County, N. Y., graduated from the College of New Jersey, in 1833, was admitted to the bar in 1836, and acquired a high reputation as a writer in New York City. In 1854 he became assistant editor of the N. Y. *Courier* and *Enquirer*, and during General Webb's absence was its managing editor till it was merged in the *World* in 1864. He then became editor of the *Yonkers Statesman*, which he conducted till his death.

Feb. 9.—HILL, Mrs. LUCY ELIZABETH (Shepard), wife of Rev. Thomas Hill, D. D., late President of Harvard College; died at Waltham, Mass., aged 81 years. Mrs. Hill, from early girlhood, was held in high esteem for her intellectual powers and her rare acquisitions as a scholar. She was an accomplished and singularly successful teacher, first as an assistant in the Dorchester High School, then at the Eagleswood Institution, in New Jersey, and, more recently, after spending a year as professor at Antioch College, in the High School in Cambridge. In these important positions she became really eminent for the extent and accuracy of her learning, especially as a linguist and mathematician, and for her influence in inspiring an ardor for knowledge in her pupils. Young as she was, there are those now in their manhood and womanhood, ready to confess their indebtedness to her as an efficient and thoroughly competent instructor in the highest branches. Her marriage with President Hill interrupted her work as a teacher. But, as the wife of the learned president, she took a deep interest in his favorite studies, and marked out for herself a very extended course of learning. Her strength was not, however, equal to her aspirations, and her health and mental powers gave way under the too severe pressure, and, after some months of suffering, death came as a relief. Her graces of character were not inferior to her intellectual endowments, and won the respect and love of all whose privilege it was to form her acquaintance.

Feb. 9.—LORD, JAMES COOPER, a philanthropic merchant and iron manufacturer of New York, the founder, in 1860, of the "First Ward Industrial School," who had more recently established a free reading-room, founded a library, and erected two churches for the benefit of the workmen at his iron-works in New Jersey, and their neighbors.

Feb. 9.—MCCONNELL, MURRAY, an eminent lawyer, was assassinated in his office at Jacksonville, Ill., aged 72 years. He was one of the oldest citizens of Central Illinois, and was thoroughly identified with the political history of that State. He participated in the Black Hawk War, and shortly after was elected a representative in the State Legislature. From 1864 to 1868 he was a member of the Senate. Under the Administration of President Buchanan (1857–'61), he held the office of Fifth Auditor of the Treasury. General McConnell was a man of decided ability, ready wit, and considerable scientific and literary attainments, and possessed a large fortune.

Feb. 10.—WISE, Rev. HENRY ALEXANDER, Jr., an Episcopal clergyman, son of Governor Wise, of Virginia; died in Wilmington, Del. He was a popular preacher, and had been a rector in Richmond, Philadelphia, Harrisonburg, and Baltimore.

Feb. 12.—BARNES, Major-General JAMES, U. S. Vols.; died at his residence in Springfield, Mass., aged about 60 years. He was born in Massachusetts, and became a cadet at West Point in 1825, graduating in 1829, fifth in a class of forty-six, and that one of the most remarkable classes of the Military Academy. He remained in the army seven years, advancing to the rank of first lieutenant of the Fourth Artillery, when he resigned and became a railroad engineer and superintendent on the Western Railroad of Massachusetts from 1836 to 1848, and chief engineer of the Seaboard and Roanoke Railroad from 1848 to 1852. He also constructed, either wholly or in part, the Rome and Watertown, the Sackett's Harbor and Ellisburg, the Buffalo, Corning, and New York, the Terre Haute, Alton, and St. Louis, and the Potsdam and Watertown Railroads, between 1848 and 1857. During the late war, he was colonel of the 18th regiment Massachusetts Vols., from July 26, 1861, to November 29, 1862, participating in most of the battles of the Army of the Potomac during that period. He was promoted to be Brigadier-General of Volunteers, November 29, 1862, and was at Fredericksburg, Chancellorsville, the skirmishes of Aldie and Upperville, and the battle of Gettysburg, where he commanded a division and was wounded severely. Subsequently he was on court-martial duty or in command of posts to the close of the war, and was brevetted Major-General of Volunteers, March 13, 1865. He was mustered out of the service January 15, 1866. His health was broken by his wounds, and though he interested himself somewhat in railroad matters, he was unable to engage in any active business.

Feb. 12.—LEAVENWORTH, Rev. ABNER JOHNSON, an eminent Presbyterian clergyman and teacher; died at Petersburg, Va., in the 66th year of his age. He was born in Waterbury, Conn., fitted for college in part at Amherst Academy, and graduated at Amherst College in 1825, studied theology at Andover, Mass., completing his theological course in 1828, and from 1829 to 1838 was pastor at Bristol, Conn., and at Charlotte, N. C., and in the latter town was principal of the Young Ladies' Seminary. In 1838 he removed to Warrenton, Va., and, in 1840, to Petersburg, Va., where for twenty-nine years he was the prin-

cipal and proprietor of the Leavenworth Academic and Collegiate Seminary for Young Ladies, which had a high reputation throughout the South. His scholarship was of a high order, and his qualifications as a teacher rare and peculiar; he was thoroughly devoted to the cause of education. He was a vigorous and ready writer, and as Corresponding Secretary of the Virginia Educational Association exerted a powerful influence for good upon the Southern educational institutions.

Feb. 14.—HUNT, L. ALVIN, a New York journalist; died at Unadilla, Otsego County, N. Y., aged 28 years. He was born in Jefferson County, N. Y., and was originally a compositor. His editorial career was commenced upon the *Argus*, and, when that journal and the *World* were consolidated, he accepted the position of night editor upon the new paper, and continued to hold it four years, resigning on account of his health. For many years he was the New York correspondent of the London *Morning Herald*, and the *Standard*.

Feb. 14.—SMITH, SOL, an actor and stage manager; died at St. Louis, Mo., aged 68 years. He was born in Oswego County, N. Y., in 1801, learned the printer's trade, and while yet a young man joined a company of strolling players, at Louisville, Ky. He was so well adapted to the business, that he soon became a leading actor, then a star, and finally a manager in many of the Western theatres. He was the author of an autobiography and reminiscences of the stage, published by Harper & Brothers in 1868.

Feb. 14.—WASHINGTON, JOHN NICHOLSON, a kinsman, in the fourth remove, of General Washington; died at Newbern, N. C. He was born in Spring Bank, Wayne County, N. C., November 19, 1819, graduated at Yale College in 1841, and, after a course of study in the Law School at New Haven, Conn., returned to his native State and practised law successfully till 1854, when he visited Europe, and, after his return, lived in retirement, in the enjoyment of a large fortune. During the late war he was for a time an officer in the Confederate army, and subsequently removed to Pittsborough, Chatham County, Va., where he taught a private school. Immediately after the surrender of Lee, he returned to Newbern, and in the summer of 1865 was elected mayor of the city, and, after the expiration of his term of office, resumed the practice of his profession.

Feb. 15.—HICKEY, Rev. JOHN F., a venerable Roman Catholic priest and teacher; died at St. Agnes Hospital, Baltimore, Md., aged 81 years. He was born in Georgetown, D. C., in 1788, studied at St. Mary's Theological Seminary, Baltimore, and in 1814 was ordained to the priesthood. After ministering for a time in Emmettsburg, he taught some years at St. Mary's College. Subsequently he acted as assistant in the Cathedral, and St. Vincent's and St. Peter's parishes, in New York City, until ill health compelled him to retire to St. Agnes Hospital.

Feb. 16.—MOORE, General WYMAN B. S.; died in Lynchburg, Virginia. He was born in Waterville, Maine, November 3, 1814; graduated at Waterville College (now Colby University); studied law at Cambridge, and was admitted to the bar in 1834. He was a member of the Maine Legislature in 1839; Attorney-General of that State from 1844 to 1848; and, by appointment, succeeded John Fairfield as a Senator in Congress, serving from January to June, 1848. He subsequently devoted much attention to the railroad interests of his State, and, in 1857, was appointed by President Buchanan Consul-General to the British-American Provinces, continuing in that office till 1861. His health had lately been very poor, and he had visited Virginia in the hope of benefiting it.

Feb. 19.—JONES, THOMAS, Jr., a politician and editor; died in New York, aged 45 years. He was born in Oneida County, studied law and was admitted to the bar, but never engaged actively in the practice of his profession. For some years he served in the State Legislature. Having had some practical experience in the insurance business, he afterward became an agent for the Mutual Life Insurance Company of New York, and removed thither for a residence. In 1853 he established a publication called the *Insurance Monitor* and *Wall Street Review*, now the oldest and most widely-circulated paper of the kind in this country.

Feb. 22.—VAILL, Rev. JOSEPH, D. D., an eminent Congregationalist clergyman; died at his residence in Palmer, Mass., in the 79th year of his age. He graduated at Yale College in 1811, and soon after completing his theological studies entered upon the work of the ministry, in which he was actively engaged for a period of fifty-five years; preaching in Brimfield, Mass., Portland, Me., and Palmer, Mass. In the fall previous to his death he was elected a member of the Massachusetts Legislature. He retained in full vigor his powers, both of body and mind, until his death. Dr. Vaill was for several years financial agent of Amherst College, and during a period of great embarrassment, in 1841–'45, raised for its endowment the sum of $100,000. He received the degree of D. D. from Amherst College in 1851.

Feb. 24.—DINSMOOR, SAMUEL, LL. D.; died at Keene, N. H., aged 70 years. He was a native of Keene, New Hampshire, graduated at Dartmouth College in 1814, and was admitted to the bar in 1818. He visited Arkansas in 1819, and spent some time there. From 1826 to 1831 he was Clerk of the N. H. Senate. He was elected Governor of New Hampshire in 1849, and reëlected in 1850 and 1851. His integrity and his amiable and genial temperament caused him to very generally esteemed.

Feb. 25.—ROBB, Rev. JOHN, a Methodist local preacher, and Clerk in the Treasury Department; died in Washington, D. C., aged 78 years.

He served on the staff of General Jackson at New Orleans, and under his Administration was Chief Clerk of the War Department, and frequently, in the absence of Secretary Cass, acted as Secretary.

Feb. 25.—TOWNSEND, Rev. C. C., an Episcopal clergyman and philanthropist; died at St. Luke's Hospital, New York City, aged 60 years. He was a native of Connecticut, and we believe a graduate of Trinity College. Soon after his ordination his attention was attracted to the condition of poor, orphan, and vagrant children, and he resolved to devote all his energies to the amelioration of their condition. He established an Orphans' Home in Iowa, and houses for their temporary reception in New York and other large cities, and had collected large sums for their support. He was the means of rescuing very many from ruin and lives of crime, and accomplished great good; but he was unfortunately lacking in business tact and methodical habits; and thus, though he was conscious of his integrity and strict honesty in the expenditure of the moneys and goods received, he often was unable to give a clear and intelligible statement in detail of his disbursements. Some of the papers had, in consequence, very unjustly denounced him as a swindler, which he certainly was not, and this accusation, operating upon a sensitive and really upright nature, so distressed him as to bring on an attack of erysipelas, from which he died.

Feb. 25.—VALENTINE, DAVID THOMAS, Clerk of the Common Council of New York, and an author; died at his residence, in the 68th year of his age. He was born in Westchester County, and when sixteen years of age removed to New York, and took a position as clerk in the grocery business. Remaining in this place for six years, he was then appointed to the Marine Court. Soon after this he acted as deputy to General Morton, who was then Clerk of the Common Council. At the expiration of six years he superseded General Morton, and for thirty-six years filled that important position with honor and fidelity. In 1840, pursuant to a resolution of the Senate and Assembly, he commenced the annual publication of a Manual of the Corporation of New York. These Manuals, twenty-five in number, as containing many of the antiquities of that city, are highly valuable and interesting. In 1853 he published a work, styled "The History of New York," which traced the progress of the metropolis from its earliest development, through the various stages of hamlet, village, and city—a work of great value to the student and to the public generally.

March 3.—MCWILLIE, WILLIAM, a political leader in Mississippi, and for some years Governor of the State; died at his residence in Kirkwood, Madison County, Miss., aged 71 years. He was born near Liberty Hill, Kershaw District, S. C., November 17, 1795. His early education was acquired in that vicinage, and he was at school in Camden, preparing to enter college, when the regiment of volunteers from that vicinity, for the War of 1812, commanded by his father, Colonel Adam McWillie, was ordered to Haddrell's Point. He accepted the office of adjutant, and served in that capacity to the close of the campaign, with the approbation of his superiors and the affection of his subordinates. Upon the disbanding of the regiment he immediately resumed his studies, entered South Carolina College in October, 1815, and graduated with distinction in December, 1817, was admitted to the bar in 1818, and at once commenced a successful career as a lawyer. Mr. McWillie was frequently in the House of Representatives from Kershaw District, S. C., and had been for many years State Senator, when, in 1845, he resigned his seat and removed to Mississippi, where he had established a large planting interest ten years before. He was elected to Congress in 1849, and was chosen Governor of Mississippi in 1857. His term of office expired in 1860, and, though advanced in life, he plunged heart and soul into the contest, of which he was a prominent and active leader throughout the war.

March 4.—LEFEVRE, Rt. Rev. PETER PAUL, D. D., Roman Catholic Bishop of Detroit; died in that city, aged 65 years. He was a native of Belgium, and had been twenty-eight years the bishop of that diocese.

March 4.—SEWALL, WILLIAM BARTLETT, an eminent lawyer and editor of Maine; died in Kennebunk, Me. He was born in York, Me., December 18, 1782. He was educated at Harvard University, graduating in the class of 1803, studied law with Chief-Justice Parker, and settled in practice in Portland. He early commenced writing for the press, and in 1823 became the editor of the Portland *Advertiser*, which he conducted with great ability for fifteen years. He represented Portland in the Maine Legislature in 1815, and in 1828 became a member of the Maine Historical Society, of which he was for some years treasurer. In 1837 he returned to the paternal homestead at Kennebunk, where he afterward resided.

March 6.—CLARK, J. HENRY, M. D., an eminent physician and author, of New Jersey; died at Montclair, N. J. He was born in Livingston, N. J., June 23, 1814, graduated at the New York University in 1841, studied medicine in New York and in Europe, and, about 1846, settled in Newark in the practice of medicine. He acquired gradually a high reputation as a practitioner, and found time to cultivate physical science to some extent. In 1856 he published a volume on "Sight and Hearing," and in 1861 another on the "Medical Topography of Newark and its Vicinity." His abilities were appreciated by his medical brethren, and for some years he was president of the Essex County Medical Society.

March 6.—GILLETTE, Rev. CHARLES, D. D., an Episcopal clergyman of sound learning, deep piety, and sterling patriotism; died sud-

denly at Baltimore, aged 55 years. He was born in Wintonbury (now Bloomfield), Hartford County, Conn., was educated at Trinity College, Hartford, and was for some time professor in the Virginia State High School. In 1843 he was ordained, and the next year emigrated to Texas, and became Rector of St. David's Church, Austin, and President of St. Paul's College, a flourishing collegiate school which he had founded. At the outbreak of the war he was firm in his adherence to the old flag, and, though he had previously been highly esteemed for his piety and activity in all matters pertaining to the advancement of the Protestant Episcopal Church in Texas, and was subjected at once to the most bitter persecution, he remained an uncompromising loyal Unionist. One of the incidents of his trials was his refusal to use a sentence in the form of Confederate prayers put forth by Bishop Gregg, which mentioned "the unnatural and cruel war forced upon us." This refusal brought down on him the force of unjust prejudice to such an extent, that the bishop, who was one of his parishioners, with all his interposing influence, scarcely saved him from being hanged. He was obliged to refrain from his pastoral functions altogether, and at the conclusion of the war came North in an impoverished condition. After a year's pastoral charge at Steubenville, Ohio, he was appointed Secretary and General Agent of the Protestant Episcopal Freedmen's Commission, and was the life of that organization. His death was the result of disease of the heart, and was without a moment's premonition.

March 6.—SHALER, CHARLES, an eminent lawyer of Pittsburg, Pa., a graduate of Union College in 1809; died in Pittsburg, aged about 79 years. He had been for many years the leader of the Pittsburg bar, and had a high reputation throughout the Middle and Western States for thorough knowledge of all questions of land-titles and commercial law. He was for some years a judge in the Pittsburg judicial district, and we believe more than once a member of the State Senate, and in 1847 associated with himself Edwin M. Stanton (Attorney-General of the United States under Mr. Buchanan, but best known as Mr. Lincoln's War Secretary), and, as a junior partner, Mr. Theodore Umbstratter, and the firm were repeatedly employed by the Government in important cases of land-titles, such as those involving large portions of California, the New Almaden mines, the controversy known then and long after as the Erie war, etc. This partnership continued until December, 1860, when Mr. Stanton was called into Mr. Buchanan's Cabinet. Judge Shaler's ambition was to be eminent in his profession, and political life had no charms for him.

March 7.—DEVEREUX, THOMAS P., a distinguished jurist and legal writer, of North Carolina; died at his residence, Connemara, Halifax County, N. C., aged 76 years. He was born in Newbern, N. C., and educated at Yale College, New Haven, graduating in the class of 1818. He studied law at the Litchfield (Conn.) Law School, but for some years did not seek for practice, a competent fortune rendering that unnecessary until some reverses in business changed the course of his life. He then resolved to devote all his energies to his profession. Not long afterward, he was appointed U. S. District Attorney for the District of North Carolina, an office which he filled for many years. In 1826 he was appointed reporter of the Supreme Court of the State in conjunction with his classmate, Hon. George E. Badger, and soon became sole holder of the office by the resignation of his associate. Four volumes of law and two of equity reports were the fruits of his labors in that capacity. Receiving in middle life, by the death of an uncle, the care of a large estate, the remainder of his days he spent on his plantation, while he served also as one of the presiding Justices of the County Court of Halifax.

March 7.—TOWNSEND, Mrs. HANNAH, a colored woman, formerly a slave in the family of the Bergens at Queens, L. I.; died at Queens, at the advanced age of 112 years. She was born in 1757, and had spent her whole life with the family. She retained her memory and most of her faculties completely till a few days before her death, which was caused by grief for the death, within a few days of each other, of two of the Bergen brothers, Luke and Schenck, at the ages of 77 and 79 years.

March 8.—MIRIAN, FLETCHER, a centenarian of Westfield, Middlesex County, Conn.; died there, aged 103 years.

March 9.—CLARK, MYRON, an active and influential citizen of Vermont; died at his residence in Manchester, Vermont, in the 79th year of his age. He was born at Hoosick, in Rensselaer County, N. Y., September 12, 1790. Early in life he engaged in the tanning business in Vermont, and after a few years transferred his business from Bennington County to Manchester. He was elected one of the Assistant Judges of the Bennington County Court in 1824, and was twice reëlected. In 1829 he became a member of the Governor's Council, and held the office three years. During the four years from 1831 to 1834 he was Judge of Probate for the district of Manchester. In 1862 he was elected to the Vermont Senate, and was reëlected in 1863. In the Senate he was a valuable member in all matters pertaining to the financial affairs of the State. Judge Clark was active in pushing forward the construction of the Western Vermont Railroad from Rutland to Troy, and for several years had the management of the road.

March 9.—COBURN, CHARLES RITTENHOUSE, an eminent educator and writer on educational topics; died at Harrisburg, Pa., aged 60 years. He was born in Bradford County, Pa., June 5,

1809. He was almost wholly self-taught, and it was only by great exertion and sacrifices that he acquired sufficient education to teach a small district school in Owego, N. Y., in 1827, at a salary of eight dollars a month. He continued teaching for several years, studying hard at every interval of leisure, and from want of means compelled to borrow his text-books. In 1837 he became assistant in the Owego Academy, and remained there about ten years, with occasional interruptions from ill health and a brief attendance on the State Normal School. In 1848–'50, he was president of the New York State Teachers' Association; in 1852–'3 he was one of the editors of the New York *Teacher*, and lectured extensively on educational topics. In the latter year he received the honorary degree of A. M. from Madison University. In 1854 he took charge of the normal and mathematical department of the Susquehanna Collegiate Institute, Bradford County, Pa., and from 1857 to 1863 was Superintendent of Schools for the same county. From 1863 to 1866 he was State Superintendent of Schools for Pennsylvania, having previously been for one year president of the State Teachers' Association. In 1866 he was elected the city Superintendent of Schools at Harrisburg, Pa., which office he held at the time of his death.

March 10.—LADD, Mrs. JEREMIAH, said to have been the oldest person in Connecticut; died in East Lyme, Conn., aged 108 years and 9 months.

March 13.—FESSENDEN, General SAMUEL, an eminent lawyer and citizen of Maine; died at his residence near Portland, Maine, in the 85th year of his age. He was born in Fryeburg, Me., July 16, 1784, received his early education at the Fryeburg Academy, and entered Dartmouth College at the age of eighteen, graduating with high honors in 1806. He studied law with Judge Dana, of Fryeburg, was admitted to the bar in 1809, and commenced practice at New Gloucester, Me., where, in spite of formidable competition, he early took high rank as a lawyer. In 1815 and 1816 Mr. Fessenden was a representative in the Massachusetts General Court, Maine being then a province of Massachusetts, and in 1818 and 1819 represented his county in the Massachusetts Senate. He was elected about this time major-general of the Twelfth Division of Massachusetts militia, and held the office for fourteen years. In 1822 he removed to Portland, and formed a law partnership with the late Thomas Amory Deblois, which continued for almost forty years, his son, Daniel W. Fessenden, being admitted a partner in 1854. This law firm had a very high reputation for ability and character, especially in cases of admiralty and commercial law, throughout the whole country. In 1828 General Fessenden was chosen a member of the Maine Historical Society, and overtures were made to him to accept the presidency of Dartmouth College. In 1846 Bowdoin College conferred on him the degree of LL. D. He early became a member of the Masonic Order, and was for a number of years Grand-Master of the Grand Lodge of the State. He was one of the original members of the antislavery party in Maine, and was thoroughly fearless and outspoken in his advocacy of its doctrines. From 1845 to 1847 he was the candidate of the Liberty party for Governor, and received from six to nine thousand votes. Of his large family —nine sons and two daughters—several were distinguished in the public service, Senator Fessenden, who also died during the year, being the most eminent.

March 14.—CLARKE, STEPHEN T., a journalist for about thirty years; died at Genoa, Italy, aged 50 years. He was born in Portland, Me., in 1819, and, before his majority, was for a year connected editorially with the Portland *Advertiser*, and for a few months was attached to one of the Pittsburg papers. In 1840 he came to New York, and was associated with the *Express*, of which he was for some years a considerable owner. In 1863 he withdrew from the *Express*, and became commercial editor of the *Tribune*, publishing also the *Golden Rule*, the national organ of the order of Odd Fellows. Always industrious and enterprising, with a genius for hard work, he had impaired his health to such an extent that, in September, 1868, he went abroad to recruit, but was taken sick in Italy, and died there after a lingering illness.

March 15.—POLK, THOMAS G., a brother of Lieutenant-General Leonidas Polk (Bishop Polk), and like him a general in the Confederate army during the late war; died at Holly Springs, Miss.

March 16. — BARSTOW, Brevet Brigadier-General WILSON, a brave officer of volunteers, who was, during the early part of the late war, successively on the staffs of Major-Generals Dix and Hooker, and subsequently Chief Commissary of Musters of the Department of the East; died in New York City, aged 89 years. He served from the first year of the war until its close with zeal and ability, entering the service as a lieutenant, and, passing through the successive grades, attained the brevet rank of brigadier-general. When mustered out, or soon afterward, he was appointed Assistant Appraiser of the port under Mr. McElrath, and in his civil office fully sustained the character for ability and integrity which he had gained in the military service.

March 18.—PHELPS, GUY ROWLAND, M. D., a physician, and one of the pioneers in the life insurance business in this country; died at Hartford, Conn., aged 67 years. He was born in Simsbury, Conn., April 1, 1802, educated in his native town, and took his medical degree at the Medical Department of Yale College in 1825. He commenced practice in New York City, but two years later returned to Simsbury, where he had a large practice

for ten years, when he removed to Hartford, and engaged in mercantile pursuits, but in 1845 began to devote his attention to life insurance, and in 1846 secured the charter of the Connecticut Mutual Life Insurance Company, of which he was the first secretary, and afterward president till his death. He had signed, as president or secretary, 97,000 policies, and paid $8,000,000 in losses. The remarkable success of life insurance in America is largely due to the tact, energy, and industry of Dr. Phelps, who led the way in which thousands have successfully followed.

March 21.—LAWRENCE, Colonel TIMOTHY BIGELOW, an American diplomatist, late Consul-General to Italy; died in Washington City, aged 42 years. He was the fourth son of the late Abbott Lawrence, and was born in Boston, November 22, 1826. He was fitted for college in Boston, and graduated at Harvard University in 1846, and subsequently passed several years in travelling in Europe. In 1849 he went to England, and was an attaché to the American Legation in London, not only during the time Abbott Lawrence was American minister, but until 1855, when his father's death called him home. In 1862 he was appointed Consul-General to Italy, and filled the position in a manner to receive the warm regard of all who had official or friendly intercourse with him. The deafness of Colonel Lawrence prevented his taking an active part during the war in the military service of his country in aid of the Union. His personal influence and his purse greatly aided the loyal cause, however, during the civil war. After passing a month with his English friends, he embarked for home about six weeks before his death, and was received with great cordiality. Having business at Washington, he went there in season to witness the inauguration services, and took the disease which resulted in his death.

March 21.—MACFARLAN, ALLAN, an enterprising and wealthy lawyer and railroad president of South Carolina; died in Charleston, S. C., aged about 49 years. He was a native of Greenock, Scotland, but migrated to this country in his youth, and graduated at the College of New Jersey in 1844 with the highest honors of his class. He studied law with the late James L. Petigru, of Charleston, S. C., was admitted to the bar in 1847, and practised his profession in Cheraw, S. C., for some years with great success. He inherited a large fortune from an uncle, and, before the breaking out of the war, he was a very extensive planter, owning several hundred slaves and a large body of land. He was a man of high character, great energy, and much public spirit. He was very active in developing the resources of South Carolina, and in promoting its system of internal improvements. He was at one time president of the Northeastern Railroad of South Carolina, and resigning this position he was made president of the Cheraw and Darlington Railroad, which office he held at the time of his death.

March 23.—REMINGTON, Rev. STEPHEN, a Baptist clergyman and author, eminent for his ability and success in the ministry; died in Brooklyn, N. Y., aged 65 years. He was originally a Methodist clergyman, and for twenty years was a popular and influential preacher in the itinerancy. In 1848, while pastor of St. Paul's Methodist Episcopal Church in Lowell, Mass., he was led to investigate the views of the Baptists, and a few months later withdrew from the Methodist Church and united with the Baptists. Soon after, he published a little volume entitled "Reasons for becoming a Baptist," which has had an immense sale, and has been translated into several European languages. This was followed by "A Defence of Restricted Communion," which also had a wide circulation. Mr. Remington was successively pastor in New York, Brooklyn, Philadelphia, and Boston, and was very successful in each of these fields, two thousand and eighty-three persons having united with the churches of which he was pastor during his labors among them.

March 24.—POMEROY, Rev. SWAN L., D. D., a Congregational clergyman and scholar; died at Sunderland, Mass., aged 70 years. He was a graduate of Brown University, and of Andover Theological Seminary, where he completed his course in 1824. He was settled for some years as a pastor in Portland, Me., and was called thence to a secretaryship of the American Board of Commissioners of Foreign Missions. He displayed great ability and energy in this position for a number of years, but terminated his connection with it about 1860. He had not since, we believe, had any pastoral charge.

March 26.—CROPPER, Mrs. HESTER, a centenarian of New York City; died there, aged 102 years.

March 27.—MILLER, SAMUEL, said to have been the richest man in Virginia, died near Lynchburg, Campbell County, Va. Mr. Miller's fortune was the result of his own exertions, and he possessed so large a comprehension of commercial affairs, that, though living in perfect seclusion on his farm, he operated freely in all the great centres of trade; and, though his estate was greatly impaired by the late war, he left somewhat more than three million dollars. Only two particulars of the disposition of his property have transpired: the bequest of $193,000 for the endowment of a female orphan asylum in Lynchburg, and of $100,000 to found a chair of agriculture in the University of Virginia at Charlottesville.

March 28.—PRINCE, WILLIAM R., a noted gardener, florist, and nurseryman, of Flushing, L. I., author of several works on plants, trees, etc.; died there, aged 74 years. He was especially noteworthy as the originator of the "Morus Multicaulis" speculation in 1836–'37, by which so many, and himself among the number, were made bankrupts.

March 28.—THOMPSON, THOMAS, a wealthy, benevolent, but eccentric art connoisseur; died in New York City, aged 71 years. He was born in Boston, August 27, 1798, fitted for college in the Boston Latin School, graduated at Harvard University in 1817, studied theology with Rev. Dr. W. E. Channing, but soon relinquished the profession and devoted himself to the fine arts. His first collection of pictures, said to have been the finest in Boston at that time, was burned in the destruction of the Tremont Temple, in March, 1852. It was valued at $92,000. After the fire he set himself the task of replacing it, and succeeded in making a collection of very great value, embracing the best works of most of our American artists and many very choice foreign pictures. This collection, which had been piled up in a warehouse in Boston for years, was brought to New York in January, 1870, and its value is estimated at half a million dollars. He possessed, aside from this, an estate of about $900,000, and lived very quietly in Boston (having never, it is said, been on a railcar or steamboat in his life) till about ten years ago. He had a wife, but no children, and had made a will bequeathing his entire estate to constitute a fund, after his wife's death, the income of which should be appropriated for the sole use of poor needlewomen of Boston. But the action of the Boston assessors, in taxing his property and pictures more highly than he thought was just, so displeased him that he removed from Boston to New York, shut up his house and pictures, and never visited the city again. He also cancelled his will, and made another, bequeathing his property in the same way for the use of needlewomen in Brattleboro, Vt., and Rhinebeck, N. Y., in equal shares.

March 30.—BOWIE, THOMAS C., an engineer; engaged in constructing the North Missouri Railroad, was killed by falling into a cellar in Kansas City, Mo. He was born in Maryland, was a nephew of Reverdy Johnson and of Odin Bowie, present Governor of Maryland, and had been, until recently, connected with the United States Coast Survey.

April 2.—LORD, Rev. JEREMIAH S., D. D., a Reformed (Dutch) clergyman of decided ability and devotion; died in Harlem, New York City, in the 57th year of his age. He was a native of Brooklyn, N.Y., and graduate of Union College, in the class of 1836, and, after being settled for some years at Montville and at Greggstown, N. Y., was called to the pastorate of the Reformed Church in Harlem, in 1848, and had been their honored and successful pastor for twenty-one years.

April 4.—BURTON, Brevet Brigadier-General HENRY S., Colonel Fifth Artillery, U. S. A., commandant at Fort Adams, Newport; died there of apoplexy, aged 51 years. He was a native of New York, but entered West Point in 1835 as a cadet from Vermont, and graduated in 1839 with the commission of second lieutenant in the Third Artillery, serving as such during the Florida War. From 1843 to 1846 he was stationed at West Point as one of the military instructors. When the war with Mexico broke out, he became lieutenant-colonel of New-York Volunteers, distinguishing himself for his defence of La Paz, in Lower California, and receiving his commission as captain in the regular service for his conduct on that occasion. May 14, 1861, he was made a major, and during the last war served with distinction, becoming lieutenant-colonel in July, 1863, and colonel of artillery in August of the same year. March 13, 1865, he was brevetted brigadier-general in the United States Army for gallant and meritorious services at the capture of Petersburg.

April 4.—FAIRFAX, CHARLES SNOWDEN, a descendant of the last Lord Fairfax; died in Baltimore, aged 40 years. He was born at Vaucluse, Fairfax County, Va., in March, 1829, and became entitled to the baronetcy upon the death of his great-grandfather, Rev. Bryan Fairfax, in 1846; but neither his immediate ancestry nor himself laid claims to the title, having become too thoroughly imbued with American sentiments. Some years ago he removed to California, where, in 1854, he served as Speaker in the House of Representatives, and subsequently for five years as clerk of the Supreme Court. He was chairman of the California delegation to the Democratic National Convention, which assembled in New York in July, 1868.

April 5.—BEAKMAN, DANIEL FREDERICK, the last surviving soldier of the Revolution on the pension list; died at Sandusky, Cattaraugus County, N. Y., aged 109 years and 6 months. He was born in New Jersey in 1760, but in early childhood removed with his parents to the Mohawk Valley, New York, and in 1778 was enrolled in the militia. In 1845 he removed to Cattaraugus County. He lived 85 years with his wife, who died at the age of 105 years. In 1867 Congress passed a special act, giving him a pension of $500 during the remainder of his life. He was a member of the Lutheran Church.

April 5.—MILLER, Rev. GEORGE B., D.D., Professor of Theology in the Lutheran Theological Seminary at Hartwick, N. Y., and an author of high repute; died at Hartwick, aged about 63 years. He was an accomplished linguist, and highly successful as a teacher, modest and unassuming in his manners, but powerful in his influence for good. His influence in the churches of New York and New Jersey was wide-spread and eminently beneficial.

April 6.—CUNARD, Sir EDWARD, for nearly thirty years agent of the Cunard line of British steamers; died suddenly of heart-disease, at his residence, in New York, aged 53 years. He was born at Halifax, Nova Scotia, January 1, 1816, and was educated in that province. His father, Sir Samuel Cunard, was made a baronet in 1849, for the energy and ability displayed in devising and carrying out his system of Atlan-

tic steamships; and upon his death, in 1865, his son Edward succeeded to his title.

April 7.—Nesbitt, George F., an eminent printer, as well as a publisher, and author; died in New York, aged 61 years. For upward of forty years he had been engaged in the business of printing, engraving, and lithographing, by which he acquired a handsome fortune. He was an honorary member of the Typographical Society, for the interests of which he manifested an earnest sympathy. He had been for some years, also, a publisher of ocasional pamphlets and books, as well as of the *Printer*, a journal devoted to the interests of the printing profession. He edited this periodical, and occasionally contributed to the press other essays and treatises, all marked by great ability, clearness, and precision of thought. Under the new laws for the reduction of postage, twelve or fifteen years since, he furnished for several years the postage-stamps and stamped envelopes to the Post-Office Department.

April 8.—Nichols, General William A., U. S. A., adjutant-general Military Department of the Missouri; died at St. Louis, Mo., aged about 51 years. He was a native of Pennsylvania, from which State he was appointed to the Military Academy at West Point, in 1834; graduated in 1838, as brevet second lieutenant in the Second Artillery, and was appointed assistant commissary of subsistence in November following. In 1844, he was promoted to be first lieutenant. During the Mexican War he served with distinction, first as an aide-de-camp on the staff of General Quitman, and afterward as acting assistant adjutant-general on that of General Garland. He participated in the battle of Monterey, September 23, 1846, and was brevetted captain for gallant and meritorious conduct in that action. In the battle of Churubusco, he also distinguished himself, and was brevetted major for gallantry at Molino del Rey. He was appointed assistant adjutant-general, with the rank of captain, July 29, 1852. He received the rank of lieutenant-colonel, August 3, 1861, and served throughout the War for the Union in the Adjutant-General's Department, being promoted to be colonel, June 1, 1864, and brevetted brigadier-general, September 24, 1864. The additional distinction of major-general by brevet was bestowed upon him March 13, 1865. Attached to the army headquarters throughout the late war, his services, though important, were not of a character to enable him to gain much popular distinction, and, as he sought no volunteer command, but was content with the military duties of the staff of the army, his fame never kept pace with his rank.

April 12.—Breed, Rev. William James, a Congregationalist clergyman, for some years financial agent of Yale College; died at West Taunton, Mass., aged 60 years. He was born in Lynn, Mass., June 10, 1809; graduated at Yale College in the class of 1831, and at Andover Theological Seminary in 1834. He was ordained June 10, 1835, over the Congregational Church in Nantucket, Mass., where he remained until 1839, when the state of his health led him to resign, and he undertook for a year the agency for the American Board of Commissioners of Foreign Missions in the Western States. From December 9, 1841, to November 5, 1845, he was pastor of the Congregational Church in Bucksport, Me. After a brief ministry to the First Congregational Church in Cincinnati, he was installed in 1846 as pastor of the High Street Congregational Church, Providence, R. I., where he continued until May, 1852. From 1853 to 1858, Mr. Breed was Financial Agent of Yale College, and for the next five years pastor at Southboro', Mass. For nearly all the remainder of his life he was acting pastor of the Congregational Church in Raynham, Mass.

April 12.—Johnson, Benjamin P., a distinguished agriculturist and agricultural writer; died in Albany, N. Y., in the 76th year of his age. He was born in Canaan, Columbia County, N. Y., November 30, 1793, graduated at Union College, in 1813, studied law at Hudson, N. Y., and practised at Rome, N. Y., for many years. He was a member of the New York Assembly from 1827–'30, President of the State Agricultural Society in 1845, and Corresponding Secretary of the same from 1847 to 1869. He was a Commissioner to the International Exhibition at London, in 1851 and 1862, and through life was actively interested in the promotion of agriculture. He had written, besides his very able reports, many excellent essays and papers on agricultural subjects.

April 13.—Aiken, Rev. Silas, D. D., a Congregationalist clergyman of marked ability; died at Rutland, Vt., aged 70 years. He was a graduate of Dartmouth College in the class of 1825; a tutor in the same college from 1825 to 1828; was ordained and settled at Amherst, N. H., in 1829, and remained there until 1836, when he was called to the pastorate of the Park Street Church, Boston, in which he continued till 1849, when he accepted a call from the First Congregational Church in Rutland, Vt., and remained in charge of that church till 1866, when, from failing health, he resigned, but continued to reside in Rutland till his death. In 1852 the University of Vermont conferred upon him the honorary degree of D. D. He published several occasional sermons and addresses, but, we believe, no work of considerable magnitude.

April 14.—Clark, Rev. Ichabod, D. D., a Baptist clergyman of great energy and executive talent; died in Lockport, Illinois, aged about 65 years. He commenced his ministry in the State of New York, where he was a pastor for nearly twenty years in the important towns of Lockport, Batavia, Le Roy, Brockport, etc., in the western part of the State; but, about 1850, removed to Illinois, where he was pastor at Galena, Rockford (for eleven years), and Springfield, and was for two years

the General Superintendent of Missions in the State. He was very widely known and highly esteemed throughout the Northwest.

April 15.—AYER, Dr. BENJAMIN, a Republican politician and legislator of Jefferson County, Ga.; was murdered near his home. He was about 69 years old, and at his death was the senior member of the Georgia Legislature. He had recently returned from Washington, D. C., where he had been with other members of both Houses of the Legislature, as a delegation to secure the early recognition of the State by Congress.

April 15.—DAY, TIMOTHY C., a Republican politician of Ohio; died in Cincinnati, of consumption, aged about 49 years. He was elected to Congress from the first Ohio district in 1854, on the Anti-Nebraska ticket, by 3,274 majority, and served from December, 1855, to March, 1857. On the formation of the Republican party, in 1855, he united with it, and was active in promoting its interests thenceforward.

April 15.—EMERSON, CHARLES NOBLE, Assessor of Internal Revenue, Tenth Massachusetts District; died in New York City, aged 48 years. He was born in Williamstown, Mass., February 6, 1821; graduated at Williams College, in 1840; studied law and was admitted to the bar there; served in the late war, advancing to the rank of major of volunteers; was appointed Assessor of Internal Revenue, 1865, prepared and published a valuable manual called the "Revenue Guide," published in 1867, and died on his return from Nassau, N. Providence, whither he had been for the improvement of his health.

April 16.—MORGAN, Colonel EDWIN WRIGHT, Professor of Mathematics in Lehigh University, South Bethlehem, Pa.; died in Bethlehem, aged 52 years. He was a native of Pennsylvania, and was appointed a cadet at West Point from that State in 1833, graduating third in his class in 1837. He was appointed second lieutenant, Second Artillery, July 1, 1837; served in the Florida War in 1837–'38, and superintended, in 1838, the removal of the Cherokees from Georgia to the West; was promoted to be first lieutenant of Second Artillery in July, 1838, and from that time till May, 1839, was on the northern frontier at Buffalo, N. Y., during the Canadian disturbances. He resigned, May 31, 1839, and was immediately employed as principal Assistant State Engineer of the State of Pennsylvania, in the prosecution of her extended public works, until the close of 1846. In April, 1847, he was reappointed as an officer of the U. S. Army, with the rank of major, Eleventh Infantry. He served throughout the Mexican War, 1847–'48, being promoted in September, 1847, lieutenant-colonel, Thirteenth Infantry, and on the 31st July, 1848, was disbanded. Returning to civil life, he was Superintendent of the Western Military Institute at Blue Licks, Ky., from 1849 to 1851; Chief Engineer, Shelby Railroad, 1852–'54; Vice-President, Shelby College, Ky., 1853–'54; Joint Superintendent with Mr. Thornton Johnson, of Kentucky Military Institute at Harrodsburg, 1854–'56, and in entire charge of it from 1856 to 1861. In 1866 he was appointed Professor of Mathematics in Lehigh University, which position he held till his death.

April 18.—ORRISON, Rev. JAMES H., a Presbyterian clergyman, for nineteen years a missionary of the Presbyterian Board in India; died at Bellefonte, Pa., aged about 45 years. He was a native of Pennsylvania, a graduate of Jefferson College and of Princeton Theological Seminary, and went out to India in 1849. After nineteen years of constant and wearing labor, he returned to this country in March, 1869, and within a few weeks after his arrival died from a sudden attack of bilious colic.

April 19.—MITCHELL, Professor ——, an eminent mathematician, a member of the Society of Friends, and, at the time of his death, Professor of Mathematics in Vassar College, Poughkeepsie; died there, aged 76 years. He was for nearly fifty years a teacher in Nantucket, Mass., and devoted much of his time to the study and practice of astronomy, and trained his daughter, Miss Maria Mitchell, now Professor of Astronomy in Vassar College, and one of the best practical astronomers in the United States, in that science. She was for many years an assistant in his school, and a coöperator with her father in his favorite study—and discovered a comet and several asteroids at Nantucket.

April 20.—DIEHL, Rev. MICHAEL, D. D., a Lutheran clergyman, Professor of Ancient Languages and Literature in Wittenberg College, Springfield, O.; died there, aged about 50 years. He was a native of Pennsylvania, a graduate of Gettysburg College and Theological Seminary, teaching for a time while prosecuting his studies at Waynesboro, Pa. He was called to his professorship at Wittenberg College almost immediately after the completion of his theological course, and continued in that position till his death. He was also, during the greater part of his career as professor, pastor of two Lutheran churches in the vicinity of Springfield. He also prepared a volume of "Memoirs and Remains of Rev. Dr. Keller," the first President of Wittenberg College, and contributed largely to the Lutheran periodical press.

April 20.—RANDOLPH, ROBERT B., a lieutenant of the Navy, dismissed by President Jackson, and famous in history as the man who pulled the President's nose; died in Washington, D. C., aged 78 years. He had entered the Navy early, had been gradually advanced to the rank of lieutenant, and under Decatur had done good service to the country. He was a cousin of John Randolph of Roanoke. His dismission from the service was unjustifiable, and, whether directed by Jackson from misapprehension, or from personal prejudice, is unknown. Randolph, having ascertained that it was done by special order of the

President, repaired to Alexandria, and, going on board a steamer on which General Jackson was, walked up to the general in the cabin, pulled his nose, and, before any one could issue a process for his arrest, escaped beyond the jurisdiction of the county. He was a fugitive for a couple of years, but then returned to the District, where he resided till his death. The act spoiled his prospects for any Government position. When, thirty years after, Secretary Floyd made him Superintendent of the Washington Armory, President Buchanan ordered his dismissal at once, out of regard to Jackson's memory.

April 22.—JOHNSON, Colonel ROBERT, son and former private secretary of ex-President Johnson; died suddenly at Greenville, Tennessee.

April 23.—MCALESTER, Major and Brevet Brigadier-General MILES D., U. S. A., a brave and skilful army officer, who rendered great service to the Union Army in the late war as an engineer; died suddenly at Buffalo, aged 84 years. He was a native of New York, but was appointed a cadet at West Point from Michigan. He was graduated in 1856, ranking third in his class, and was immediately assigned with brevet rank to the Corps of Engineers, becoming full second-lieutenant in that corps in December, 1856. He served on engineering duty in the construction and repair of fortifications on the Atlantic coast, from Florida to New York, till May, 1861, being promoted to a first-lieutenancy in the Engineer Corps in May of that year. During the war he was engaged in engineering duty mostly as Chief Engineer of the Third Army Corps, in the Army of the Potomac, till October 30, 1862, being in all the important battles of that army and winning two brevets; from October 30, 1862, to April, 1863, he was Chief Engineer of the Department of Ohio, fortifying Cincinnati and its vicinity, and providing bridge-trains for the Western armies; and in June and July was Chief Engineer in the siege of Vicksburg. On the 3d of March, 1863, he was promoted to be captain in the Engineer Corps, and in September of that year called to West Point as Assistant Professor of Engineering. On the 15th of July, 1864, he was appointed Chief Engineer of the Military Division of West Mississippi, and in that capacity was engaged in the military operations for the reduction of forts Gaines and Morgan, at the mouth of Mobile Bay, in July and August, 1864, and the siege, capture, and storming of Spanish Fort and Fort Blakeley, Mobile, in April, 1865. For his gallant and meritorious conduct here he was brevetted colonel and brigadier-general, U. S. A., and subsequently to the war was assigned to duty, and the construction of defences in the vicinity of Mobile and New Orleans, and the improvement of the mouths of the Mississippi River. He was commissioned major of the Corps of Engineers, March 7, 1867, and appointed Engineer of the 8th Light-house District, May 22, 1867. Few young men have accomplished so much in a brief life, or done their work so uniformly well, as this accomplished young engineer.

April 28.—RUSHMORE, WILLIAM C., a distinguished citizen of Brooklyn, L. I., President of the Atlantic Bank, Treasurer South Side Railroad Company, and Registrar of the Brooklyn City Railroad Company; was killed by an accident on the Long Island Railroad, at Willow Tree, near Jamaica, L. I. His age was 51 years.

April 26.—HOOPER, JOHN, an eminent botanist of Brooklyn, N. Y.; died in that city, aged 67 years. He was born in Oxford, England, but had resided in the United States for thirty years, and had been during the whole of that time engaged with unremitting zeal in the promotion of natural science. To his researches and study, in conjunction with the labors of the late Prof. Bailey, of West Point, and Prof. Harvey, of Trinity College, Dublin, science is mainly indebted for our present knowledge of the marine algæ. His splendid collection of these, the most complete yet made of our marine flora, he bequeathed to the Long Island Historical Society, of which he had been an active member from its organization.

April 26.—POST, MINTURN, M. D., an eminent physician and author, of New York City; died there in the 61st year of his age. Dr. Post was born in New York City, June 28, 1808, graduated at Columbia College in 1828, studied medicine in New York and Philadelphia, was a private pupil of Dr. Valentine Mott, and after receiving his medical degree went to Paris, and completed his studies under the instruction of Baron Louis Broussais and others. On his return to the United States he translated an able French Treatise on Auscultation and Percussion, and was largely instrumental in promoting the study of physical diagnosis. He soon attained a good and lucrative practice, and for twenty-six years past had been the medical examiner of the New York Mutual Life Insurance Company, a position requiring a thorough knowledge of his profession, quick discernment, and skill in ready diagnosis. Dr. Post ranked very high in his thorough familiarity with all the diseases of the chest, and outside of his profession was a man of wide and generous literary culture.

April 27.—MCCLOSKEY, HENRY, a New York journalist of considerable ability; died in Flatbush, L. I., aged about 40 years. He was a native of Ireland, but emigrated to the United States about twenty years since. He was editor of the *Brooklyn Eagle* for several years, but early in the late war his articles were so bitterly hostile to the Government, that he found it necessary to withdraw from that paper. He then entered upon the practice of law, and was elected City Clerk of Brooklyn for two terms, becoming also political editor of the New York *Sunday Mercury*. He had been for two years past reporter for the Court

of Sessions. In the autumn of 1868 his mind gave way, and he was committed to the Insane Hospital at Flatbush, where he died. His abilities in other relations than those of politics were of a high order, and in the Board of Education and elsewhere he did the community good service.

April —.—WISE, Captain HENRY AUGUSTUS, United States Navy, an accomplished naval officer, chief of the Bureau of Ordnance from 1863 to 1867, and author; died at Naples, Italy, aged 50 years. He was born in Brooklyn, N. Y., May 12, 1819, entered the Navy as midshipman in 1833, served on the coast of Florida during the Seminole War, became a lieutenant in 1845, served in the Pacific squadron, in California, and in Mexico during the Mexican War, was flag-lieutenant of the Mediterranean squadron from 1852–'55, accompanied the Japanese ambassadors on their return home in 1860, was promoted to be commander in 1862, and made assistant-chief of the Bureau of Ordnance and Hydrography. In 1863 he was promoted to be chief of the Bureau of Ordnance, which was then made a separate bureau, and in January, 1867, attained the rank of captain. He resigned his connection with the Ordnance Bureau in January, 1869, in consequence of his health, and went abroad, but died at Naples. Captain Wise was the author of "Los Gringos" (the Yankees), a book of sketches of travel in Mexico, California, South America, etc. (New York, 1849); "Tales for the Marines" (New York, 1855); "Scampavias" (New York, 1857); "Captain Brand, of the Schooner Centipede," a novel of sea-life (1860); and other works, usually of nautical life. Captain Wise was twice married, his first wife being a daughter of Edward Everett, his second the widow of the late Baron Bodisco, Russian minister to the United States.

May 2.—SEYMOUR, CHARLES C. B., musical and dramatic critic and author; died in New York City, of inflammation of the brain, aged 40 years. He was a native of London, England, but, in 1849, took up his residence in New York, where he engaged in teaching. When the New York *Times* was established in 1850, he became connected with the editorial staff, and continued to occupy that position until his death. He was a brilliant and able writer, clear and terse in style, and peculiarly happy in expression. Among his literary productions may be mentioned a volume of biography published by the Harpers, about 1860. Mr. Seymour was the *Times* correspondent at the Paris Exposition, where his services, as one of the American commission, were recognized by the presentation of a medal from the Emperor of the French. From January to July, 1865, he was associated with Mr. Hagen, in the New York *Weekly Review*, which paper he edited with marked discretion and taste.

May 10.—ADKINS, Rev. JOSEPH, an honored and patriotic citizen of Georgia, a Baptist clergyman, and State Senator from the 19th Senatorial District, was murdered in Warren County, Ga., aged about 67 years. He was a native of Warren County, and had resided there through life. He had been for many years a Baptist minister, and had long preached acceptably in his own county. His private character was irreproachable, and he had been through the war a stanch Republican and Unionist, and on the reconstruction of Georgia had been elected a State Senator. He was one of a delegation sent by the Legislature to Washington, to urge the complete legal reconstruction of the State. The sending of this delegation had roused the hostility of a considerable class in the State, and one of their papers had openly recommended that every member of it "should perish by the wayside."

May 10.—MAJOR, Rev. JOHN W., a Presbyterian clergyman, editor, and teacher; died in Palmyra, Wayne County, N. Y., aged 44 years. He was a descendant of the Scotch Covenanters, was born at Galway, Saratoga County, N. Y., graduated with high honors at Union College in 1845, completed his theological course at Princeton, and was licensed to preach June 12, 1850, by the Baltimore Presbytery. His first settlement was in Berkeley County, Va., where in the exercise of his duties he contracted a severe cold, which so seriously affected his health as to compel him to resign his pastorate and accept the position of principal of the Clarksville Female Seminary. In 1854, finding his health somewhat improved, he accepted a call to the charge of the First Presbyterian Church in Caledonia, N. Y.; but, finding the winters too severe, he was induced to remove to Georgetown, D. C., and assume the duties of principal of the female seminary in that town. Here, as elsewhere, he was a successful teacher. Subsequently he held a pastorate in Lauriaburr, N. C., taking charge at the same time of the high school. Upon his return North, he was for a time editor of the *Herald of Truth*, and for four years was pastor of the Reformed Dutch Church at the Bogbt, near Cohoes, N. Y. In 1862 he was appointed chaplain to the Panama Railroad Company, and sailed for Panama. Upon his return-passage he was attacked with the Chagres fever, which so completely prostrated him, that he was compelled to resign the pastorate altogether. Subsequently he removed to Brooklyn, and engaged in literary labor, so far as his health permitted, among other engagements, contributing occasional articles to the ANNUAL CYCLOPÆDIA of 1867 and 1868. The spring of 1869, however, indicated his end near at hand, and it was thought best to remove him to a quiet home in the country, which he reached only to die. A man of great firmness, conscientiousness, and decided piety, he was also an able, clear, and vigorous writer, a successful teacher, and possessed that wide and generous culture which made him a most agreeable and genial associate and friend.

May 12.—SHERWOOD, LORENZO, an eminent political leader, editor, and railway manager, of New York and Texas; died in Brooklyn, N. Y., aged 59 years. He was born in Hoosick, Rensselaer County, N. Y., graduated at Burlington, Vt., and was principal of the academy there while pursuing his law studies. Removing to Madison County, N. Y., he was for a while editor of a paper at Hamilton, and subsequently for several years partner of General (now United States Senator) Nye. In 1843 he was a member of the New York Legislature, and aided materially in preparing the way for the constitutional reforms introduced in the Convention of 1846. In 1849 he settled in Galveston, Texas, and a few years later was elected to the Texas Legislature, where his independence and freedom of speech drew down upon him the wrath of the supporters of slavery. His life threatened, and his expulsion from the State urged solely on account of his Union sentiments and his opposition to slavery, he withdrew from all connection with politics, and turned his attention to railroads and other public improvements; and with such success, that he became the leading railway authority in that region. During the war he was at the North, and, true to his convictions, labored earnestly with pen and voice in sustaining the Union cause. Since the close of the war he had been occupied in promoting the reduction of railway freights, through the organization and publications of the "National Cheap-Freight Railway League," of which he was president.

May 18.—PHELPS, JOHN JAY, an enterprising and public-spirited citizen of New York; died there, in the 59th year of his age. He was born in Simsbury, Conn., in 1810, and at the age of thirteen went to Hartford, Conn., as an apprentice to the printing business. Seven years later, he, in partnership with George D. Prentice, who has since become famous as a wit, started a paper in Hartford, and met with very encouraging success. Leaving his newspaper, he began the manufacture of glass in Susquehanna, Pa., and afterward entered the dry-goods trade, by which he realized his fortune. At the age of forty he retired from business, and subsequently devoted himself entirely to public enterprises. He was the founder of the Lackawanna and Western Railway, which brought Pennsylvania coal to the New York market, and acted as its president, without salary, until it was completed and a success. He was the first man in this city that used freestone as a building-material. He was director of the Erie Railway until it was completed, and received the thanks of the Common Council for his services in that great enterprise. He was at various times a director in the Manhattan Gaslight Company, the Camden and Amboy Railroad, the Mercantile, City, and Second National Banks, and the Bleecker-street Savings-bank. He was also a prominent member of the Citizens' Association.

May 15.—LORD, RUFUS L., a wealthy and patriotic banker of New York City, died there, aged 83 years. Mr. Lord possessed real and personal property of the value of about $5,000,000. He was very liberal during the war, responding to every call for material aid, and subscribing to or bidding for every public loan of the United States. About a year before his death his office was robbed of about $1,100,000 of bonds and certificates of stock, but he ultimately recovered nearly the whole, though by the payment of heavy rewards. He was a bachelor, and his large estate was divided among his relatives.

May 17.—DIMMOCK, ASA G., an Ohio journalist; died at Montrose, Pa., in the 56th year of his age. He was born in New Jersey, and, having received a good academical education, commenced his editorial career there while yet in his minority. In 1837 he removed to Ohio, and soon became the editor of the Cadiz *Sentinel*. In 1839–'40 he was elected clerk of the Ohio House of Representatives, but resigned before the close of the session. He then removed to Millersburg, where he edited the *Holmes County Farmer* for a number of years, with great ability, being elected, during the time, State Senator, and subsequently chosen as warden of the Ohio Penitentiary. He next edited, for a brief period, the Sandusky *Daily Mirror*, but, this proving unprofitable, he took charge of the Coshocton *Democrat*, which he edited until compelled by disease to retire from journalistic life.

May 18.—DANA, EDMUND TROWBRIDGE, a lawyer and legal writer, of remarkable abilities, but prevented by protracted disease from accomplishing the great results of which his fine intellect gave promise; died in Boston, in the 51st year of his age. He was born in Cambridge, educated at the University of Vermont and at the Cambridge Law School, and, after struggling, with a body enfeebled by disease, to do his full share of a general practice in partnership with his brother, R. H. Dana, Jr., he went to Germany, and remained there eight years, studying, so far as his health would permit, the Roman civil law, and history and philosophy in their bearings upon law. He wrote occasionally for the higher class of American periodicals, and, after his return in 1856, attempted the translation of the works of Von Mohl and other eminent German jurists. Compelled by the constant encroachment of his malady, to abandon all continuous or concentrated mental action, he yet retained to the last the mental scope and comprehensiveness of his well-trained intellect.

May 18.—SCOTT, Rev. EDWARD PAYSON, a Baptist clergyman, for seven years a missionary at Nowgong, Assam; died there, of cholera, aged 37 years. He was born in Greensboro', Vt., in 1832; was educated at Knox College, Galesburg, Ill., and the Theological Seminary of Madison University, Hamilton, N. Y. He was appointed in May, 1860, to the Assam mission,

but did not sail till June, 1862, and arrived at Nowgong in November, 1862. He had been a most faithful and devoted missionary, and had so far exhausted his own strength in ministering to the natives who were suffering from the terrible disease, that he readily fell a victim to it.

May 21.—McCauley, Commodore Charles S., U. S. A., a veteran officer of the Navy; died in Washington, D. C., aged about 75 years. He was born in Pennsylvania, from which State he received his appointment; entered into the naval service January 16, 1809, and spent twenty-two years afloat. In 1830 he was disabled from active duty, and the last few years of his life were spent in Washington.

May 23.—Shepherd, Nathaniel G., poet and artist; died in New York City, aged 84 years. He was a native of New York, and entered business life as an artist, studying for that profession in his native city, but subsequently spent several years in Georgia as a teacher of writing and drawing; and, upon his return North, engaged in the insurance business, devoting his leisure time to study, and especially to that of poetry, for which he evinced a decided talent. Upon the outbreak of the war he accepted a position as war correspondent for *The Tribune*, and in this capacity visited the scene of conflict in Virginia, and the vicinity of Fort Sumter. Returning some time in the fall of 1863, he once more resumed his favorite study, and many exquisite poems were the product of his pen. "The Dead Drummer Boy," which appeared in *Harper's Magazine*, was one of the finest poems elicited by the war. His best efforts saw the light in the Harpers' publications; but he also wrote for *The Ledger*, *The Chimney-Corner*, and a number of other periodicals, with almost equal success.

May 24.—Allyn, Judge Joseph P.; died in Paris, France, aged 86 years. He was born in Hartford, Conn., and at thirteen years of age was compelled, by reason of poor health, to relinquish his studies and enter the store of his father, a wholesale merchant in that city, but, the winters proving too severe, he was obliged to try the effect of a Southern climate. Subsequently, he returned to his native city and entered into a partnership business, but failing health again drove him abroad. During the Thirty-sixth Congress, he was residing in Washington, D. C., and held a subordinate office in the House. Having been appointed, by President Lincoln, one of the Judges of Arizona, in 1863, he proceeded thither with the other Territorial officers and a military escort, performing the journey from St. Louis to Arizona upon horseback. He discharged the duties of his position for nearly four years, during which time he was once run for Congress by the Republican party. In July, 1867, he sailed for Europe for the benefit of his health. He was an able correspondent of *The Hartford Evening Press.*

May 24.—Briscoe, Brevet-General Joseph C., major U. S. A.; died in New York City, aged 85 years. He was born in Wilmount, County Kilkenny, Ireland; graduated, with distinction, at Trinity College, Dublin, and in 1854 came to the United States, where he was connected as a civil engineer with many important public works in the Pennsylvania coal-fields. At the breaking out of the war, he enlisted in the First New-York Volunteers, and from that time until the close of the struggle he remained in the service of the United States. At the battle of Big Bethel he carried the regimental colors, and was wounded in the foot. For his gallantry on that occasion he was commissioned a lieutenant. In Kearny's Division he made the campaign of the Peninsula, and, while in charge of the construction of one of the forts at Fair Oaks, attracted the attention of that general by the engineering skill displayed in the work. By him he was made engineer officer of the division. He served on that general's staff till the latter's death at Chantilly. After that he was detailed on the staff of General Stoneman and then upon that of General Birney, where he remained, serving occasionally with Generals Hancock and French. When Birney was appointed to the command of the Tenth Corps, he appointed Captain Briscoe chief of staff, with the rank of major, and strongly recommended him to Governor Curtin, who gave him the colonelcy of the 199th Pennsylvania Volunteers. At the capture of Petersburg, Colonel Briscoe commanded a brigade, and distinguished himself by the storming of Fort Gregg, for which action he was brevetted general. When the war closed, he was appointed president of the Examining Board for officers in the regular Army, under the rank of major.

May 26.—Rush, James, M. D., a physician and author; died in Philadelphia, aged 83 years. He was a native of that city, and was a son of Dr. Benjamin Rush, one of the signers of the Declaration of Independence. Young Rush graduated at Princeton College in the class of 1805, studied medicine with his father, and received the degree of M. D. from the University of Pennsylvania in 1809. He subsequently pursued his studies at Edinburgh, Scotland, and, returning to Philadelphia, practised his profession for some years, but finally relinquished it for the purpose of devoting himself to scientific and literary pursuits, for which he had a decided talent. The productions of his pen are of the most varied kind. Among them are "Hamlet, a Dramatic Prelude;" "Rhymes of Contrast on Wisdom and Folly;" "An Analysis of the Human Intellect," an attack upon Metaphysics, and "The Philosophy of the Human Voice," which is confessedly the ablest work upon the subject. The large fortune which he received from his wife was devoted to the founding and endowment of the Ridgway Branch of the Philadelphia Library.

May 26.—West, Captain W. H., commander

of Pacific Ocean steamers, and volunteer lieutenant, U. S. N., died at sea. He was a native of Pennsylvania. Soon after the war broke out he entered the United States naval service, and was commissioned a volunteer lieutenant. He commanded the United States supply steamer Massachusetts, of seven guns, for some two years, and was known as an able, patriotic officer. After the close of the war he retired from the service and resumed his connection with the merchant marine, being for some time in command of the Quaker City, running between this port and Charleston. Upon the withdrawal of that vessel from commerce, Captain West accepted a position in the service of the Pacific Mail Steamship Company, which he held as first officer of the Golden City at the time of his death.

May 30.—FULLER, RICHARD F., an eminent lawyer of Boston; died in Wayland, Mass., aged 48 years. He was a brother of the gifted Margaret Fuller, and was born in Cambridge; graduated with honor at Harvard College in the class of 1844; studied law, and entered upon the practice of his profession in Boston, where he distinguished himself by his ability and scholarship. He was fond of literary pursuits, and published several volumes, including a biography of his brother, Rev. A. B. Fuller, and a volume of poems, entitled "Visions in Verse."

June 1.—NOTT, Rev. SAMUEL, a Congregationalist clergyman, the last survivor of the first band of missionaries sent out by the American Board of Commissioners of Foreign Missions to India, in 1812; died at the residence of his son, in Hartford, Conn., aged 81 years. He was born in Franklin, Conn., in 1788, being a younger brother of the late President Nott of Union College. He was educated at Union College, graduating there in 1808, and at Andover Theological Seminary in 1810, where he was a classmate with Drs. Gardner Spring and R. S. Storrs, Sen.; was ordained February 6, 1812, and went out with Gordon Hall, Adoniram Judson, Samuel Newell, and Luther Rice, as the first company of missionaries sent out by the American Board. He returned, and, from 1816 to 1823, was a teacher in New York; from 1823 to 1829, preached in Galway, N. Y., and from 1829 to 1849, in Wareham, Mass. After resigning his pastorate at Wareham, he remained there till about 1860, in charge of a school, which he taught with great success. At the completion of his seventieth year, he disposed of his school and went to reside with his son in Hartford, Conn.

June 2.—ARNOLD, JONATHAN E., a prominent lawyer and politician of Milwaukee, Wis.; died there, aged 55 years. He was a native of New England, but went to Milwaukee soon after his admission to the bar, and speedily took rank as an able counsellor and an eloquent advocate. He attained a high reputation, not only in his own, but the adjacent States. He was identified with the Whig party during its existence, and, on its demise, joined the Democrats. He could have had, for many years, any position in the gift of his party, but, latterly, the evil habit of intemperance had lost him much of the respect he had formerly enjoyed. He was, however, esteemed by his brethren of the legal profession, and was president of the Milwaukee Bar Association at the time of his death.

June 2.—FOSTER, Commander JAMES P., U. S. N., a gallant naval officer, twenty-one years in the service; died at Indianapolis, Ind., aged 42 years. He was born in Bullitt County, Ky., June 8, 1827, but removed with his father's family in childhood to Bloomington, Ind., and was appointed to the naval service from Indiana in 1846, and at the inauguration of Mr. Lincoln had reached the rank of lieutenant. On the 16th of July, 1862, he was commissioned a lieutenant-commander, and in October of the same year, returning from a foreign cruise, was ordered to the Mississippi squadron, commanded by Admiral Porter. He was placed in command of the Neosho, from which he was soon transferred to the iron-clad ram Chillicothe, of two guns, and in March of 1863 distinguished himself by the valuable service performed by his vessel during the Yazoo expedition. Later in the year he was placed in command of the gunboat Lafayette, of eight guns, and rendered valuable assistance during the bombardment and siege of Vicksburg. After the close of the war Lieutenant-Commander Foster was ordered to the Naval Academy and placed in charge of the practice-ships; and on the 25th of July, 1866, was promoted to the rank of commander, and placed in command of the Osceola, and ordered to the Brazilian squadron, where he contracted the disease (jaundice) of which he died. Last year he was ordered to the naval station at Mound City, Ill., and on the 22d of March last, being completely disabled, he was relieved and placed on waiting orders. He was an able, gallant officer, and his death will be regretted by all who knew him.

June 2.—LEE, Rev. DAY KELLOGG, D. D., a Universalist clergyman and author; died in New York City, in the 53d year of his age. He was born in Sempronius, Cayuga County, N. Y., September 10, 1816, and entered the ministry in 1835, preaching his first sermon in Ann Arbor, Mich. He has been settled as pastor of Universalist societies in Newark, N. J., Salem, Mass., Southbridge, Mass., Williamsburgh, L. I., Ogdensburg, N. Y., Auburn, N. Y., and New York City, removing from Auburn to New York in June, 1865. He received the honorary degree of M. A., from Tufts College, Massachusetts, in 1864, and that of D. D. from the Theological School of St. Lawrence University at Canton, N. Y., in 1868. Dr. Lee was an indefatigable worker not only in his parish and in preparing his sermons, which always contained something fresh and interesting, but also in many benevolent and philanthropic undertakings. He

was also an extensive writer, contributing frequently to the Universalist denominational newspapers and other periodicals, and also preparing for publication a series of books under the general title of "Tales of Labor," comprising four volumes. He was of a fine, poetic, and highly-sympathetic temperament, and possessed of eminent social qualities that endeared him to all with whom he came in contact.

June 4.—ABERNETHY, ELISHA SMITH, an eminent lawyer of Connecticut, died at Bridgeport, Conn. He was born in Torrington, Conn., in October, 1805; graduated at Yale College in 1825, studied law, and entered upon the practice of his profession in Waterbury. In 1836 he removed to Litchfield, and was Judge of the County Court. In 1847 he took up his residence in Bridgeport, and was for many years Judge of Probate for that district. In 1859 he was appointed clerk of the Superior Court for Fairfield, and held that office until his death.

June 4.—VERNON, Mrs. JANE MARCHANT FISHER, a gifted and estimable actress; died in New York City, aged 73 years. She was born at Brighton, Eng., came to this country in 1827, and soon after her arrival in New York married Mr. George Vernon, an actor, who left her a widow in less than three years. From that time she devoted her talents to the stage, having previously filled engagements at the Bowery and Chatham Theatres. About 1848 she appeared at Burton's, then at the Old Broadway, and finally at Wallack's, where she performed until within two or three months of her death. Her dramatic career extended over a period of forty-two years, during which she continued to hold the sympathetic admiration of the public. Her acting was chiefly confined to comedy and the drama, and she was a perfect mistress of her art, showing great skill and tact in the delineation of character.

June 5.—CROCKER, LUCIUS B.; died in Paris. He was a native of Albany County, N. Y., but went to Oswego in early life and engaged in commercial pursuits, and afterward in the freighting and forwarding business. In these he proved remarkably successful, and soon became prominently known in connection with canal and railroad enterprises. He was president of the first railroad constructed across the State of Iowa from Clinton to Omaha, forming the present connection of the Pacific road, and it was largely owing to his energy and capacity that this road was pushed to completion during the first exciting years of the war. He was several times made Mayor of Oswego, and, although not himself a politician in the ordinary sense of the term, was well known to all the prominent politicians of this State and at Washington. About two years ago he went abroad for his health, accompanied by his family. After about a year's absence, his wife died at Rome and her remains were sent home. He himself, after an extended tour through Europe, Western Asia, and Egypt, was on his way to this country, when he was seized at Paris with the attack which caused his death.

June 5.—EMRIE, JONAS REECE, an editor, and former member of Congress; died in Mound City, Ill. He was a native of Hillsboro, O.; was educated to the printing business, and edited and published the *Hillsboro Gazette* for twenty years. He represented his district in Congress one term, and was nominated for a second, but, owing to a change in the political character of the district, was defeated. He served for a term in the Ohio Legislature, and for a considerable time was Judge of the Probate Court for Highland County. Owing to pecuniary embarrassments occasioned by security debts that fell upon him, Judge Emrie removed to Mound City in 1857. Here for a while he conducted the *Emporium* newspaper, which, however, he finally sold out, and then engaged in the mercantile business. For several years he occupied the responsible position of police magistrate in that city; also was township treasurer of schools, and master in chancery for the county.

June 9.—VAN OECKELEN, CHARLES, composer and professor of music; died in New York City, aged 41 years. He was born in Holland, and spent his early years in Java, whence he came to the United States in 1855, in company with his father, an inventor of musical instruments, among which the automaton clarionet-player attracted much attention. The son, Charles, taught music for three years at the Rockland Female Institute, but, on the death of his father, he removed to New York in order to be with his mother, and earned a scanty support by taking private pupils. He was an accomplished harmonist, and his compositions possess very decided merit, but they never obtained the public recognition which they deserved—principally because the author was too modest to trumpet his own glory.

June 10.—KITTRIDGE, WILLIAM C.; died at Rutland, Vt., aged 69 years. He was born in Dalton, Mass.; graduated at Williams College in 1821; read law with Elijah Hunt Mills and Lewis Strong, of Northampton; lived a year in Kentucky for the benefit of his health; was admitted to the bar in Campbell County, Ky., in 1833; was six months in the law-office of Jonathan Sloan, of Ravenna, Ohio, who was afterward United States Treasurer; and was admitted to the bar in Rutland County, December, 1824. For eight years he was town representative, for two years a county senator, for two years Speaker of the House of Representatives, for five years State's Attorney, for six years Judge of the County Court, for one year Judge of the Circuit Court, for one year Lieutenant-Governor of the State and president of the Senate, member of one Constitutional Convention, and for nearly seven years Assessor of Internal Revenue.

June 11.—LYON, Mrs. MARY DU PONT, daughter of Major Jean Pierre Du Pont, of the

French Army, and the last descendant of the Marquis de Montcalm, of old French and Indian War fame; died at Lyons Falls. She had been suffering for several months, and left her home on Staten Island, where she resided with her son, ex-Governor Lyon, to revisit Lewis County, a few weeks previous. Mrs. Lyon was a woman of marked energy and capacity, and by her decision of character exercised great influence over her associates.

June 14.—Cock, Thomas, M. D., an eminent physician, professor, and medical writer, of New York City; died there, aged 87 years. He was born at Glen Cove, L. I., and studied medicine in company with Drs. Valentine Mott and Cheeseman, in the office of Dr. Seaman, at that time a noted practitioner, with whom he was afterward associated in partnership. During the epidemic of yellow fever, in 1822, he was among the most indefatigable and untiring in his efforts to overcome the disease; and again, during the cholera of 1832, his protracted labors and ceaseless devotion were appropriately recognized by the city authorities in the presentation of a service of silver. During his long career he occupied various positions of honor and importance in the profession, and numbers of men now eminent in the medical world pursued their studies under his auspices. He was formerly president of the Academy of Medicine of New York; was a professor, and subsequently president of the College of Physicians and Surgeons, and was for many years connected, as attending and consulting physician, with the New York Hospital. Dr. Cock was long an active member, and at his death a vice-president, of the American Bible Society. Retired for some years, through the infirmities of age and ill-health, from the practice of his profession, he has left the worthy record of a long and honored life, and a memory gratefully cherished by all who knew him as a skilful physician, a kind friend, and a Christian gentleman.

June 14.—Dixon, Joseph, a remarkable inventor; died in Jersey City, aged 71 years. He was self-educated, and developed his extraordinary talent for invention before he had attained his majority, having made a machine for cutting files. He learned the printer's trade, afterward that of wood engraving, then lithography, and afterward studied medicine, and in that connection became interested in chemistry, becoming finally one of the most accomplished and comprehensive chemists in the country. He was a thorough optician; and had no equal in his knowledge of photography. He took up the experiments of Daguerre in 1839, and was probably the first person to take a portrait by the camera. He showed Prof. Morse how to take portraits by means of a reflector, so that the subjects should not appear reversed. Morse tried to get the plan patented in Europe. Mr. Dixon built the first locomotive, with wooden wheels, but with the same double crank now used; it caused a sneer at the time, but, when it became demonstrated that a steam-engine could be run on wheels and perform the services of beasts of burden, his double crank was adopted. He originated the process of transferring on stone, now used the world over by lithographers. He invented the process of photo-lithography, and published it years before it was believed to be useful. By his process of transferring, the old bank-notes were easily counterfeited, and it was to guard against the abuse of his own process that he brought out the system of printing in colors on the bills, and had the method patented, but never received any benefit from the patent, all the banks having used it without pay. Many of our readers will remember the original "red dog" money, and the present process used by the Government, for printing in colors, for which a large amount is paid to patentees, is the old process of Mr. Dixon's for which his patent had expired long before, and the present patents are therefore untenable. He perfected the system of making collodion for the photographers, and assisted Mr. Harrison in getting a true system for grinding the lenses for camera-tubes. He first invented the anti-friction metal, which has been for a great many years known as "Babbitt metal," and he is the father of the steel-melting business in this country. He invented a vast number of machines and processes, but he is most widely known among manufacturers as the originator of the plumbago crucible as now made. He started the business in 1827, in Salem, Mass., and brought it to Jersey City in 1847. His name had become known in all civilized countries as a crucible-maker, and his establishment in Jersey City is the largest of the kind in the world. He was singularly self-reliant, never failed in his mechanical undertakings, even in the last, that of the great orchestrion, that occupied his time for nearly eleven years, but which stood before him perfect at last, and still stands—a monument of his great skill, science, and perseverance.

June 16.—Howland, William W., a distinguished merchant of New York, long the senior partner of the great house of Howland and Aspinwall; died in New York City, aged 71 years. He was born in New Bedford, Mass., in June, 1798, came to New York at the age of nineteen, was for three years a clerk for Hicks, Jenkins & Co., then a leading commission-house in New York, and in that time had developed such remarkable business abilities that his employers took him into the firm. He remained an active partner till the winding up of the concern, and then entered upon a still larger enterprise, which made his name known all over the world, and insured him an immense fortune.

June 18.—Ives, Nathan Beers, M. D., an eminent physician, of New Haven, Conn.; died there, aged 67 years. He was born in New Haven in 1806, graduated at Yale College

in the class of 1825, and at the Medical School in 1828, and, following the example of his father and grandfather, entered upon his profession in his native city, where his talents, industry, and social qualities, soon placed him in the front rank. With his father he was also for many years engaged in private medical instruction. The unremitting labors of his profession, however, proved too severe for his health, and a few years previous to his death he retired from active practice.

June 21.—GREENLEAF, Rev. PATRICK HENRY, D. D., an Episcopal clergyman; died suddenly in Brooklyn, N. Y., aged 62 years. He was born in New Gloucester, Me., July, 1807, graduated at Bowdoin College, in the class of 1825, and had been for some years Rector of Emmanuel Church in Brooklyn.

June 22.—EATON, Captain WILLIAM B., a distinguished shipmaster, and captain in the volunteer naval service; died at North Chelsea, Mass., aged 50 years. He commenced life as a sailor, and for many years commanded some of the finest ships sailing from this port in the Valparaiso trade, being considered one of our most skilful navigators. Upon the outbreak of the late war he left the civil for the volunteer service, and commanded several gunboats and transports, in which he was very successful in taking prizes, among which was the large iron ship Circassian. Recently he was in command of the steamer De Soto, of the New York and New Orleans line. His death was supposed to have resulted from the bite of an insect while working in his garden.

June 24.—DAVENPORT, Elder WILLIAM, a minister of the Christian Church; died at Nebraska City, aged 72 years. He was a native of Kentucky, and in early life a slaveholder, but manumitted his slaves before 1834, and removed to Tazewell County, Ill., where he was a preacher and pastor for more than thirty years. In 1848 his brother and himself established a school at Walnut Grove, which has since become Eureka College. He was a Union man during the war, and was taken prisoner by John Morgan.

June 24.—MASON, DANIEL GREGORY, of the publishing firm of Mason Brothers, New York; died at Schwalbach, Germany, aged 49 years. He was a native of Massachusetts, and a man of fine literary attainments and musical culture. His health had been failing for several months, and, upon the advice of physicians, he went to Carlsbad, Germany, but, finding no relief, left for the place in which he died.

June 26.—BARKER, JAMES W., a prominent politician, merchant, and philanthropist of New York; died at Rahway, N. J., aged 54 years. He was born in White Plains, Westchester County, N. Y., served as clerk in a mercantile house, and soon entered into business for himself, which his energy and good management rendered exceedingly prosperous. He was an earnest and zealous Whig, and, after the disorganization of that party, he united with others in founding the "Order of the Star-Spangled-Banner," a secret organization for the purpose of preventing the political ascendency of foreign-born inhabitants of this country, of which order he became the head in 1853. In 1860 Mr. Barker united with the supporters of Mr. Lincoln, and was ever after an earnest and zealous Republican. In 1863 he established a large mercantile house in Pittsburg, doing a business of nearly two millions per annum. At the time of his death he was president of the Eclectic Life Insurance Company.

June 30.—BRIGGS, GEORGE, formerly a member of Congress from New York; died at Saratoga, N. Y., aged 64 years. He was born in Fulton County, N. Y., but, when eight years of age, removed with his parents to Vermont, where he was educated, and for several years engaged in agricultural and mercantile pursuits. In 1837 he was elected by the Whig party to the lower House of the Vermont Legislature, serving one term, at the end of which, in 1838, he settled in New York City, and embarked in the hardware business, which he followed for many years, amassing a large fortune. He represented the Whig party in Congress from 1849 to 1853, being elected from the Fifth New York District, and was also elected to the Thirty-sixth Congress from the Seventh District of New York, serving as chairman on the Committee on Revolutionary Claims. He was a delegate to the Philadelphia "National Union Convention" in 1866, since which time he had taken but little part in political matters.

June —.—MOULTRIE, JAMES, M. D., an eminent physician and medical professor in South Carolina Medical College; died at Columbia, S. C. He was passionately devoted to natural science, and, in the intervals of professional labor, had made large contributions to the different departments of zoology.

June —.—TERRY, HENRY D., Brigadier-General of Volunteers in the late war; died in Washington, D. C. He was a native of Connecticut, but emigrated early in life to Michigan, where he had entered upon the legal profession before the commencement of the war. He had given considerable attention to military matters for some years, and, when the call was made for troops in June, 1861, he raised a regiment (the fifth Michigan), of which he was appointed colonel, and which was mustered into the service, August 28, 1861. They were ordered to the Army of the Potomac, and such were the ability and military skill manifested by Colonel Terry, that on the 17th of July, 1862, he was commissioned brigadier-general, having already for some months been in command of a brigade. He served through the war in the Army of the Potomac, behaving with great gallantry in the several battles in which he was engaged, and, when mustered out of service in 1865, resumed the practice of his profession in Washington, D. C., where he continued to reside till his death.

July 2.—ROCHE, JAMES, an Irish patriot and

journalist; died in New York, aged 51 years. He was born at Lisconduff, County Monaghan, Ireland; received a liberal education, and early manifested a taste for journalism. In 1854 he came to this country, and subsequently was identified with several journals, was associated with Thomas Francis Meagher in the conduct of the *Irish News*, and later was engaged upon the *Sun*. In 1861 he went to his native country for the benefit of his family, and, while in Ireland, published the *Galway American*, in which he strongly advocated the Union cause, suffering some persecution in consequence. He was an earnest patriot, and quick in his sympathies for the wronged and oppressed.

July 5.—BRANCH, Colonel JAMES R., a Confederate officer and Southern politician; was killed by an accident at Richmond, aged 40 years. He was born in Petersburg, where he resided most of his life; graduated at Randolph-Macon College in 1847, and shared in the highest honors of his class. When the war broke out, he raised a company of artillery, known as Branch's Battery, and with it entered the Confederate service. He was severely wounded at Plymouth, and was finally forced to relinquish his command. The latter part of his life was devoted to politics.

July 6.—DAY, Rev. OLIN B., D. D., a Congregationalist clergyman; died at Hollis, N. H., aged 63 years. He was a native of West Springfield, Mass.; graduated at Amherst College in 1834, and at Andover Theological Seminary in 1837. He was settled at Derry Village, N. H., till 1852, when he became pastor of the Congregational Church in Hollis. Subsequent to 1863 he was a member of the Board of Trustees of Dartmouth College.

July 14.—GEUBE, HEINRICH, a German journalist and humorous writer; died suddenly after alighting from the cars at Mantua, N. J., returning from Baltimore to New York, aged 49 years. He was a native of Hanover, Germany, and a graduate of the University of Göttingen. In 1848 he played an important part in the revolutionary movement in Germany, and was a member of the German Parliament. In 1850 he came to this country, and first established himself as a school-teacher, but subsequently engaged as a writer. At the time of his death he was connected with the *New-Yorker Demokrat*.

July 14.—HALLOCK, Rev. B. B., a Universalist clergyman, author, and editor, of New York City; was killed by an accident on the Erie Railway, near Mast Hope, aged 65 years. He was born at Brookhaven, L. I. He commenced preaching in 1838, and was settled over the old Fifth Society of the Universalist Church, New York City, and was also principal of the Mechanics' Institute School. About twelve years ago he retired from the pulpit. He was a prominent Mason and Odd-Fellow, and had written a book on Odd-Fellowship. He was also publisher of the *Ambassador*, now *Leader*, and for several years editor of an Odd-Fellow periodical.

July 18.—BUCKNER, Commander WILLIAM P., U. S. N.; died in Brooklyn, N. Y., aged 60 years. He was born in Kentucky, and belonged to the well-known family of Buckners in that State. In 1821 he was appointed to the Navy from Arkansas, and, after passing through the various grades, was commissioned a commander in 1862, and placed on the retired list. He resided for some time in Maryland.

July 18.—CLERC, LAURENT, A. M., an eminent deaf-mute and instructor of deaf-mutes; died in Hartford, Conn., aged 83 years. He was born in La Balme, department of Isère, France; educated by the Abbé Sicard in Paris, and, after eight years' study, became a teacher of the highest classes. In 1815 Dr. Thomas H. Gallaudet, founder of the Deaf and Dumb Asylum at Hartford, met Mr. Clerc in Paris, and persuaded him to come with him to the United States, which he accordingly did the following year. In 1817 the asylum was opened, Messrs. Gallaudet and Clerc being the teachers, the latter devoting his whole life thenceforth to the interests of the asylum, though after 1858 he had retired from the most arduous duties of his profession. His ability, zeal, and graces of character, won for him the respect and love not only of his pupils, but of all with whom he was brought into contact.

July 18.—VENABLE, GEORGE H., editor; died in Petersburg, Va. He was a native of Virginia, and, though possessed of a fine literary taste, made but few contributions to literature until in 1867 he became connected with the Petersburg *Index*.

July 20.—WHITELEY, Colonel L. A., an enterprising journalist; died in Washington, D. C. He was associate editor of the Louisville *Journal*, during the rise, triumphs, and fall of the Know-Nothing party of Kentucky, and for many years controlled the Baltimore *Clipper*. Subsequently he had charge of the Washington Bureau of the New York *Herald*, and during the past few years has filled a prominent position on the *National Intelligencer* of that city.

July 23.—ALBERTI, GEORGE F., a noted slave-catcher; died in Philadelphia, aged 79 years. He was for many years a sheriff, and, by his cruelty and violence, a terror to all who were in any way amenable to the law. When the Fugitive-slave law was passed, he became its special champion, and carried out its provisions vigorously. His energy, however, got him into trouble in 1850. He returned the child of a fugitive-slave woman, born in New Jersey, with its mother to Maryland. He was sentenced to ten years' imprisonment, and a fine of $1,000, but was pardoned before the expiration of his term. Of late years he lived a retired life.

July 22.—DOUGLASS, Rev. JOHN L., a Baptist clergyman and missionary in Burmah; died at Bassein, of fever. He was a native of Rut-

land, Ohio; studied several years at Hamilton, and graduated at Union College in 1850. The same year he was ordained, and was for a time pastor of a church at St. Ann, N. Y. Subsequently he held a charge in Pittsburg, Pa., and in 1854 sailed for Burmah, where he labored till 1860. Returning to the United States, he held a pastorate in Philadelphia three years, and again returned to his missionary field, where he remained until his death.

July 22.—LEGGETT, GILBERT, a veteran police officer; died in New York City, aged 75 years. He was a native of that city, and in early life was a sailor, serving in that capacity on board the privateer Armstrong, in the War of 1812. When the vessel was captured by the British at a Spanish port, he was sent to the prison at Dartmoor, England, where he was confined for two years. In 1858 he was detailed at Essex Market Police Court, and has been a member of the Metropolitan force from its organization.

July 23.—CRAPO, HENRY H., formerly Governor of Michigan; died in Flint, Mich., aged 65 years. He was born at Dartmouth, Mass., but early removed to New Bedford, where he continued to reside until his removal to Michigan, in 1856, after which he was largely engaged in the manufacture and sale of lumber. He held at one time the office of Mayor of Flint; in 1862 was elected to the State Senate, and in 1864 was chosen Governor, and re-elected in 1866.

July 24.—SHERWIN, THOMAS, LL. D., a prominent educator; died at Dedham, Mass. He was born in Westmoreland, N. H., March 26, 1799. After seven years spent in the family of a physician, with but limited advantages for schooling, he was apprenticed at the age of fourteen to the clothier's trade, in Groton, Mass. Improving his spare time, however, in study, and at the close of his apprenticeship devoting his whole attention to mental culture, he entered Harvard College in 1821, graduating among the first in his class in 1825. Having had in the mean time, and subsequently for a year, experience in teaching, he was appointed teacher of mathematics in Harvard. From 1828 he was a prominent teacher in Boston; for many years was principal of the Boston English High School, and was at one time president of the American Institute of Instruction. He was the author of an Algebra and other text-books.

July 25.—LANGE, ALBERT, born in Charlottenburg, province of Brandenburg, Prussia, December 16, 1801; died at his residence in Terre Haute, Ind. Mr. Lange was graduated at the University at Halle, where he joined a conspiracy, while yet a student, to overthrow the Prussian monarchy, and lay the foundation of a great nationality based upon a free constitution, and self-government. The organization was exposed by the confession of one of the members to a Catholic priest, and Mr. Lange was tried, convicted, and sentenced to close confinement in the fortress of Glogau. At the end of one year the severity of the sentence was mitigated by order of the King. He was held, however, as a political prisoner a period of five years, during which time he studied the Constitution of the United States, read and translated into the German some of Mr. Clay's speeches, as well as portions of Shakespeare's plays, and formed the determination to come to this country. Although sentenced for fifteen years, at the end of five years he was pardoned, and restored to citizenship, but immediately sailed for the United States, arriving here in the year 1829. In 1849 he was appointed consul to Amsterdam, through the influence of Mr. Fillmore, then Vice-President. In 1860, as candidate of the Republican party of Indiana, he was elected Auditor of State, in which office he served one term of two years, doing excellent service with Governor Morton in obtaining means for equipping troops at the outbreak of the late war. Returning to his adopted city he was elected mayor, which place he held two terms.

In social and political life Mr. Lange was distinguished for his courtesy and refinement. Possessing a fine classical education, and having acquired a thorough knowledge of the laws and customs of this country, he took pleasure in aiding and assisting all who came to him, and especially those who, like himself, had left the Fatherland and found a home in the New World.

July 26.—JEWETT, SIMEON B.; died in Clarkson, N. Y. He was formerly United States Marshal for the Western District of New York.

July 30.—KEEP, HENRY, a distinguished financier and railroad manager; died in New York City, aged 51 years. He was born in Jefferson County, N. Y., and, after suffering many hardships through poverty, made his way to Honeoye Falls, near Rochester, where he obtained employment first as a teamster. Laying by a little money, he invested it during the financial crisis of 1837 in depreciated currency, which, upon its subsequent rise, yielded him a handsome profit. Venturing more, he bought up a considerable amount of Canada bank-notes from people living on the American frontier, at a discount, and, going to different towns in Canada, had them cashed at par. In this way he made sufficient capital for starting a banking establishment at Watertown, and subsequently established other country banks. Removing to New York, where his field of operations could be more extended, he was soon widely known as a successful operator in railroad stocks, taking his place upon the list of millionnaires. He was treasurer of the Michigan Southern Railroad from 1861 to 1863. In 1866 he was president of the New York Central Railroad, but resigned at the end of six months. In June of 1868 he was elected president of the Chicago and Northwestern Railroad, which position he retained till his death. He

was also controlling manager of the Northern Indiana and president of the Cleveland and Toledo Railroads.

July —.—XAUPI, Rev. Father HONORATUS X.; died at Mount Hope Retreat, near Baltimore, Md., aged 83 years. He was a native of France, and was for forty years professor of French at Mount St. Mary's College, Emmettsburg. He was ordained priest by the late Archbishop Carroll.

Aug. 1.—WILSON, Rev. SAMUEL B., D. D., a Presbyterian clergyman and professor of theology; died in Hampden-Sidney, Prince Edward County, Va., aged 86 years. He was born in Virginia; educated at Hampden-Sidney College; studied theology under some of the great theologians of Virginia in the beginning of the present century; was ordained in 1806, and settled the same year at Fredericksburg, Va., where he remained as pastor, greatly esteemed and beloved, till 1841, when he was called to fill the chair of theology in the Union Theological Seminary, at Hampden-Sidney, then just vacant by the death of Dr. Baxter. He continued in this professorship until his death, a period of twenty-eight years, and filled it with marked ability, though, for the last few years, somewhat infirm in body.

Aug. 6.—BAKER, DAVID JEWETT, a pioneer settler and political leader in Illinois for many years; died at Alton, Ill., aged 77 years. He was born in East Haddam, Conn., September 7, 1792, of Revolutionary stock, removed with his parents to Ontario County, N. Y., in 1800, fitted himself for college, while engaged in the work of a farm in the wilderness, and graduated from Hamilton College, Clinton County, N. Y., in 1816, studied law with Hon. John Dixon, of Ontario County, and was admitted to the bar in 1819. He married, and removed to Illinois the same year, settling at Kaskaskia, then the capital of the State, and speedily obtained a large practice on that circuit, becoming a few years later probate judge of Randolph County. In 1823 an attempt was made to introduce slavery into Illinois, by an amendment of the constitution. He opposed this with such energy with voice and pen, that the supporters of slavery in the State determined to kill him, and Thomas Reynolds (afterward Governor of Missouri) attacked him with a bludgeon in the streets of Kaskaskia, inflicting a blow upon his head, the scar of which remained till his death. In 1829 he was appointed by Governor Edwards United States Senator, to fill a vacancy, and served till 1831; carrying through Congress the important measure of selling the public lands to actual settlers in quantities of forty acres, which greatly facilitated the settlement of Illinois and other new States. In 1833 General Jackson appointed him United States Attorney for Illinois, and Mr. Van Buren reappointed him, so that he filled this important office till 1841. He became a Whig in 1840, and a Republican in 1854, taking an active part in the political struggles of both parties, but holding no office, and only once a candidate.

Aug. 7.—CHAPMAN, CHARLES, an eminent criminal lawyer and politician of Connecticut; died in Hartford, Conn., aged 70 years. He was born in Newtown, Conn., in June, 1799, his father being Asa Chapman, an eminent lawyer, and judge of the Supreme Court; received a good academic education, was admitted to the bar in 1823, practised law in Newtown 1824–'27, removed to New Haven, and in 1832 to Hartford; was a member of the Connecticut Legislature three times before 1841; United States District Attorney, 1841–'45; member of Congress from First District, Connecticut, 1851–'53; candidate of the Temperance party for Governor in 1854; and in 1856 joined the Democratic party. Though occasionally active in political life, Mr. Chapman's greatest power was manifested in his profession. As a criminal lawyer he had no superior in his State, hardly one in the nation. He was a man of infinite wit, great sarcastic power, and a genial companion and friend.

Aug. 7.—EASTMAN, PHILIP, LL. D., an eminent jurist of Maine; died in Saco, Me., aged 70 years and 6 months. He was born in Chatham, N. H., in February, 1799, educated at Fryeburg, Me., and Bowdoin College, graduating in 1820, studied law with Stephen Chase, and Judges Baylies and Dana, and was admitted to the bar at Paris, Me., in 1823. He practised law at North Yarmouth, Me., 1823–'36; at Harrison, Me., 1836–'47; and at Saco, 1847–'69. In 1840 he was associated with Ebenezer Everett, Esq., in revising and publishing the "General Statutes of Maine;" in 1840–'42 he was a member of the Maine Senate. In 1842–'43 he was a commissioner to locate the claims of settlers on the northeastern boundary of Maine under the Washington Treaty; and for five years subsequently commissioner for Cumberland County. From 1831 to 1869 he was a member of the Board of Overseers of Bowdoin College. In 1849 he published a carefully-prepared digest of the first twenty-six volumes of the "Maine Law Reports." As a lawyer, he took a high rank among the leading jurists of the State, which has furnished so many eminent members of the legal profession.

Aug. 8.—LITTLE, CHARLES C., a leading Boston publisher and importer of books for more than forty years; died at Cambridge, Mass., aged 70 years. He was born at Kennebunk, Me., July 25, 1799, went to Boston early in life and entered a shipping-house, where he remained but a short time. After spending a winter at Charleston, S. C., Mr. Little returned to Boston and entered the bookstore of Carter, Hilliard & Co. He subsequently became a member of the firm of Hilliard, Gray, Little & Wilkins, in which he continued until the formation of his partnership with the late James Brown, in the year 1837, under the style of Charles C. Little & Co., or as it appeared on their books, Charles C. Little and James Brown.

This was subsequently changed, by the admission of other partners, to Little, Brown & Co. The house were not only large publishers of standard works, such as Bancroft's Histories, the Aldine edition of British Poets, White's Shakespeare, etc., but for many years the most extensive law publishers in the United States, and also the largest importers of standard English law and miscellaneous works, introducing to American buyers the "Encyclopædia Britannica," the great dictionaries of Dr. William Smith, and many other standard works. In all these great enterprises Mr. Little was active, energetic, and prompt. He was highly esteemed in private life. For nearly a year before his death his health had been impaired, and he had spent some months at the South, and had but recently returned.

Aug. 11.—NUNNS, ROBERT, a celebrated piano-forte maker; died at Setauket, L. I., aged 78 years. He was born in 1791, and had been engaged in the business over fifty years, being, it was said, the oldest builder of piano-fortes in the United States.

Aug. 12.—NICHOLS, JEREMIAH, an influential and active politician of Pennsylvania; died in Philadelphia, in his 47th year. He was a native of Philadelphia, and was born in 1822. In 1860 he was elected to the State Senate by the Republicans from the First District, which had always been strongly Democratic. He was re-elected in 1863, and served until 1866. Originally a carpenter, Mr. Nichols was a man of no culture, but was thoroughly familiar with the inner workings of local politics. He was especially identified with the Cameron wing of the Pennsylvania Republicans. In social life he was exceedingly popular, and known as a man of generous impulses.

Aug. 14.—EVANS, HENRY G., a former journalist and publisher of New York City; died in Brooklyn, N. Y., in the 57th year of his age. Mr. Evans was co-editor and proprietor of the *New York Evening Mirror* almost from the beginning of its career to its close, and was one of the best writers for the daily press in the city. For fifteen years past (since the discontinuance of the *Mirror*) he had been extensively engaged in mercantile business, and maintained a high reputation.

Aug. 14.—KAPFF, EDWARD, a gallant officer of volunteers in the late war, Colonel of the 7th Regiment New York State Volunteers (Steuben Regiment) in 1861 and 1862, a native of Germany, and subsequently returned thither; died at Stuttgart, Germany.

Aug. 15.—NAGLE, WILLIAM J., an officer of volunteers in the late war, and subsequently a Fenian leader; died by suicide in New York City. He was a native of New York, but of Irish parentage, was captain in 88th Regiment New York Volunteers 1861–'63, became identified with the Fenians in 1863, visited Ireland in their behalf, was arrested and imprisoned by the British Government, and after his discharge, in consequence of representations of the American minister, returned to New York, but was in poor health and depressed. He had recently been appointed a clerk in the Tax-Commissioner's Office.

Aug. 16. — JÄGER, BENOIT, a venerable French scholar and professor, died in Brooklyn, N. Y., aged 83 years. He was a native of France, but had long been resident in the United States, and was for many years Professor of Ancient and Modern Languages in some of the collegiate institutions of Brooklyn.

Aug. 17.—CLARK, Rev. JAMES A., Professor of Latin in Kalamazoo College, and former editor of the *Michigan Christian Herald;* died in Kalamazoo, Mich., aged 41 years. He was a native of Washington, Berkshire County, Mass., was prepared for college at Shelburne Falls Academy, Mass., and entered Williams College in 1849, whence he graduated with honor in 1853, and was subsequently offered a tutorship in the college; but, after teaching for a year in the academy at Shelburne Falls, he entered Newton Theological Seminary and graduated in 1857. Removing to the West, he became pastor of the Baptist Church in Adrian, Mich., and subsequently at Fairfield in the same State. In 1861 he was called to a professorship in Kalamazoo College, and remained there till 1864, when he took charge, as editor, of the *Michigan Christian Herald* at Detroit, and continued in that position till the consolidation of the paper with the *Standard* at Chicago, in 1867, remaining corresponding editor till his death. In 1867 he was recalled to Kalamazoo, this time as Latin professor, acting also as treasurer of the college. He was at the same time the treasurer of the State Convention. In 1868 Prof. Clark entered with all his heart into the effort for the further endowment of the college, and his labors were crowned with the most gratifying success, though the exposure and overwork were, perhaps, the causes of his premature death.

Aug. 23. — TENNEY, JOHN S., LL. D., a Maine jurist; died in Norridgewock, Me., aged 80. He was born in New Hampshire in 1788, educated at Bowdoin College, studied law, and settled at Norridgewock, taking rank for many years past as one of the ablest lawyers and judges of the State. After occupying many subordinate positions, he was elected Chief Justice of the Supreme Court of the State, and served from 1856 to 1863.

Aug. 24.—DOUB, Rev. PETER, D.D., a Methodist clergyman and professor, died at Greensboro, N. C., aged 74 years. He had been a member of the North Carolina Conference for more than fifty years, and was for two or three years a professor in the Methodist Theological Seminary in that state.

Aug. 25.—MCDONALD, DAVID, a jurist of Indiana; died at Indianapolis, Ind. He had been Judge of the United States District Court for the Indiana District since 1866.

Aug. 25.—PENNINGTON, AARON S., an able lawyer, brother of the late William Penning-

ton, Governor of New Jersey and Speaker of the House of Representatives; died in Paterson, N. J., in the 70th year of his age. He had practised law at Paterson for many years, principally as a Chancery lawyer, and was formerly a State Senator and Public Prosecutor of the Pleas for Passaic County. He was also Vice-Governor of the Society for Establishing Useful Manufactures, and at one time acted as governor of that society. He was esteemed for his probity in his profession, and for his generous social qualities.

Aug. 27.—DURIVAGE, J., an active journalist and author; died at Memphis, Tenn. He was a native of Boston, a versatile and agreeable writer, and a gentleman of amiable manners and kindly disposition.

Aug. —.—GRIGG, JOHN WARNER, a wealthy citizen of Philadelphia, son of the late John Grigg, publisher; died at Philadelphia, aged about 50 years. He bequeathed the following sums to the various charities of his native city: the Pennsylvania Hospital, $50,000; the Charity Hospital, $10,000; the Foster Home Association, $10,000; the Northern Home for Friendless Children, $5,000; the Merchants' Fund Society, $10,000; the House of the Good Shepherd, $10,000; the first troop of Philadelphia city cavalry, $10,000; the Union Benevolent Society, $5,000; to each of the seven soup societies of the city of Philadelphia—namely, the Northern, Central, Western, Kensington, Spring Garden, Moyamensing and Southwark—$1,000, $7,000. Total, $117,000.

Aug. —.—HARASZTHY, Colonel AGOSTIN, an enterprising and energetic Hungarian explorer and pioneer, born in Hungary in 1812 and educated there; emigrated to the United States many years ago; lived for some years in Wisconsin, Iowa, and Texas; came to California in 1850; was Superintendent of the Mint at San Francisco 1853–'57; afterward engaged largely in the culture of the grape, was Superintendent of the Buena Vista Vinicultural Society's Vineyard in Sonoma County, and was sent in 1864 to Europe by the State of California, to investigate the culture of the grape there and procure European varieties; he returned with large supplies of the best European kinds, and published in 1865 a large and valuable treatise on grape culture and wine-making in Europe and in California; in 1867 he went to Nicaragua and obtained from that government the right to manufacture distilled liquors for twenty years; while exploring near Leon, he fell into a stream, and was devoured by alligators.

Sept. 2.—BOOLE, FRANCIS I. A., a New York politician; died in the Insane Hospital at Utica, N. Y., aged 49 years. He was born in Nova Scotia, May 21, 1820, came to New York in his youth and learned the trade of shipbuilding. He first came into notice as Common Councilman for all the districts of the Eleventh Ward, New York City, about 1858. He was subsequently elected Alderman of the same ward, and in 1862 was appointed City Inspector by Mayor Opdyke. In the autumn of 1863 he was nominated for Mayor by Tammany Hall, but was defeated by C. Godfrey Gunther, coming out of the canvass with less votes than either Mr. Gunther or Mr. Blunt, the Republican candidate. On the creation of the Board of Health in 1865 the office of City Inspector was abolished, and, Mr. Boole's great popularity having sensibly waned, his mind became affected, and he soon manifested symptoms of softening of the brain.

Sept. 2.—OSBORNE, THOMAS B., LL. D., a lawyer, judge, and political leader of Connecticut; died at New Haven, Conn., aged 72 years. He was born in Fairfield County, Conn., in 1797, educated at Yale College, graduating in the class of 1817, studied law, was judge of Fairfield County for several years, and represented the Fourth Congressional District in Congress from 1839 to 1843. In 1848 he removed to New Haven, was law professor in the Law Department of Yale College from 1855 to 1865, and in 1856 received from Wesleyan University the degree of LL. D.

Sept. 3.—OXENDINE, Rev. ARCHIBALD W., a Baptist clergyman and Revolutionary veteran; died at Benton's Creek, Phelps County, Mo., aged 110 years. He was born in South Carolina, August 26, 1759, was one of Marion's men during the Revolution, and had been very many years a minister of the Baptist denomination. Although he had been unable to walk for the last three years, he retained his sight, hearing, and intellect, up to the last hour.

Sept. 5.—PALMO, FERDINAND, an Italian cook, confectioner, and founder and manager of an opera-house in New York City; died there, aged 85 years. He was born in Naples, Italy, in 1784, emigrated to the United States in 1802, and, after spending four or five years at the South, came to New York City in 1807, and, by skill, industry, and economy, was able soon to open a small restaurant and confectionery of his own. After a number of years he built the large restaurant, which for many years occupied the corner of Reade Street and Broadway, known to old New-Yorkers as the *Café des Mille Colonnes*, and made a fortune there. In 1835 he determined to sell this, and to build and manage an Italian opera-house, and erected what was afterward known as Burton's Theatre, now the United States Court Rooms, in Chambers Street. He opened this for the first regular season in 1844, and in a very short time lost his entire fortune in the enterprise. He returned to his old profession, but he was past sixty years of age, and soon the failure of the house by which he was employed threw him out of employment. The theatrical and opera managers and actors, to whom he had always been a kind friend, hereupon established a fund for his support, by which his last years were rendered comfortable.

Sept. 5.—WORTH, JONATHAN, a leading politician and Unionist of North Carolina; died

at Raleigh, N. C., aged about 72 years. He was a member of the North Carolina Legislature from 1829 to 1834, and in 1831, during the height of the nullification excitement, introduced a resolution into the House of Commons of the State, denouncing it in the strongest terms. When the secession movement began, he opposed it with great vigor, and voted against the convention to take North Carolina out of the Union. He was known as a decided Unionist during the war, though, like Mr. Botts, of Virginia, he remained at his home and kept aloof from political action. In 1865 he was elected Governor of the State, and served until the reconstruction of the State, when he gave place to Governor Holden.

Sept. 10.—GOLD, SAMUEL WADSWORTH, M. D., an eminent physician and agriculturist, of West Cornwall, Conn.; died there, aged 75 years. He was educated at Williams College, graduating in the class of 1814, and studied medicine, practising for some years under a license. In 1829 he received the degree of M. D. from Williams College, and in 1836 from Yale College, of which he subsequently became a Fellow. He was a member of the Senate of Connecticut, and for many years, in connection with his son, Samuel W. Gold, Jr., M. D., had had the reputation of being in the very front rank of New England farmers. His contributions to agricultural literature and science were numerous and valuable.

Sept. 11.—BAHNSON, Right Rev. GEORGE F., D. D., a bishop of the Moravian Church, for the southern division; died at Salem, N. C., aged 64 years. A native of the Netherlands, where he was born in September, 1805, he came to this country many years ago, and was employed as a teacher in the Moravian Theological Seminary at Nazareth, Pa. He subsequently accepted a call as pastor of the Moravian Church at Lancaster, and officiated in that capacity until 1861, when he was ordained a bishop, and assumed the charge of the Church in the Southern States, taking up his residence in Salem, where he died. Bishop Bahnson had just returned from Europe, where he had been for several months, attending the General Council of the Moravian Church. He was a man of fine culture, amiable manners, and decided ability.

Sept. 18.—DORR, Rev. BENJAMIN, D. D., an eminent Episcopal clergyman and author of Philadelphia; died at Germantown, Pa., in the 74th year of his age. He was born in Salisbury, Conn., in 1796, graduated at Dartmouth College in 1817, and at the General Episcopal Theological Seminary in New York in 1820. He received ordination as a priest from Bishop Hobart in 1823; and after having taken charge, in turn, of the parishes of Lansingburg and Waterford, N. Y., and Trinity Church, Utica, and serving as secretary of the Episcopal Board of Missions, he, in 1837, became rector of Christ Church, Philadelphia, where he spent a useful ministry of thirty-two years. He received the degree of D. D. from the University of Pennsylvania in 1838. He was the author of several devotional works of considerable merit.

Sept. 19.—WOODBRIDGE, Rev. JOHN, D. D., a distinguished Congregationalist clergyman and author, born in Southampton, Mass., in 1784; died at Waukegan, Wis., in the 85th year of his age. He graduated at Williams College in 1804, and was ordained as pastor of the church in Hadley, June 20, 1810, where he remained until September 15, 1830, when he became pastor of the Bowery Presbyterian Church in N. Y. city. Here he remained about ten years, and was afterward settled at Bridgeport and New Hartford, Ct., and on the 16th day of February, 1842, became pastor of the Russell Church in Hadley, from which he was dismissed, at his own request, July 15, 1857. His entire pastorate in Hadley, therefore, lasted thirty-five years. Dr. Woodbridge came from a ministerial family, there having been but one break in the line of John Woodbridges, ministers of the Gospel, since the Reformation, or for more than three hundred years. Dr. Woodbridge possessed fine antiquarian tastes, and had made some valuable contributions to the early history of Old Hadley and the Connecticut Valley.

Sept. 21.—ROCKWOOD, Rev. GILBERT, a Congregationalist clergyman and missionary; died in Wilbraham, Mass., aged 58 years. He had been a missionary among the Tuscaroras from 1837 to 1861.

Sept. 22.—ALLEN, RICHARD L., an editor, author, and practical agriculturist; died in Stockholm, Sweden, aged 66 years. He was born in Hampden County, Mass., in October, 1803, educated at Westfield, Mass., and early entered into mercantile pursuits in New York City. Relinquishing this, he entered into literary pursuits and the study of the law in Baltimore, but on account of impaired health returned to a more active, out-door life in 1832. He had a large tract of woodland on the Niagara River, which he cleared and brought into cultivation, and commenced breeding various kinds of improved stock, a business in which he took great delight. In 1842, in conjunction with his elder brother, Mr. A. B. Allen, he founded the *American Agriculturist*, of which for thirteen years he was contributor, co-editor, and publisher. He also prepared during this period "The American Farm Book," a capital work, and also a valuable treatise on "The Diseases of Domestic Animals." The demand for improved agricultural implements, stimulated by the *Agriculturist*, led the Allen brothers to open an agricultural implement warehouse, which is still carried on, and this business became so extensive that they withdrew from the paper to conduct it. Mr. Allen had also a large amount of real estate at Manitowoc, Wis., and was greatly esteemed there for his liberality and kindness of heart. He was a man of cultivated intellect, of fine tastes, and a most generous and amiable disposition.

He was making a tour of Northern Europe at the time of his sudden death.

Sept. 27.—COWEN, BENJAMIN S., M. D., a prominent politician, jurist, and editor, of Ohio; died at St. Clairsville, Ohio, aged 76 years. He was born in Washington County, N. Y., in 1793; educated there; studied medicine, and received his diploma about 1817. In 1820 he removed to Moorefield, Harrison County, Ohio, and, after some years' practice as a physician, studied law, and was admitted to the bar in 1829. He removed to St. Clairsville in 1832, and, after a time, added to his professional duties the editorship of the Belmont *Chronicle*, of which he was proprietor and principal editor until 1852, when he relinquished it to his son, now Brigadier-General B. R. Cowen. In 1839 he was sent as a delegate to the convention which nominated General Harrison for President, and in 1840 was elected to Congress by the Whigs, where he succeeded Joshua R. Giddings as chairman of the Commitee on Claims. He took strong ground in favor of the Tariff of 1842, which passed by only one majority, and throughout his congressional career, as, indeed, throughout his long life, was always looked upon as a consistent antislavery man. During 1845 and 1846 he was a member of the Ohio Legislature, and from 1847 to 1852 was presiding judge of the Court of Common Pleas. At the commencement of the war he took an active part in raising men and money, and during its continuance his efforts to aid the Government were never relaxed.

Sept. 29.—EKIN, Rev. JOHN, D. D., an eloquent and able clergyman of the Associate Reformed Church, for many years a prominent and influential clergyman of Cincinnati, but of late settled in Kansas; died in Topeka, Kan., aged about 65 years.

Oct. 2.—NELSON, WILLIAM, a venerable citizen and lawyer of Westchester County, N. Y.; died at Peekskill, N. Y., in the 86th year of his age. He was born in Clinton, Dutchess County, N. Y., June 29, 1784; received an academical education, studied law, and was admitted to the bar of the Supreme Court in May, 1807, his license having been signed by Chief-Justice Kent. He practised law for more than fifty years in the counties of Westchester, Putnam, and Rockland, with ability and success. He was District Attorney for these three counties for thirty years; a member of the Assembly of New York in 1819 and 1820; State Senator in 1823–'24. Governor Yates urged him about this time to accept the circuit judgeship of the Second Circuit, but he declined. He remained in the active practice of his profession till 1847, when he was elected member of Congress from his district, and reëlected in 1849. He declined to be again a candidate, and returned to his practice, in which he continued till his eightieth year.

Oct. 15.—HASTINGS, FREDERICK H., an estimable citizen of Rensselaer County, N. Y., well known in the public councils of the State; died at Brainard's Bridge, N. Y., aged 51 years. He was a member of the New York State Senate in 1864–'65, and, though not a member of the legal profession, having been for many years engaged in manufacturing and farming, he was, from the public confidence in his ability and integrity, made chairman of the Committee on Manufactures, and assigned a prominent position on the committees on Claims, Public Health, and Medical Colleges and Societies. His strict integrity and freedom from partisanship won him high esteem from all who knew him well.

Oct. 16.—RITNER, JOSEPH, a leading politician of Pennsylvania, many years since; died in Carlisle, Pa., aged 90 years. He had been in early life a Federalist, and, on the organization of the Whig party in 1828, became a Whig. By that party, then, and for some years after, in the majority in Pennsylvania, he was elected Governor in 1835, and held office till 1839. He was not a man of very great abilities, but the able councillors he had about him, the late Thaddeus Stevens being one of the foremost, caused his administration to be respectable in character. During his term of office, a convention for revising the State constitution was held, and the new constitution was adopted in 1838. In the gubernatorial election which followed, the Democratic party gained the ascendency, and, after a campaign of unsurpassed bitterness, David R. Porter was elected Governor. Each party feared the other; it was reported that Governor Ritner would hold over, and there was so much talk of force to inaugurate Governor Porter, that Governor Ritner, naturally timid, requested that a body of U. S. troops might be sent to Harrisburg to keep the peace. Two bodies, each professing to be the Legislature, were in session. Before any actual collision, however, wiser counsels prevailed, and Governor Porter was inaugurated peacefully, and Governor Ritner retired to private life, taking no further part in the politics of the State. (*See* PORTER, DAVID R., in ANNUAL CYCLOPÆDIA for 1867.)

Oct. 17.—RICE, VICTOR M., a Republican politician and political leader of New York; died at Oneida, Madison County, N. Y., aged 55 years. He was born at Clymer, Chautauqua County, N. Y., in 1814, but resided for many years in Buffalo; had received an excellent education, and was, for a considerable time, a teacher in that city, at first of penmanship, and subsequently the head of a commercial or business college. Though active in politics, he held no office until 1862, when he was elected Superintendent of Public Instruction, a position whose onerous and varied duties he performed with great success for three years. At the close of his term in 1865, he did not seek a reëlection, but returned to Buffalo, where he had since been a bank-officer. His death occurred from a carbuncle.

Oct. 18.—MACDONALD, MOSES, an active po-

litical leader in Maine; died at Saco, Me., aged 54 years 6 months. He was born in Limerick, Me., April 8, 1815; had a good academical education; studied law; was admitted to the bar in 1837, and practised his profession from 1837 to 1845. In 1841, 1842, and 1845, he was a member of the Maine Legislature, and in 1845 Speaker of the House; he was State Treasurer from 1847 to the close of 1849; member of Congress from the First Congressional District of Maine from 1851 to 1855; and Collector of the District of Portland, under President Buchanan, from 1857 to 1861.

Oct. 19.—MORTON, ALEXANDER, a celebrated gold-pen manufacturer, and a liberal and patriotic citizen of New York; died in New York City, aged 49 years. By the adoption of skilful automatic processes, invented by himself, he made a great change in the manufacture of gold pens about the year 1860, and thenceforth the pointing, tempering, and grinding of these pens, which had formerly been done unequally and often imperfectly by hand, was all accomplished by machinery. His pens had a high reputation, and an immense sale throughout the Union, and his large income was disbursed with a generous hand for the cause of the Union and its defenders.

Oct. 23.—AVERY, EPHRAIM K., a once famous Methodist clergyman; died in Pittsfield, Ohio, aged 70 years. He was a native of Connecticut, and had been for some years a Methodist preacher, and had attracted attention by his eloquence and ability, when he was stationed in Fall River, Mass., in 1832 and 1833. Here he became acquainted with a young woman, a member of his church, named Sarah Maria Cornell. They were for a considerable period very intimate, but without exciting any particular attention, Miss Cornell being affianced to another. At length the body of the girl was found near a haystack, in a field remote from the highway, and the circumstances made it evident that the double crime of seduction and murder had been committed. Mr. Avery's known intimacy with her led to the suspicion that he was the murderer. He was tried both by an ecclesiastical and a civil court; the former acquitting him after a careful and protracted trial, with emphatic assurance of his innocence, and the latter failing to make a case against him, and discharging him under a *nolle prosequi*. But the community refused to believe him innocent, and, after attempting in vain, for some years, to continue in the ministry, he felt compelled to withdraw from it, and removed to Ohio, where, for more than thirty years, he had led the life of a quiet, industrious farmer, and was greatly respected and beloved by his neighbors and acquaintances.

Oct. 23.—FARMER, JOHN W., a generous and philanthropic citizen of New York; died in Brooklyn, N. Y., aged 50 years. In the winter of distress which followed the financial panic of 1857, he not only gave bountifully of provisions to the poor, but established the soup-house system for their benefit, thus furnishing them with nutritious food at a rate much below what they could have prepared it for at their own homes, even if the meat had been given them. He followed the same course in 1861–'62. For four or five years past he had been deeply interested in coöperative movements, and had organized a number of co-operative societies in New York and vicinity. He was fertile in expedients to aid the poor to help themselves, and never chary of his own means in aiding them to do so.

Oct. 28.—HENRY, Rev. ROBERT W., D. D., an eminent and eloquent Presbyterian clergyman, educated at Princeton, N. J., and settled successively in Chicago, Ill., as co-pastor with Rev. Dr. McElroy, in New York City, and over the North Presbyterian Church, Philadelphia; died in Alexandria, Egypt. He had been making the tour of Europe and the East since May, 1869, and was bound homeward, when he was seized with the Syrian fever, at Alexandria, and died after a few days' illness.

Nov. 2.—BANGS, Rev. HEMAN, a pioneer Methodist clergyman; died in New Haven, Conn., aged 79 years. He was born in Fairfield, Conn., April 15, 1790, but early removed to Delaware County, N. Y. At the age of eighteen he was converted, and soon after was licensed to preach. In 1815 he joined the New York Conference, and continued in it for fifty-four consecutive years. For many years he was the presiding elder for the New Haven District, and in 1868 was the presiding elder of the South Long Island District. His ministry was a successful one, and during his pastorate he admitted some ten thousand persons to church membership.

Nov. 5.—RIGGS, Dr. JETUR R., a prominent physician of Paterson, N. J.; died at Drakeville, Sussex County, N. J. He was born in Morris County, N. J., June 20, 1809; studied medicine and graduated at the Barclay Street Medical University of New York. In 1828 he made an extensive sea-voyage over the world; practised his profession from 1832 to 1849; served two years in the New Jersey Legislature; in 1855 was elected for three years to the Senate of New Jersey; and in 1858 was chosen a Representative in Congress, serving as a member of the Committee on Manufactures.

Nov. 6.—HALL, Rev. HENRY LEWIS, a Congregationalist clergyman; died at Poughkeepsie, N. Y., aged 34 years. He was born in Guilford, Ct., in November, 1835; fitted for college at East Hampton; graduated with honor from Yale College in 1860; studied theology at New Haven one year; was one year with the army as chaplain of the Tenth Regiment Connecticut Volunteer Infantry; and then studied three years at Halle, in Germany, with Tholuck, in whose family he spent most of that time, and with whom he was on terms of cordial intimacy. He was a thorough scholar, a careful and elegant writer, a dignified and impressive

speaker, and a devoted pastor. In 1868 ill health compelled him to resign a pastorate in Auburn, Me., since which time he had been unable to resume the duties of his profession.

Nov. 7.—BASCOM, OLIVER, an active politician of the State of New York; died at Whitehall, N. Y., of heart-disease, aged 54 years. He was born in Orwell, Vt., at which place his father pursued the occupation of a farmer, and when quite young commenced life as a clerk in a store in Whitehall, N. Y. He afterward became a director of the Northern Transportation Company, and for ten years was secretary and treasurer of that corporation. About two years ago he resigned those offices, and entered the lumber firm of Brett, Spooner & Co. In the fall of 1868 he was elected Canal Commissioner, and performed the duties of that office with creditable assiduity, and thus probably aggravated the malady which terminated his career so suddenly.

Nov. 8.—KENT, Rev. ARATUS, a pioneer Congregationalist clergyman and home missionary, died at Galena, Ill., aged 75 years. He was born in Suffield, Conn., educated at Yale and Princeton, and, upon the completion of his theological course, applied to the Home Missionary Society for "a place so hard that no one else would take it," and in 1829 was sent to the Galena lead-mines. Here he was unceasing in his labors, and in less than two years had a Sabbath-school with ten teachers and from sixty to ninety scholars, having also established a day-school, which he conducted himself. In 1831 he organized the First Presbyterian Church in Galena, and, after holding a pastorate for several years, became in 1848 an agent of the Home Missionary Society. He was indefatigable in the performance of all his duties, never sparing himself in heat or cold, storm or sunshine. The foundation and present prosperity of Beloit College, and Rockford Female Seminary, are in a large degree owing to his energy. He was a man of remarkably generous impulses, and, with a salary always small, gave to charitable objects in the course of his ministerial career nearly seven thousand dollars.

Nov. 9.—PRATT, THOMAS G., a prominent politician and political leader of Maryland; died in Baltimore, aged 65 years. He was born in Washington in 1805; was educated in an academy in Georgetown, D. C., studied law, and frequently served in the Maryland Senate. In 1837 he was a presidential elector; from 1844 to 1848, Governor of Maryland; Senator in Congress from 1850 to 1857; a delegate to the Chicago Convention of 1864; and to the Philadelphia National Union Convention of 1866.

Nov. 11.—BINGHAM, Rev. HIRAM, a Congregationalist clergyman and missionary of the American Board; died in New Haven, Conn., aged 80 years. He was born at Bennington, Vt., graduated at Middlebury College in 1816, and at the Andover Seminary in 1819, being ordained the same year. Having a strong desire to carry the gospel to the Sandwich Islands, he offered his services to the American Board, and received an appointment in 1819. He was stationed on the Island of Oahu at Honolulu, which soon became the permanent seat of government, and the chief resort of whaling and other ships of the North Pacific, and his unwearied labors for a period of twenty years gave him a strong influence for good over the kings and chief rulers of that time. In 1841 Mr. Bingham was obliged to return to the United States, in consequence of the failure of his wife's health, which never was sufficiently recovered to admit of her return; and after her death, which occurred some years later, it was not considered advisable for him to resume his connection with the mission.

Nov. 11.—COIT, Rev. GURDON S., D. D., an Episcopal clergyman; died in Bridgeport, Conn. He was formerly a professor in Trinity College, Hartford, Conn., and for twenty-five years was Rector of St. John's Church, Bridgeport.

Nov. 11.—WARNER, WYLLYS, Secretary and Treasurer of Yale College; died in Chicago, aged 70 years. He graduated at Yale College in 1826, and subsequently at the Yale Theological Seminary; but, although licensed to preach, was never a settled pastor. In 1829 he was made a tutor at Yale, and was subsequently appointed agent to collect what was known as the $100,000 fund for the college, in which work he was very successful. In 1833 he was chosen treasurer of the college in place of James Hillhouse, deceased, and continued in that office until 1852, when failing health compelled him to resign. Upon the death of Rev. Samuel R. Andrew, secretary of the college, in 1858, Mr. Warner was elected to that office, which he continued to fill to the time of his death.

Nov. 15.—BALDWIN, ALEXANDER W., United States District Judge for Nevada; was killed at Alameda, Cal., by a railroad accident, aged 34 years. He was a native of Alabama, and son of Judge Joseph G. Baldwin of the Supreme Court of California, author of "The Flush Times of Alabama and Mississippi." Young Baldwin was educated for the law, and became a member of the successful firm of Stewart, Kirkpatrick, and Baldwin, of Virginia City, Nevada. When but thirty years of age he was chosen a United States district judge, and had already won himself much honor when his brilliant career was suddenly ended.

Nov. 15.—BUTTERFIELD, JOHN, a pioneer in the establishment of stage and express lines; died in Utica, N. Y., aged 86 years. He was born in Helderberg, N. Y., and was self-educated. In 1822 he removed to Utica to assist in the management of the regular stage-line for the transporting of passengers between Albany and Buffalo, and soon became the leading manager of that business in the State. Upon the establishment of railroads he at once directed his energies to that new project, and

was also one of the originators of the American Express Company, in which organization he was a directing power until his death. Perceiving the commercial importance of the electric telegraph, he took part in the establishment of the New York, Albany, and Buffalo Telegraph Company. He also aided largely in building up the city of Utica.

Nov. 23.—McLEAN, Rev. DANIEL VERCH, D. D., a Presbyterian clergyman and author; died at Red Bank, N. J., aged 68 years. He was a graduate of Miami University, Ohio, was for several years pastor of the old Tennent Church of Freehold, N. J.; afterward was president of Lafayette College, Easton, Pa., and at the time of his death was pastor of the Church at Red Bank.

Nov. 27.—KIERNAN, General JAMES L., Brigadier-General of Volunteers, in the late war; died in New York City, aged 32 years. He was a native of New York; received a liberal education, and graduated as a physician at the University of New York. When the war commenced he was in the practice of his profession, and was engaged at the same time as one of the editors of the *Medical Press*. His patriotism, however, led him to volunteer his services on behalf of his country. At the battle of Port Gibson, Miss., he was severely wounded, and fell into the hands of the enemy, but subsequently escaped. For his services in the field he was commissioned as a brigadier-general, and at the close of the war was appointed United States consul at Chin Kiang, China, the duties of which office he performed acceptably to the Government.

Nov. 27.—NICHOLAS, SAMUEL SMITH, a jurist and publicist of Kentucky; died in Louisville, aged 73 years. He was a son of George Nicholas, a colonel in the Revolutionary War, and was born in Lexington, Ky. When a youth he entered into active business in Baltimore under the care of his uncle, Robert Smith, afterward mayor of the city. Although but a lad, he was sent as supercargo to Lima and Canton, and he made the best use of the voyage to perfect his commercial and general education. On his return he entered into business in New Orleans. Thence he removed to Kentucky, and became a law student in the office of the late Chancellor Bibb, then living at Frankfort. Entering upon the practice of his profession in Louisville, he rose rapidly to a high position, and in December, 1831, became judge of the Court of Appeals. Subsequently he served in the State Legislature. He assisted in the preparation of the Revised Code of Kentucky, and was the author of a series of essays on constitutional law.

Nov. 28.—PRAY, ISAAC C., a New York journalist, author, and dramatic actor; died in New York City, aged 56 years. He was born in Boston in 1813, his father being one of the wealthiest merchants in that city. He was connected for some time with the *Journal of Commerce*, and afterward wrote for the *Herald*; was the author of "Virginius," a play first brought out at the Academy of Music, and was very successful as a theatrical manager.

Nov. —.— WALSH, BENJAMIN D., State Entomologist of Iowa; died at Rock Island, Ill., from the effects of an accidental injury, aged 61 years. He was born in England, but emigrated to the United States at the age of twenty-two years. He had received an excellent education in England, and, having a strong predilection for natural history, he devoted himself to the study of some branches of it for nearly forty years. He had been connected with the Natural History Society of Philadelphia, and the Smithsonian Institute, and had given much time to the investigation and arrangement of the very large collection of insects brought home by the various exploring expeditions. He was regarded as a standard authority on entomology, and for two years past had been employed by the State of Iowa in connection with the Agricultural College in investigating the insects of the State injurious to vegetation.

Dec. 2.—RICHARDSON, ALBERT DEANE, journalist and author; was assassinated in New York City, aged 36 years. He was born in Franklin, Mass., was educated in his native town and at Holliston, and at the age of seventeen went to Pittsburg, Pa., and engaged in teaching, employing his leisure time in writing for the press. Subsequently he removed to Cincinnati, where he was attached to the *Sun*, and afterward to the *Unionist*, the *Daily Columbian*, and the *Cincinnati Gazette*. Having made an engagement with the *Boston Journal*, he went out to Kansas as correspondent for that paper, and resided there for about two years, acting as secretary of the Territorial Legislature, and as adjutant-general to the Territorial Governor. He took an overland trip across the country as far south as the Rio Grande; and in the winter of 1859–'60 returned East. Having become connected with the *Tribune*, he spent a year in Colorado as correspondent for that paper, and upon his return went through the South on a secret mission for the *Tribune*. He was war correspondent of that paper from the summer and autumn of 1861 (when he was with Fremont in Missouri) to May, 1863, when, after numerous experiences in field and camp, he was taken prisoner by the enemy, on the Mississippi River, and held in confinement twenty months at various Southern prisons; escaped December 18, 1864, from Salisbury, N. C., prison, and reached Knoxville, Tenn., after incredible hardships, January 1st, 1865. After his escape he wrote "Field, Dungeon, and Escape," which sold to the extent of nearly 100,000 copies. His health being impaired, his visited California in the autumn of 1865, with Mr. Colfax and other friends, and on his return wrote "Beyond the Mississippi," which also had a very large sale, and which he revised in 1869, after another journey across the Plains. In 1868, while still in the occasional service of the *Tribune*, he wrote a biography

of General Grant for his Hartford publishers, which was very popular. In June, 1869, he went again to California, and wrote for the *Tribune* his "To and Back from the Pacific," a series of brilliant letters. He subsequently visited Chicago and Kansas for that paper, contributing at the same time to other periodicals and magazines. He had formed in 1867 the acquaintance of a Mrs. McFarland, the wife of a lawyer in New York City, who, from a variety of causes, desired a separation from her husband, and had for the time made an engagement as actress in one of the New York theatres. His attentions to her (they being fellow-boarders) excited the displeasure of McFarland, and he attempted, in March, 1868, to kill Richardson as he was escorting Mrs. McFarland from the theatre. The wounds received by Mr. Richardson were not very serious, and he refused to prosecute. Mrs. McFarland then determined to obtain a divorce from her husband, and there was an understanding between her and Richardson that, when the divorce was obtained, she was to become his wife. A divorce was obtained in the autumn of 1869, but Mr. Richardson had not subsequently seen Mrs. McFarland; when on the 26th of November McFarland, who had for some time previous threatened to take his life, appeared in the *Tribune* office, and, as Mr. Richardson came to the counter to inquire for his letters, shot him instantly. He lived for about a week after being wounded, and before his death the marriage ceremony was performed between him and Mrs. McFarland.

Dec. 8.—Potter, Hazard Arnold, M. D., an eminent surgeon of Western New York; died at Geneva, aged 58 years. He was born in Potter Township, Ontario (now Yates) County, N. Y.; graduated M. D. at Bowdoin College in 1835, and began the practice of his profession in Rhode Island, but, after a residence there of a few months, returned to his native town. In 1853 he removed to Geneva. In 1854 he performed for the first time, successfully, the operation of trephining the spine, and the same year performed the operation of gastrotomy, for the relief of intussusception of the bowels, with success. He was one of the first to remove ovarian tumors, and introduced a new method of amputation at the hip-joint, dissecting out the head of the femur and proceeding otherwise as if for the ordinary flap-operation. During the late war he entered the service as a volunteer surgeon. He was a strong advocate for the cause of temperance, to which he devoted much time the latter part of his life.

Dec. 9.—Squires, Captain Charles W., Assistant Superintendent of the Erie Railroad; died of an accidental injury received while in the performance of his duties, aged 32 years. He served through the entire war with great credit. At the battle of Williamsburg, when the Excelsior Brigade, under General Sickles, was forced back, and the enemy was pressing upon the reserve, two guns abandoned by the artillery were yet in position and loaded. Captain Squires, then second-lieutenant, seized the lanyard of each gun, waited until the Union troops had passed to the rear, and then fired, temporarily staying the advance, and giving his own forces additional time to retire. Captain Squires served through the Peninsular campaign, and was afterward upon the staff of General Berry, who was killed at Chancellorsville. While on a train, upon Thanksgiving-Day, he observed a switch out of place, and, after giving the alarm to the engineer, sprang from the engine as it slowed, and replaced the switch, but was himself thrown down, his feet being crushed beneath the wheels. Amputation was performed upon one, but he died from the shock.

Dec. 10.—Tomer, a venerable Christian Indian; died in Greenville, Me., aged 107 years.

Dec. 11.—Harris, George W. ("Sut Lovengood"), jurist, and author of humorous works; died near Knoxville, Tenn., aged 64 years. He was a native of Tennessee, and author of many works written in a witty and humorous style.

Dec. 11.—Upham, Nathaniel Gookin, LL. D., formerly Judge of the Supreme Court of New Hampshire; died in Concord, aged 68 years. He graduated at Dartmouth College in 1820, and early gained a wide reputation as a lawyer. In 1833 he was appointed one of the Justices of the Supreme Court of New Hampshire, discharging the duties of that office with honor and fidelity for a period of ten years. In 1843 he became an officer of the Concord Railroad, and was connected with it for more than twenty years. He was for many years one of the strongest pillars of the Democratic party, and during the administration of President Pierce, who was a warm personal friend, was appointed a commissioner to London for the adjustment of claims then pending between citizens of the two countries. After the attack upon Fort Sumter, Judge Upham left the Democratic party and gave an unqualified support to the Government. In 1865 and 1866 he was sent by the Republicans to the State Legislature. He had a decided taste for historical and antiquarian research. In 1862 he received from Dartmouth College the honorary degree of Doctor of Laws.

Dec. 13.—Brewster, Brigadier-General William R., U. S. Volunteers; died in Brooklyn, L. I. In the late war, after the promotion of General Sickles, he commanded the Excelsior Brigade, and at the time of his death held a position in the United States Internal Revenue Department.

Dec. 14.—Waite, Henry Matson, LL. D., a Connecticut jurist; died at Lyme, Conn., aged 81 years. He graduated at Yale College in 1809; studied law, and was for many years Judge of County and Superior Courts. From 1851 he was a Justice of the Supreme Court of the State, and from 1854 to 1858 Chief Justice of the Supreme Court.

Dec. 18.—Henry, Hugh Horace, U. S. Marshal for the District of Vermont; died in

Chester, Vt., aged 55 years. He graduated at Dartmouth College in 1833, and subsequently served three terms in the Vermont Legislature. He was a member of the Chicago Republican Convention in 1860, which nominated Mr. Lincoln, and in 1861 and 1862 he went to the State Legislature as a Republican. In 1864 he was elected State Senator, and during the next year he received the appointment of United States Marshal. Mr. Henry was regarded as one of the finest debaters in Vermont, and always exerted a large influence in the legislation of the State.

Dec. 19.—THURSTON, Rev. ELI, D. D., a Congregationalist clergyman; died at Fall River, Mass., aged 61 years. He graduated at Amherst College in 1834, and subsequently at the Andover Seminary, and spent the first ten years of his ministry as pastor of the Congregational Church in Hallowell, Me. He was afterward a pastor for twenty-one years at Fall River. He was a man of fine scholarly attainments, and a preacher of much force and ability.

Dec. 21.—DUNN, Rev. JOHN PATRICK, Roman Catholic priest; died in Philadelphia, aged 64 years. He was a native of Ireland, and was educated at Maynooth College. He was very popular as a clergyman, and an effective speaker.

Dec. 22.—LINCOLN, CHARLES R., an old and capable journalist; died in Flushing, L. I. He was born at Dorchester, Mass., February 9, 1806. He left his home at the early age of eight years, and found his way to the city of New York, where he learned and followed the business of a printer. While still very young, he left the office of the *Courier and Enquirer*, and commenced the publication of a daily paper in New York, called *The Star*, which was soon after destroyed by fire. In 1836 he was appointed printer to the Greek Mission under Rev. Dr. Robinson and the late Rev. Mr. Hill, and for three years he remained in Greece, actively and successfully employed in promoting the best interests of the mission. After the abolition of the printing department in connection with the missionary enterprise, Mr. Lincoln, in 1841, settled in Flushing, L. I., and, with the Rev. Dr. Hawks, commenced the publication of the *Church Record*, a magazine printed under the auspices of the Episcopal Church, and which, during the period of its existence, was conducted with marked ability. The publication of the *Record* was, however, soon discontinued, and in the same year (1841) the first number of the *Flushing Journal* was issued, with Mr. Lincoln as its editor and proprietor, and to this paper he continued to give the best efforts of his pen, and in its columns he consistently and faithfully advocated what he sincerely believed to be the right and true in every issue brought before the people.

Dec. 23.—COZZENS, FREDERICK, author and editor; died in Brooklyn, aged 52 years. He was born and educated in New York City, and, though for most of his life engaged in mercantile pursuits, he devoted his leisure hours to the pleasures of authorship. He contributed to the *Knickerbocker*, and also to *Putnam's Magazine*, collecting the contributions to the former into a volume entitled "Prismatics, by Richard Haywarde," and a portion of the latter into a volume entitled "The Sparrowgrass Papers," which gave him a reputation as one of the first American humorists of the day. Two years later he published a volume of travels, "Acadia, a Sojourn among the Bluenoses." He also published a paper entitled *The Wine-Press*, devoted chiefly to the interests of his trade as a wine-merchant.

Dec. —.—CASKIE, JOHN S.; died at Richmond, Va. He was a native of Virginia, and from 1851 to 1855 was a Representative in Congress, serving on the Committee upon the Judiciary.

OBITUARIES, FOREIGN. *Jan.* 1.—SHEPPARD, Rev. JOHN GEORGE, D. C. L., an English clergyman, teacher, and author; died at Kidderminster, Eng., aged 51 years. He was a native of County Kilkenny, educated at Wadham College, Oxford, where he obtained an open scholarship, and subsequently was elected fellow and tutor. After leaving the university he became second master of Repton School, Derbyshire, and in 1851 was appointed headmaster of King Charles the First's Grammar School, Kidderminster. He was the author of eleven volumes, of which three were religious, and the remainder were educational, including among their number "Theophrasti Characteres," 1852, "Notes upon Thucydides," original and compiled, and "Aids to Classical Study." At the time of his death he was preparing a school edition of "Carrington's Virgil." He received the degree of Doctor of Civil Law in 1858.

Jan. 5.—WARDE, Admiral CHARLES, K. H., one of the oldest officers of the British navy; died at Westerham, Kent, aged 82 years. He entered the navy in 1798, and served as midshipman on board the Northumberland till 1802, and subsequently saw active service on the Immortalité, Colossus, Glory, Barfleur, Druid, and Centaur, serving on the latter, and on the Belleisle as flag-lieutenant. In April, 1808, he was made a commander, and in 1810 was appointed to the Banterer, in which he served on the Irish and Scotch coasts, and afterward in the Mediterranean. In 1815 he received orders, from Lord Exmouth, to proceed to Algiers, for the purpose of taking secretly a plan of the sea defences and soundings around the sea-face of the city, which hazardous undertaking he performed with great honor to himself, and, as an acknowledgment of his services, received the insignia of K. H. from his Majesty King William IV. In 1846 he retired from active service. In 1862 he gained his seniority as admiral.

Jan. 6.—WOODFORD, EDWARD, LL. D., an eminent Scottish teacher and author; died in Edinburgh, aged 68 years. He was born near Elgin, and educated at King's College, Aber-

deen, beginning his career as a student of medicine, but afterward changing his course and attaining distinction as a student of classics. On leaving the university he devoted himself to teaching, and established a private academy at Aberdeen, which attained a high reputation. Subsequently he removed to Edinburgh, where he was a teacher in the Southern Academy, afterward at Jedburgh, and finally was at the head of the Madras College, in St. Andrew's, where his reputation became so wide-spread that in 1850 he was appointed one of her Majesty's Inspectors of Schools for Scotland. His works are: "An Epitome of Part of Cæsar's Commentaries," 1860; "Eclogæ Horatianæ," 1849; "Elements of the Latin Language," and "The Answers in the Shorter Catechism," adapted for reading in continuous text, with the questions and proofs subjoined, and the grammatical notes.

Jan. 8.—GORDON, Admiral Sir JAMES ALEXANDER, G. C. B., Governor of Greenwich Hospital; died there, aged 87 years. He entered the navy in 1793, and rose rapidly in his profession. He was at the battle of the Nile; served in the West Indies, Mediterranean, and Adriatic; commanded the Active, frigate, at the battle of Lissa, for which he received a gold medal and a pension of £300, and, at the capture of the French frigate La Pomone, had a leg carried away by a 36-pounder. In August, 1814, with a squadron under his command, he entered the river Potomac, where, having reduced Fort Washington and other batteries, he forced the city of Alexandria to capitulate. In 1827 he was appointed Governor of the Royal Naval Hospital at Plymouth. In 1840 he became Lieutenant-Governor of Greenwich Hospital, and in 1853 was advanced to the post of Governor of that establishment. Altogether he served in the navy nearly seventy-six years, and he was the last survivor of Lord Nelson's band of captains. In 1815 he was created a K. C. B.; in 1854, G. C. B., and Admiral of the Fleet in 1868.

Jan. 11.—DICKINSON, JOHN, F. R. S., F. G. S., F. A. S., a paper-maker, inventor, philosopher, astronomer, geologist, and geographer; died in London. He was born March 29, 1782, in London, and, after receiving a good school education, was apprenticed to Mr. Andrew Strahan, at that time the King's printer. At the expiration of his indentures he went into business, first as a printer and afterward as a paper-maker, in partnership with Mr. George Longman, in the Old Bailey. It was about 1806 that Mr. Dickinson first purchased a paper-mill, and by machinery of his own invention, and that of Mr. Henry Fourdrinier, he created a revolution in the whole manufacture of paper. Mr. Dickinson was the inventor of numerous processes which have greatly aided in perfecting this branch of industry, and some of his devices for protecting bank-note paper from being counterfeited are even now the best that have been devised. In the fifty-one years in which he was engaged in manufacturing, he took out nearly fifty patents. He was elected Master of the Stationers' Company in 1857, and (which was unusual) was chosen again the next year. He was offered a Fellowship in the Royal Society in 1818, but declined it from modesty; he was elected in 1845, and read some papers of great merit to the Society, on the percolation of water through the chalk strata. In his latter years, he devoted much attention to astronomy, and to geographical and geological science. He had a fine observatory, well supplied with astronomical instruments, at his country-seat of Abbot's Hill, and quite a geological museum of his own collecting. He was also a liberal benefactor and manager of several hospitals and other benevolent institutions.

Jan. 11.—DYCE, ROBERT, M. D., Professor of Midwifery in the University of Aberdeen; died at Edinburgh, aged 70 years. He was a native of Aberdeen, graduated at Marischal College in 1816, and afterward studied medicine in his native town, Edinburgh, and London. Having spent some time in the Military Hospital at Chatham, he accepted a staff appointment from Sir Lowry Cole, Governor of the Mauritius, and subsequently Governor of the Cape of Good Hope. Returning home in 1833, he was for some years lecturer on midwifery in Marischal College, and finally professor. He contributed some valuable papers to the medical periodicals, and was known as an accomplished naturalist. He was for many years physician to the Royal Infirmary.

Jan. 14.—CURTIS, Admiral Sir LUCIUS, Bart., K. C. B., the senior officer of her Majesty's fleet, and of the British Navy; died at Portsdown Hill, near Cosham, Eng. He was born June 8, 1786, entered the navy in 1795, was made post-captain in 1806, was taken prisoner in 1810 by the French, and, after several months of cruel captivity, returned to England and was for two years in command of frigates in the coast squadron. He became a baronet in 1816, rear-admiral in 1838, vice-admiral in 1849, and admiral in 1855. He was admiral superintendent of Malta 1843–'48.

Jan. 14.—WRIGHT, HENRY GOODE, M. D., an accomplished physician and author; died in London, aged 41 years. He was educated at Gloucester, Edinburgh, and Paris, graduated M. D., at Edinburgh, in 1851, and was appointed, not long after, physician to the Samaritan Free Hospital, the St. Pancras Dispensary, and the Royal Benevolent Industrial Society. He stood deservedly high in his profession, and his two medical treatises, "Headaches, their Causes and their Cure," and "Uterine Disorders, their Constitutional Influence and Treatment," rank among the ablest contributions to pathology. He contributed also a series of annotations to the *Lancet*, which were remarkable for their brilliancy, wit, sarcasm, and wise counsel. But, outside of his profession, he was also an

able and brilliant writer; a regular contributor to the *Saturday Review*, where his papers were among the most attractive features of that dashing, racy periodical, and a writer also for other magazines, a genial wit and associate of eminent literary men, he left a void which cannot easily be filled.

Jan. 15.—WELD, CHARLES ROBERT, a literary man, traveller, and author, for sixteen years Assistant Secretary of the Royal Society; died at Newbridge Hill, near Bath, England. He was born in Windsor, England, in 1818, educated at Trinity College, Dublin, called to the bar in November, 1844, became Assistant Secretary to the Royal Society in 1845, and remained in its service till 1861. In 1847 he published a "History of the Royal Society," in two volumes, and the next year commenced a series of "Vacation Tours," of which he published nine volumes between 1848 and 1867, embracing tours in different portions of Europe, in America, India, etc. He was a very active assistant to Sir John Franklin in the home work connected with his Arctic explorations, and had written several pamphlets on the subject of Arctic Expeditions. He was one of the superintendents of the London International Exhibition of 1862, and a commissioner of the Paris Exhibition of 1867. His report at the latter, on the "Philosophical Instruments and Apparatus for teaching Science," was a very able and interesting document. He was a member of many of the learned societies, and a frequent contributor to *Fraser's Magazine*, the *Athenæum*, etc.

Jan. 18.—ASHPITEL, ARTHUR, F. S. A., an accomplished English architect, and writer on architectural and antiquarian subjects; died in London. He was born in London, December 15, 1807, educated at Homerton, received his professional training in the office of his father, who was a skilful architect, and, having been made a cripple for life by an accident, when about twelve years old, he was the more inclined to close and laborious study. He did not open a separate office and studio for himself till 1842, when his thorough knowledge of architectural science, and his admirable skill and genius in his designs, soon brought him a large practice. His designs embraced numerous public institutions, bridges, churches, chapels, schools, colleges, stations, villas, cottages, etc. He was also consulted as the highest authority on the restoration of ancient cathedrals, churches, and bridges. He travelled in Italy, and resided some time in Rome, from 1854–'57, and on his return prepared and exhibited at the Royal Academy a "Restoration of Ancient Rome," which showed a very thorough study of the local history of the city of the Cæsars. A companion drawing, "Rome as it is," was exhibited by him the next year. He was Vice-President of the Royal Institute of British Architects in 1862, and contributed to its transactions or sessional papers numerous valuable architectural essays. He had also prepared ten very interesting communications for the *Archæologia* of the Society of Antiquaries. He published an essay on "Baths and Washhouses" in 1853; one on "Town Dwellings," of great interest, in 1855, and a "Treatise on Architecture," which was mainly composed of his own and others' articles on the subject, in the "Encyclopædia Britannica," and had edited and almost entirely rewritten Nicholson's "Handrails and Staircases," and Nicholson's "New Guide; or, Book of Lines for Carpenters;" and had been a large contributor to the biographies of architects in the "Encyclopædia Britannica," and articles to the dictionary and other works of the Architectural Publication Society. He was, moreover, a fine Hebraist, and a critical Latin and Greek scholar, familiar with the languages of modern Europe, an accomplished musician and musical composer, and a good poet.

Jan. 21.—BELGIUM, LEOPOLD FERDINAND ELIE VICTOR ALBERT MARIE, Prince Royal of, Duke of Brabant, Count of Hainault, and Duke of Saxony, the heir-apparent of the throne of Belgium; died at the palace of Laeken, near Brussels, in the tenth year of his age. He was the only son of Leopold II., a child of great intelligence and affectionateness, but who had suffered for more than six months from severe illness. His death made the Count of Flanders, brother of Leopold II., heir-presumptive to the throne.

Jan. 23.—EWART, WILLIAM, a Liberal member of Parliament, eminent for his advocacy of measures of reform; died at Liverpool, in the 71st year of his age. He was born May 1, 1798, in Liverpool, educated at Eton, and Christ Church College, Oxford, graduating with high honors in 1821. He was called to the bar in 1827, and entered Parliament in 1828, sitting for Bletchingly till 1830, for Liverpool from 1830 to 1837, for Wigan from 1839 to 1841, and for the Dumfries burghs from 1841 to 1868. He was a very able legislator, and was a leader among the Liberals, and a high authority in commercial matters. He carried a bill in 1833–'34 for the abolition of capital punishment for theft, the minor forms of burglary, letter-stealing, and sacrilege, and for abolishing the practice of hanging in chains. The next session he procured the removal of the prohibition against prisoners, in cases of felony, being defended by counsel. He also led the way, by suitable legislation, for the founding of schools of design, free public libraries, museums, and institutes for mechanics, and for the adoption of the metric system. His only published volume is a work issued in 1838, entitled "The Reform of the Reform Bill."

Jan. 30.—BARNARD, Mrs. CHARLOTTE A., a musical composer and lyric poetess, whose songs and ballads had attained a wide popularity; died at Dover, England. She was the wife of Rev. C. C. Barnard, and had published a great number of popular songs under the *nom de plume* of "Claribel."

Jan. —.—HUET, PAUL, an eminent French landscape-painter; died in Paris. He was born in that city October 3, 1804, and educated in the School of Fine Arts, and in the *ateliers* of Paul Guérin and Baron Gros. From 1824 to 1827 he travelled extensively in Europe and the East, sketching everywhere the landscapes which pleased him. On his return to France he exhibited in 1827, at the hall of the School of Fine Arts, a view of La Fère, and except in 1839 and 1844, when he was absent in Italy, he had one or more of his landscapes in the annual expositions for forty years. His landscapes have a high rank as the best and most characteristic examples of the modern French school. He received a second medal in 1833, for his "Entrance to the Forest of Compiègne, and View of the Guardhouse;" a first medal at the Exposition of 1848, and the grand medal at the International Exhibition of 1855. In June, 1841, the King (Louis Philippe) conferred upon him the decoration of the Legion of Honor.

Jan. —.—OELCKERS, THEODOR, a German scholar, author, and radical; died at Leipsic, aged 53 years. From 1849 to 1858 he was imprisoned for political causes. He was the author of forty-two original volumes and seventy-two translations.

Jan. —.—VERCELLONE, Father, a learned Barnabite monk; died at Rome. He was the author of several learned works on Scriptural exegesis, and shortly before his death was employed in editing the famous Greek Bible of the Vatican.

Feb. 1.—CHURCHILL, Colonel, an eccentric English officer and author; died suddenly at Beirut. He married an Arab princess some years since. His principal works were "Mount Lebanon; a Ten Years' Residence, from 1842 to 1852," 3 vols. 8vo, and "The Druses and the Maronites, under the Turkish Rule, from 1840 to 1860," 8vo, 1862.

Feb. 3.—KEELEY, ROBERT, an English comedian of great celebrity; died in London, aged 75 years. He was born in London, and early apprenticed to the printing trade, but after three years' probation turned his attention to the stage. Having won some success in Lynn and Birmingham, he went to the metropolis and entered into an engagement at the Olympic, and the following year at Drury Lane, and in 1821 joined the Adelphi Company. In 1822 he made his first appearance at Covent Garden, under the auspices of Charles Kemble, and there secured a high reputation for his originality. Here he married Miss Goward, an actress, with whom, after a few years of successful engagements, he went into the provinces on a starring tour. Subsequently they performed at the Princess's Theatre and with the Haymarket Company. His last appearance in public was at the Dramatic College *fête* in 1867.

Feb. 7.—HODGSON, JOSEPH, F. R. S., President of the Royal College of Surgeons; died in London, aged 81 years. He was born in Birmingham, and educated at King Edward VI.'s School. His medical studies were pursued in London at St. Bartholomew's Hospital, and in 1811 he received his diploma as a member of the College of Physicians and Surgeons, winning the Jacksonian prize for his "Essay on Diseases of the Arteries and Veins," which was the basis of a larger work on the same subject, published in 1815. The same work was subsequently translated into French, German, and Italian, and reprinted in America. After practising for a time in London, Mr. Hodgson settled in Birmingham, where he soon obtained throughout the midland counties a very extensive practice. He was surgeon to the Birmingham Hospital, and the Eye Infirmary. He was a remarkably skilful operator, and was especially renowned for his operations for stone. Having acquired a large fortune through his profession, he removed to London in 1849, and was immediately elected on the Council of the College of Surgeons. In 1855 he delivered the Hunterian Oration; the next year was chosen examiner at the college, and in 1864 filled the office of president. During his residence in London he was in great demand as a consulting physician. He was the favorite medical adviser of Sir Robert Peel, and attended that statesman in his last hours. During the last years of his life Mr. Hodgson was afflicted with failing sight, and a few weeks previous to his death became totally blind.

Feb. 8.—JORDON, EDWARD, a quadroon statesman, Colonial Secretary of Jamaica, W. I.; died at Kingston, aged 68 years. In the days of his youth and early manhood he suffered, in common with the whole of his class, from the social proscription and political disabilities to which the colored people were at that time subjected in all the West-India colonies of England. But, having received a good education, and being of a sensitive nature, he commenced a course of agitation with the view of obtaining for the free colored population the political rights which belonged to them as British subjects. Having succeeded in securing these, he immediately became a zealous advocate of emancipation, calling upon his enfranchised countrymen of the colored class to unite with the antislavery party of England in bringing about the abolition of slavery. For certain expressions used in a newspaper of which he was editor, relative to the approaching doom of the system, he was put on his trial for treason, with the certainty of being hanged if convicted; but the firmness of one man on the jury that sat on his trial saved his life. It was not long after this event that slavery received its death-blow in the British West Indies by the passing of the Emancipation Act, about which time Jordon was elected a member of the Jamaica House of Assembly. Thenceforward he rose step by step, until he obtained the highest positions in the colony, having been successively member of the Privy Council,

Prime Minister in the first Executive Committee under Sir Henry Barkly's Administration, Speaker of the House of Assembly, Receiver-General, and, finally, Colonial Secretary. In acknowledgment of his talents and eminent services, the Queen, in the year 1854, made him a Commander of the Bath, the honor thus conferred upon him being the first instance of a colored man being admitted into what may be called an order of nobility.

Feb. 9.—MURCHISON, Lady CHARLOTTE, wife and scientific coadjutor of Sir Roderick Impey Murchison, the celebrated geologist and geographer; died in London, aged 80 years. She was the daughter of General Hugonin, and married, September 15, 1815, Roderick Impey Murchison, then a captain in the British Army. Through her influence, her husband was led, after his retirement from the army service, to devote his attention to physical science, in which he has since won such renown. She entered with great zest into all his studies, and her attainments in both geology and geography were hardly inferior to his. She was highly esteemed by all the scientific friends of her husband, to whom her rare conversational powers and her extensive attainments were a source of constant delight.

Feb. 12.—EPPS, JOHN, M. D., a homœopathic physician, phrenologist, politician, and author; died in London, aged 64 years. He was educated at Mill Hill, and the University of Edinburgh, where he graduated M. D. in 1827. He settled in London in the same year, commenced practice, lectured to medical students on the materia medica, and other subjects, and, having embraced the doctrines of Gall and Spurzheim, published about 1830 a work entitled "Horæ Phrenologicæ." He was appointed in 1831 Medical Director of the Royal Jennerian and Royal Vaccine Institution, and continued to hold that office till his death. He was editor, for a number of years, of the *London Medical and Surgical Journal*, of the *Anthropological Magazine*, and of the *Journal of Health and Disease*. He became a convert to homœopathy very early, lectured upon it, published a number of works on the subject, and edited for many years a homœopathic journal. He was a very active political reformer, and was identified with all the liberal measures agitated in England for the last forty years. In private life he was a man of great generosity, and of a genial and sympathizing nature. He had published twenty-two volumes aside from his journals, most of them devoted to homœopathy or phrenology, though two biographies and one or two political essays were included among them.

Feb. 13.—BERGENROTH, GUSTAVE H., a Prussian scholar, devoted to historic studies; died in Madrid, Spain, of typhus fever. He had been engaged for nearly nine years in the investigation of the Spanish diplomatic records and letters relative to the period of Henry VIII., Queen Mary, and Queen Elizabeth, known as the "Simancas Papers," and had furnished to Mr. Froude much of the material of which he has made such excellent use in his histories. Herr Bergenroth had, but a few months previous to his death, succeeded in obtaining permission, till then strenuously withheld from him, to examine some important documents, relative to the private life of Queen Catharine of Aragon, and a projected marriage between Henry VIII. and Queen Juana, the widow of King Philip and mother of Charles V., and it is believed that he had transcribed most of these papers.

Feb. 13.—CAZOTTE, CHARLES FERDINAND DE, Consul-General of France for California; died in San Francisco, aged 50 years. M. de Cazotte was an officer of the Legion of Honor, and had been decorated with several foreign orders. He was successively French consul at Panama, Lima, and Valparaiso, and finally was appointed to reside in San Francisco in place of M. F. Gautier. After a residence of many years abroad, he obtained leave of absence and revisited his native land in 1868, and was promoted to the position of consul-general in California—his Government deeming it important that French commerce should be thus directly in communication with the ministry instead of by the medium of the French consulate-general in New York, as heretofore.

Feb. 13.—WARDROP, JAMES, F. R. S., an eminent British surgeon and surgical writer; died in London, in his 87th year. He was born in Linlithgow, Scotland, August 14, 1782, educated at the High School and University of Edinburgh, and studied medicine there and in London, where he was a pupil of Clive, Cooper, and Abernethy, and subsequently in Paris and Vienna. He made for some years diseases of the eye his specialty, and, while in practice at Edinburgh, published "Essays on the Morbid Anatomy of the Human Eye." In 1814 he removed to London, became a member of the Royal College of Surgeons, and in 1818 was appointed Surgeon Extraordinary to the Prince Regent, and in 1828 Surgeon to the King. He was a lecturer on Surgery at the Aldersgate School, for several years, and devoted much attention to the treatment of aneurism, on which he published a treatise. His practice of tying the artery on the distal side of the aneurismal tumor was said by the late Dr. Valentine Mott to have conferred the highest honor and the most lasting fame on Mr. Wardrop. He was through his whole course an earnest friend of medical reform in London. He published six distinct medical treatises, and numerous contributions on surgical topics (including the article "Surgery") to the "Encyclopædia Britannica," to Costello's "Cyclopædia of Practical Surgery," and the medical and surgical journals, reviews, etc.

Feb. 18.—BALDWIN, CHARLES, a veteran journalist and newspaper proprietor; died in London, in the 95th year of his age. He was born in 1774, was the son of the founder of the

St. James Chronicle, which was established in 1761, and was first the partner of his father, and eventually sole proprietor of that paper. In 1827, the paper having become very popular under Dr. Giffard's editorship, Mr. Baldwin determined to found a daily evening paper, and on the 21st of May, in that year, established the London *Daily Standard*, of which he continued to be a proprietor (though not actively such for the last twenty-five years) till his death. He was very enterprising in obtaining the earliest news, and conducted his paper, which was always the organ of the Conservative party, with great ability and success. He was the senior member of the Stationers' Company, and twice master of it. He was also a member of the council, and treasurer of the Literary Fund for some years.

Feb. 18.—WEBB, Rev. JOHN, F. S. A., M. R. S. L., an English clergyman, antiquarian, musical composer, and author; died near Hay, County Hereford, England, in his 93d year. He was born and bred in London, educated at St. Paul's School, London, and Wadham College, Oxford, graduating in 1798. He held several valuable livings during his sixty-nine years of clerical service, the most important being that of Rector of Tretire, 1812–1869, and Vicar of St. John's, Cardiff, 1821–'63. He was a most accomplished scholar—almost universally accomplished—though his favorite pursuits were in the line of antiquarian research and musical composition. He was elected a Fellow of the Society of Antiquaries in 1819, and contributed to its *Archæologia* five carefully-edited papers, several of them nearly complete volumes in themselves. For the Camden Society he prepared three volumes of great value, and several tracts and papers on the early history of Gloucester were also from his pen. He was a poet of considerable ability, and as a musical composer and adapter he possessed great skill. He adapted much of the music performed at the great musical festivals in Birmingham, and wrote the libretos for Mehul's Oratorio of *Joseph*, Haydn's *Seasons*, Neukomm's *David*, and Mendelssohn's *Hebrew Mother*.

Feb. 22.—BARNES, RALPH, an eminent jurist and legal writer, Secretary to the Bishop of Exeter; died in Exeter, in the 88th year of his age. He was born July 14, 1781, educated at the Exeter Grammar School, studied law, and was admitted as an attorney in 1802. He was Secretary to the Bishop of Exeter from 1830 to 1869. He was the author of numerous legal and semi-legal treatises, mostly on topics connected with ecclesiastical law, on which he had no superior in Great Britain. His "Treatise on Equity Practice" has had a high reputation both in Europe and the United States. His intellectual powers and his ability to express his views clearly and forcibly continued to the close of his life, as his "Remarks on the Judicial Aspects of the Colenso Case," and his "Thoughts on Mr. Gladstone's Chapter of Autobiography, in its Legal Aspect," evinced. He was an earnest law reformer, though a Conservative in politics; in ecclesiastical antiquities he was an acknowledged authority.

Feb. 23.—DELAWARR, Rt. Hon. GEORGE JOHN SACKVILLE-WEST, fifth Earl, LL. D., D. C. L., the senior member of the House of Peers, and a member of H. M. Privy Council; died at Buckhurst, England, in the 78th year of his age. He was born in Saville Row, Middlesex, October 26, 1791, and became earl by the death of his father, July 28, 1795. He was educated at Harrow, where he was the intimate friend of Lord Byron, and at Brasenose College, Oxford, where he took his degree of B. A. in 1811. He ranked high as a scholar, and was fond of classical and literary pursuits through life. He was Chamberlain of the Queen's Household from 1841 to 1846, and from November, 1858, to June, 1859. He was a liberal patron of Sackville College, East Grimstead, and rebuilt its chapel and hall, and restored its other buildings at his own expense, in 1848.

Feb. 23.—KYLE, Rt. Rev. JAMES, D. D., Bishop of Germanicia, *in partibus infidelium*, and Vicar-Apostolic of the Roman Catholic Church, in the Northern District of Scotland, died at Preshome-in-the-Enzie, in the 81st year of his age. He was born at Edinburgh, September 22, 1788, and in 1799 sent to the Catholic College of Aquhorties, on the banks of the Don, to receive his education. He was ordained a priest there in March, 1812, and for two or three years following was a priest in Glasgow. He was recalled, in 1815, to Aquhorties, as a professor, and attained a high reputation both as a classical scholar and a master of ecclesiastical history. In 1828 he was called from his professorship to be the first Bishop of the Northern District of Scotland, comprising the seven northern shires and the northern part of Inverness. For over forty years he had labored in this very hard and difficult field with an assiduity and success that were astonishing. Few men could have accomplished as much in the same time, and none could have done this work more quietly and unobtrusively.

Feb. 23.—TOWNSEND, GEORGE HERBERT, an English journalist and compiler; died by his own hand, in Kennington. He had received a good education, and entered early upon journalism, advocating the measures of the Conservative party, and laboring very zealously for them. In addition to his duties on the daily press, he found time to compile an "Epitome of Russell's Modern Europe," a "Summary of Persian History," "The Manual of Dates," a reference-book, first published in 1862, and a second edition in 1867, the seventh edition of "Men of the Time," "The Handbook of the Year 1868," editions of Fielding's "Tom Jones," and Smollett's "Roderick Random," and several volumes of anecdotes, essays, etc. He had been promised by Mr. Disraeli an appointment to a Government sit-

uation, of £1,000, on the occurrence of a vacancy; but the vacancy did not occur till after the defeat of the Conservative Cabinet, and the Liberal Administration abolished the office. Mr. Townsend's disappointment is said to have led him to commit suicide.

Feb. —.—RITTER, HEINRICH, a German philosopher and historian; died at Göttingen, in his 78th year. He was born at Zerbst, in 1791, educated in general literature and theology at Halle and Göttingen, and in philosophy at Berlin. From an early age, history and its bearing upon philosophy was a favorite topic of thought and study with him. At the age of twenty-six he had published two small works, which show the direction of his studies, books which were full of the germs of thought. They were entitled, "On the Formation of the Philosopher by the History of Philosophy;" and "What Influence has the Philosophy of Descartes exercised on the Formation of that of Spinoza, and what are their Points of Contact?" From 1824 to 1835, he was extraordinary professor at Berlin; from 1835 to 1837, professor at Kiel; and from 1837 to his death, professor of the History of Philosophy at Berlin. He had published, in 1820, an essay on the "Philosophy of Empedocles," and the following year a "History of the Ionian Philosophy." This was followed, in 1826, by "Remarks on the Philosophy of the Megaric School," and, after these monographs, he settled himself to his life-work, "The General History of Philosophy," in twelve volumes, which appeared from 1829 to 1853. He subsequently completed this by an "Essay on Modern German Philosophy since Kant." He published somewhat later a "History of Christian Philosophy, preceded by an Essay on the Relations of Faith to Science," in 2 vols. 8vo. Besides these great works, he published "An Introduction to Logic," in 1823; an "Abridged Philosophy of Logic," in 1824; "The Demi-Kantians and Pantheism," 1827; "The Knowledge of God in the World," 1836; a "Treatise on Sin," 1839; and "Smaller Philosophical Essays," 1839–'40, 2 vols. Most of his works have been translated into other languages.

Feb. —.—ZIMMERMANN, CLEMENS, a Bavarian painter, mainly in fresco; died in Munich, in the 81st year of his age. He was born in Düsseldorf, November 4, 1788; educated at Düsseldorf and Munich, and showed such evident marks of genius in the first considerable painting which he exhibited, "Noah's Sacrifice," that he at once won a reputation. In 1815, he was appointed director of the Gallery at Augsburg, and ten years later was made Professor of painting in the Munich Academy. King Louis I. selected him as one of the artists to decorate the Glyptothek, the Pinakothek, and the other public buildings, by whose erection he aimed to make Munich a city of palaces. He also assigned to him the delicate and difficult task of executing in fresco the designs of Cornelius for the ornamentation of the corridors of the Pinakothek. He was so successful in these, that the King authorized him to decorate the dining-hall of the Royal Palace with a series of subjects which he had designed from Anacreon. In the execution of these designs he employed a process of his own invention, combining encaustic with painting in oils. He was appointed, some years later, director of the Central Gallery of Art in Munich. His paintings were all of the historical class; occasionally he undertook religious subjects. One of the best of these, an "Assumption of the Virgin," of colossal size, adorns a church in Australia.

March 3.—BARHAM, THOMAS FOSTER, M.B. an English scholar, author, and physicist; died at Newton Abbot, Devonshire. He was born at Hendon, Middlesex, in 1794, and was educated at Queen's College, Cambridge, where he took his degree of M.B., in 1820. After acting for some time as physician to the Exeter Dispensary, he settled at Newton Abbot, where he remained until his death. He was the author of several volumes, among which were four classical, four theological, and five scientific works.

March 4.—SIMPSON, JAMES, C.E., an English hydraulic engineer; died in London, aged 70 years. He was the son of Thomas Simpson, the original projector of, and for forty-one years engineer to, the Lambeth Water-works, and also engineer to the Chelsea Water-works. He was born at Westfield Lodge, Surbiton, and was educated under the direction of his father, whom he succeeded in the Chelsea Company. In 1828, after having made some careful experiments, he succeeded in preparing the most complete "filter-bed" that has yet been executed; and also among other of his early works was the construction of elevated reservoirs at Streatham and Brixton, with the iron mains and pumping-engines in connection therewith. In 1849, in view of the increasing deterioration of the Thames water in and near London, Mr. Simpson advised the Lambeth Company to remove the works to their present position above Kingston, and the success of the undertaking led to the subsequent removal of the Chelsea Works to the same locality. In 1845 he designed the extensive works for supplying Bristol with water from the Mendip Hills. At Copenhagen and at Aberdeen, also, are monuments of his skill. The long pier at Southend for obtaining access to steamers at low water, and the extensive dock and harbor of West Hartlepool, and many other valuable enterprises, owe their success to his devotion to this department of science. In 1825 he was elected a member of the Institute of Civil Engineers, and subsequently was vice-president, and in 1854 and 1855, president of that body.

March 7.—CLINTON, General Sir ARTHUR BENJAMIN, G. C. B., K. C. H., a veteran British officer; died at Brighton, aged 99 years. He was educated at Rugby, and entered the army in 1794; served in the Peninsula and at Water-

loo, and received honors at Talavera, Busaco, and Toulouse. In 1832 he was made a K. C. H., in 1854 was constituted a general, and in 1861 a G. C. B. He also received honors in Russia and in Holland.

March 9.—Boileau, Sir John Peter, Bart., F. R. S., V. P. S. A., an English physicist and antiquarian; died at Torquay, whither he had repaired in the hope of obtaining relief from a bronchial affection, aged 74 years. He was a lineal descendant of Etienne Boileau, the first Grand-Provost of Paris. Previous to 1815 he performed military service. In 1836 he purchased the estate of Ketteringham, to which he added other purchases in that vicinity, and subsequently, to gratify his antiquarian tastes, Burgh Castle, in Suffolk, one of the most remarkable specimens of Roman masonry in England. At Ketteringham he made great improvements, erecting a spacious Gothic hall in the house, and richly storing it with paintings, books, and choice monuments of antiquity, and forming in the grounds a park of two hundred acres, planted with choice forest trees. In 1843 he was elected a Fellow of the Royal Society, and, in 1852, of the Society of Antiquaries. In 1849 he was made president of the Norwich Archæological Society, and he served for many years as vice-president of the Society of Antiquaries, contributing to each valuable exhibitions. He was also vice-president of numerous other scientific bodies, and president of the Norwich School of Design. Sir John filled the office of Sheriff of Norfolk in 1844. He was eminent for his liberality, and ever zealous in any good work calculated to benefit his fellow-creatures.

March 12.—Schleswig-Holstein-Sonderburg-Augustenburg, Christian Charles Frederick Augustus, Duke of, father-in-law of the Princess Helena of England; died on his estate of Primkenau, in Silesia, aged 71 years. He was son of the Duke Frederick Christian of Schleswig-Holstein, and of the Princess Louisa Augusta of Denmark, daughter of King Christian VII. He was born at Copenhagen, and succeeded his father in the dukedom in 1814. In the proceedings of the provincial diets to which Frederick VI. committed the direction of the German States, after the French Revolution of July, the Duke of Augustenburg took a prominent part, distinguishing himself as much by his zeal in the cause of liberty and progress as by his great oratorical ability. After the downfall of the Duchy of Schleswig-Holstein, his estates were confiscated, and he was declared a traitor for heading the insurrectionary movement against the King of Denmark. He appealed to the German Diet for protection against the consequences of this decree, but without success. Returning to Silesia, he purchased there, in 1853, the estate of Primkenau. In 1851 he ceded, for a money-payment, his property and rights in Holstein to the Danish Crown; but afterward, with his son, Frederick Christian Augustus, sought to repudiate the transaction, and himself published a strong protest on behalf of his alleged rights. The Austrian and Prussian Governments, in 1865, wholly ignored his pretensions after they had wrested Schleswig-Holstein from Denmark. He was considered the handsomest man in Germany.

March 13.—Clay, Sir William, Bart., an English politician and political economist; died in London, aged 78 years. He commenced life as a merchant and ship-owner. In 1832 he entered Parliament as a member for the newly-formed borough of the Tower Hamlets, and was reëlected until 1857. During his parliamentary career he was a firm Radical, advocating extension of the suffrage, the ballot, triennial Parliaments, and abolition of church-rates. From 1839 to 1841 he was secretary of the Board of Control. He was the author of the Small Tenements Rating Act, which led to much discussion during the debates on Mr. Disraeli's Reform Bill.

March 20.—Grenfell, John Pascoe, Admiral of the Brazilian Navy, and Brazilian consul at Liverpool; died in that city, aged 69 years. He was born at Battersea, in 1800; entered the service of the East India Company when but eleven years of age, and in 1819 that of the Chilian Republic, in which he took part in the war against Spain. In 1820 he commanded one of the boats of the squadron which, under the direction of Lord Cochrane, boarded and cut out from under the castle of Callao de Lima, and from the midst of a squadron of armed vessels and gunboats, the Spanish admiral's ship, the Esmeralda, a frigate of 40 guns, fully manned and prepared for the attack. Among the wounded was Lieutenant Grenfell. In 1823 he accompanied Lord Cochrane to Brazil, and engaged in the service of that new state against Portugal, became commander, and afterward, as post-captain, distinguished himself in the war with the Argentine Confederation, and in a naval fight off Buenos Ayres, July, 1826, lost his right arm. In 1844 he was made a rear-admiral, and received the Queen's permission to hold his rank and continue in the service of the Emperor of Brazil. In 1846 he returned to England as Brazilian consul, residing at Liverpool. In 1848 he received the thanks of the town and a gold medal for his exertions in saving the lives of the passengers and crew of the emigrant-ship Ocean Monarch, burnt off that port. In 1850 he was placed in supreme naval command in the campaign growing out of a misunderstanding between the Argentine Republic and that of Montevideo, in which Brazil was involved, and, after its speedy and happy conclusion, was promoted to the rank of vice-admiral. In 1852 he returned to his post at Liverpool, which he continued to hold, with honor to himself, until his death.

March 20.—Pratt, Rev. John Bennett, LL. D., a Scottish Episcopal clergyman, antiquarian, and author; died at Cruden, Aberdeen-

shire, aged 78 years. He was born in the parish of New Deer, took the degree of M. A. at Aberdeen, and, after his ordination as deacon, in 1821, was sent to Stuartfield, where he served with acceptance four years, and was then chosen as pastor of St. James's Church, Cruden. Here he became widely known for his theological learning, literary accomplishments, and professional zeal, and received from Bishop Skinner the appointment of examining chaplain. He was the author of several volumes, among which are "Old Paths, where is the Good Way," Oxford, 1840; "Buchan," with Illustrations, Aberdeen, 1858; "The Druids," London, 1861; "Letters on the Scandinavian Churches, their Doctrine, Worship, and Polity;" and several sermons. In 1865 he received from his university the degree of LL. D.

March 28.—Baber, Rev. Henry Hervey, F. R. S., an eminent biblical scholar and bibliographer; died at Stretham, aged 94 years. He was an alumnus of St. Paul's School; entered All-Souls' College, Oxford, as a Bible-clerk, and graduated B. A. in 1799, and M. A. in 1805, when he became Vice-Principal of St. Mary's Hall, and curate to Dr. Copleston in the parish of St. Mary the Virgin. While still an under-graduate, he was appointed a sub-librarian of the Bodleian, where his youthful zeal in the performance of his duties proved his fitness for the important post which he afterward held in the library of the British Museum. In 1812 he was appointed keeper of the Printed Books in the British Museum, which post he held until 1837, when the trustees passed a resolution, "acknowledging Mr. Baber's long and meritorious services." In 1827 he was presented to the rectory of Stretham, with Thetford, in the discharge of which duties he continued until his death. Mr. Baber was the editor of the Alexandrian Codex of the Septuagint translation of the Old Testament; also of several volumes relating to translations.

March 29.—Lauder, James Eckford, R.S.A., an eminent figure-painter; died at Edinburgh, aged 57 years. He was born at Silvermills, near Edinburgh, and having, at an early age, evinced a decided talent for drawing, he enjoyed every opportunity for developing it, both at the Trustees' Academy, and under the counsel of his accomplished brother, Robert Scott Lauder. Repairing to Rome, he devoted four or five years to the study of the Italian masters; and on his return to Edinburgh at once essayed the highest style of figure-painting, in which he became eminently successful. His "Ten Virgins," and his "Bailie Macwheeble," were engraved by the Association for the Promotion of Fine Arts. For two Scriptural pieces—"Wisdom," and "The Unjust Steward,"—he received a prize of two hundred guineas at Westminster Hall. Mr. Lauder was also a thorough scholar in music.

March 29.—Mullock, Right Rev. John Thomas, O. S. F., D. D., Roman Catholic Bishop of St. John's, Newfoundland; died at St. John's, aged about 63 years. He was nominated Bishop of Thaumacus, and coadjutor to Bishop Fleming in 1847, and succeeded that prelate as Bishop of St. John's in 1850. He was a native of Ireland, and had edited and translated St. A. Liguori's "History of Heresies, and their Refutation," published in two volumes at Dublin, in 1847, and which had passed through several editions.

March —.—Armengaud, Jean Germain Desiré, a French art-historian and critic, died in Paris, in the 72d year of his age. He was born at Castres (Tarn), in 1797, educated at Lavaur and Toulouse, and at first, greatly against his inclination, entered upon commercial pursuits. He soon abandoned these, however, and devoted himself to the study of the fine arts. After a long period of close application, and the careful examination of all the principal galleries and academies of art in Europe, he undertook the preparation of a series of magnificently-illustrated publications. The principal of these were: "History of the Painters of all the Schools, from the Renaissance up to our own Times," 1849, a quarto volume, with numerous fine engravings; "The Public Galleries of Europe," 1856, quarto, with numerous illustrations, selected carefully from 35,000 copies of paintings in these galleries; "The Chefs-d'Œuvre of Christian Art," illustrated, 1858, 8vo; "The Treasures of Art," illustrated with 47 engravings, 1859; "The Chefs-d'Œuvre of Rubens, in the Cathedral of Anvers, or the Oratory of the Family," 1859; "The Parthenon of History," in three distinct parts, illustrated with numerous exquisite engravings, 1863–1864. Pope Pius IX. took a great interest in the labors of M. Armengaud, and created him a knight of the Order of St. Gregory the Great.

March —.—Gaume, Very Rev. Jean Joseph, D. D., a French Roman Catholic clergyman, theologian, and author; died in Paris, aged 67 years. He was born at Fuans (Department of Doubs) in 1802, and, after receiving a very thorough and careful education in the college and seminary of his department, was appointed, in 1827, Professor of Theology in the seminary of Nevers. Between that date and 1841 he was successively director of the lower seminary, and canon and vicar-general of the diocese, and in these latter capacities founded numerous charitable institutions. He was already the author of a number of learned works when, in 1841, he visited Rome, and was the recipient of distinguished honors from the Pope, Gregory XVI., who made him a knight of the Reformed Order of St. Sylvester and Vicar-General of Rheims, Montauban, and Aquila. He also received the degree of D. D. from the University of Prague, and was elected a member of numerous learned societies. In 1854 Pope Pius IX. created him a Roman prelate, with the title of Prothonotary Apostolic *ad instar participantium*. He was subsequently

made a canon of Notre Dame. Dr. Gaume was a very able and voluminous writer both on theological and educational topics; his religious works number over forty volumes, the greater part of them devoted to the exposition of the duties, hopes, fears, and future, of the Christian life. He was also the translator of several of the works of St. Alphonse Liguori into French; among these, his version of "The Clock of the Passion" was very popular. He was very active in the promotion of a movement to substitute, in the secondary schools of France, portions of the works of the Christian fathers for the pagan classics, the influence of which he believed to be injurious to the young, and had prepared, in accordance with this idea, a library of thirty volumes of Christian classics, Latin and Greek, and two volumes of "Profane Poets and Prose Writers completely expurgated." He had also written several works ably defending his educational views.

March —.—SINCLAIR, PETER, a distinguished Scottish reformer, lecturer, and temperance advocate; died in the street, in Chicago, Ill., of disease of the heart, aged about 60 years. He had long been prominent in all beneficent reforms in Scotland, was a promoter of temperance societies, popular education, savings-banks, emigration, etc. During the late civil war in this country, he was one of the most fearless and unflinching advocates of the Union cause in Scotland, and, after its close, he took an active part in the promotion of the emigration of working-men from Scotland on a large scale, and had visited the United States to make arrangements for it. He was the intimate friend of De Quincey, Jeffrey, Hugh Miller, and other literary and scientific men of Scotland, of the present and the last generation.

April 2.—BRIDGES, Rev. CHARLES, M. A., an evangelical clergyman of the Church of England, and author of religious works; died at the rectory of Hinton Martell, aged 75 years. He graduated at Queen's College, Cambridge, in 1818, was ordained deacon in 1817, and priest in the following year. In 1823 he was presented to the rectory of Old Newton, near Stow Market, Suffolk, which he held until 1849. He was next presented to the rectory of Weymouth, and in 1855 to that of Hinton Martell, which was offered to him by the Earl of Shaftesbury as a tribute to his meritorious services. His writings gained a wide circulation. Among the most important are his "Exposition of the 119th Psalm," "Exposition of the Proverbs," "The Christian Ministry, with an Inquiry into the causes of its inefficiency," and "Sacramental Instruction." He was also the author of several published sermons.

April 8.—MACKESY, THOMAS LEWIS, M. D., F. R. C. S. I., an eminent Irish surgeon; died at Waterford, Ireland, aged 78 years. He was a native of that town; graduated at the London College of Surgeons in 1809, and immediately entered the army and served in many memorable actions, including Waterloo. Subsequently he returned to his native city, where he acquired a large and lucrative practice, served as mayor, and was for many years an active magistrate and poor-law guardian. In 1862 he was elected President of the Royal College of Surgeons of Ireland, and the following year received the degree of M. D. from the University of Dublin. He was a contributor to the "Transactions" of the Social Science Association on Hygienic and Public Medicine, and frequently lectured before the Irish Medical Association.

April 10.—RADNOR, Rt. Hon. Sir W. PLEYDELL BOUVERIE, third Earl of, an English peer; died at his seat, Coleshill, Berkshire. He was born in May, 1779, at London, and belonged to a family raised to the peerage in 1747. He commenced his political life in 1802, and from that time until 1828 took an active part in the parliamentary contests as an extreme Liberal, sitting for Salisbury. On the death of his father, in 1828, he succeeded to the earldom and took his seat in the House of Lords. Here he was known for many years as the "Radical Peer," and was so decidedly a Reformer that the Liberal party, when in power, did not venture to give him a place in the Cabinet, although entitled to it for his ability and services. The latter part of his life he passed mostly at his Berkshire estate, devoting his attention to agriculture and horticulture.

April 11.—ILBERY, JOSIAH JAMES, the oldest railway officer in the world, died at Douglass, Isle of Man, aged 100 years. He was born in London, September 16, 1769. In 1826 he was engaged to fulfil the duties of Superintendent to the Liverpool and Manchester Railway, at the Liverpool end, and, from the opening of the line in 1830 until he had entered his eighty-sixth year, his laborious duties were faithfully and regularly performed.

April 11.—SELLER, WILLIAM, M. D., F. R. S., an eminent Scottish physician, and professor of materia medica, died at Edinburgh, aged 72 years. He was educated at the High School, Edinburgh, and afterward at the University, where he graduated in medicine, in 1821. In 1836 he was made a Fellow of the Royal College of Physicians, and, in 1848, President. Subsequently he was elected Fellow of the Royal Society of Edinburgh, and, as lecturer under the Morison endowment, delivered six annual lectures on mental diseases, in which his metaphysical powers of mind were strongly displayed. He was President of the Medico-Chirurgical Society from 1854 to 1856, and examiner in medicine at the university till within a short time of his death. For many years he acted as physician to the Royal Public Dispensary. He was the author of an elaborate memoir of the life and writings of Dr. Whytt, "Physiology at the Farm," and papers on the treatment of different diseases.

April 19. — FINGALL, Sir ARTHUR JAMES PLUNKETT, ninth Earl of, K. P., an Irish Cath-

olic nobleman, died in London, aged 78 years. He was born in Geneva. In July, 1836, he succeeded to the honors of the Irish and British peerage. He represented the County of Meath in the liberal interest in the first two Parliaments of William IV., and was for many years Lord-Lieutenant and Custos Rotulorum of the county, and at one time a Lord-in-Waiting on her Majesty. In 1834 he was a Privy Councillor in Ireland, and was made a Knight of the Order of St. Patrick in 1846.

April 21.—LAUDER, ROBERT SCOTT, R. S. A., a Scottish *genre* painter of great talent, died in Edinburgh. He was born at Silvermills, near that city, in 1803, and, like most of those who have become distinguished painters in after-life, early displayed decided taste for drawing, which, however, met with but little encouragement from his family. His first distinct ideas of art were received, when not far from nine years of age, from David Roberts, afterward a celebrated artist. Subsequently, through the influence of Sir Walter Scott, he was admitted a student in the Trustees' Gallery in Edinburgh, where he successfully prosecuted his studies for several years, after which he spent five years on the Continent, studying at Rome, Florence, Bologna, and Venice, and, in 1838, established himself in London, where he won a great reputation by his "Bride of Lammermuir," exhibited in the Royal Academy, his "Glee Maiden," "Meg Merrilies," "Claverhouse ordering Morton to be shot," "Christ teaching Humility," and "Christ walking on the Waters." Since 1849 he had resided in Edinburgh, and contributed some valuable pictures to the Scottish Academy's exhibition.

April 22.—BELL, Rev. PATRICK, LL. D., an eminent inventor, and Presbyterian clergyman; died at Carmyllie, aged about 70 years. He was the son of a farmer of Auchterhouse, Forfarshire, where he was born; was educated at the University of St. Andrew's, where he distinguished himself in mathematics and their application to physics, also by his fondness for natural philosophy, and, in 1827, while still a student, invented the reaping-machine, the principle of which was suggested to him by a pair of shears. As a recognition of his important service to agriculture, Dr. Bell was presented with a thousand pounds by the Highland Society, and a piece of plate by the farmers of Scotland. He also received the honorary degree of LL. D. from the University of St. Andrew's, and subsequently a similar degree was conferred upon him by an American college. His ordination did not take place until 1843.

April 30.—BULLER, Sir ARTHUR WILLIAM, M. P., an English jurist and scholar; died in London, aged 61 years. He was the son of the late Charles Buller, formerly in the civil service of the East India Company; was born in Calcutta in 1808, and educated at the University of Edinburgh and Trinity College, Cambridge, where he graduated B. A. in 1830, and M. A. in 1834, and the same year was called to the bar at Lincoln's Inn. From 1840 to July, 1848, he was Queen's Advocate in Ceylon, and left that post to accept the appointment of Judge of the Supreme Court of Calcutta. In 1858 he resigned. From June, 1852, to June, 1865, he represented Davenport in the House of Commons, after which time he sat for Liskeard. He was a Liberal in politics, and supported Mr. Gladstone's bill for the disestablishment and disendowment of the Irish Church.

April —.—DALTON, Rt. Rev. JOHN, Roman Catholic bishop of Harbor Grace, Newfoundland; died there suddenly. He was nominated bishop on the creation of the see in 1856, and was consecrated the same year.

April —.—DREYSCHOCK, M., a distinguished German pianist; died in Venice, aged 51 years. He was born at Zack, in Bohemia, and had for several years filled the post of director of the Conservatoire of Music at St. Petersburg.

April —.—TILLY, COUNT CHARLES GUSTAVE EDWARD AUGUSTUS VON TSERCLAS, the last survivor of the line of Count Tilly, the celebrated opponent of Gustavus Adolphus in the Thirty Years' War; died aged 85 years. He had been chamberlain to the King of Holland, and a member of the Equestrian Order of Brabant, and was the last direct descendant of Everard von Tserclas Tilly, the liberator of Brussels in 1356, and of his descendant above alluded to, who was generalissimo of the Catholic League in the seventeenth century.

May 4.—LEFROY, Rt. Hon. THOMAS, LL. D., late Chief Justice of the Queen's Bench in Ireland; died at Bray, near Dublin, aged 93 years. He was born at Bray in 1797; educated at Trinity College, Dublin, where he won the gold medal of his class, and was called to the bar of Lincoln's Inn in 1797. After practising for several years in the courts of common law and equity, he was, in 1818, appointed his Majesty's third sergeant-at-law, and, rising in succession to the first, frequently served as a Judge of Assize. In 1830 he resigned, and from that period until 1841 represented the University of Dublin in Parliament, in the Conservative interest. Upon the return of Sir Robert Peel to place and power in that year, Mr. Lefroy was appointed to the first vacancy on the Irish Bench, as one of the Barons of the Exchequer; whence he was promoted, in 1852, by Lord Derby, to the post of Lord Chief Justice of the Queen's Bench, which seat he held until his ninetieth year, when he resigned, and bade adieu to public life. He was the author of several law reports.

May 8.—COLE, THOMAS, better known as "Daddy Cole," a Christian negro of considerable intelligence and medical skill; died at Lagos, Western Africa, aged 114 years. He had been for many years a native doctor in Sierra Leone, Abeokuta, and Lagos, and had been very successful in the African fevers. He was forty years previous to his death a

consistent member and class-leader of the Wesleyans.

May 8.—WESTCOMB, CHARLES, an English publisher and editor; died in London, aged 48 years. He was born of poor parents in Exeter, and was educated in one of the public schools of St. Sidwell's. At the age of eleven he undertook his first public duty—that of keeping the cholera-books of the visitations of 1832. Being a skilful accountant, he early enlisted in the management of several mining enterprises, and his love of work was so absorbing, that for many years he accomplished what would have overtaxed the energies of three ordinary men. In 1859 he became proprietor of the *Exeter and Plymouth Gazette*, and subsequently purchased in succession the *Maidstone Journal*, the *London Globe*, and the *Edinburgh Courant*. Besides his editorial duties, he was the mainspring of several mining and commercial undertakings, and devoted much time and attention to public affairs. He was for several years high sheriff of Exeter. Of the School of Art and the Albert Memorial Museum he was one of the originators and most earnest supporters. In politics he was a stanch Conservative.

May 10.—DILKE, Sir CHARLES WENTWORTH, Bart., LL.D., F.R.G.S., F.S.A., a journalist, art connoisseur, and author; died at St. Petersburg, aged 59 years. He was the only son of Charles Wentworth Dilke, the founder, proprietor, and first editor of the *Athenæum* newspaper, and an author of great ability. Sir Charles was born in London, February 18, 1810; educated at Westminster School and Trinity College, Cambridge, graduating LL.B. in 1834. He was associated with his father for a number of years in the editing of the *Athenæum*, and greatly improved its tone and ability, but for the last twenty years had devoted most of his time to art matters, in which his tastes were exquisite. He was one of the earliest and most active promoters of the first Crystal Palace Exhibition, and was a leading member of the executive committee. He was offered the honor of knighthood and a large pecuniary remuneration for his great services in this connection, but declined both. He was a commissioner to the New York Crystal Palace Exhibition in 1853, and one of the five royal commissioners of the second London International Exhibition in 1862, and was made a baronet by the Queen in January, 1862. He had also taken an active interest in the meetings and transactions of the Society of Antiquaries and the Royal Geographical Society. He was a member of Parliament for Wallingford, in the liberal interest, from July, 1865, to November, 1868. He had visited St. Petersburg at the time of his death, to attend the Imperial Horticultural Exhibition about to be held there.

May 11.—BADEN, MATTHEW, a centenarian of Oare, in the parish of Wilcot, Wilts; died there, aged 106 years and 3 months. He was born at Pewsey in February, 1768. He left a numerous family of descendants to the fifth generation.

May 11.—JOHNSTONE, JAMES, M.D., an eminent physician and medical professor of Birmingham; died at Leamington, England, aged 63 years. He was the last of a distinguished family of physicians and surgeons, who, for one hundred and fifty years, had stood at the head of the medical profession in Birmingham and the midland counties. He had been for a number of years professor of medicine in the Queen's College, Birmingham, consulting physician of the Children's Hospital, governor of the Grammar School for thirty years, physician of the General Hospital, and president of the British Medical Association.

May 17.—RICHARDSON, EDWARD, sculptor; died at Brighton, England, aged 57 years. He formerly resided in South Lambeth, and first became known to the public in 1842, from his work of restoring the well-known effigies of the Knights Templar that lie in the Round Church of the Temple. His work was severely and perhaps unjustly criticised, and in a volume which he subsequently published upon that subject, describing his method of procedure at length, he concludes with the assertion that "he found in almost every instance ample authority for adding the missing parts," that "no part of the originals was removed, and that the extent of every restoration may be traced." In 1848 and 1849 he restored eight ancient effigies in the church of Elford, in Staffordshire. He was commissioned to make and procure many of the casts of sepulchral effigies which form the interesting series exhibited in the museum of the Crystal Palace at Sydenham. He also executed some work in a military connection in bronze and in marble. He was an active member of the London and Middlesex Archæological Society, and prepared valuable reports for both the *Archæological Journal* and the *Gentleman's Magazine*.

May 18.—CUNNINGHAM, PETER, an English author and critic; died at St. Albans, Herts, aged 53 years. He was the third son of Allan Cunningham, the poet; was born in Pimlico, April, 1816, educated at Christ's Hospital, and in 1834 was appointed by the late Sir Robert Peel to a clerkship in the Audit Office. In 1834 he became chief clerk of that department of the public service, from which he retired in 1860. He was the author and editor of several descriptive works, guide-books, biographies, etc. Among these were: "Hand-Book of London," 2 vols. (1849); "Guide to Westminster Abbey" (1842); and "Modern London" (1851). "Life of Inigo Jones" (1848); "Story of Nell Gwynn" (1852). His critical works were: the "Works of Drummond" (1833); "Specimens of the British Poets" (1841); "Works of Oliver Goldsmith" (1854); "Johnson's Lives of the Poets" (1854); and "The Letters of Horace Walpole" (1857–'59).

May 20.—AYRE, Rev. JOHN, an eminent

biblical scholar and author; died in Hempstead, aged 68 years. He descended from a worthy Lincolnshire family; was born in February, 1801, and educated at Caius College, Cambridge, where he received his degree of B. A. in 1823. He was for some years Curate of Edmonton, and subsequently held the incumbency of St. John's Chapel, Downshire Hill. He was also domestic chaplain to the Earl of Roden to the end of his life, and was one of the editors of the "Parker Society." In 1866 his valuable "Treasury of Bible Knowledge" was issued by Messrs. Longman, and has had an extensive sale both in England and the United States; and the last edition of "Horne's Introduction to the Study of the Scriptures" was brought out under his careful superintendence. At the time of his death Mr. Ayre was engaged on a learned and elaborate work bearing on Jewish antiquities.

May 23.—JONES, RACHEL, a widow of Bristol, England; died from burns received by her dress taking fire, aged 108 years. Her great-grandson, a man aged 60 years, succeeded in extinguishing the flames, but too late to save her life.

June 10.—HURLSTONE, FREDERICK YEATES, a *genre* and historical painter; died in London, aged 69 years. He was born in London in 1800, and was educated at the Royal Academy, where he obtained the gold medal for the best historical picture, in 1823, and was a constant exhibitor at that institution until 1832, when he became a member of the Society of British Artists, to the presidency of which he was chosen in 1842, holding that position until his death. Among his principal works were: "The Prisoner of Chillon," "Haidee," "Italian Mendicant," "The Moorish Peasant Girl," "A Spanish Beauty," "The Farewell of Boabdil to Granada," and "Columbus at the Convent Gate." His finest portrait was the "Earl of Cavan." Mr. Hurlstone received a gold medal from the French Government, through the French Academy of Arts.

June 10.—SEYMOUR, FREDERICK, C. B., Governor of British Columbia; died on board the gunboat Sparrow-hawk, off the coast of northern British Columbia. In 1843 he was Secretary of Tasmania; Stipendary of Antigua in 1848; Governor of British Honduras, 1857 to 1863; and Governor of Columbia from 1863 to his death.

June 19.—LACUNZA, JOSÉ MARIA, a Mexican statesman and poet; died in Havana, of yellow fever, aged about 60 years. He was a native of Mexico, and had received an excellent collegiate and legal education, and was admitted to the bar in 1834 or '35. When Santa Anna became dictator the first time, in 1843–'44, he called Lares and Lacunza into his Council, and they were the ablest of his ministers. In one of Santa Anna's later assumptions of power, he again called Lacunza into his Cabinet. When Maximilian began his brief and unfortunate career as Emperor in Mexico, he found Lacunza and Lares the most eminent lawyers of the capital, and, as both were favorably disposed toward him, in November, 1864, he made Lacunza Minister of State and president of his Council, and Lares a member of the Council. Lacunza labored earnestly to make Maximilian's administration successful, but, finding this impossible, he resigned in November, 1865, and, finding that the end was drawing nigh, made his escape a few months later to Havana, where he continued to reside till his death. His poems, which are really of a very high order, have passed through several editions.

June 24.—VON DER GOLTZ, Count ROBERT HEINRICH LUDWIG, the Prussian envoy extraordinary and minister plenipotentiary to France; died at Charlottenberg, near Berlin, aged 52 years. He was born in Paris, where his father filled the same office from 1815 to 1822, the period of his death. The son entered the diplomatic service in 1849, as assistant member of the Federal Commission at Frankfort. He was then appointed counsellor of legation, and was afterward sent to Athens as resident Prussian minister. In February, 1857, he became envoy extraordinary and minister plenipotentiary at that post, and two years afterward was accredited in the same capacity to the Prussian embassy at Constantinople in the place of Major-General de Wildenbruck. He remained there three years, at the expiration of which time he was appointed to St. Petersburg, and, after a short term of service in that city, was transferred to Paris in the month of January, 1863, taking the place which was occupied by his father nearly fifty years before. At the period when M. de Manteuffel, the celebrated Prussian statesman, was president of the Council, Count Von der Goltz had a seat for some time in the Prussian Chamber of Deputies, where he acted with the opposition. He was a Knight of the Order of St. John.

June 28.—TODD, Rev. JAMES H., D.D., a clergyman of the Irish Established Church, professor and author; died near Dublin, aged 64 years. He was the son of Charles H. Todd, an eminent surgeon of Dublin, and was born in that city in 1805; graduated at Trinity College in 1825, and was elected to a fellowship in 1831. In 1850 he was elected to a senior fellowship, and in addition to his Regius professorship, obtained in 1852, held the appointment of Librarian of Trinity College, and Precentor of St. Patrick's Cathedral. His chief theological works were: "Discourses on the Prophecies relating to Anti-Christ," 1840; "Search after Infallibility," and a "Memoir of St. Patrick's Life and Mission." He also edited the "Books of the Vaudois," and some of the works of John Wickliffe, including "The Last Age of the Church," and his "Apology for Lollard Doctrines." He subsequently devoted himself to the work of editing some of the ancient records of Irish history from original MSS.

Dr. Todd was one of the founders of the Irish Archæological Society, and was a contributor of very many important papers to the "Transactions" of the Royal Irish Academy, of which he was president for the usual term of five years.

July 2.—BERBRUGGER, LOUIS ADRIEN, a French philologist and author; died in Algiers, aged 68 years. He was born in Paris, May 11, 1801. He was educated in that city, and, having a taste for foreign travel, attended the course in the School of Geography. In 1834 he was appointed by the Government to collect original documents relative to the occupation of France in the fifteenth century. He had adopted the social theories of Fourier, and he lectured on these for some time, publishing his lectures in 1834 under the title of "Conferences." He accompanied Marshal Clausel, whose private secretary he was, into Algiers in 1835, and was with him and Marshal Vallée in their military expeditions, in which he gathered a great number of Arabic manuscripts for the Library and Museum of Algiers, of which he subsequently became the librarian and conservator. From 1835 to 1837 he edited the *Algerian Monitor*, the official journal of the colony. He devoted himself very earnestly to the study of the archæology of that interesting country, and communicated maps and drawings to the French Academy of Inscriptions, of which he was elected a corresponding member in 1839. He had received the decoration of the Legion of Honor in 1838. He was one of the commissioners who treated with Abd-el-Kader in 1842 for the exchange of prisoners, and also a member of the numerous scientific commissions which have explored Algeria. Before going out to Algeria (where he spent thirty-four years), he had prepared a Spanish dictionary and Spanish grammar, and subsequently he published three or four volumes of travel in Algeria: "Algeria Historic, Picturesque, and Monumental," 4 vols., 1842–'45; two volumes of memoirs in the "Scientific Exploration of Algeria," a "Project of Exploration in the Second Line of Algerian Oases," 1850; "The Great Kabylia under the Romans," also published in 1850, and several works of lighter literature.

July 8.—MARTIN, Dr. JOHN, an eminent physician, meteorologist, and author; died in Lisbon, Portugal, aged 80 years. His whole life was devoted to the practice of medicine, but the last twenty years he had directed his attention to meteorological questions, and had accumulated a great mass of information on the variations of the barometer, thermometer, and hydrometer, under given circumstances, on the supply of ozone, on the climacteric, meteorological, and other circumstances which modify cholera and yellow fever. All these investigations were prosecuted after the day's duties were completed, and under the relaxing influences of a warm climate.

July 9.—CALDICOTT, Rev. THOMAS FORD, D. D., a Baptist clergyman and author; died in Toronto, Canada, aged 66 years. He was born in Buckby, Northamptonshire, England, in 1808, emigrated to Canada in 1824, and, after teaching there for seven years, removed to Hamilton, Madison County, N. Y., and thence successively to Lockport, N. Y., Boston, Mass., and Brooklyn, N. Y., in which cities he was a pastor for twenty-six years, writing much for the periodical religious press during the time. In 1860 he returned to Canada and was settled as pastor of the Bond Street Baptist Church, Toronto, where he remained till his death, taking an active part in the promotion of all the educational and benevolent institutions of the Canadian Baptists. He was a very thorough scholar, an able writer, and an eloquent preacher.

July 11.—JERDAN, WILLIAM, F. S. A., an English journalist, author, and man of letters; died at Bushey Heath, Herts, aged 88 years. He was born in Kelso, Scotland, in 1782, educated in his native town, and in Edinburgh, and was for a time a law clerk in the office of a writer to the *Signet*. In 1801 he came to London to push his fortunes, but, after a year's trial of life in a counting-house, returned to Edinburgh to finish his education. He revisited London in 1806, and was for seven years a reporter or contributor for the *Aurora*, the *Pilot*, the *Morning Post*, the *British Press*, and the *Monthly Meteor*, and the publisher of the last named periodical. In 1813 he became editor and part proprietor of the *Sun*, but sold his share in it in 1816 in order to start the *Literary Gazette*, with which he was connected as editor for thirty-four years. He was one of the founders of the Royal Society of Literature, a member of the Society of Antiquaries from 1826, and of numerous literary societies. In 1850 he retired from the editorship of the *Literary Gazette*, and soon afterward a literary pension of £100 a year was conferred upon him. He was a somewhat voluminous writer, having, besides his contributions to the reviews, magazines, etc., which were very numerous, written four volumes of Memoirs, to accompany Fisher's "National Portrait Gallery"; the "Paris Spectator," 1814; "A Voyage to the Island of Elba; an Autobiography in 4 volumes," 1852–'58; "Men I have Known," in 1866; and edited the "Rutland Papers," and the "Perth Correspondence" for the Camden Society.

July 12.—HAIGH, Rev. R. B., LL. D., M. R. A. S., an eminent philologist, and orientalist; died at Holmfirth, aged 65 years. He was educated at Rotherham College for the ministry, but his fondness for the acquisition of languages induced him to abandon his theological studies and devote himself to the classics and teaching. He became familiar not only with most of the European languages, but acquired a proficiency in many of the Oriental languages, which was reflected in the attainments of his pupils. He was for many years Principal of Bramhall Col-

lege. He was a member of the Royal Asiatic Society of London and the Asiatic Society of Paris. His degree of LL. D. was received from the University of Glasgow.

July 18.—RAMIREZ, Rt. Rev. FRANCISCO, D. D., a Mexican prelate and politician, Bishop of Caradro and Vicar-Apostolic of Tamaulipas; died in Brazos Santiago, Texas, aged 46 years. He was a native of Mexico, and, having been educated for the priesthood, took an active part with the clerical party in opposing Juarez. He had won the regard and confidence of the French troops, and, through the influence of the Archbishop of Morelia, the Pope created him a bishop while he was in Europe. When Maximilian came to Mexico as Emperor, he attached himself to him, and was appointed his almoner, and subsequently a member of his Cabinet and council. He was a true friend of the Mexican race, and Maximilian reposed great confidence in him. Upon the downfall of the Emperor he made his escape into Texas, where he lived in great obscurity and poverty, suffering at times for food. His privations broke down a constitution not naturally very vigorous, and he died in great misery after a protracted illness.

July 20.—WADDINGTON, The Very Rev. GEORGE, D. D., Dean of Durham; died at Durham, aged 76 years. He was educated at the Charterhouse, and at Trinity College, Cambridge; was Browne's medallist in 1811; University Scholar and Chancellor's medallist in 1813; was elected to a fellowship in Trinity College, and spent some years in foreign travel. In 1840 he was installed Dean of Durham, and in the following year was chosen warden of the university. He was the author of "A Visit to Europe" (1822); "A Visit to Greece" (1825); "The Present Condition and Prospects of the Greek or Oriental Church, with some Letters written from the Convent of Strophades" (1829); "History of the Church from the Earliest Ages to the Reformation" (3 vols., 1835); "A History of the Reformation on the Continent" (3 vols., 1841); and "Lectures on National Education" (1845).

July —.—BOUILHET, LOUIS, a French author and poet; died in Paris, aged 45 years. He was born at Cany, France, in 1824, educated at the College of Rouen, studied medicine, but abandoned the practice of it for literature. In 1854 he removed from Rouen to Paris. Between 1856 and 1859 he published three volumes of poems; the first an "Epic of the Times of the Emperor Commodus;" the second an "Antediluvian Romance;" the third being a "Collection of Short Poems." He also wrote a number of dramas in verse, which had great success in Parisian theatres. In 1859 he received the decoration of the Legion of Honor.

Aug. 1.—SALISBURY, Rt. Rev. WALTER KERR HAMILTON, D. D., Bishop of; died at the Palace, Salisbury, aged 60 years. He was the eldest son of the late Venerable Anthony Hamilton, Archdeacon of Taunton; was born in London, November 16, 1808; educated at Eton, and Christ Church, Oxford, and elected Fellow of Merton College in 1831. Having taken his degree of M. A., in 1833, he was ordained, and served for a short time the curacy of Wolvercot, and afterward that of St. Peter's in the East, Oxford, of which church he became Vicar, in 1837. In June, 1841, he became Canon Residentiary of Salisbury, and two years later was promoted to the post of Precentor. He labored hard to reform the ordinary Cathedral abuses, and did a large share of the preaching. In May, 1854, he was consecrated to the bishopric of Salisbury, which he held till the day of his death. As bishop he enjoyed the patronage of between fifty and sixty livings, and his diocese included the greater part of the counties of Wilts and Dorset. He took an active part in the proceedings of the Upper House of Convocation, and occasionally spoke also in the House of Lords. Though a learned theologian, and a great reader, he wrote but little. His most important work is a "Letter on Cathedral Reform."

Aug. 1.—TINNE, Miss, a traveller and explorer; was murdered by the Touaregs and Arabs, near Taharet, on the Sahara Desert. She was a native of Holland, and descended from a family of high rank and great wealth. Accompanied by her mother, an aunt, Baron von Heuglin, and Dr. Steudner, she had visited in 1863–'64 the upper waters of the Nile, penetrating a considerable distance beyond Gondokoro, when the whole party were attacked with the African fever, and the mother, aunt, and Baron von Heuglin, died of it. After her recovery, Miss Tinne and Dr. Steudner returned to Egypt, and thence to Holland. But her passion for geographical explorations was so strong, that she fitted out another expedition, in 1868, and, having spent some time at Tripoli, started thence in the spring of 1869, accompanied only by native attendants, and a couple of Dutch sailors, with the intention of crossing the Sahara and penetrating to Bournu. Finding her supplies insufficient, she determined to explore the country of the Touaregs, or Tuaricks, and return to Mourzouk to meet the camels and supplies she had ordered thither. The Arabs and Touaregs who were in her service pretended to quarrel, and the Arabs killed her and the two sailors.

Aug. 2.—MEDWIN, Captain THOMAS, a retired British army officer and author; died at Horsham, England, aged 80 years. He was a cousin of the poet Shelley, and was intimate with him from childhood. After Shelley's death he wrote an interesting memoir of him. He was also a friend and associate of Lord Byron, and some years after his death published a very readable book, entitled, "Conversations with Lord Byron." He had published during his long literary career several other biographies and volumes of travel, etc.

Aug. 5.—EDEN, Hon. EMILY, a very accom-

plished English traveller and authoress, daughter of the first and sister of the second and third Earls of Auckland; died at Richmond, Surrey, aged 74 years. She had received an excellent education, and possessed fine literary tastes. She accompanied her brother, the second Earl of Auckland, to India, when he went out as Governor-General in 1835, and remained there till his return in 1841. Not long after her return she published an interesting volume, "Portraits of the People and Princes of India," and subsequently a volume of her very vivacious and interesting letters home was collected, under the title of "Up the Country." Within the past six or eight years she had published two novels, which were very popular. They bore the somewhat singular titles of "The Semi-Attached Couple," and "The Semi-Detached House."

Aug. 11.—Selwyn, Rt. Hon. Sir Charles Jasper, an eminent English jurist; died in London; aged 56 years. He was a son of the late William Selwyn, Q. C., and was born in 1813; educated at Eton and Trinity College, Cambridge, was called to the bar at Lincoln's Inn, 1840; made Commissary of the University of Cambridge in 1855, and Queen's Counsel in 1856. From 1859 to 1868 he sat in Parliament for Cambridge University, when, having held for a few months the post of Solicitor-General, he was appointed Lord Justice of Appeal, and became a member of the Privy Council. He was knighted in 1867.

Aug. 12.—Di Luca, Ferdinando, an Italian geographer and mathematician; died in Naples, aged about 60 years. He was the author of a series of excellent geographical text-books, in general use in Italy, and approved by the Minister of Public Instruction. He was the editor of the *Compendio di Geografia di Adriano Balbi*, to which he had made large and valuable additions, and had written some excellent treatises on mathematical geography. He had recently published a globe on a new plan, and had brought before the Imperial Geographical Society of Paris, of which he was a corresponding member, the narrative of Piaggia's discoveries in Central Africa.

Aug. 12.—Grange, Constance Caumont la Force, Marquise de la, an accomplished and brilliant French lady, of remarkable beauty, the intimate friend of Lamartine and Madame Lamartine; died in Paris, aged 68 years. She had been twice married, and was a lady-in-waiting on the dauphine, daughter of Louis XVIII., in 1823. In 1832 she married the Marquess de la Grange, a young officer of the *Garde*, who was as strongly attached to the Lamartines as his wife. She survived the gifted poet but a few months.

Aug. 16.—Anne, Louis François Theodore, a French soldier, politician, novelist, and art critic; died in Paris, aged 72 years. He was an officer in the army of the Restoration from 1814 to 1830, but had written in 1820 an historical eulogy on the Duc de Berri. He wrote for some years, either alone or associated with others, numerous dramas, many of which were successful. From 1830 to 1851 he published six or eight historico-political works, always in the interests of the elder Bourbons, to whom he remained faithful. He had produced also, between 1832 and 1858, eighteen or twenty volumes of novels, mostly historical, some of which were very popular. When we add that he was editor of *La France*, art and dramatic critic of *L'Union*, and an assistant editor of the *Revue* and *Gazette des Théâtres*, it will be seen that his literary life was one of great activity.

Aug. 17.—Barrow, Edward, an English journalist; died in London, aged 71 years. He had been connected with the London press for about half a century, first on the *Mirror of Parliament*, of which his brother was editor, and his nephew, Charles Dickens, a reporter. He was afterward, for nearly forty years, a member of the literary staff of the *Morning Herald*, and for a part of the time of the *Standard*, and was universally esteemed.

Aug. 26.—Leys, Baron Jean Auguste Henri, an eminent Belgian historical *genre* painter; died at Antwerp, aged 54 years. He was born at Anvers, February 18, 1815, and was destined to an ecclesiastical career, but his fondness for art was so great that, at the age of fifteen, he began to study for an artist. At the age of eighteen he had already exhibited a picture of considerable merit. He completed his studies in France and Holland, and, returning to Belgium, found in M. Couteau, a wealthy and generous art connoisseur, a most liberal and discriminating patron. For him Baron Leys executed the greater part of his numerous paintings. He was thought to excel in his skill as a colorist, in the spirit and naturalness of his compositions, and in the fidelity and originality of his production of the representative types of the people of the middle ages, which have been the most frequent subjects of his pictures. He was decorated with the order of Leopold I. in 1840, raised to the rank of grand officer of that order, and made a baron in 1851, and subsequently promoted to the rank of commander of the order. He was also elected a member of the Royal Academy of Belgium in 1845.

Aug. 26.—Persiani, Giuseppi, an Italian musical composer, best known as the husband of the celebrated prima donna Madame Persiani (*née* Fanny Tacchinardi), but the author of some excellent operas; died at Paris, aged 68 years. He was born at Recanati, in the Papal States, in 1801, educated at the Royal Musical College of Naples, under Tritto, and produced his first opera, "The Generous Enemy," in Florence in 1826. Among his other operas which were successful were, "Attila," "Gaston de Foix," "Eufemia di Messina," "Ines de Castro," "L'Orfana Savojerda," and "Il Fantasma." Most of his operas were written with

a view to bring out the strong points of Madame Persiani's singing and acting.

Aug. 26.—SPIERS, ALEXANDER, Ph. D., an eminent philologist, professor in the University of France, and inspector of the colleges of France; died at Passy, near Paris, aged 62. He was a native of England, but had been for many years a resident and professor in Paris. He was the author of numerous valuable text-books, and his French-and-English Dictionary (republished here, both in a verbatim edition, and under the editorship of Prof. Surenne) has the reputation of being the most complete work of the kind published. His death was sudden, and occurred just after his return from a tour of inspection of the colleges of the departments.

Aug. 30.—MOREIRA, CUSTODIO JOSEZ, a native of Portugal, but for more than a hundred years a resident of Brazil; died at Franca, Brazil, aged 135 years. He was born in 1734, and his health had been so perfect throughout his long life, that he performed his full share of daily labor till he was 127 years of age.

Aug. 31.—LEMOS SABINA MARIA DE, a Portuguese lady of high rank, the mother of the Baron Rio do Verde; died in Minas Geraes, Brazil, aged 115 years. She was born in Portugal in 1754, and has left over three hundred descendants down to the fifth generation. Her son, the baron, was murdered in Rio Janeiro in 1865, at the age of eighty-one, but his mother was kept in ignorance of his death.

Aug. 31.—YOUNG, Sir CHARLES GEORGE, Knight, Garter King of Arms for all England, an antiquarian and standard authority on the whole subject of heraldry; died in London, aged 74 years. He was born in April, 1795, educated at the Charter-House School, and at the College of Arms, where he was one of the pursuivants from 1813 to 1820. He was then appointed York Herald, and in 1822 registrar of the College of Arms, an office of great labor and responsibility. In August, 1842, he was appointed Garter Principal King of Arms, and received the honor of knighthood. In this capacity he was sent abroad to invest foreign monarchs with the blue ribbon of the Garter. He made eight or nine of these honorable journeys during his term of service. Sir Charles was the author of several books and pamphlets relating to heraldry subjects.

Aug. —.—LOBECK, Prof. JUSTUS FLORIAN, a naturalist, of German birth and education, but long a resident in Chili, where he had made large contributions to natural science, and had been for some years Professor of Natural History in the University of Santiago; died in that city.

Aug. —.—MANEILLE, M., one of the greatest of modern French cooks; died in Paris. Associated with MM. Simon and Barthelemy in the time of the first republic, he opened the celebrated Paris restaurant called the *Trois Frères Provençaux*, and was the inventor of the *Poulet à la Marengo*.

Sept. 3.—HOHENZOLLERN-HECHINGEN, FRIEDRICH WILHELM CONSTANTINE, Prince of, the last reigning sovereign of the Duchy of Hechingen; died at the Castle of Netzken, near Berlin, of apoplexy, aged 68 years. He was born February 16, 1801, and was heir to several other titles and positions as well as that of Duke or Prince of Hechingen, being Burgrave of Nuremberg, Duke of Sagon in Silesia, Count of Sigmaringen, Condé of New Castile, and Lord of Hagerlech and Wehrstein. He succeeded his father, as Prince of Hechingen, September 13, 1838. After the revolution of 1848–'49, when so many dynasties made shipwreck, the prince, prompted in part, perhaps, by his apprehension of a rising among his people, and in part by his desire to contract a morganatic marriage with the Countess of Rothenbourg, whom, by the law of succession, he could not make the partner of his throne, abdicated the government of the principality in favor of the King of Prussia, who was the representative of the elder branch of the Hohenzollerns, on the 7th of December, 1849, and was made a lieutenant-general in the Prussian army, and chief of the second regiment of *Landwehr* of Lower Silesia. He was divorced from his countess in February, 1863.

Sept. 4.—FAWKNER, JOHN P., the founder of the Colony of Victoria, Australasia; died at Melbourne, aged 77 years. He was born in London in 1792, and at the age of eleven years was allowed to accompany, in some humble capacity, the expedition of Lord Hobart, in 1803, to found a new penal settlement on the southern shore of New Holland. The spot chosen was not favorable for a settlement, and the expedition soon removed to Van Diemen's Land or Tasmania, and founded Hobart Town. Here young Fawkner led a roving life for some years, keeping sheep, trading, building huts, and mingling in the plots for the escape of convicts. One of these last adventures involved him in trouble, and he left Tasmania for Sydney for two years. Returning to Tasmania in 1818, he married, acted as advocate or impromptu attorney, started a public house and a newspaper, the *Launceston Advertiser*. In the autumn of 1830 he resolved to start an expedition for a settlement in Southern Australia, and, though not its actual leader, he was its principal promoter, selected the site of what is now Melbourne, and was the most active agent of its settlement. He started a newspaper here, the Port Philip *Patriot*, and began farming, but was unfortunate and became insolvent. Emerging from his difficulties, he converted the *Patriot* into a daily paper, established a sheep station, devoted himself to gardening and wine making, and was active in the city and colonial councils. He was a member of the Colonial Assembly from its first organization, and, having acquired wealth after the discovery of gold, was a prominent man in the colony, and for several years, until his death, a member of the Legislative Council.

where his natural shrewdness and large colonial experience made his advice valuable.

Sept. 11.—PALMERSTON, Right Hon. EMILY MARY, Viscountess, daughter of Lord Melbourne, and widow of Lord Palmerston; died at Brockett Hall, Herts, aged 82 years. Lady Palmerston was born April 21, 1787, and was a cousin of Lady Noel Byron. She married, when but eighteen years of age, Peter, fifth Earl Cowper, by whom she had five children. He died in 1837, and in 1839 she married Lord Palmerston. She was a woman of remarkable ability and tact, and won the esteem and attachment of all with whom she was brought in contact. She was specially distinguished for her kindness and tenderness to the poor.

Sept. 15.—CLARK, Rev. WILLIAM, M. D., F.R.S.; died at Cambridge, aged 81 years. He graduated at Trinity College in 1808, and was soon after elected to a fellowship. In 1817 he became Professor of Anatomy in the college, and discharged the duties of his professorship for nearly half a century. At his retirement in 1866, his services were recognized by a public subscription among the members of the university for a bust in commemoration of his merits.

Sept. 15.—KIERNAN, Right Rev. MICHAEL, D. D., Roman Catholic Archbishop of Armagh, and Primate of all Ireland; died at Dundalk. He was a native of Louth, and, after the usual collegiate course at Maynooth, was ordained curate at Newry and Drogheda, and was then appointed parish priest of Collon. Thence he was transferred, in 1848, to the parish of Dundalk, where he remained for twenty years, acting at the same time as vicar-general of the arch-diocese. He was elected to the primacy in 1868.

Sept. 19.—JONES, GEORGE, R. A., a British painter of great merit; died in London, aged 83 years. He was the son of a mezzotinto engraver of some note, and was admitted to the Royal Academy in 1801, but on the breaking out of the Peninsular War he gave up painting for a time, and obtained a commission in a militia regiment, with which he joined the army under Wellington in Spain, and, in 1815, was with the army of occupation in Paris. He afterward resumed painting, became an associate of the Academy in 1822, and a Royal Academician in 1824. From 1834 to 1840 he was librarian to the Academy, and was then appointed keeper, which post he held for ten years. At the commencement of his career as an artist, his pictures consisted chiefly of views of English and Continental towns, but afterward he chose battle-scenes, and, later in life, representations of Old-Testament narrative. Among his principal pictures are: "The Battle of Waterloo," for which he received two hundred guineas from the British Museum; the battles of "Vittoria and Borodino;" and the "Opening of London Bridge." In 1849 he published a "Life of Chantrey."

Sept. 26.—BAKEWELL, J. C., an English journalist, physicist, and author; died at Hampstead, England, aged 69 years. He was born at Wakefield in 1800, received a thorough scientific education, and was connected, as scientific editor, with the *Morning Post* and other periodicals for some years. He was the author of "The Natural Evidences of a Future Life," "Philosophical Conversations," "Electric Science," a Treatise on Geology, and other works.

Sept. 28.—BLOOMFIELD, Rev. S. T., D. D., Rector of Bisbrooke, and honorary Canon of Peterborough, an English clergyman, scholar, and author; died at Wandsworth Common, near London, aged 85 years. He was educated at Sidney Sussex College, Cambridge, graduating B. A. in 1808. He had been Rector of Bisbrooke since 1814. He was the author of a capital critical edition of the Greek New Testament with copious notes.

Oct. 19.—WALSH, Rt. Hon. JOHN EDWARD, LL. D., Master of the Rolls in Ireland, an able jurist; died in Paris, aged 52 years. He was born in 1816, and was educated in the University of Dublin, where he graduated B. A. in 1837 and M. A. in 1840. His college career was unusually brilliant; he obtained a classical scholarship, the first gold medal in ethics and logic, and was also auditor of the Historical Society. In 1839 he was called to the bar, and to the Inner Bar in 1857, where he at once took a leading position. In 1859 he was appointed a Crown Prosecutor, and held that office until 1866, when he became Attorney-General, and in the same year sat in the House of Commons. His parliamentary career was, however, short, as the dissolution of Parliament followed close upon his election, and, before the long vacation was over, he was made Master of the Rolls. He was the author of "Justice of the Peace for Ireland" (1844); "Reports in Chancery, Irish," in 1845–'49; and "Ireland Sixty Years ago" (1847).

Oct. 23.—CONINGTON, JOHN, M. A., Corpus Professor of Latin in the University of Oxford, a profound classical scholar, critic, and author; died at Boston, Lincolnshire, aged 44 years. He was born at Boston in 1825, educated at Rugby (under Drs. Arnold and Tait), and at Magdalen College, Oxford, where he obtained the Hertford and Ireland scholarships in 1844, a first class in classics in 1846, the Chancellor's prizes for Latin verse, English essay and Latin essay in 1847, 1848, and 1849, and was elected Eldon scholar in 1849, and Fellow of University College at the close of his undergraduate course. Soon after he became lecturer at that college. In 1854 he was elected to the newly-created University Professorship of Latin, which he held till his death. His enthusiasm, attainments, and success in his university career are unparalleled in recent times, and were not surpassed by the giants in classical lore of the last century, Porson, the Bentleys, etc. In 1848 Mr. Conington published a translation of the "Agamemnon of Æschylus" in English verse, which attracted great attention for its thorough

appreciation of the force and beauty of the original, and its graceful and perfect rhythm. In 1850 he edited Maguire's "Homeric Ballads." His inaugural lecture as professor of Latin, "On the Academical Study of Latin," was issued in 1855, and "The Choëphorœ of Æschylus," with notes, in 1857. In 1858 he published the first, and in 1863 the second volume of "The Works of Virgil, with an English Commentary," and in 1863 also "The Odes and Carmen Sæculare of Horace, translated into English verse." In 1866 appeared from his pen "The Æneid of Virgil, translated into English Verse." He had also prepared critical texts of some of the classics, and critical essays on others. His numerous articles on classical subjects in the Reviews were evidence of the earnestness of his zeal in classical pursuits.

Oct. 31.—WESTMINSTER, Sir RICHARD GROSVENOR, second Marquis of, an English nobleman said to have possessed the largest amount of property of any British peer of ancient or modern times; died in London, aged 74 years. Known in early life as Viscount Belgrave, he was educated at Christ Church College, Oxford, and entered Parliament in 1818, as member for the county of Chester, and was affiliated with the Whig or Liberal party. He continued in Parliament till 1835, and in 1845, on the death of his father, entered the House of Lords. He was Lord-Steward of the Household of the Queen under the Russell ministry of 1850–'52, and a member of the Privy Council. His real estate, mostly in London and Westminster, was valued some years since at £21,000,000.

Oct. —.—BRUCE, JOHN, F. S. A., an English journalist, antiquarian, and author; died in London, aged 67 years. He was born in that city in 1802, of a family of Scottish extraction; was educated at the Grammar School of Aberdeen, and at private schools in England; studied law, but relinquished the practice of his profession in 1840, and gave his attention to literary pursuits. He edited with much credit several valuable works for the "Camden" and other societies; contributed to the *Archæologia* of the Society of Antiquaries, to the *Edinburgh Review*, and to various other periodical publications, including *The Gentleman's Magazine*, of which he was for some time editor, and edited a Calendar of the State Papers of the reign of Charles I. He was Treasurer and Vice-President of the Society of Antiquaries, Treasurer and Director of the Camden Society, and in April, 1861, was elected a trustee of Sir John Sloane's Museum.

Oct. —.—CERISE or CERISI, LAURENT ALEXANDRE PHILIBERT, M. D., an Italian physician, psychologist, and author, long resident in France; died in Paris, aged 60 years. He was born in Aosta, Piedmont, in 1809, and educated at the University of Turin, where he graduated M. D. in 1828. Not finding sufficient liberty of philosophic speculation in his own country, he migrated to France, and was licensed as a physician in 1834. Being a friend and disciple of the philosopher Buchez, he was for some time one of the editors of the *Européen*, and was one of the founders of the *Annales Médico-psychologiques*, and of the *Union Médicale*. He was made a chevalier of the Legion of Honor in 1845, and of the order of Civil Merit of Savoy in 1849. He had a remarkable tact in the diagnosis of insanity, and his decisions in regard to the most doubtful cases were regarded as almost infallible by the profession. Some of his psychological treatises are among the ablest contributions to this difficult science ever published. Among his works are: "A Critical Examination and Study of the System of Phrenology," 1836; "The Physician of the Infant Schools, or Manual of Health and Physical Education," 1836; "The Functions and Diseases of the Nervous System in their Relations to Education," 1842; a work crowned by the Academy of Medicine. He had also edited with great care and numerous notes, Roussel's "Moral and Physical System of Woman;" "Cabanis's Connections of Physics and Morals;" and "Bichat's Researches upon Life and upon Death."

Oct. —.—RAMSEY, ALEXANDER, assistant editor of the English *Cyclopædia*, and other works, and sub-editor of the *Penny Magazine;* died in London.

Dec. 31.—DE SANCTIS, LUIGI, D. D., an eminent Italian Protestant divine, professor, and author; died in Florence, aged 61 years. He was born in the States of the Church, educated for the priesthood in the Roman Catholic Church, and became Dean of the Church of the Minerva in Rome. He was, while yet a young man, appointed Bishop's examiner, and was in a fair way of attaining the highest dignities of the Church. At this time he imbibed liberalistic views; and, having obtained permission to go to Venice, crossed from thence to Corfu, where he avowed himself a Protestant, and received the protection of the English consul. He next went to Geneva, where he was ordained, and, finding the views of the Free Italian Church too loose and ill-defined, joined the Waldensians, and became a Professor of Theology in their College at Turin. In Italy, in 1859, he entered upon a larger work with great energy, preaching, teaching, writing, and editing the *Eco della Verita*, and his famous almanac *Amico de Casa*, which had an immense sale. He published twenty-three books, all of them of great merit, and most of them devoted to the work of denouncing his early views of the Romish faith. His *Roma Papale* has been translated into French and English, and sold largely both in England and America. His death was very sudden.

Dec. —.—ASAKY, GEORGE, poet, historian, linguist, journalist, and educator; died in Jassy, Moldavia, aged 81 years. He was born in Jassy, educated at the German universities and in Italy, and, upon his return to his native country in 1812, obtained employment in the

Department of Foreign Affairs. In 1822 he represented the new Government of Moldavia at the court of Vienna. In 1827 he was called upon to take part in preparing a Constitution for Moldavia, and, in the capacity of member of the committee appointed for that purpose, he visited St. Petersburg, where he was received with marked distinction by the Emperor, who decorated him with the order of St. Vladimir, and appointed him Keeper of the State Records. About the same time he was honored with similar marks of distinction from the Sultan. For the last forty years he filled several important and public offices, among them that of Director of the Department of Worship and Public Instruction. In this department the most important work of his life was done. When he first entered upon that work there was not a public printing-press in the whole land, and the only two private presses were in monasteries. At his own cost, he founded the first printing-office in Jassy, after doing which he established and conducted several literary periodicals, among which was *The Bee*, the first journal ever published in Moldavia. His activity in promoting education was incessant, and his literary labors were all directed toward the great end of stimulating the sluggish minds of his countrymen, ripening their tastes, and improving their morals. Asaky was a great linguist. He was reported to be master of ten languages, and in 1854 published at Jassy a volume of poems in several languages. He applied himself vigorously also to purifying the written language of the province, which, from the effect of time, and the predominance of the Greek language in the Principalities, had become materially changed from its primitive vigor and purity. For his labors in this direction he is regarded as one of the fathers of the modern literature of Moldavia.

Dec. —.—LAUNITZ, ———, a distinguished sculptor, whose statue of Guttenberg, at Frankfort, is highly celebrated; died in that city, aged 74 years.

OHIO. The receipts from all sources during the year were $4,781,614.49. On hand at the close of the fiscal year 1868, $570,120.75. Disbursements for the year, $4,913,675.10. Balance in the Treasury, November 15, 1869, $438,060.14. The funded debt of the State had been reduced $516,093.57, leaving the amount outstanding, $10,016,581.86. Less amount invested by Fund Commissioners in loans not due, $160,648.59, leaving net balance of debt outstanding, $9,855,938.27. The irreducible State debt, constituted of school and trust funds, is $3,819,912.11, the interest on which, due January 1, 1870, was $265,999.46. The total valuation on the duplicate of 1869 amounts to $1,157,180,455. The taxes levied thereon in 1869, receivable in 1870, are $4,045,476.58 for State purposes, and $18,187,490.92 for county and local purposes. Adding delinquencies and forfeitures, $577,798.34, the total tax will be $22,810,675.84. The auditor calls attention to the fact that increased taxation is necessary for the general fund, to the extent of $510,000. The anticipated deficit is occasioned by the increased expenses of the General Assembly, the addition of eleven new judges to the judicial force of the State, the purchase of land and establishing thereon a Reform School for Girls, and the extraordinary appropriations made by the General Assembly. To meet the deficiency until the amount can be raised by additional taxation, a temporary loan of $300,000 is recommended. The amount of the public debt, matured and immediately maturing, after deducting payments and bonds in the hands of the Sinking Fund Commissioners, is placed at $1,469,599.44. To provide for this the auditor suggests an extension of the loan for $1,000,000, leaving a balance of $469,599.44. As the greater part of this sum can neither be satisfactorily renewed nor extended, the auditor suggests a restoration of the sinking-fund levy for 1870, to one and two-tenths of a mill, which will give the means of paying the entire balance.

The total levy for State purposes is recommended to be four mills, being an increase of half a mill over the rates of the preceding three years. During 1870 the decennial revaluation of all the taxable property in the State will take place. The auditor reports his refusal to pay the claims arising from damages caused by the Morgan raid, holding the legislation approving those claims to have been defective, not having received a vote of two-thirds of all the members elected. Attention is called to the enormous increase of local taxation. The highest aggregate of levies during the war (A. D. 1865), which included nearly two and a half million dollars of war-levies, was only $20,546,237.68. In the present year the aggregate had risen to $22,810,675.84. Statistics given show that the total taxable value of property in the cities of the State is $279,065,819, and that the total levies thereon, for A. D. 1869, amount to $8,705,336.79; that in but one of these cities is the total rate of levy below two per cent.; that in two the rate is above three and one-half per cent.; in one, precisely three and one-half per cent.; in seven it is over three per cent.; in four it is exactly three per cent.; and the average in all the cities of the State is 3.1195 per cent. It is a noticeable fact connected with this table, that of the total levy of $8,705,336.79 on all the cities of the State, nearly one-half is levied in Cincinnati alone, and yet the total rate of levy in that city is but little above the average of all the cities of the State. It is clear, therefore, that, in all the centres of trade and business in the State, the simple protection of the State costs every business man, settled within its borders, three per cent. upon every dollar of capital used in his business.

By an act of the General Assembly in 1868, the office of Commissioner of Statistics was

abolished, and the duties devolved upon the Secretary of State. The first annual statistical report of that officer is a voluminous document, though not full and complete in all its departments, owing to the inability of the secretary to compel the proper returns in all cases. A general review is made of the leading geological features of the State. Sand is said not to exist in unusual amount or unusual purity. Clay is found in vast amount, in all its forms, and has furnished a large share of the State wealth. In carbonate of lime the State is unusually rich. Deposits of hydraulic cements are known to exist, and more will probably be found by the geological survey. Less than a million dollars' worth of petroleum was found during the year, in Washington, Athens, Noble, and Morgan Counties. In Cleveland about 1,000,000 barrels of petroleum were refined during the year, and about 750,000 barrels shipped. About 2,000,000 bushels of salt were made during the year in the southeastern counties. Official returns show that 208,746 tons of iron were manufactured during the year. The superficial coal area of Ohio has been computed at 11,900 square miles. The coal statistics for this year, furnished through official sources, show that over fifty-five million bushels were mined. It is probable that not over two-thirds of the coal mined has been reported, and that the amount actually mined will not fall far short of seventy-five million bushels. Prof. Taylor, in his work on "Coal Statistics," published in 1854, estimates that, in the ordinary method of computation, at least twenty-three thousand millions of tons of coal are available in the State of Ohio. It is expected that the forthcoming geological survey will furnish full and accurate information of these coal-fields, now doubtless the greatest source of wealth and power.

The grape crop in Ohio, for the past two years, has not been satisfactory to grape-growers. The official returns, although tolerably satisfactory, are in some cases known to be considerably below the actual figures. The capacity of the grape to make wine may be considered an important test of climate. Humboldt says ("Cosmos," vol. i., p. 324) that, to procure palatable wine, it is requisite that the mean annual heat should exceed 49°, that the winter temperature should be upward of 33°, and the summer temperature upward of 64°. Meteorological observations, taken at Kelly Island for the past ten years, show that the average for that period, from 1859 to 1869, is 49.92°. At Cincinnati, where wine is also made in large quantities, it will be observed that the temperature of the winter is slightly above the minimum required, the temperature of the summer ten degrees higher, and the mean temperature four degrees higher. Kelly Island has been remarkable for its growth of the Catawba grape, which ripens here more perfectly than in many localities two or three degrees farther south. The whole lake-coast region from east of Cleveland to west of Sandusky Bay, a distance of more than seventy miles, has been regarded as well adapted to grape culture. Last year, however, the grape crop on Kelly Island was about half short, and this year only about one-quarter crop was realized. The grape crop along the entire lake region has been a failure for the past two years, with the exception of a strip of country from Cleveland east, where the crop has been fair, but imperfectly ripened. About Cincinnati, where the Catawba grape was formerly successfully grown, its cultivation has been abandoned, and the Ives, Concord, Delaware, and other varieties, have been successfully substituted.

In 1868, the culture of the grape was as follows: Acres planted, 2,357; acres in vineyard, 7,574. Pounds of grapes gathered, 2,937,737. Gallons of wine pressed, 143,767. The crop was 2,588,490 pounds less than in 1867, and the falling-off in gallons of wine pressed more than one-half. Nearly three-fourths of the entire grape crop of the State, in 1868, was gathered in the five lake counties of Ashtabula, Cuyahoga, Erie, Lorain, and Ottawa, and one river county, Belmont.

The reports made by township assessors for 1869 show the statistics of orchards for that year, and of apples, peaches, and pears, for the year 1868, in the State, as follows:

Number of acres in orchards.....	342,213
Bushels of apples produced.....	11,637,515
" peaches "	599,499
" pears "	66,712½

The increase and decrease in the acres in orchards and amount of fruit produced in 1868, as compared with that of 1867, are as follows:

Acres in orchards.....	8,640	decrease.
Bushels apples produced.	1,913,623	increase.
" peaches "	760,105	decrease.
" pears "	17,145½	"

The reports of the several county auditors, based upon the returns of the assessors, show the following statistics of the grain crops, known as breadstuffs, for the year 1868:

	Bushels.
Wheat.....	16,490,059
Rye.....	815,666
Buckwheat.....	562,256
Corn.....	76,725,228
Oats.....	19,058,852
Barley.....	815,788
Potatoes.....	7,449,967

This shows an increase over the aggregate grain crops of 1867 of 17,192,839 bushels, being an increase in wheat, corn, oats, and potatoes, of 18,218,844 bushels, and a decrease of 1,016,005 bushels in rye, buckwheat, and barley. An analysis of the agriculture of the State for the last ten years shows the statistics for 1868 to be:

Wheat.—Acres sown.....	1,456,734
" Bushels produced.....	16,490,059
" Average per acre.....	11.31

This shows an increase over the number of acres sown in 1867 of 296,770 acres, and a decrease of 247,280 acres as compared with

the average for the last ten years, which is 1,704,014; also a decrease of 821,866 bushels as compared with the average for the ten previous years. The average bushels per acre for that time is 10.15, showing an increase, in 1868, of 1.16 bushels per acre over that average.

Corn.—Acres planted	2,232,301¼
" Bushels produced	76,725,288
" Average bushels per acre	34.37

This crop is an increase of 12,850,224 bushels over that of 1867, and 1.67 bushels above the average per acre of the eighteen previous years.

Oats.—Acres sown	793,573
" Bushels produced	19,058,852
" Average bushels per acre	23.86

This crop is above the average amount raised for the ten preceding years, while the bushels produced per acre are about the same as for that time.

Barley.—Acres sown	40,021
" Bushels produced	815,788¼
" Average bushels per acre	20.38

There was less barley sown in 1868 than for several years previous thereto, while the average bushels produced per acre were more than that of any year since 1864.

Rye.—Acres sown	87,899
" Bushels produced	815,666
" Average bushels per acre	9.30

This is a decrease from 1867 of 20,800 acres sown, 209,625 bushels produced, and 0.14 in average.

Buckwheat.—Acres sown	51,232
" Bushels produced	562,256
" Average bushels per acre	10.97

This is a decrease from 1867, in acres sown, of 6,641; in bushels produced, 27,989, and an increased average of 0.78.

Potatoes.—Acres planted	103,287
" Bushels produced	7,449,247
" Average bushels per acre	72.12

This crop is the largest since 1860, and the largest yield per acre since 1864.

A comparative aggregate statement for the past five years shows an average acreage in grain of 4,555,760, while the number of acres sown in 1868 exceeded this average by 214,287. The year 1868 shows the largest aggregate of breadstuffs since 1861.

Hay.—Acres	1,532,342
" Tons produced	1,743,537
" Average tons per acre	1.13

The average for ten years was 1.18 tons per acre.

Flax.—Acres sown	97,820
" Bushels of seed produced	620,092
" Pounds of fibre produced	12,032,392

The culture of flax in 1868 was greater than in any year since 1862, when the statistics of this crop were first reported.

Tobacco.—Acres planted	18,035
" Pounds produced	17,398,198
" Average pounds per acre	964

The crop is above the average, both in quantity and average per acre.

In 1868, 87,005,878 pounds of butter and 17,814,599 pounds of cheese were produced, being 2,466,967 pounds of butter more, and 2,227,569 pounds of cheese less, than the average of nine years. The manufacture of cheese for export is confined to the counties composing the Western Reserve. The sorghum crop for 1868 was as follows:

Acres planted	25,257
Pounds of sugar produced	28,668
Gallons of molasses produced	2,004,055
Average gallons of molasses per acre	79

The returns show that maple sugar and molasses were manufactured in 1868 as follows:

Pounds of maple sugar	3,570,932
Gallons of molasses	311,191

This is considerably below the average production.

The sweet-potato crop, in 1868, was as follows:

Number of acres planted	2,030
Number of bushels produced	148,268
Average bushels per acre	73

There were, in 1868, 3,963,097 acres in pasture, being a decrease of 358,209 acres. The acres of uncultivated lands in 1868 amounted to 5,861,277 acres, being a decrease of 85,524 acres from the previous year.

The number and value of horses, cattle, mules, and sheep, listed for taxation in 1869, are as follows:

Number of horses	704,578
Value of same	$47,961,833
Average value	$68 07
Number of cattle	1,492,581
Value of same	$32,924,806
Average value	$22 05
Number of mules	25,090
Value of same	$1,740,487
Average value	$69 56
Number of sheep	6,272,640
Value of same	$10,774,324
Average value	$1 71

Comparing with the year 1868, we have the following result:

Decrease in number of sheep	1,416,205
Decrease in value of same	$4,045,029
Decrease in average value	.21

The returns of the assessors show that the wool-clip in 1868 was 22,940,479 pounds, which is a decrease of 1,908,145 pounds as compared with the clip of the previous year.

The following table shows the damage done to sheep by dogs during the year:

Number of sheep killed by dogs	48,203
Value of same	$98,167
Number of sheep injured by dogs	22,725
Estimate of injury done	$32,546
Aggregate amount of injury to sheep by dogs	$130,713
Number of dogs in the State	184,102

The number of hogs in the State is placed at 1,455,943; value, $8,030,262; average value, $5.51.

The number of marriages reported for the year ending July 1, 1869, is as follows:

Marriages by license	23,482
Marriages by banns	428
Total marriages for the year	23,910

The number of marriages for 1869 shows a decrease of 4,321 on the number for 1868. Eight counties failed to make their returns in reference to marriages for 1868, and there were seven delinquents for 1869. Seven of the counties, which failed to report in 1868, reported this year. If the number of marriages in these counties, with the exception of Pike, was the same in 1869 as in 1868, the number 1,888 should be added to the total given above, making a grand total of 25,798 for this year.

The average number of marriages for each of the three years immediately preceding the war—1858, 1859, and 1860—was 23,707. The average for each of the years during which the war continued—1861, 1862, 1863, 1864, and 1865—was, 20,834. The average for each of the years succeeding the war—1866, 1867, 1868, and 1869—was 27,962.

The number of divorces reported as granted during the year ending July 1, 1869, was 1,003, being an increase over 1867 of 136.

In 1866 the divorces stood, in proportion to the number of marriages, as one to twenty-six; in 1867, as one to thirty; in 1868, as one to thirty-three; and in 1869, as one to twenty-four. On the 1st of July, 1868, 629 suits for divorce were pending in the courts of the State. During the year ending July 1, 1869, 1,355 suits were brought. During the same year, 1,343 cases were disposed of—1,003 by granting divorces, 290 by refusal to grant divorces, and 50 by dismissal. Of the suits in which divorces were refused, 111 were brought by the husband, and 179 by the wife. In 58 cases the custody of the children was given to the father, and in 334 to the mother. At the close of the year there were still pending 641 suits for divorce.

Owing to defective legislation, the returns of births and deaths are very incomplete and unsatisfactory. The births reported were 30,150, and the deaths, 15,159. Next year, under the operation of a new law, this class of statistics will be much more reliable, if not entirely perfect.

The number of persons naturalized in Ohio for the year ending July 1, 1869, is 6,114, distributed as follows:

England, Scotland, and Wales	1,421
Ireland	2,408
Germany	1,316
Other countries	969
Total	6,114

The following is the number of deaths by violence reported for the year ending July 1, 1869:

Homicides	78
Suicides	110
Casualties	305
Violent diseases	133
Total	626

The number of inquests held during the year is 481; the number of deaths superinduced by intemperance is 120.

The number of crimes by violence, prosecuted during the year, was 481, being 325 less than the preceding year, while the convictions are 378, a decrease of 21.

The whole number of indictments for crimes against property, for the year ending July 1, 1869, was 906.

The number of convictions for offences against the liquor law is greater by the sum of 307 than in 1868, and greater by the sum of 163 than in 1867. Only 13 persons were imprisoned in the county jail for this class of offences.

The number of prisoners confined in the county jails was 5,727, and the average cost of keeping them $15.33.

The returns for the year ending July 1, 1869, show:

Number of deeds recorded	80,057
Number of leases recorded	2,8[illegible]
Number of mortgages recorded	41,16[illegible]
Amount of money secured by mortgages	$58,871,10[illegible]
Number of mortgages cancelled	20,11[illegible]
Amount of money released by same	$22,111,0[illegible]

A comparison with 1868 shows that the number of deeds recorded increased 663, the number of leases decreased 105, and the number of mortgages increased 3,845. The amount secured by mortgage was greater by the sum of $16,328,779.

The number and value of new structures, for the last year, are as follows:

	Number.	Value.
Dwellings, hotels, etc	14,230	$10,140,10[illegible]
Barns and stables	2,730	770,2[illegible]
Mills, factories, etc	299	718,55[illegible]
Stores, warehouses, etc	333	577,62[illegible]
Churches, public halls, etc	38	1,962,73[illegible]
Total	17,690	$13,389,15[illegible]
Average value of dwelling-houses		$7[illegible] 55
Average value of barns and stables		28[illegible] 61
Average value of factories, etc		2,4[illegible] 1[illegible]
Average value of stores, etc		1,734 6[illegible]
Average value of churches, public halls, etc.		33,[illegible]55 55

There has been an increase of 553 new structures, and an increase in the aggregate value of the same of $2,834,904. During each year a better class of dwelling-houses has been built in the State. The same remark will also apply to other classes of structures. The increase in the seven leading counties, of buildings of all kinds, in five years, has been as follows: Cuyahoga, 6,329; Hamilton, 5,5[illegible]; Montgomery, 2,526; Lucas, 2,431; Summit, 2,018; Franklin, 1,868; Stark, 1,766.

The following is the number of paupers as returned by the county auditors:

Number of paupers in county infirmaries	4,[illegible]
Number of paupers otherwise supported by the county	1,[illegible]
Whole number of county paupers	5,[illegible]

The returns of banks and their capital in Ohio, for the year 1869, are as follows:

	Number.	Capital.
National banks	130	$22,6[illegible]
Private and other banks	141	6,11[illegible]41
Aggregate	271	$28,7[illegible]41

This shows a decrease of five in the number of national banks, but their capital has been increased $461,050.

The number of private banks shows an increase of twenty-three during the year, and the capital of these banks has been increased $990,271.

The amount of legal-tender notes or other moneys exempt from taxation, as returned for this year, is $14,827,340, being a decrease on last year of $7,080,455.

During the year, Cuyahoga County has gained $2,726,201 in valuation; Franklin, $721,193; Montgomery, $114,411; and Lucas, $259,540. On the other hand, Hamilton County shows a loss of $308,607.

The valuation of the five largest cities in the State, together with the amounts assessed in each for city purposes, is as follows:

	Valuation.	City Tax.
Cleveland	$36,462,967	$1,272,012 97
Cincinnati	130,715,510	4,169,824 76
Columbus	16,018,693	384,448 62
Dayton	15,591,090	422,397 54
Toledo	9,079,400	468,373 88

The number of prisoners in the penitentiary on the 31st of October, 1869, was 974, and the number of convicts admitted during the year ending on that day was 347. This is a decrease, compared with the preceding year, of 27 in the number of convicts admitted, and of 67 in the number confined in the penitentiary.

The earnings during the year ending October 31st were	$175,663 06
Expenses	143,635 83
Excess of earnings over expenditures.	$32,027 23
In 1868 the earnings were	$171,037 45
Expenses	141,794 95
Excess of earnings over expenses	$29,242 50

The total number of persons of school age in the State, in 1869, was officially reported at 1,028,675; an increase of 11,108 over the previous year. The total number enrolled in the public schools in 1869 was 740,382, an increase of 8,610 over the year 1868. The average daily attendance in the public schools in 1869 was 434,865, an increase over 1868 of 24,144.

The total of taxes for schools, school buildings, and all other purposes, the present fiscal year, is $6,578,196.83, an increase over the taxation of the previous fiscal year of $616,795.68. Of this increase of taxation, the sum of $17,833.86 is in the State taxation for school purposes, and the sum of $598,961.82 is the increase of local school taxation.

The Institution for the Education of the Deaf and Dumb reports that in 1868 there were 235 pupils in the institution. During the year ending November 15, 1869, 68 pupils were received. During the same time 3 died, 5 removed from the State, 11 left the institution from graduation, promotion, poor health, or expulsion, and 18 were detained at home. The number of pupils present at the close of the school year of 1869 was 266, of whom 150 were boys, and 116 girls. Since the establishment of the institution, 1,113 mutes have been admitted. 190 were admitted the first twelve years or up to 1840; 258 in the next ten years; 210 the next ten, and 348 in the nine years since 1860. Several marriages among the graduates have occurred the past year. The reluctance with which parents often give their consent to unions, where one or both parties are mutes, seems to be diminishing.

The State Library report shows 28,251 volumes in the general library, and 4,567 volumes in the law library.

The State Board of Equalization fixed the valuation of the railroad property within the State, for taxable purposes, at $49,911,387.

The adjourned session of the Legislature opened January 5th. On the 9th, a resolution passed the House, directing the Ohio delegation in Congress to vote against appropriations for the national buildings at Washington, on the ground that the national capital would, before long, be removed to the Mississippi Valley. On the 5th of March, a resolution inviting ex-President Johnson to visit Columbus was voted down. A woman-suffrage proposition was defeated in the House on March 24th, by a vote of 49 to 36. March 31st, a bill, authorizing a geological survey of the State, became a law, and Prof. J. S. Newberry was subsequently confirmed as State Geologist. April 1st, the House rejected the fifteenth amendment to the United States Constitution by a vote of 47 to 36, and on the 30th the rejection was concurred in by the Senate. In the same month, after a long contest, a bill was passed permitting contracts to loan money at eight per cent. interest, all transactions where the rate is not specifically mentioned to remain at six per cent. In the same month a law was passed exempting from attachment $1,000 homestead property or $500 personal property, in addition to the amount already exempted. A bill was also passed to pay claims arising from the raid of the Confederate general John Morgan in Ohio; but the Auditor, on the opinion of the Attorney-General, subsequently refused to pay the claims, on the ground of defective action of the Legislature. On the 7th of May the Legislature adjourned *sine die*.

The Republican State Convention met in Columbus, June 23d, when the following ticket was nominated: for Governor, R. B. Hayes; Lieutenant-Governor, John C. Lee; Judge of Supreme Court, Luther Day; State Treasurer, S. S. Warner; Attorney-General, F. B. Pond; member of Board of Public Works, R. R. Porter. The following platform was adopted:

Resolved, That, as citizens of the nation, representing the Republican sentiment of an honored Commonwealth, we regard with sincere satisfaction the fidelity evinced by General Grant to the Republican party, and his policy, both foreign and domestic, and his national Administration, and we pledge our cordial support to the measures inaugurated to insure conciliation, economy, and justice at home, and command consideration and respect abroad.

Resolved, That we hail with profound satisfaction the patriotic and consistent declaration of President Grant in his Inaugural Address, that, while he will on all subjects have a policy to recommend to Congress, he will have none to enforce against the will of the people—a sentiment which assures the country of an executive Administration founded on the model of the Administrations of Washington and Madison and that will insure to Congress the unrestricted exercise of its constitutional functions, to the people their rightful control of the Government.

Resolved, That the abolishment of slavery was a national and necessary consequence of the war of the rebellion, and that the reconstruction measures of Congress were measures well adapted to effect the reconstruction of the Southern States, and secure the blessings of liberty and free government; and, as a completion of these measures, and firmly believing in its essential justice, we are in favor of the adoption of the fifteenth amendment to the Constitution.

Resolved, That the late Democratic General Assembly, in its reckless expenditure of public money, its utter neglect of the business interests of the State by failing to enact the wise and much-needed financial measures providing for the assessment and equalization of taxation prepared by the commission appointed by the preceding General Assembly; its hostility to our benevolent and literary institutions; its failure to carry out the reported pledges of the Democratic party to secure economy in the State; its extraordinary length of session in time of peace, resulting in an expense to the State, amounting, for the pay of its members, to more than double that of the previous General Assembly; the malignant attempts to disfranchise disabled soldiers and other citizens of the State; its attempt to take from the General Government the right to pursue, arrest, and punish, those who violate the laws made in pursuance of the Constitution of the United States; and the vicious acts intended to destroy the power of the nation to protect and preserve the liberty and safety of its citizens, has shown the Democratic party unworthy of the trust, confidence, and support, of our honest and patriotic people.

Resolved, That the Republican party of Ohio is in favor of a speedy establishment of a Soldiers' Orphans' Home in Ohio, not only as an act of justice to the many poor and helpless orphans of deceased soldiers, but as a recognition of the patriotic services of their fathers in the late war, and for the purpose of redeeming the pledges made by all loyal people to protect the families of those who fell in the cause of human liberty and right.

The Democratic State Convention was held at Columbus, July 7th, when the following ticket was nominated: for Governor, W. S. Rosecrans; Lieutenant-Governor, T. J. Godfrey; State Treasurer, S. Buhrer; Judge of Supreme Court, W. J. Gilmore; Attorney-General, J. M. Connell; member of Board of Public Works, B. P. Churchill. The platform adopted was as follows:

Resolved, That exemption from tax of over $2,500,000,000 in Government bonds and securities is unjust to the people, and ought not to be tolerated, and that we are opposed to any appropriation for payment of interest on public bonds until they are made subject to taxation.

Resolved, That the claims of bondholders that the bonds which were bought with greenbacks, and the principal of which is by law payable in currency, should, nevertheless, be paid in gold, is unjust and extortionate, and if persisted in will inevitably force upon the people the question of repudiation.

Resolved, That we denounce the high protective tariff which was designed to aid the interests of the New England manufacturers. The said tariff is also, by its enormous impositions on salt, sugar, tea, coffee, and necessaries, unendurable and oppressive, especially upon the people of the West, and that we demand its repeal, and the substitution of another based upon revenue principles alone upon the closest possible approximation to absolute free trade.

Resolved, That the Democratic party of the United States have always been permanently friendly to the rights and interests of the laboring-man, that they are in favor of a limited number of hours in all manufacturing workshops, hours dictated by the physical and mental well-being of the laborer; that they favor the most liberal laws in regard to household and homestead exemption from sale and execution; that they are also in favor of liberal grants of land from the public domain to the actual settler, and are opposed to the donation of them to swindling railroad corporations, and that they are generally friendly to the system of measures advocated by the labor and industrial congresses; and we pledge the Democratic party, if restored to power, to exercise them in giving them practical application.

Resolved, That the attacks of Governors Hayes and Lee upon the doings of the late General Assembly are false in fact, malicious in spirit, and unworthy of gentlemen occupying their elevated positions.

Resolved, That the late General Assembly were called upon to make large and extraordinary appropriations; to rebuild the burned Lunatic Asylum, to provide a Reform School for Girls, construct a new Blind Asylum, to make appropriations to pay over $80,000 of a judgment obtained in the Supreme Court of the State in favor of the Life Insurance and Trust Company, and to meet a deficiency of over $500,000 of the preceding Republican Legislature, all of which, together with the extra compensation paid to members under a law passed by a Republican Legislature, were provided for without an increase of the State levy, and the appropriations in the aggregate are much less than that of the preceding Republican Legislature, without subtracting $800,000 from the relief fund for the maimed and disabled soldiers and their families.

Resolved, That we hereby return our thanks to the fifty-eighth General Assembly for their economical expenditures in the administration of the State government, and the exposal of the wholesale frauds in the erection of State buildings, whereby the people were swindled out of $500,000 by the negligence of Republican State officials and the dishonesty of contractors.

Resolved, That it is the right of each State to decide for itself who shall possess the elective franchise within it; that the attempt to regulate suffrage in Ohio by means of the so-called fifteenth constitutional amendment is subversive of the principles of the Federal Constitution.

Resolved, That the policy and legislation of the radical party directly tend to destroy all the reserved rights of the States, and convert the republic into a consolidated despotism; that, whether such despotism be exercised by an emperor, a President, or a Congress, the result would be fatal to liberty and good government; that consolidation in this country means the absolute dominion of monopoly and an aggregate capital over the lives, the liberty, and the property, of the toiling masses.

Resolved, That we denounce the national banking system as one of the worst outgrowths of the bonded debt, which unnecessarily increases the burden of the people $30,000,000 annually, and that we demand its immediate repeal.

Resolved, That the trial and sentence to death by a military commissioner of a citizen of Texas, not in the military or naval service, when the civil courts were in the unobstructed exercise of their functions in that State, and in the time of profound peace, and the approval of that sentence by Accident Grant, are violations of the most sacred rights of American citizens, guaranteed by their constitutions, State and Federal, and deserve and should receive the severest

condemnation of every lover of liberty and constitutional government.

Resolved, That the numerous palpable and high-handed usurpations of the party in power, their many public and private acts of tyranny, trampling under foot the civil law and the guarantees of the Constitution; their continuing to deprive sovereign States of representation in Congress, and to govern said States by mere military rule, show them to be the party of despotism, and unworthy the confidence and support of a free people.

Resolved, That we extend the right hand of fellowship, and recognize as brethren in a common cause, all conservative men, not heretofore Democrats, who will unite with us in rescuing the Government from the unworthy hands into which it has fallen, and we pledge the united and cordial support of the two hundred and fifty thousand Democrats in Ohio, whom we represent, to the ticket nominated by this convention, and presented by us to the suffrages of the people of Ohio.

On the 14th of July a State Temperance Convention was held in Mansfield, at which a platform of prohibition of the manufacture and sale of intoxicating liquors was adopted, and the following State ticket nominated: for Governor, J. E. Ingersol; Lieutenant-Governor, Joshua Wadsworth; State Treasurer, T. Edmondson; Attorney-General, James A. Sumner; Judge of Supreme Court, G. T. Stewart; member of Board of Public Works, L. B. Silver.

Mr. Ingersol declined the Temperance nomination for Governor, and Samuel Scott was nominated in his stead. On the 8th of August a dispatch was received from General Rosecrans, then in California, declining the Democratic nomination for Governor, and on the 11th the Central Committee nominated George H. Pendleton for the office. The election took place October 12th, when the entire Republican ticket was elected. The vote on Governor stood thus: R. B. Hayes (Rep.), 236,082; G. H. Pendleton (Dem.), 228,581; S. Scott (Prohibition), 629. At the same election a Legislature was chosen. Republican and Democratic straight tickets were run in all the counties but Hamilton, and in a few localities Prohibition legislative tickets were nominated. In Hamilton County a "Reform" ticket, chosen equally from the Republican and Democratic parties, was successfully run against the straight Republican ticket. The result of the election was as follows: Senate — Republicans, 18; Democrats, 17; Reform, 2; total, 37. House — Republicans, 53; Democrats, 49; Reform, 10; total, 112. Dividing the "Reform" members according to their party antecedents, the Republicans have a majority of one in the Senate, and four in the House.

The geological survey of the State, authorized by the law passed in March, was entered upon in June. Prof. Newberry, the State Geologist, immediately on his confirmation organized his corps and allotted to the members different fields of labor, Mr. J. H. Klippart, Secretary of the State Board of Agriculture, being charged with the investigation of the surface soil in its relation to agricultural purposes. In addition to the regular corps, seven volunteers were employed on the survey, all experienced men, and five of them graduates of the School of Mines in New York, whose only compensation was their travelling expenses. A portion of these investigated the manufacturing interests, especially in relation to iron and coal. The summer was mainly employed in blocking out the work through the State, and mapping its surface geologically. One of the immediately valuable results of the survey was the discovery of large deposits of water-lime within the State.

The development of the stone interest of the northern part of the State has been greater during this year than at any previous time, several new quarries having been opened. The quarries from which are taken the grindstones, that have long formed an important item of commerce, and the building-stone, that has recently become widely known as Cleveland stone, or Ohio stone, are situated in the counties of Cuyahoga and Lorain, not far from Cleveland. The stratum of rock principally worked is known as "grindstone grit," and is a gray sand-rock, free from pebbles, and of varying thickness. It is of a light-gray color, generally free from coloration by iron, works easily, splits and breaks very true into large and perfect blocks, and, being nearly pure silex, is wholly indestructible by exposure. Colonel Whittlesey, who thoroughly examined the strata of this part of the State as a member of the former geological survey, reported it unequalled in value for grindstone and building purposes by any thing in the Northern States. Grindstones were made from the ledges on Vermillion River, in Lorain County, in 1798, within two years after the settlement of the Western Reserve.

The principal quarries are at Berea, twelve miles from Cleveland, from which comes the greater portion of the grindstones, and recently a large part of the building-stone; at Independence, eight miles from Cleveland; at Lake Abram, between two and three miles from Berea; and at Amherst and Brownhelm, in Lorain County, about twenty miles from Cleveland. The texture and color of the stone vary slightly in the different localities. The Berea stone is of a light gray tinged with blue, and lies horizontally in sheets varying in thickness from one foot to ten feet, on either side of Rocky River, even with the bed of the stream. The rock is generally worked to a depth of from twenty to twenty-five feet, the thin upper layers being used for common flagging, the thicker layers next succeeding for grindstones and bridge-building, and the under sheets, varying from seven to ten feet in thickness, for the finest building-work and statuary. The Berea block-stone was introduced into New York City as a building-stone in 1866, and met with so much favor that a large demand for it sprang up. A great number of important buildings in the Atlantic States and Canada have since been built or trimmed with it,

and it has been successfully used for large statuary. Eight quarries were worked by different firms in 1869, producing 7,000 tons of small and medium-sized grindstones and 75,000 tons of building-stone. Lake Abram stone is of a somewhat coarser texture, of a light-gray or cream color, and crops out on a high ridge. The stone is used for building-purposes and for large grindstones for manufactories, some weighing from two to three tons each. The quarry was first worked this year. Independence stone also is taken from a high ridge, is of a light-gray color, and is used for building and for large coarse grindstones. The quarries are worked by three firms, producing about 4,000 tons, mostly grindstones. The Amherst and Brownhelm, or Black River quarries, are in hills from twenty to forty feet high. The stone is of a gray or cream color, and is used for grindstones and very extensively for building-stone all over the Northern States. The stone from these quarries was the first from Ohio taken to the Eastern States, it having been introduced in New York in 1863. During 1869 the shipments aggregated 30,000 tons of building-stone and 8,000 tons of grindstones. The entire shipments of what is known as "Ohio stone," in 1869, amounted to over 125,000 tons in grindstones and building-stone.

The specific gravity of the Ohio or Cleveland stone is 2.35. It weighs on an average 142½ pounds to the cubic foot. A close analysis makes the percentage of pure silica at from 92 to 95.20, the latter percentage being reported of Berea stone. A number of cubic blocks, 1½ inches square, were, in 1867, tested by hydraulic pressure, in New York, at the request of the architect of Trinity Building. The Berea stone tested sustained an average pressure of 15,400 pounds, and the Amherst or Brownhelm stone of 9,750 pounds.

On November 1st, the Board of Education of the city of Cincinnati adopted the following resolutions:

Resolved, That religious instruction, and the reading of the Holy Bible, are prohibited in the common schools of Cincinnati, it being the true object and intent of this rule to allow the children of the parents of all sects and opinions, in matters of faith and worship, to enjoy alike the benefits of the common-school fund.

Resolved, That so much of the regulations on the course of study and text-books in the intermediate and district schools (p. 213, *Annual Report*) as reads as follows: "The opening exercises in every department shall commence by reading a portion of the Bible by or under the direction of the teacher, and appropriate singing of the pupils," be repealed.

Application was made to the Superior Court, by persons opposed to this action, for an injunction restraining the Board from carrying out the resolutions. They quoted, as the basis of their action, the following provision of the Bill of Rights in the constitution of the State:

Religion, morality, and knowledge, however, being essential to good government, it shall be the duty of the General Assembly to pass suitable laws to protect every religious denomination in the peaceable enjoyment of its own mode of public worship, and to encourage schools and the means of instruction.

The injunction was granted, and arguments heard for and against making it perpetual. A decision was rendered in February, making the injunction perpetual. The case attracted attention throughout the country, as bearing upon the question of religious or sectarian instruction in public schools.

OREGON, the most northern State of the Union on the Pacific slope, having California on the south and Washington Territory on the north, extending from the Pacific Ocean to Snake River, the latter constituting a part of its eastern boundary. It is 350 miles long from east to west, and 275 wide from north to south, containing 95,274 square miles, or 60,975,360 acres, being about half as large as the State of California. Population estimated at about 100,000. Capital Salem, in Marin County.

The Coast Mountains and the Sierra Nevada, traversing California, continue northward through Oregon; the latter, after leaving California, are named the Cascades. Near the southern boundary the chain throws off a branch called the Blue Mountains, which extends northeastwardly through the State, passing into Washington and Idaho.

The course of the Cascades through the Sate is generally parallel with the shore of the Pacific, and distant therefrom an average of 110 miles. In California the direction of the Coast Mountains and coast valleys is that of general parallelism with the sea-shore; the mountains sometimes approaching close to the shore and then receding miles from it, leaving belts of arable land between them and the ocean. In Oregon the Coast Range consists of a series of highlands running at right angles with the shore, with valleys and rivers between the numerous spurs having the same general direction as the highlands. The Coast Range of mountains, which extend the whole length of the State, are covered with fine timber, such as fir, cedar, ash, hemlock, maple, live-oak, and other valuable kinds. Numerous streams, abounding in trout and salmon, flow down from these mountains. The western coast is rather rough and uninviting, yet there are innumerable situations where happy homes might be made if settlers had the nerve to attack and subdue the forests that cover them. The climate is mild, the air and water pure, and the soil exceedingly rich and productive, while the water-powers and facilities for manufacturing lumber are unsurpassed, with the broad highway of the Pacific stretching away to excellent markets. The Indian Reservation, covering the principal parts of the coast west of the Willamette Valley is the great obstacle to the settlement and improvement of that part of the State.

The Willamette Valley, between the Coast and Cascade ranges of mountains, is 150 miles long by 80 wide, and embraces 12,000 square

miles. Through this valley flows the Willamette River, which is fed by several fine lateral streams issuing from the mountains. There are easy passes through the Coast Range of mountains to the sea. The soil is deep and very productive, and the valley is well timbered. Immediately south lies the Umpqua Valley, which is reached from the Willamette by easy passes through the Calapooya Mountains. The Umpqua River flows through this rich valley, and is fed by clear, swift tributaries from the mountains on either side, similar to the Willamette. The soil is not quite equal to that of the Willamette Valley.

The lands of Oregon yield as fine a wheat crop as any country in the world, the grain reaching a size and plumpness seldom seen in other countries, and is a never-failing crop. Oats, barley, and, in fact, all small grains grow to the best advantage. It is unsurpassed for fruit and garden vegetables. It is known all over the Pacific slope as the land of "red apples." The people have taken great pride in planting large orchards of the best-selected fruits, which bear heavily every year, and are never known to fail. Peaches grow well, but not so bountifully as apples. It is a great country for pears, plums, cherries, currants, blackberries, strawberries, and many other fine fruits and berries. Some parts of the State cannot be surpassed for grapes, but they do not ripen well in the Willamette Valley.

The people have built many school-houses. There is a liberal system of common schools for so new and weak a State. The poorest cottage has its books and papers; in general, the people are fond of reading.

Oregon is a good country for horses; they are generally fleet, hardy, and live to a very great age. This is also a suitable country for sheep, cattle, and hogs, and has a great many fine breeds of each. Sheep are very healthy, multiply rapidly, and produce very fine heavy fleeces.

The climate along the coast is mild and very uniform; in the Willamette, Umpqua, and Rogue River Valleys it is very much the same. In the summer a gentle breeze blows from the mountains toward the sea in the forenoon, and in the evening from the sea to the mountains. In the winters the winds from the South Pacific strike the coast at the western extremity of the State, and, following the natural channel between the Cascade and Coast Ranges, bring up the clouds from the ocean, which give Oregon her rainy season of from four to six months' duration. When the winter winds blow from the Isthmus of Darien or the Gulf of Mexico, they have snow, which generally lies but a short time in the valleys. In the valleys east of the Cascade Mountains there is more snow and frost in winter, and but little rain. The summers all over the State are dry, clear, and pleasant; the heat of the sun being toned down by the cool breezes, blowing in every direction, from the summits of Mounts Hood, Adams, Jefferson, and St. Helen's, rising to an altitude of perpetual snow during the entire year. The rainy season here mentioned is not one continuous, monotonous rain during the whole winter season, but falls for several days at a time, perhaps for a week or more, with intervals of pleasant weather for several days' or weeks' duration.

The following table of the number of rainy and dry days in the year ending August 31, 1869, will give a better idea of the climate than any description. It is from the registry of Dr. George W. Gray, of Albany, Linn County, Oregon:

	Dry days.	Rainy days.	Showery days.		Dry nights.	Rainy & showery nights.
Sept., 1868.....	28	0	2	Sept., 1868.....	30	0
Oct., "	23	2	6	Oct., "	24	7
Nov., "	19	6	5	Nov., "	19	11
Dec., "	10	10	11	Dec., "	12	19
Jan., 1869.....	14	6	11	Jan., 1869.....	14	17
Feb., "	20	5	3	Feb., "	19	9
Mar., "	15	3	13	Mar., "	18	13
Apr., "	21	3	6	Apr., "	22	8
May, "	19	5	7	May, "	20	11
June, "	29	0	1	June, "	30	0
July, "	28	0	3	July, "	29	2
Aug., "	24	2	5	Aug., "	25	6
Total.....	250	42	73	Total.....	262	103

As will be seen by the above table, we had 250 dry days; 42 rainy days; 78 showery days; 262 dry nights, and 103 rainy nights, during the year ending August 31, 1869. This climate will bear comparison with any in the northern latitude.

The winter of 1868–'69 was among the mildest that Oregon has been favored with for many years. Snow did not fall in sufficient quantities, at any time, to cover the ground, and ice was not formed thicker than one-eighth of an inch during the coldest weather.

The mountain-summits of Oregon and their heights, according to the Coast Survey Reports, are as follows:

	Feet.		Feet.
Mt. St. Helen's.....	9,550	Mt. Constitution.....	2,395
" Ranier.....	12,330	" Erie.....	1,250
" Baker.....	10,760	" Ellina.....	6,812
" Olympus.....	8,200	The Brothers.....	6,827
" Constance.....	7,777	Mt. Hood.....	11,225

There were no elections, either for members of Congress, Legislature, or State officers, and consequently no occasion for political conventions. The State was very much excited during the year, in regard to the projected railroads of the State; nearly 2,000 miles have been surveyed and portions built from the proceeds of the lands donated to them by the Government; but when the companies had sold the fertile lands granted to them, and expended the money, they discontinued their work and left the roads unfinished, and without any facilities for travel over the portions which were finished. These roads have, some of them, during the year passed into other hands, and there is a prospect that most of them will be completed speedily. They will

connect the State with San Francisco, and with the Central Pacific south of the Blue Mountains. It is expected also that a branch of the Northern Pacific, which is already well under way, will be constructed to Portland, Oregon.

OVERBECK, FRIEDRICH, an eminent German painter, born at Lubeck, July 3, 1789; died in Rome, November, 1869. He commenced his studies as an artist at Vienna in 1806; but having adopted certain notions on art, and the mode of studying it, essentially different from those inculcated in the academy, he was expelled, together with certain other students who entertained the same views, and in 1809 went to Rome. Here he was soon afterward joined by Cornelius and Schadow; and these three, animated by similar ideas, and mutually encouraging each other, laid the foundation of a school that now holds a high rank, and has in no small degree influenced the taste for art in Europe at the present time. A picture of the Madonna, which he painted at Rome in 1811, brought him into marked notice. He was next employed, together with his associates, by the Prussian consul, Bartholdi, to decorate his villa with frescos, and here Overbeck executed his "Joseph Sold into Captivity," and "The Seven Years of Famine." After completing these he painted in fresco, in the villa of the Marchese Massini, five large compositions from Tasso's "Jerusalem Delivered." In 1814, with several of his associates, he embraced the Roman Catholic faith, and from that time devoted his pencil more exclusively than ever to religious subjects. His chief work is a fresco at Assisi, "The Miracle of Roses of St. Francis," and his greatest picture in oil-colors is "The Influence of Religion on Art," preserved in the Stadel Institute in Frankfort. One of his last undertakings, a series of designs from the Evangelists, delicately engraved in the line manner, is a work of great merit. Through his entire career as an artist, he adhered to the views with which he started, viz.: a thorough devotion to the style of the Italian masters prior to the period of the Renaissance, and a strong impression that form or drawing in the style of Greek or classic art is inadmissible in works embodying religious subjects. Most of his best works are familiar throughout Europe and America, and the most distinguished German engravers have employed themselves in reproducing his compositions.

OWEN, JOHN JASON, D. D., LL. D., an eminent Greek scholar, author, and commentator; born at Colebrook, Connecticut, August 13, 1803; died in New York City, April 18, 1869. His parents having removed to Kingsboro, New York, he commenced his preparations for an academic course under the tutorship of the Rev. Elisha Yale. He graduated at Middlebury College, Vermont, in 1828, and at the Andover Theological Seminary, Massachusetts, in September, 1831. The following year he took up his residence in New York, was ordained to the Christian ministry by the Third Presbytery, and immediately became connected, as secretary, with the Presbyterian Educational Society. He occasionally occupied his leisure time in preaching, but never took charge of any church. When the Cornelius Institute was established, he took direct control of it. About that time he commenced perfecting his knowledge of Greek and Latin, devoting his spare hours to their study with his own ardor and assiduity. He was particularly fond of the former language. The result was, the appearance at different times of translations of several Greek authors, which have since become text-books and standard works of reference in many educational institutions. Among them may be mentioned his Greek Reader, a preparatory book, which was first issued in 1842; Homer's Iliad, 1851; Thucydides, 1849, and also Homer's Odyssey, and Xenophon's Anabasis and Cyropædia. These books attracted considerable attention and scrutiny, and were warmly welcomed by all scholars. It was a frequent remark of Prof. Owen's that theological students were unable to combine the study of Greek and of the Bible at the same time, to remedy which he finally translated the Acts of the Apostles into Greek, appending a dictionary of the words in the same language. His most extensive literary undertaking was his Commentaries on the Gospels, the first volume of which appeared in 1857. Two volumes have since been printed, and manuscript for a third was in readiness for the printer at the time of his death. In November, 1848, Prof. Owen retired from the head of Cornelius Institute, in order to accept an appointment as Professor of the Latin and Greek Languages and Literature at the New York Free Academy. On the 7th of July, 1853, he was chosen Vice-Principal of the academy under Professor Webster, continuing as such until the 2d of May, 1866, when the name of the Institution was changed to that of the New York Free College, of which he became Vice-President.

P

PARAGUAY, a republic in South America. President, General Francisco Solano Lopez, born in 1827; assumed the presidency on September 10, 1862. Area of Paraguay proper (situated between the Rivers Parana and Paraguay), 73,000 English square miles; but, including part of the Grand Chaco, a disputed territory on the right bank of the Paraguay, between Bolivia, Paraguay, and the Argentine Republic, and a small tract of land between the Parana and Uruguay, to which Paraguay lays claim, the territory would exceed 200,000 square miles. The population, in 1867, amounted to 1,337,431.

A division of iron-clads left Asuncion on the 5th of January, and, entering the Manduvira on the 6th, chased six Paraguayan steamers to a narrow river, seventy miles from the Paraguay, but were there stopped by the Paraguayans sinking a steamer across the narrow channel. Being unable to follow the chase farther, the Brazilian vessels returned to Asuncion. During the pursuit the Paraguayans abandoned a nearly-completed steamer, an old one cut down, a schooner laden with tackling and cordage, and a number of barges and boats.

Lopez ordered the crews and guns of the steamers to be removed to his new position at Birabibi, in the mountains, where he had 5,000 men, and was actively recruiting.

The American minister, General McMahon, and the French and Italian consuls, were still with Lopez. As regards the forces of the contending parties at the beginning of 1869, it seems that the Paraguayans under Lopez numbered about 9,000, and the allies, under the command of the Marquis Caxias, 18,000 men. The allies for a while were inactive. Caxias left his command on account of alleged sickness, giving it up to Marshal Guilherme de Souza. This indecision gave Lopez time to recover and to fortify himself in his new position at the mouth of the Tebicuari. Paranhos, the Brazilian commissioner to Paraguay, endeavoring to bring the war to a close, made propositions of peace to the Paraguayans on the following conditions: that the independence of Paraguay shall not be impaired; that the freedom of navigation of the Rio Paraguay and the Rio de la Plata be guaranteed, and that Lopez renounce his claims to a portion of the Chaco territory and the province of Matto Grosso.

This proposition was not accepted. The Paraguayans were determined to fight to the bitter end. The prisoners of war, released by the allies at Angostura, rejoined Lopez, who made several very successful raids into the territory held by the allies. On April 14th the new commander-in-chief of the allies, Count d'Eu, arrived at Asuncion, and applied himself first to remedying abuses and providing for a vigorous campaign.

In March General McMahon, the minister of the United States in Paraguay, was recalled by the new Administration in Washington.

The following is President Grant's letter to Lopez, informing him of McMahon's recall:

Great and Good Friend: Mr. Martin T. McMahon, who has for some time resided near the Government of the Republic of Paraguay, in the character of minister resident of the United States, being about to return to this country, I have directed him to take leave of your Excellency. Mr. McMahon, whose instructions had been to cultivate with your Government relations of the closest friendship, has been directed, on leaving Paraguay, to convey to your Excellency the assurance of our sincere desire to strengthen and extend the friendly intercourse now happily subsisting between the two Governments, and to secure to the people of the two countries a continuance of the benefits resulting from that intercourse. The zeal with which he has fulfilled his former instructions leads me to hope that he will execute his last commission in a manner agreeable to your Excellency.

Written at Washington the fifteenth day of March, in the year of our Lord one thousand eight hundred and sixty-nine.

Your good friend, U. S. GRANT.

By the President:
HAMILTON FISH, Secretary of State.

At the formal departure from Lopez, General McMahon addressed him as follows:

Your Excellency: My mission near the Government of Paraguay having terminated, I have the honor to place in your Excellency's hands the autograph letter of the President of the United States, announcing my recall. The heroism and noble perseverance which I have witnessed during my short residence in this country has filled me with profound and lasting interest in the lot of its people. I hope sincerely that the day is not far distant when the din of arms will cease forever within the confines of the republic, and that the heroic sacrifices made by the gallant people over whom your Excellency presides will meet their just reward in the prosperity and lasting independence of their country. I now fulfil the last duty with which I am intrusted, by expressing to your Excellency the sincere desire of the President of the United States to strengthen and draw closer the friendly relations happily existing at present between the two Governments, and to insure to each people the benefits resulting therefrom. I offer you this assurance with the greatest pleasure, from the fact that, during my mission near your Excellency's Government, nothing has occurred to interfere in the slightest degree with these friendly relations, and I devoutly hope that they will ever continue on the same footing.

To this President Lopez made the following reply:

Mr. Minister: I had cherished the hope that the worthy representative of the greatest of republics would have been a witness to the end of the heroic sacrifices made by this people for their existence, whatever be the final lot which the God of nations may design for them. I feel flattered, nevertheless, at the just terms in which you recall the heroism of this generous people, and, while our voice is stifled, they will serve to prove to the world that the Para-

guayan Republic still exists, fighting to insure its free return to the community of nations, and that a prolonged struggle has not undermined its faith or shaken its heroism. Sensible as I am of the assurances which your Excellency gives me in the name of the President of the United States, my task shall be to foster the friendly relations between the two countries, so that when we get rid of the enemies now claiming all our attention, we may resume the enjoyment of the mutual benefits they offer.

General McMahon was attended to the Brazilian lines by a Paraguayan guard of officers, under the command of General Caballero—next to Lopez the most prominent man in the Paraguayan camp. On arriving at General Polidoro's headquarters, General McMahon was received with marked respect, and shortly after an aide-de-camp arrived from the Count d'Eu, with an invitation to visit him at his headquarters. He accepted the invitation, and was received by his Imperial Highness with every mark of distinguished consideration. A guard of Brazilian soldiers, under the command of Captain Rice, accompanied him to Asuncion.

When the allies, after several months of inactivity, resumed the offensive, they were at first much harassed by Lopez's bold troopers. General Barreto, with over 2,000 cavalry, failed to advance on Villa Rica, to join General Portinno's brigade, which was attempting a march from the Upper Parana, but, on returning from the Tebicuari, he found he could not get over that river where he struck it, and thought it advisable to make no further stay, looking for fords, but to hurry back with all possible dispatch; and, in fact, it was only by a series of forced marches that he managed to escape being caught in the narrow roads through the woods. As it was, his rear-guard, which had fallen behind nine or ten miles, in trying to bring along some 8,000 Paraguayan non-combatants, was cut off from the main body; the Paraguayans, under Caraballo, coming in by a side-road, and fortifying during the night the narrow bush-road which formed the communication. On being informed of this Barreto turned back, and abandoned his rear-guard to its fate. The Count d'Eu, on hearing that Barreto was threatened by the Paraguayans, hurried off brigades of cavalry and infantry to his assistance, and rescued the rear-guard, but all the Paraguayan refugees had disappeared. Most of the Brazilian rear-guard saved themselves by abandoning their horses and by taking to the woods, living on what they could find till their friends came up. Barreto brought into camp between 3,000 and 4,000 Paraguayan women, children, and old men, who were started ahead, and thus were not recaptured.

A victory was obtained by a Brazilian force that marched against San Pedro, while 1,200 Paraguayans were trying to place a deep river between them and the greatly superior corps marching to attack them. Three hundred Paraguayans were surrounded and taken, the rest tried to cross the river, and, while doing so, they suffered so severely from the fire poured on them, that the Brazilian commander estimates their loss at 500 killed, out of the 1,200 engaged. All the cannon, two flags, some arms, etc., were taken.

These operations on the part of the allies developed the fact that Lopez was still strong. His position was in a range of mountains, having a height of 900 to 1,000 feet, beyond which the country gradually rises to the central chain of Paraguay, where the elevation reaches over 3,000 feet. In those highlands the Paraguayan women were raising food, while the men guarded the approaches and could retire from position to position into still more difficult regions; the gaps were well defended by abattis and earthworks; on the flat tops of the mountains Lopez had his heaviest cannon so placed as to sweep the gaps and command the works below; he was, however, very much in need of arms and ammunition. The Brazilian commander was aware of Lopez's pertinacity and his own difficulties, as set forth plainly and frankly in a statement subsequently made.

The attack upon Ascurra, which had been for several months the stronghold of Lopez, was retarded by heavy rains. When the Brazilians advanced, they received a serious check and were thrown back upon their base, their rear-guard being defeated during the retreat. Count d'Eu was baffled in every attempt to make a satisfactory reconnoissance of approaches to Ascurra, although he commanded the entire line from Asuncion to Villa Rica. On August 21st, the Argentine cavalry cut off 300 to 400 Paraguayans escorting some baggage, but the advanced troops of the allies fell back. The main army, according to official Brazilian reports, reached Perebebuy on the 10th of August. On the 12th, this place was attacked and taken after a stubborn struggle. The place was defended by 2,000 men. The taking of Perebebuy caused Lopez, as it appears, to abandon Ascurra. The allies continued their pursuit, and forced Lopez to accept battle on August 16th. Lopez was beaten, and left 23 cannon, his loss being estimated by the Brazilian reports at 2,000. At the Hondo another skirmish took place, with the same result. On August 18th the six vessels of Lopez, which were beached near Caraguatay, in the Tagy, were burned by the Paraguayans. The allied loss at the taking of Perebebuy is given at 645 killed and wounded. The town was badly chosen for defence, being on the slope of a hill, and commanded from several points. The Paraguayans were caught as in a trap, the works being entered on three sides; but they resisted desperately, even the women taking part with lances and sticks, and hurling bottles and stones at the allied soldiery. General José Manoel Menna Barreto was killed.

After these reverses, Lopez retreated slowly, holding his ground as pertinaciously as could be expected. The Indians in the east of Paraguay seemed to remain loyal to him, and he sent officers to them to organize and train

them. He had still about 5,000 men, but began to be out of ammunition, while his cavalry was poorly mounted. He established his headquarters at St. Estanislas to collect supplies and men (50 miles from the river Paraguay). The loss of the Brazilians during the struggles in August is said, by Paraguayan sources, to have amounted to 8,000 men. The allies prepared to return from Paraguay, and the Argentine contingent was called back. Count d'Eu gave his command to General Polidoro.

Early in the year, the allies had appointed in Asuncion a provisional government. In August the Provisional Government issued a decree, offering free grants of land along the Upper Parana for the importation of live cattle. The Government also abolished the monopoly on yerba, the Paraguayan tea. This was the only tax imposed upon the people by the late government, and it yielded an immense revenue, the tea being purchased by the government at about twenty-five cents the twenty-five pounds, and sold to exporters at about $8.

In September, Lopez retired still farther, to San Joaquin, the allies remaining rather inactive, as pursuit became more and more difficult. In November, the Brazilians crossed the Tejui-Guaza River, and surrounded the position of Lopez, which was promptly abandoned, the Paraguayans being closely pursued by cavalry, which pushed on to Ingatime, where machinery for making gunpowder was found and destroyed. Lopez then retreated beyond the Maracaya. The latest news from the seat of war was very contradictory. The allies several times reported the flight of Lopez to Bolivia; but these reports were up to the end of the year found to be incorrect, as he still continued his guerilla warfare. At the close of the year the Argentine, as well as a considerable portion of the Brazilian troops, were called home, a small force being regarded as sufficient to prevent the return of Lopez to power.

PARDEE, RICHARD G., a promoter and organizer of Sabbath-schools, and an author, born in Sharon, Schoharie County, N. Y., October 12, 1811; died in New York, February 4, 1869. The first sixteen years of his life were spent upon his father's farm, attending, as he had opportunity, the district school. In 1828 he went to Seneca Falls, where he acted for a short time as clerk in the post-office, and afterward obtained a situation in a dry-goods store. In 1840 he removed to Palmyra, in Wayne County, and was there engaged in business until 1852, when he removed to Geneva, and a year later to New York City, having accepted the position of General Agent for the New York Sunday-school Union. Here he remained for a period of ten years, exhibiting marked enterprise and efficiency in the management of the affairs of the Union, developing and extending its influence until it became a conspicuous feature in the religious institutions of that city. About 1863 he resigned his position in order to labor more effectually in the Sunday-school, although, at the same time, he entered into the employment of a life-insurance company. During the last five years of his life he visited nearly every State in the Union, attending conventions, lecturing before Sunday-schools, and everywhere showing an indefatigable assiduity in the promotion of the Sunday-school work, laboring among all denominations alike. He was the author of a volume entitled "The Sabbath-school Index," several articles in religious periodicals, giving his experiences in, and views on, Sunday-school matters, and also of a work on horticulture.

PARK, ROSWELL, D. D., an Episcopal clergyman, college professor and president, and author, born in Conn., in 1807; died in Chicago, Ill., July 16, 1869. He entered the United States Military Academy at West Point in July, 1827, and graduated in 1831, ranking first in his class. He was immediately appointed second-lieutenant of the Corps of Engineers, and served as assistant-engineer in the construction of Fort Adams, Newport Harbor, from 1831 to 1833; of Fort Warren, Boston Harbor, from 1833 to 1836, and of the Delaware Breakwater, at the mouth of Delaware Bay, in 1836. On the 30th of September, 1836, he resigned his commission, and was immediately appointed Professor of Natural Philosophy and Chemistry in the University of Pennsylvania, where he remained till 1842. In 1842 he received deacon's, and, in 1843, priest's orders in the Protestant Episcopal Church, and was, for two years, employed in the pastorate. But teaching was his appropriate vocation, and, in 1845, we find him the Principal of Christ-Church Hall, a high-school in Pomfret, Conn., which he conducted with great success till 1852. In 1850, Norwich University, Vt., conferred on him the honorary degree of D. D., and called him to the presidency of the university. He declined, but two years later accepted the presidency of Racine College, Wisconsin, retaining the position till 1859, and serving as chancellor of the college from 1859 to 1863. In 1863 he removed to Chicago, and founded a literary and scientific school for young men near that city, to which he gave the name of Immanuel Hall. Of this school he was the rector and proprietor till his death. Dr. Park had a high reputation as a physicist, and kept up his acquaintance with physical science through life. He was the author of "A Sketch of the History of West Point," 1840; "Pantology, or a Systematic Survey of Human Knowledge," 1841; "Hand-Book for American Travellers in Europe," 1858; "Jerusalem and Other Poems," 1857, and a number of occasional addresses, lectures, etc.

PEABODY, GEORGE, a banker of London, and the most liberal philanthropist of ancient or modern times, born in Danvers, Mass., February 18, 1795; died in London, Eng., November 4, 1869. He was descended from a

good family of the old English stock, his ancestor Francis Paybody having come to New England in 1637, and having attained to a prominent position and considerable wealth in the colony during a long life there. Some of his numerous descendants, and among them the parents of George Peabody, had met with misfortunes and were poor. In consequence of their poverty they were unable to give any considerable opportunities of education to their children. After acquiring the scanty rudiments of an education, little more than the ability to read and write, George Peabody became, at the age of eleven years, a clerk in the grocery-store of Sylvester Proctor in Danvers. Three years later, he went to Vermont and lived for a year with his grandfather, Mr. Dodge, at Thetford. In 1811, his elder brother, David, had opened a dry-goods shop in Newburyport, Mass., and sent for George, from Thetford, to become his clerk. Not long after he entered upon his duties there, a destructive fire occurred, and his brother, with many others, was ruined. He next went with an uncle—John Peabody, who had at one time been esteemed wealthy, but who had failed in 1811—to Georgetown, D. C. Here his uncle started a store, conducting business from prudential considerations in his nephew's name, though he was still a minor, and very soon intrusting it entirely to his management. His genius for mercantile pursuits soon developed itself, and attracted the attention of some eminent business men. Meantime fearing that, if he continued in business in his own name, he would be held responsible for debts of relatives which he had never contracted, he withdrew, in 1814, to become the partner of Mr. Elisha Riggs, in the wholesale dry-goods trade, that gentleman supplying the capital, the management of which he confided to the young merchant. At Baltimore, next year, the new house entered upon a large and growing business, insomuch that, in 1822, it could afford to establish branches in New York and Philadelphia. The business still increasing, Mr. Peabody soon had the opportunity of making repeated voyages to Europe for the purchase of goods, and several times on his transatlantic journeys was intrusted with affairs of moment by the State of Maryland. By the retirement of Mr. Riggs, in 1829, he became the head of his house, and in 1837 settled in London, four years afterward withdrawing from the firm of Peabody, Riggs & Co., and establishing himself as a banker. At this time he was already a man of large wealth. He had also performed noteworthy service for the public. During the commercial and financial crisis of 1837, he was appointed by the Maryland Legislature one of three commissioners to negotiate a loan. This duty was none of the lightest. In England all American securities were looked upon with suspicion because of the neglect of some of the States to pay the interest on their debt held abroad, and because of the numerous failures which were weekly reported. Mr. Peabody's influence, however, was sufficient to obtain the loan, and, in appreciation of his service on this occasion, the State afterward officially recorded her obligation "for his generous devotion to the interests and honor of Maryland." During these trying days he struggled manfully to sustain the credit of his native country, and it is not awarding him too much praise to say that the restoration of confidence in the ability and purpose of the United States to pay their debts was due more to his efforts than to those of any other man. He had won a high reputation in both Europe and America for commercial ability, strict integrity, and a wise foresight and discrimination in his business transactions, and in a few years his house became the leading one for American securities in Europe, and the one on which letters of credit were very generally drawn. His courtesy and attention to Americans who had letters of credit on George Peabody & Co., were very gratifying to the recipients and spread his fame widely. His house in London became the headquarters of American news and acquaintance. In 1851, when the prospects of the American department of the great World's Fair in London were very dark, Congress refusing an appropriation, Mr. Peabody came forward, and by his liberality supplied the deficiency. Toward Dr. Kane's Arctic expedition he gave $10,000. An American writer in London, since his death, gives the following account of his remarkable courtesies to American travellers:

> During 1851 Mr. Peabody commenced inviting to dinner every person who brought a letter of credit on his house. The thing had been unknown heretofore. He showed to the stranger particular attentions. A day or two after his arrival there was a polite note of invitation to dinner at the "Star and Garter," or to a Sunday's *fête* at Hampton Court, or to a sail on the Thames, or, at least, to an "At Home" at Club Chambers, left at his door. Simply as a business investment, his outlays paid. From 1851 to 1861, on which latter year he retired from active interest in his firm, the drafts upon him in American letters of credit increased twenty-fold. To defend themselves, the other leading houses were obliged to adopt his plan, and to-day the American stranger, visiting the great metropolis, owes it to Mr. Peabody's example that he finds not his money only, but a social welcome, in the bills of exchange he presents.
>
> At the head of the dinner-table, as the host of the numerous *fêtes* given at Richmond Hill, Blackwall, and Hampton Court, in his spacious suite of apartments at Club Chambers, or among guests at his extemporized pleasure-parties, Mr Peabody was one of the most genial of men. His gentle bearing, quiet humor, constant attention, and thorough good-breeding—added to his appreciation of whatever was good in the social qualities of others, laughing among the heartiest at a well-told story or brilliant repartee, and never flagging in his interest up to the latest hour of night—made him, as a friend and companion, one of the most desirable of men. It was on the 4th of July, 1851, that Mr. Peabody gave the international entertainment at Willis's Rooms, which brought him his first English notoriety. He had become somewhat known among Americans before this as a giver of good dinners. Not being in English society, however (for up to 1861 even he had never been presented at court, nor was a member of any one of the leading clubs—indeed, his nomination at the Reform had been black-balled), there were grave difficulties in

the way. Mr. Peabody sought Mr. Abbott Lawrence, and laid before the minister his plans. The latter approved, and presented them in turn to the Duke of Wellington. The Duke liked the idea, promised to mention it to his friends, and agreed to accept Mr. Peabody's invitation when it should come. This stamped the affair. Where the Duke went all could go. It was without exaggeration the affair of the season. Mr. Peabody spared no expense. Lablache, Alboni, and Grisi, lent the concert the aid of their voices; duchesses waltzed with Governors of States, and members of Parliament flirted with Massachusetts belles, long past the small hours of the night; newspapers chronicled the wonderful success of the rich American's banquet; and on the morning of July 5, 1851, George Peabody's name was in the mouths of half the kingdom.

The one hundredth anniversary of the corporate existence of Danvers, Massachusetts, occurred on the 16th of June, 1852, and that day was celebrated in a manner befitting the occasion. Among the invitations to attend the festivities was one to George Peabody, who replied, expressing regret that he could not be present to join in the celebration of this the centennial of his native town. He, however, sent the committee a sentiment enclosed in an envelope, "which was not to be opened until his name should be called in due course at the dinner-table." After the dinner had been eaten and several speeches made, Mr. Peabody's name was called, the envelope opened, and this sentiment read: "Education—a debt due from the present to future generations." In continuation he wrote: "In acknowledgment of the payment of that debt by the generation which preceded me in my native town of Danvers, and to aid in its prompt future discharge, I give to the inhabitants of that town the sum of $20,000, for the promotion of knowledge and morality among them." To this sum he afterward made repeated additions, taking great interest in the Peabody Institute and Library, erected and supplied with books and apparatus through his liberality. In all, he gave to this institute $200,000, and $50,000 more to found an institution on a similar plan in North Danvers.

Mr. Peabody's commercial credit never suffered serious reverse. There was but a single time during his residence in London—and that occupying the brief period of two or three days only—when his financial solidity was in question. It was in the early autumn of 1857. There had been great failures in New York. Remittances from America to England ceased. The storm increased. Private bankers refused to discount the best paper, and the Bank of England denied the application for an extraordinary loan to Overend and Gurney. Failures commenced in the city; whispers against the oldest houses were overheard; a draft of the broker of the Rothschilds, for £10,000, on Brown, Shipley, and Co., was rejected when offered for discount, and Peabody was said to be tottering. Mr. Peabody then took the bold step of his life. Without consultation with friends, as if on his usual errand to 'Change, he stepped into the parlor of the Bank of England, placed before the directors a list of his assets, and asked the loan of £1,000,000. Such, at least, was London rumor. What took place in that modern Star Chamber is not on record. Before the close of business hours it was stated, as if on authority, that the great American house was safe. Mr. Peabody's credit stood impregnable.

Five years after this event Mr. Peabody paid a visit to the United States, and one of his first acts was to contribute the sum of $300,000 for the founding of an educational institution in his adopted city of Baltimore. To this he afterward added $200,000, and in 1866 the donation was increased by $500,000, and on the 22d of September, 1869, he gave $400,000 more, making a total contribution of $1,400,000. In 1858 the corner-stone of the building was laid, but, the rebellion soon after breaking out, its erection and dedication were delayed until after the close of the war. In his letters to the trustees of this institution Mr. Peabody expressed the hope that it would be "so conducted throughout its whole career as to teach political and religious charity, toleration, and beneficence, and prove itself to be, in all contingencies and conditions, the true friend of an inestimable Union, of the salutary institutions of free government, and of liberty regulated by law."

While in the United States, Mr. Peabody was the recipient of marked attention from all classes of people wherever he went. Numerous public receptions were tendered him, all of which were declined, save one in Danvers, which was one of the most enthusiastic that was ever bestowed upon a philanthropist.

In 1858 Mr. Peabody returned to England, and set about putting into practical effect a scheme of benevolence which had occupied his mind for several years previous. This was, "under a sense of gratitude" for his success in England, "to make a donation for the benefit of the poor of London." To this end he consulted his friends, C. M. Sampson, Sir James Emerson Tennent, his partner, J. S. Morgan, and the Right Rev. Bishop McIlvaine, of Ohio. In a letter dated "London, March 12, 1862," and addressed to Charles Francis Adams, the United States minister to England, Lord Stanley, M. P. (now Earl of Derby), and others, whom he appointed trustees, he wrote, after explaining the motives which actuated him: "My object being to ameliorate the condition of the poor and needy of this great metropolis, and to promote their comfort and happiness, I take pleasure in apprising you that I have determined to transfer to you the sum of £150,000, which now stands available for this purpose on the books of Messrs. George Peabody and Co., as you will see by the accompanying correspondence." This sum was increased by a further donation of £200,000 in 1864, and just before his death by £150,000 additional, making the whole amount £500,000 —$2,500,000.

Mr. Peabody's object, though stated by him as the amelioration of the condition and augmentation of the comforts of the poor generally, was practically the helping of the industrious poor. The most reasonable way of benefiting these would be, he thought, to provide at very moderate rent decent homes for them. In that great city the children of the poor grow up amid surroundings of painful squalor, and in habitations where all the virtues are in danger of being excluded with fresh air and cleanliness. Mr. Peabody thought it no blessing to overweigh those whom he benefited with a sense of their dependence, and argued to himself that the good done would be all the greater by making the poor free agents in it. He would not maintain paupers, for that was the work of society by other means. He wished to help the poor to help themselves. Consequently, he thought it wise to charge a rent below the average, but to give far better accommodations than ever private landlords could offer. He might also have reckoned upon creating a desire to build a better kind of dwellings than have usually been erected for tenants.

Four great buildings, known by the name of Peabody, have been erected in four of the poorest quarters of London, and others are now in course of erection. It has been said that they did not quite fulfil his design; that the tenants did not like the provision which required them to keep the rooms and halls clean, and preferred to pay the same or higher rents where they could have the privilege of living as filthily as they pleased. It was alleged also that for the most part these tenements had passed into the occupancy of a class above those for whom they were at first intended—clerks on small salaries, poor but industrious journeymen-mechanics—who availed themselves of the opportunity of obtaining a low rent when they could afford one a grade higher. There may have been some grounds for these criticisms, but it is a sufficient answer to most of them that Mr. Peabody, who was not at all inclined to too great leniency in such matters, visited these tenement-houses often, *incognito*, and that he came away expressing himself fully satisfied with the way the trustees had carried out his intentions. It should be said that a part of the income was reserved, to be devoted to the relief of the tenants in deserving cases.

In 1866 Mr. Peabody again visited the United States, and was received with a hearty welcome. He had already given so largely to objects of benevolence that he had begun to experience the luxury of giving, and it was his principal errand here to bestow upon his native country largesses which should transcend what he had given in England. As we have already noticed, he increased his gifts to the Institute and Conservatory of Music at Baltimore to $1,000,000; for the founding of an Institute of Archæology at Cambridge, in connection with Harvard College, he gave $150,000, and to Yale College, for a department of Physical Science, $150,000. But his most magnificent donation was the gift of $2,100,000 to a board of trustees for the promotion of education in the South, without restriction of race or condition; a gift which, under the circumstances of the South at the time, was one of the highest boons which could have been bestowed upon her. This fund has been wisely managed, and has stimulated the liberality of others, and through its influence, direct and indirect, education in the South has taken great strides in advance. To other objects, during this visit, he made donations of more than $200,000, and distributed among his kindred about $1,500,000 in addition. In 1867 he returned to England, and was tendered by the Queen a baronetcy or the Grand Cross of the Order of the Bath, but declined them both, and in answer to a question as to what gift he would accept, said: "A letter from the Queen of England, which I may carry across the Atlantic and deposit as a memorial of one of her most faithful sons." The Queen promptly complied with this request, writing Mr. Peabody a most graceful letter of acknowledgment of his "more than princely munificence," and adding to it a portrait of herself. The letter and portrait are both deposited in the Peabody Institute at Danvers.

The gratitude of the citizens of London manifested itself in the erection of a fine statue of him in that city. Early in 1868 he visited the Continent, and, after purchasing an estate in Hungary, spent some time in Rome, where he liberally endowed an Art School, and where the citizens in gratitude erected a statue to his memory. His health was failing, but he felt that he must once more revisit his native land before his death, and on the 10th of June, 1869, he landed in New York, and, after some days' rest, proceeded to Boston and to his beloved Danvers. He now endowed the Peabody Museum, at Salem, with $150,000, gave $30,000 to Newburyport for a Library, $30,000 to Phillips Academy, Andover, $20,000 to the Massachusetts Historical Society, $20,000 to the Maryland Historical Society, $25,000 to Kenyon College, $10,000 to the Public Library at Thetford, Vt., $60,000 to Washington College, Virginia, and crowned his previous benevolence to the cause of Southern Education by a further gift of $1,400,000 to the trustees of that fund for its purposes. On the 30th of September, 1869, he took his departure for London, and four weeks later died in that city. His known charities to the various objects of benevolence, aside from his gifts to near and distant relatives amount to, in round numbers, eight and a half million dollars. Those who knew him best say that he also gave considerable sums secretly. He left a property of five millions or more, mostly to his relatives. It was his own testimony, and that of those who were most intimately acquainted with him, that these great benefactions were really so many triumphs over a

disposition naturally parsimonious and fond of hoarding; and it was from a sense of benefits conferred on him by Divine Providence that he overcame the natural tendencies of his nature, and exercised his strong will in giving, till it became a delight to him to give; till, in the words of Mr. Gladstone, "he taught us how a man may be the master of his fortune, and not its slave." The extent of his benefactions is undoubtedly greater than that of any man of ancient or modern times, and entitles him to a place among the world's best and noblest heroes. Intellectually he was surpassed my many, but in the greatness of benevolence he stands alone in all the history of the past.

The preservation of the remains of Mr. Peabody for transportation to the United States was intrusted to the hands of Dr. Parry. The process carried out consisted in injecting the whole body through the arteries with a solution of arsenic, containing also some bichloride of mercury.

Twenty-four hours afterward another liquid, consisting of a saturated solution of tannic acid, was thrown in, with a view of effecting the gradual conversion of the gelatinous structures into the tanno-gelatin, or the basis of leather. None of the viscera were removed or disturbed, and, before the opening into the chest required for the injection, practised through the aorta, was closed, an arsenical paste, or rather cream, consisting of arsenic, camphor, and spirits, was introduced into the thoracic cavity; also through an opening in the diaphragm into the cavity of the abdomen, and freely distributed about.

Death had taken place about two days and a half before the process was commenced, and decomposition had set in, so as to produce great distention of the abdomen; but the process was found to check all this, and, when completed, all signs of a tendency to decomposition were removed. Under the silk shroud, and upon the floor of the coffin, there was placed a bed of well-burnt animal charcoal.

PENNSYLVANIA. The Legislature of the State of Pennsylvania met at Harrisburg on the 5th of January, and continued its sessions from day to day until the 20th of April. In that time it passed a large number of acts, very few of which, however, are of general interest. A United States Senator was elected to succeed Charles R. Buckalew, whose term of office expired on the 4th of March. The choice fell upon John Scott, of Huntingdon County. On the 8th of March, the Governor submitted the fifteenth amendment of the Federal Constitution, and "unhesitatingly recommended the prompt ratification of the same." The ratification was made in the Senate on the 11th, by a vote of 18 to 15, and the vote of the House was taken on the 25th, and resulted in the approval of the amendment, 62 to 33. Among the acts of the session was one providing for the registration of electors. An act on this subject had been passed in 1868, which was pronounced to be unconstitutional by the Supreme Court. At the election in October of that year, loud complaints were made of illegal voting, especially in the city of Philadelphia; and accordingly, early in this session, a new registry act was introduced, which recieved the approval of the Governor on the 17th of April. It provides that a list of qualified voters shall be made on the first Monday in June by the assessors, who shall take the tax-list and strike therefrom the names of all who have died or removed from the district, or in any other way lost their right to vote, making careful inquiry with regard to all the persons who are enrolled on the list. The assessors are also to add the names of such persons as are qualified to vote, so far as they can ascertain them by inquiry, at the same time assessing a tax upon such persons. Another list is to be made of all white freemen above twenty-one years of age claiming to be qualified, taking the residence, occupation, name of employer, if any, and whether naturalized or native. The completed list is to be subject to public inspection, and names added from time to time on the personal application of those claiming the right to vote. All such lists, with the assessments, etc., are to be returned to the county commissioners at least ten days before the election, and no additions will be made to them thereafter. Any person claiming the right to vote on the day of election, whose name is not upon the list, "shall produce at least one qualified voter of the district as a witness to the residence of the claimant, in the district in which he claims to be a voter, for the period of at least ten days next preceding said election, which witness shall take and subscribe a written, or partly written and partly printed, affidavit to the facts stated by him, which affidavit shall define clearly where the residence is of the person so claiming to be a voter; and the person so claiming the right to vote shall also take and subscribe a written, or partly written and partly printed, affidavit, stating, to the best of his knowledge and belief, where and when he was born; that he is a citizen of the Commonwealth of Pennsylvania and of the United States; that he has resided in the Commonwealth one year, or if formerly a citizen therein, and has moved therefrom, that he has resided therein six months next preceding said election; that he has not moved into the district for the purpose of voting therein; that he has paid a State or county tax within two years, which was assessed at least ten days before said election; and, if a naturalized citizen, shall also state when, where, and by what court he was naturalized, and shall also produce his certificate of naturalization for examination; the said affidavit shall also state when and where the tax claimed to be paid by the affiant was assessed, and when, where, and to whom paid; and the tax receipt therefor shall be produced for examination, unless the affiant shall state

on his affidavit that it has been lost or destroyed, or that he never received any; but, if the person so claiming the right to vote shall take and subscribe an affidavit that he is a native-born citizen of the United States (or, if born elsewhere, shall state the fact in his affidavit, and shall produce evidence that he has been naturalized, or that he is entitled to citizenship by reason of his father's naturalization), and shall further state in his affidavit that he is, at the time of taking the affidavit, between the ages of twenty-one and twenty-two years, that he has resided in the State one year, and in the election district ten days next preceding such election, he shall be entitled to vote, although he shall not have paid taxes; the said affidavits of all persons making such claims, and the affidavits of the witnesses to their residence, shall be preserved by the election board, and at the close of the election they shall be enclosed with the list of voters, tally-list, and other papers required by law to be filed by the return judge with the prothonotary, and shall remain on file therewith in the prothonotary's office, subject to examination, as other election papers are; if the election officers shall find that the applicant or applicants possess all the legal qualifications of voters, he or they shall be permitted to vote, and the name or names shall be added to the list of taxables by the election officers, the word 'tax' being added where the claimaint claims to vote on tax, and the word 'age' where he claims to vote on age; the same words being added by the clerks in each case respectively on the lists of persons voting at such election."

The right to vote of any person whose name is upon the list may be challenged by any "qualified citizen of the district," and the same proof will then be required as in the case of a person whose name is not upon the list at all.

After some further provisions regarding the powers and duties of assessors, inspectors, and judges of election, the act contains the following:

SEC. 11. On the petition of five or more citizens of the county, stating under oath that they verily believe that frauds will be practised at the election about to be held in any district, it shall be the duty of the Court of Common Pleas of said county, if in session, or, if not, a judge thereof in vacation, to appoint two judicious, sober, and intelligent citizens of the county to act as overseers at said election; said overseers shall be selected from different political parties, where the inspectors belong to different parties, and, where both of said inspectors belong to the same political party, both of the overseers shall be taken from the opposite political party; said overseers shall have the right to be present with the officers of the election, during the whole time the same is held, the votes counted and the returns made out and signed by the election officers; to keep a list of voters, if they see proper; to challenge any person offering to vote, and interrogate him and his witness under oath, in regard to his right of suffrage at said election, and to examine his papers produced; and the officers of said election are required to afford to said overseers so selected and appointed every convenience and facility for the discharge of their duties; and if said election officers shall refuse to permit said overseers to be present and perform their duties as aforesaid, or if they shall be driven away from the polls by violence and intimidation, all the votes polled at such election district may be rejected by any tribunal trying a contest under said election: *Provided*, That no person signing the petition shall be appointed an overseer.

Some special provisions are made respecting registration in the city of Philadelphia which require greater care in the preparation of lists, and forbid the assessors to take down the names of boarders at hotels, taverns, restaurants, and sailors' boarding-houses in that city, for the proof of residence must be by the testimony of two citizens who are householders and electors.

The constitutionality of this act was soon brought in question, chiefly on account of the difference between the regulations required in the city of Philadelphia and those prescribed for other parts of the State. The provision of the constitution supposed to be violated was that which says—"elections shall be free and equal." An action was brought in the Supreme Court by several citizens of Philadelphia, who asked that tribunal to declare the act of April 17th unconstitutional, and enjoin the authorities of the city from carrying it into effect. The case was first tried at *nisi prius* in the month of June, before Judge Sharswood, and a decision rendered in accordance with the demand of the petitioners. The judge took the ground that the law made the elections unequal because it prescribed one mode of registration for the city of Philadelphia, and another for the rest of the State, and that it infringed their freedom, by imposing conditions upon the right of suffrage, which, if not complied with by the citizen, would prevent him from voting at all. The question was tried before the full bench of five judges, early in July, and the former decision reversed, Judges Agnew, Williams, and Read, maintaining the constitutionality of the law, and Sharswood and Thompson dissenting. The opinion of the majority was read by Judge Agnew. He argued at considerable length that difference of regulation, according to the circumstances and requirements of different localities, did not make the elections unequal, and contended that there was nothing in the law subversive of the rights of the people, as the conditions imposed were only such as were necessary to secure the great ends of freedom and equality of elections. His conclusions are summed up in the following paragraphs:

But it is unnecessary to discuss this subject at greater length. Enough has been said to show that free and equal elections are the true end to be secured, and that the system of laws regulating the elections is only the means of securing the end; that this system of regulation is the subject of legislation over which the Legislature exercises a sound discretion; that no clause in the constitution requires uniformity of regulation, or prohibits legislation according to the obstacles which different localities present to prevent a free and equal election; and that it is a mistake to substitute uniformity of regulation for the free and equal election which it is the object of the

regulation to secure. We have also shown that none of the features of this law subvert the rights of the true electors of this city, and that it is the only test of the constitutionality of any provision contained in the law.

It is true there is a kind of liberty this registry law will destroy. It is that licentiousness, that adulterous freedom which surrenders the polls to hirelings and vagabonds, outcasts from home and honest industry; men without citizenship or stake in the government; men who will commit perjury, violence, and murder itself. To prevent this is the purpose of this law, and it should have the aid of fair men of all parties to give it a fair trial, and secure its true end. It may have defects—doubtless it has; and what system devised by the wit of man has not? But its defects, if any, should be remedied as they are disclosed by experience. The law is not unconstitutional. It is a part of the political system of the State, on which its offices and its very continuance depend; and we, as a court, have no right to put hands upon the whole system on the grounds of mere hardship, and for defects of regulation which are not clear or palpable violations of the letter or very spirit of the constitution.

The political campaign was opened by the Republicans, the State Central Committee of that party having met in February, and resolved that the next Union Republican State Convention should be held in the city of Philadelphia on the 23d of June. The State officers to be elected were the Governor of the Commonwealth, and one judge of the Supreme Court. On the appointed day, the delegates who had been chosen in the various districts assembled, and were called to order by Galusha A. Grow, chairman of the State Central Committee. James A. Graham, of Alleghany County, was chosen as president on the permanent organization. General John W. Geary was nominated for the office of Governor by 122 votes out of a total of 133; and Henry W. Williams, of Alleghany County, was nominated for Judge of the Supreme Court, by acclamation. A committee of thirty, consisting of one from each senatorial district, prepared the following platform, which was unanimously adopted:

Resolved, That we rejoice in the glorious national victory of 1868, which is bringing peace, happiness, and prosperity, to us as a nation.

Resolved, That we wholly approve the principles and policy of the Administration of General Grant, and we heartily indorse every sentiment contained in his inaugural address, and especially do hereby ratify and approve the late amendment to the Constitution of the United States proposed by Congress, known as the fifteenth amendment.

Resolved, That we have confidence that the General Administration will wisely and firmly protect the interests of the nation in respect to our just claims against Great Britain, and that we indorse the action of the Senate in rejecting the Johnson-Clarendon treaty, known as the Alabama claims.

Resolved, That we heartily sympathize with the struggling people of all nations in their efforts to attain universal freedom and the inalienable rights of man.

Resolved, That we cordially indorse the administration of Governor John W. Geary, as wise, economical and honest, and that it deserves, as it has received, the approval of the people of Pennsylvania, and we especially commend his uniform efforts to restrain the evils of special legislation.

Resolved, That in Hon. Henry W. Williams, our candidate for the Supreme Bench, we present a learned, pure, and patriotic jurist, who will adorn the high position to which we propose to elect him.

Resolved, That we reiterate and affirm our adherence to the doctrine of protection as proclaimed in the ninth resolution of the platform adopted at the State Convention of March 7, 1866.

Resolved, That we indorse the ticket this day nominated, and pledge to it our hearty and cordial support.

Resolved, That the chairman of this convention is hereby authorized to appoint a chairman of the State Central Committee on the joint recommendation of the candidates this day nominated; and that the State Central Committee shall consist, during the coming campaign, of the same number of delegates from each county as the last committee, and they be appointed by the senatorial and representative delegates, except Alleghany County, which shall have eight members.

The Democratic Convention was held at Harrisburg, on the 14th day of July, and nominated Asa Packer for the office of Governor, and C. L. Pershing for Judge of the Supreme Court. The principles of the party were embodied in the following declarations:

1. That the Federal Government is limited to the grants contained in the Federal Constitution; that the exercise of doubtful constitutional powers is dangerous to the stability of the Government and the safety of the people; and the Democratic party will never consent that the State of Pennsylvania shall surrender her great right of local self-government.

2. That the attempted ratification of the proposed fifteenth amendment to the Federal Constitution by the radical members of the last Legislature, and their refusal to submit the same to a vote of the people, was a deliberate breach of their official duty and an outrage upon every citizen of the State, and the resolution making such ratification should be promptly repealed, and the amendment submitted to the people at the polls for acceptance or rejection.

3. That the Democratic party of Pennsylvania is opposed to conferring upon the negro the right to vote; and we do emphatically deny that there is any right or power in Congress or elsewhere to impose negro suffrage upon the people of this State in opposition to their will.

4. That reform in the administration of the Federal and State governments in the management of their financial affairs is imperatively demanded.

5. That the movements now being made for the amelioration of the condition of the laboring man have our most cordial coöperation.

6. That the legislation of the late Republican Congress, outside of the Constitution, the disregard of the majority therein of the will of the people and sanctity of the ballot-box, in the exclusion from their seats in Congress of Representatives clearly elected, the establishment of military governments in States in the Union, and the overthrow of all civil government therein, are acts of tyranny and usurpation that tend directly to the destruction of all republican government, and the creation of the worst forms of despotism.

7. That our soldiers and sailors, who carried the flag of our country to victory, must be gratefully remembered, and the guarantees given in their favor most faithfully carried into execution.

8. Equal rights and protection for naturalized and native-born citizens at home and abroad; the assertion of American nationality which shall command the respect of foreign powers and furnish an example of encouragement to people struggling for national integrity, constitutional liberty, and undivided rights.

9. That the present internal revenue and tax-

ing system of the General Government is grossly unjust, and means ought to be at once adopted to cause a modification thereof.

General Hancock had been asked to allow his name to be used for the position of Governor, and a letter was read before the convention in which he declined that honor, though he declared that, if he were in civil life, no distinction would be more agreeable to him than to be Governor of Pennsylvania. General Hancock was a citizen of the State, and a distinguished officer of the army during the late war.

The election took place on the 12th of October, and resulted in the choice of the Republican candidates. The total vote for Governor was 576,508, of which Geary received 290,552, and Packer 285,956, the majority of the former was 4,596. The whole vote for Judge of the Supreme Court was 573,941, Williams receiving 291,366, and Pershing 282,575—majority for Williams, 8,791. A full list of members of the Legislature was chosen at the same election, of whom 19 Senators and 60 Representatives were Republican, and 14 Senators and 40 Representatives were Democrats.

The finances of Pennsylvania are in a very promising condition. The fiscal year began on the 1st of December, 1868, and at that time there was a surplus in the Treasury of $1,012,925.37. The receipts during the year amounted to $5,241,711.28, which gives a total amount of funds at the disposal of the Treasurer of $6,254,636.65. Of this, $4,853,774.16 were paid out as follows:

Ordinary expenses paid during the year ending November 30, 1869	$2,485,114 97
Loans, etc., redeemed at the Treasury	109,644 09
Loans redeemed by Commissioners of the Sinking Fund	362,762 09
Interest paid at Treasury	170,665 74
Interest paid by the Commissioners of the Sinking Fund	1,725,587 97

This left a surplus in the Treasury at the end of the year amounting to $1,400,862.49. The question of disposing of these surplus funds each year, so as to save the interest on the money, was considered in the Legislature at the last session, and the Governor was requested to "submit some plan to the Senate to secure the State from loss by the accumulation of large amounts of surplus funds in the Treasury." In response to this request, the Governor suggested that all such funds could, "with safety and benefit to the State, be employed in the purchase of its outstanding bonds, and in saving the interest on them which would accumulate prior to their maturity." This plan was not adopted at that session, and, in his message to the Legislature of 1870, Governor Geary renewed his suggestion.

The entire debt of the State, on the 30th of November, was $32,814,540.95. On the 1st of January, 1867, it amounted to $37,704,409.77, which shows that a reduction has been made in three years of $4,889,868.82. The reduction during the last fiscal year amounted to $472,406.18. The different items of the debt at present are as follows:

Funded debt, viz.:		
6 per cent. loans	$25,311,180 00	
5 per cent. loans	7,277,384 38	
4½ per cent. loans	112,000 00	
		$32,700,564 38
Unfunded debt, viz.:		
Relief notes in circulation	$96,397 00	
Interest certificates outstanding	13,036 82	
Interest certificates unclaimed	4,448 38	
Domestic creditors' certificates	44 67	
		113,976 57
Amount of public debt November 30, 1869		$32,814,540 95

The loans of the State fall due as follows:

Amount of overdue loans, including bank charter loans and relief notes unredeemed				$200,493 25
Amount payable in	1870,	interest 5	per cent.	1,493,815 65
" "	1871, "	6	"	2,520,750 00
" "	1872, "	6	"	4,907,150 00
" "	1872, "	5	"	92,850 00
" "	1877, "	6	"	7,909,600 00
" "	1877, "	5	"	3,994,400 00
" "	1878, "	5	"	321,000 00
" "	1879, "	6	"	400,000 00
" "	1882, "	6	"	9,973,050 00
" "	1882, "	5	"	1,185,900 00
" "	1882, "	4½	"	112,000 00
Amount of loans				$33,810,067 90

The sinking fund of the State consists of bonds of the Pennsylvania Railroad Company to the amount of $6,300,000, and bonds of the Sunbury and Erie Railroad Company amounting to $3,500,000, making $9,800,000 in all.

With regard to the general management of the public funds, the Governor, in his last message, cast some grave reflections upon the integrity of the men who are generally elected to the office of State Treasurer. In urging an increase of the salary of that official, he said: "It is only $1,700, a sum entirely insufficient to command the services of any responsible man, who is required to furnish a bond, with good and approved sureties, for $80,000, and to run the risk of handling at least five or six million of dollars per annum, without the unlawful use of the State funds, and subsidies from sources that dare not be revealed to the public, because they are positively prohibited by law, under penalties of no ordinary magnitude. Yet there are but few men who have held this office, however poor they may have been when they took charge of it, who have not become rich. There is certainly some advantage to be gained by the holding of the position of State Treasurer, unknown to the public, but which readily accounts for the disgraceful scramble, and for the political and moral debauchery which the people of this State seem to be doomed annually to witness, in the election of that officer; and, because of the disgrace it brings upon their representatives, the people hang their heads in indignation and shame."

The public school system of Pennsylvania deservedly holds a very high rank. The State has no school fund, and the revenues for this object are derived mainly from taxation in the different districts. The estimated value of the school property is $14,045,632, and the expense of maintaining the schools during the past year has been $6,986,148.92. There are 1,977

school districts in the State, in which there are 13,936 schools, employing 17,142 teachers. The whole number of children of school-age in the State is 975,753, of whom 815,758 attend the public schools; 85,000 attend private schools, and 75,000 do not attend any school. The average attendance of the public schools is 548,075, and the average cost of tuition for each pupil is 97 cents per month. The average salaries of male teachers per month is $39.00, and of female teachers, $30.52. The increase in the most important items concerning the public schools during the past year, as compared with the same statistics of the previous year, is shown in the following statement:

In number of districts	53
In number of schools	270
In number of graded schools	63
In number of school directors	202
In number of teachers	371
In number of pupils	15,238
In the average number of pupils	37,971
In the cost of tuition	$227,434 83
In total cost, including expenditures of all kinds	$785,610 96

The whole number of students who have attended the four State normal schools has been 10,237, of whom 321 have graduated. These institutions were attended during the past year by 4,178 students, who were instructed by 76 teachers. A State normal school for the sixth district has recently been established at Bloomsburg, in Columbia County, and opened under the most favorable auspices. Its buildings are the finest of the kind in the State, and were erected at a cost of upward of $100,000. A normal school will probably be established at California, in Washington County, during 1870, and efforts have been made to secure the establishment of another at West Chester, for which the sum of $65,000 has already been subscribed.

There are upward of 30 incorporated colleges in Pennsylvania, of which only about 15 are in a flourishing condition. The aggregate endowment of these is reported to be $287,000; their libraries contain 97,938 volumes, and their apparatus is valued at $82,450. During the past year the number of students in attendance was 2,901, of whom 198 have graduated; the number of professors was 149.

Great credit is due to Pennsylvania for the establishment and successful management of soldiers' orphans' schools, where the destitute orphan children of the soldiers who lost their lives in the late war are fed, clothed, and educated, at the public expense. These institutions now meet with the cordial support and encouragement of the people of the State. The increasing number of applicants renders it necessary that some definite limit to admissions should be determined upon by law. It has, therefore, been recommended that "the indigent children of Pennsylvania soldiers, who served in Pennsylvania regiments, and who died prior to January 1, 1866, from wounds received, or disease contracted, in the service of the United States during the late war, shall be hereafter admitted and none others." The entire cost of supporting these schools for the year ending May 31, 1869, was $500,971.62. The number of pupils in attendance at the end of the year was 3,631.

By a recent act of the Legislature, the management of the charitable institutions of the State has been vested in a Board of Public Charities, composed of five gentlemen. This change in the management of these institutions is regarded as one of great importance, and calculated to lead to beneficial results. During the year 212 patients were admitted into the State Lunatic Hospital at Harrisburg, being a greater number of admissions than in any previous year since the opening of the hospital. The number remaining in the hospital at the end of the year was 410—212 males and 198 females. Of those discharged during the year, 40 were restored, 42 improved, and 48 unchanged; the number of deaths was 28. The accommodations of the hospital have not been sufficient for the number of applicants, and preference has been given to recent cases over those of long standing. The receipts into the treasury for the year 1869 were $91,438.78, while the expenditures amounted to $91,359.17. The number admitted into the Pennsylvania Hospital for the Insane, at Philadelphia, during the year 1869, was 220; the number discharged was 243, leaving 313 (157 males and 156 females) under treatment at the end of the year. The highest number of patients in the hospital at any one time during the year was 347; the average number for the year was 330. Of those discharged, 115 were cured, 21 much improved, and 33 unchanged; 31 died during the year. All classes of insane persons are admitted into this institution, without regard to the duration or curability of their disease. The enlightened system for the instruction and amusement of the inmates reflects credit upon the State. The pleasure-grounds, workshops, museums, and reading-rooms, have proved highly successful in the treatment of the insane. Much encouragement is given to out-door games and in-door amusements. At least three evenings of every week are devoted to entertainments of some kind in the lecture-room; while billiard-rooms, bowling-alleys, gymnasiums, and officers' tea-parties, have produced very beneficial results.

The subject of prison discipline has been brought prominently before the people of the State by the recent report of the commissioner appointed "to visit, for philanthropic purposes, the prisons and almshouses in the various counties of the Commonwealth." While the construction and management of some of the county prisons are commended, others are represented to be "unsafe, where prisoners could not be held unless loaded with chains, where the sexes were not separated, where there was no discipline, nor any effort

made toward the moral and religious improvement of the inmates; the buildings totally unfit for the purposes of a prison; and where the prisoners become schooled in vice, and eventually graduated prepared for a life of lawlessness." Other prisons are defective from a want of a proper classification of the criminals. The attention of the Legislature has been called to this bad condition of the county prisons, and the necessity that exists for a thorough reform of the penal system of the State. During the year ending December 31, 1869, 1,550 applications for pardon were made to the Executive, of which 62, or four per cent., were granted, 1,108 rejected, and 380 were still under consideration at the close of the year. Seven criminals suffered the penalty of death during the year.

An unusual martial spirit has prevailed throughout the State during the past year. In 1866 there were 8 volunteer companies, in 1867, 88; in 1868, 67; which number increased in 1869 to 184. During the year ending November 30, 1869, 107 companies were organized, of which 56 are in Philadelphia. In his last message to the Legislature, Governor Geary says of this force: "This is a small but efficient and well-equipped force, which, in case of riot, rebellion, or other public danger, would be ready at once to imperil itself for the enforcement of the laws, and the protection of the lives and property of the citizens. It is, therefore, desirable that the Legislature should give the volunteers such practical aid as would, in some degree, compensate them for the time and money expended to maintain their organizations, in which the people are as much interested as the volunteers themselves."

On the 6th of September a disaster occurred in the Avondale coal-mine, in Luzerne County, resulting in the loss of 108 lives. Early on the morning of that day, 108 miners entered the mine as usual for their daily labor, and, while they were there engaged in work, the shaft, constructed chiefly of combustible materials, became ignited, and soon the only entrance to the mine was filled with burning timbers, fire, and smoke. The immense wooden structure above the shaft also took fire, and was soon reduced to ashes. No assistance could be rendered the sufferers from without, and, there being no means of escape, all of the unfortunate miners instantly perished. Their bodies were subsequently recovered. As nearly all of those who perished had families dependent upon them for support, the suffering caused in the neighboring community was extreme. The condition of these suffering families enlisted the sympathy of the general public, and generous subscriptions were sent for their relief from various parts of the country. The investigation into the causes of this disaster revealed a culpable carelessness in the construction and management of mines, whereby the lives of the miners were constantly endangered. Public sentiment demanded that the subject should receive the careful attention of the Legislature, and that a law should be passed prescribing such regulations in the construction, ventilation, and working of mines, as would secure proper safeguards to the lives of the miners. In presenting this subject to the Legislature in his last annual message, Governor Geary said: "The inquiry, therefore, into the causes which produced this shocking catastrophe, the various theories that have been promulgated concerning it, the remedies for the prevention of similar occurrences hereafter, the construction and ventilation of collieries, and the modes of conducting their operations so that the operatives may prosecute their labor without imperilling their lives, are proper subjects for legislative consideration. Such laws as you may enact can most certainly be enforced by competent inspectors in the mining districts, who should be chosen with strict regard to character, integrity, capability and scientific knowledge; and whose duties should be so specifically defined that they cannot be misunderstood. I therefore most respectfully and earnestly recommend that this whole subject receive the attention its importance demands, and that a law be passed, so general in its character and so stringent in its provisions, that the people of this Commonwealth will never again be appalled by a calamity, within her limits, so sad as that of Avondale."

PERKINS, Rev. JUSTIN, D. D., an American Congregationalist clergyman, and missionary to the Nestorians, born in West Springfield, Mass., March 12, 1805; died at Chicopee, Mass., December 31, 1869. The first eighteen years of his life were passed upon his father's farm, but in the spring of 1823, having made a profession of religion, he was desirous of qualifying himself for the missionary work, and, in anticipation therefor, prepared for college in his native town, and in Westfield, and, in 1829, graduated at Amherst College. The next year he taught in the academy of that town, and the two following years studied at the Andover Seminary, after which he held, for a time, the office of tutor in Amherst College. Having, in January, 1833, received from the American Board an appointment with a view to the commencement of a mission among the Nestorians, he sailed from Boston, with Mrs. Perkins, September 21, 1833. He remained for a time at Tabreez, but established himself at Oroomiah in November of 1834. Here, almost unaided, he laid the foundation of the mission whose history is so identified with his missionary life. Schools were established which grew into noble seminaries of learning. The people had never seen printed books, the few copies of the Scriptures existing among them being manuscripts, in the ancient Syriac, which were kept carefully wrapped up and hid away in secret places, to save them from the ravages of the Mohammedans. The reading-matter for the schools, for several years, was created

by the slow motion of the pen. Dr. Perkins early commenced reducing the modern Syriac to a written form, and translating into it portions of the Scriptures. In 1841 Dr. P. visited this country, accompanied by Mar Yohannan, the Nestorian bishop. In August of 1869, wearied and worn by his labors, he came home to die.

PERU, a republic in South America. President, elected in 1868, Colonel José Balta. Minister of the United States, General Alvin P. Hovey (appointed in May, 1866). Area, 510,107 square miles; population, estimated in 1859 at 2,500,000. In 1868 the Ministers of Government, Justice, and Foreign Affairs presented to Congress the following budget for the next year: Government, $9,083,772.10; Justice, $4,414,121.70; Foreign Affairs, $1,468,932.92. The national debt, on December 31, 1866, amounted to $50,140,621. The army, in 1866, consisted of 10,608 men; the navy consisted of 11 vessels, with 108 guns. The merchant navy, in 1861, consisted of 110 seagoing vessels, together of 24,284 tons.

In the beginning of 1869, bills were passed by the Peruvian Congress authorizing the Government to issue bonds to the amount of 60,000,000 soles (one sole equal to $1.25), which were to be applied to the construction of railways connecting the most important points throughout the republic.

In May, the republic recognized the insurgents of Cuba as a belligerent power, by the following decree of her President:

LIMA, *May* 13, 1869.

JOSÉ BALTA, *Constitutional President of Peru:*

Whereas the insurrection in Cuba has for its object the independence of the island, and that the bonds being broken that bound Cuba to the Government of Spain, there are two parties that carry on the war with a political object and should be regarded by other nations in a spirit consonant with international right:

That the Government and the people of Peru sympathize with the noble cause proclaimed by the Cubans; that the commander of the revolutionary forces of Cuba has asked the recognition of his party as belligerents:

That Peru should recognize the political status of the insurgents, not considering them as subjects of a government actually at war with Peru, and without prejudice to the manifestations that Peru may hereafter make in their behalf, I decree:

1. That the Government of Peru recognizes as belligerents the political party that is now struggling for Cuban independence.

2. The citizens, ships, and other appurtenances of Cuba serving the cause of independence, shall be considered as friends by Peru.

The Minister of Foreign Affairs is charged with the execution and circulation of this decree.

JOSÉ BALTA.

J. A. BARRENECHEA.

The Government took an important step toward colonizing the Amazon region, by the following liberal decree:

The Government will concede a free passage to natives of this country or to foreigners who may desire to settle in the Amazon region. The local authorities will distribute the public lands to the settlers, in accordance with the laws of Peru. The Government will furnish to the immigrants, before commencing their voyage, all the agricultural and other necessary implements gratis, the local authorities supplying them with seeds, etc.

The pensioners of the state who may desire to emigrate to the Amazon will, in addition to the above-mentioned privileges, receive their pay in the place of their settlement. The payments will be made by the department treasuries, according to the established custom. The government concedes a monthly payment of eight soles for six months to the foreign or Peruvian settlers, a sufficient time in which to gather the first harvest.

The prefects of departments will open a careful register of the number and nationality of the settlers, together with all important circumstances that may occur.

The emigrants oblige themselves to remain at least four years in the Amazonian regions. Those who receive money for their passage to the country of the Amazon must commence their voyage within three months from said receipt; those who fail to do so must return the passage-money and pay the expenses they may have occasioned the Government.

The opening up of the headlands of the Amazon within the Peruvian territory is of great prospective importance; the most valuable drug and dyestuffs are found there; timber of great importance abounds; there are open valleys, well watered, having a virgin soil; any climate, from the coldest to the torrid, can be reached; and the country abounds in game, while the numerous rivers are alive with fish. The principal difficulty—that of reaching this region—is now obviated by the decree, since the Government will land the immigrants at the place designated, and, besides, take care of them until the time for gathering the first crop has passed by. Add to these benefits the fact that Brazil has declared the free navigation of her Amazonian waters, and Peru followed her example, and that a railway is being projected by the most influential and wealthiest men of the republic, to connect Lima with the Peruvian head-waters of the King of Rivers, thus offering two outlets for the products of the settlers. Protected by the Government forces, the other danger, of attacks from the Indians, who are hostile and warlike, is diminished.

The agreements made December, 1868, between the United States minister, General Hovey, and Antonio Barrenechea, Minister of Foreign Relations, for the settlement of all outstanding claims of the citizens of both countries, were ratified and exchanged in June.

In the month of September, the fears of great earthquakes (predicted by the German *savant*, Falb) were increased by the alarming accounts of earthquakes continually occurring in the south, the extraordinary tidal phenomena noticed along the coast, the sea rising higher than for many years past, and the proximity of the earth to those planets known to exercise a most unpleasant influence upon it.

Many families left the capital, and even the merchants took their most valuable effects from the bonded warehouses of the custom-house; fully 20,000 people left the two cities of Lima and Callao. The earthquake period

passed by, however, with only a slight shock on October 1st. Nothing unusual occurred, and the people returned to their homes.

The Government, pressed for money, and with a multitude of clamorous creditors, negotiated a loan with the firm Dreyfus, at Paris, by the sale of 2,000,000 tons of guano, under terms highly advantageous to the purchaser. The Peruvian capitalists were, naturally, indignant at seeing the probability of such a rich prize slipping from their hands, more especially as they had made offers more acceptable in public opinion than those of Dreyfus. Basing their claim on an existing law, these capitalists maintained the legal rights held by Peruvians over foreigners in all cases where the national treasure of guano was concerned. After a long period of suspense, the Supreme Court of Peru decided this point in favor of the Peruvian bankers and against the house of Dreyfus.

An important decree received the President's approval, authorizing the construction of a land and submarine telegraph from Lima to Tumbez, the border port adjacent to the Republic of Ecuador. Already a land line is in operation from Lima to the city of Trujillo, nearly 260 miles to the north, and, with the exception of a few miles of submarine wire, the whole northern coast of Peru will be speedily traversed by this line. This enterprise is directed by M. Carlos Paz-Soldan, who represents a company composed of some of the most prominent Peruvian capitalists, who, without asking subsidy or guarantee from the Government, have agreed to finish the work, placing Lima in direct telegraphic communication with Panama in four years from the beginning of the work. From Tumbez north the line will be submarine, and it is confidently expected that the facilities offered to the public and to the Governments of Peru and Ecuador, for the speedy transmission of messages, will render the undertaking profitable in its results. At all events, this is another proof of the progressive spirit of Peru, and an evidence that the Government of Colonel Balta is interested and decided in aiding all measures that tend toward promoting the welfare and consequent peace of the country.

PETERS, Absalom, D. D., a Congregationalist clergyman and author, born at Wentworth, Grafton County, N. H., September 19, 1793; died in New York City, May 18, 1869. He was a son of General Absalom Peters, and, upon his mother's side, a lineal descendant of John Rogers, the Smithfield martyr. At sixteen years of age young Absalom made application for admission to the Military Academy at West Point, and, while awaiting the result, went to Troy as clerk in a store. Subsequently his conversion turned him aside alike from military and mercantile occupations, to fit himself for the work of the ministry, and, applying himself to study, he graduated at Dartmouth College in 1816, and at Princeton Seminary in 1819. The same year he accepted a commission as a home missionary for Northern New York, and spent some months in a tour of preaching in the destitute portions of Washington and Warren Counties. In 1820 he was ordained, and installed pastor of the First Church, in Bennington, Vt., and dismissed December 14, 1825, to accept the secretaryship of the United Domestic Missionary Society, and as such to aid in the formation of the American Home Missionary Society, of which he was the first secretary, continuing such until 1837. During this period he edited the *Home Missionary and Pastor's Journal*, and in 1838 commenced editing the *American Biblical Repository*. In 1844 he was installed pastor of the First Congregational Church in Williamstown, Mass., where, for thirteen years, he labored acceptably and with success, both in the town and in the college, and, in view of advancing age, was dismissed at his own request, September 4, 1857. While in the discharge of his pastoral duties in Williamstown, he originated and edited for a brief time the *American Eclectic*, and also projected the *American Journal of Education*, which was, however, soon merged in Dr. Henry Barnard's journal of the same title. His latter years were spent in literary labors and correspondence. After he reached his seventieth year, he wrote and published his first volume of poems. During a life of more than seventy-five years he had never known sickness, and his last illness, though severe and somewhat protracted, did not impair the vigor of his intellect, or provoke any symptoms of impatience.

PICKENS, Francis W., a Southern statesman, diplomatist, and political leader, born in Togadoo, St. Paul's Parish, S. C., April 7, 1807; died in Edgefield, S. C., January 25, 1869. He was the son of Andrew J. Pickens, an eminent lawyer of South Carolina, was educated at South Carolina College, Columbia, and was admitted to the bar in 1829. Three years after, he commenced his political career in the State Legislature, of which he was elected a member during the memorable nullification excitement. He ranged himself on the side of the nullifiers, and, proving an excellent debater, he took a prominent place among the advocates of the extreme State-Rights doctrine. In 1834 he was elected to Congress, of which he remained a member for ten years. Declining a reëlection in 1844, he retired into private life. Reappearing on the political stage in 1850, he was elected a delegate to the Nashville Southern Convention, which met in 1850–'51 to consider the course to be pursued by the South under the alleged aggressions of the North. His services were next called into requisition in 1854, when he was chosen to preside over the South Carolina State Convention for the election of delegates to the General Democratic Convention; and in 1856 he went to Cincinnati as delegate to that Convention. In 1857 President Buchanan appointed him

minister to Russia in which country he remained about three years; and on his return home, toward the end of 1860, he was elected Governor of his native State. This was on the eve of the war; and, in those ever-memorable events which marked the outbreak of hostilities between the North and the South, the deceased ex-Governor took a prominent part. The name of Governor Pickens is inseparably associated with the story of Fort Sumter, and with the overt acts which precipitated the war. Governor Pickens was one of the most active promoters of secession. No sooner had he been inaugurated as Governor, than he boldly declared for the disruption of the Union, even at the risk of war; and, immediately after the Charleston Convention had passed the Ordinance of Secession, he issued his proclamation, declaring the withdrawal of South Carolina from the Union an accomplished fact, taking steps at the same time for organizing an independent government. He then demanded of Major Anderson the surrender of Fort Sumter, and, upon the refusal of that officer to comply with the demand, ordered that fire should be opened upon the fort. Upon the capture of Sumter, he addressed the people of Charleston, calling God to witness, in the course of his speech, that, so long as he remained their Chief Magistrate, no power on earth should ever lower from the fortress the flags that had been raised in place of the national ensign, unless they were lowered and trailed in a sea of blood. While he continued as Chief Magistrate of the State, Governor Pickens did all in his power to support the Confederate Government in its prosecution of the war; but in 1862 he was succeeded in that office by Governor Bonham, and after the close of the war he sank into comparative obscurity, in which he remained until his death.

PIERCE, Franklin, LL. D., an American statesman, fourteenth President of the United States, born in Hillsborough, New Hampshire, November 23, 1804; died at Concord, New Hampshire, October 8, 1869. He was of Revolutionary stock, his father, General Benjamin Pierce, having participated in the battle of Bunker Hill, and served throughout the Revolutionary War, not leaving the army till 1784. He was, subsequently, for thirteen consecutive years, a member of the State Legislature, and in 1827–'29, Governor of the State. The son, Franklin, was sent at an early age to the academies at Hancock and Francetown, and in 1820, at the age of sixteen, entered Bowdoin College, at Brunswick, Maine. During his college course he taught school for one or more winters, to replenish his somewhat scanty finances.

Leaving college in 1824, where he had graduated with honor, he returned to Hillsborough, but, choosing law as his profession, he soon entered the office of Judge Woodbury, at Portsmouth. Moving thence to Northampton, Mass., he spent the last two years of his preparatory studies in the law-school there, and in the office of Judge Parker at Amherst, and in 1827 was admitted to the bar. His entry was not a brilliant one, his first case proving a failure; but he was not discouraged, and, by careful study and discipline, soon attained a high position as a lawyer, in a bar of remarkable ability. He early took a deep interest in politics, as was natural, his father being a leader of the Democratic party in the State. In 1829, the year of his father's second election as Governor, he was elected to the State Legislature from Hillsborough. He was continued in the Legislature for four years, being chosen Speaker in 1832–'33.

In 1833 he was elected to Congress, where he remained for four years. His record there was not particularly brilliant. He worked faithfully as a member of the Judiciary and other committees, always advocating the measures proposed by President Jackson. He sustained Jackson's opposition to the improvement system, opposed the establishment of a military academy at West Point, and sided with the Administration in every measure. Being elected, in 1836, United States Senator from New Hampshire, he took his seat in the Senate at the beginning of the Administration of Mr. Van Buren, in 1837, the youngest member of that body. He saw that his time for distinction was yet to come. Such men as Clay, Webster, Calhoun, Benton, Woodbury, and Silas Wright, occupied every avenue to reputation, and engrossed the attention of all hearers. Pierce spoke little, working on committees and familiarizing himself with the affairs which demanded his attention, and soon came to be looked upon as authority on the subjects of Revolutionary pensions and the defence of the country.

In 1840 Mr. Van Buren was defeated; and, for the first time in twelve years, the administration was taken from the hands of the Democrats and transferred to the Whigs. An extra session of Congress was called by President Harrison, who did not live to see it assemble, and an effort was to be made to overthrow some of the acts in regard to national banking, the tariff, etc., which had been the especial favorites of the Democracy. During this time Mr. Pierce was looked upon by the Democrats as their ablest defender, and some of his speeches on the questions of the day are among his most eloquent efforts.

A political life is not necessarily a pecuniarily successful one, and Mr. Pierce, who had in 1834 married a daughter of the Rev. Dr. Appleton, ex-President of Bowdoin College, found a family growing up around him with very little provision made for their future support. He, therefore, in 1842, gave up his seat in the Senate and removed again to Concord. Although he entered the Senate without a reputation as a lawyer, he returned to find a most remunerative practice awaiting him. A writer of the day says: "It is a convincing

proof of his eminent powers that he at once placed himself in the very first rank at a bar so distinguished for ability as that of New Hampshire. * * * Far more than any other man whom it has been my fortune to meet, he makes himself *felt* by one who tries a case against him. From the first, he impresses on his opponent a consciousness of the necessity of a deadly struggle. From the beginning to the end of the trial of a case, nothing with him is neglected which can by any possibility honorably conduce to success. His manner is always respectful and deferential to the court, captivating to the jury, and calculated to conciliate the good-will even of those who would be otherwise indifferent spectators." A chief justice of New Hampshire wrote: "The eloquence of Mr. Pierce is of a character not to be easily forgotten. He understands men, their passions, and their feelings. His language always attracts the hearer. A graceful and manly carriage, bespeaking him at once the gentleman and the true man, a manner warmed by the ardent glow of an earnest belief, an enunciation ringing, distinct, and impressive beyond that of most men, a command of brilliant and expressive language, and an accurate taste, together with a sagacious and instinctive insight into the points of his case, are the secrets of his success."

In 1846 President Polk offered him the position of Attorney-General of the United States. He declined it, however, giving as his reasons that public life never suited his taste, and that he longed for the quiet and independence of the private citizen; that he could not arrange his business to leave, and that Mrs. Pierce's health demanded a quiet and private life. Previous to this he declined a nomination to the United States Senate. From 1842 to 1847 he accepted no public office, refusing the nomination for Governor, but taking an active interest in the politics of the State.

Mr. Pierce had said in his letter to President Polk that nothing except the voice of his country in time of war would call him from his seclusion. When the Mexican War broke out in 1847, he enrolled himself first volunteer of a company raised in Concord, and soon received the colonelcy of the 9th Regiment. In March he was commissioned a brigadier-general, his brigade consisting of regiments from the extreme North, the extreme West, and the extreme South. Hawthorne, who saw him previous to his departure from New York, says:

> He had been intensely occupied, since his appointment, in effecting the arrangements necessary on leaving his affairs, as well as by the preparations, military and personal, demanded by the expedition. The transports were waiting at New York to receive the troops. He was now in the midst of bustle with some of the officers of his command about him, mingled with the friends whom he was to leave behind. The severest point of the crisis was over, for he had already bidden his family farewell. His spirits appeared to have risen with the occasion. He was evidently in his element, nor, to say the truth, dangerous as was the path before him, could it be regretted that his life was now to have the opportunity of that species of success which, in his youth at least, he had considered the best worth struggling for. He looked so fit to be a soldier that it was impossible to doubt, not merely his good conduct, which was as certain before the event as afterward, but his good fortune in the field and his fortunate return.

He sailed on the 27th of May, in the bark Kepler, arriving at Vera Cruz one month later, joining General Scott at Puebla on the 7th of August. In the battle of Contreras he was severely wounded by the falling of his horse, but continued with his brigade during the day. He was also with his troops at Churubusco, and after the battle was appointed by General Scott one of the commissioners to arrange an armistice. He remained in Mexico during the war, and, at its close, resigned his commission and returned to his practice. In 1850 he was chosen President of the convention called to revise the State constitution, and by his influence procured the removal of the tests by which Catholics were excluded from certain offices.

In the Baltimore Convention of 1852, after thirty-five ballotings for candidate for the presidency, in which he had not received a vote, his name was brought forward by the Virginia delegation, and he was nominated on the forty-ninth ballot by a majority of 271 votes. He received in the following November the votes of all the States except Massachusetts, Vermont, Kentucky, and Tennessee, obtaining 254 votes of the electoral college, while General Scott had only 42. In his inaugural address he maintained that slavery was fully recognized in the Constitution, and that the fugitive-slave law was constitutional, and should be strictly executed. He appointed, as his Cabinet, William L. Marcy, Secretary of State; James Guthrie, Secretary of the Treasury; Jefferson Davis, Secretary of War; James C. Dobbin, Secretary of the Navy; Robert McClelland, Secretary of the Interior; James Campbell, of Pennsylvania, Postmaster-General, and Caleb Cushing, Attorney-General. The principal events of his Administration were the question of the bounding of the Mesilla Valley, now Arizona; exploring routes for the proposed railroad from the Mississippi to the Pacific; the affair of Martin Koszta; the repeal of the Missouri Compromise; the famous Ostend Conference; the Treaty of 1854 between the United States and Great Britain, providing for commercial reciprocity between this country and the British Provinces; the filibuster invasion of Nicaragua by William Walker; the dismissal of the British minister and consuls in 1855 for sanctioning the enlistment of recruits for the British army; and the Kansas troubles. President Pierce signed bills to reorganize the consular and diplomatic system of the United States; to organize court claims; to provide a retired list for the navy, and to confer the title of lieutenant-general on Winfield Scott. He vetoed, in 1856, a bill making appropriations for the completion and reform

of certain public works, and a bill appropriating 10,000,000 acres of public lands to the States for the relief of the indigent insane; in 1855 he vetoed a bill for the payment of the French spoliation claims, and a bill increasing the annual appropriation for the Collins line of steamers. Before the adjournment of Congress, in August, 1856, the House amended the army appropriation bill so as to provide that no part of the army should be employed to enforce laws passed by the Territorial Legislature of Kansas, until Congress should have decided it to be a valid legislative body. The Senate refused to concur in the amendment, and Congress then adjourned. The President immediately issued a proclamation, calling an extra session of Congress to convene on August 21st, when the bill was passed without any proviso. Congress came together again in December. The President's message was chiefly devoted to the Kansas troubles, taking strong grounds against the Free-State party. His administration ended March 4, 1857.

Of his political course as President, which at the time drew down upon him such severe censures from those who differed from him in opinion, perhaps the best, certainly the most charitable, explanation is to be found in the language of his intimate friend and biographer, Nathaniel Hawthorne, who, in his life of President Pierce, said:

> When the series of measures known under the collective term of the Compromise were passed by Congress, in 1850, and put to so searching a test, here at the North, the reverence of the people for the Constitution, and their attachment to the Union, General Pierce was true to the principles which he had long ago avowed. At an early period of his Congressional service, he had made known, with the perfect frankness of his character, those opinions upon the slavery question which he has never since seen occasion to change in the slightest degree. There is an unbroken consistency in his action with regard to this matter. It is entirely of a piece, from his first entrance upon public life until the moment when he came forward, while many were faltering, to throw the great weight of his character and influence into the scale in favor of those measures through which it was intended to redeem the pledges of the Constitution, and to preserve and renew the old love and harmony among the sisterhood of States. His approval embraced the whole series of those acts, as well those which bore hard upon Northern views and sentiments, as those in which the South deemed itself to have made more than reciprocal concessions. No friend nor enemy that knew Franklin Pierce would have expected him to act otherwise, with his view of the whole subject. Whether looking at it through the medium of his conscience, his feelings, or his intellect, it was impossible for him not to take his stand as the unshaken advocate of union, and of the mutual steps of compromise which that great object unquestionably demanded.

At the Democratic National Convention of 1856, at Cincinnati, Mr. Pierce, though a candidate, did not unite the suffrages of his party, and, after numerous ballotings, Mr. Buchanan was made the nominee. Soon after the close of his term of office, President Pierce sailed for Europe with his wife, whose health had been seriously impared since the death of their last surviving son in 1853, by a railroad accident, just before her husband's inauguration. They visited Madeira, and made a protracted tour of Europe, returning home in 1860. The journey was an interesting one, but the bereaved mother could not rally from her great affliction, and died in 1863. During the war of 1861–'65, ex-President Pierce remained in retirement, taking no active part in the strife, though, in accordance with his lifelong views, his sympathies were understood to be with the South. The death of his wife, to whom he was tenderly attached, saddened him greatly, and that of his intimate friend, Hawthorne, added to his depression. For two or three years past his health had been very feeble, and he had had several severe attacks of illness.

In private life, General Pierce was greatly esteemed and loved; of amiable and winning manners, a faithful friend, a tender and devoted husband, a kind and cordial neighbor, and a devout Christian, his death saddened many hearts who knew little and cared less for his political career or his views on national subjects.

PORTUGAL, a kingdom in Europe. King, Luiz I., born October 31, 1838; succeeded his brother, King Pedro V., November 11, 1861. Heir-apparent, Carlos, born September 28, 1863. A new ministry was formed on the 11th of August, 1869, composed as follows: Duke of Loulé, President and Minister of the Interior; J. L. de Castro Pereira Corte Real, Minister of Justice; A. J. Braamcamp, Minister of Finance; General Maldonado d'Eça, Minister of War; L. A. Rebello da Silva, Minister of Marine; J. T. Lobo de Avala, Minister of Public Works; Minister of Foreign Affairs, Mendez Leal. Area, 36,510 square miles; population in 1864, 3,984,045; with the Azores and Madeira (in 1864), 4,347,441. The population of the Portuguese colonies in Africa and Asia is given (in the *Gotha Almanac* for 1870) as 3,872,959, of whom 2,000,000 are set down for Angola, Ambriz, Benguela, Mosammedes.* The revenue in the budget for 1869–'70 was estimated at 15,616,096 milreis, and the expenditures at 21,109,960. Public debt in June, 1868, 196,562,673 milreis. The strength of the army in the kingdom was in May, 1868, 1,567 officers and 28,092 soldiers; in the colonies, 1st line, 9,453; 2d line, 21,411. The fleet, in 1868, consisted of 30 armed and 12 non-armed vessels; total, 42 vessels, with 366 guns. The imports of Portugal, in 1866, amounted to 26,410,000 milreis; the exports to 17,290,000 ms. The movement of shipping in 1867 was as follows:

Flag.	Vessels entered.	Vessels cleared.
Portuguese	6,424	6,511
Foreign	3,920	4,252
Total	10,344	10,763

The railroads in operation amounted, in 1869, to 96.5 geographical miles.

Portugal, in 1869, suffered from serious finan-

* For a list of Portuguese colonies in Asia and Africa, see AMERICAN ANNUAL CYCLOPÆDIA for 1866.

cial difficulties. There was, in the beginning of 1869, a large deficit in the annual budget. The King himself, in his speech to the Cortes, on January 2d, admitted that the difficulties could only be overcome by good order in the administration, by diminution in the expenditure, and by self-sacrifice. It is stated that, for ten years past, Portugal has been spending £4,-200,000 a year on an income of £3,500,000 a year. The deficit in 1866–'67 was £1,117,482; in 1867–'68 it was £1,298,596. Portugal has not had a budget without a deficit for thirty years. The expenditure has increased every year during that period; the revenue has been stationary during that time. The public debt has increased from £20,000,000 in 1854, to £47,-000,000 in 1867. In addition to this, the Government had embroiled itself with foreign capitalists, who had carried out some of the greatest public enterprises in Portugal. The Government had seized the Southeastern Railway of Portugal, which measure chiefly affected British interests; but disputes also took place in reference to the Northern Railway, constructed almost exclusively by French capital. In both cases the capital yielded very small returns, and, as a natural consequence, great dissatisfaction and mutual recrimination ensued. This went to such an extent as to assume a national character on the part of the Portuguese, and successive ministries, although desirous of settling the pending disputes, were prevented by the decided opposition of the Cortes. The question of the Southeastern Railway was the cause of the fall of two ministries, the Cortes not having ratified the terms agreed to by the Government; the dispute lay in reality with the nation, who considered that their honor was involved. This dispute was, however, at last settled. The Government took possession of the railway in default of completion of the company's obligations, as it states, and assigned a sum of about £520,000 as compensation; not, however, as a right, but in equity, and subject to the consent of the Cortes. The public feeling was very much excited against the Southeastern Company of Portugal, and a large portion of the nation repeatedly urged confiscation. The trade of Portugal had fallen off greatly during the past two years, and is said to have been influenced unfavorably by the introduction of the paper currency in Brazil, where a large amount of Portuguese capital is retained, waiting for a favorable turn in the exchange.

The Cortes was opened on the 2d of January. The candidate of the opposition, Mendez Leal, being chosen president, the ministers resigned, and their resignation was accepted by the king. But the friends of the ministry manifested their adhesion to it so energetically, that the officers of the army and navy assured the king he could rely upon them and fearlessly choose his ministers. All the officers of the Parliament resigned, a motion against their election having been made by forty-four deputies. In the session of January 21st, the deputies were informed that the King had resolved upon retaining his Cabinet. A royal decree dissolved the House of Deputies, and ordered a new session to begin on May 4th. To alleviate the financial pressure, the King assigned to the Treasury a part of the income of his family, by the following letter to the Marquis da Bandeira, the Prime Minister:

MY DEAR MARQUIS: The late administrative crisis being at an end, and while we are still occupied with the financial question, which rightly deserves our attention, I hasten to acquaint you, as President of the Council of Ministers, that the Queen, myself, and my sons, are desirous to be the first to contribute as much as is in our power to diminish the heavy burdens of the Treasury. The Queen proposes to cede the tenth part, myself 36,000,000 reis, and my sons 4,000,000 reis, from our annual civil lists, for the necessities of the state during the next financial year. I assure you that, whatever the circumstances, the country will find me and the royal family always ready to perform our share in bearing the burdens of the state.

Believe me to be, yours, affectionately,
LUIZ.

Political discontent spread, however, and culminated in serious disorders in the capital. The financial measures were not well received by the Chambers. To obviate the threatening outbreak of general discontent, a new ministry was formed, in August, under the Duke of Loulé, as President of the Council and Minister of the Interior, whose accession was considered a pledge for an honorable arrangement with the foreign capitalists. Political agitation continued, however. In December, a military movement was set on foot by the Duke of Saldanha, and the public peace was disturbed at Oporto. In the night of December 10th, placards were posted in the streets of Lisbon, summoning the people to arms in the name of a republic. On the next day numerous arrests were made; but the excitement again passed away. The General Cortes assembling on January 5, 1870, was opened by King Luiz, who, in his speech, referred with gratification to the state of tranquillity which now existed at home and abroad, and promised to introduce important measures of reform and economy.

Concerning its colonial policy, the Portuguese Government informed the powers of Europe of its determination to abolish completely the slave-trade in all its colonies, which was accomplished by a royal decree on February 26, 1869. The Portuguese Governor of Macao issued, in regard to the Coolie trade, the following proclamation:

The Governor of the provinces of Macao and Timor determines as follows: The Portuguese consul in the port of Callao, Lima, having communicated to this Government, by a dispatch dated the 9d of August last, the horrible act committed by a farmer in the suburbs of that city upon forty-eight Chinese immigrants who had been transported to that country as laborers, by marking them with a red-hot iron, as was formerly the custom with African slaves; and that furthermore many laborers, or Chinese colonists, were wandering about the streets of that city soliciting the charity of the public, having been abandoned

by their masters when, being mutilated, they were judged useless to perform the services for which they had contracted; it is therefore determined, with the advice of the council, that, failing the receipt of official information that energetic measures have been taken to prohibit atrocities of such a nature, so barbarous and so contrary to the civilization of the age, his Majesty not determining to the contrary, the following regulations shall be observed:

1. Until further notice, the licenses conceded by this Government to open emigration-houses for the port of Callao, Lima, shall be suspended.

2. Furthermore, there shall not be admitted for examination by the Superintendent of Emigration, and there shall not be registered at the office of the Procurator of Chinese Affairs, contracts for any Chinese emigrants or colonists destined as above mentioned.

On August 3d the Chambers authorized the Government to grant concessions for the establishment of submarine telegraph lines from the coast of Portugal to Brazil.

PRESBYTERIANS. I. OLD AND NEW SCHOOL PRESBYTERIANS OF THE UNITED STATES.—Both the Old School and the New School General Assemblies met in New York City on the 20th of May. Their proceedings throughout had in an unusual degree a relation to each other, and deserve to be considered side by side. The conviction seemed to prevail among the members of both bodies, that this would be the last occasion on which they would meet in separate sessions, and that they were, to all intents and purposes, except in form, one body. One new Synod and six Presbyteries from the South were represented in the Old School General Assembly. Immediately on the opening of the Assembly, a committee of seven was appointed to confer with a similar committee of the New School on the subject of reunion. The examination of the votes of the Presbyteries showed that only a very small number had unconditionally approved of the terms of reunion which had been sent down by the General Assemblies of 1868, but that the most of them had declared in favor of reunion on modified conditions. On the seventh day of the session (May 27th), the joint committee reported the plan of reunion as it had been agreed upon in conference. It was adopted by a vote (including absentees who afterward recorded their votes) of 276 yeas to 8 nays. It is in full as follows:

The Committee of Conference appointed by the two General Assemblies have attended to the duties assigned to them, and, after a very free interchange of views, with prayer to Almighty God for His guidance, are unanimous in recommending to the Assemblies for their consideration, and, if they see fit, their adoption, the accompanying three papers, to wit:

1. Plan of Reunion of the Presbyterian Church in the United States of America;

2. Concurrent Declarations of the General Assemblies of 1869; and

3. Recommendation of a day of prayer.

HENRY DAY, Secretary.

I.—PLAN OF REUNION OF THE PRESBYTERIAN CHURCH IN THE UNITED STATES OF AMERICA.

Believing that the interests of the Redeemer's kingdom would be promoted by the healing of our divisions, and that the two bodies bearing the same name, having the same constitution, and each recognizing the other as a sound and orthodox body according to the principles of the confession common to both, cannot be justified by any but the most imperative reasons in maintaining separate, and, in some respects, rival organizations; we are now clearly of the opinion that the reunion of those bodies ought, as soon as the necessary steps can be taken, to be accomplished, upon the basis hereinafter set forth:

1. The Presbyterian churches in the United States of America, namely, that whose General Assembly convened in the Brick Church in the city of New York, on the 20th day of May, 1869, and that whose General Assembly met in the Church of the Covenant in the said city on the same day, shall be reunited as one church, under the name and style of the Presbyterian Church in the United States of America, possessing all the legal and corporate rights and powers pertaining to the Church previous to the division in 1838, and all the legal and corporate rights and powers which the separate churches now possess.

2. The reunion shall be effected on the doctrinal and ecclesiastical basis of our common standards; the Scriptures of the Old and New Testaments shall be acknowledged to be the inspired word of God, and the only infallible rule of faith and practice; the Confession of Faith shall continue to be sincerely received and adopted as containing the system of doctrine taught in the Holy Scriptures; and the government and discipline of the Presbyterian Church in the United States, shall be approved as containing the principles and rules of our policy.

3. Each of the said Assemblies shall submit the foregoing basis to its presbyteries, which shall be required to meet on or before the 15th day of October, 1869, to express their approval or disapproval of the same, by a categorical answer to the following question:

Do you approve of the reunion of the two bodies now claiming the name and rights of the Presbyterian Church in the United States of America, on the following basis, namely: "The reunion shall be effected on the doctrinal and ecclesiastical basis of our common standards; the Scriptures of the Old and New Testaments shall be acknowledged to be the inspired word of God, and the only infallible rule of faith and practice; the Confession of Faith shall continue to be sincerely received and adopted as containing the system of doctrine taught in the Holy Scriptures; and the government and discipline of the Presbyterian Church in the United States shall be approved as containing the principles and rules of our polity?"

Each presbytery shall, before the 1st day of November, 1869, forward, to the stated clerk of the General Assembly with which it is connected, a statement of its vote on the said basis of reunion.

4. The said General Assemblies now sitting shall, after finishing their business, adjourn, to meet in the city of Pittsburg, Pennsylvania, on the second Wednesday of November, 1869, at 11 o'clock A. M.

If the two General Assemblies shall then find and declare that the above-named basis of reunion has been approved by two-thirds of the presbyteries connected with each branch of the Church, then the same shall be of binding force, and the two assemblies shall take action accordingly.

5. The said General Assemblies shall then and there make provision for the meeting of the General Assembly of the united Church on the third Thursday of May, 1870. The moderators of the two present assemblies shall jointly preside at the said Assembly of 1870, until another moderator is chosen. The moderator of the Assembly now sitting at the Brick Church aforesaid shall, if present, put all votes and decide questions of order; and the moderator of the

other assembly shall, if present, preach the opening sermon; and the stated clerks of the present Assemblies shall act as stated clerks of the Assembly of the united Church until a stated clerk or clerks shall have been chosen thereby; and no commissioner shall have a right to vote or deliberate in said assembly until his name shall have been enrolled by the said clerks, and his commission examined and filed among the papers of the Assembly.

6. Each presbytery of the separate Churches shall be entitled to the same representation in the Assembly of the united Church in 1870, as it is entitled to in the Assembly with which it is now connected.

II.—CONCURRENT DECLARATIONS OF THE GENERAL ASSEMBLIES OF 1869.

As there are matters, pertaining to the interests of the Church when it shall have become reunited, which will manifestly require adjustment on the coming together of two bodies which have so long acted separately, and concerning some of which matters it is highly desirable that there should be a previous good understanding, the two Assemblies agree to adopt the following declarations, not as articles of compact or covenant, but as in their judgment proper and equitable arrangements, to wit:

1. All the ministers and churches embraced in the two bodies should be admitted to the same standing, in the united body, which they may have held in their respective connections, up to the consummation of the union.

2. Imperfectly organized churches are counselled and expected to become thoroughly Presbyterian, as early within the period of five years as may be permitted by the highest interests to be consulted; and no other such churches shall be hereafter received.

3. The boundaries of the several Presbyteries and Synods should be adjusted by the General Assembly of the united Church.

4. The official records of the two branches of the Church for the period of separation should be preserved, and held as making up the one history of the Church; and no rule or precedent, which does not stand approved by both the bodies, should be of any authority until reëstablished in the united body, except in so far as such rule or precedent may affect the rights of property founded thereon.

5. The corporate rights now held by the two General Assemblies, and by the Boards and Committee, should, as far as practicable, be consolidated, and applied for their several objects, as defined by law.

6. There should be one set of Committees or Boards for Home and Foreign Missions and the other religious enterprises of the Church, which the churches should be encouraged to sustain, though free to cast their contributions into other channels if they desire to do so.

7. As soon as practicable after the union shall have been effected, the General Assembly should reconstruct and consolidate the several Permanent Committees and Boards which now belong to the two Assemblies, so as to represent, as far as possible, with impartiality, the views and wishes of the two bodies constituting the united Church.

8. The publications of the Board of Publication and of the Publication Committee should continue to be issued as at present, leaving it to the Board of Publication of the united Church to revise these issues and perfect a catalogue for the united Church, so as to exclude invidious references to past controversies.

9. In order to a uniform system of ecclesiastical supervision, those theological seminaries that are now under Assembly control may, if their boards of direction so elect, be transferred to the watch and care of one or more of the adjacent Synods; and the other seminaries are advised to introduce, as far as may be, into their constitutions, the principle of synodical or Assembly supervision; in which case they shall be entitled to an official recognition and approbation on the part of the General Assembly.

10. It should be regarded as the duty of all our judicatories, ministers, and people in the united Church, to study the things which make for peace, and to guard against all needless and offensive references to the causes that have divided us; and, in order to avoid the revival of past issues by the continuance of any usage, in either branch of the Church, that has grown out of former conflicts, it is earnestly recommended to the lower judicatories of the Church that they conform their practice in relation to all such usages, as far as is consistent with their convictions of duty, to the general custom of the Church prior to the controversies that resulted in the separation.

III.—RECOMMENDATION OF A DAY OF PRAYER.

That the counsels of Infinite Wisdom may guide our decisions, and the blessing of the Great Head of the Church rest upon the results of our efforts for reunion, it is earnestly recommended to the churches throughout both branches of the Presbyterian Church, that they observe the second Sabbath of September, 1869, as a day of fervent and united prayer to Almighty God, that He would grant unto us all "the spirit of counsel and might, the spirit of knowledge and of the fear of the Lord," and, in the new relations now contemplated, enable us to "to keep the unity of the Spirit in the bonds of peace."

Suitable action was taken to communicate the result of these proceedings to the Presbyteries, and for the taking and reception of their votes upon them.

The committee which had been appointed to confer with similar committees to consult upon a plan of reunion of all Presbyterian bodies, as proposed by the Philadelphia "Union Convention" of 1867, reported progress. The subject of reunion with the Southern Presbyterian Church was considered. No definite conclusion was arrived at, since, in the frame of mind of the Southern people, the prospect of such reunion did not seem promising. The Assembly reiterated its hope of last year, that a more favorable time would come. The Board of Publication were instructed to enter upon the preparation of books in the Spanish and Portuguese languages.

The increase in the contributions of the Church was reported not to be in proportion to the growth in the wants of benevolent and missionary enterprises. Authority was given for the preparation of a statement exhibiting to each Presbytery and Synod the proportional amount which it seemed desirable it should contribute. Increased interest was reported in Sunday-schools, baptisms, benevolence, missions, and in all things tending to the increased prosperity and spirituality of the Church. Measures were taken to protect the property interests of the Church against adverse decisions of the Kentucky courts, which go to place the churches in that State under the control of the "Declaration and Testimony Secession." The Supreme Court of the United States is to be appealed to.

The Board of Foreign Missions employs 62 missionaries, 13 ordained native preachers, 10 native licentiates, 86 assistant missionaries, and 198 native helpers. The number of churches is 48; of communicants, 1,838; of children in Sunday-schools, 7,400. Two new missions have been established among the Winnebago

and the Navajoe Indians. Twenty-six ministers and assistant missionaries have been added to the force. Two missionaries have died. The work is in better condition than ever before.

New School General Assembly.—Five Southern Presbyteries were represented in the New School General Assembly. At the opening of this body a committee of five was appointed to confer with a similar committee from the General Assembly on the attitude of the reunion question. In the mean time, the New School portion of the joint committee of thirteen of the previous year's Assemblies reported the result of the action they had taken toward obtaining a decisive vote on the acceptance of the terms of reunion. The Old School body had expressed a desire for a modification of the first article of the basis, but too late to be acted on by the New School Assembly of 1868. In pursuance of this expression, however, many of the Old School Presbyteries were voting for reunion on the basis of "the standards pure and simple," which was a different question from the one that was before the New School Presbyteries. The committee also thought that the plan of reunion would be more acceptable to the New School Presbyteries, if the tenth article, permitting the examination of ministers going from one Presbytery to another, were omitted. They have therefore recommended that the Presbyteries, besides voting on the basis itself, should express their assent to the Old School amendment, and to the omission of the tenth article, so that the General Assemblies might have light sufficient to enable them to act on the subject without remanding it to the Presbyteries.

One hundred Presbyteries had voted in favor of reunion on the basis as it was sent to them, and four had declared against it. A large number had favored the suggested amendments, and some had added supplementary conditions and amendments of their own proposing.

On the seventh day of the session (May 27th) the report of the joint committee (of five from each branch, who were appointed on the first day) was received and adopted unanimously. It is given above.

The following communication was received from a committee of the General Synod of 1868 of the Reformed Church. It had been unanimously adopted by that body.

NATIONAL COUNCIL OF EVANGELICAL CHURCHES.

Whereas, The Constitution of the Church confides to the General Synod the duty of "regulating and maintaining a friendly correspondence with the highest judicatories or assemblies of other religious denominations, for the purpose of promoting union and concert in general measures, which may be calculated to maintain sound doctrine, preventing conflicting regulations relative to persons under censure of the judicatories of either denomination, and to produce concert and harmony in their respective proceedings to promote the cause of piety and religion;" and

Whereas, It is the conviction of this Synod that wholesome fraternal measures may be adopted for combining and unifying the Evangelical denominations in support of the common doctrines of Christianity, without involving any surrender of the distinctive features and individual characteristics of these denominations; and

Whereas, The doctrinal and governmental system of the Reformed Church is broad and catholic, presenting a basis on which general measures for the promotion of piety and religion may be prosecuted: therefore

Resolved, That the Synod hereby appoints a committee of three ministers and three elders, to present, in its behalf, to the highest judicatories and assemblies of other Evangelical denominations, at their next annual meetings, for their consideration and adoption, the following plan of a National Council of the Evangelical denominations in these United States:

1. Such Council shall have for its great object the concerting of proper measures for promoting, *not* organic, but fraternal union, for the maintenance of the common doctrines and ethics of the Christian Church, whose one head is the Lord Jesus.

2. That its powers shall be simply advisory, and be exercised, not for the purpose of assailing what any denomination represented therein may regard as necessary for its welfare, but to secure concert of action for the furtherance of the Gospel, by diminishing sectarian rivalries and oppositions.

3. Such Council, when convened, may consider and recommend such general measures as may tend to give expression to the proper and essential unity of all who love the Lord Jesus Christ, whether in this or other lands, and draw them closer together in aggressive labors to bring the whole world into subjection to Christ.

4. The Council shall be a delegated body, and may consist of five representatives—three ministers and two laymen—from each Evangelical denomination, acceding to this recommendation, but no denomination, as such, shall be held responsible in any legislative sense for what the Council may choose to recommend.

5. The Council shall meet, provided the higher judicatories and assemblies of sister churches accede to this suggestion, on the third Tuesday of October, 1869, in the city of New York, at 10 o'clock A. M., in the Reformed Church on Washington Square.

Favorable action was taken on this invitation in both General Assemblies. Both bodies made the Pope's invitation to Protestants to return to the Roman Catholic Church, and the proper reply to be made to it, subjects for the consideration of special committees. In accordance with resolutions subsequently adopted by both General Assemblies, the moderators of both drew up a joint reply to the papal letter of invitation, stating the differences which separate the Protestant Churches from the Church of Rome. Among the visiting delegations who were received by the two bodies, that of Protestants from Bohemia deserves to be stated.

Final Ratification of the Plan of Reunion.—Pursuant to the terms on which they had adjourned from New York, the two General Assemblies met at Pittsburg on the 10th of November. Reports were read in the New School General Assembly from all the Presbyteries, numbering 118. All but three were in favor of the plan of reunion. In the Old School General Assembly, report was made that all the Presbyteries but twelve had responded to the overture for reunion. One hundred and twenty-eight Presbyteries had

voted in the affirmative and three in the negative. Fifty-eight Presbyteries had voted unanimously in favor of reunion. A report was then adopted in both General Assemblies, declaring the basis of reunion ratified by the votes of more than two-thirds of the Presbyteries of both branches of the Church, and that it be of practical force. The report provided for the appointment of a committee of five from each branch of the Church, to take into consideration the affairs of the Boards and Committees, and report, to the Assembly of the United Church next to be held, what changes are necessary. It also provided for the appointment of another joint committee of ten (five from each General Assembly), to propose to the General Assembly of the united Church a proper adjustment of boundaries of Presbyteries and Synods, and a ratio of representation, and other measures of adaptation to the different circumstances of the united Church. Ceremonies appropriate to the consummation of the reunion were celebrated in imposing style in a joint meeting of the General Assemblies, which was held on the 12th of November, and signalized the closing proceedings of both Assemblies.

The following are the statistics of the two branches for 1869:

OLD SCHOOL SYNODS.	Ministers.	Churches.	Communicants.
Albany	99	73	11,196
Alleghany	92	107	14,124
Atlantic	21	87	4,423
Baltimore	98	121	11,157
Buffalo	47	37	4,995
Chicago	113	117	8,413
Cincinnati	105	121	12,084
Illinois	126	163	10,703
Indiana	62	90	7,295
Iowa	67	105	4,795
Kansas	33	40	1,536
Kentucky	43	118	4,936
Missouri	71	107	4,681
Nashville	20	13	794
New Jersey	250	208	27,958
New York	226	168	23,538
Northern India	29	13	333
Northern Indiana	62	101	6,863
Ohio	108	147	12,197
Pacific	44	34	1,899
Philadelphia	240	220	33,519
Pittsburg	118	154	19,831
St. Paul	48	61	2,051
Sandusky	41	61	3,714
Southern Iowa	58	85	4,941
Wheeling	106	165	18,614
Wisconsin	43	55	3,321
Total	2,881	2,740	258,908

Number of Synods, 27; of Presbyteries, 143; of licentiates, 187; of candidates for the ministry, 376; of licensures, 85; of ordinations, 98; of installations, 172; of churches organized, 95; of members added, 27,171; of baptisms, 15,569; of persons in Sunday-schools, 239,389.

Contributions: for Congregational purposes, $3,180,102; for the Boards, $868,578; for disabled ministers, $37,196; for miscellaneous purposes, $397,892; for the freedmen, $27,310; for the contingent fund, $15,708; whole amount, $4,526,281.

SYNODS.	Ministers.	Churches.	Members.
Albany	87	65	8,281
Utica	71	72	7,205
Onondaga	70	68	8,573
Geneva	102	86	9,564
Susquehanna	37	36	3,336
Genesee	138	106	14,210
New York and New Jersey	208	174	25,788
Pennsylvania	124	95	17,512
West Pennsylvania	33	34	3,881
Michigan	120	123	11,405
Western Reserve	98	75	8,381
Ohio	50	65	4,689
Cincinnati	57	46	4,214
Indiana	49	66	5,128
Wabash	39	56	3,401
Illinois	88	101	6,675
Peoria	103	66	7,349
Wisconsin	44	36	1,961
Iowa	64	73	3,295
Minnesota	44	46	2,281
Missouri	44	51	2,877
Kansas	24	21	573
Tennessee	17	26	2,388
Alta California	29	22	1,422
Total	1,848	1,631	172,589

Number of Presbyteries, 113; of licentiates, 116; of candidates, 303; of baptisms, 8,296; of persons in Sunday-schools, 192,264.

Funds.—Home missions, $142,377; foreign missions, $116,364; education, $29,492; publication, $14,491; church erection, 43,013; ministerial relief, $18,966; freedmen, $12,594; General Assembly, $12,998.43; congregational, $2,886,940; miscellaneous, $363,98.2.

II. UNITED AND REFORMED PRESBYTERIANS.—The General Assembly of the *United Presbyterian Church* met at Monmouth, Ill., on the 26th of May. A report was rendered respecting the correspondence with the Associate Reformed Presbyterian Church, South. The United Presbyterian commissioner had been well received, but the Associate Reformed Synod decided it was not at present expedient to establish a correspondence between the two churches. Upon this showing, the General Assembly resolved that another commissioner should not be appointed until the other body should express its readiness to enter into correspondence. The committee for conference with representatives of other Presbyterian bodies on the subject of union reported that insuperable difficulties seemed to exist at present in the way of union, the chief of which grew out of the diversity of views that prevail on the subject of psalmody. The Assembly acknowledged, by resolution, the Christian spirit, and particularly the increasing regard shown for the distinctive principles of its own church by the Old School and New School churches, and continued the committee, while it declined to modify its views on psalmody. The Assembly, having been called upon, on appeal, to adjudicate in a case where a church-member had married his deceased wife's sister, determined to give the Church an opportunity to make a full expression on the subject. An overture was therefore prepared, calling for a vote, whether the declaration in the Westminster Confession—"the man may not marry any of his wife's kindred nearer in blood than he

may of his own, nor the woman of her husband's kindred nearer in blood than of her own"—should be repealed.

The Assembly reviewed the testimony of the Church against secret societies. A vote of thanks was offered to his Highness the Maharajah Duleep Singh, for the interest which he has taken in the missions of the Church. The progress of the China mission is impeded by the death of Mrs. McKelvey, and the purpose of Mr. Nevin to return to this country for his health. The Assembly resolved to withdraw its force from that field, unless Mr. Nevin should announce his firm purpose to return, in which case it is pledged to sustain him.

The following are the statistics of the United Presbyterian Church: Number of pastors, 401; without charge, 164; licentiates, 43; students of theology, 45; congregations, 726; mission stations, 44; members, 65,624; increase by profession, 4,121; by certificate, 3,998; decrease, 5,059; infant baptisms, 4,171; adult baptisms, 504; number of Sunday-schools, 555; teachers employed, 6,068; scholars, 43,806; contributions by Sunday-schools, $19,133.

The total of contributions to the Boards was $138,588, or $21,000 less than the previous year. The amount paid to pastors was $318,-374. The receipts for home missions were $35,270.72; seventy-nine missionaries are employed in this work. The missions to the freedmen have 2,334 pupils in day-schools, and 2,821 in Sunday-schools. The receipts for foreign missions were $50,624.52. There are five missions—in Syria, India, Egypt, China, and Italy—with 11 stations and 33 out-stations, with a missionary force of 26 Americans and seventy natives. There are 40 mission-schools, with about 1,080 scholars.

Monmouth College, Monmouth, Ill., has 368 students. Westminster College is also supported by this Church.

The General Synod of the *Reformed Presbyterian Church* met at Cedarville, O., on the 19th of May. The action of the previous General Synod in the case of George H. Stuart was reaffirmed by the action of the Synod toward certain Presbyteries. A Philadelphia Presbytery, which had protested against the action toward Mr. Stuart, was not recognized, and another Presbytery was declared in its place. The Presbytery of Alleghany, which had also offered a protest, was pronounced out of the communion of the Church, and the Presbytery of Saharunpur, in India, was declared in secession for having suspended relations with the General Synod, in consequence of disapproval of its action in reference to Mr. Stuart. Nevertheless, the Synod took measures to retain its hold on the mission at Saharunpur. The commission for the arrangement of terms of union with the United Presbyterian Church reported substantially the basis which is given below, and was continued. The Synod reiterated its approval of the proposed amendment to the Constitution of the United States, which has for its end the formal recognition of the Christian religion.

The joint committee from the United Presbyterian General Assembly and the Reformed Presbyterian General Synod met in Pittsburg, Pa., on the 10th of November, and agreed upon the following plan for the union of those two bodies:

Whereas, An organic union between the General Assembly of the United Presbyterian Church and the General Synod of the Reformed Presbyterian Church is most desirable and of the utmost importance to the maintenance and more general diffusion of the principles which are held in common: therefore

Resolved, That these churches agree to form an organic union on the basis of the principles embraced in their respective "Testimonies," and the other subordinate standards which they hold in common.

Resolved, That these churches, when united, shall be called the United Presbyterian Church, consisting of the Reformed Presbyterian Church and the United Presbyterian Churches, and that the United Supreme Judicatory of the United Church shall be called the "General Assembly of the United Presbyterian Church of North America."

Resolved, That the different boards and institutions of the respective churches shall not be affected by this union, but shall have the control of their funds, and retain all their corporate or other rights and privileges, until the interests of the Church shall require a change.

The Synod of the *Reformed Presbyterian Church* (O. S.), which met at Newburg, N. Y., on the 26th of May, adopted a resolution, deploring the irreligious character of the Government of the United States. It declared that irreligion found expression in the Constitution of the United States, that fundamental law leaving the Government, which establishes it, "destitute of all constitutional warrant for worshipping God, and with no constitutional obligation to abstain from violating His law." It assumed that such a Constitution could not be accepted and approved by a Christian people without sin, and that it was a duty of citizens to refuse to coöperate with a government thus constituted. It concluded by approval of the efforts which have been made by Christians of all denominations "in behalf of certain proposed amendments to the national Constitution."

The Synod established a fund for the benefit of superannuated ministers and the needy families of deceased ministers; determined to establish a new missionary post at Killis, in Syria; to coöperate with the Synod of Ireland in the foreign missionary field; and to continue the prosecution of missionary work among the freedmen in Washington. The educational interests of this Church are represented by a theological seminary, and Northwood College, in Ohio, where colored students are educated. It also coöperates with the trustees of Monmouth College. The Synod declined to participate in the National Council of Evangelical Churches, which was called by the Reformed Church.

III. CUMBERLAND PRESBYTERIANS.—The General Assembly of the Cumberland Presbyterian Church met at Murfreesborough, Tenn., May

20th. The principal feature of the session was the consideration of communications from a convention of colored ministers of the denomination, which met at the same time. The object of the latter was to consult upon the means of organizing and strengthening the Church among the colored people. The convention, among other things, asked that the Synod be authorized to create presbyteries of colored ministers, and that provision be made for the organization of a synod of colored ministers, when the requisite number of presbyteries shall have been formed. The first request was referred to the synods, and the second was laid over until an occasion should arise to decide upon it. The convention also sought assistance in building and furnishing churches for colored congregations; and asked that a plan be devised by which colored ministers could receive theological instruction. The matter of help in building churches was commended to the whole Church. The colored ministers were invited to select a location for a theological institution, and measures were taken to coöperate with them in establishing it. It was agreed on both sides that it would be for the best for the ministers of the two races to meet in separate judicatures. The Assembly advised against establishing new schools of a higher grade than a preparatory, recommending that advanced scholars be directed to the institutions already established. On account of defects in the returns, no report of statistics has been rendered. The number of colored ministers is computed at 58. Cumberland University has 17 teachers and 758 students, including those in the preparatory departments. New departments have been organized, and the library has been very much enriched. McGee College Mission has 190 students. Other institutions are reported prosperous. A theological department is to be established at "Camp Blake," where fifty-three students have already been cared for. It has been offered the theological library of the late Dr. Murdoch, of Yale College. The Board of Publication (capital $6,-989.91) has issued nearly 25,000 volumes. Its receipts for the year were $9,807.

IV. Southern Presbyterian Church.—The General Assembly of the Presbyterian Church in the United States (Southern branch) met at Mobile, Ala., on the 20th of May. The Rev. Stuart Robinson, who has been conspicuous for several years past by his participation in the "Declaration and Testimony" movement in Kentucky, was chosen moderator. A prominent subject of attention related to the work among the freedmen. The committee, who had been appointed to correspond with the Northern Church, reporting that their correspondence had developed no practical plan of coöperation in this work, the Assembly determined, on the motion of the committee, that it was "not prepared to take any steps contemplating the proposed concert of action." A general and uniform plan of operations among the colored people was finally adopted. It contemplates, "for the present, separate, particular churches, with their own deacons and elders, and, at the same time, instruction by an educated white ministry, until they can prove their ability to produce a competent ministry of their own." It provides, with the consent of the colored people concerned, for the establishment of separate colored churches, to be united with adjacent white churches under a common pastorate; they are to elect deacons and ruling elders, and to be represented in the upper courts by the pastors in charge of them, and by the ruling elders of the white churches with which they are associated, "until they are sufficiently educated to warrant their becoming independent." Where no white churches are accessible, evangelists may establish colored mission churches, and preside over their sessions in admitting members and exercising discipline. Suitable colored men may be made exhorters, under the direction of pastors or evangelists, and, where colored candidates are able to stand examination, they may be licensed and installed over colored churches, either still holding their connection with the white churches, or ecclesiastically separated from them. The plan provides for the appointment of synodical committees to carry it into effect, and advises that assistance be rendered colored candidates for the ministry, and encouragement be given colored Sunday-schools. The report on foreign missions was very favorable. The subject of the spiritual care of the Southern people who have emigrated to Brazil, and, contingently, of the propagation of the Gospel in that region, was referred to the missionary committee, with instructions to take such action upon it as they should think proper. Approval was rendered of evangelistic work, and recommendation made of efforts to increase the measure of its influence. An effort will be made to raise the minimum of pastors' salaries (last year $600) to $750. Reports of evangelistic labors, from 13 of the 47 presbyteries connected with the General Assembly, showed good results. All the interests of the Church were represented as in a flourishing condition. Among the new presbyteries reported was that of Central Ohio, which is connected with the Synod of Kentucky.

The number of Sunday-school scholars in 18 presbyteries is about 8,000.

The receipts of the sustentation fund were $31,708.50, from 652 contributing churches. All the funds show increase—in receipts and in the number of contributing churches—over the previous year.

The cash receipts of the publication fund were $29,746.20; assets over and above liabilities, $36,819.74. Pages printed, 17,833,500.

The Union Theological Seminary reports 4 teachers and 26 students, and the theological seminary at Columbia, S. C., 26 students. The library of the former contains 5,800, and that of the latter, 18,117 volumes.

The receipts of the Board of Foreign Missions for 11 months were over $20,000. The missionary force will consist of 16 missionaries, and 14 assistants, including women and native helpers. The missions are, to the Choctaws, in Brazil, China, and Italy. There is a boys' and girls' school at Hanchow, China.

The receipts of the Committee on Education were $11,548.71; expenses, $12,211.23. There were 83 applicants for aid. Students for the ministry, 245. Contributions were reported to Davidson, Stewart, Kings, and Hampton Sidney Colleges, and to Columbia Theological Seminary. The whole contribution of the Church to education was not less than $33,000.

PRUSSIA,* a kingdom in Europe. King, Wilhelm I., born March 22, 1797; succeeded his brother Friedrich Wilhelm III. on February 2, 1861. Heir-apparent, Friedrich Wilhelm, born October 18, 1831. The ministry, in 1868, consisted of the following members: Count Otto von Bismarck-Schönhausen, Presidency and Foreign Affairs (appointed in 1862); Baron von der Heydt, Finance (1866); General Dr. von Roon, War (1859) and Navy (1861); H. Count von Itzenplitz, Commerce and Public Works (1862); Dr. von Mühler, Worship, Instruction, and Medical Affairs (1862); Leonhard, Justice (December, 1867); Von Selchow, Agriculture (1862); F. A. Count zu Eulenburg, Interior (1862). Ambassador of the United States at Berlin, George Bancroft (1867); Prussian ambassador in Washington, Baron von Gerolt.

The area of Prussia, inclusive of the new territory acquired in 1866, and of the duchy of Lauenburg, is 135,806 square miles. The total population, according to the census of December 3, 1867, was 24,043,296. This includes 18,228 soldiers who at that time were located in the other States of the North-German Confederation. The population of each of the old provinces, and of the new territories, in 1867, was, according to the official census, as follows:

OLD PROVINCES.	
Prussia	3,090,960
Posen	1,537,338
Brandenburg	2,716,022
Pomerania	1,445,635
Silesia	3,585,752
Saxony	2,067,066
Westphalia	1,707,726
Rhine provinces	3,455,358
Hohenzollern	64,632
Jade	1,748
NEW TERRITORY	
Hanover	1,937,637
Schleswig-Holstein	981,718
Hessen-Nassau	1,379,745
Lauenburg	49,978
Garrisons outside of the kingdom	18,228
Total	24,039,543

The population of towns of more than 2,000 inhabitants is 6,894,478; of towns and hamlets of less than 2,000 inhabitants, 561,872: total population of towns, 7,456,350.

The Prussian Diet, sitting in the beginning of 1869, was closed on March 6th, by a speech from the throne, read by Count Bismarck, in which the results of the Diet's deliberations and enactments, as well as the policy of the Prussian Government, are expressed as follows:

The Government can assert that it has succeeded in reconciling opinions which, though contradictory, were equally to be respected, and that it has, in fact, triumphed over one of the difficulties inseparable from parliamentary existence in carrying a measure which gives decisive evidence of our progress in constitutional development.

After carefully examining the budget passed by the Diet, the Government of his Majesty sanctions it almost without alteration, and the Government has granted the extraordinary credits necessary for completely meeting the expenditure.

The Government will proceed with conscientious solicitude and economy with the regulation of the budget, and will take as the basis of the next financial proposals the necessity of reëstablishing the balance between receipts and expenditures.

The Government expresses to you the thanks of his Majesty for the attention you have devoted to the law regulating the difficulties pending between the state and the town of Frankfort, and which, consequently, has enabled the Government to settle that matter in conformity to the paternal sentiments of his Majesty, and in an amicable manner.

The proposals relative to the improvement of the judicial functions, and for the introduction of juridical uniformity throughout all parts of the monarchy, have been partially approved by the two Chambers.

So far as concerns the ulterior reforms which it is equally desirable to carry out, the Government believes that it can calculate upon the realization of a common understanding.

Thanks to your constant efforts, it has been possible to introduce notable ameliorations in the legislation for isolated provinces.

The desire of the Government to take into consideration the wishes of these provinces, and at the same time the general public interest, has met with the warm support of the two Chambers of the Diet.

If the discussions on public instruction have not been productive of any definite result, the Government will from that fact discover a motive more fully to utilize the time until next session, in thoroughly elucidating the question, so as to be in a position to lay a more complete scheme before the Diet.

So far as concerns the development of our corporative institutions, the Government has not yet been able to present the complete proposition to the Diet, but the preliminary confidential discussions which have been deemed necessary, while considering the vast range of this question, and the manifold difficulties attendant upon its satisfactory solution, justify the hope that an understanding upon it will be arrived at which will be in accordance with the interests of the country.

Notwithstanding this apparent good understanding between the Prussian Government and the deputies, the financial question continued to be agitated with a degree of animosity, especially when Count Bismarck retired for the summer, ostensibly to restore his health, and when the administration was intrusted to Count Eulenburg and Von Mühler, who were regarded as uncompromising reactionists.

A new session of the Diet was opened,

* For statistics of the religious denominations, of the nationalities, and of industry, *see* AMERICAN ANNUAL CYCLOPÆDIA for 1863.

October 6th, by the King of Prussia in person. He said that an unavoidable deficit in the finances rendered an augmentation of the taxes necessary, and announced that reforms would be introduced, placing the eastern provinces on a basis of self-government, and that new laws in regard to public education would be submitted. He also alluded to the success of his efforts to preserve peace and friendly relations with foreign powers. He "relies confidently" on the deputies not refusing their assent to the propositions of the Government.

On finding that his propositions concerning taxes would be rejected by the Diet, the Finance Minister, Von der Heydt, resigned (in October), and was succeeded by Camphausen, whose appointment strengthened the national liberal element in Count Bismarck's ministry. His programme, laid before the Diet on October 30th, was described by him as one to "restore order in the administration of the finances, while the resources of the country should be spared as much as possible." His proposed "consolidation," calculated to furnish means for covering a portion of the deficit, and to improve the method of paying the public debt, was passed by a large majority of the Diet, in December, 1869. The Lower House adopted a resolution to extend the jurisdiction of the Federation over the entire civil law.

According to the budget, the national debt of Prussia, at the end of 1869, amounted to 442,639,372 thalers, 184,471,491 of which are, however, railway debts. The interest and sinking fund for the payment of the principal will, in 1870, require 28,648,600 thalers; 10,228,511 thalers of this sum, however, belong to the railways, and will be covered by their profits. The expenses of the national debt have risen 948,970 thalers since 1869. Of the above sum, 377,925,827 thalers belong to the old provinces, viz.: 211,225,925 thalers state debt bearing interest, 133,061,000 thalers railway debt bearing interest, 2,553,902 thalers provincial debt bearing interest, 12,835,000 thalers interest-bearing notes, and 18,250,000 thalers bank-notes bearing no interest. The debts of the provinces united to the kingdom, in 1866, are as follows: Hanover, 21,096,291 thalers, 16,261,120 thalers of which are railway debts; Hesse, 15,249,950 thalers, of which 15,107,600 thalers for railways; Nassau, 20,158,755 thalers, of which 16,472,514 thalers for railways; Hesse-Homburg, 99,429 thalers; Frankfort, 7,754,171 thalers, of which 3,569,257 thalers for railways; Schleswig-Holstein, 354,948 thalers.

The German military organization is complete, and, according to a statement in the Prussian *Military Gazette*, in January, 1869, "a million of soldiers can, at any moment, be placed under arms by a single telegram from Berlin." The Prussian troops, it adds, consist of 325 battalions of infantry, 268 squadrons of cavalry, 11 regiments of artillery, with 1,146 guns, and 12 battalions of engineers, making 410,000 soldiers in all. To these should be added the Federal contingents, which are as follows: Saxony, 29 battalions, 24 squadrons, 96 batteries, and 6 guns; Brunswick, 3 battalions, 4 squadrons and 6 guns; Mecklenburg-Strelitz, 1 battalion; and Hesse-Darmstadt, 10 battalions, 8 squadrons, 24 guns, and 1 battalion of engineers; total, 53,000 men. "But," says the *Military Gazette*, "this force of 463,000 only represents the standing army of North Germany. In case of emergency, Prussia can also command the services of the troops of Baden, Wurtemberg and Bavaria, and immediately order a levy of her reserve, consisting of 120 battalions of infantry, 76 squadrons of cavalry, 240 guns, and 12 battalions of engineers; or an army of 143,000 men. An additional force of 200,000 men is at her disposal for the occupation of towns and garrisons. The above numbers do not include the officers, military train, military laborers, nor special corps of any kind."

The Prussian Government has made extraordinary efforts to create a respectable navy. In fact, a few years ago it would have scarcely been an exaggeration to say that the long-boat of a British man-of-war was a fair match for Prussia's whole fleet. But Count Bismarck has already found himself able to assert that the Prussian navy is now second to none in the Baltic Sea. The extraordinary rapidity with which iron-clad after iron-clad has been built and launched in the Prussian ports, and the scarcely disguised pretensions of the Prussian Government to the supremacy of the Baltic Sea, have created no little jealousy and anxiety in Russia. In 1868, at the suggestion of Count Bismarck, the Prussian and Russian fleets cruised and manœuvred together during the summer months; but a proposal to renew the same exercises this year has met at St. Petersburg with an unqualified refusal. This incident has caused much sensation in Russian naval circles, the general impression being that the Government is aware of the present superiority of the Prussian navy. The influential Russian organ, *Golos*, of St. Petersburg says in a remarkable article on this subject: "After seizing Kiel and the bay of Jahde, Prussia has constructed in that bay the naval port of Keppens, and thus at once become a naval power and a dangerous rival to us in the Baltic. When the canal between the Baltic and the North Sea, the construction of which is already seriously contemplated at Berlin, is completed, the naval power of Prussia, which formerly only existed in the dreams of Prussian patriots, will become an accomplished fact." The *Golos*, after accusing Prussia of false dealing in her relations with Russia, proceeds: "Our commercial legislation has been such that if the Prussian Minister of Commerce had been asked for his advice he could not have invented any thing more advantageous for Prussian interests. The sliding scale of customs tariffs which have been re-

cently abolished, and the obstacles created by our bureaucracy, have drawn nearly all our northern maritime commerce into Prussian harbors. The Crimean War, and the construction of the railway communication between our western provinces and Königsberg, have made that port the headquarters of our northern trade. * * * Moreover, the mercantile marine of North Germany increases yearly, while merchant-ships under the Russian flag are scarcely ever seen on foreign waters." "If France," the *Goloss* significantly adds, "does not think proper to put a stop to Prussian impetuosity, that power will in a few years absorb the whole of Germany, or, in other words, become the arbiter of Europe."

In January, 1869, Count Bismarck made some startling disclosures in the Diet concerning a Hanoverian legion formed in peace, and the dangers threatening Prussia by the agitations of ex-King George of Hanover and the ex-Elector of Hesse. On the ground of the ex-King of Hanover's ill-disguised hostility and pretensions, his property was sequestrated, as also that of the ex-Elector of Hesse (the latter in February, 1869). The king addressed a strong protest to all German sovereigns, in which he endeavors to refute the charges made by the Prussian Government against him, and concludes by saying:

The first adviser of the Prussian Crown has pleaded for this new act of violence at the Diet. Part of the accusations by which he has done this are but a repetition, without any proof, of the pretended facts of a legion and the provocation of hostilities, which I have mentioned above, in conjunction with the equally renovated fiction of conditions and suppositions of the property treaty of September 29, 1867, which, by the spirit as well as by the text of the treaty, are proved not to exist. The other parts of the accusations are inventions of a similar value. They are those of the existence of a committee in Hietzing hostile to Prussia, which does not exist, and never has existed; then of the attempt to recruit Poles in Switzerland. These statements are so inconsistent that they do not need to be seriously contradicted.

It is also below my dignity to mention the way and the manner in which the first adviser of the Crown of Prussia has brought forward these frivolous accusations. I only state the fact that imperial Europe has loudly proclaimed its indignation; and I can only express my regret that, on the part of his Majesty the King of Prussia, no disapprobation of the behavior of the first adviser of the Crown has come to my knowledge.

His Majesty the King of Prussia, giving his sanction to the project of law concerning the sequestration of my family property, has created an obstacle on that road which still permitted him a return to the fulfilment of the duties of the treaty. For he has made the fulfilment of the duties undertaken by the treaty dependent upon a foreign will. Having already formally protested against the Royal Ordinance of March 2, 1868, concerning the sequestration of the property of my house, I again see myself now obliged solemnly to protest against the law, which renders more difficult the reëstablishment of the lawful state. Hoping that your Majesty will also receive the present communication with that sympathy of which your Majesty has given me so many proofs, I am, with the highest esteem and friendship, your Majesty's most friendly brother.

This Hanoverian Legion, said to have been organized in France by the connivance of the ex-King of Hanover, was, however, in consequence of the vigorous measures of Prussia, disbanded, and the agents of the ex-King then entered into negotiations for their settlement in Algiers as colonists, with the view of inducing their families and relations to join them.

The value of the property of King George of Hanover, now in the hands of the Prussian Government, is estimated at 13,382,000 thalers. This estimate does not include the contents of the royal castles. The cost of administering the above property is about 180,000 thalers a year.

The Prussian King, regarding himself as a guardian of Protestanism, issued the following decree:

The great movements which in our age are making themselves felt in the religious life both of nations and individuals, and are pressing forward to a decision, and the tasks they impose on the Protestant Church of our country, are apparent to all, and admonish us to entreat the support of Almighty God. It is therefore my will that a day be set apart in the Protestant churches of my country for special prayer that God may pour out His blessing on the present important deliberations as to the constitution of our Church, and to implore Him to protect the Protestant Church from all dangers that threaten it; and, to strengthen the ties which unite its members to each other and to the Church universal, I have appointed the 10th of November, the birthday of Dr. Martin Luther, for this purpose, and hereby commission the minister and the highest ecclesiastical authorities of Prussia to make the necessary arrangements.

According to an official compilation, the invested capital of all the railroads in the original provinces of Prussia amounted, at the end of 1867, to 462,464,800 thalers. The total expenditure was equivalent to 54 per cent. of the total receipt.

One hundred and five million tons of coal were produced in Prussia in 1867.

Berlin has now an area of 23,184 acres. It has 700 public buildings, 61 of which are devoted to divine service, 107 to instruction, 73 to sanitary purposes, 200 to the Government, 87 to the municipality, and 170 to the military. There are over 33,000 private houses (21,919 dwelling-houses, 1,164 factory buildings, and 10,180 stables and barns).

At the present day the political journalism of Berlin is represented by nine large, well-printed newspapers, published daily, or in some cases twice a day, with supplements of varying size. Then there are two law journals, partly political also, two humorous journals published weekly, the *Kladderadatsch* and the *Wespen*, and about two hundred papers besides, of all sorts and descriptions, for special departments of social or professional interest, as art, science, fashion, etc.

The emigration from Prussia has considerably increased in the last year, and reached, in 1868, the unprecedented number of 36,234 souls, 25,306 of whom emigrated from the old provinces.

PUBLIC DOCUMENTS. *Message of President* GRANT *to the two Houses of Congress at the commencement of the second session of the Forty-first Congress, December* 6, 1869.

To the Senate and House of Representatives:

In coming before you for the first time as Chief Magistrate of this great nation, it is with gratitude to the Giver of all good for the many benefits we enjoy. We are blessed with peace at home, and we are without entangling alliances abroad to forebode trouble; with a territory unsurpassed in fertility, of an area equal to the abundant support of five hundred millions of people, and abounding in every variety of useful mineral in quantity sufficient to supply the world for generations; with abundant crops; with a variety of climate adapted to the production of every species of the earth's riches, and suited to the habits, tastes, and requirements of every living thing; with a population of forty millions of free people, all speaking one language; with facilities for every mortal to acquire an education; with institutions closing to none the avenues of fame or any blessing of fortune that may be coveted; with freedom of the pulpit, the press, and the school; with a revenue flowing into the national treasury beyond the requirements of the Government. Happily, harmony is rapidly being restored within our own borders. Manufactures, hitherto unknown in our country, are springing up in all sections, producing a degree of national independence unequalled by that of any other power. These blessings, and countless others, are intrusted to your care and mine for safe keeping for the brief period of our tenure of office. In a short time we must each of us return to the ranks of the people who have conferred upon us our honors, and account to them for our stewardship. I earnestly desire that neither you nor I may be condemned by a free and enlightened constituency, nor by our own consciences. Emerging from a rebellion of gigantic magnitude, aided as it was by the sympathies and assistance of nations with which we were at peace, eleven States of the Union were, four years ago, left without a legal State government. A national debt had been contracted; American commerce was almost driven from the seas; the industry of one-half of the country had been taken from the control of the capitalist and placed where all labor rightfully belongs, in the keeping of the laborer. The work of restoring State governments loyal to the Union, of protecting and fostering free labor, and providing means for paying the interest on the public debt, has received ample attention from Congress. Although your efforts have not met with the success in all particulars that might have been desired, yet, on the whole, they have been more satisfactory than could have been reasonably anticipated.

Seven States which passed ordinances of secession have been fully restored to their places in the Union. The eighth (Georgia) held an election, at which she ratified her constitution, republican in form, elected a Governor, members of Congress, a State Legislature, and all other officers required. The Governor was duly installed, and the Legislature met and performed all the acts required of them by the reconstruction acts of Congress. Subsequently, however, in violation of the constitution they had just ratified, as since decided by the Supreme Court of the State, "they unseated the colored members of the Legislature, and admitted to seats some members who are disqualified by the third clause of the fourteenth amendment to the Constitution, one article which they themselves had contributed to ratify." Under these circumstances, I would submit to you whether it would not be wise, without delay, to enact a law authorizing the Governor of Georgia to convene the members originally elected to the Legislature, requiring each member to take the oath prescribed by the reconstruction acts, and none to be admitted who are ineligible under the third clause of the fourteenth amendment.

The freedmen, under the protection which they have received, are making rapid progress in learning, and no complaints are heard of lack of industry on their part, when they receive fair remuneration for their labor.

The means provided for paying the interest of the public debt, with all other expenses of the Government, are more than ample. The loss of our commerce is the only result of the late rebellion which has not received sufficient attention from you. To this subject I call your earnest attention. I will not now suggest plans by which this object may be effected, but will, if necessary, make it the subject of a special message during the session of Congress. At the March term, Congress, by a joint resolution, authorized the Executive to order elections in the States of Virginia, Mississippi, and Texas, to submit to them the constitutions which each had previously in conventions formed, and submit the constitutions, either entire or in separate parts, to be voted upon at the discretion of the Executive. Under this authority elections were called. In Virginia the election took place on the 6th of July, 1869. The Governor and Lieutenant-Governor elected have been installed. The Legislature met and did all required by this resolution, and by all the reconstruction acts of Congress, and abstained from all doubtful authority. I recommend that her Senators and Representatives be admitted, and the State be fully restored to her place in the family of States.

Elections were called in Mississippi and Texas, to commence on the 30th of November, 1869, and to last for two days in Mississippi, and four days in Texas. The elections have taken place, but the result is not known. It is to be hoped that the acts of the Legislatures of these States, when they meet, will be such as to receive your approval, and thus close the work of reconstruction.

Among the evils growing out of the rebellion, and not yet referred to, is that of an irredeemable currency. It is an evil which, I hope, will receive your most earnest attention. It is a duty, and one of the highest duties of Government, to secure to the citizens a medium of exchange of fixed and uniform value. This implies a return to a specie basis, and no substitute for it can be devised. It should be commenced now, and reached at the earliest practicable moment consistent with a fair regard to the interests of the debtor class. Immediate resumption, if practicable, would not be desirable. It would compel the debtor class to pay beyond their contracts the premium on gold at the date of purchase, and would bring bankruptcy and ruin to thousands. Fluctuation, however, in the paper value of the measure of all values, gold, is detrimental to the interests of trade. It makes the man of business an involuntary gambler, for, in all sales, where future payment is to be made, both parties speculate as to what will be the value of the currency to be paid and received. I earnestly recommend to you, then, such legislation as will insure a gradual return to specie payments, and put an immediate stop to fluctuations in the value of currency. The methods to secure the former of these results are as numerous as are the speculations on political economy. To secure the latter, I see but one way, and that is, to authorize the Treasury to redeem its own paper at a fixed price whenever presented, and to withhold from circulation all currency so redeemed until sold again for gold. The vast resources of the nation, both developed and undeveloped, ought to make our credit the best on earth, with a less burden of taxation than the citizen has endured for six years past. The entire public debt could be paid in ten years, but it is not desirable that the people should be forced to pay it in that time. Year by year the ability to pay increases in a rapid ratio, but the burden of interest ought to be reduced as rapidly as can be

done without a violation of contract. The public debt is represented, in great part, by bonds having from five to twenty and from ten to forty years to run, bearing interest at the rate of six per cent. and five per cent. respectively. It is optional with the Government to pay these bonds at any period after the expiration of the least time mentioned upon their face. The time has already expired when a great part of them may be taken up, and is rapidly approaching when all may be. It is believed that all which are now due may be replaced by bonds bearing a rate of interest not exceeding four and one-half per cent., and, as rapidly as the remainder become due, that they may be replaced in the same way. To accomplish this, it may be necessary to authorize the interest to be paid at either of three or four of the money centres of Europe, or by any Assistant Treasurer of the United States, at the option of the holders of the bonds. I suggest this subject for the consideration of Congress; also, simultaneously with this, the propriety of redeeming our currency, as before suggested, at its market value, at the time the law goes into effect, increasing the rate at which currency will be bought and sold from day to day, or week to week, at the same rate of interest as the Government pays upon its bonds.

The subject of the tariff and internal taxation will necessarily receive your attention. The revenues of the country are greater than the requirements, and may with safety be reduced; but, as the funding of the debt in a four or a four and a half per cent. loan would reduce the annual current expenses largely, thus, after funding, justifying a greater reduction of taxation than would be now expedient, I suggest a postponement of this question until the next meeting of Congress. It may be advisable to modify the taxation and tariff in instances where unjust or burdensome discriminations are made by the present laws; but a general revision of the laws regarding this subject, I would recommend the postponement of for the present.

I also suggest the renewal of the tax on incomes, etc., but at a reduced rate, say of three per cent., and this tax to expire in three years with the funding of the national debt as here suggested.

I feel safe in saying that the taxes and the revenues from imports may be reduced safely from sixty to eighty millions per annum at once, and may be still further reduced from year to year as the resources of the country are developed.

The report of the Secretary of the Treasury shows the receipts of the Government, for the fiscal year ending June 30, 1869, to be $370,943,747, and the expenditures, including interest, bounties, etc., to be $321,490,597. The estimates for the ensuing year are more favorable to the Government, and will, no doubt, show a much larger decrease of the public debt. The receipts in the Treasury beyond expenditures have exceeded the amount necessary to place to the credit of the sinking fund, as provided by law. To lock up the surplus in the Treasury and withhold it from circulation would lead to such a contraction of the currency as to cripple trade and seriously affect the prosperity of the country. Under these circumstances the Secretary of the Treasury and myself heartily concurred in the propriety of using all the surplus currency in the Treasury in the purchase of Government bonds, thus reducing the interest-bearing indebtedness of the country, and of submitting to Congress the question of the disposition to be made of the bonds so purchased. The bonds now held by the Treasury amount to about $75,000,000, including those belonging to the Sinking Fund. I recommend that the whole be placed to the credit of the Sinking Fund. Your attention is respectfully invited to the recommendations of the Secretary of the Treasury for the creation of the office of Commissioner of Customs Revenue, for the increase of salary to certain classes of officials, and the substitution of increased national bank circulation to replace the outstanding three per cent. certificates, and most especially to his recommendation for the repeal of laws allowing shares of fines, penalties, forfeitures, etc., to officers of the Government and to informers.

The office of Commissioner of Internal Revenue is one of the most arduous and responsible under the Government. It falls but little, if any, short of a Cabinet position in its importance and responsibilities. I would ask for it, therefore, such legislation as in your judgment will place the office upon a footing of dignity commensurate with its importance and with the character and qualifications of the class of men required to fill it properly.

As the United States is the freest of all nations, so, too, its people sympathize with all peoples struggling for liberty and self-government. But, while so sympathizing, it is due to our honor that we should abstain from enforcing our views upon unwilling nations, and from taking an interested part, without invitation, in the quarrels between different nations, or between governments and their subjects. Our course should always be in conformity with strict justice and law, international and local. Such has been the policy of the administration in dealing with these questions. For more than a year a valuable province of Spain, and a near neighbor of ours, in whom all our people cannot but feel a deep interest, has been struggling for independence and freedom. The people and Government of the United States entertain the same warm feelings and sympathies for the people of Cuba in their pending struggle that they manifested throughout the previous struggles between Spain and her former colonies, in behalf of the latter; but the contest has never assumed a condition which amounts to a war in the sense of international law, or which would show the existence of a *de facto* political organization of the insurgents sufficient to justify a recognition of belligerency. The principle is maintained, however, that this nation is its own judge when to accord the rights of belligerency, either to a people struggling to free themselves from a government they believe to be oppressive, or to independent nations at war with each other. The United States have no disposition to interfere with the existing relations of Spain to her colonial possessions on this continent. They believe that in due time Spain and the European powers will find their interest in terminating these relations, and establishing their present dependencies as independent powers, members of the family of nations. These dependencies are no longer regarded as subject to transfer from one European power to another. When the present relations of the colonies cease, they are to become independent powers, exercising the right of choice and of self-control in the determination of their future condition and relations with other powers. The United States, in order to put a stop to bloodshed in Cuba and in the interest of a neighboring people, proposed their good offices to bring the existing contest to a termination. The offer not being accepted by Spain, on a basis which we believed could be received by Cuba, was withdrawn. It is hoped that the good offices of the United States may yet prove advantageous for the settlement of this unhappy strife. Meanwhile, a number of illegal expeditions against Cuba have been broken up. It has been the endeavor of the Administration to execute the neutrality laws in good faith, no matter how unpleasant the task, made so by the sufferings we have endured from lack of like good faith toward us by other nations.

On the 26th of March last, the United States schooner Lizzie Major was arrested on the high-seas by a Spanish frigate, and two passengers taken from it and carried as prisoners to Cuba. Representations of these facts were made to the Spanish Government as soon as official information of them reached Washington. The two passengers were set at liberty, and the Spanish Government assured

the United States that the captain of the frigate in making the capture had acted without law; that he had been reprimanded for the irregularity of his conduct, and that the Spanish authorities in Cuba would not sanction any act that could violate the rights or treat with disrespect the sovereignty of this nation. The question of the seizure of the brig Mary Lowell, at one of the Bahama Islands by the Spanish authorities, is now the subject of correspondence between this Government and those of Spain and Great Britain. The Captain-General of Cuba, about May last, issued a proclamation, authorizing search to be made of vessels on the high-seas. Immediate remonstrance was made against this, whereupon the captain-general issued a new proclamation, limiting the right of search to vessels of the United States, so far as authorized under the treaty of 1795. This proclamation, however, was immediately withdrawn. I have always felt that the most intimate relations should be cultivated between the Republic of the United States and all independent nations on this continent. It may be well worth considering whether new treaties between the United States and them may not be profitably entered into to secure more intimate relations—friendly, commercial, or otherwise.

The subject of an interoceanic canal, to connect the Atlantic and Pacific Oceans, through the Isthmus of Darien, is one in which commerce is greatly interested. Instructions have been given to our minister to the Republic of the United States of Colombia, to endeavor to obtain authority for a survey by this Government, in order to determine the practicability of such an undertaking, and a charter for the right of way to build, by private enterprise, such a work, if the survey proves it to be practicable.

In order to comply with the agreement of the United States as to a mixed commission at Lima for the adjustment of claims, it became necessary to send a commissioner and secretary to Lima in August last. No appropriation having been made by Congress for this purpose, it is now asked that one be made, covering the past and future expenses of the commission.

The good offices of the United States to bring about a peace between Spain and the South American republics, with which she is at war, having been accepted by Spain, Peru, and Chili, a congress has been invited to be held in Washington during the present winter. A grant has been given to Europeans of an exclusive right of transit over the territory of Nicaragua, to which Costa Rica has given its assent, which, it is alleged, conflicts with the vested rights of citizens of the United States. The Department of State has now this subject under consideration. The minister of Peru having made representations that there was a state of war between Peru and Spain, and that Spain was constructing, in and near New York, thirty gunboats which might be used by Spain in such a way as to relieve the naval force in Cuba, and also to operate against Peru, orders were given to prevent their departure. No further steps having been taken by the representative of the Peruvian Government to prevent the departure of these vessels, and I, not feeling authorized to detain the property of a nation with which we were at peace on a mere Executive order, the matter has been referred to the courts to decide.

The conduct of the war between the allies and the Republic of Paraguay has made the intercourse with that country so difficult that it has been deemed advisable to withdraw our representative from her.

Toward the close of the last Administration a convention was signed at London for the settlement of all outstanding claims between Great Britain and the United States, which failed to receive the advice and consent of the Senate to its ratification. The time and the circumstances attending the negotiations of that treaty were unfavorable to its acceptance by the people of the United States, and its provisions were wholly inadequate for the settlement of the grave wrongs that had been sustained by this Government, as well as by its citizens. The injuries resulting to the United States by reason of the course adopted by Great Britain during our late civil war, in the increased rate of insurance, in the diminution of exports and imports, and other obstructions to domestic industry and production; in its effect upon the foreign commerce of the country; in the decrease and transfer to Great Britain of our commercial marine; in the prolongation of the war, and in the increased cost, both in treasure and in lives, if its suppression could not be adjusted and satisfied as ordinary commercial claims which continually arise between commercial nations; and yet the convention treated these simply as such ordinary claims, from which they differ more widely in the gravity of their character than in the magnitude of their amount. Great even as is that difference, not a word was found in the treaty, and not an inference could be drawn from it, to remove the sense of the unfriendliness of the course of Great Britain in our struggle for existence, which had so deeply and universally impressed itself upon the people of this country. Believing that a convention thus misconceived in its scope and inadequate in its provisions would not have produced the hearty, cordial settlement of pending questions which alone is consistent with the relations which I desire to have established between the United States and Great Britain, I regarded the action of the Senate in rejecting the treaty to have been wisely taken, in the interest of peace, and as a necessary step in the direction of a perfect and cordial friendship between the two countries. A sensitive people, conscious of their power, are more at ease under a great wrong wholly unatoned than under the restraint of a settlement which satisfies neither their ideas of justice nor their grave sense of the grievance they have sustained. The rejection of the treaty was followed by a state of public feeling on both sides, which I thought not favorable to an immediate attempt at renewed negotiations. I accordingly so instructed the minister of the United States to Great Britain, and found that my views in this regard were shared by her Majesty's minister. I hope that the time may soon arrive when the two Governments can approach the solution of this momentous question with an appreciation of what is due to the rights, dignity, and honor of each, and with the determination not only to remove the causes of complaint in the past, but to lay the foundation of a broad principle of public law which will prevent future difficulties, and tend to a firm and continued peace and friendship. This is now the only grave question which the United States have with any foreign nation.

The question of renewing a treaty for reciprocal trade between the United States and the British provinces on this continent has not been favorably considered by the Administration. The advantages of such a treaty would be wholly in favor of the British provinces, except possibly a few engaged in the trade between the two sections. No citizen of the United States would be benefited by reciprocity. Our internal taxation would prove a protection to the British producer almost equal to the protection which our manufacturers now receive from the tariff. Some arrangement, however, for the regulation of commercial intercourse between the United States and the Dominion of Canada may be desirable.

The commission for adjusting the claims of the Hudson Bay and Puget's Sound Agricultural Company upon the United States has terminated its labors. The award of $650,000 has been made, and all the rights and titles of the company on the Territory of the United States have been extinguished. Deeds for the property of the company have been delivered. An appropriation by Congress to meet this sum is asked.

The commissioners for determining the northwestern land-boundary between the United States and the British possessions, under the treaty of 1856, have completed their labor, and the commission has been dissolved.

In conformity with the recommendation of Congress, a proposition was early made to the British Government to abolish the mixed courts created under the treaty of April 1, 1862, for the suppression of the slave-trade. The subject is still under negotiation.

It having come to my knowledge that a corporate company, organized under the British law, proposed to land upon the shores of the United States, and to operate there, a submarine cable, under a concession from his Majesty the Emperor of the French, of an exclusive right for twenty years, of communication between the shores of France and the United States, with the very objectionable feature of subjecting all messages conveyed thereby to the scrutiny and control of the French Government, I caused the French and British legations at Washington to be made acquainted with the probable policy of Congress on the subject, as foreshadowed by the bill which passed the Senate in March last. This drew from the representatives of the company an agreement to accept as the basis of their operations the provisions of that bill, or of such other enactment on the subject as might be passed during the approaching session of Congress; also, to use their influence to secure from the French Government a modification of their concession so as to permit the landing upon French soil of any cable belonging to any company incorporated by the authorities of the United States, or of any State in the Union, and on their part not to oppose the establishment of any such cable. In consideration of this agreement, I directed the withdrawal of all opposition by the United States authorities to the landing of the cable and to the working of it until the meeting of Congress. I regret to say that there has been no modification made in the company's concession, nor, so far as I can learn, have they attempted to secure one. Their concession excludes the capital and the citizens of the United States from competition upon the shores of France. I recommend legislation to protect the rights of citizens of the United States, as well as the dignity and sovereignty of the nation against such an assumption. I shall also endeavor to secure by negotiation an abandonment of the principle of monopolies in ocean telegraphic cables. Copies of this correspondence are herewith furnished.

The unsettled political condition of other countries less fortunate than our own, sometimes induces their citizens to come to the United States for the sole purpose of becoming naturalized. Having secured this, they return to their native country and reside, without disclosing their change of allegiance. They accept official positions of trust or honor which can only be held by citizens of their native land. They journey under passports describing them as such citizens, and it is only when civil discord, after, perhaps, years of quiet, threatens their persons or their property, or when their native state drafts them into its military service, that the fact of their change of allegiance is made known. They reside permanently away from the United States, and they contribute nothing to its revenues; they avoid the duties of its citizenship, and they only make themselves known by a claim of protection. I have directed the diplomatic and consular officers of the United States to scrutinize carefully all such claims of protection. The citizen of the United States, whether native or adopted, who discharges his duty to his country, is entitled to its complete protection. While I have a voice in the direction of affairs I shall not consent to imperil this sacred right by conferring it upon fictitious or fraudulent claimants.

On the accession of the present Administration it was found that the minister for North Germany had made propositions for the negotiation of a convention for the protection of immigrant passengers, to which no response had been given. It was concluded that to be effectual all the maritime powers engaged in the trade should join in such a measure. Invitations have been extended to the Cabinets of London, Paris, Florence, Berlin, Brussels, the Hague, Copenhagen, and Stockholm, to empower their representatives at Washington to simultaneously enter into negotiations, and to conclude with the United States conventions identical in form, making uniform regulations as to the construction of the parts of vessels to be devoted to the use of immigrant passengers, as to the quantity of food, as to the medical treatment of the sick, and as to the rules to be observed during the voyage, in order to secure ventilation, to promote health, to prevent intrusion, and to protect the families, and providing for the establishment of tribunals in the several countries for enforcing such regulations by summary process.

And your attention is respectfully called to the law regulating the tariff on Russian hemp, and to the question whether to fix the charges on Russian hemp higher than they are fixed upon manilla is not a violation of our treaty with Russia, placing her products upon the same footing with those of the most favored nations.

Our manufactures are increasing with wonderful rapidity under the encouragement which they now receive. With the improvement in machinery already effected and still increasing, causing machinery to take the place of skilled labor to a large extent, our imports of many articles must fall off largely within a very few years.

Fortunately, manufactures are not confined to a few localities as formerly, and it is to be hoped will become more and more diffused, making the interest in them equal in all sections. They give employment and support to hundreds of thousands of people at home, and retain with us the means which otherwise would be shipped abroad.

The extension of railroads in Europe and the East is bringing into competition with our agricultural products like products of other countries. Self-interest, if not self-preservation, therefore, dictates caution against disturbing any industrial interest of the country. It teaches us also the necessity of looking to other markets for the sale of our surplus. Our neighbors south of us, and China and Japan, should receive our special attention.

It will be the endeavor of the Administration to cultivate such relations with all these nations as to entitle us to their confidence, and make it their interest as well as ours to establish better commercial relations.

Through the agency of a more enlightened policy than that heretofore pursued toward China, largely due to the sagacity and efforts of one of our own distinguished citizens, the world is about to commence largely-increased relations with that populous and hitherto exclusive nation. As the United States have been the initiators in this new policy, so they should be the most earnest in showing their good faith in making it a success. In this connection, I would advise such legislation as will forever preclude the enslavement of the Chinese upon our soil under the name of coolies, and also prevent American vessels from engaging in the transportation of coolies to any country tolerating the system. I also recommend that the mission to China be raised to one of the first class.

On my assuming the responsible duties of Chief Magistrate of the United States, it was with the conviction that three things were essential to its peace, perpetuity, and fullest development:

1. Among these is strict integrity in fulfilling all our obligations.

2. To secure protection to the person and property of the citizen of the United States in each and every portion of our common country, wherever he may

choose to move, without reference to original nationality, religion, color, or politics, demanding of him only obedience to the laws and proper respect for the rights of others.

3. Union of all the States, with equal rights, indestructible by any constitutional means.

To secure the first of these, Congress has taken two essential steps: first, in declaring by joint resolution that the public debt should be paid, principal and interest, in coin; and second, by providing the means for paying. Providing the means, however, could not secure the object desired without a proper administration of the laws for the collection of the revenues, and an economical disbursement of them. To this subject the Administration has most earnestly addressed itself, with results, I hope, satisfactory to the country. There has been no hesitation in exchanging officials in order to secure efficient execution of the laws—sometimes, too, where in a mere party view undeserved political results were likely to follow—nor any hesitation in sustaining efficient officials against remonstrances wholly political. It may be well to mention here the embarrassments possible to arise from leaving on the statute-books the so-called tenure-of-office acts, and to earnestly recommend their total repeal. It could not have been the intention of the framers of the Constitution, when providing that appointments made by the President should receive the consent of the Senate, that the latter should have the power to retain in office persons placed there by Federal appointment against the will of the President. The law is inconsistent with a faithful and efficient administration of the Government. What faith can the Executive put in officials forced upon him, and those, too, whom he has suspended for reasons? How will such officials be likely to serve an Administration which they know does not trust them? For the second requisite to our growth and prosperity, time and a firm but humane administration of existing laws, amended from time to time as they may prove ineffective, or prove harsh and unnecessary, are probably all that are required. The third cannot be attained by special legislation, but must be regarded as fixed by the Constitution itself, and gradually acquiesced in by force of public opinion.

From the foundation of the Government to the present time the management of the original inhabitants of this continent, the Indians, has been a subject of embarrassment and expense, and has been attended with continuous robberies, murders, and wars. From my own experience upon the frontiers in Indian countries, I do not hold either legislation or the conduct of the whites who come most in contact with the Indian blameless for these hostilities. The past, however, cannot be undone, and the question must be met as we now find it. I have attempted a new policy toward these wards of the nation (they cannot be regarded in any other light than wards), with fair results, so far as tried, and which, I hope, will be attended ultimately with great success. The Society of Friends is well known as having succeeded in living in peace with the Indians in the early settlement of Pennsylvania, while their white neighbors of other sects in other sections were constantly embroiled. They were also known for their opposition to all strife, violence, and war, and are generally noted for their strict integrity and fair dealings. These considerations induced me to give the management of a few reservations of Indians to them, and to throw the burden of the selection of agents upon the Society itself. The result has proved most satisfactory.

It will be found more fully set forth in the report of the Commissioner of Indian Affairs. For Superintendent and Indian Agents not in the reservations, officers of the army were selected. The reasons for this are numerous: Where Indian agents are sent, there, or near there, troops must be sent also. The agent and the commander of the troops are independent of each other, and are subject to orders from different departments of the Government. The army officer holds a position for life; the agent at the will of the President. The former is personally interested in living in harmony with the Indian, and in establishing a permanent peace, to the end that some portion of his life may be spent within the limits of civilized society; the latter has no such personal interest. Another reason is an economic one, and still another, the hold which the Government has upon a life-officer to secure a faithful discharge of his duties in carrying out a given policy. The building of railroads, and the access thereby given to all the agricultural and mineral regions of the country, are rapidly bringing civilized settlements into contact with all the tribes of Indians. No matter what ought to be the relations between such settlements and the aborigines, the fact is, that they do not harmonize well, and one or the other has to give way in the end. A system which looks to the extinction of a race is too horrible for a nation to adopt without entailing upon itself the wrath of all Christendom, and engendering in the citizen a disregard for human life and the rights of others dangerous to society. I see no substitute for such a system except in placing all the Indians on large reservations as rapidly as it can be done, and giving them absolute protection there. As soon as they are fitted for it they should be induced to stake their lands in severalty and to set up territorial governments for their own protection. For full details on this subject I call attention to the reports of the Secretary of the Interior and the Commissioner of Indian Affairs.

The report of the Secretary of War shows the expenditures of the War Department for the year ending the 30th of June, 1869, to be $80,644,042, of which $23,882,810 was disbursed in the payment of debts contracted during the war, and is not chargeable to current army expenses. His estimate of $34,531,031 for the expenses of the army for the next fiscal year is as low as it is believed can be relied on.

The estimates of bureau officers have been carefully scrutinized and reduced wherever it has been practicable. If, however, the condition of the country should be such, by the beginning of the next fiscal year, as to admit of a greater concentration of troops, the appropriation asked for will not be expended.

The appropriations estimated for river and harbor improvements and fortifications are submitted separately. Whatever amount Congress may deem proper to appropriate for these purposes will be expended. The recommendation of the General of the Army, that appropriations be made for the forts at Boston, Portland, New York, Philadelphia, New Orleans, and San Francisco, if for no others, is concurred in. I also ask your special attention to his recommendation of the general commanding the military division of the Pacific, for the sale of the Seal Islands, of St. George, and St. Paul, Alaska Territory, and suggest that it either be complied with, or that legislation be had for the protection of the seal fisheries, from which a revenue should be derived.

The report of the Secretary of War contains a synopsis of the reports of the head of bureaus of the commanders of military divisions, and of the districts of Virginia, Mississippi, and Texas, and the report of the General of the Army in full. The recommendations therein contained have been well considered, and are submitted for your action. I, however, call special attention to the recommendation of the Chief of Ordnance for the sales of arsenals and lands no longer of use to the Government; also, to the recommendation of the Secretary of War, that the act of March 3, 1869, prohibiting promotions and appointments on the staff corps of the army be repealed. The extent of country to be garrisoned, and the number of military posts to be occupied, are the same with a reduced army as with a large one, and a large number of staff officers required is more dependent upon the latter than the former condition.

The report of the Secretary of the Navy, accompanying this, shows the condition of the navy when this Administration came into office, and the changes made since. Strenuous efforts have been made to place as many vessels in commission or render them fit for service, if required, as possible, and to substitute the sail for steam while cruising, thus materially reducing the expenses of the navy and adding greatly to its efficiency. Looking to our future, I recommend a liberal though not extravagant policy toward this branch of the public services.

The report of the Postmaster-General furnishes a clear and comprehensive exhibit of the operations of the postal service, and of the financial condition of the Post-Office Department. The ordinary postal revenues for the year ending the 30th of June, 1869, amounted to $18,344,510, and the expenditures to $23,698,131, showing an excess of expenditures over receipts, $5,353,620. The excess of expenditures over receipts for the previous year amounted to $6,427,192. The increase of revenues for 1869 over those of 1868 was $2,051,909, and the increase of expenditures was $967,538. The increased revenue in 1869 exceeded the increased revenue in 1868 by $936,336, and the increased expenditure in 1869 was $2,527,570 less than the increased expenditures in 1868, showing, by comparison, this gratifying feature of improvement, that, while the increase of expenditures over the increase of receipts in 1868 was $2,439,535, the increase of receipts over the increase of expenditures in 1869 was $1,084,371.

Your attention is called to the recommendations made by the Postmaster-General for authority to change the rule of compensation to the main trunk railroad lines for their services in carrying the mails, for having post-route maps executed, for reorganizing the efficiency of the special agency service, for the increase of the mail service on the Pacific, and for establishing mail service under the flag of the Union on the Atlantic; and most especially do I call your attention to his recommendation for the total abolition of the franking privilege. This is an abuse from which no one receives a commensurate advantage. It reduces the receipts for postal service from twenty-five to thirty per cent., and largely increases the service to be performed.

The method by which postage should be paid upon public matter is set forth fully in the report of the Postmaster-General.

The report of the Secretary of the Interior shows that the quantity of public lands disposed of during the year ending 30th of June, 1869, was 7,666,000 acres, exceeding that of the previous year by 1,010,409. Of this amount 2,899,544 acres were sold for cash, and 2,737,365 acres entered under the homestead law. The remainder was granted to aid in the construction of works of internal improvement, apportioned to these States as swamp lands, and located with warrants and scrip. The cash receipts from all sources were $4,472,886, exceeding those of the preceding year $2,840,140.

During the last fiscal year, 23,196 names were added to the pension-rolls, and 4,876 dropped therefrom, leaving at its close 107,963. The amount paid to pensioners, including the compensation of disbursing agents, was $8,422,884, an increase of $4,411,902 on that of the previous year.

The munificence of Congress has been conspicuously manifest in its legislation for the soldiers and sailors who suffered in the recent struggle to maintain that unity of government which makes us one people. The additions to the pension-rolls of each successive year since the conclusion of the hostilities result in a great degree from the repeated amendments of the act of the 14th of July, 1862, which extended its provisions to cases not falling within its original scope.

The large outlay which it thus occasioned is further increased by the more liberal allowance bestowed since that date upon those who, in the line of duty, were wholly or permanently disabled. Public opinion has given an emphatic sanction to these measures of Congress, and it will be conceded that no part of our public burden is more cheerfully borne than that which is imposed by this branch of the service. It necessitates further, next fiscal year, in addition to the amount justly chargeable to the naval pension fund, an appropriation of thirty million dollars. During the year ending the 30th of September, 1869, the Patent-Office issued 13,762 patents, and its receipts were $686,389—being $213,926 more than the expenditures.

I would respectfully call your attention to the recommendation of the Secretary of the Interior, for uniting the duties of supervising the education of freedmen with the other duties devolving upon the Commissioner of Education.

If it is the desire of Congress to make the census which must be taken during the year 1870 more complete and perfect than heretofore, I would suggest early action upon any plan that may be agreed upon. As Congress at the last session appointed a committee to take into consideration such measures as might be deemed proper in reference to the census, and to report a plan, I desist from saying more.

I recommend to your favorable consideration the claims of the Agricultural Bureau for liberal appropriations in a country so diversified in climate and soil as ours, and with a population so largely dependent upon agriculture. The benefits that can be conferred by properly fostering this Bureau are incalculable.

I desire respectfully to call the attention of Congress to the inadequate salaries of a number of the most important officers of the Government. In this message I will not enumerate them, but will specify only the Justices of the Supreme Court. No change has been made in their salaries for fifteen years, and within that time the labors of the court have largely increased, and the expenses of living have at least doubled. During the same time Congress has twice found it necessary to increase largely the compensation of its members, and the duty which it owes to another department of the Government deserves, and will undoubtedly receive, its due consideration.

There are many subjects not alluded to in this message which might with propriety be introduced, but I abstain, believing that your patriotism and statesmanship will suggest the topics and the legislation most conducive to the interests of the whole people. On my part I promise a rigid adherence to the laws, and their strict enforcement. U. S. GRANT.

Inaugural Address of President GRANT, *delivered March* 4, 1869.

Citizens of the United States:

Your suffrages having elected me to the office of President of the United States, I have, in conformity with the Constitution of our country, taken the oath of office prescribed therein. I have taken this oath without mental reservation, and with the determination to do to the best of my ability all that it requires of me. The responsibilities of the position I feel, but accept them without fear. The office has come to me unsought. I commence its duties untrammelled. I bring to it a conscientious desire and determination to fill it to the best of my ability to the satisfaction of the people.

On all leading questions agitating the public mind, I will always express my views to Congress, and urge them according to my judgment; and, when I think it advisable, will exercise the constitutional privilege of interposing a veto to defeat measures which I oppose. But all laws will be faithfully executed whether they meet my approval or not.

I shall, on all subjects, have a policy to recommend, but none to enforce against the will of the people. Laws are to govern all alike, those opposed, as well as those who favor them. I know no method to se-

cure the repeal of bad or obnoxious laws so effective as their stringent execution.

The country having just emerged from a great rebellion, many questions will come before it for settlement in the next four years, which preceding Administrations have never had to deal with. In meeting these, it is desirable that they should be approached calmly, without prejudice, hate, or sectional pride, remembering that the greatest good to the greatest number is the object to be attained.

This requires security of person, property, and for religious and political opinion, in every part of our common country, without regard to local prejudice. All laws to secure these ends will receive my best efforts for their enforcement.

A great debt has been contracted in securing to us and our posterity the Union; the payment of this, principal and interest, as well as the return to a specie basis, as soon as it can be accomplished without material detriment to the debtor class or to the country at large, must be provided for. To protect the national honor, every dollar of Government indebtedness should be paid in gold unless otherwise expressly stipulated in the contract. Let it be understood that no repudiator of one farthing of our public debt will be trusted in public place, and it will go far toward strengthening a credit which ought to be the best in the world, and will ultimately enable us to replace the debt with bonds bearing less interest than we now pay. To this should be added a faithful collection of the revenue, a strict accountability to the Treasury for every dollar collected, and the greatest practicable retrenchment in expenditure in every department of Government.

When we compare the paying capacity of the country now with the ten States in poverty from the effects of war, but soon to emerge, I trust, into greater prosperity than ever before, with its paying capacity twenty-five years ago, and calculate what it probably will be twenty-five years hence, who can doubt the feasibility of paying every dollar then with more ease than we now pay for useless luxuries? Why, it looks as though Providence had bestowed upon us a strong box in the precious metals locked up in the sterile mountains of the far West, of which we are now forging the key to unlock to meet the very contingency that is now upon us.

Ultimately it may be necessary to insure the facilities to reach these riches, and it may be necessary also that the General Government should give its aid to secure this access. But that should only be when a dollar of obligation to pay secures precisely the same sort of dollar to use now, and not before. While the question of specie payments is in abeyance, the prudent business man is careful about contracting debts payable in the distant future. The nation should follow the same rule. A prostrate commerce is to be rebuilt and all industries encouraged.

The young men of the country, those who from their age must be its rulers twenty-five years hence, have a peculiar interest in maintaining the national honor. A moment's reflection as to what will be our commanding influence among the nations of the earth in their day, if they are only true to themselves, should inspire them with national pride. All divisions, geographical, political, and religious, can join in this common sentiment. How the public debt is to be paid, or specie payments resumed, is not so important as that a plan should be adopted and acquiesced in.

A united determination to do is worth more than divided counsels upon the method of doing. Legislation upon this subject may not be necessary now, nor even advisable, but it will be when the civil law is more fully restored in all parts of the country, and trade resumes its wonted channels.

It will be my endeavor to execute all laws in good faith, to collect all revenues assessed, and to have them properly accounted for and economically disbursed. I will, to the best of my ability, appoint to office those only who will carry out this design.

In regard to foreign policy, I would deal with nations as equitable law requires individuals to deal with each other, and I would protect the law-abiding citizen, whether of native or foreign birth, wherever his rights are jeopardized or the flag of our country floats. I would respect the rights of all nations, demanding equal respect for our own. If others depart from this rule in their dealings with us, we may be compelled to follow their precedent.

The proper treatment of the original occupants of this land, the Indians, is one deserving of careful study. I will favor any course toward them which tends to their civilization and ultimate citizenship.

The question of suffrage is one which is likely to agitate the public so long as a portion of the citizens of the nation are excluded from its privileges in any State. It seems to me very desirable that this question should be settled now, and I entertain the hope and express the desire that it may be by the ratification of the fifteenth article of amendment to the Constitution.

In conclusion, I ask patient forbearance one toward another throughout the land, and a determined effort on the part of every citizen to do his share toward cementing a happy Union; and I ask the prayers of the nation to Almighty God in behalf of this consummation.

President GRANT'S *Proclamation for the Election in Virginia, May* 14, 1869.

In pursuance of the provisions of the act of Congress, approved April 10, 1869, I hereby designate the 6th day of July, 1869, as the time for submitting the constitution passed by the convention which met in Richmond, Virginia, on Tuesday, the 3d day of December, 1867, to the voters of said State registered at the date of such submission, viz., July 6, 1869, for ratification or rejection.

And I submit to a separate vote the fourth clause of section 1, article III., of said constitution, which is in the following words:

Every person who has been a Senator or representative in Congress, or elector of President or Vice-President, or who held any office, civil or military, under the United States, or under any State, who having previously taken an oath as a member of Congress, or as an officer of the United States, or as a member of any State Legislature, or as an executive or judicial officer of any State, shall have engaged in insurrection or rebellion against the same, or given aid or comfort to the enemies thereof. This clause shall include the following officers: Governor, Lieutenant-Governor, Secretary of State, auditor of public accounts, second auditor, register of the land-office, State treasurer, attorney-general, sheriff, sergeant of a city or town, commissioner of the revenue, county surveyor, constables, overseers of the poor, commissioner of the board of public works, judges of the supreme court, judges of the circuit court, judge of the court of hustings, justices of the county courts, mayor, recorder, aldermen, councilmen of a city or town, coroners, escheators, inspectors of tobacco, flour, etc., and clerks of the supreme, district, circuit, and county courts, and of the court of hustings, and attorneys for the Commonwealth; provided that the Legislature may, by a vote of three-fifths of both houses, remove the disabilities incurred by this clause from any person included therein, by a separate vote in each case.

And I also submit to a separate vote the 7th section of article III. of the said constitution, which is in the words following:

In addition to the foregoing oath of office, the Governor, Lieutenant-Governor, members of the General Assembly, Secretary of State, auditor of public accounts, State treasurer, attorney-general, and all persons elected to any convention to frame a constitution

for this State, or to amend or revise this constitution in any manner, and the mayor and council in any city or town, shall, before they enter on the duties of their respective offices, take and subscribe to the following oath or affirmation, provided the disabilities therein contained may be individually removed by a three-fifths vote of the General Assembly: "I, ——, do solemnly swear (or affirm) that I have never voluntarily borne arms against the United States since I have been a citizen thereof; that I have voluntarily given no aid, countenance, counsel, or encouragement to persons engaged in armed hostility thereto; that I have never sought or accepted, or attempted to exercise the functions of any office whatever under any authority or pretended authority in hostility to the United States; that I have not yielded a voluntary support to any pretended government, authority, power, or constitution, within the United States, hostile or inimical thereto. And I do further swear (or affirm) that to the best of my knowledge and ability I will support and defend the Constitution of the United States against all enemies, foreign and domestic; that I will bear true faith and allegiance to the same; that I take this obligation freely, without any mental reservation or purpose of evasion, and that I will well and faithfully discharge the duties of the office on which I am about to enter, so help me God." The above oath shall also be taken by all the city and county officers before entering upon their duties, and by all other State officers not included in the above provision.

I direct the vote to be taken upon each of the above-cited provisions alone, and upon the other portions of the said constitution in the following manner, viz.:

Each voter favoring the ratification of the constitution (excluding the provisions above quoted) as framed by the convention of December 3, 1867, shall express his judgment by voting

FOR THE CONSTITUTION.

Each voter favoring the rejection of the constitution (excluding the provisions above quoted), shall express his judgment by voting

AGAINST THE CONSTITUTION.

Each voter will be allowed to cast a separate ballot for or against either or both of the provisions above quoted.

In testimony whereof I have hereunto set my hand and caused the seal of the United States to be affixed.

Done at the city of Washington this 14th day of May, in the year of our Lord 1869, and of
[SEAL.] the independence of the United States of America the ninety-third.

U. S. GRANT.

By the President:
HAMILTON FISH, Secretary of State.

Respecting Wages of Labor, May 19, 1869.

Whereas, the act of Congress, approved June 25, 1868, constituted on and after that date eight hours a day's work for all laborers, workmen, and mechanics employed by or on behalf of the Government of the United States, and repealed all acts and parts of acts inconsistent therewith:

Now, therefore, I, Ulysses S. Grant, President of the United States, do hereby direct that, from and after this date, no reduction shall be made in the wages paid by the Government by the day to such laborers, workmen, and mechanics, on account of such reduction of the hours of labor.

In testimony whereof I have hereto set my hand, and caused the seal of the United States to be affixed.

Done at the city of Washington, this 19th day of May, in the year of our Lord 1869, and of
[SEAL.] the independence of the United States the ninety-third.

U. S. GRANT.

By the President:
HAMILTON FISH, Secretary of State.

Address of ANDREW JOHNSON *to the People of the United States.*

To the People of the United States:

The robe of office, by constitutional limitation, this day falls from my shoulders, to be immediately assumed by my successor. For him the forbearance and coöperation of the American people, in all his efforts to administer the Government within the pale of the Federal Constitution, are sincerely invoked. Without ambition to gratify, party ends to subserve, or personal quarrels to avenge at the sacrifice of the peace and welfare of the country, my earnest desire is to see the Constitution, as defined and limited by the fathers of the republic, again recognized and obeyed as the supreme law of the land, and the whole people—North, South, East, and West—prosperous and happy under its wise provisions.

In surrendering the high office to which I was called four years ago, at a memorable and terrible crisis, it is my privilege, I trust, to say to the people of the United States a few parting words, in vindication of an official course so ceaselessly assailed and aspersed by political leaders, to whose plans and wishes my policy to restore the Union has been obnoxious. In a period of difficulty and turmoil almost without precedent in the history of any people, consequent upon the closing scenes of a great rebellion and the assassination of the then President, it was, perhaps, too much, on my part, to expect of devoted partisans, who rode on the waves of excitement which at that time swept all before them, that degree of toleration and magnanimity which I sought to recommend and enforce, and which I believe in good time would have advanced us infinitely further on the road to permanent peace and prosperity than we have thus far attained. Doubtless had I at the commencement of my term of office unhesitatingly lent its powers or perverted them to purposes and plans "outside of the Constitution," and become an instrument to schemes of confiscation and of general and oppressive disqualifications, I would have been hailed as all that was true, loyal, and discerning; as the reliable head of a party, whatever I might have been as the Executive of the nation. Unwilling, however, to accede to propositions of extremists, and bound to adhere, at every personal hazard, to my oath to defend the Constitution, I need not, perhaps, be surprised at having met the fate of others whose only rewards for upholding constitutional right and law have been the consciousness of having attempted to do their duty, and the calm and unprejudiced judgment of history.

At the time a mysterious Providence assigned to me the office of President, I was, by the terms of the Constitution, the Commander-in-chief of nearly a million of men under arms. One of my first acts was to disband and restore to the vocations of civil life this immense host, and to divest myself, so far as I could, of the unparalleled powers then incident to the office and the times. Whether or not, in this step, I was right, and how far deserving the approbation of the people, all can now on reflection judge, when reminded of the ruinous condition of public affairs that must have resulted from the continuance in the military service of such a vast number of men.

The close of our domestic conflict found the army eager to distinguish itself in a new field, by an effort to punish European intervention in Mexico. By many it was believed and urged that, aside from the assumed justice of the proceeding, a foreign war, in which both sides would cheerfully unite to vindicate the honor of the national flag, and further illustrate the national prowess, would be the surest and speediest way of awakening national enthusiasm, reviving devotion to the Union, and occupying a force concerning which grave doubts existed as to its willingness, after four years of active campaigning, at once to return to the pursuits of peace. Whether these

speculations were true or false, it will be conceded that they existed, and that the predilections of the army were, for the time being, in the direction indicated. Taking advantage of this feeling, it would have been easy, as the Commander-in-chief of the army and navy, and with all the power and patronage of the presidential office at my disposal, to turn the concentrated military strength of the nation against French interference in Mexico, and to inaugurate a movement which would have been received with favor by the military and a large portion of the people.

It is proper, in this connection, that I should refer to the almost unlimited additional powers tendered to the Executive by the measures relating to civil rights and the Freedmen's Bureau. Contrary to most precedents in the experiences of public men, the powers thus placed within my grasp were declined, as in violation of the Constitution, dangerous to the liberties of the people, and tending to aggravate, rather than lessen, the discords naturally resulting from our civil war. With a large army and augmented authority, it would have been no difficult task to direct at pleasure the destinies of the republic, and to make secure my continuance in the highest office known to our laws.

Let the people whom I am addressing from the presidential chair during the closing hours of a laborious term consider how different would have been their present condition had I yielded to the dazzling temptation of foreign conquest, of personal aggrandizement, and the desire to wield additional power. Let them with justice consider that, if I have not unduly "magnified mine office," the public burdens have not been increased by my acts, and other and perhaps thousands or tens of thousands of lives sacrificed to visions of false glory.

It cannot, therefore, be charged that my ambition has been of that ordinary or criminal kind which, to the detriment of the people's rights and liberties, ever seeks to grasp more and unwarranted powers, and, to accomplish its purposes, panders too often to popular prejudices and party aims.

What, then, have been the aspirations which guided me in my official acts? Those acts need not, at this time, an elaborate explanation. They have been elsewhere comprehensively stated and fully discussed, and become a part of the nation's history. By them I am willing to be judged, knowing that, however imperfect, they at least show to the impartial mind that my sole ambition has been to restore the Union of the States, faithfully to execute the office of President, and, to the best of my ability, to preserve, protect, and defend the Constitution. I cannot be censured if my efforts have been impeded in the interests of party faction; and if a policy which was intended to reassure and conciliate the people of both sections of the country was made the occasion of inflaming and dividing still further those who, only recently in arms against each other, yet, as individuals and citizens, were sincerely desirous, as I shall ever believe, of burying all hostile feelings in the grave of the past. The bitter war was waged on the part of the Government to vindicate the Constitution and save the Union; and if I have erred in trying to bring about a more speedy and lasting peace, to extinguish heart-burnings and enmities, and to prevent troubles in the South which, retarding material prosperity in that region, injuriously affected the whole county, I am quite content to rest my case with the more deliberate judgment of the people, and, as I have already intimated, with the distant future.

The war, all must remember, was a stupendous and deplorable mistake. Neither side understood the other; and had this simple fact and its conclusions been kept in view, all that was needed was accomplished by the acknowledgment of the terrible wrong, and the expressed better feeling and earnest endeavor at atonement shown and felt in the prompt ratification of constitutional amendments by the Southern States at the close of the war. Not accepting the war as a confessed false step on the part of those who inaugurated it, was an error which now only time can cure, and which even at this late date we should endeavor to palliate. Experiencing, moreover, as all have done, the frightful cost of the arbitrament of the sword, let us, in the future, cling closer than ever to the Constitution as our only safeguard. It is to be hoped that not until the burdens now pressing upon us with such fearful weight are removed will our people forget the lessons of the war; and that, remembering them from whatever cause, peace between sections and States may be perpetual.

The history of late events in our country, as well as of the greatest governments of ancient and modern times, teaches that we have every thing to fear from a departure from the letter and spirit of the Constitution, and the undue ascendency of men allowed to assume power in what are considered desperate emergencies. Sylla, on becoming master of Rome, at once adopted measures to crush his enemies, and to consolidate the power of his party. He established military colonies throughout Italy; deprived of the full Roman franchise the inhabitants of the Italian towns who had opposed his usurpations; confiscated their lands, and gave them to his soldiers; and conferred citizenship upon a great number of slaves belonging to those who had proscribed him, thus creating at Rome a kind of bodyguard for his protection. After having given Rome over to slaughter, and tyrannized beyond all example over those opposed to him and the legions, his terrible instruments of wrong, Sylla could yet feel safe in laying down the ensigns of power so dreadfully abused, and in mingling freely with the families and friends of his myriad victims. The fear which he had inspired continued after his voluntary abdication, and even in retirement his will was law to a people who had permitted themselves to be enslaved. What, but a subtle knowledge and conviction that the Roman people had become changed, discouraged, and utterly broken in spirit, could have induced this daring assumption? What, but public indifference to consequences so terrible as to leave Rome open to every calamity which subsequently befell her, could have justified the conclusions of the dictator and tyrant in his startling experiment!

We find that, in the time which has since elapsed, human nature and exigencies in the Government have not greatly changed. Who, a few years past, in contemplating our future, could have supposed that in a brief period of bitter experience every thing demanded in the name of military emergency, or dictated by caprice, would come to be considered as mere matters of course; that conscription, confiscation, loss of personal liberty, the subjection of States to military rule, and disfranchisement, with the extension of the right of suffrage merely to accomplish party ends, would receive the passive submission, if not acquiescence, of the people of the republic!

It has been clearly demonstrated, by recent occurrences, that encroachments upon the Constitution cannot be prevented by the President alone, however devoted or determined he may be, and that, unless the people interpose, there is no power under the Constitution to check a dominant majority of two-thirds in the Congress of the United States. An appeal to the nation, however, is attended with too much delay to meet an emergency. While, if left free to act, the people would correct, in time, such evils as might follow legislative usurpation, there is danger that the same power which disregards the Constitution will deprive them of the right to change their rulers, except by revolution. We have already seen the jurisdiction of the judiciary circumscribed when it was apprehended that the courts would decide against laws having for their sole object the supremacy of party, while the veto-power, lodged in the

Executive by the Constitution for the interest and protection of the people, and exercised by Washington and his successors, has been rendered nugatory by a partisan majority of two-thirds in each branch of the national Legislature. The Constitution evidently contemplates that, when a bill is returned with the President's objections, it will be calmly reconsidered by Congress. Such, however, has not been the practice under present party rule. It has become evident that men who pass a bill under partisan influences are not likely, through patriotic motives, to admit their error, and thereby weaken their own organizations by solemnly confessing it under an official oath. Pride of opinion, if nothing else, has intervened, and prevented a calm and dispassionate reconsideration of a bill disapproved by the Executive.

Much as I venerate the Constitution, it must be admitted that this condition of affairs has developed a defect which, under the aggressive tendency of the legislative department of the Government, may readily work its overthrow. It may, however, be remedied, without disturbing the harmony of the instrument.

The veto-power is generally exercised upon constitutional grounds, and whenever it is so applied, and the bill returned with the Executive's reasons for withholding his signature, it ought to be immediately certified to the Supreme Court of the United States for its decision. If its constitutionality shall be declared by that tribunal, it should then become a law; but, if the decision is otherwise, it should fail, without power in Congress to reënact and make it valid.

In cases in which the veto rests upon hasty and inconsiderate legislation, and in which no constitutional question is involved, I would not change the fundamental law; for in such cases no permanent evil can be incorporated into the Federal system.

It is obvious that, without such an amendment, the Government, as it existed under the Constitution prior to the rebellion, may be wholly subverted and overthrown by a two-thirds majority in Congress. It is not, therefore, difficult to see how easily and how rapidly the people may lose—shall I not say have lost?—their liberties by an unchecked and uncontrollable majority in the law-making power; and, when once deprived of their rights, how powerless they are to regain them.

Let us turn for a moment to the history of the majority in Congress, which has acted in such utter disregard of the Constitution. While public attention has been carefully and constantly turned to the past and expiated sins of the South, the servants of the people, in high places, have boldly betrayed their trust, broken their oaths of obedience to the Constitution, and undermined the very foundations of liberty, justice, and good government. When the rebellion was being suppressed by the volunteered services of patriot soldiers amid the dangers of the battle-field, these men crept, without question, into place and power in the national councils. After all dangers had passed, when no armed foe remained, when a punished and repentant people bowed their heads to the flag and renewed their allegiance to the Government of the United States, then it was that pretended patriots appeared before the nation and began to prate about the thousands of lives and millions of treasure sacrificed in the suppression of the rebellion. They have since persistently sought to inflame the prejudices engendered between the sections, to retard the restoration of peace and harmony, and by every means to keep open and exposed to the poisonous breath of party passion the terrible wounds of a four-years' war. They have prevented the return of peace and the restoration of the Union, in every way rendered delusive the purposes, promises, and pledges by which the army was marshalled, treason rebuked, and rebellion crushed, and made the liberties of the people and the rights and powers of the President objects of constant attack. They have wrested from the President his constitutional power of supreme command of the Army and Navy. They have destroyed the strength and efficiency of the Executive Department by making subordinate officers independent of and able to defy their chief. They have attempted to place the President under the power of a bold, defiant, and treacherous Cabinet officer. They have robbed the Executive of the prerogative of pardon, rendered null and void acts of clemency granted to thousands of persons under the provisions of the Constitution, and committed gross usurpation by legislative attempts to exercise this power in favor of party adherents. They have conspired to change the system of our Government by preferring charges against the President in the form of articles of impeachment, and contemplating, before hearing or trial, that he should be placed in arrest, held in durance, and, when it became their pleasure to pronounce his sentence, driven from place and power in disgrace. They have in time of peace increased the national debt by a reckless expenditure of the public moneys, and thus added to the burdens which already weigh upon the people. They have permitted the nation to suffer the evils of a deranged currency, to the enhancement in price of all the necessaries of life. They have maintained a large standing army for the enforcement of their measures of oppression. They have engaged in class legislation, and built up and encouraged monopolies, that the few might be enriched at the expense of the many. They have failed to act upon important treaties, thereby endangering our present peaceful relations with foreign powers.

Their course of usurpation has not been limited to inroads upon the Executive Department.

By unconstitutional and oppressive enactments, the people of ten States of the Union have been reduced to a condition more intolerable than that from which the patriots of the Revolution rebelled. Millions of American citizens can now say of their oppressors, with more truth than our fathers did of British tyrants, that they have "forbidden the governors to pass laws of immediate and pressing importance, unless suspended until their assent should be obtained;" that they have "refused to pass other laws for the accommodation of large districts of people, unless those people would relinquish the right of representation in the Legislature—a right inestimable to them, and formidable to tyrants only;" that they have "made judges dependent upon their will alone for the tenure of their offices, and the amount and payment of their salaries;" that they have "erected a multitude of new offices, and sent hither swarms of officers to harass our people and eat out their substance;" that they have "affected to render the military independent of and superior to the civil power," "combined with others to subject us to a jurisdiction foreign to our Constitution, and unacknowledged by our laws," "quartered large bodies of armed troops among us," "protected them by a mock trial from punishment for any murders which they should commit on the inhabitants of these States," imposed "taxes upon us without our consent," deprived us in many cases of the benefit of trial by jury," "taken away our charters, excited domestic insurrection among us, abolished our most valuable laws, altered fundamentally the forms of our Government, suspended our own Legislatures, and declared themselves invested with power to legislate for us in all cases whatsoever."

This catalogue of crimes, long as it is, is not yet complete. The Constitution vests the judicial power of the United States "in one Supreme Court," whose jurisdiction "shall extend to all cases arising under this Constitution" and "the laws of the United States." Encouraged by this promise of a refuge from tyranny, a citizen of the United States, who, by the order of a military commander, given under the sanction of a cruel and deliberate edict of Congress, had been denied the constitutional rights of liberty

of conscience, freedom of the press and of speech, personal freedom from military arrest, of being held to answer for crime only upon presentment and indictment, of trial by jury, of the writ of *habeas corpus*, and the protection of civil and constitutional government—a citizen, thus deeply wronged, appeals to the Supreme Court for the protection guaranteed to him by the organic law of the land. At once a fierce and excited majority, by the ruthless hand of legislative power, stripped the ermine from the judges, transferred the sword of justice to the general, and remanded the oppressed citizen to a degradation and bondage worse than death.

It will also be recorded as one of the marvels of the times, that a party claiming for itself a monopoly of consistency and patriotism, and boasting, too, of its unlimited sway, endeavored, by a costly and deliberate trial, to impeach one who defended the Constitution and the Union not only throughout the war of the rebellion, but during his whole term of office as Chief Magistrate; but, at the same time, could find no warrant or means at their command to bring to trial even the chief of the rebellion. Indeed, the remarkable failures in his case were so often repeated that, for propriety's sake if for no other reason, it became at last necessary to extend to him an unconditional pardon. What more plainly than this illustrates the extremity of party management and inconsistency on the one hand, and of faction, vindictiveness, and intolerance, on the other? Patriotism will hardly be encouraged when, in such a record, it sees that its instant reward may be the most virulent party abuse and obloquy, if not attempted disgrace. Instead of seeking to "make treason odious," it would, in truth, seem to have been their purpose rather to make the defence of the Constitution and the Union a crime, and to punish fidelity to an oath of office, if counter to party dictation, by all the means at their command.

Happily for the peace of the country, the war has determined against the assumed power of the States to withdraw at pleasure from the Union. The institution of slavery also found its destruction in a rebellion commenced in its interest. It should be borne in mind, however, that the war neither impaired nor destroyed the Constitution, but, on the contrary, preserved its existence, and made apparent its real power and enduring strength. All the rights granted to the States, or reserved to the people thereof, remain therefore intact. Among those rights is that of the people of each State to declare the qualifications of their own State electors. It is now assumed that Congress can control this vital right, which can never be taken away from the States without impairing the fundamental principles of the Government itself. It is necessary to the existence of the States, as well as to the protection of the liberties of the people; for the right to select the elector in whom the political power of a State shall be lodged, involves the right of the State to govern itself. When deprived of this prerogative, the States will have no power worth retaining; all will be gone, and they will be subjected to the arbitrary will of Congress. The Government will then be centralized, if not by the passage of laws, then by the adoption, through partisan influence, of an amendment directly in conflict with the original design of the Constitution. This proves how necessary it is that the people should require the administration of the three great departments of the Government strictly within the limitations of the Constitution. Their boundaries have been accurately defined, and neither should be allowed to trespass upon the other, nor, above all, to encroach upon the reserved rights of the people and the States. The troubles of the past four years will prove to the nation blessings if they produce so desirable a result.

Upon those who became young men amid the sound of cannon and din of arms, and quietly returned to the farms, the factories, and the schools of the land, will principally devolve the solemn duty of perpetuating the Union of the States, in defence of which hundreds of thousands of their comrades expired, and hundreds of millions of national obligations were incurred. A manly people will not neglect the training necessary to resist aggression, but they should be jealous lest the civil be made subordinate to the military element. We need to encourage, in every legitimate way, a study of the Constitution for which the war was waged, a knowledge of and reverence for whose wise checks by those so soon to occupy the places filled by their seniors, will be the only hope of preserving the republic. The young men of the nation, not yet under the control of party, must resist the tendency to centralization—an outgrowth of the great rebellion—and be familiar with the fact that the country consists of united States, and that, when the States surrendered certain great rights for the sake of a more perfect union, they retained rights as valuable and important as those which they relinquished for the common weal.

This sound old doctrine, far different from the teachings that led to the attempt to secede, and a kindred theory that States were taken out of the Union by the rash acts of conspirators that happened to dwell within their borders, must be received and advocated with the enthusiasm of early manhood, or the people will be ruled by corrupt combinations of the commercial centres, who, plethoric from wealth, annually migrate to the capital of the nation to purchase special legislation. Until the representatives of the people in Congress more fully exhibit the diverse views and interests of the whole nation, and laws cease to be made without full discussion at the behest of some party leader, there will never be a proper respect shown by the law-making power either to the judicial or executive branch of the Government. The generation just beginning to use the ballot-box, it is believed, only need that their attention should be called to these considerations to indicate, by their votes, that they wish their representatives to observe all the restraints which the people, in adopting the Constitution, intended to impose upon party excess.

Calmly reviewing my administration of the Government, I feel that, with a sense of accountability to God, having conscientiously endeavored to discharge my whole duty, I have nothing to regret. Events have proved the correctness of the policy set forth in my first and subsequent messages; the woes which have followed the rejection of forbearance, magnanimity, and constitutional rule, are known and deplored by the nation.

It is a matter of pride and gratification, in retiring from the most exalted position in the gift of a free people, to feel and know that in a long, arduous, and eventful public life, my action has never been influenced by desire for gain, and that I can, in all sincerity, inquire, "Whom have I defrauded? whom have I oppressed? or off whose hand have I received any bribe to blind my eyes therewith?" No responsibility for wars that have been waged or blood that has been shed rests upon me. My thoughts have been those of peace, and my effort has ever been to allay contentions among my countrymen.

Forgetting the past, let us return to the first principles of the Government, and, unfurling the banner of our country, inscribe upon it, in ineffaceable characters, "The Constitution and the Union, one and inseparable."

ANDREW JOHNSON.

WASHINGTON, *March* 4, 1869.

The following documents relate to the session of the first Council of the Vatican, and the regulation of its business, with the allocution of Pope Pius IX. on the opening of the same:

Allocution addressed in a General Congregation before the first Session of the Vatican Council by Pius IX., December 2, 1869, to the Bishops assembled in Rome for the said Council:

VENERABLE BRETHREN: On the eve of the day on which we are to open the holy Œcumenical Council, nothing has appeared to us more seasonable, nothing could be more pleasing to us, than to see you all met together around us, venerable brethren, as we so much desire to see you, and to be able to speak to you with all the affection which fills our inmost heart. For since the matter of which we have to treat is most important, namely, the discovery of remedies for so many ills which in these days disturb both Christian and civil society, we have deemed it worthy of our apostolical care, and befitting the greatness of our task, that, before the transaction of the affairs of the Council begins, we should beg of God, on your behalf, as a pledge of every grace, the aid of the Heavenly benediction; and we have judged it necessary to give you the rules, as set forth and published in our apostolical letters, which we have decided on establishing for the right and orderly transaction of every thing in the proceedings of the Council. This it is, venerable brethren, which, with the favor of God, and of the Immaculate Mother of God, upon our wishes, we are to-day carrying out in this your solemn assembly; nor can we sufficiently express to you in words the great consolation which this hoped-for readiness of your arrival in such numbers, in due obedience to the apostolic voice, fills our heart, since from all parts of the Catholic world we see you hastening to this city of Rome on account of the Council we have summoned, and feel that you are united to us by the highest agreement of your souls, together with an excellent devotion toward us and toward the Apostolic See, and a wonderful ardor for the work of the kingdom of Christ, while the patient suffering of tribulations, for the sake of Christ, renders many of you most dear to our heart. But, venerable brothers, this your union with us is so much the more pleasing to us because, in clinging thereto, we tread in the footsteps of the Apostles, who have left us brilliant examples of their unanimous and constant union with the Divine Master. For you have learned from Holy Scripture that, when Christ our Lord was going a journey through cities and towns in Palestine, preaching and proclaiming the kingdom of God, all the Apostles with a like zeal kept close to His side, and, as St. Luke says, the twelve were faithfully with Him wherever He went. And this union of the Apostles was even more strikingly manifested at the time when the Heavenly Master was teaching in Capernaum, and spoke more in detail before the Hebrews of the mystery of the Divine Eucharist; for when those people in their carnal and blunted senses could not believe in a work of so much love, and showed themselves so weary of the Master that, as St. John testifies, many of the disciples went back and walked with Him no more, yet the love of the Apostles remained steadfast in obedient veneration of the Master, and when Jesus asked the Apostles whether they also would go away, Peter, being grieved, uttered these words, "Lord, to whom shall we go?" and added the reason why he had determined to follow the Lord with constant fidelity: "Thou hast the words of eternal life." Remembering these things, what ought we to think sweeter or more pleasant than this our assembly? What can we see more firm and stable? Although united in the name of Christ, we shall certainly have contradictions and struggles to undergo, the enemy will not be idle, for he desires nothing more than to sow cockles; but we, being mindful of the apostolic firmness and constancy which received from the Lord the reward of this praise, "You are they who have remained with Me in My trials," mindful also of our Redeemer, who declared plainly, "He who is not with Me is against Me," we shall have in like manner to be mindful of our office, and with all zeal to take care to follow Christ with unshaken faith and firmness, and to remain attached to Him always with minds of one accord. For the position we, venerable brethren, are placed in is, that we have to struggle with daily efforts in battle array against numerous and most fierce enemies. We must, therefore, employ the spiritual arms of our warfare, and bear the whole strength of the battle, relying both on the Divine authority, and using the shield of charity, of patience, of prayer, and of constancy. But there is no fear lest we fail in this contest, if we are determined to fix our eyes and our minds upon the Author and Finisher of our faith. For, if the Apostles derived sufficient courage and strength to bear bravely all adversity by fixing their eyes and their thoughts upon Christ, we also, looking upon Him in the saving pledge of our redemption, shall find in the divine virtue of this sight such strength and power that we shall overcome the slanders, the insults, and the devices of our enemies, and we shall draw with joy, from the cross of Christ, salvation for ourselves and also for many unhappy wanderers from the way of truth. But it is not enough to look upon our Redeemer; we must also put on such teachableness of mind that we may readily listen to Him with all our hearts. This it is indeed which the Heavenly Father Himself ordered by the authority of His Majesty, when Christ the Lord revealed His glory on the high mountain before chosen witnesses, and He said: "This is My beloved Son in whom I am well pleased, hear ye Him;" therefore we must with humble obedience of the mind listen to Jesus in every thing, and especially in that which He had Himself so much at heart, when, foreseeing the difficulties which would befall His disciples, He did not fail ardently and repeatedly to pray to His Father in the Last Supper, "Holy Father, preserve in Thy name those whom Thou hast given to Me, so that they may be one, even as We are one." Therefore, let one soul with one heart be in all. Truly we cannot have a greater consolation than if we continually yield the obedient hearing of the heart to the teachings of Christ; for thereby we shall know that we are with Christ, and we shall find in ourselves an evident pledge of eternal salvation, for he who is of God heareth God's word.

May the Almighty and Merciful God, with His powerful help, through the intercession of the Immaculate Mother of God, confirm these words of pontifical exhortation which we have drawn from the bottom of our heart, and may He graciously cause them to bring forth plenteous fruits. Lastly, may He turn His face upon you, venerable brethren, and fill both your bodies and your souls with the favor of His blessing; your bodies, indeed, so that you may have strength to bear, diligently and readily, all those labors from which your sacred functions cannot be free; your souls, in order that you may be filled with heavenly assistance, and may excel in examples of priestly life and in the splendor of all virtues, for the salvation of the Christian flock. And may the grace of this blessing be with you continually, and mercifully inspire all the days of your life, so that your days may be found full—full of holiness and of justice, full of the fruits of holy works in which our true riches and glory consist. Thus also may it happily be our lot that, when the course of our mortal pilgrimage is completed, we may not fear on that last day of life to say with the prophet-king, "I rejoiced in this which was said to me, we will go to the house of the Lord," and that we may surely trust to find the way open to us to the fountain of Zion, to the Heavenly Jerusalem.

Apostolic Letter of Pope Pius IX., prescribing the General Order to be followed in the Deliberations of the First Œcumenical Council of the Vatican.

PIUS IX., POPE,

Ad futuram rei memoriam.

In the midst of the numerous anguishes to which we are a prey, we are principally inclined to render thanks to the divine mercy which "comforteth us in all our tribulations,"* for it is that mercy which, after inspiring us with the thought of convoking this general and Œcumenical Holy Council, will permit us to inaugurate it happily. We rejoice in the Lord, with good cause, for commencing the salutary reunions of this Council on the solemn day of the Immaculate Conception of the Virgin Mary, and under her powerful and motherly auspices, and in our Vatican basilica, and before the ashes of the blessed Peter, who, "persevering in the solidity of the rock, preserves, with the government of the Church which was handed him, the solicitude of all the pastors and the keeping of all the sheep which were intrusted to him."†

As we do not lose sight of the fact that this Council was convoked by us in order that the cares of the holy pontiffs of the Church should be joined to ours, for the purpose of extirpating the errors which have sprung from the impiety of the present age, to remove the evils which afflict the Church, to correct morals and to restore the discipline of the two clergies; as we know with how much zeal, how much attention and solicitude we must provide for the regulating, in conformity with holy discipline and the maxims of the ancestors, of all that concerns the management, government, and execution of this important affair, for these motives, in the name of our apostolic authority, we decree what follows, and we order that it shall be executed by every one in this Council of the Vatican.

I.

OF THE CONDUCT TO BE HELD DURING THE COUNCIL.

The thought that "every best gift and every perfect gift is from above, coming down from the Father of lights,"‡ that nothing agrees better with the goodness of the heavenly Father than giving "the good Spirit to them that ask for it,"§ this thought has held us, when we opened to the faithful of Christ, on the occasion of the Council, the treasures of the Church, by our apostolic letters dated the 11th of April of this year, not only to exhort these same faithful to purify "their consciences from dead works to serve the living God,"‖ by multiplying their prayers, their supplications, their fasting, and other pious exercises, but also to order that the holy sacrifice of the Mass should be celebrated every day in the Catholic world to beseech the light and assistance of the Spirit of God, with the object of obtaining from the Lord the happy conclusion of this Council and fruits of salvation for the Church.

We now renew and confirm these exhortations and prescriptions, ordering moreover that in the churches of this noble city of Rome, during the whole duration of the Council, the litanies and other prayers will be recited for this object, on every Sunday, at the hours the most convenient to the faithful people.

But the bishops and other persons of the priestly order who will celebrate the Council must do something better and more excellent. Ministers of Christ, dispensers of the mysteries of God, they must "give in every thing the example of good works, in doctrine, in integrity, in gravity, uttering only wholesome and irreprehensible words, in such manner that our adversaries shall fear to speak ill of us."¶ Resting upon the ancient Councils, and particularly upon that of Trent, we exhort them all in the Lord to apply themselves with care, each according to his piety, to prayer, to the reading of holy books, to meditation upon heavenly things, in order to celebrate as often as possible, with a pure and chaste heart, the holy sacrifice of the Mass, to guard their souls from all human care, to preserve modesty in morals, temperance at meals, the religious spirit in all their acts. Far from us discord, jealousy, and culpable intentions; let the first of virtues, charity, reign everywhere, so that it may be said of this holy assembly of the bishops of the Church: "How good, how sweet it is for brothers to dwell together!"* Finally, let the Fathers watch over the people of their households, let them prescribe for them a Christian discipline, a holy life, for they are not ignorant of the grave words of the Apostle Paul to the bishops when he prescribes to them to rule well their own house.†

II.

OF THE RIGHT AND MODE OF PROPOSITIONS.

Although the right and charge of preparing the matters which shall be treated in the holy Œcumenical Council, and of asking the advice of the fathers, belong only to us and to this Apostolic See, we do not, however, confine ourselves to wish, but we urge all the Fathers of the Council who may have something to prepare concerning the general interest to do so in liberty. But, as it does not escape us that this faculty, unless exercised at the proper time and in a suitable manner, would prejudice not a little the order which must preside at the acts of the Council, we decree that these propositions shall be made in the following conditions: 1. They shall be put down in writing and submitted separately to a special congregation composed of both our venerable brethren, the cardinals of the holy Roman Church, and the Fathers of the Council, and which shall be instituted by us; 2. They must relate really to the general good of Christendom, and not solely to the particular advantage of such or such diocese; 3. They will be accompanied with a statement of the motives of utility or opportunity which shall have determined their authors to produce them; 4. They shall contain nothing in opposition to the constant sentiment of the Church and her inviolable traditions.

The special congregation which shall have received propositions shall examine the same diligently, and shall submit to our judgment its advice for the admission or rejection, in order that we, after mature deliberation, may decide whether they must be submitted to the synod.

III.

OF THE SECRECY TO BE PRESERVED IN THE COUNCIL.

Prudence compels us to prescribe for all the acts of the Council the law of secrecy, which has had to be enforced more than once in preceding Councils on account of the circumstances. This precaution seems more necessary than ever in a time when impiety, become so powerful, watches every opportunity for inciting to animadversion against the Catholic Church and her doctrine. In consequence, we forbid all and each of the Fathers, officers of the Council, theologians, canonists, and whosoever will assist in any manner the Fathers and officers in the matters of the Council, to reveal or make known: any one whatsoever, out of the Council, the decrees and all that shall be proposed for examination, as well as the discussions and the advices of the members. We order, moreover, that the officers of the Council, who are not clothed with the episcopal dignity, and all others who, having received from us a special mission, will have, in order to fulfil their office, to assist at the deliberations of the Council, shall take an oath to fulfil faithfully their duties, and to preserve the faith of secrecy concerning all that has been specified above, and all other matters that may be confided to them.

IV.

OF THE ORDER OF PRECEDENCE AND OF THE RIGHTS OF OTHERS TO BE PROTECTED.

As it is of great importance, for the tranquillity and good accord of minds, that each should preserve scrupulously and with modesty, in all the acts of the Council, the rank which becomes his dignity; and to cut short, as much as possible, all occasions of giving offence, we decree that all shall conform to the following order, according to the various dignities:

The first rank belongs to our venerable brethren, the cardinals of the holy Roman Church, bishops, priests, or deacons. The second, to the patriarchs; the third, by a special favor which we confer on them, to the primates, according to the order of their promotion. This concession is made only for this once, and will confer no right to the primates, nor prejudice the rights of others. The fourth rank will be reserved to the archbishops, according to the order of their promotion to the archiepiscopacy; the fifth, to the bishops, all according to the order of promotion; the sixth, to the abbots *nullius;* the seventh, to the general abbots and other superior-generals of the religious orders where solemn vows are made, even when they have only the title of vicars-general, provided that they exercise really a legitimate authority upon all their order with all the rights and privileges of a superior-general.

Otherwise, we decide, conformably to the discipline and the rules of the preceding Councils, that if it should happen, perchance, that some members should not sit in the place belonging to them, should express their opinion, even by the word *placet*, should assist at the congregations, or, in a word, should take part in any act of the Council during its sessions, no prejudice to any one, nor any new right, would result therefrom.

V.

OF THE JUDGES OF EXCUSES AND CONTESTS.

In order that the examination of the more serious matters with which the very holy Synod shall be occupied in every manner should be as little trammelled or delayed as possible by the taking up of cases concerning private individuals: We have resolved that the Synod should elect, by secret ballot, five of the Fathers of the Council, to *judge of the excuses*, who will receive and weigh, according to the rule of the discipline of the Councils and of the sacred canons, the procurations and excuses of the absent prelates, as well as the petitions of those who, before the closing of the Council, may think they have good reasons to retire. However, these judges will not decide upon these matters; they will refer them to the general congregation. We have resolved, moreover, that the same Synod should elect, by secret ballot, five other Fathers to judge the contests and difficulties relating to precedence. If these judges should not succeed in ending by a summary and *economical* judgment, as it is styled, all the contests relating to the order of sitting, the rights of precedence or other claims, if there should arise any among the assembled Fathers, they will submit them to the authority of the general congregation.

VI.

OF THE OFFICERS OF THE COUNCIL.

As it is of the highest importance that necessary and apt ministers and officers should be designated, in conformity with custom and the discipline of Councils, as all the acts of this synod should be made according to all the rules, we, keeping account of these sorts of ministers, do select and appoint;

1. General custodians of the Council: our beloved sons John Collonna and Dominic Orsini, Roman princes assisting at our pontifical throne.

2. Secretary of the Council: our venerable brother Joseph, Bishop of St. Hyppolite, to whom we adjoin, with the office and title of under-secretary, our beloved son Louis Jacobini, prothonotary apostolic, and in the capacity of coadjutors, our beloved sons Canons Camillo Santori and Angelo Jacobini.

3. Notaries of the Council: our beloved sons Luke Pacifici, Louis Colombo, John Simeoni, Louis Pericoli, and Domini Bartolini, to whom we adjoin our dear sons Salvator Pallotini and Francis Santi, advocates, who will assist the said notaries.

4. Scrutators: Our beloved sons Louis Serafini and Francis Nardi, auditors apostolic: Louis Pellegrini and Leonard Dialti, clerks of the apostolic Chambers; Charles Cristofori and Alexander Montani, voters at the signatures of Justice; Frederic de Falloux du Coudray, regent of our apostolic chancery, and Lawrence Nina, abbreviator of the major Park. These eight scrutators will collect the votes in the following manner: four will go over the left side of the court of the Council, walking two by two and accompanied by two notaries; the other four will do the same on the right side.

5. Promoters of the Council: Our beloved sons John Baptist de Dominicis Tosti, and Philip Rolli, attorney of the Sacred Consistory.

6. Masters of Ceremonies of the Council: our beloved sons Louis Ferrari, prefect of our household, and Pius Martinucci, Camillo Balestra, Remi Ricci, Joseph Romagnoli, Peter-Joseph Rinaldi Bucci, Anthony Cataldi, Alexander Tortoli, Augustin Accoramboni, Louis Sinistri, Francis Riggi, Anthony Gattoni, Balthazar Baccinetti, Cesar Togni, Roch Mass.

7. Our officers of ceremonies, charged with designating the seats of the members, our beloved sons Henry Folchi, prefect, and Louis Naselli, Edmund Stonor, Paul Bastide, Louis Pallotti, our secret chamberlains, and our beloved sons Scipio Perilli, Gustavus Gallot, Francis Reguany, Nicolas Vorsak and Philip Silvestri, our honorary chamberlains.

VII.

OF THE GENERAL CONGREGATIONS OF FATHERS.

Arriving now at what concerns the order of the general congregations, we have resolved and decided that five of our venerable brethren, cardinals of the holy Roman Church, will preside in our name and with our authority the same congregations of Fathers which precede the public sessions; and, in consequence, we select and appoint our venerable brother Charles de Reisach, Cardinal of the holy Roman Church, Bishop of Sabine; our beloved sons the cardinals of the order of priests, Anthony de Lucca, of the title of the Four-Crowned Saints; Joseph Andre Bizzarri, of the title of St. Jerome of the Illyrians; Louis Bilio, of the title of St. Laurence *in Panisperna*, and our beloved son, the Cardinal of the order of Deacons, Annibal Capalti.

These presidents, in addition to what concerns the direction of the congregations, will take care, in matters to be discussed, that the discussion of those relating to faith shall be the first to begin with; they will be at liberty, afterward, when they may deem it opportune, to carry the consultations upon questions of faith or discipline.

But, as, since the time when we gave our letters apostolic of indiction to this Council, we have taken care to call to Rome from various parts of the Catholic universe theologians and ecclesiastical jurisconsults, in order that they should prepare, with others of this city and with men thoroughly versed in the same sciences, that which tends to the object of this general Synod, and thus facilitate the examination of those matters by the Fathers, we desire and order that the projects of decrees and canons drawn up and written by these same men, and by us reserved such as they are, and not invested with our approbation, to the knowledge of the Fathers, be submitted to the examination and judgment of the same Fathers assembled in general congregation.

For this reason, the presidents herein above designated will take care that the propositions of the decrees and canons to be acted upon by the announced congregation be printed and distributed,

some days in advance, to each of the Fathers, in order that the latter, during that interval of time, may examine them with care in all their parts and reflect maturely upon the decision to be rendered. If one of the Fathers should wish to speak in the congregation upon the article proposed, it will be necessary, in order to preserve among the speakers the proper order with regard to the dignity of each one, that he shall make it known to the president, one day at least previous to the session in which he intends to speak.—After hearing the remarks of the Fathers, if others wish still to discuss the question in the same session, they will be free to do so after having first obtained the authorization of the president, and observing the order claimed by the dignity of the speakers.

If the proposition brought before the congregation should present no difficulty, or only slight difficulties, easily solved, during the session, then there will be nothing to prevent that, the doubts being elucidated, the form of decree or canon of the Council in question should be adopted by taking the votes of the Fathers. If, on the contrary, the said proposition should give rise to difficulties of such a nature that, contradictory opinions having been expressed, it should be found impossible to come to an agreement during the session, then recourse must be had to the mode herein above established by us for the settlement of this sort of matters in a permanent and proper manner. We prescribe that, from the very beginning of the Council, there shall be instituted four special and distinct congregations or delegations of Fathers, the first of which will occupy itself with, and treat, during the whole duration of the Council, matters concerning faith; the second, questions of ecclesiastical discipline; the third, questions interesting the religious orders; the fourth, finally, the matters of the Eastern rite. Each of these congregations will be composed of twenty-five Fathers, elected by the Fathers of the Council, by secret ballot.

Each of these congregations or delegations shall have at its head one of our venerable brothers the cardinals of the holy Roman Church, appointed by us, who will call, for the wants of the congregation, one or more of the theologians or canonists of the Council, and, from among these, will designate one who shall perform the functions of secretary of the said congregation. If, therefore, it should happen, as we have said before, that a question raised in the general congregation about some proposed decision cannot be settled, then the cardinals, presidents of this general congregation, will see that the proposition in question, together with the difficulties to which it has given rise, be submitted to the examination of such of these especial congregations, to whose competence it may appertain, according to the matters assigned to each of them. After the question shall have been deliberated in this congregation, the printed report thereof will be distributed to the Fathers of the Council, according to the order prescribed above by us, in order that in the next general congregation, if no new obstacle presents itself, the form of the decree or canon of the Council may be adopted after taking the votes of the Fathers. But the votes of the Fathers will be expressed verbally, in such a way that they may have full liberty to pronounce them even by reading them aloud.

VIII.

OF PUBLIC SESSIONS.

The celebration of public sessions requires that we should see to regulate in a proper and methodical manner their operations and acts. Therefore, in every public session, the Fathers being seated, each in his rank and place, and the ceremonies contained in the ritual instructions which have been handed them by our order being ended, the text of the propositions of decrees and canons adopted in the general congregations hereinabove designated shall be read by our order, in a loud and intelligible voice, in the following order: The canons on dogmas of faith will be announced first, then the disciplinary decrees, making use of the solemn formula which it has been customary with our predecessors to use, to wit: "Pius, bishop, servant of the servants of God, with the approbation of the Council, for the perpetual memory of the matter." The Fathers will then be asked whether the canons and decrees that have been read meet with their assent, and immediately the scrutators of votes will come forward and will note exactly those votes, which must be collected one at a time, according to the manner prescribed above. We declare that these votes must be expressed by these words: *placet* or *non placet*. We decree at the same time, that it will not be permitted to the Fathers who may be absent from the session, for any cause whatsoever, to send in their vote in writing. The votes having been collected, the secretary of the Council, with the scrutators hereinbefore designated, will commence classing and counting the votes before our pontifical chair, and will report the result to us. We will then render our supreme sentence, and will order that it be promulgated and published in this solemn form: "These decrees have been approved by all the Fathers, unanimously (or, if there have been any opponents), with the exception of so many votes: and we, with the approbation of the holy Council, order, decree, and sanction that the same be read." These formalities being accomplished, the promoters of the Council will require the prothonotaries present to draw up one or more proces-verbals of all and every thing accomplished during the session. Finally, the day of the next session having been announced by our order, the assembly will be adjourned.

IX.

THAT NO ONE SHOULD WITHDRAW FROM THE COUNCIL.

Under the penalties prescribed by the holy canons, we forbid all the Fathers of the Council and all other persons who are obliged to attend it to withdraw therefrom, before this holy, general, and Œcumenical Council of the Vatican shall be duly and regularly closed and dismissed by us, unless a just cause of departure shall have been presented and proved conformably to the rule hereinbefore established, and the permission to depart obtained from us.

X.

APOSTOLIC INDULT ON THE NON-RESIDENCE OF THOSE WHO ATTEND THE COUNCIL.

As all those who are obliged to assist at the acts of the Council are in the service of the universal Church, following the example of our predecessors,* we order, by virtue of the apostolic goodness, that all the prelates and other dignitaries having right to a vote in the Council, and all other persons who take part in it, by whatever title, may receive the fruits, income, daily production and distributions of their livings, excepting only the distributions made, as it is styled, between presents; and we make this concession for all the time of the Council, in so far as the persons above designated shall remain or take part in it.

We prescribe and order that our present Letters, and all the prescriptions therein contained, be inviolably observed in this coming and very holy Œcumenical Council by all and each of those they may concern; notwithstanding the opposition of any one, even of those who should be especially and individually designated.

Given in Rome, at St. Peter's, under the seal of the fisherman, the 27th of November, 1869, in the twenty-fourth year of our pontificate.

N CARD. PARACCIANI CLARELLI.

---

* Paul III., Brief of January 1, 1546. Pius IV., Brief of November 26, 1561.

Allocution pronounced in the Vatican Basilica at the opening of the Œcumenical Council by Pope Pius IX., on the 8th day of December, 1869.

To the Bishops of the Catholic World in the same Council assembled.

VENERABLE BRETHREN: What by all our vows and prayers we have been continually begging of God, that, namely, we should be enabled to celebrate with you the Œcumenical Council which we had summoned; this has, by the marked and singular goodness of God Himself, been granted to us, and fills us with the utmost joy. Wherefore our heart exults in the Lord, and is filled with unspeakable consolation, for that on this most auspicious day, hallowed by the memory of the Immaculate Conception of the Virgin Mary Mother of God, we again see you before us in greater numbers than heretofore, present in this stronghold of the Catholic religion; and we are gladdened by the sight of you who are called to bear a part of our solicitude.

You are here, venerable brethren, gathered together in the name of Christ (Matt. xviii. 20) that with us you may give testimony to the Word of God and the testimony of Jesus Christ (Apoc. i. 2); and that with us you may teach all men the way of God in truth (Matt. xxii. 16); and that under the guidance of the Holy Spirit you may judge (Acts x. 5, 19) with us of the oppositions of knowledge falsely so called (1 Tim. vi. 20).

For at this time more than ever, now that the earth has mourned and faded away, infected by the inhabitants thereof (Isa. xxiv. 4, 5), zeal for the glory of God and the safety of the Lord's flock requires of us to surround Zion, and to encompass her; and to tell her towers, and to set our hearts in her strength (Ps. xlvii. 13, 14).

For you see, venerable brethren, with what fury the old enemy of mankind has attacked and still continues to attack the house of the Lord which holiness becometh.

To him is due that disastrous conspiracy of the impious so widely spread, which, strong in union, powerful in resources, fenced round with ordinances, and making liberty a cloak for malice (1 Pet. ii. 16), ceases not to wage a cruel war, disgraced by every atrocity, against the holy Church of Christ. You know well the nature of this war, its fierceness, its weapons, its successes, and its purposes. You have ever present before you how those sound doctrines on which rests human society, in its various ranks, are disordered and obscured; how deplorably all the rules of right are turned to wrong; how manifold are the forms employed of falsehood and corruption, while the saving bonds of justice, honor, and authority, are loosened; the vilest passions are inflamed, and the Christian faith is uprooted from the souls of men; so that if any schemes and endeavors of the wicked could avail for the destruction of the Church of God, we might at this very time fear her approaching downfall. "But nothing is more powerful than the Church"—they are the words of St. Chrysostom—"the Church is stronger than heaven itself. 'Heaven and earth shall pass away; but My words shall not pass away.' What words are these? 'Thou art Peter, and upon this rock I will build My Church: and the gates of hell shall not prevail against it.'" (Homil., ante exil., n. 1.)

And although the city of the Lord of hosts, the city of our God, rests on a foundation that shall never be overthrown; yet when we see, and in our inmost heart grieve over, so vast an accumulation of ills, and the ruin of so many souls, to avert which we would willingly lay down our life; as we exercise on earth the office of the eternal pastor, and therefore must needs be more inflamed than others with zeal for the house of God: we deemed ourselves bound to adopt that course which offered most hope of healing the many wounds of the Church. And often turning in our mind that word of the Prophet Isaias, "Take counsel, gather a council;" and considering that this remedy had often been successfully employed by our predecessors in the utmost extremity of the Christian Church: after long-continued prayers; after hearing the counsel of our venerable brethren the cardinals of the holy Roman Church, and after learning the desires of many holy bishops, we have thought right to summon you, venerable brethren, who are the salt of the earth, the guardians and pastors of the flock of the Lord, to assemble at this See of Peter; and on this day, through the gracious providence of God, who has removed all that might hinder our great undertaking, we celebrate, with the ancient solemn rites, the opening of our holy congregation. So various and so abundant is the feeling of love, venerable brethren, which we experience at this time, that we are unable to retain it in our breast. For seeing you, we imagine that we behold the whole Catholic family, our own most dear children, gathered around us. We think of the many pledges of love, of the many outbursts of fervent hearts by which, at your suggestion, under your guidance, and by your example, our children have shown and continue to show, such admirable respect and affection for us and for this Apostolic See; and full of this thought we cannot in this most honorable assembly, wherein you are gathered together, refrain from a solemn and public profession of our great gratitude to them all; and we most earnestly beseech God that the trial of their faith, much more precious than gold, may be found unto praise, and glory, and honor, at the appearing of Jesus Christ (1 Peter ix. 7). We think also of the wretched fate of so many men who are led astray and wander far from the way of truth and justice, and therefore of true happiness; and with desire we desire to help and save them, remembering the example of our Divine Redeemer and Master Jesus, who came to seek and to save that which was lost. Moreover, our eyes are turned to this monument raised to the honor of the prince of the Apostles in which we stand: they are turned on this cherished city, which, by the loving-kindness of God, has not been delivered over as a spoil to the nations; they are turned on this Roman people, so dear to us, by whose love, fidelity, and reverence, we are always surrounded, and we are moved to extol the goodness of God, who has been pleased at this season more and more to assure to us the hope of His divine protection. But our thoughts, venerable brethren, dwell chiefly upon you, whose care, earnestness, and concord, we now perceive to be of so great importance for promoting the glory of God: we notice the burning zeal which you have brought to the fulfilment of your task, and in particular that admirable and most close union which exists between all of you and us and this Apostolic See; than which union, in this season more even than in all our former afflictions, nothing can be more grateful to us, nothing more beneficial to the Church; and we rejoice vehemently in the Lord to see such dispositions in you, that we are forced to conceive a sure and well-founded hope of most rich and excellent fruits to be obtained from your coming together in this present Council. Never heretofore, perhaps, was war waged with more determination and more cunning against the kingdom of God; and never was there more need of that close union between the priests of the Lord and the supreme shepherd of His flock, which imparts so wonderful strength to the Church; and, through the peculiar care of God, and through your excellent dispositions, this union has been maintained without breach; so that it has become, and we trust will daily more and more become, a spectacle to the world, to angels, and to men.

Wherefore, venerable brethren, be strong in the Lord; and in the name of the most holy Trinity, be sanctified in truth (John xvii. 19); put on the whole armor of light, and join with us in teaching the way, the truth, and the life, for which men, so long the victims of countless disorders, must now needs yearn;

join with us in securing a return of peace for all kingdoms, law for the barbarians, calm for the monasteries, good order for the Church, discipline for the clergy, and for God an acceptable people. (St. Bern. de Considerat., iv. 4.) God is standing in His holy place; He is in the midst of us in our councils and in our acts; He, in this effort of His abundant mercy, has chosen us to be His ministers and fellow-laborers; and it behooves us to be so devoted to this service that we now consecrate our minds, our hearts, our strength, to Him alone.

But conscious of our own weakness, we distrust our powers, and our eyes are raised, our prayers are addressed, with confidence to Thee, Spirit of God. Thou Fount of true Light, and of the Wisdom of God, do Thou pour the illumination of Thy grace into our minds, that we may see what is right, what is salutary, what is most excellent; do thou rule, mould, and direct our hearts, that whatever this Council shall do may have a right beginning, a prosperous course, and a happy termination.

And Thou too, Mother of fair love, of knowledge and holy hope, Thou Queen and bulwark of the Church, do Thou take our consultations and our toils under the secure protection of Thy motherly care, and by Thy prayers to God gain for us the grace to be ever one in spirit and one in heart.

Be you also with us, ye angels and archangels; and thou, too, prince of the Apostles, blessed Peter; and thou, fellow-apostle of Peter, Paul, doctor of the Gentiles and preacher of truth in the whole world; and all ye saints of heaven, ye especially whose relics we venerate in this place, by your powerful intercession procure for us that we may all faithfully fulfil our ministry, and may receive mercy from God in the midst of His temple, to whom be honor and glory for ever and ever.

R

RAILWAYS. The official figures showing the number of miles of railway constructed in the United States in 1869, exhibit an actual increase of about 7,745 miles for the calendar year, which is far greater than the aggregate of any former year. The largest amount in any previous year was in 1856, when 8,640 miles of road were built, while in 1868 only 2,970 miles of new rails were laid. Since 1826, when Massachusetts began to lay iron tracks, the construction of railways in this country has averaged more than 1,000 miles a year.

Counting the cost of construction at $40,000 a mile, we expended during the last year $300,000,000 in building railways, with probably $300,000,000 for expenditures besides building; such as new rails, new cars, depots, etc.

The present distribution of railway lines is nearly as follows: 4,000 miles in New England, 17,000 miles in the Western States, 900 in the Pacific States, 10,000 in the Middle States, 11,000 in the Southern and Gulf States. The war scarcely checked railway building in the North and West; but, for the time, it ruined the Southern roads, most of which have since been relaid and supplied with rolling-stock, or are now in process of relaying and supply. And new roads are now building, or are projected, in every part of the Southern States, under the belief that they are essential to the full development of their agricultural resources. Texas is pushing through a central road, which may become the Southern route to the Pacific coast. Illinois is building a dozen different roads, which will cover 500 miles, and Indiana yet more. Michigan is engaged upon three new roads, covering 500 miles. Six new roads, extending over 300 miles, are in progress in Iowa. Missouri is pushing on her South Pacific. Oregon, California, Kansas, and Nevada, are all building new railways, And last, not least, Virginia projects a great central road through the State, which will make, with connections, direct transit from Norfolk, on the Atlantic coast, to San Francisco, free from snow.

These are the leading railway enterprises now seeking aid from the North, and to these should be added the efforts New York and Baltimore are making to perfect their railroad connections with the West.

The following table presents a summary of the miles of railroad in operation in each State, at the close of the year 1869 or beginning of 1870, compared with the beginning of the year 1864, or a period of six years. This shows an aggregate outlay of over $2,200,000,000 in railroad construction, and an aggregate mileage of 48,860 miles; which latter will probably, before the middle of the year 1870, exceed 50,000 miles in actual operation. This is in addition to double tracks and sidings, constructed on a large number of the roads in this country.

The Pacific Railroad was completed on the 10th of May, 1869, by the junction of the Central Pacific and the Union Pacific Railroads at Promontory Summit, Utah, a point 1,084 miles west from Omaha, and 690 east from Sacramento. The last spike was driven with imposing ceremonies, and on the 15th of May through-trains began to run regularly. By a subsequent arrangement between the two companies, and in conformity with a resolution passed by Congress, Ogden, 52 miles east from Promontory Summit, and 1,032 miles west from Omaha, was fixed as the dividing point between the Central Pacific and the Union Pacific Railroads. The former, therefore, extends from Sacramento, California, to Ogden, Utah, a distance of 742 miles, and the latter from Ogden to Omaha, 1,032 miles. From the beginning, the work has been vigorously prosecuted, and its completion in May of 1869 was reached a year earlier than had been anticipated by the company. This rapid progress has been due largely to the aid rendered by the General Government. The Union Pacific

Railroads of the United States, January, 1870, *compared with January*, 1864.

Railroad Company was organized in October, 1863, under a charter granted by Congress, called "An Act to aid in the construction of a Railroad and Telegraph Line from the Missouri River to the Pacific Ocean, and to secure to the Government the use of the same for postal, military, and other purposes." The capital stock of the company was fixed at $100,000,000, in shares of $1,000 each, which were subsequently fixed at $100 each, and it was also provided that no one person could subscribe for or hold more than 200 shares of the stock. The Government granted the company every alternate section of land for ten miles on each side of the road, which was subsequently extended to every alternate section for twenty miles on each side of the road; and also the right of way over the public lands to the extent of 200 feet in width on each side of the road, together with the right to use timber and other material necessary for the construction of the road wherever found upon the public lands. The Government also granted aid in bonds, maturing in 30 years, and bearing six per cent. interest, payable in gold, amounting as follows:

517 miles west from Omaha, at $16,000 per mile	$8,272,000
150 miles, at $48,000	7,200,000
433 " " 32,000	13,856,000
Total	$29,328,000

These bonds were issued only upon the completion of each section of 20 miles of the road, and were transferred upon the certificate of three commissioners, appointed by the United States Government, that the road was thoroughly built and adequately supplied with all the machinery, equipments, and fixtures necessary to a first-class railroad. By subsequent legislation, the company obtained the right to issue its first-mortgage bonds to an amount equal to the bonds of the United States, which were made a second lien upon the road.

The whole bonded debt of the road became, therefore, $58,656,000. The contract for the construction of the Union Pacific road was made in August, 1864, but owing to certain delays the first 40 miles of the road were not completed until January, 1866; in January, 1867, 305 miles; in January, 1868, 540 miles; and in January 1869, 1,032 miles were completed. The obstacles to be overcome in constructing the road were found to be less formidable than had been anticipated. In crossing the mountains there are no grades exceeding 90 feet to the mile, and these but for short distances, while an altitude of more than 6,000 feet is attained by a gradual ascent. Omaha is 397 feet above the level of the sea, and the elevation of Cheyenne, at the base of the Black Hills, 517 miles west from Omaha, is 6,062 feet, making an average grade between these two points of ten feet to the mile; while the average ascent from Cheyenne to Sherman, at the summit of the Black Hills, the elevation of which is 8,262 feet, is 69 feet to the mile. The average cost of constructing the road, including car-shops, depots, stations, locomotives, cars, and all necessary expenses, except those of surveying, is stated at $68,058 per mile for 914 miles west from Omaha, and $90,000 per mile for 186 miles; while the total cost of the road for this distance, including surveys, is stated at $82,445,012.

According to a provision of the charter, the management of the road is controlled by a Board of twenty Directors, five of whom are appointed by the General Government, and are prohibited from holding stock in the road. The Government also exercises the right of appointing three commissioners to examine the road, and report whether it has been constructed and operated according to law. There have been conflicting reports as to the condition of the road and the manner of its construction. In September, 1868, a Special Commission, composed of Brevet Major-General G. K. Warren, U. S. A., Jacob Blinkens-

derfer, Jr., civil engineer, and General James Barnes, was appointed by the President of the United States to make a thorough reëxamination of so much of the Union Pacific road as had then been constructed. Their report, which was submitted in November of the same year, when 890 miles of the road had been completed, closed as follows: "Deficiencies exist, but they are, almost without exception, those incident to all new roads, or of a character growing out of the peculiar duties encountered, or inseparably connected with the unexampled progress of the work. A matter of great importance, and highly creditable to the able managers of the company, is that they can all be supplied at an outlay but little exceeding that which would have obviated them in the first instance, but at the cost of materially retarding the progress of the great work. Under the circumstances, it is much more a matter of surprise that so few mistakes were made, and so few defects exist, than it would be had serious deficiencies been of more frequent occurrence; and the country has reasons to congratulate itself that this great work of national importance is so rapidly approaching completion under such favorable auspices."

RAWLINS, JOHN A., Major-General of the United States Army and Secretary of War, born at Guilford, Jo Daviess County, Illinois, February 13, 1831; died in Washington, September 6, 1869. He was reared as a farmer and charcoal-burner, which occupation he followed till 1854, in the mean time improving every opportunity he could command for reading and study. Removing to Galena, Ill., he studied law, and, in 1855, was admitted to the bar, and practised his profession successfully until the commencement of the late war. His principles were Democratic, and, in 1860, he was candidate for presidential elector from the 1st Congressional District of his native State on the Douglas ticket. Though a decided Democrat, and opposed to the war, upon the fall of Fort Sumter he felt that it was no longer a question of politics, and forthwith gave all his sympathies to the support of the Government. On receiving the news of the Bull Run disaster, he engaged in raising troops, and on the 15th of September following went into service on the staff of General Grant, as assistant adjutant-general with the rank of captain. He was appointed a brigadier-general of volunteers, to rank from August 11, 1863; was brevetted major-general of volunteers, to rank from February 24, 1865; was appointed chief of staff to the Lieutenant-General commanding on March 3, 1865, with the rank of brigadier-general in the United States Army, and was commissioned a major-general in the United States Army, to rank from March 13, 1865. Through all the trying scenes of the great conflict he refused no hardship and shunned no danger, but manfully supported his chief until the victory was won, remaining upon his staff until, on the resignation of General Schofield, March 11, 1869, he was appointed Secretary of War, the arduous duties of which position he performed with untiring faithfulness until a few days previous to his death.

RAYMOND, HENRY JARVIS, an American journalist, editor, author, and political leader, born in Lima, Livingston County, N. Y., January 24, 1820; died in New York City, June 18, 1869. His father was a farmer, and in that life Mr. Raymond's early days were spent. As soon as he was old enough, he attended the famous Lima Seminary, and there laid the foundation of a solid education. In the winter of 1835–'36 he taught a district school. After considerable solicitation, his father finally consented to send young Raymond to college, and he graduated with high honors at the University of Vermont in 1840. After leaving college he came to New York, studied law, and maintained himself by teaching, and by writing for the *New-Yorker*. He was desirous of becoming a journalist; and when, in 1841, Mr. Greeley established the *Tribune*, Mr. Raymond was his assistant. Here he greatly distinguished himself by his skill as a reporter, a department of the journalistic profession in which he had no superior in promptness, accuracy, and tact. He made a specialty of lectures, sermons, speeches, etc.; and, among other remarkable feats of this kind of enterprise, reported Dr. Dionysius Lardner's lectures so perfectly, that the lecturer consented to their publication in two large volumes, by Greeley & McElrath, with his certificate of their accuracy. Mr. Raymond's activity soon manifested itself in his zeal for exclusive news, and in after-life he often expressed a regret that railroads and telegraphs had so reduced the opportunities of gaining these victories. He often related a "beat" he gained for the *Tribune* in his early days. He went, with various reporters of rival journals, to Boston, to report a speech of Daniel Webster. The other journals each sent two short-hand reporters to work against Raymond. He took his notes in the method which he had invented, and the company returned by the night-boat. But while the others were enjoying themselves, Raymond was copying his notes in the back cabin, which had been turned into a printing-office, and when the boat reached the city the whole speech, several columns long, was in type, ready to be transferred to the presses, and by six o'clock the readers of the *Tribune* had it before their eyes. The other papers acknowledged themselves beaten, and never used their short-hand reports. After remaining on the *Tribune* about seven years, he accepted a position on the staff of the *Courier and Enquirer*, under James Watson Webb. He remained with General Webb eight years, until 1851, when, on account of political differences, he left him, and went to Europe for his health. The disagreement arose from a difference of opinion in regard to the measures before Congress in 1850, the

year of the great Compromises. Mr. Raymond sympathized with President Taylor, and General Webb with his successor. While on the staff of the *Courier and Enquirer* he became well known as a polished writer and a man of letters, and formed a connection with the publishing-house of Harper and Brothers, which lasted ten years. During this time a spirited discussion of Fourier's principles of socialism was carried on between Mr. Raymond and Mr. Greeley, and his articles on this subject were afterward published in pamphlet form. Mr. Raymond's political life began in 1849, when he was elected a member of the Assembly by the Whigs; he was reëlected in 1850, when he was chosen Speaker. He at once became prominent as a debater, directing his attention while in the Legislature especially to the common schools and the canals.

The *Times* newspaper was started by him on the 18th of September, 1851. It commenced with six editors, two proof-readers, and eighteen compositors. In 1852 he went to the Baltimore Convention to report the proceedings for his paper, but was given a seat as a delegate, and made an eloquent speech in exposition of Northern sentiment. In 1854 he was elected Lieutenant-Governor of New York, receiving 157,166 votes, a majority of 28,333 over Ludlow, his principal opponent. As an organizer of the Republican party, Mr. Raymond was an active worker. The "Address to the People," which was issued from Pittsburg in 1856, was from his pen. He advocated the election of Fremont after the meeting of the first National Convention. In 1857 he refused to be a candidate for Governor of this State. The next four years were devoted to his profession. In 1858 he sided, apparently, with the supporters of Mr. Douglas, but in the end resumed his relations with the Republican party. In 1859, he visited Europe, and while in Italy witnessed the short and decisive campaign of the French against the Austrians. His account of the battle of Solferino, written on the spot during the progress of the action, was dispatched by a special courier to Havre, in season to catch the earliest mail for New York, where it arrived several days in advance of the English accounts. In 1860 he was earnestly in favor of the nomination of Mr. Seward for the presidency, but acquiesced promptly in the selection of Mr. Lincoln by the Republican National Convention, and it was through his influence that Mr. Seward was placed in the Cabinet of Mr. Lincoln. He was a warm supporter and personal friend of Mr. Lincoln in all his active measures, though at times deploring his hesitating policy. After the disaster at Bull Run, he proposed the establishment of a provisional government, but the idea was not received with any favor. In 1861 he was again elected to the Assembly, where he was chosen Speaker. The following fall he was the president of the Union State Convention at Syracuse, where he voted for the nomination of General Dix, but, after the nomination of James S. Wadsworth, declared the latter his first choice. In 1863 he was defeated by Governor Morgan for the nomination of United States Senator. In May, 1864, he was a delegate to the Republican State Convention, and was chosen by a unanimous vote delegate at large to the National Convention. He was afterward appointed chairman of the New York State delegation. He was elected in the fall of 1864 to the Thirty-ninth Congress, from the Sixth Congressional District, and took his seat on the 4th of December, 1865. His course was that of a moderate Republican. Though allied by strong conviction with the Republican party, he was never, in the strict sense of the word, a party man, and never surrendered to party the supreme right of private judgment on all questions, whether of principle or policy. Unable, frequently, to go with the Republican party on all questions, he incurred the charge of political inconsistency—so often and so recklessly brought against public men of independent thought, and never more unjustly than in the case of Mr. Raymond. So far from being fickle and inconsistent, he was in truth one of the most consistent and conscientious men that ever took part in public affairs. He was always true to his convictions. His public course was based on the broadest principles of right and justice. Mr. Raymond's Congressional record began with the delivery of his speech against Mr. Stevens's theory of "dead States," on the 22d of December, 1865. He maintained, in opposition to that doctrine, that, as the several ordinances of secession were nullities, the Southern States had never been out of the Union. Holding this view, he would exact of them all necessary guarantees of future loyalty to the Constitution, and for the care and protection of the freedmen. He advised the most rigid scrutiny into the character of the men whom they should send to Congress; but he sought to allay the animosities and mutual jealousies engendered by the war, and deprecated any policy which would tend to keep them alive. His speech in reply to Mr. Shellabarger, January 29, 1866, was conceived in the same spirit; and consistently with these opinions, he opposed the bill reported by Mr. Stevens, from the Reconstruction Committee, to provide military governments for the Southern States.

Aside from purely political questions, Mr. Raymond took a very active interest in the ordinary legislation of Congress; and his name is connected with some of the most important bills considered by the body of which he was a member. The Philadelphia Convention, held August 14, 1866, enlisted his warm support. Impressed with the belief that Congress did not fully represent the wishes of the country, in respect to the various questions involved in the reorganization of the Southern States, he favored the plan of a direct appeal to the

people. This view he held in common with some other members of the Republican party, and thus formed the groundwork of the Address and Declaration of Principles, which he drew up and which were unanimously adopted by the convention. But the movement was misunderstood by Republicans. A compromise, involving the surrender of some vital principle, was suspected; and, as few Republican journals lent it their support, it failed to exert a permanent influence on the party. On the expiration of his term, Mr. Raymond, having declined the renomination that was pressed upon him by prominent men of both parties, withdrew almost wholly from public life, and devoted all his energies to the conduct of his paper. He was offered the mission to Austria by President Johnson, in 1867; but his name was sent to the Senate without his consent, and after he had notified the President that no considerations could induce him to accept the position. Mr. Raymond frequently said that he felt journalism to be his true vocation. He had no love for political life. Its honors held out no lure for his ambition. He was fond of travel, and in the summer of 1868 made a third visit to Europe. His tastes were cultivated and liberal, and his studies embraced a wide range of subjects. He was a large reader, and with this combined the rarest qualities of a thinker and reasoner. Few men, even among practised writers for the daily press, had the readiness in composition that distinguished him. None was ever more quick to seize the right point of a subject, and give it expression with ease, clearness, and vivacity. He wrote with extraordinary facility on every subject that came up for discussion in the paper; and could be light and playful or weighty and profound, as the nature of the topic required.

Absorbed in the duties of his profession, Mr. Raymond found but little leisure for literary labors in other fields. His only book was a biography of Abraham Lincoln, first published in 12mo, in 1864, and republished the following year, so much enlarged as to be almost a new work. Besides this, his publications have been a few political speeches and literary orations. At one time he meditated a history of his own life and times, which he intended to be a vindication of his political course; but it was never begun. Mr. Raymond was almost as well known as a public speaker as an editor, and possessed singular power over an audience. It was not merely in the personal magnetism of the man, but in the force of his reasoning, the lucidity of his illustrations, and the logical arrangements of his thoughts. His manner was easy and conversational, his enunciation rapid but distinct, his voice clear and resonant. The mere announcement that he was to speak on any subject, was always sufficient to draw an audience. As a journalist, Mr. Raymond occupied the very first rank. Thoroughly conversant with the history and dominant issues of national and State politics, he possessed also remarkable fertility and resources as a writer. His faculties were so much under his command, and his education was so comprehensive and practical, that he could advantageously discuss a wide range of topics. As a controversialist it would not be easy to find his equal. His industry was incomparable, his intelligence quick and sure. Without the highest gifts of imagination, he was always clear, forcible, and instructive; and he knew how to seize the controlling point of a question and present it so that the reader could not fail to understand and be convinced. His judgment was naturally moderate and conservative, free alike from the control of prejudice and of passion; and that intensity of conviction which easily passes into fanaticism, and is often dangerous to a public man, was not congenial to his mental organization. His death occurred from apoplexy, with which he was attacked while entering his own house, and which proved fatal in the course of four or five hours.

REFORMED CHURCH. 1. The General Triennial Synod of the Reformed Church in the United States (German) met in Philadelphia, on the 25th of November. The reports from the classes on striking out the word "German" from the designation of the Church, showed twenty-four classes voting in favor of the change, and it was declared carried. Considerable time was spent in discussions upon the liturgy. The Eastern Synod has one liturgy; the Synods of Ohio and the Northwest have proposed another. The sentiment of the General Synod must leave it optional with the classes which liturgy they should employ. In reference to a union with the Reformed Church (Dutch) of America, the Synod declared, that a closer union between two bodies so intimately related in doctrine, culture, and name, would be both natural and desirable, so soon as that consummation can be reached with the cordial consent of both Churches. "We cordially reciprocate the kind feeling that has for several years found expression through the delegates of the Reformed Church of America, and other authoritative channels, touching this matter. We rejoice in the growing friendly relation of these two Protestant bodies, and are ready to coöperate in all proper movements looking to a closer union; but we do not see our way clear at this time to take any more definite action on this subject."

The review of the state of the Church speaks of the cheering advance that has been made since the first Synod met in Philadelphia, one hundred and twenty-three years before. It represents the progress since the meeting of the last Synod to have continued favorable; the various interests have been strengthened and extended; the Church has grown in spirituality, its enterprises have been vigorously prosecuted. "Though we have not carried on foreign missions, technically so called, yet we have labored among different nationalities

within the limits of our own vast country. And the labor has not been in vain. The General Synod's Board has had nearly one hundred missionaries on its list, and, despite all the disadvantages with which it has had to contend, has done what twelve or fifteen years ago it would have been deemed chimerical to propose. The Northwestern Synod has had a separate Board of Missions, as had also several of the classes, some of these among the strongest." The publication of the various periodicals, both in English and in German, has continued unbroken, and, "during the past three years, there has been a clear increase above all losses in our statistics of *one* District Synod, three classes, thirty-six ministers, and ten thousand members."

The statistics of this Church are summarized as follows: General Synod, 1; District Synods, 3; classes, 31; ministers, 521; confirmed members, 117,910; unconfirmed members, 68,362; baptisms, 36,117; confirmations, 20,183; receptions by certificate, 3,779; Sunday-school scholars, 47,990; Sunday-schools, 1,919; contributions, $228,817.94, or, not including ministers' salaries, $76,500.

2. The sixty-third session of the General Synod of the Reformed Church (Dutch), in America, opened in Philadelphia on the 2d of June. The amended charter having been obtained from the New York Legislature, the change of name of this body is completed. The Board of Directors reported the receipt of donations and bequests amounting to about $18,000, besides a gift of $2,890.63 to Hope College. The widows' fund amounts to $29,192.19. The amount of $16,917.41, had been received on account of the assessment ordered by the General Synod of 1864, for the increase of the permanent fund. The Board of Domestic Missions reported 5,358 admitted. There are 72 missions, with 4,000 families under their pastoral charge. The number of contributing Churches was 296. The total receipts were $30,973.33. The number of children brought into the schools was 8,115.

There were 58 young men studying for the ministry under the care of the Board of Education, and 615 children in the parochial schools. The receipts of the Board were $39,157.53. It is under an indebtedness of $3,942.49. The Board of Publication issued during the year 6,250 copies of religious works; and 68,500 of reprints, tracts, etc. The sales amounted to $15,918.94; assets, $38,007; liabilities, $10,836.38. The principal of the widows' fund is $29,192.19. The receipts of the disabled ministers' fund were $2,369.55.

Papers condemning freemasonry were presented from the classes of Wisconsin and of Holland. The committee to whom they were referred, reported that they considered much that was said against masonry to be exaggerated or unfounded; but that the path of safety for Christians lay outside of all secret, oath-bound societies, and recommended a resolution "That the members of our churches be advised to refrain from uniting with those fraternities which are held together by oaths of secrecy, but if, in the exercise of Christian liberty, any communicant has chosen to join such societies, he shall not on that account be held answerable to ecclesiastical discipline." Four classes in New Jersey, and the classes of Philadelphia, were set off to form a new particular Synod, which was named the Synod of New Brunswick.

The number of churches is 451; licentiates, 474; communicants, 58,796.

The number of families reported is 37,706. Received on confession, 3,190; on certificate, 2,040; infant baptisms, 3,585; adult baptisms, 797; scholars in Sunday-schools, 47,244. The total of contributions for religious and benevolent purposes was over $255,000; for congregational purposes, $846,627.18.

Missions.—The receipts of the Board of Foreign Missions were from Churches, $59,523.03; from Sunday-schools, $5,310.79. The receipts from other sources swell the total to $81,410.38. The debt of the Board has increased to $24,000.

In the Amoy Mission in China, there is a missionary force of 8 persons. The number of members is 701. The Christian community in the classis of Arcot numbers 2,094 persons, of whom 534 are church members. Eight missionaries are connected with the mission in Japan.

REGNAUD, DE SAINT-JEAN D'ANGELY, AUGUST MICHEL MARIE ETIENNE, Count, a Marshal and Senator of France, born in Paris July 29, 1794; died in that city December 21, 1869. He was of a distinguished family, his father having played a prominent part in the history of both the empire and the republic. He was educated at the Prytanée de Saint-Cyr, and entered in 1811 the Military School of St. Germain. In the following year he joined the 8th Hussars, then in Russia, as sub-lieutenant. His regiment was almost destroyed at the battle of Leipsic. He took a prominent part in the campaign of 1814, distinguished himself under the walls of Rheims, and was named by Napoleon chief of squadron at Waterloo. In 1825 M. Regnaud went to Greece, organized there a European cavalry corps, and served as a volunteer in General Maison's expedition in the Morea. After the Revolution of July he was allowed to retain the rank in the army conferred upon him by the Emperor. In 1832 he was appointed colonel of the First Lancers, and in 1840 received the brevet of field-marshal and military commander of the department of the Meurthe, where he remained till the establishment of the republic. Under the new government he was employed in the Army of the Alps, and was promoted in 1848 to the rank of General of Division. In the following year he was elected by the district of Charente-Inférieure to the Legislative Assembly, in which he acted with the majority.

For several days in the early part of 1851, he was at the head of the War Department, and after the *coup d'état* was appointed a Senator. In 1849 Marshal Regnaud was made Grand Officer of the Legion of Honor, and since 1854 he had commanded the Imperial Guards. The weight of declining years had prevented him from taking any very active part in the stormy events of the last decade.

REICHENBACH, Baron KARL VON, Ph. D., a German naturalist, chemist, technologist, and author, born at Stuttgart, February 12, 1788; died at Leipsic, January 19, 1869. He was educated at Tübingen, where he received the degree of Doctor of Philosophy. At the age of sixteen years he had formed the project of establishing a new German state in the islands of the South Sea, and being of a wealthy family he prosecuted his design with great zeal for three years, when the French Government, which at that time had possession of Stuttgart, suspecting that he was entertaining revolutionary plans, arrested him, and imprisoned him for some months. Upon his release he turned his attention to technological science, and after a thorough investigation of the great manufactories and smelting-furnaces of France and Germany, pursued through several years, he established manufactories at Villingen and at Hausach. In 1821 he entered into partnership with Count Hugo von Salen, and the two established a large number of chemical works in Moravia, which in a few years realized for them great fortunes, and enabled Von Reichenbach to purchase several fine estates. The King of Würtemberg about this time raised him to the rank of baron. Possessing an intense fondness for physical science, and having made extensive attainments in several branches of it, Baron von Reichenbach, in 1831, published his discovery of *paraffine*, and, in 1833, that of creosote. He had also the honor of being the first author of a geological treatise in Austria—his "Geological Researches in Moravia" appearing in Vienna in 1834. Not long after this publication he became interested in the experiments of Mesmer and others, in the so-called Mesmerism or animal magnetism, and commenced a series of elaborate investigations, carried on with German precision and care for fifteen or twenty years, into the character of this mysterious force. The result of his observations was first made public in a work translated and republished both in England and the United States, and by which he is best known in this country: "Physico-Physiological Researches upon Magnetism, Electricity, etc., and their Connections with the Vital Force." 3 vols. 1849. In this work he first announced his theory of a new imponderable agent, differing from both electricity and magnetism, to which he gave the name of *Od*, and to which he attributed the phenomena of clairvoyance, magnetic writing, table-tipping, etc. This work produced great excitement among the philosophers throughout Europe; and the materialist school opposed his views most vehemently, one of them (Charles Vogt) going so far as to attack it in a very bitter review under the title of "The Collier's Hearth and Science," in allusion to Baron von Reichenbach's career as a manufacturer. The baron replied with equal severity in a volume with the title of "The Collier's Hearth and False Science," and defended and extended his investigations in the following works: "Odic-Magnetic Letters," 1852; "The Sensitive Man and his Connections with Od," 1854; "Who is Sensitive, and Who is Not?" Among his somewhat diversified pursuits, Von Reichenbach had included that of a collector of minerals, meteorites, etc. His collection of the latter at his chatean in Reisenberg was said to be altogether the finest in Europe. He had also purchased and arranged the noble herbarium of Sieber, which was the most complete on the Continent.

REISACH, CHARLES AUGUSTE, Count DE, a cardinal bishop of the Catholic Church, born at Roth, Bavaria, July 6, 1800; died in Annecy, Savoy, December 23, 1869. He was the scion of an old noble family of the eleventh century, and had been reckoned among the counts and barons of the German empire since 1737. He studied theology and law in the German universities, and was ordained a priest in 1823. Immediately after entering the priesthood he became noted for his energetic defence of the interests of the Church, and, for his devotion to the ultramontane theories, soon became the recipient of many honors on the part of the Pope. During a prolonged stay in Rome he was made domestic prelate of the Pope, and consultor of the Congregation of the Index. In 1836 the influence of Rome secured his appointment as Bishop of Eichstadt when only thirty-six years old, an age at which nowadays the episcopal dignity is rarely obtained. In 1841 he became coadjutor of the Archbishop of Munich, and in 1846 Archbishop of Munich. Thus placed at the head of the Episcopate of Bavaria, he showed himself, in his relations with the Government and as a member of the first Chamber of Bavaria, an uncompromising champion of all the claims of his Church, though at the same time he was eminently successful in avoiding serious conflicts with the Government. His zeal in the interest of Rome was, in 1855, rewarded with a cardinal's hat, the Pope creating him a cardinal priest, with the presbyterial title of St. Anastasia, which, in 1861, was changed to that of Santa Cecilia. Not only was he received among the cardinals, but he was desired by the Pope to resign the Archbishopric of Munich, and to take up his permanent abode in Rome, in order to be the chief adviser of the Holy See in all the many and complicated transactions with the churches and the Governments of the German nation. In this position he gained the complete confidence of the Pope, who, July 22, 1868, bestowed upon him an honor which is rarely received by any non-Italian, by making him

Bishop of Sabina, one of the six suburban sees, whose occupants are the six cardinal bishops, and, as such, next to the Pope. The See of Sabina belonging now to the territory of the King of Italy, the Italian Government did not recognize the papal appointment, and instituted a trial against Cardinal Reisach for violating the laws of the kingdom of Italy. He was, of course, found guilty, but as he resided in Rome, and not upon Italian territory, the sentence had no practical consequences. On the convocation of the Council, Cardinal Reisach was appointed to the presidency of one of the committees charged with making the necessary preparations; but his health was too feeble to allow him to take an active part in these preparatory labors. At the suggestion of his medical advisers, he left Rome, to seek relief from the illness to which he soon after succumbed.

RHODE ISLAND. The General Assembly met at Providence in January, 1869, when the Inspectors of the State Prison submitted their report, in which they strongly deprecated imprisonment for debt, characterized it as a relic of barbarism, and invoked the action of the Assembly "to purge the statutes of a law which is contrary to the genius of the age and the humanitarian principles which should animate the legislation of the State." They also protested against the practice of sending to the jail demented and lunatic persons, as criminals, when they were fit subjects for a different institution. The question which had long been before the people of Rhode Island, growing out of the great need felt in the State for suitable accommodations for the care and protection of the insane poor and paupers, was settled at this session of the Legislature by the establishment of a "Board of State Charities and Corrections," and by the appointment of a committee empowered "to negotiate for and purchase a suitable farm of not less than two hundred acres, for the location for a House of Correction, State Asylum for the Insane Poor, and such other institutions as the General Assembly may order." In accordance with this resolution, the committee subsequently selected the site in Cranston known as the "Howard Farm," consisting of nearly three hundred acres, at a cost of $22,500. This is regarded as the most advantageous location for the purposes for which it was selected that could be found in Rhode Island. About fifty acres of the farm is woodland, which contains much heavy timber that can be used to advantage in the erection of the buildings necessary to carry out the designs of the General Assembly. The large hill on the farm commands an extensive view of the bay, from the cove to the sea; while the buildings to be erected upon it will be visible from every part of the State. The adjacent farm of one hundred and forty acres was also purchased by the State, which, together with other contemplated purchases to be made, will give the State Farm an area of five hundred acres. The establishment of the Board of State Charities was a measure of great importance, as it contemplated the organization and systematizing of the various charitable and penal institutions of the State. During the year a new building for the male inmates of the workhouse has been erected and occupied, and two large buildings for the insane poor were nearly completed. Up to the close of the year, 101 males and 54 females had been committed to the workhouse; these subjects represented fifteen towns of the State.

Provision was made at the January session of the Legislature for the "purchase and maintenance, in connection with the agricultural department of Brown University, of an experimental garden or small farm, together with such buildings as may be necessary." The bill, after directing that said farm shall be under the control of a board of trustees, to be appointed in part by the General Assembly and in part by Brown University, and making an appropriation of $10,000 from the State Treasury to aid in carrying out this design, provides:

1. That an equal sum of $10,000 shall be raised by subscription from private individuals on or before October 1, 1869, for the same object.

2. That $5,000 of the Agricultural Fund, or 10 per cent. of the entire amount for which the lands donated by Congress were sold, be appropriated by the university toward the purchase of said experimental farm.

3. That said experimental farm shall be placed by the university under competent direction, and shall be so managed as to afford a practical illustration of the newest and most approved methods of culture, and shall, under proper regulations, be accessible to all who may wish to visit it.

4. That provision shall be made by the university for a course of lectures, to be given each year at the university, or some more convenient place in the city of Providence, in which some of the more important principles of agriculture shall be unfolded, improvements made or suggested within the year noticed, and the results of experiments given.

The National Union Republican State Convention assembled at Providence on the 4th of March, for the purpose of nominating candidates for the State offices, and organized, with James M. Pendleton as president. About one hundred and six delegates were in attendance, and much enthusiasm and harmony were manifested in the proceedings. No platform of principles was adopted, but speeches were made approving the impeachment proceedings against Andrew Johnson, indorsing the proposed policy of President Grant's Administration, and rejoicing in the triumph of Republican principles; asserting that the negro who fights the battles of the country should have the right of suffrage, and that the public securities should be paid in gold, and in no other way. The nominations of the convention were: Seth

Padleford, of Providence, for Governor; Pardon W. Stevens, of Newport, for Lieutenant-Governor; John R. Bartlett, of Providence, for Secretary of State; Willard Sayles, of Providence, for Attorney-General; and Samuel A. Parker, of Newport, for General Treasurer.

The Democratic State Convention was held at Providence on the 24th of March, and nominated Lyman Pierce, of Providence, for Governor; William H. Allen, of North Kingston, for Lieutenant-Governor; J. Miller, of Bristol, for Secretary of State; George N. Bliss, of East Providence, for Attorney-General, and Philip Rider, of Newport, for General Treasurer. The election was held on the 7th of April, and passed off very quietly. The vote was not large, and resulted in the entire success of the Republican ticket. The number of votes received by the different candidates was as follows:

	Republicans.		Democrats.
Governor,	S. Padleford, 7,370	Pierce,	3,390
Lieut.-Gov.,	P. W. Stevens, 7,523	Allen,	3,257
Sec. State,	J. R. Bartlett, 7,373	Miller,	3,174
Att'y.-Gen.,	W. Sayles, 7,327	Bliss,	3,334
Treasurer,	S. A. Parker, 7,359	Rider,	3,447

Members of the General Assembly were also chosen at this election, as follows:

	Senate.	House.
Republicans	27	61
Democrats	6	11
Republican majority	21	50

At the election held in 1868, Burnside received 10,088 votes for Governor, and Pierce received 5,781.

The fifteenth amendment to the Constitution of the United States, having been postponed from the January session, was ratified by the Senate, on the 27th of May, by a vote of 22 to 11. The House, however, did not concur in the ratification, but action on the amendment was postponed by that body until the January session of 1870. The cause assigned for the reluctance of the Rhode Island Legislature to ratify this amendment is the clause in the State constitution requiring of all voters, not native citizens, a property qualification of $140; the effect of which is, to exclude many foreigners from the privilege of voting. It was feared by many members of the Legislature that this provision of their State law would be nullified by the adoption of the fifteenth amendment, though many able lawyers contended that there would be no conflict between the two laws. In his first message to the Legislature, Governor Padleford urged that body to take early action on the fifteenth amendment.

A State Teachers' Institute was held at East Greenwich on the 22d and 23d of October, which was attended by many prominent educators from different parts of the State. The educational needs of the State were fully discussed, and the various modes of teaching compared, by those who were successful laborers in the cause of education. The need of a State Normal School was most prominent in the discussions, and the views of the convention on this subject were expressed in the following resolutions, reported by the Commissioners of Public Schools:

Resolved, That as teachers of Rhode Island we feel the need of a higher professional training, and we recognize in the Normal School the supply of the great want felt, etc.

2. That it is the expression of our earnest feeling, as teachers at the East Greenwich Institute, that a State Normal School is greatly needed in our own State, and we appeal to the legislators to make special and immediate effort to secure such a Normal School, that Rhode Island may take rank with her sister States in the educational work.

3. That we will use our utmost endeavors to secure a true public sentiment on this subject, and we congratulate ourselves that, in Prof. J. T. Edwards and Prof. Green, of East Greenwich, the chairmen of Education in the Senate and House of Representatives in this State, we find the true friends of the proposed school.

In the month of October the "Rhode Island Woman Suffrage Association" held a convention at Providence, which was attended by many prominent women in this movement. It was urged, in the speeches, that the Legislature should be influenced by strong petitions to take early action on the question of woman suffrage. The following were the resolutions adopted:

Whereas, In the adjustment of the question of suffrage now before the people of this country for settlement, it is of the highest importance that the organic law of the land should be so framed and constructed as to work injustice to none, but secure as far as possible perfect political equality among all classes of citizens; and,

Whereas, All persons born or naturalized in the United States, and subject to the jurisdiction thereof, are citizens of the United States, and of the State wherein they reside: be it

Resolved, 1. That the immunities and privileges of American citizenship, however defined, are national in character, and paramount to all State authority.

2. That while the Constitution of the United States leaves the qualifications of electors to the several States, it nowhere gives them the right to deprive any citizen of the elective franchise which is possessed by any other citizen—to regulate, not including the right to prohibit, the franchise.

3. That, as the Constitution of the United States expressly declares that no State shall make or enforce any laws that shall abridge the privileges or immunities of citizens of the United States, those provisions of the several State constitutions that exclude women from the franchise on account of sex, are violative alike of the spirit and letter of the Federal Constitution.

4. That, as the subject of naturalization is expressly withheld from the States, and as the States clearly would have no right to deprive of the franchise naturalized citizens, among whom women are expressly included, still more clearly have they no right to deprive native-born women citizens of this right.

5. That justice and equity can only be attained by having the same laws for men and women alike.

6. That, having full faith and confidence in the truth and justice of these principles, we will never cease to urge the claims of women to a participation in the affairs of government equal with men.

Resolved, That this society declares its strong conviction that it is in the highest degree unequal and impolitic to make sex the ground of seclusion from the exercise of political rights.

Resolved, That suffrage is the turning-point of wo-

man's cause; that it alone will secure her equal pay for labor, and equal professional and official relations.

The finances of the State are in a sound condition. The funded indebtedness at the close of the war was $4,000,000, of which there has subsequently been redeemed $1,072,500, leaving outstanding $2,927,500 in State bonds, bearing interest at six per cent. per annum, payable semiannually. None of the bonds are payable previous to 1882.

At the end of the fiscal year, April 30, 1868, the Treasury was overdrawn $61,574.62.

The receipts from the ordinary sources of revenue for the fiscal year ending April 30, 1869, were		$688,503 09
Payments during the same period, exclusive of $61,474.62 for overdrafts, and $132,000 for redemption of State bonds, were		440,590 71
Being an excess in receipts of		247,912 38
Deducting the last two items above named, for overdrafts and bonds redeemed, and adding receipts from other sources, there remained in the Treasury on the 30th of April, 1869,		132,294 40
The estimated receipts of the fiscal year ending April 30, 1870, are	650,000 00	
Estimated payments	580,000 00	
Excess of receipts	70,000 00	
To which add the balance in the Treasury on the 30th of April, 1869,	132,294 48	
Will leave in the Treasury		$193,224 48

Although the State Prison is under the most efficient management, its accommodations are faulty and too limited. A large number of the criminals are now under sentence to the State Farm, where they are profitably employed.

Governor Padleford has called the attention of the Legislature to the inadequate accommodations of the present, and the growing needs for a more capacious edifice. The present one was erected more than a century ago, when Rhode Island was one of the least populated of the British colonies, the entire colony having a population of only 40,000. It is hoped that the Legislature will take such action in this matter as will lead to the erection of a State-house, commensurate with the increased wealth and population of the State, and adequate to its present needs.

ROEBLING, JOHN AUGUSTUS, a distinguished civil engineer and builder of suspension bridges, born in the city of Mülhausen, in Thuringia, Prussia, June 12, 1806; died in Brooklyn, New York, July 22, 1869. His academical studies were pursued in his native city, and on their completion he was sent to the Royal Polytechnic School, at Berlin, where he received the degree of Civil Engineer, and, after devoting the three years required to the service of the government, emigrated to this country in 1831. Locating himself near Pittsburg, Pa., he devoted his attention for a few years to agricultural pursuits, but subsequently became enlisted in the canal improvements, and in the process of time in railway enterprises, surveying lines across the Alleghany Mountains, from Harrisburg to Pittsburg. About this period he commenced the manufacture of wire rope, producing the first specimens of that fabric ever made in this country, which after some opposition he succeeded in introducing on the inclined planes of the old Portage Railroad, over which the canal-boats of the Pennsylvania Canal were transported. From his experience in the strength of wire rope he became convinced of its adaptability for bridging, and accordingly in 1844 undertook a project which proved his idea a feasible one—a suspension aqueduct over the Alleghany River, at Pittsburg. This comprised seven spans, each of 162 feet, the cables being seven inches in diameter, and, proving successful, was followed by the building of the Monongahela Suspension Bridge, with eight spans 188 feet in length, each supported by 4½-inch cables. In this bridge the pendulum process was employed, to counterbalance adjoining spans under the pressure of unequal loads. In 1848 Mr. Roebling commenced a series of suspension aqueducts on the line of the Delaware and Hudson Canal, connecting the anthracite coal-regions of Pennsylvania with the tide-water of the Hudson River. These were the Lackawaxen Aqueduct, two spans, 115 feet each, and two 7-inch cables; the Delaware Aqueduct, four spans, 134 feet each, and two 8-inch cables; the High Falls Aqueduct, one span, 145 feet, and two 8½-inch cables; and the Neversink Aqueduct, one span, 170 feet, and two 9½-inch cables. They were completed within two years, and are all permanent works, needing merely an occasional renewal of the wooden ducts, which decay from the action of the water. It was soon after the completion of these works that Mr. Roebling removed his works and residence to Trenton, N. J. In 1851 Mr. Roebling undertook to build a suspension bridge across the Niagara, to connect the Central Railroad of New York and the Great Western Railway of Canada, and in four years succeeded in constructing the first suspension bridge capable of bearing the immense weight of railroad locomotives and trains. The span of this bridge is 825 feet clear, and its supports are four 10-inch cables. While the Niagara Bridge was building, he was also engaged on another of even greater magnitude. This was to have crossed the Kentucky River, on the line of the Cincinnati and Chattanooga Railroad, with a space of 1,224 feet, but before the structure had been completed the company suspended payment, and the work was discontinued. In the fall of 1856, he commenced the great Cincinnati bridge, whose span is 1,030 feet, and, after having been forced to suspend operations for several years, on account of financial drawbacks, brought it to a successful completion in 1867. In the interim, from 1858 to 1860, inclusive, he was engaged on another suspension bridge at Pittsburg. The last and greatest work of Mr. Roebling was that on which he was engaged up to the time of his death—the East River Bridge, from New York to Brooklyn.

While making measurements in connection with this, one of his feet was terribly crushed by a Fulton ferry-boat, and the accident induced tetanic spasms, which terminated fatally after a few weeks of intense suffering.

ROGET, PETER MARK, M. D., F. R. S., an eminent physician, philologist, and author, born in London in 1779; died there, September 12, 1869. He was the only son of the Rev. John Roget, a minister of one of the Swiss churches in London, was educated at the University of Edinburgh, where he took the degree of M. D., in 1798. The following six years were spent in the practice of his profession. In 1804 he established himself in Manchester, where he was appointed Physician to the Infirmary. Four years later he removed to London, where he resided until his death. Here he won a reputation in his profession, and ranked high in the medical world. The formation of the "Northern Dispensary" was mainly owing to his exertions, and for many years he held the post of physician to that institution. In 1811 he was chosen one of the secretaries of the Medical and Chirurgical Society of London, and in 1829 and 1830 was elected president. In 1814 a valuable paper contributed by him to the Royal Society obtained for him a fellowship in that institution, and, upon the retirement of Sir John Herschel from the office of senior secretary of the society, Dr. Roget was appointed his successor, and held that position for twenty years with marked ability and success. He was the first Fullerian Professor of Physiology in the University of London, of the senate of which body he was one of the original members. Although his practice was large and his skill in his profession great, Dr. Roget was less widely known as a practitioner than as an author. As a contributor to numerous reviews and magazines he earned an enviable reputation. As a scientific writer, his work on "Animal and Vegetable Physiology," first published in 1834, exhibited his extensive learning and deep research. Numerous treatises on scientific subjects which he wrote, and which were published by the Society for the Diffusion of Useful Knowledge, were models of erudition, and did great service to science in their day; but the greatest of his literary productions is undoubtedly his "Thesaurus of English Words and Phrases." As far back as 1804 he had projected it, but found no time to make other than "a classed catalogue of words on a small scale" for his own use. After his retirement from the duties of secretary of the Royal Society, however, he devoted himself to the compilation, working incessantly at it for a period of four years. This book was first published in 1854, when the venerable author had passed his seventy-third year. It was received with great favor, and at once assumed the position of a standard medium of reference. At the time of his death he was engaged in revising the work for a twentieth edition.

ROMAN CATHOLIC CHURCH.* The Pope, Pius IX. (before his elevation to the Papal See, Giovanni Maria di Mastai Ferretti), was born at Sinigaglia on the 13th of May, 1792; elected Pope on the death of Gregory VI. in 1846, and crowned on the 21st of June of that year. According to the list of Pontiffs, given in the official *Annuario Pontificio*, he is the 257th Bishop of Rome.

There were in December, 1869, 55 cardinals, of whom 5 were cardinal bishops (one see being vacant), 42 cardinal priests, and 8 cardinal deacons; 39 were Italians by birth, and only 16 non-Italians; 7 French, 4 Spanish, 3 Germans, 1 Portuguese, 1 Irish.

According to the *Annuario Pontificio* for 1869, there were 12 patriarchs of the Latin and Oriental rite, 12 Latin archbishops immediately dependent upon the Holy See, 120 with ecclesiastical provinces, 7 Oriental archbishops; total, 139 archbishops. Of Latin bishops, there are six called suburbicarians, always cardinals with sees near Rome; 84 immediately subject to the Holy See, and 570 with dioceses; 66 bishops of the Oriental rite; total, 723 (against 714 in 1868). Pope Pius IX. has during his pontificate elevated to the metropolitan dignity 20 sees, and erected 6 archbishoprics and 113 bishoprics. Archbishops' sees *in partibus*, 36; bishops' sees *in partibus*, 198. The vacant sees are: 1 patriarchal, 9 archiepiscopal, 100 episcopal; those occupied amount to 747 patriarchal and residental, and 234 *in partibus*. There are 135 apostolic delegations, vicariates, and prefectures, besides which the present Pope has created 32 similar offices.

The Catholic Church in the United States, in 1869, had 7 archbishops, 45 bishops, 7 vicars apostolic, 3,505 priests. A large portion of the Catholics consists of Germans. According to a valuable statistical work published by the Rev. E. A. Reiter (*Schematismus der kath. deutschen Geistlichkeit in den Vereinigten Staaten Nord-Americas*, New York, 1869), there were, in 1869, 6 German bishops (their number has since been increased to 9); 1,160 German priests; 705 German and 51 mixed (German and English) congregations; 1,447,111 Catholic Germans, 62,392 annual baptisms of Catholic German children, 133,322 scholars of German Catholic schools. The author of this work regards the usual estimate of a Roman Catholic population of 5,000,000 as too high, and thinks that it does not exceed 3,354,000. The number of Catholic German periodicals amounts to ten.

The British dominions had, in 1869 (according to the London *Catholic Directory* for 1870), 9 archbishoprics, 70 bishoprics (against 69 in 1869), 31 vicariates apostolic (against 33 in 1869). The ecclesiastical statistics of Great

New York. D. Appleton & Co.

Britain were in 1869 (as compared with 1868) as follows:

	Clergy.		Churches, Chapels, and Stations.		Communities of Men.		Communities of Women.	
	1869.	1868.	1869.	1868.	1869.	1868.	1869.	1868
England .	1,538	1,489	1,151	1,122	69	67	216	214
Scotland*	199	201	208	207	..	..	17	18

The *Directory* gives the number of Roman Catholic peers in 1869 as 33 against 30 in 1868, the additions being the Marquis of Bute, the richest nobleman in Great Britain, who joined the Roman Catholic Church, and the Lords Howard and Acton, who in 1869 were elevated to the peerage. The number of Roman Catholic baronets was therefore 48 against 50 in 1868. The number of Roman Catholic members of the House of Commons in 1869 was 86, all except one (Sir John Simeon) from Ireland.

The Pope having by a bull of June 29, 1868, convoked an Œcumenical Council to meet in Rome, on the 8th of December, 1869, and also having by letters dated September 8 and September 14, 1868, invited the bishops of the Oriental Churches to attend the Council, and the Protestants to return on this occasion to the Catholic Church, the most active preparations for the opening of the Council were carried on throughout the year. In order that when the prelates should come they might not be detained too long from their dioceses (as was the case at Trent), it was deemed advisable to establish preparatory committees of chosen theologians to study maturely such questions as it was thought would probably come up or be proposed in the Council. The chief direction of all the preparations was in hands of a special congregation of seven cardinals, all Italians, except one, Cardinal de Reisach, a German by birth, and formerly Archbishop of Munich.† To this congregation were added seven consultors, four of whom were Italians, one (Mgr. Talbot) an Englishman, one, Prof. Feije, of the University of Louvain, a Belgian, and one, Prof. Hefele, of the University of Tübingen (subsequently elected Bishop of Rottenburg), a German. The special committees, each under the presidency of a cardinal, were to occupy themselves with politico-ecclesiastical affairs —with the affairs of the Eastern Churches, with religious orders and congregations, with questions of dogmatic theology, and with points of ecclesiastical discipline. The dissertations and essays of the committees were printed for the private use of the bishops.

The north arm of the transept of St. Peter's, which stretches toward the Vatican Palace, was selected as the place for holding the sessions of the Council, and the principal architects of Rome were engaged to fit it up with appropriate decorations and suitable furniture. Other places were prepared for the General Congregations (committees of the whole, as as they would be termed in the United States), and for particular congregations (special committees).

The bishops of the Eastern Churches did not respond favorably to the Pope's invitation to attend the Council (*see* EASTERN CHURCHES and GREEK CHURCH). Only a few were reported to have expressed a desire to accept the invitation, which they, however, felt unable to gratify on account of the contrary disposition of the heads of these Churches.

In the Protestant world a few demonstrations took place in reply to the Pope's letter addressed to Protestants. Considerable attention was attracted by the acts of the Rev. Dr. Cumming, of London. This well-known Presbyterian minister wrote a letter to the Archbishop of Westminster, inquiring whether he would be permitted to plead the cause of Evangelical Protestantism in the assembly of Rome; and, when the archbishop replied that he was not authorized to answer the question, Dr. Cumming addressed the same question to the Pope himself, and expressed his readiness to appear in Rome if permission to address the Council should be given to him. This letter called forth the following reply of the Pope, addressed not to Dr. Cumming, but to Archbishop Manning, of Westminster, in which the permission asked by the doctor to plead the cause of Evangelical Protestantism in the Council at Rome was refused.

Pope Pius IX. to our Venerable Brother Henry Edward, Archbishop of Westminster.

VENERABLE BROTHER: Health and the Apostolic blessing. We have seen from the newspapers that Dr. Cumming, of Scotland, has inquired of you whether leave will be given at the approaching Council for those who dissent from the Catholic Church to put forward the arguments which they think can be advanced in support of their own opinions, and that, on your replying that this is a matter to be determined by the Holy See, he has written to us upon the subject.

Now, if the inquirer knows what is the belief of Catholics with respect to the teaching authority which has been given by our Divine Saviour to His Church, and therefore, with respect to its infallibility in deciding questions which belong to dogma or to morals, he must know that the Church cannot permit errors which it has carefully considered, judged, and condemned, to be again brought under discussion. This, too, is what has already been made known by our letters. For when we said, "it cannot be denied or doubted that Jesus Christ Himself, in order that He might apply to all generations of men the fruits of His redemption, built here on earth upon Peter His only Church, that is, the One, Holy, Catholic and Apostolic Church, and gave to him all power that was necessary for preserving whole and inviolate the deposit of faith, and for delivering the same faith to all peoples, and tribes, and nations," we thereby signified that the primacy, both of honor and of jurisdiction, which was conferred upon Peter and his successors by the Founder of the Church, is placed beyond the hazard of disputation. This, in-

* The number of priests for 1869 does not include priests who are retired or who are at present unattached. Of the stations, many are served only occasionally. The decrease of priests and churches in 1869 may therefore only be apparent.

† Cardinal de Reisach died in December, 1869.

deed, is the hinge upon which the whole question between Catholics and all who dissent from them turns, and from this dissent, as from a fountain, all the errors of non-Catholics flow. "For, inasmuch as such bodies of men are destitute of that living and divinely-established authority, which teaches mankind especially the things of faith and the rule of morals, and which also directs and governs them in whatever relates to eternal salvation, so these same bodies of men have varied in their teaching, and their change and instability never cease." If, therefore, your inquirer will consider, either the opinion which is held by the Church as to the infallibility of its judgment in defining whatever belongs to faith or morals, or what we ourselves have written respecting the primacy and teaching authority of Peter, he will at once perceive that no room can be given at the Council for the defence of errors which have already been condemned, and that we could not have invited non-Catholics to a discussion, but have only urged them "to avail themselves of the opportunity afforded by the Council, in which the Catholic Church, to which their forefathers belonged, gives a new proof of its close unity and invisible vitality, and to satisfy the wants of their souls by withdrawing from a state in which they cannot be sure of their salvation." If, by the inspiration of divine grace, they shall perceive their own danger, and shall seek God with their whole heart, they will easily cast away all preconceived and adverse opinions, and, laying aside all desire of disputation, they will return to the Father from whom they have long unhappily gone astray. We, on our part, will joyfully run to meet them, and, embracing them with a father's charity, we shall rejoice and the Church will rejoice with us, that our children who were dead have come to life again, and they who were lost have been found. This, indeed, we earnestly ask of God; and do you, venerable brother, join your prayers to ours.

In the mean while, as a token of the divine favor and of our own especial benevolence, we most lovingly give to you and to your diocese our Apostolic blessing.

Given at St. Peter's, in Rome, this 4th day of September, 1869, in the 24th year of our Pontificate.

POPE PIUS IX.

The Letters Apostolic of September 13, 1868, addressed "To all Protestants and other non-Catholics."

A second letter of the Pope, however, informs the archbishop that any Protestants, who may wish to discuss the points of difference between them and the Roman Catholic Church, may come to Rome, and that theologians will be appointed by the Pope, with whom they may confer.

The noted Protestant writer, Merle d'Aubigné, wrote a letter to Arthur Kinnaird, a member of the British House of Commons, in which he urges the Protestant world to resume the work of reformation where, in the second half of the sixteenth century, it was unfortunately interrupted. He proposed that all Protestant Churches of the world should make provision to set apart the 8th of December, 1869 —the day when the Council would be opened —for religious services, in which points like the following be discussed: Jesus Christ the sole head of the Church; the Word of God the sole source and rule of a Christian life; the righteousness of Christ and faith, instead of works and superstitious ceremonies; religious liberty in the place of the Syllabus; a general priesthood in the place of monasticism and celibacy. He also recommended special prayers for the enlightenment of those who still were under the yoke of the Pope. He did not expect, he said, that the Roman Catholic nations would soon join the Protestant Churches, but he hoped that yet a true Christian spirit might cleanse the Church of Rome from its pagan and Jewish elements, so that the Saviour might resume in it the place which to Him alone belongs. A number of Churches, though not, it seems, a considerable one, acted on the 8th of December in accordance with this proposition. In the United States the moderators of the two largest bodies among the Presbyterians (the Old and New School Presbyterians) sent, in accordance with the resolutions passed by the General Assemblies, a joint letter to the Pope, restating in brief and mild words the great doctrinal differences which separate the Roman Catholic from the Protestant branches of Christianity. In Germany, the Church Diet and several other societies passed resolutions explaining why, in their opinion, there can be no hope of a reunion of the Protestant denominations and of Roman Catholicism, as long as the Pope occupies his antiscriptural position. Only in the Church of England a number of clergymen expressed a desire that their Church might be represented in Rome, and treat with the Vatican Council about a reunion.

Within the Catholic Church a profound interest was manifested in the coming Council and more particularly in two questions which the Council was expected to define—the infallibility of the Pope, and the relation of the Church to the state governments. The bishops all over the world notified by pastoral letters the faithful of their dioceses of the Council as one of greatest events in the recent history of the Church from which they expected the greatest results. In this respect they showed an almost unexpected unanimity. Many of them published their pastoral letters in the form of pamphlets or of books. Most of them did not directly refer to the great questions which so much engaged the attention of the Christian world. Some, however, seized the opportunity to make a special plea for the doctrine of papal infallibility, the promulgation of which they hoped would be among the most glorious labors of the Council. Particular attention was attracted by the works of Archbishop Manning, of Westminster, and Archbishop Dechamps, of Malines, in Belgium. By these pleas in favor of infallibility, a few bishops were induced to utter their dissent, denying the opportuneness of promulgating such a doctrine. Foremost among them was the learned Bishop Dupanloup, of Orleans, one of the most famous bishops of the Catholic Church in France. His pamphlet was chiefly directed against the book of the Archbishop of Malines, and, while it dwelt emphatically upon the authority of the General Council and promised an unconditional submission to any thing the Vatican Council might decree, it undertook to show that the reasons adduced by the Arch-

bishop of Malines for a promulgation at this time of the doctrine of infallibility were insufficient. Only one bishop, Monseigneur Maret, Bishop of Sura, *in partibus infidelium*, and Dean of the Theological Faculty of Paris, published a work ("On the General Council and the Public Peace," 2 vols., Paris, 1869) against the doctrine of infallibility itself from the standpoint, as the author expressly states, "of the old Gallican Church." The arguments of this work are in brief as follows:

According to the Holy Scriptures, the Church is a limited monarchy which stands under the common rule of the Pope and the bishops. The history of the Councils is at least as much in favor of the divine right of the bishops as of the supremacy of the Holy Chair. Freedom of discussion, vote by majority, a juridical examination of the apostolic decrees, and, in certain cases, a right to condemn the doctrines and the person of the Pope—these are rights which prove beyond all doubt the participation of the bishops in the sovereign powers of the Holy Father. But these rights do not extend far enough to give the episcopal body a supremacy over the Pope, and the latter therefore exercises, in general, all the privileges of supremacy. He summons the Council, presides over it, dissolves it, and sanctions its decrees. In a word, he always remains the head of the Church. If, however, the changes desired by a certain school are made, the Church will cease to be a limited, and become an absolute monarchy. This would be a complete revolution; but what is truly divine is unchangeable, and consequently, if the constitution of the Church is changed, it ceases to be divine. Pius IX., in his bull, *Ineffabilis Deus*, has himself said of doctrine, *Crescat in eodem sensu, in eadem sententia;* but the new dogma would lead to a development of doctrine *in alio sensu, in alia sententia*. It would therefore amount to a denial of the divinity of the Church. "If it were realized," exclaims the bishop, "what a triumph would it be to the enemies of the Church! They would call the asseverations of centuries, and history itself, as witnesses against Catholicism; she would be crushed by the weight of opposing testimony; the Holy Scriptures, the Fathers, and the Councils, would rise in judgment against her. They would bury us in our shame, and, from the desert, atheism would rise more powerful and threatening than ever."

No other bishop expressed his approval of this work, while quite a number hastened to declare against it.

The doctrine of infallibility called forth among the theologians, lower clergy, and laity of the Church, a more earnest opposition than among the bishops. A considerable sensation was produced by a letter from a noted French pulpit orator, the late Father Hyacinthe, protesting against what he regarded as the ultramontane tendencies prevailing at Rome. Father Hyacinthe, belonging to a family of the name of Loyson, had been for many years a monk of the Order of Barefooted Carmelites. His fame as a preacher having attracted the attention of the present Archbishop of Paris, he was several years ago appointed to preach the Advent course of sermons at Notre-Dame, the Lent course being reserved for the representative of the opposite school of the Church—the Jesuit, Père Felix. His sermons ran chiefly on general topics, such as "Society," "Education," "The Family," "The Church," and attracted general attention by a marked liberalism which met with great applause on the part of some liberals in the Catholic Church and of non-Catholics, but called forth many remonstrances from prominent men in the Church. A speech made at the Peace Congress, held in Paris in 1869, drew upon him a sharp rebuke from his superior, the General of the Carmelite Order. This led him to announce to the Archbishop of Paris the impossibility of his preaching again at Notre-Dame, and soon afterward he published an answer to the General of his Order.

The letter of the General of the Carmelite Order to Father Hyacinthe was as follows:

ROME, *July* 22, 1869.

MY VERY REVEREND FATHER HYACINTHE: I have received your letter of the 9th inst., and in a short time after the speech which you delivered at the Peace League. I have not, happily, found in that speech the heterodox phrase attributed to you. It must be said, however, that it contains some vague propositions, admitting of unfortunate interpretations, and that such a speech does not come well from a monk. The habit of the Carmelite was certainly there no longer in its place. My reverend father and dear friend, you know the great interest I have always taken in you. From the commencement of your sermons at Notre-Dame de Paris, I have earnestly exhorted you not to identify yourself with questions in dispute among Catholics and on which all are not agreed; because, from the moment you attach yourself ostensibly to one side, your ministry became more or less unfruitful with the other.

Now, it is patent that you have made no account of the intimation of your father and superior, as last year you wrote a letter to a club in Paris in which you freely disclosed your opinions in favor of a party, having little wisdom, and in opposition with the sentiments of the Holy Father, the episcopacy, and the clergy in general. I was alarmed, as were also the French clergy. I wrote to you immediately to enable you to see the false path you had entered on, in order to stop you. But in vain, for some months after you authorized from yourself a periodical review in Genoa to publish another letter, that has been the cause of so much vexation to you and me. Lastly, during your last sojourn at Rome, I made you serious observations, and even rather strong reproaches on the false position you were placed in on account of your imprudence, but you had scarcely arrived at Paris when you published, under your own signature, a letter deplored by all, even by your friends.

Lately your presence and speech at the Peace League have caused as great scandal in Catholic Europe as happened about six years ago, on the occasion of your speech at a meeting in Paris. You have, beyond doubt, given some reason for such recriminations by some bold, obscure, and imprudent phrases.

I have done all that I could up to the present to defend and save you. To-day I must think of the interests and honor of our holy order, which, unknown to yourself, you compromise.

You write me from Paris, November 19, 1868: "I avoid mixing the Paris convent and the order of Mount Carmel with these matters." Let me say to you, my dear father, that this is an illusion. You are a monk, and bound to your superiors by solemn vows. We have to answer for you before God and man, and consequently have to take the same measures in your regard as in that of other monks, when your conduct is prejudicial to your soul and our order.

Already in France, Belgium, and even here, some of the bishops, clergy, and faithful, are blaming the superiors of our order for not taking certain measures in your regard, and it is concluded that there is no

authority in our congregation, or that it shares in your opinions and course of action. I do not certainly regret the course I have followed up to the present in regard to you, but matters are arrived at such a point that I would compromise my conscience and the entire order if I do not take more efficacious measures in this matter than I have done in the past.

Meditate in solitude on the great truths of religion, not to preach them, but for the profit of your soul. Ask light from Heaven, with a contrite and humble heart. Address yourself to the Holy Virgin, to our father, St. Joseph, and to our seraphic mother, St. Theresa. A father can well address these words to his son, although he be a great orator. It is a very serious question for you and for us all. I pray to the Saviour that He may deign to accord you His light and grace. I recommend myself to your prayers, and give you my benediction, and I am your very humble servant,

FR. DOMINIQUE DE SAINT JOSEPH,
Superior-General.

The reply of Father Hyacinthe was as follows:

PARIS, Passy, *September* 20, 1869.

MY VERY REVEREND FATHER: During the five years of my ministry at Notre-Dame de Paris, and notwithstanding the open attacks and secret accusations of which I have been the object, your esteem and your confidence have never failed me. I preserve numerous proofs of them, written in your own hand, which apply to my preaching, quite as much as to my person. Whatever may happen, I shall always retain a grateful recollection of them. Now, however, by a sudden change, the cause of which I do not seek in your heart, but in the intrigues of an all-powerful party at Rome, you accuse what you encouraged, you blame what you approved, and you command me to speak a language, or maintain a silence, which would no longer be the full and faithful expression of my conscience. I do not hesitate an instant. I could not reascend the pulpit of Notre-Dame with language perverted by a command, or mutilated by reticence. I express my regret to the intelligent and courageous archbishop who opened the pulpit to me, and who has maintained me in it against the ill-will of the men of whom I have just spoken. I express my regret to the imposing auditory which bestowed upon me its attention, its sympathy, I had almost said, its friendship. I should not be worthy of that auditory, of the bishop, of my conscience, or of God, could I consent to enact such a part before them. I withdraw at the same time from the monastery I live in, and which, under the new circumstances in which I am placed, is changed for me into a prison of the soul. In acting thus I am not unfaithful to my vows; I promised monastical obedience, but within the limits of the honesty of my conscience, and the dignity of my person and ministry. I promised it, subject to that higher law of justice and "royal liberty," which, according to St. James the Apostle, is the proper law of the Christian. It was the most perfect practice of that holy liberty which I went to ask in the cloister more than ten years ago, in the ardor of an enthusiasm free from all human calculation—I cannot add free from all the illusions of youth. If, in exchange for my sacrifices, I am now offered chains, it is not merely my right, it is my duty to reject them. The present moment is a solemn one. The Church is passing through one of the most violent, the most obscure, and the most decisive crises of its existence here below. For the first time in three hundred years, an Œcumenical Council is not only convoked, but declared necessary. These are the expressions of the Holy Father. It is not at such a moment that a preacher of the Gospel, even the humblest, can consent to keep silence, like those mute dogs of Israel, faithless guardians, which the prophet reproaches because unable to bark; *canes muti, non valentes latrare*. The saints never kept silent. I am not one of them; but, nevertheless, I am of their race—*filii sanctorum sumus*—and I have always longed to leave my footsteps, my tears, and, if need be, my blood, in the traces where they have left theirs. I raise, therefore, before the Holy Father and the Council, my protest as a Christian and a priest, against those doctrines and those practices which are called Roman, but which are not Christian, and which, by their encroachments, always more audacious and more baneful, tend to change the constitution of the Church, the basis and the form of its teaching, and even the spirit of its piety. I protest against the divorce, as impious as it is insensate, sought to be effected between the Church, which is our Eternal Mother, and the society of the nineteenth century, of which we are the temporal children, and toward which we have also duties and regards. I protest against that opposition, more radical and more frightful still, to human nature, attacked and outraged by these false doctors, in its most indestructible and most holy aspirations. I protest, above all, against the sacrilegious perversion of the Gospel of the Son of God Himself, the spirit and the letter of which are alike trampled under foot by the Pharisaism of the new law. It is my most profound conviction that, if France in particular, and the Latin races in general, are given up to social, moral, and religious anarchy, the principal cause undoubtedly is not Catholicism itself, but the manner in which Catholicism has for a long time been understood and practised. I appeal to the Council which is about to assemble to seek remedies for the excess of our ills, and to apply them with as much force as gentleness. But if fears which I will not share were to be realized—if the august assembly had no more liberty in its deliberations than it already has in its preparations—in a word, if it were to be deprived of the essential character of an Œcumenical Council, I would cry aloud to God and man to claim another, really assembled in the Holy Spirit, not in the spirit of party; really representing the Universal Church, not the silence of some, and the oppression of others. "For the hurt of the daughter of my people am I hurt. I am black; astonishment hath taken hold of me. Is there no balm in Gilead? is there no physician there? Why, then, is not the health of the daughter of my people recovered?" (*Jeremiah* viii.). And finally, I appeal to your tribunal. O Lord Jesus! *ad tuum Domine Jesu tribunal appello*. It is in your presence that I write these lines; it is at your feet, after much prayer, much reflection, much suffering, much waiting, it is at your feet that I sign them. I feel that, if men condemn them upon the earth, you will approve them in heaven. To live or to die—that is sufficient for me.

FR. HYACINTHE.

The response of the General of the Carmelite Order to Father Hyacinthe was as follows:

ROME, *September* 26, 1869.

REVEREND FATHER: Your letter of the 20th only reached me yesterday. You will easily imagine how deeply it afflicted me, and with what bitterness it filled my soul. I was far from expecting you to fall to such a depth. Therefore my heart bleeds with grief, and is filled with an immense pity for you, and I raise my humble supplications to the God of all mercies that He may enlighten you, pardon you, and lead you back from that deplorable and fatal path on which you have entered. It is very true, my reverend father, that, during the last five years, in spite of my personal opinions, which are in general contrary to yours on many religious questions—as I have more than once expressed to you—in spite of the counsels I have given to you on several occasions relative to your preachings, and to which, excepting in the case of your Lent sermons at Rouen, you paid but little attention, so long as you did not openly depart from the limits imposed by Christian

prudence on a priest, and especially on a monk, I always manifested toward you sentiments of esteem and friendship, and encouraged you in your preachings. But if that is true, so also is it that, from the moment in which I perceived that you were beginning to go beyond these limits, I was forced to begin on my side to express to you my fears, and to mark to you my dissatisfaction. You must remember, my reverend father, that I did so especially last year, about the month of October, when passing through France, relative to a letter addressed by you to a club in Paris. I then expressed to you what annoyance that writing had caused me. Your letters published in Italy were also very painful to me, and also drew on you from me observations and reproaches when you last visited Rome.

Lastly, your presence and speech at the Peace League filled up the measure of my apprehension and my grief, and forced me to write you the letter of the 22d of July last, by which I formally ordered you in future not to print any letter or speech, to speak in public or elsewhere than in the churches, to be present in the chambers, or take part in the Peace League, or any other meeting, the object of which was not exclusively Catholic and religious. My prohibition, as you see, did not in the least refer to your sermons in the pulpit. On the contrary, I desired you in future to devote solely and entirely your talents and your eloquence to teachings in the Church. Consequently it was with painful surprise that I read in your letter that "you could not reascend the pulpit at Notre-Dame, with language perverted by dictation or mutilated by reticence."

You must be aware, reverend father, that I have never forbidden you to preach, that I have never given you any order or imposed any restrictions on your teachings. I only took the liberty of giving to you some counsels, and of addressing to you some observations, especially on the subject of your last lectures, as in my quality of superior it was my right and my duty to do. You were, consequently, as free to continue your preaching at Paris, or elsewhere, as in preceding years, before my letter of the 22d July last; and, if you have resolved not to reappear in the pulpit of Notre-Dame de Paris, it is voluntary and of your own free will, and not by virtue of measures adopted by me toward you. Your letter of the 20th announces to me that you are about to leave your monastery in Paris. I learn, indeed, by the journals and by private letters, that you have already left it, and have cast off your gown, without any ecclesiastical authorization.

If the fact is unfortunately true, I would remark to you, my reverend father, that you must be aware that the monk who quits his monastery and the dress of his order without the regular permission from the competent authority, is considered as a real apostate, and consequently incurs the canonical penalties mentioned in Cap. *Periculoso*. The punishment is, as you are aware, the greater excommunication, *latæ sententiæ*, and, according to our constitutions, confirmed by the Holy See, part iii., chapter XXXV., No. 12, those who leave the community without authorization incur the greater excommunication, *ipso facto*, and the note of infamy. *Qui a congregations recedunt, præter, apostasium, ipso facto excommunicationem et infamiæ notam incurrunt.*

As your superior, and in accordance with the prescription of the apostolic decrees, which order me to employ even censure to bring you back to the bosom of the order you have so deplorably abandoned, I am under the necessity of calling on you to return to the monastery in Paris which you have quitted within ten days from the date of the present letter, observing to you that, if you do not obey this order within the time stated, you will be deprived canonically of all the charges you hold in the Order of Barefooted Carmelites, and will remain under the censure established by the common law and by our rules.

May you, my reverend father, listen to our voice and to the cry of your conscience; may you promptly and seriously descend within yourself, see the depth of your fall, and by an heroic resolution manfully recover yourself, repair the great scandal you have caused, and by that means console the Church, your mother, you have so much afflicted. That is the most sincere and ardent desire of my heart; it is also that which your afflicted friends, and myself, your father, ask with all the fervor of our souls of God Almighty, of God so full of mercy and goodness.

FR. DOMINIQUE DE SAINT JOSEPH.

While the letter of Father Hyacinthe met with immense applause outside the Catholic Church and among the liberal newspapers, it was generally and severely censured by nearly all the Catholic press and by all the parties within the Church. The *Correspondant* of Paris, the organ of Count Montalembert, Prince Broglie, and other friends of Father Hyacinthe, blamed this unexpected move as too rash and extreme, saying that Father Hyacinthe would have served their common cause better by remaining in his place, preaching whatever he would have to say from the pulpit of Notre-Dame. Bishop Dupanloup immediately addressed to him the following letter:

ORLEANS, *September* 25, 1869.

MY DEAR COLLEAGUE: As soon as I was informed from Paris of the step which you were about to take, I endeavored, as you know, to spare you at any cost what would prove a great fault and misfortune for yourself as well as a profound affliction for the Church. I sent off on the instant, and in the night, an old fellow-student and friend of yours to prevent you, if that were possible. But it was too late; the scandal had been consummated, and from this moment you can measure by the grief of all the friends of the Church, and the joy of her enemies, the extent of the mischief which you have wrought. At present I can do no more than pray to God, and conjure you to pause on the declivity on which you now stand, leading as it does to abysses which your soul, in its trouble, has not discerned. You have suffered, I know; but allow me to tell you, Father Lacordaire and Father de Ravignan had to bear more than you, and they raised themselves to a higher rank in patience and fortitude, through their love of the Church and Jesus Christ. How is it that you did not feel what an injury you were doing to the Church, your mother, by these accusing predictions? And what an insult to our Saviour to place yourself, as you are now doing, alone, face to face in opposition to Him, and in contempt of His successors! But I am willing to hope and believe that this aberration will be only a transient one. Return among us; after having caused this affliction to the Catholic world, give it a great consolation and a striking example. Go and throw yourself at the feet of the Holy Father. His arms will be open to receive you, and in clasping you to his paternal heart he will restore to you the peace of your conscience and the honor of your life. Receive from him who was your bishop, and who will never cease to love your soul, this testimonial and these counsels of sincere and religious affection.

FELIX, Bishop of Orleans.

To this Father Hyacinthe made the following reply:

PARIS, *September* 26, 1869.

MONSEIGNEUR: I am much touched by the feeling which dictated the letter you addressed to me, and I am most grateful for the prayers you so kindly put up in my behalf, but I cannot accept either your reproaches or your counsels. What you qualify as a great fault committed I call a great duty accomplished.

Be pleased to accept, monseigneur, the homage of the respectful sentiments with which I remain, in Jesus Christ and His Church, your very humble and obedient servant, Brother HYACINTHE.

Father Hyacinthe soon after left for the United States, where he was received with marked attention. He declared, however, that, though a decided opponent of ultramontanism, he was determined to remain within the fold of the Roman Catholic Church. He remained in the United States for a few weeks, and then returned to France. He was subsequently reduced from the monastic state to that of a secular by the Pope.

Larger than in France was the number of prominent opponents to papal infallibility among the theological scholars of Germany. A considerable number of the leading theologians and Catholic periodicals appeared to consider an earnest and a vigorous combat against the promulgation of this doctrine as a duty they owed to the Church. Prominent among the publications of this class was the book published under the pseudonym of "Janus," and entitled "The Pope and the Council." Men of all parties professed to be astonished at an immense amount of scholarship displayed in it. It was a declared opinion that only a life-long study of Church history would enable a scholar to write such a book, and that a Church historian of no ordinary ability must either be its author or must have aided in its compilation. As the senior of the Church historians of Germany, Dr. Döllinger, of Munich, had already publicly avowed himself a determined opponent of the promulgation, he was erroneously believed to be, if not the author, at least connected with the authorship.

The work is a most violent attack on the authority possessed in the Church by the Pope on the one hand and the Council on the other, and the relation of the two. "For thirteen centuries," says the author, "an incomprehensible silence on this fundamental article reigned throughout the whole Church and her literature. None of the ancient confessions of faith, no catechism, none of the patristic writings composed for the instruction of the people, contain a syllable about the Pope, still less any hint that all certainty of faith and doctrine depends on him." The book then endeavors to show that not a single question of doctrine for the first thousand years was finally decided by the Popes; that in none of the early controversies did they take any part at all; and that their interposition, when they began to interpose, was often far from felicitous. Pope Zosimus, the book says, commended the Pelagian teaching of Celestius; Pope Julian affirmed the orthodoxy of the Sabellian Marcellus of Ancyra; Pope Liberius subscribed an Arian creed; Pope Vigilius contradicted himself three times running on a question of faith; Pope Honorius lent the whole weight of his authority to the support of the newly-introduced Monothelite heresy, and was solemnly anathematized by three Œcumenical Councils for doing so. Nor do these "errors and contradictions of the Popes" grow by any means fewer or less important as time goes on. Neither, again, did the Roman Pontiffs possess, in the ancient constitution of the Church, any of those powers which are now held to be inherent in their sovereign office, and which must undoubtedly be reckoned among the essential attributes of absolute sovereignty. They convoked none of the General Councils, and only presided, by their legates, at three of them, nor were the canons enacted there held to require their confirmation. They had neither legislative, administrative, nor judicial power in the Church, nor was any further efficacy attributed to their excommunication than to that of any other bishop. No special prerogatives were held to have been bequeathed to them by St. Peter, and the only duty considered to devolve on them in virtue of their primacy was that of watching over the observance of the canons. The limited right of hearing appeals, granted to them by the Council of Sardica, in 347, was avowedly an innovation, of purely ecclesiastical origin, and moreover was never admitted or exercised in Africa or the East. Many national Churches, like the Armenian, the Syro-Persian, the Irish, and the ancient British, were independent of any influence of Rome. When first something like the papal system was put into words by an Eastern Patriarch, St. Gregory, the greatest and best of all the early Popes, repudiated the idea as a wicked blasphemy. Not one of the Fathers explains the passages of the New Testament about St. Peter in the ultramontane sense; and the Tridentine profession of faith binds all the clergy to interpret Scripture in accordance with their unanimous consent. Hence, concludes the author, "To prove the doctrine of papal infallibility, nothing less is required than a complete falsification of Church history."

It was admitted on both sides that the book was the most able work that the opponents of the Council could make against the infallibility question. To refute such a book would, of course, require some time and space; and the most important replies did therefore not appear before the close of the year, and will be referred to in the AMERICAN ANNUAL CYCLOPÆDIA for 1870.

In view of the formidable opposition to the promulgation, shown by the German theologians, the National Council of the Bishops of Germany, held at Fulda, in September, became a subject of general interest. The pastoral letters issued by the assembled bishops aimed particularly at allaying the uneasiness which the bishops were aware had spread in large circles. They reminded the faithful of their dioceses that "never and never shall and can a General Council establish a dogma not contained in Scripture or in the Apostolical traditions. *** Never and never shall and

can a General Council proclaim doctrines in contradiction to the principles of justice, to the right of the state and its authorities to culture (*Gesittung*), and the true interests of science (*Wissenschaft*), or to the legitimate freedom and well-being of nations. *** Neither need any one fear that the General Council will thoughtlessly and hastily frame resolutions which needlessly would put it in antagonism to existing circumstances, and to the wants of the present times; or that it would, in the manner of enthusiasts, endeavor to transplant into the present times, views, customs, and institutions, of times gone by."

In reply to an insinuation that there would not be the fullest liberty of debate, the bishops say: "the bishops of the Catholic Church will never and never forget at the General Council, on this most important occasion of their office and calling, the holiest of their duties, the duty of bearing testimony to truth; they will, remembering the Apostolic vow, that he who desires to please men is not the servant of Christ, remembering the account which they will soon have to give before the throne of the Divine Judge, know no other line of conduct but that dictated by their faith and their conscience." With admirable wisdom the bishops succeeded in so framing their letter as to receive the approval of both parties. The principal organ of those urging the promulgation of infallibility, the *Civiltà Cattolica* of Rome, warmly recommended the letter, while the opponents of promulgation received it with great joy as a momentous testimony against an opinion which they contended was, among the Catholics of Germany, extremely unpopular, and as an indication that, as members of the Councils, the great majority of the German bishops would be found among the earnest opponents.

In October the bishops began to arrive. The first were from the East, who had set out early. The European and Western bishops began to pour in only in the latter portion of November. By the first of December, fully five hundred had arrived, and the week that followed saw two hundred more. Every courtesy was shown them. As a train crossed the frontier into the Pontifical States, an officer ascertained the names of all the bishops, telegraphed the information to Rome, and, on their arrival, they found other officials ready to welcome them, and to escort them in carriages to their several destinations.

On December 2d, the Pope delivered to the bishops then in Rome, assembled in the Sistine Chapel, an allocution in preparation for the Council; and they received printed copies of an apostolical letter, dated November 27th, settling some matters for the good order of the Council and the dispatch of business. (*See* the text of the *allocution* of December 2d, and of the apostolical letter of November 27th, in PUBLIC DOCUMENTS.) With a copy of this letter, the bishops also received pamphlets containing the forms of prayers to be used, and a detailed account of the ceremonial to be followed, all based on an extract from the ceremonials of the ancient councils. The following is a translation of the last-named document, issued by Aloisius Ferrari, Prothonotary Apostolic, Prefect of Ceremonies:

On the fourth day of the week, the 8th of December of the year 1869, the Feast of the Immaculate Conception of the Blessed Virgin Mary, at half-past 8 A. M., the celebration of the Œcumenical Vatican Council will be solemnly begun with devout prayer in the chapel over the portico of the Basilica of St. Peter.

At the appointed hour all will meet at the Apostolic Vatican Palace.

The most Eminent and most Rev. Lords the Cardinals, and the most Rev. Lords the Patriarchs will vest in the *Aula Paramentorum*; the most Rev. Lords the Primates, Archbishops, Bishops, and Abbots who have place in the Council by privilege, both of the Latin and Oriental rites, will assume the vestments proper to their order and rite in the *Musæum lapidarium*, viz., those of the Latin rite, white vestments and mitres of linen; Cardinals, mitres of silk; those of the Oriental rites will wear their usual vestments: all will then immediately proceed to the chapel over the portico of the Basilica of St. Peter to await the coming of our Most Holy Lord Pope Pius the Ninth.

The senior of the Cardinal Priests, the two Cardinal Deacons who assist the Pope, the Cardinal Deacon appointed to sing the Gospel at the opening of the Council, the two Bishops assisting the Supreme Pontiff with the Book and Candle, the Apostolic Subdeacon Auditor of the Rota, will also put on white vestments in the Pauline Chapel, the Cardinal Priest excepted, who will put on a cope; and all will await His Holiness, together with two Prothonotaries Apostolic in cappas, and the acolytes.

The Supreme Pontiff having vested and put on the *mitra preciosa*, or precious mitre, will go to the before-mentioned chapel; and, after the first verse of the hymn *Veni Creator Spiritus* has been sung, a procession, with prayers, will be begun and finished in the manner prescribed in the *Ordo* and *Methodus celebrandi Concilium*.

The Most Holy Father, on entering the Basilica, will descend from the *Sella Gestatoria* (or platform on which he has been carried), and, after adoring the most august Sacrament exposed at the high altar, at the end of the hymn *Veni Creator Spiritus*, will sing the versicles and prayers, and will then go to the Hall of the Council, and the Mass of the Immaculate Conception of the Blessed Virgin Mary, with the prayer of the Holy Ghost, will be celebrated by the Most Eminent and Rev. Cardinal Dean of the Sacred College.

When the prayer *Placeat* has been said by the Cardinal Celebrant at the end of the Mass, the Most Rev. Lord Archbishop the preacher, after asking for an Indulgence from the Supreme Pontiff, will address the Fathers from a pulpit, and will then publish the indulgence.

The Supreme Pontiff having given the benediction, will put off the cope, and will put on all the sacred vestments, just as if he were going to celebrate a solemn Pontifical Mass.

Then, after the performance of the usual homage, the prayers of the Council will be begun, and, after the versicle *Benedicamus Domino*, all and every who have not the right of being present at the Session of the Council will go out of the Hall, and the door will be shut.

The formal opening of the Council* took

* The following account is abridged from a letter of the Rev. Father Hecker to the *Catholic World* of New York, and published by that periodical February, 1870.

place on the morning of the 8th of December. At half-past seven, the cardinals, archbishops, and bishops, began to gather in the Vatican Palace, where they robed, putting on white copes and mitres, and then passed to the great hall at the front, and immediately over the vestibule of St. Peter's. Here the masters of ceremony assigned to each one his proper place, and they awaited the coming of the sovereign pontiff. When he appeared, all knelt in prayer. In a clear and sonorous voice he intoned the *Veni Creator Spiritus*. The choir took up the strain, the bishops arose, and commenced to move in procession back to the Vatican Palace, through the ducal hall, down the unequalled Scala Regia, and into the vestibule of St. Peter's. The Pope, and the cardinals with him, knelt at the main altar as the bishops had done, and waited until the last strophe of the hymn, *Veni Sancte Spiritus*, was finished by the choir. He arose, chanted the versicle and prayer to the Holy Ghost, and then, preceded by the cardinals, also entered the council-hall. They passed each to his proper place, the pontiff to a *prie-Dieu* prepared for him in the middle, to await the commencement of the high mass. This should have been celebrated by Cardinal Mattei, the dean of the College of Cardinals, but, his age and infirmities being too great to permit so great an exertion, the next in rank, Cardinal Patrizi, took his place and was the celebrant. The pontiff approached the altar with him, recited the *Judica* and the *Confiteor*, and then retired to his own seat, and the cardinal ascended to the altar and continued the mass. Before the last gospel, a portable pulpit was brought out near the altar; Mgr. Passavalli, Archbishop of Iconium, ascended it, wearing cope and mitre, and preached the introductory sermon. The sermon over, the Pope gave the solemn blessing, the gospel of St. John was recited, and the mass was over.

The altar being now clear, the attendants brought in a rich, throne-like stand, and placed it on the altar in the centre. Monsignor Fessler, secretary of the Council, attended by his assistant, brought in procession a large book of the gospels, elegantly bound, and placed it on the throne. The Pope then assumed his full pontifical robes. The cardinals and all the prelates, in their proper order, approached, one by one, to pay him homage, kissing his hand or the stole he wore. This over, all knelt while the pontiff chanted the prayer, *Adsumus, Domine*. Four chanters next intoned the litany of the saints in the strains of Gregorian chant. When the litany was terminated, the Pope recited the prayers that follow it. Cardinal Borromeo then, acting as deacon, chanted the gospel taken from Luke x., narrating the mission of the disciples. The assembly were then seated, and the Holy Father, himself seated and wearing his mitre, delivered a discourse or allocution.* At the conclusion of this discourse all knelt, and the Holy Father again intoned the *Veni Creator Spiritus*. The Pope sang the versicles and prayer that follow it, and all again were seated. The secretary now mounted the pulpit and read aloud the first proposed decree, "That this Holy Vatican Council be and is now opened." The fathers all answered, *Placet;* the Pope gave his sanction; the formal decree was passed and proclaimed, and the notaries instructed to make an official record of it.

A second decree was similarly proposed, voted, and sanctioned, fixing the second public session for the festival of the Epiphany, January 6, 1870. This closed the proceedings of the first public session. The Holy Father arose and intoned the solemn *Te Deum* or thanksgiving.

The preliminary arrangements for the transactions of the Council had been made by an apostolic letter* (*Multiplices inter*) of November 27th. Chapter ii. of this letter states that the Pope would appoint a congregation to which any member of the Council would deliver in writing any proposal which in his opinion would lead to the general benefit. This congregation was announced to consist of 12 cardinals (5 residents of Rome, 3 other Italians, 1 French, 1 Spanish, 1 German, 1 Irish), and 14 prelates (2 patriarchs from the East, 1 French, 2 Spanish, 4 Italians, 1 South American, 1 from the United States, 1 Mexican, 1 English, 1 Belgian, 1 German).

The first general congregation, according to an announcement made at the first public session, was held on the 10th of December. To the general congregations the bishops come, not in procession, but singly, or in groups of two, three, or four, as they may chance to arrive at the door of St. Peter's. They are robed not in cope and mitre, but simply in rochet and mantelletta. At 9 A. M. the main door is closed. Whoever comes late must enter by a side-door. Mass of the Holy Ghost is celebrated by some one of the prelates, without music. At its conclusion, the presiding cardinals take their places. All kneel while the chief cardinal reads the prayers prescribed for the occasion. When he concludes, all rise, are seated, and the congregation is opened. On December 10th, only four of the presiding cardinals were in their places. The chief one, Cardinal de Reisach, was absent in Switzerland, whither he had gone for his health, and died there. Cardinal de Luca, the next in rank, took his place, and made a brief address to the fathers in Latin. The bishops voted by ballot, first, for the five members of the committee on excuses, and then, a second time, for the five members of the committee on complaints. As the fathers voting were over seven hundred, as each one voted for ten persons, and as the voting was very scattering, the ballots were placed in boxes, which were publicly sealed; and a committee, consisting of the senior patriarch, the senior primate, the senior archbishop, the senior bishop, and the senior mitred

* We have given this allocution in the article PUBLIC DOCUMENTS.

* *See* PUBLIC DOCUMENTS.

abbot, was appointed to superintend the counting of these votes the next day, and to superintend the counting hereafter of the votes to be cast in the coming elections. The following canons have appeared as a *schema* delivered to the Council. They could not have been honestly obtained, such is the secrecy observed. They are almost the very questions summed up in the syllabus of December 8, 1864.

THE CHURCH OF CHRIST.

CANON I. Whosoever says that the religion of Christ is not existing and expressed in any community established by Christ Himself, but that it can be rightly held and exercised by each individual for himself, and without regard to any community which constitute the Church of Christ, let him be anathema.

CANON II. Whosoever says the Church has not received from Christ any positive and unchangeable organization, but that it is, just like any other human community, mutable and transformable, according to the changes of the times, let him be anathema.

CANON III. Whosoever says the Church of Divine Promises is not an external and visible community, but a purely internal and invisible one, let him be anathema.

CANON IV. Whosoever says that the true Church is not a body in itself, but consists of different and dispersed denominations, and is diffused throughout them all; or that the different communities opposed to each other in their professions of faith, and divided in their spirit, equally form members or parts of the one common Church of Christ, let him be anathema.

CANON V. Whosoever says that the Church of Christ is not an institution absolutely necessary for reaching eternal happiness, or that men can arrive at this blessing through the exercise of any other kind of religion, let him be anathema.

CANON VI. Whosoever says that the authority with which the Catholic Church proscribes and condemns all religious sects separated from its communion is not prescribed by Divine right; or that about religious truths only opinions, not certainties, can exist, and that, therefore, all religious sects are to be tolerated, let him be anathema.

CANON VII. Whosoever says that this very Church of Christ can fall into darkness or error, and so deviate from the Holy Truth in faith and morals, and fall away from its original institution into depravity and corruption, let him be anathema.

CANON VIII. Whosoever says the present Church of Christ is not the last and highest institution for reaching eternal happiness, but that there is another to be expected through a new and more complete effusion of the Holy Spirit, let him be anathema.

CANON IX. Whosoever says that the infallibility of the Church is restricted only to things contained in the Divine Revelation, but is not extended to other truths which are necessary to the integral maintenance of the Revelation, let him be anathema.

CANON X. Whosoever says that the Church is not a perfect institution, but merely a corporation, or that it is of such a nature, with regard to civil society or the state, as to be subject to the temporal power, let him be anathema.

CANON XI. Whosoever says that the Church divinely instituted is like a society of equals, and that the bishops, having offices and duties, possess no governmental power bestowed upon them by Divine right, and which they can freely exercise, let him be anathema.

CANON XII. Whosoever says that Christ, our Saviour and Sovereign, has conferred upon the Church the power to direct only by advice and persuasion those who turn aside, not to compel them by orders, by coercion, and by external verdicts and statutory punishments, let him be anathema.

CANON XIII. Whosoever says that the true Church of Christ, out of which there is no salvation, is any other than the Holy Catholic and Roman Apostolic Church, let him be anathema.

CANON XIV. Whosoever says that the Holy Apostle Peter was not appointed by Christ as the first of the Apostles, and as the visible head of the whole Church militant, or that he had only the honorary supremacy, but not the true and real jurisdiction, let him be anathema.

CANON XV. Whosoever says that it is not according to Christ's own will that St. Peter has permanent successors in his supremacy over the whole Church, or that the Roman Pope is not the successor of Peter in this primacy by Divine right, let him be anathema.

CANON XVI. Whosoever says that the Roman Pope has only the office of superintendence and direction, not the highest and fullest power of jurisdiction over the whole Church, or that his power is not direct and legitimate over the whole of the various churches, let him be anathema.

CANON XVII. Whosoever says that the independent church authority, as established by the Catholic Church and bestowed upon her by Christ, and the supreme civil power cannot exist together, so as to preserve the due rights of both, let him be anathema.

CANON XVIII. Whosoever says that the power necessary for the government of a civil state does not emanate from God, or that one is not bound by Divine law to submit himself to such power, or that such power is repugnant to the natural liberty of men, let him be anathema.

CANON XIX. Whosoever says that all rights existing between men arise from the political state, and that there is no other authority besides that constituted, let him be anathema.

CANON XX. Whosoever says that the supreme rule for public and social conduct is in the law of the political state, or in the public opinion of men, or that the judgments of the Church concerning what is lawful and unlawful do not extend to such actions, or that there may be something allowed by civil rights that is not allowed by Church rights, let him be anathema.

CANON XXI. Whosoever says that the laws of the Church have no binding power, except so far as they are confirmed by the sanction of the civil power, or that the civil power has the right, consequent on its high authority, to pronounce judgment or decisions in matters of religion, let him be anathema.

The concluding prayer was said, and the meeting adjourned.

On the 14th of December a second general congregation was held. Two documents were distributed to the bishops. The first was a "constitution" on the election of the Roman pontiff, should the Apostolic See become vacant during the Œcumenical Council, dated December 4, as follows:

Since full power to feed, direct, and govern the Universal Church was given to the Roman Pontiffs in the person of St. Peter, Prince of the Apostles, by Our Lord Jesus Christ, the very peace and unity of the Church might easily be imperilled if, the Apostolic See being vacant, any doubt or uncertainty should arise concerning the election of the new Pontiff.

To avert so untoward an event, Constitutions have been promulgated by the Roman Pontiffs, Our predecessors, and particularly by Alexander III., of blessed memory, in the Third General Council of Lateran (Cap. Licet De Electione); by B. Gregory X. in the Second General Council of Lyons (Cap. *Ubi* De Electione in 6); by Clement V. (Clement, 2 De Electione); by Gregory XV. (Constit. Decet Romanum Pontificem); by Urban VIII. (Constit. Ad. Romani Pontificis V. Kal. Februarii, 1625); and by Clement XII. (Constit. Apostolatus IV. nonas

Octobris, 1732), in which, among many other things there prescribed in order that a matter of so great moment should be performed in the most suitable manner, it is declared and decreed that, without any exception whatever, the election of the Sovereign Pontiff is the affair of the College of Cardinals alone.

Turning these things over in Our mind, now that the Œcumenical and General Vatican Council convoked by the Apostolical Letters, beginning with the words *Æterni Patris*, of the 29th June, 1868, is on the point of being solemnly inaugurated, it appeared to Us Our Apostolic duty to prevent and cut off from henceforth all occasion of discord and discussion concerning the election of the Sovereign Pontiff, if that it should be pleasing to the Divine Will to call Us out of this life during the said Council.

Moved further by the examples of Julius II., Our predecessor who, as is known in history (Raynald, *Annal. Eccles.*, ad annum 1513, No. VII.), being stricken by fatal illness at the time that the Vth Council of Lateran was sitting, called the Cardinals around him, and, solicitous for the legitimate election of his successor, in their presence ordered that this should be done, not by the said Council, but by their College alone, as in effect was the case at the death of the aforesaid Julius; and also by the examples of Our other predecessors, Paul III. and Pius IV., the former of whom by Letters Apostolic of the 19th of November, 1544, the latter by similar letters of the 22d September, 1561, providing for the case of their death during the celebration of the Council of Trent, decreed that, in case of the election of a new Pontiff becoming necessary, it should be done by the Cardinals of the Holy Roman Church alone, entirely excluding all participation whatever of the Council. And, further, after mature deliberation and diligent scrutiny concerning this matter, made together with not a few of our Venerable Brethren the Cardinals of the same Holy Roman Church, of Our certain knowledge, by Our own will, and in the fulness of Our Apostolic power, we declare, decree, and establish that, if it should please God to put an end to Our mortal exile during the aforesaid General Council of the Vatican, the election of the new Sovereign Pontiff, in whatever state or position the Council may be at the time, is only to be made by the Cardinals of the Holy Roman Church, and not by the said Council, all other persons being equally excluded from participating in the said election in the character of deputy for any one whomsoever, even under authority of the Council itself.

Further, in order that this election by the aforesaid Cardinals, being relieved of all impediments, and of all occasion of perturbation and dissension, may proceed more freely and expeditiously, with the same knowledge and fulness of Apostolical powers, We also decree and establish that, if We should die during the aforesaid Vatican Council, the said Council, in whatever state or position it may be found, should understand that it is at once and immediately suspended and prorogued, as with these Our letters We intend now to suspend the same unto a period to be hereafter fixed upon; in other words, that without any delay it should immediately cease to hold any Assembly, Congregation, or Session, to make any decree or canon, nor for any reason or cause, even though it should appear of great importance, can it proceed in any matter until the new Pontiff, canonically elected by the Sacred College of Cardinals, shall believe it due time to, and of his Sovereign Authority intimate the reopening and continuation of, the same Council.

Deeming it, moreover, opportune that the things which We have ordained on occasion of the aforesaid Vatican Council, whether with regard to the election of the Sovereign Pontiff, or with regard to the suspension of the said Council, should furnish a certain and stable *norma* to serve in perpetuity on all similar occasions, with equal knowledge and power as above, We decree and establish that, in the future, whenever the death of the Roman Pontiff occurs during the celebration of whatever Œcumenical Council, whether held in Rome, or in whatever other place in the world, the election of the new Pontiff should be made always exclusively by the College of Cardinals alone, according to the manner above defined: and that the same Council, as soon as it shall receive certain news of the death of the Pontiff, should understand that it is *ipso facto* suspended and prorogued until the new Pontiff, canonically elected, shall ordain and renew that it continue its sessions.

We also decree that these presents should remain and be always valid and in force, and never at any time, under whatsoever title or cause of nullity, or defect of Our intention, or under any plea of law whatsoever, should be invalidated or called in question in any manner; and we decree that henceforth all attempts whatever to set aside the above depositions, made by what authority soever, the Apostolic See being vacant, shall be null and void, even though by the said Vatican Council itself, as by any future Œcumenical Council, and that, even though if with the unanimous consent of the Cardinals of the Holy Roman Church.

Nevertheless, whenever it shall be necessary to refer to the Constitution of Our predecessor, Alexander III., published in the Council of Lateran, and commencing *Licet de Vitanda*, or any other Constitution Apostolic, special or general, and published in the General Councils, and even though included in the body of the laws, and under whatever term or form, and howsoever binding it shall be, as if they were inserted word by word in the present Constitution, except in those parts which are contrary to these presents, *which*, in that case, shall remain in their full vigor.

To no one, then, is it permitted to violate this page of declarations, ordinances, statutes and decrees, and of Our will, nor presume to contradict them, which, if any one should attempt it, let him know that he will incur the displeasure of Almighty God, and of His Holy Apostles, Peter and Paul.

Given at St. Peter's in Rome, 4th December, 1869, and the twenty-fourth of Our Pontificate.

(Signed) CARDINAL MATTEI, *pro-datario*.
CARDINAL PARACCIN-CLARELLI.

The second was a bull revoking and annulling many of the censures and penalties enacted in times past by the canon law against various offences. It is dated October 12, and is as follows:

Pius, Bishop, Servant of the Servants of God, *ad perpetuam memoriam*.

It behooves the moderation of the Apostolic See to retain that which has been salutarily constituted in the Canons of old, so that, if sacred dispensations are rendered necessary by the altered circumstances of the times, the said Apostolic See should provide and apply a remedy in accordance with its supreme power.

We have hence observed, in the course of late years, that the number of ecclesiastical censures incurred *ipso facto*, which have been holily inflicted and promulgated in maintenance of the discipline and integrity of the Church, and in order to curb and correct the unbridled license of evil-doers, have little by little increased in number and volume; that some causes of infliction of some can no longer arise, through the changes of times and manners, and thus they no longer possess their original use and opportuneness, and that hence they give rise to various doubts, anxieties, and scruples of conscience, both to the faithful and to those who have the charge of their souls.

We, therefore, desiring to repair these inconveniences, have ordained that a list should be drawn up of such cases, and be presented to Us, in order that, after diligent examination, we might establish which

it would be useful to preserve and retain, and which to modify or abrogate.

This list having been made, and the counsel of our Venerable Brethren, the Cardinals of the Holy Roman Church, deputed as the general inquisitors of the faith for the whole Christian world, having been taken; and after long and patient examination of every matter by Our own movement, of Our certain knowledge, with serious deliberation, and in the fulness of Our Apostolic authority, We decree by this constitution, which is to be of perpetual authority, that of all censures of every kind whether of excommunication, suspension, or interdict, which have hitherto been inflicted *latæ sententiæ*, and incurred *ipso facto*, no other shall henceforth remain in force, saving only those inserted in this Constitution, and that only in the manner in which they are here inserted; declaring at the same time that the same, not only in so far as the canons of old accord with this Our Constitution, but should receive all their force in virtue of this Our Constitution itself, and as if they were now for the first time published.

EXCOMMUNICATIONS LATÆ SENTENTIÆ SPECIALLY RESERVED TO THE ROMAN PONTIFF.

We declare that henceforth such are subject to excommunication *latæ sententiæ*, specially reserved to the Roman Pontiff:

1. Who apostatize from the Christian Faith; and all and singular, heretics, whatever their name, and to what sect soever belonging, and those who believe in them, and their receivers, promoters, and defenders.

2. All, and singular, those who knowingly read without authority of the Apostolic See the books of the said apostates and heretics, arguing in favor of heresy, or the books of what author soever prohibited by name by Letters Apostolic, and those who hold, print, or defend, such books in whatsoever manner.

3. Schismatics and those who with persistence withdraw themselves from the obedience of the Roman Pontiff of the time being.

4. All, and singular, and of whatever state, dignity, and condition, those who appeal against the ordinances and decrees of the Roman Pontiffs of the time being to a future Universal Council, as also those by whose aid, counsel, or favoring, such an appeal shall be made.

5. All those who may kill, wound, smite, arrest, imprison, restrain, or hostilely persecute, the Cardinals of the Holy Roman Church, the Patriarchs, Archbishops, Bishops, Legates, or Nuncios of the Apostolic See, or drive them from their dioceses, territory, estates, or dominions; as well as those who ordain such things, ratify them, or lend their aid, counsel, or furtherance.

6. Those who impede, directly or indirectly, the exercise of ecclesiastical jurisdiction, whether by means of local or foreign courts of law, or who have recourse to the secular courts with this end, or who procure, or publish, or lend aid, counsel, or furtherance to any ordinances to this end.

7. Those who constrain, directly, or indirectly, lay judges to drag before their tribunals ecclesiastical persons, contrary to the dispositions of the Canons, as also those who make laws and decrees against the rights and liberties of the Church.

8. Those who have recourse to the lay power to impede the letters or any other act whatever of the Apostolic See, or of any of its legates or delegates; those who directly or indirectly prohibit their promulgation or execution.

9. All forgers of Letters Apostolic, especially in the form of briefs or memorials concerning grace and justice, purporting to be signed by the Roman Pontiff or by the Vice-Chancellors of the S. R. C., or by any other in their place, or by mandate of the Roman Pontiff; as also those who publish falsely Letters Apostolic, especially in the form of briefs, and more particularly those who falsely sign such memorials, whether in the name of the Roman Pontiff or of the Vice-Chancellors, or any acting in the stead of the same.

10. Whosoever absolves an accomplice *in peccato turpi*, even in the hour of death, when another priest, even one not appointed to hear confessions, unless in a case where grave scandal might have arisen, could have heard the confession of the dying person.

11. Those who usurp or sequestrate the jurisdictions, possessions, or revenues, which belong to ecclesiastical persons on account of their churches or benefices.

12. Those who invade, destroy, or retain for their own use or that of others, the cities, lands, places, and rights, belonging to the Roman Church, or who usurp, perturb, or retain, the supreme jurisdiction within the same.

We declare that the absolution from all the excomunications here enumerated was, and specially, reserved to the Roman Pontiff *pro tempore*, and for such the general concession of power to absolve from cases and censures or from excommunications reserved to the Roman Pontiffs, in no way suffices. On which account we further revoke all indults whatsoever concerning such, under whatever form, or to whatever persons, even regulars, of what order, congregation, society, or institute soever. Those then, who should presume, without the necessary faculty, under whatever pretext, to absolve such, let them know themselves to be under the bond of excommunication, reserved to the Roman Pontiff, unless, in case of peril or death, in which, however, the obligation is to be maintained with the person so absolved, to stand under the prescriptions of the Church in case he should be restored to health.

EXCOMMUNICATIONS RESERVED (NOT "SPECIALLY") TO THE ROMAN PONTIFF.

We declare that those are subject to excommunication *latæ sententiæ*:

1. Who teach or defend, be it in public or private, propositions condemned by the Apostolic See under pain of excommunication *latæ sententiæ*; similarly, those teaching or defending as lawful the practice of asking the penitent the name of the accomplice, a practice condemned by Benedict XIV. in the Constitutions *Suprema*, 7th July, 1745; *Ubi primum*, 2d June, 1740; *Ad eradicandum*, 28th September, 1746.

2. Those who, yielding to the temptation of Satan, lay violent hands on ecclesiastics, or religious of either sex, excepting those reserved cases and persons for whom the bishop or others have, by right or privilege, a permission to absolve.

3. Those who engage in or provoke to a duel, who accept a challenge, or are parties to the same, or lend any help or furtherance, or any who permit or abet the same, or who do not do all that lies in their power to prevent the same, whatever their dignity, whether regal or imperial.

4. Those giving their names to the Masonic or Carbonari sects, or other similar sects that openly or covertly conspire against the Church or any legitimate authority, as well as any who favor the same sects in any way, or fail to denounce the secret heads or leaders until such time as they shall have denounced them.

5. Those who order the violation of ecclesiastical asylum, or who with rash temerity perpetrate the same.

6. Those who violate the enclosures of nuns, and who, of whatever nature or condition, sex or age, enter a monastery without legitimate license, as also those who admit or introduce them; and also nuns leaving such enclosures, excepting the cases and in the form prescribed by St. Pius V. in his Constitution *Decori*.

7. Women overstepping the enclosure of religious houses of men and the superiors or others admitting them.

8. Those guilty of real Simony (*Simonia Realis*) concerning any benefice whatsoever, and their accomplices.

9. Those guilty of real confidential* Simony, in regard to whatever benefice, and whatever may be their dignity.

10. Those committing an act of *real* Simony, with a view to gain admission to a religious order.

11. All those who fall under the censure of excommunication under the Constitution of St. Pius V., *Quam plenum*, 2d January, 1554, by trafficking with indulgences and other spiritual favors.

12. Those who collect alms for Masses, increasing the amount, and making a profit by having the Masses said in places where the alms for saying the same are customarily smaller.

13. All those on whom the penalty of excommunication falls, under the Constitution of St. Pius V., *Admonet nos*, 29th March, 1567; of Innocent IX., *Quæ ab hac sede*, 4th November, 1591; of Clement VIII., *Ad Romani pontificis curam*, 26th June, 1592; and of Alexander VII., *Inter cæteras*, 24th October, 1660, concerning the alienation and infeudation of cities and places belonging to the Holy Roman Church.

14. Religious who may presume to administer to any, whether of the laity or clergy, except in case of necessity, the Sacrament of Extreme Unction, or of the Eucharist, in viaticum, without the leave and license of the parish priest.

15. Those, without the lawful permission, abstracting relics from the holy cemeteries or catacombs of Rome and its territory, and those lending them aid or favor.

16. Those who communicate with persons excommunicated by name by the Pope in *crimine criminoso*, and lending them aid and favor.

17. Ecclesiastics who knowingly and of their own will communicate *in divinis* with persons excommunicated by name, by the Roman Pontiff, and those receiving them to the offices.

EXCOMMUNICATIONS LATÆ SENTENTIÆ, RESERVED TO BISHOPS OR ORDINARIES.

We declare that they are subject to excommunication *latæ sententiæ*, reserved to Bishops or ordinaries:

1. Clerics in holy orders, or regulars or nuns presuming to contract marriage after the solemn vow of chastity, as well as those presuming to contract marriage with any of the aforesaid persons.

2. Those who procure abortions (*effectu sequuto*).

3. Those who knowingly make use of forged Apostolic letters, or who coöperate in this sin.

EXCOMMUNICATIONS LATÆ SENTENTIÆ (NOT RESERVED).

We declare that they are subject to excommunication *latæ sententiæ* (not reserved):

1. Who order and constrain that ecclesiastical sepulture be given to notorious heretics, or to persons under excommunication or interdict by name.

2. Those who obstruct or intimidate inquisitors, informers, witnesses, and other ministers of the holy office; those who abstract or burn the writings of the said sacred tribunal, or lend to any, so doing, aid, counsel, or favor.

3. Those alienating or presuming to receive ecclesiastical possessions without apostolic license according to the form *Extravagantis ambitiosæ, de reb. eccl. non alienandis.*

4. Those who, by negligence or culpable omission, fail to denounce within a month a confessor or priest by whom they may have been instigated *ad turpia*, in any of the cases expressed by our predecessors, Gregory XV., *Constit. Universi*, August 20, 1622, and Benedict XIV., *Constit. Sacramentum Pœnitentiæ*, June 1, 1741.

Besides these already enumerated we declare similarly excommunicated, those who were excommunicated by the Council of Trent, whether with absolution reserved to the Sovereign Pontiff, or to the Ordinary, or without reserve, excepting the penalty of anathema established in the decree, Sess. IV., *De editione et usu sacrorum librorum*, to which we desire that they shall only be subject who, without the approbation of the Ordinary, print, or cause to be printed, books concerning sacred things.

SUSPENSIONS LATÆ SENTENTIÆ RESERVED TO THE SOVEREIGN PONTIFF.

Chapters and convents, with churches and monasteries, incur suspension *ipso facto*, at the will of the Holy See, from the receipts of their benefices, and all others who receive Bishops or Prelates to the government, or administration of one or the other, before these aforesaid Bishops have produced the Apostolic Letters which nominated them.

2. They incur *ipso jure* the three years' suspension from collation of Orders who ordain any one without title of benefice or patrimony, upon the agreement that after ordination they shall not apply to them for maintenance.

3. They incur *ipso jure* suspension of one year from the administration of Orders who ordain the subject of another, even under pretext of a benefice about to be conferred, or already conferred, but not sufficient in amount without Letters dismissory from his own Bishop; or even a subject of his own who has been living out of his jurisdiction for a considerable time, so that he might there have contracted a canonical impediment, without letters of testimonial from the Ordinary of the place in which he has been living.

4. Those incur suspension *ipso jure* for a year from collation of Orders who shall have conferred any sacred Order (except the case of legitimate privilege), without title of benefice or patrimony to an ecclesiastic living in any congregation in which no solemn profession is made, or to a religious not yet professed.

5. Religious expelled from their monasteries and living *extra religionem* incur *ipso jure* perpetual suspension from Orders.

6. They incur *ipso jure* suspension from Orders received who presume to receive such Orders from a person excommunicated or suspended, interdicted, or denounced by name; or from a notorious heretic or schismatic. We further declare that one so receiving ordination in good faith from such a person cannot exercise such orders until he shall have been dispensed.

7. Foreign secular clerics, who, after having lived more than four months in Rome, are ordained by any other than their Ordinary without license from the Cardinal Vicar of Rome, or without previously passing an examination before him, or even if ordained by their own Ordinary after being sent back from the above examination; and in the same way ecclesiastics belonging to any of the six suburbicarian dioceses, if they should be ordained out of their own dioceses by license of their Ordinary addressed to any but the Cardinal Vicar of the city, and who have not performed, before receiving Holy Orders, the spiritual exercises for ten days in the house in Rome of the Priest of the Missions so called; all such incur suspension *ipso jure* from Orders so received, during the good pleasure of the Holy See, and the Bishops who ordained such, suspension from exercise of episcopal rites for the space of a year.

INTERDICTS LATÆ SENTENTIÆ (RESERVED).

1. Such Universities, Colleges, and Chapters, however they may be entitled, who appeal from the orders

* *Realis* si pactum ex utraque parte adimpleatur.
Accedit Simonia *confidentialis*, quæ fit quolibet pacto, seu confidential circa electionem ve præsentationem ad beneficia, ad munera ecclesiastica, etc.

and commands of the Roman Pontiff *pro tempore* to a future General Council, incur *ipso jure* the interdict specially reserved to the said Roman Pontiff.

2. Those who knowingly celebrate, or cause to be celebrated, the Divine Offices in places forbidden by the Ordinary, or by the judge delegate, or by law, or who admit persons, excommunicated by name, to the Divine Offices or to the Sacraments of the Church, or to ecclesiastical burial, incur *ipso jure* interdict from entering the churches until such time as they have satisfied the will of him whose sentence they have set at naught.

Finally, We will and declare that all those are similarly subject to suspension or interdict, who were decreed, *ipso jure*, suspended or interdicted by the most Holy Council of Trent.

Further, those censures, whether of excommunication, suspension, or interdict, which, besides those just enumerated, have been inflicted by Our Constitutions, or those of our predecessors, or by the Sacred Canons, and which have been hitherto in vigor, whether by the election of the Roman Pontiff, or by the internal rule of whatsoever order or institute of regulars, as also of whatsoever college, congregation, society, or pious house of what name or description soever, we will and declare that these same shall all remain in full force and vigor.

Moreover, we decree that whatsoever of the new concessions and privileges which may hereafter be granted by the Apostolic See, and to whomsoever, can in no way or means ever be understood to comprehend the faculty to absolve any of the cases or censures reserved to the Roman Pontiffs, except in those cases where particular and explicit mention of the same is there made, those privileges and faculties granted, whether by our predecessors, or by us, at whatever time, to whatever dignity, order, congregation, society, or institute, although regular, of whatever kind, and endowed with a particular title to the same, and worthy of special mention, all and singular by this Our Constitution, We will to revoke, suppress, and abolish, as, indeed, we hereby revoke, suppress, and abolish them, every existing privilege contrary (and more particularly those specially comprehended and not *in corpore juris*, or confirmed by the Apostolic Constitutions, or by whatsoever Apostolic approbation, by immemorial custom, or by what other sort of confirmation soever, of whatever form or tenor, or by whatever interrogatory of the derogatories, or other more efficacious unusual class) notwithstanding. All of which, as far as necessary, we intend to revoke and do revoke.

Nevertheless, We will that the faculty conceded to Bishops at the Council of Trent (Sess. XVIII. Cap. VI. *De Reform.*), to absolve from whatsoever censure reserved by this Our Constitution to the Apostolic See (excepting those *special* reserved), be retained and remain in force.

At the second congregation a ballot was taken for the members of the committee (or deputation) on matters of faith, which was generally regarded as the most important committee of the Council. Seven hundred and twenty-one prelates voted, each voting for twenty-four persons. The votes were sealed up as before in the presence of the Council, and were afterward counted. The result was as follows:

1. Most Rev. Emmanuel Garcia Gil, Archbishop of Saragossa, Spain.
2. Rt. Rev. Louis Francis Pié, Bishop of Poitiers, France.
3. Most Rev. Patrick Leahy, Archbishop of Cashel, Ireland.
4. Most Rev. Réné Fr. Regnier, Archbishop of Cambrai, France.
5. Most Rev. John Simor, Archbishop of Gran, Hungary.
6. Most Rev. Ignatius Andrew Schaepman, Archbishop of Utrecht, Holland.
7. Most Rev. Antonius Hassun, Armenian Patriarch.
8. Rt. Rev. Bartholomew d'Avanzo, Bishop of Calvi.
9. Most Rev. Miecislaus Ledochowski, Archbishop of Gnesen and Posen.
10. Most Rev. Francis Cugini, Archbishop of Modena, Italy.
11. Rt. Rev. S. D. Larangeira, Bishop of Rio Grande, Brazil.
12. Rt. Rev. Ignatius Senestry, Bishop of Ratisbon, Bavaria.
13. Most Rev. Victor A. Dechamps, Archbishop of Malines, Belgium.
14. Most Rev. Martin J. Spalding, Archbishop of Baltimore, United States.
15. Rt. Rev. Anthony Monescillo, Bishop of Jaen, Spain.
16. Rt. Rev. Peter J. De Preux, Bishop of Sion, Switzerland.
17. Rt. Rev. Vincent Gasser, Bishop of Brixen, Tyrol.
18. Most Rev. Raphael V. Valdivieso, Archbishop of Santiago, Chili.
19. Most Rev. Henry Edward Manning, Archbishop of Westminster, England.
20. Rt. Rev. Fred. M. Zinelli, Bishop of Treviso, Lombardy.
21. Most Rev. Walter Steins, Archbishop of Calcutta.
22. Rt. Rev. Conrad Martin, Bishop of Paderborn, Prussia.
23. Most Rev. Joseph S. Allemany, Archbishop of San Francisco, United States.

Cardinal Bilio was appointed chairman.

The composition of this committee showed that all of the prominent defenders of the question of papal infallibility (Manning, Dechamps, Spalding, Martin), and none of the prominent opponents (Dupanloup, Hefele, Strossmayer), had been elected.

The third congregation was held on the 21st of December, for the election, in the same manner, of twenty-four prelates, to constitute the deputation or committee on discipline. The number of votes given was larger than on the previous occasion. Among those elected were the Archbishops of New York, Mexico, and Quebec, and the Bishops of La Crosse, and Puno in Peru.

On December 28th, another general congregation was held, at which twenty-four prelates were elected, to constitute the committee on all questions relating to the religious orders. Among the members elected were the Archbishop of Quito and the Bishop of Buffalo. At this meeting the discussion of the *schema* or draft on certain matters regarding faith, given to the bishops on December 10th, was commenced. The council-hall had been found to be unsuited for speaking. Various halls in the Vatican Palace had been measured; several

churches had been examined, and at one time it was almost decided to try a hall in the distant Quirinal Palace. But, before doing so, the architect tried other plans in the council-hall itself, and finally succeeded in remedying the evils complained of, so as to enable the Council to open the discussion on the appointed day. The presiding cardinal announced that the discussion on the first *schema* would now commence, and that fourteen prelates had already given notice of their intention to speak. Seven spoke that day, among whom were Cardinal Ransder, of Vienna, Archbishop Kenrick, of St. Louis, and Archbishop Connolly, of Halifax. The discussion was continued on December 29th, on January 3d, 4th, 8th, and 11th; thirty-five speakers, in all, addressing the Council.

ROUSSEAU, Lovell H., Brigadier-General U. S. A., and late Major-General of Volunteers, a lawyer, patriot, soldier, and political leader of Kentucky, born in Lincoln County, Ky., in August, 1818; died in New Orleans, La., January 7, 1869. He enjoyed but limited advantages of education, and his schooling ceased entirely before he was ten years of age. His father died in 1833, leaving a large family of small children in straitened circumstances. When about fourteen, being the oldest of the family at home, he worked as a day-laborer at macadamizing the turnpike-road from Lexington to Lancaster. Being engaged in the study of the French language at this time, he used to write out the conjugations of the verbs at night, and, spreading the paper before him as he beat rock by day, with a stone upon it to prevent the wind blowing it away, commit the exercise to memory. When he became of age he relinquished all his interest in his father's few negroes to his sisters, to prevent their being sold apart. About the same time he removed to the vicinity of Louisville, and began the study of law. He was entirely without aid or instruction, and never was asked a question or had a conversation on the subject of his studies until he went to be examined for license. From March to August, 1840, he applied himself assiduously to preparing for his profession, reading law fourteen hours and history two hours per day. This close application produced a dangerous illness, which lasted some months. On his recovery he resolved to remove to Bloomfield, Ind., where he continued his studies till February, 1841, when he was admitted to the bar, and, though but poorly qualified, soon attained to respectable success in it. In 1844 and 1845 he was elected to the Indiana Legislature, and while there rose to considerable influence. In 1846 he raised a company for the Mexican War, and entered the unfortunate 2d Indiana regiment, which met with such an untoward fate at Buena Vista. Captain Rousseau, however, notwithstanding a loss of fourteen men out of fifty-one, kept his company together and retreated to the ranche, where he did good service when the enemy attacked our wagon-train, and was highly complimented by Colonel Marshall, in his report of his operations on that occasion. He was elected to the Indiana Senate, four days after his return from Mexico, by a heavy majority in a Democratic district, he having always been a Whig. He removed to Louisville in 1849, before his senatorial term had expired; but his constituents would not permit him to resign, and he continued to serve them for one year after having resumed his residence in his native State. He immediately took a prominent position at the Louisville bar, strong as it was in talents and learning. Like nearly if not quite all the lawyers who have taken conspicuous positions as successful commanders in the recent war, his forte was with the jury, and in the management of difficult cases during the trial. In 1861, when the storm of secession broke upon the country, he labored assiduously to prevent his native State from joining the South. When he saw that actual hostilities could not be averted, he resigned his position in the Senate, and at once commenced the organization of troops for the Union army. Recruiting for the war was going on actively all around him, and to such an extent did Kentuckians sympathize with the secession movement, that a man who actively supported the Government was in hourly peril. General Rousseau was eventually obliged to establish his camp on the Indiana side of the river, and he was notified that his marching of his regiment through the city of Louisville would be a signal for the rising of the enemy and the extermination of Union men. He was at length ordered to join in the field the forces he had organized, and, as their commander, did gallant service with the armies of the South and Southwest. He participated in nearly all the principal engagements which occurred in Kentucky, Tennessee, Alabama, and Georgia. He was early made a brigadier-general, and for his bravery and gallant services at Perryville won a major-general's commission. He was engaged in the campaign and battle of Shiloh; was commandant of the district of Northern Alabama, succeeding General Ormsby M. Mitchel in command of the Third Division of Buell's army, and followed Bragg through Kentucky, and fought him bravely at Perryville. He distinguished himself at Stone River, and in the campaign of Tullahoma, Chickamauga and Chattanooga. During 1864, he commanded the district of Tennessee; made his famous raid into Alabama, destroying the Montgomery and Atlanta lines of railroad, and in December, 1864, held the important position of Fort Rosecrans, Nashville, against the siege of Hood. In 1865 he was elected as a Union man to the House of Representatives, where he acted with the Democrats. During the session he had a personal encounter with Mr. Grinnell, of Iowa, for which he received the censure of the House. He immediately resigned, but was again returned by his constituents. In 1867 he was

appointed a brigadier-general in the regular army, and was dispatched to take possession, in the name of the United States, of Alaska. He was summoned to Washington to testify in the impeachment trial, but did not arrive in time. Not desiring to return to his command in Alaska, the President assigned him to the command of the Gulf Department, where his administration was not remarkably successful. He seems to have been a better soldier than administrative officer or legislator. General Rousseau was a man of commanding figure, and extraordinary personal presence, and was greatly beloved by his soldiers.

RUSSIA, an empire in Europe and Asia. Emperor, Alexander II., born April 17 (new style April 29), 1818; succeeded his father Nicholas, February 18 (March 2), 1855; heir-apparent, Grand-duke Alexander, born February 26 (March 10), 1845; his son, Nicholas, born May 18, 1868.

The total area of Russia is about 7,860,000 square miles; of which 2,050,313 belong to Europe. The population of the great divisions of the empire was, in 1865, as follows:

In Europe..	Russia Proper	61,220,000
	Poland	5,230,000
	Finland	1,840,000
In Asia.....	Caucasus	4,500,000
	Siberia and Central Asia.. ...	5,500,000
		78,290,000

The budget of the Russian empire for 1869 amounted to 482,000,000 rubles. The revenue accounts show a surplus of 4,000,000 from the budget of 1867, and a surplus of 10,000,000 from the budget of 1868, and these amounts cover the increase of 18,000,000 in the expenditure. Thirty-one million rubles are appropriated from special sources for the construction of railway lines and for harbor works at Riga and Odessa. The Minister of Finance ascribes the increase in the revenue to a more than usually satisfactory harvest, and to the stimulus given to commerce by the extension of the railway system. He expresses his conviction that nothing but a peaceful development of the moral and material interests of Russia can consolidate the finances of the country.

The debt of Russia amounted on January 1, 1869, to 2,003,484,160 rubles; the debt of the former kingdom of Poland, 44,201,662.

The Russian army, in 1866, consisted of 697,137 men. The fleet, on January 1, 1868, was composed of 267 vessels (20 iron-clads, 210 other steamers, 37 sailing-vessels), exclusive of the coasting-vessels. The movement of commerce in 1867 and 1868 was as follows (value expressed in millions of rubles):

PORTS.	Arrivals.	Clearances.
Baltic Sea	5,768	5,658
White Sea	841	924
Black Sea and Sea of Azof	4,436	4,510
Total	11,047	11,092

The movement of shipping, in 1868, was as follows:

COMMERCE.	Imports.	Exports.
With Europe—Exclusive of precious metals (1868)	244,430,000	217,690,000
Precious metals (1867)	33,230,000	12,130,000
With Asia—Exclusive of precious metals (1867)	26,440,000	24,630,000
Precious metals (1867)	340,000	2,260,000

The gradual extinction of serfdom is still in progress in Russia. Of the 10,000,000 of former serfs, two-thirds have already become landed proprietors. The Government allotted to each peasant a lot of three hectares (the hectare being nearly 2½ acres), requiring them to pay one-fifth its appraised value at once to the proprietor, while the Government advanced the remaining four-fifths and charged the peasants six per cent. interest on the loan for forty-nine years. The annual charge for each lot under this arrangement is nine rubles; other taxes amount to nearly five rubles; and, if there are children entitled to land under the emancipation act, the head of the family must pay for them also. Until the purchase of the land is completed, the peasant is obliged to labor for the proprietor, though he is personally free. It is optional with the peasants to accept a free gift of one hectare instead of the privilege of purchasing three; but comparatively few content themselves with these "beggars' portions." Besides the high price of the land, another drawback to the Czar's plan is that the possession of the land is vested not in individuals but in communes, so that the peasants continue to be veritable *adscriptio glebæ*. They cannot separate from the communities without the formal consent of the communal assembly, except on paying their share of the interest on the Government advances for the whole period of forty-nine years. This *adscriptio glebæ* is to cease, however, with the year 1870, when the law gives the peasants the option of separating from the community by renouncing their right to any portion of the communal lands.

An important reform, effected in 1869, was the abolition of the hereditary character of the Russian priesthood, a body numbering, with their families, not less than seven hundred thousand. (*See* GREEK CHURCH.)

Another great reform was accomplished by a ukase reducing the term of military service from seven years to five, in the case of young men under twenty who enter the army as volunteers. A further reduction of a year's service is promised as a reward for good conduct. This regulation is to be followed by another restricting marriages in the army. Hitherto soldiers were encouraged to marry in order to induce them to make the army their home, and their wives and children were maintained by the Government. This practice is now regarded as too expensive and not desirable even from a purely military point of view, as the movement of the troops from place to place has been greatly encumbered by their taking so many women and children with them. It is

found that the number of soldiers' marriages has considerably diminished since the introduction, four years ago, of the present system of short military service. In 1860, four soldiers out of ten were married, whereas the proportion now is four out of seventeen.

The Government is endeavoring to increase its military efficiency and power by improving the railway communications between the various parts of the empire. There are, as yet, no railways connecting the interior of Russia with the Vistula, the Crimea, the Caucasus, or Central Asia; there is no safe and rapid means of transferring troops from one point on the frontier to another; the communication between the provinces where the irregular cavalry is recruited and the frontier is very defective; and the important positions on the coasts of the Baltic and Black Sea are not connected by lines of railway. The only line which is really important from a strategical point of view is that from Kharkov to Rostov, which enables the Cossacks of the Don to be moved rapidly and at short notice to the frontier. As against Prussia, Russia has only a line running parallel with her frontier and too far distant from it to be of any military use, while Prussia has three lines parallel to the northern frontier of Poland, and two at right angles to it.

Russia is steadily advancing in Asia, and is already regarded by many of the neighboring rulers of Central Asia as the arbiter in Asiatic politics. Thus the Ameer of Bokhara applied to her for assistance against Sheer Ali, of Afghanistan, England's ally; he accompanied his request by the payment of a tribute, and sent his son to St. Petersburg to secure his succession to the throne through the protection of Russia. The administrative organization of Russian Toorkistan is pushed on with great activity. However, opposition, and even rebellion, is not wanting in Asia. The Kirgheez rebellion spread in the spring of 1869 to the country of the Don Cossacks, who seem to have united with the Calmucks and the Kirgheez in their attempt to cast off the Russian rule. Several thousands of these Cossacks crossed the Volga above Sarepta, to join other rebels in their attack on Uralsk, on the river Ural, and the Russian garrisons on the Orenburg frontier, together with those of Kazan, Simbeersk, and Saratov, were ordered to meet them. The insurgents acquired strength enough to cut most of the means of communication between Russia Proper and Central Asia, thus almost paralyzing the trade between those countries.

The importation of cotton and silk into Toorkistan ceased in March, in consequence of the disturbed state of the frontier districts. Two of the bitterest enemies of Russia, Sadyk and Atamkoul, invaded the khanate of Khiva at the head of an insurgent band. All the post-roads were abandoned, and the communications so interrupted, that the only way of reaching Tashkend in safety was to make a detour by way of Siberia. Meanwhile the Government was still considering the project of a railway communication between Russia and Central Asia. The trade committee of the Ministry of Finance at St. Petersburg reported in favor of the proposed line between the eastern shores of the Caspian and the Amou-Daryan, and strongly recommended that the works should be commenced as soon as possible. The railway is to be connected with Moscow by a line of steamers on the Caspian and the Volga. Another plan, which has many advocates, is, that the proposed railway should start from Orenburg; but the project recommended by the committee is said to find the most favor with the Government, chiefly because it would facilitate the opening of a new channel for Russian commerce with China *via* Kashgar. Another committee, composed of delegates from the departments of the Interior, of Finance, of War, and of the Navy, left St. Petersburg under the direction of General Skolkoff, on a mission to the Amoor district and the island of Saghalien, for the purpose of investigating on the spot the capabilities of those countries as regards colonization and commercial enterprise.

Russia is, meanwhile, colonizing her new territories. Several Ozech settlements have been made in the Caucasus on the rivers Dschub and Tuapse, and 1,500 Moravian families were on their way to the same territory.

The Russian empire contains within its boundaries some of the finest lands in the world, and has a population remarkable for its homogeneity and number. With a territory extending from Finland to the Pacific Ocean, and from Archangel to Mount Ararat, it may be truly said that Russia needs no more land. The Caucasus gives her the command of both Asia Minor and Central Asia. Satisfied with this immense territory, the Government of Russia has wisely abstained as much as possible from interfering in foreign politics for many years past, and devoted all its energies to the internal development of the country. Russia's position, however, is a peculiar one. She is both a European and an Asiatic power; not by detached possessions, as England, but by a continuous and uninterrupted extent of territory in both continents.

Industry is progressing in Russia. The Government issued a ukase for a universal exhibition to be held at St. Petersburg in 1870, to open on May 15th. Another ukase approved the formation of a private company for constructing the projected railway line from the Caspian Sea to Lake Aral.

A Mechanical School for Women has been opened at Warsaw, under the immediate superintendence of Government, its object being to train the young women of the lower classes in all the lighter kinds of handicraft which may be pursued without injury to health.

RUSSIAN ORDNANCE. Some details are given, in the *Russian Artillery Journal*, of the

trial of an 11-inch Krupp's cast-steel breech-loading gun, fired against the Hercules's shield last August at the Wolkow Artillery-ground, near St. Petersburg. Up to the year 1868, the regulation calibres of the breech-loading guns for coast defence were 8-inch and 9-inch.

Trials made in Russia, and the comparative trial with guns of large calibre in Prussia, agreed in demonstrating that the 8-inch coast gun acts with great effect on ships with 4½-inch armor plating, even at distances of 1,866 yards, and that at the same distance the 9-inch gun can do very serious damage to ships with 6-inch armor-plating. At a distance of 700 yards the 9-inch gun pierces an armored shield with 8-inch plates. For success in attacking ships with 8-inch or 9-inch plates at great distances, or ships with still thicker plates, even at short distances, the 9-inch gun is not of sufficient power. Having regard to this, we have included the 11-inch gun in the regulation calibres for coast defence.

The first trial-gun of this calibre, made of cast steel and strengthened with hoops, was manufactured for the Government at Krupp's factory. This gun differed somewhat in its measurements from the design to which the new 11-inch guns are made. This difference, which arose from the gun having been originally intended for a muzzle-loader, consisted principally in the length of the bore, being 27 inches shorter than the length of the bore of the 11-inch gun, according to the design finally adopted. In consequence of this, the initial velocity of projectiles fired with battering charges from the trial-gun would necessarily be about 50 feet less than from the new guns. The trial-gun had been submitted last year at Krupp's factory to a trial of endurance, had fired 400 rounds with battering charges, and had then been removed to the Wolkow Artillery-ground, near St. Petersburg, to ascertain its destructive effect against armored shields of very great strength.

The experimental firing took place in the month of August of the year 1869, against a shield representing a portion of the broadside of the iron-clad English ship Hercules. This shield was built up in the following manner: Three wrought-iron plates, each 16 feet long, 3 feet 8 inches broad, the two lower 9 inches, the upper one 6 inches thick, were fastened by bolts with countersunk heads to a backing consisting of horizontal teak balks 12 inches thick, between which, through their whole thickness, seven 1-inch strips of iron plate were inserted, strengthened with angle-iron.

Immediately behind the teak balks were two wrought-iron plates, one behind the other, each 1 inch thick. Behind these came a row of vertical oak balks, 9 inches thick, between which, through the whole breadth, were inserted nine 1-inch strips of iron plate, strengthened with angle-iron. The whole rested against two rows of horizontal oak balks, the front row being 6 inches thick, and the hinder 9 inches. Behind the latter was fastened a 1-inch wrought-iron plate. The whole thickness of the backing was therefore 39 inches; the whole thickness of the part of the shield with 9-inch plate, 48 inches; and the whole thickness of the part of the shield with 6-inch plate, 45 inches. The whole length of the shield was 16 feet, its height 11 feet. At the back of the shield five wrought-iron 1-inch stays were riveted on, and rested on 14-inch timbers, which were connected together, and formed a frame to support the shield. All three plates were made at the Millwall Works, London. The Hercules's shield is one of the very strongest armored shields designed up to the present time.

In June and December, 1865, at Shoeburyness, gunnery experiments with the Armstrong 300-pounder (10.5-inch) and 600-pounder (12-inch and 13-inch) were made against a similar shield. The solid steel projectiles, fired from the 300-pounder, with 50 lb., 60 lb., and 66 lb. of powder, did not pierce the shield, even at the shortest distances. The 600 lb. solid steel projectiles, fired with a charge of 100 lb., at a distance of 700 yards, with an initial velocity of 1,420 feet per second, went through the plate, and remained in the wood backing, when they struck undamaged portions of the shield; on the other hand, when they struck places in the shield which were already weakened by previous rounds, they went right through the target. From the results of the trials at Shoeburyness, it appeared that the Hercules's shield is of very great resisting power, and that the capabilities of the 600-pounder Armstrong gun against it, even at small distances, were insufficient.

The firing performed here, from the 11-inch cast-steel breech-loading gun, took place at a distance of 466.6 yards with cast-steel shells, with *thin* lead jackets, which were made at Krupp's works, and brought up to the weight of 550 lb. by filling the hollow with sand and filings. Five rounds were fired from the gun, one with battering charge, i. e., with 91.5 lb. of prismatic powder, and four with diminished charges, for the purpose of determining their destructive effect upon the target at different distances, without rendering it necessary to move the heavy guns to other distances. To this end two rounds were fired with a charge of 85.5 lb. of prismatic powder, and two rounds with 72 lb. of the same powder. With the charge of 85.5 lb. the trial-gun produces the same effect at 466.6 yards as with the battering charge at 746.6 yards, and as the new 11-inch guns with battering charges at a distance of 1,108.3 yards. With a 72-lb. charge the effect of the trial-gun is the same at 466 yards as at a distance of 1,610 yards with the battering charge, and the same as that of the new 11-inch gun at a distance of 1,960 yards. The effect of the 11-inch trial-gun with battering charge at 466.6 yards is the same as that of the new 11-inch gun at 842 yards.

The principal damage done to the shield during this gunnery trial was as follows: The first shot fired with a battering charge of 91.5 lb. of prismatic powder struck the lower 9-inch plate in about the middle of it, near the upper edge, went through the whole target, and continued its flight into the plain. The hole produced in the plate was of an oval form, having a horizontal diameter of 11 inches, and a vertical diameter of 13 inches. By this shot a bolt was broken, carrying away a stay from the backing. The projectile, which was picked up after the firing, proved to be quite whole; the lead jacket was stripped off; the length of the shot was lessened by $\frac{1}{8}$ inch; but, in other respects, its dimensions had apparently remained unaltered. At the second round, which was fired with a charge of 85.5 lb. prismatic powder, the projectile did not strike the shield direct, but grazed 16.3 feet before it, hitting a plate lying on the ground, and then struck with its side against the lower 9-inch plate of the shield. The indentation produced was about 2½ feet long, up to 1 foot broad, and up to 4½ inches deep. The plate was buckled inward 2 inches, and showed cracks on the bottom edge of the hole made by the first shot. The projectile broke in pieces.

At the third round, which was fired with 85.5 lb. prismatic powder, the projectile struck the joint between the two lower plates, pierced the whole shield, grazing 58 feet 3 inches behind, and then continued its flight. The dimensions of the hole made by this shot were almost the same as in the case of the first. By this shot, a bolt was also broken and a stay carried away; the shot, which was picked up after the trial, proved to be broken into two equal parts, about perpendicular to its axis.

At the fourth round, which was fired with a charge of 72 lb. prismatic powder, the shot struck the upper 6-inch plate near the lower edge, grazing the top edge of the middle plate, and went right through the shield. The oval hole made by this shot was of somewhat larger dimensions than the previous ones, the horizontal diameter being about 13.5 in., and the vertical 11.9 inches.

Of broken bolts there were three—two in the top plate and one in the middle plate; in addition, a stay was separated from the backing. The shot, which was picked up after the firing, proved to be quite whole; the lead jacket was stripped off; its length was diminished by almost $\frac{3}{16}$ inch, otherwise its dimensions had apparently remained unchanged.

At the fifth round, which was fired with a charge of 72 lb. prismatic powder, the shot struck the middle 9-inch plate near the lower edge, penetrated so far into the target that the surface of the end of the shot was level with the front surface of the plate, and there remained. In doing this the head of the shot went through the plates the whole thickness of the teak backing, the two 1-inch plates, behind the teak timbers, and about 4 inches into the upright oak balks. The other damage visible after this shot consisted in injury to the stay, which was in the neighborhood of the point of impact, and in carrying away some rivets. The shot remained apparently whole. After the termination of the trial, the whole shield had been driven back 6 inches, almost parallel to its original position.

This gunnery-trial, in which the plates of the shield had proved to be very good, showed that our 11-inch gun, of the new construction, when fired with good steel projectiles with a thin lead jacket, is capable of doing the following damage to armor-plated walls of the strength of the broadside of the British ship Hercules.

1. At a distance of about 842 yards this shield, both with 6-inch and 9-inch plates of good quality, is pierced with a considerable surplus of power.

2. At a distance of about 1,166 yards this shield is also pierced, although with but a small surplus of power.

3. At a distance of about 1,983 yards a shield of the strength described, with 6-inch plates, is pierced.

4. At the same distance, when fired against the shield protected by 9-inch plates, the shot pierces the plate, and sticks fast in the backing, after it has penetrated its whole length. From the results of this experiment, it may be concluded that the 11-inch rifled *cast-steel* breech-loading gun of the new make, provided with good *steel* projectiles, is considerably superior in execution to the English 12 and 13 inch (600-pounder) wrought-iron rifled 25-ton muzzle-loading guns; and that it is a very efficient gun against fleets with armor plating of considerable thickness, not only at short and medium, but even at greater distances.

If we consider that, as shown by the experiment made, when fired against the Hercules's shield, at a distance of about 1,983 yards, the projectiles of the 11-inch gun penetrated their whole length, and, at a shorter distance of about 1,166 yards, go through the whole shield, and avail ourselves of the formulas, derived from the results of the gunnery experiments of the English, Prussian, and other artilleries, against armor-plates with backing, we gather that the distance of 1,399 yards may be regarded as the limit at which our 11-inch guns, of new make, may produce very destructive effects when fired against ships whose broadsides are of the strength of the Hercules, and are covered with 9-inch plates.

Although at this distance we cannot reckon upon every shot fired piercing the broadside described, still it is beyond a doubt that they would stick fast in the wood backing, after having gone through the 9-inch plate, and there produce the full effect of their bursting charge. At a distance of about 1,282 yards all good 11-inch steel projectiles must pierce a shield of the strength of the Hercules broadside, protected by wrought-iron plates of the best quality.

S

SAINTE-BEUVE, CHARLES AUGUSTIN, a French poet and critic, academician and Senator, born at Boulogne-sur-Mer, December 23, 1804; died in Paris, October 13, 1869. His father, a government officer, died two months before his birth; and his mother, a woman of remarkable intellectual abilities and of English descent, superintended his education, which was conducted at first at Boulogne, and after the age of fourteen in Paris, at the institution Landry and the College of Charlemagne. On leaving college, he was strongly attracted to a literary life, but the necessity of entering upon some calling which should afford him a competent livelihood led him to enter the medical profession. He was appointed assistant-surgeon to the Hospital St. Louis, but his longings for literary distinction led him to write much for the press. When Victor Hugo's "Odes and Ballads" were published and attracted the attention of the public, Sainte-Beuve could no longer endure his profession. Resigning his situation as assistant-surgeon, he announced his intention of devoting himself thenceforth to poetry and general literature. He formed the acquaintance of Victor Hugo, and attached himself to the editorial staff of the *Cenacle* in company with Alfred de Musset, the two Deschamps, etc. In 1828 appeared his first volume, "An Historical and Critical Tableau of French Poetry and the French Theatre in the XVIth Century." This work gave him a high reputation as a critical writer. The "Poems of Joseph Delorme" followed the next year, but were not so well received. In 1830 "The Consolations," a volume of poems and aphorisms, very much in the style of Pascal, Fénelon, and Madame Guyon, whose Christian mysticism was at this time exerting a powerful influence on his mind. The *Cenacle* went down in the Revolution of 1830, and Sainte-Beuve, drawn toward the doctrines of St. Simon for the time, became one of the editors of the *Globe*, then under the direction of Pierre Leroux. This connection did not last long, and Sainte-Beuve had set out for Belgium, where he was offered a professorship, when M. Buloz persuaded him to commence in the *Revue des Deux Mondes* a series of literary portraits, in which he displayed great skill. He also became a contributor to the *National*, where he manifested a decided leaning toward the school of Diderot and Voltaire. His religious views at this period seemed to fluctuate with the seasons. In 1832 he was a disciple and friend of Lamennais and the Abbé Gerbet, and his *Volupté*, which the critics have called "a romance of the flesh and the spirit," was one of the results of their influence upon him. Five years later he visited Switzerland and determined to write a "History of Port Royal," the illustrious journalists being now the objects of his admiration, as they had been in 1831 the subjects of his satire. Another volume of his poems, *Pensées d'Août*, appeared about this time. His "History of Port Royal," in five volumes, progressed slowly, being twenty years (1840–'60) in publication. In 1840 M. Thiers appointed him librarian of the Mazarin Library, and five years later he was admitted to the French Academy to fill the vacancy caused by the death of Casimer Delavigne. In 1848 he delivered a course of lectures on "French Literature at the Commencement of the Nineteenth Century," at Liége, which attracted great attention, and were afterward published in two volumes.

In 1850 he joined the *Constitutionnel*, and contributed to that journal an admirable collection of literary biography and criticism, his "*Causeries du Lundi*" (Monday Literary Gossip), which form an improved continuation of his "Portraits," and fill a series of volumes. Soon after the *coup d'état* of December, 1851, he was attached to the *Moniteur*, and was Professor of Latin Poetry at the College of France, but the insubordination of the students exhibited at his first lectures obliged him to retire, and in 1857 he was appointed professor at the Normal School. The Emperor signalized his departure for Algeria at the end of 1865 by raising M. Sainte-Beuve to the dignity of Senator; and in 1867 he was a member of the Committee of Five appointed by the French Academy to superintend a new edition of the "Historical Dictionary of the French Language." He possessed the charm of a remarkable originality, an extraordinary tact in mingling biographical anecdotes and criticism, and a power of keen and rapid dissection of character and motive which, though generally kindly, was always piquant and sometimes merciless. His style was as original as his criticism, and mingled the idioms and expressions of the sixteenth century with those of the nineteenth in a conglomerate as peculiar and very much of the same character as the "Carlylese" which has exerted such an influence on our English tongue, the new language, the "Sainte-Beuve dialect" as Balzac terms it. Besides the works aleady named, Sainte-Beuve published "*Poésies Complètes*" (Complete Poems), 1 vol., 12mo, numerous editions; "Criticisms and Literary Portraits," 5 vols., 8vo, 1832–'39; "Literary Portraits," 2 vols., 12mo, 1844; "Contemporary Portraits," 2 vols., 12mo; "*Causeries du Lundi*" (Monday Gossipings), 15 vols. (13 12mo, and 2 18mo), 1851–'62; "Gallery of Celebrated Women," 1858; "New Gallery of Celebrated Women," 1864; "*Nouveaux Lundis*" (New Mondays), 2 vols., 18mo, 1863; together with a great

number of prefaces, introductions, memoirs, and biographical notices, for the works of other writers.

SALTER, WILLIAM D., Commodore U. S. N., born in New York City, in 1795; died in Elizabeth, N. J., January 8, 1869. He entered the Navy as midshipman, November 15, 1809. He was for forty-six years on the active-service list, winning each promotion by long and arduous service. He was retired September 13, 1855, having been for sixty years in the service. When he entered the Navy he was attached to the American frigate Constitution, which was commanded by Captain Isaac Hull, during the action against the British frigate Guerriere, on the 19th of August, 1812. He was the last survivor of those on board this vessel during that memorable event. He also served with gallantry on various vessels which have borne a prominent part in the history of American naval warfare. He was appointed commander at the Brooklyn Navy-yard in 1856, and filled the position until 1859. In 1863 he was ordered to report to the War Department, and was assigned by the Secretary of War upon a commission to examine vessels. From this duty he was relieved by the Naval Department in 1866. Since that time he was a resident of Elizabeth. He had suffered severely for three or four years past from rheumatism of the heart, which finally caused his death.

SAN DOMINGO,* or the Dominican Republic, a state of the West Indies, comprising the eastern portion of the Island of Hayti. Area, 17,826 square miles; population, 136,500 (mostly mulattoes and whites). President, in 1869, Buenaventura Baez.

During the greater part of the year the republic continued to be a prey to intestine wars. In March, ex-President Cabral submitted to President Baez, but soon he again took part in the insurrectionary movements. The revolutionary party gained in strength and importance by the appearance of General Luperon on the coast of the Dominican Republic on board the armed steamer Telégrafo on the 1st of June. On the 8th of June Luperon opened fire upon Samaná, and effected a landing. In consequence of these events, the Government published the following decree:

ARTICLE 1. The steamer Telegraph, its chief, Gregorio Luperon, and the people who accompany him, are declared pirates.

ART. 2. All vessels-of-war are fully authorized to give chase and pursue her, and to act with respect to her chief, troops, and crew, according to the invariable and universal international law.

ART. 3. This decree will be sent to the Executive authority for its promulgation and constitutional enforcement.

Given in the Chamber of the Senate Council of St. Domingo on the 18th day of June, in the year 1869, in the twenty-sixth year of the independence, sixth year of the restoration, and second year of the regeneration.

By the President of the Senate:

JACINTO DE LA CONCHO,

GERARDO BOBADILLA, Secretary.

Executed, published, and circulated in the territotories of the Republic for its punctual observance.

Given in St. Domingo the 19th day of June, 1869, twenty-sixth year of the independence, sixth of the restoration, second of the regeneration.

BUENAVENTURA BAEZ.

Countersigned—JOSÉ HUNGRIA, Minister of War and Marine; M. MA. GAUTIER, Minister of Foreign Affairs.

Cabral, whom President Baez had deposed, continued, with the aid of Luperon, his struggle against Baez, with varied success. Some of the most distinguished generals in San Domingo are friends and supporters of Cabral. Cabral became master of all the southern portion of San Domingo, containing some 40,000 inhabitants.

Baez leased the Bay of Samaná to the United States, and on the 6th of December the United States flag was planted on the peninsula bordering the Bay. According to some accounts, this lease caused great excitement among the people of San Domingo, and the revolutionists were reported to make new efforts to overthrow Baez before, as they feared, the American Congress could ratify the arrangements for the lease. Generals Luperon and Cabral issued a proclamation protesting against the sale of the town and Bay of Samaná to the United States, and declaring the act illegal and contrary to the wishes of the nation and to the constitution, which forbids alienation of the national territory. Other accounts, however, represented the immense majority of the people, including nearly all the foreigners, to be heartily in favor of the measure, which early in 1870 was to be submitted to a popular vote.

The revolutionists under Cabral continued to hold the southwestern part of the island.

SETON, SAMUEL WORTHINGTON, an American educator, born in New York City, January 23d, 1789; died there, November 20, 1868. After leaving school he entered upon mercantile life, and made a voyage to China. On his return, he entered one of the banks of New York, and occupied the position of teller, when, in 1827, he was elected agent of the late Public School Society, in which capacity he was visiter of the schools, and had the charge of their extensive system of supplies, libraries, etc. In 1823 he was elected a trustee of the society, and in the discharge of these duties he displayed the peculiar tact and skill in management, as well as felicity and beauty of illustration, which made him so popular in the public schools as well as in the Sunday-school work. These qualifications, combined with his gentle and winning disposition, pointed him out as being peculiarly fitted for the office of Agent and Superintendent of the Public Schools. He remained in this office until the Public School Society was merged in the present Board of Education in 1853, when he was appointed Assistant Superintendent, and served in that capacity till his death. He was indefatigable in his labors, and during a period of forty-

* The latest statistics of commerce and shipping are given in the AMERICAN ANNUAL CYCLOPÆDIA for 1868.

eight years, in which he held the office of superintendent of a Sabbath-school, he was absent from his post but twelve Sabbaths.

SEWAGE, USE OF TOWN. The various experiments conducted by the Metropolis Sewage Company, London, both at Barking Creek and on their experimental farm a little beyond Barking, as well as those conducted by myself, states Mr. Wm. Hope before the Institution of Surveyors, on a smaller scale on my own land, have given me an opportunity of acquiring knowledge in this particular branch of agriculture, which, I believe I may safely say, no one else has enjoyed; and it is only the consideration of these exceptional advantages which has made me presume so far as to address the Institution of Surveyors on such a subject.

In considering the utilization of sewage by irrigation, we may usefully divide it into three heads: first, *conveyance* of the sewage from the town to the country; secondly, *distribution* throughout the district proposed to be irrigated; thirdly, *application* of the sewage to the actual soil or crops.

Now, with regard to the first question I need say very little. An experienced surveyor will naturally avail himself of the readiest means at his command for conveying a large body of noxious liquid from one district to another. He will be guided by local circumstances and local materials in designing his work, and the nature of the work will, in some degree of course, also depend upon whether the levels of the ground permit of gravitation either by purely natural fall, or by means of a short lift, or necessitate forcing by expensive machinery. I will merely remark that there is of course a great convenience for distribution in what I may term the luxury of pressure. If the main culvert or sewer be an iron pipe of any description, through which the sewage is forced by powerful engines, it becomes a very easy and simple matter to attach a pipe at any point for supplying any land, no matter where situated; but, if the main outfall conveys the sewage by gravitation only, then the sewage can only be distributed by the same means, and, of course, can only be taken to land on a lower level than the outfall, and this, in many places, becomes a most serious difficulty.

The *distribution* of the sewage of a small town of 10,000 or 20,000 inhabitants is a simple enough affair, for it is distributed on one farm only, and that farm is, of course, chosen so as to be more or less in a ring fence; but, if it is desired to deal with the sewage of a great city, much more contriving is necessary. For short distances and low pressures, earthenware pipes may sometimes be used for the lateral channels, but they are not satisfactory; and it must always be recollected that the bursting or leakage of a sewage-pipe is a somewhat serious affair, even in the country. Iron pipes are, of course, always the handiest and neatest things to deal with, but they are expensive. Earth ditches are perfectly effectual, and are, perhaps, the most convenient of all for communicating with other minor branches; but, unless the lay of the land coincides exactly with the fall required to be given to distributing channels, the earth ditches soon become very expensive in construction, and wasteful in the space occupied. And, in view of the several difficulties and drawbacks attending the use of either ditches, or earthenware or iron pipes, I have devised a new method of distributing sewage, which, I think, is likely to prove useful in some localities. It is very simple—consisting merely of sheet-iron troughs, with a semicircular section, supported upon rough wooden legs of any required size and length. Such iron troughs, at whatever elevation from the ground—and in most cases a very few feet are quite sufficient—occupy no more space than a ditch would occupy when running with a fall coincident with that of the land itself. Therefore, there is no permanent waste of land in a broad embankment, and the outlay becomes less than the outlay in constructing a raised-up ditch when a very few inches in height are attained. If any unusual height is necessary, to bridge over a hollow for instance, the section of the trough may be slightly altered, and, instead of being semicircular, the diameter may be diminished, and to the prolongation of the sides of the smaller semicircular trough, thus formed, may be riveted stronger plates to act as girders, and so the original sectional area would be preserved. With troughs so constructed, having a few angle-irons bent all round them outside, a very strong and durable kind of semitubular bridge would be obtained. I may mention that I have made an experiment with about a mile and a half of semicircular troughing far thinner than that which would be used in a permanent work, and that this troughing is placed at an unusual height, being for a great part of its length from 16 feet to 22 feet above the ground. It is, moreover, in a most exposed situation, and has, nevertheless, stood all the severe gales of last winter without the very smallest sign of giving way.

Difficulties for the first few years may arise in arranging for the distribution of the whole sewage of a large town over a wide area of land, if there are a few obstructive people in the area who fancy that they could make more by standing out and refusing to take the sewage, than by taking it, if compulsory powers have not been obtained. But, even in this case, it would be a pecuniary rather than a physical difficulty. There need, therefore, be no greater difficulty in designing the different channels by which the sewage of a large town may be distributed to any given number of farms, than there is in an analogous kind of work which has been executed by very many gentlemen now present, namely, draining several separate estates into one common outfall. It is simply inverting the process, and, instead of collecting the water from the various estates into one main channel by which it would run away, bringing the water

down the one main channel, and then distributing it over the various estates.

Now, with regard to the purely agricultural question of the *application* of sewage to the soil or crops. Experience has only served to confirm me in my original opinion, that the proper way of laying out land for sewage is, wherever the fall of the land will at all permit it, to lay it out in rectangular "panes," or lands thrown up to a ridge in the centre, a small carrier of say 8 inches or 9 inches wide being cut along the top of the ridge, by which to irrigate the land. This system combines many advantages, and, so far as I see, presents no drawbacks. First of all, the rectangular form admits of easy and simple cultivation by horse and steam power, without turn-wrest ploughs, or any other special apparatus, and this of itself is so great an advantage as almost to outweigh any thing that could be urged in favor of any other system. But this is also the cheapest way of laying out land; for it is manifest that from the ridge to the furrow there will always be a sufficient fall for the flow of the sewage; therefore the actual watering of the plants can be done with certainty and regularity, and all that requires to be attended to is the fall to be given to the carrier in the ridge, and to regulate this, unless the land is either very flat or very irregular in formation, very little soil need be shifted, except along the line of the ridge. Moreover, if, during the first year that the land is laid out, there may be a little too much fall from the ridge to the furrow in one place, or rather too little in another, owing to the shifting of the land to fill up hollows and level rises in the length of the ridge, this irregularity will be diminished every time that the land is worked, and so, in the course of a few years, will gradually disappear. Last year I laid out a small experimental field, of some nine acres, on this system, under peculiar disadvantages, as the point to which alone I could bring the sewage was slightly lower than most other parts of the field; and although there was very little difference of level in any part, yet such difference as there was, was against me. The field was also irregularly shaped, one of its sides being more than twice as long as the opposite side, and one of its corner angles very acute, and another very obtuse; but, as I ran my lands so as to abut upon or tail off on the side between these two angles, this difficulty vanished; for, of course, it did not the least signify whether the end of each land was square or not. I also laid out the lands of slightly-varying breadths and of an increasing slope, beginning with a very flat land and rising to very steep one—the last land having a fall of 1 in 10 from the ridge to the furrow. The most convenient size of land is 40 feet or 45 feet wide from furrow to furrow, with a slope of 1 in 20 from furrow to ridge. The best mode of conducting the work in laying out lands in this way is, after any small amount of cross-ploughing or filling-up old furrows, and other similar work that may be necessary, has been got through, to plough the land into ridges approximating to the desired height. These ridges should then be rolled very heavily, when it will be seen whether or not their fall is sufficiently continuous to admit of a carrier being dug in them as they are; and, if it is found that any shifting of earth is required, the rolling of the ridge will have answered the purpose of making the carting lighter. You will observe that the simplicity of this mode of laying out land, as compared with attempting to alter the levels of the entire surface of a field, is very great; the labor is, in fact, minimized, and, moreover, for the future cultivation of each individual crop, the form of lands which I have described is, I find, very convenient. Of course, the size of each land is known with accuracy; therefore, all the future cultivation, whether ploughing, or hoeing, or weeding, or harvesting, may be done by piece-work, and the quantities of sewage applied and the bulk of produce obtained can be checked and ascertained with very great ease; and thus the farmer has a better opportunity of finding out the exact profit that he makes upon any particular crop.

With regard to the cost of such laying out, this must, of course, depend upon the prior formation of the ground; but this part of laying out in ridges may practically be done for the cost of, perhaps, one extra ploughing.

There remains, then, the question over what area and to what crops to apply the sewage; and, clearly, the area on which it is applied must depend, in some measure, upon the crops selected. One important crop must always be grass; because this is the only crop that is always on the ground, and always more or less in a growing condition. It is the only crop, therefore, to which sewage can be applied more or less usefully on all days in the year; and, wherever any large quantity of sewage is to be disposed of, there is always a population to consume grass, whether in the form of meat, or of dairy produce, or of horse-labor. A very considerable quantity of the sewage of any town can, therefore, always be used in the production of grass, without any danger of overstocking the market. The experience that we have had, both at the Lodge Farm, in the occupation of the Metropolis Sewage Company, and on my own experimental field, shows that sewage is equally applicable to cereal crops as to grass, green crops, and vegetables; but, no doubt, a greater return per acre can be obtained by the production of the latter, because a greater quantity of sewage can be utilized by them than by cereals, and, therefore, it is desirable that the bulk of the sewage should be applied to either grass, green crops, or market-garden vegetables. But, in a case where sewage is carried to a considerable distance from a town, into a purely farming district, experience proves that sewage is quite as applicable to cereal crops as to any

other during the periods of the year when it can be so applied; and in the early spring, before the summer green crops are sown, probably sewage may be more usefully applied to winter wheat and oats than to any thing else. The third crop of wheat, on the same land, the third year running, can now be seen growing, and apparently very healthy, upon a poor gravel at the Lodge Farm; and this result has been obtained exclusively by the use of sewage, and of a surprisingly small quantity. Last year there was a very fair crop indeed of 5½ quarters to the acre, and the sewage applied was only about 500 tons—equal, in round numbers, at a penny a ton, to about a couple of guineas; and, the first year that we tried sewage upon wheat, it was put to one portion of the same field which looked particularly bad. Two portions of this field were carefully measured, and one was left as it was, and the other was sewaged with about the same quantity of sewage as mentioned before. The result was very remarkable. The unsewaged portion gave 3 loads of straw to the acre, and 3 quarters 5 bushels of grain; the sewaged portion gave, as was naturally to be expected, a large increase of straw, 4½ loads to the acre, or 50 per cent. of increase; and the figures of the grain were still more satisfactory, being inverted—namely, 5 quarters and 3 bushels to the acre.

We should now consider the quantity of sewage per acre which may be usefully applied to crops of grass, roots, and vegetables, to which the main bulk of the sewage must always be applied. With regard to grass, I have frequently had controversies with various persons, including some well-known agriculturists, as to the proper kind of grass to which to apply sewage, and also as to the proper time of sowing the proper quantity of sewage to be applied, and the result to be looked for. Some persons have imagined that sewage can be beneficially applied to ordinary natural grasses year after year, and they cite the Craigentinny meadows at Edinburgh as an example; and cases have been brought to my notice where I myself have been quoted as supporting this notion; but it is an idea which I am altogether opposed to. The water and manure, which together compose sewage, stimulate the growth of all the hardier and ranker kinds of natural grasses to such an extent that in the course of time they choke and kill out all the finer kinds, and the grass becomes the rank, nasty stuff that we see at Craigentinny.

Many persons imagine that sewage cannot be applied to any crop without positive injury, during hard frosts or snow; but this is not the case. The sewage is always above the freezing-point, and more so than ordinary running water. The actual contact with the sewage must, therefore, be beneficial to the plants in protecting them from cold.

The water supply of London, as proved by the official returns, exceeds thirty gallons per head per diem. This would give upward of 48 tons of sewage per head in the course of a year; so that, if we take 50 tons as an easy calculation in round numbers for the quantity of sewage per head flowing out of any town, we shall not be very far wrong. In this way 5,000 tons would represent the sewage of 100 persons; so that, as the sewage of 100 persons is the maximum amount that can be properly utilized by a crop of Italian rye-grass, and as the rye-grass can be grown only once in two years, we should get fifty persons per acre as the maximum proportion of population which is at all safe to apply. But, of course, it never would suit the convenience of any farmer to grow nothing but a never-ending see-saw of Italian rye-grass and potatoes.

With regard to other crops, we have grown 52½ tons of mangold-wurzel per acre at the Lodge Farm from the application of 1,100 tons of sewage to land which was completely worked out by white crops. Now, 1,100 tons would be equal, according to the same rough calculation, to the sewage of only 22 persons per acre.

When I talk of 70 tons per acre as a weight of mangold which ought to be obtained every season by the use of sewage, it is not such an unreasonable thing as it at first appears. And if we apply 2,000 tons per acre to a crop of mangold, it would be equivalent roughly to one acre for every 40 persons; and my own opinion is, that some such proportion should be the very minimum of land which should be laid out for the utilization of the sewage of any town. And it would be greatly for the advantage, both of the town and of the farmer, if an increased area were put under, at all events, the possibility of irrigation; for, how often would not the farmer, if his land were laid out for it, be only too glad to give an occasional dressing to a crop of wheat that looked sickly after the March storms, to a crop of turnips that he was afraid of losing from the fly, or even to a crop of potatoes in a dry summer?

And now a few words as to the money value of town sewage. When used for market-garden vegetables its value is exceptionally great, as the vegetables produced are of the finest possible quality; being grown with maximum rapidity, on which the quality of vegetables specially depends. Now, it is well known that market-gardeners apply from £10 to £20 worth of solid manure to the acre, around London, at all events; while, to produce the finest crops of cabbages, cauliflowers, or celery, only takes from 500 to 1,000 tons of sewage, according to the particular species of seed used, and the particular age at which it is desired to send the crop to market. Taking, then, the highest of these quantities, or 1,000 tons as equal to the lowest value for a garden dressing of ordinary manure, or £10 an acre, we should have a total value of 2,400 pence for 1,000 tons of sewage, or nearly 2½d. per ton; and I have no reason to suppose that this

is at all beyond what a market-gardener could afford to pay, having regard to the superior result which he obtains. And it is somewhat curious that this value does not differ very considerably from the only reliable valuation that was ever made of the chemical ingredients in town sewage. To be on the safe side, I have always taken 1d. a ton as the standard price at which the Metropolis Sewage Company should sell the sewage to the farmer; and a very few rough calculations will show that this is a very safe estimate indeed.

To take the case of Italian rye-grass. We have seen that 90 to 100 tons of grass ought to be grown from 5,000 tons of sewage in the course of one entire growing season. Now, 5,000 tons at 1d. are equal to £20 16s. 8d., to which we must add, say £4 an acre for rent and taxes; £1 an acre for application of sewage, interest on improvement expenditure, and other small items; the mowing of ten crops a year by machine (for which I may mention the rye-grass is particularly suitable) at 3s., £1 10s.; carting 100 tons to the homestead at 6d., £2 10s.; or a total of £29 16s. 8d.—say, £30.

If we take such a crop as mangold-wurzel and apply 2,000 tons at 1d., we have a charge for sewage of £8 6s. 8d. per acre; taking the same figures of £4 for rent and taxes, and £1 for application of sewage, etc., 30s. for cultivation, 10s. for seed, 10s. for hoeing, and 70s. for harvesting 70 tons of roots, we have a total charge of £19 6s. 8d. per acre, and taking the same price of 15s. per ton for the value of the food obtained, we have a total yield of £52 10s. per acre, or a net balance to the farmer of £33 3s. 4d.; and, as we have produced 52½ tons of mangold at the Lodge Farm from 1,100 tons of sewage, it is not going too far in reckoning upon 70 tons of mangold from 2,000 tons of sewage.

It may be objected that I am dealing with the sewage of a great city, and not of a small town; but though the rainfall is less in London in proportion to the population, yet the water supply is greater, and the two together give 75 or 80 tons of sewage per head per annum, instead of 50; so if this diluted sewage is of the value I have described, surely a sewage equal to only 50 tons per head per annum cannot be worth less. Now, 50 tons at 1d. are equal to 4s. 2d.; at 2d. 8s. 4d.; and at 2½d. 10s. 5d.; so that as the urban population of England, living in towns of 2,000 inhabitants and upward, exceeds ten millions, and as almost all these towns are duly polluting the rivers in conformity with the "Towns Improvement Act, 1847," they are propagating scarlet fever and typhus at a direct cost to the towns of £5,000,000 a year, in addition to the indirect loss to the land and to the working-classes; so that we may reckon the loss to the country in gold exported to pay for foreign manure, grain, beef, mutton, hides, wool, bacon, butter, and cheese, at not less than £15,000,000 sterling annually.

SMITH, TOULMIN, an eminent English publicist, constitutional lawyer, and Scandinavian scholar, born in Birmingham, May 29, 1816; died at Lancing, Sussex, England, April 28, 1869. He was a descendant of an old and honorable family of Birmingham, his ancestors having been for five hundred years property-holders in that town. His father was an active educational reformer and writer. The family were Dissenters. Mr. Toulmin Smith received a very thorough education in the excellent schools of Birmingham, and, possessing extraordinary abilities and application, early distinguished himself. In 1835, when but nineteen years of age, he prepared an elaborate "Introduction to the Latin Language," and in 1836 published "A Popular View of the Progress of Philosophy among the Ancients." At an early age he had commenced the study of the Scandinavian languages, literature, history, and politics, and, at the age of twenty-three or four, was one of the most accomplished Scandinavian scholars in Great Britain. In 1837, Mr. Smith sailed for the United States, where he remained five years. During his residence there, he published a volume of great labor and research, but one which has made his name famous on both sides of the sea, "On the Discovery of America by the Northmen in the Tenth Century." The work was accompanied by maps and plates, and has, ever since its publication, in 1839, been considered the standard authority on that subject. The most eminent American historians have quoted it, and it was the ground of his election as a corresponding member of the Society of Northern Antiquaries, at Copenhagen, a well-deserved tribute to his ability and carefulness of research. On his return to Europe, he devoted himself very sedulously to the study of constitutional and Old Saxon law, and became an acknowledged master of both. He was not called to the bar till 1849, but the same year published a treatise, in which, with great learning and power, he demonstrated that "Government by Commissions was illegal and pernicious," and a few months later, in his "Parallels between the Constitution and Constitutional History of England and Hungary," enlightened the nation concerning the political history of the Magyars, and evoked an earnest sympathy for the great Hungarian leader. In 1854, as the result of long and patient study and research, he published his great work, "The Parish: its Obligations and Powers, its Officers and their Duties," a masterly treatise on the whole history of organization and development of the parish, from the earliest Saxon records to the present time. This work, which has passed through several editions, is an admirable contribution to the history of local self-government, and of the foundations of English liberty. In 1855 he prepared a treatise of great practical value, "The Law of Nuisances and Sewerage Works." In 1859 he published "The Right Holding of the

Coroner's Court," in which he traced the history of this ancient institution. For eight years he conducted *The Parliamentary Remembrancer*, a periodical which was not merely a record of Parliamentary proceedings, a hand-book of "bills" in progress and of votes recorded, but, by its learned annotations, illustrated practically present legislation by past Parliamentary action. Its essays and notes were singularly able treatises on Parliamentary practice and English law, the growth of public opinion on great questions of public interest, etc. He was also a very learned antiquarian, and from childhood strongly attached to his native town of Birmingham. He had published, in 1868, "The Traditions of the Old Crown House in Der-Yat-End, in the Lordship of Birmingham" (a famous building which had been in possession of the family for 500 years), and had nearly completed, at the time of his death, a "History of English Guilds," a work of immense labor, for the Early English Text Society. He had also gathered and largely annotated the materials for a History of Birmingham. He had found time, in his busy life, for the cultivation of physical science, and was a skilful geologist and mineralogist.

SOUTH CAROLINA. Since the adoption of the new State constitution, in the year 1868, the efforts of the citizens of South Carolina have been directed toward securing order and prosperity in the public affairs of the State, and rapid progress has been made, through well-directed legislation, in improving and perfecting the State government. The condition of public affairs, consequent upon the recent reorganization of the State government, suggested subjects of an important nature requiring the attention of the Legislature. Pursuant to the provisions of the new constitution, fixing the 4th Monday of November, in each year, as the time for the assembling of the Legislature, that body was convened at Columbia on the 22d of November, and continued in session until the 24th of March, 1869, when it adjourned to meet again in November. The previous election had given to the colored members a majority in the General Assembly, since they held 76 of the 124 seats in the House, and 9 of the 33 in the Senate. Of the white members there were 14 Democrats in the House and 7 in the Senate. With this balance of power in the Legislature, the interests of the colored citizens of the State were not overlooked. The ratification of the fifteenth amendment of the Constitution of the United States was carried by a vote of 18 to 1 in the Senate, and 88 to 8 in the House; the law regulating the manner of drawing jurors was so amended that, on the completed list of jurors, "the number of names of white voters shall bear to the number of names of colored voters, as near as may be, the same proportion as the whole number of white voters bears to the whole number of colored voters in the township, city, or county, as the case may be;" and, to insure the enforcement of the Civil Rights Bill of Congress, a bill was passed providing as follows:

SECTION 1. That from and after the passage of this bill it shall not be lawful for common carriers or any party or parties engaged in any business, calling, or pursuit, for the carrying on of which a license or charter is required by law, municipal, State, Federal, or otherwise, to discriminate between persons on account of race, color, or previous condition, who shall make lawful application for the benefit of such business, calling, or pursuit.

SEC. 2. Any party so discriminating shall be considered as having violated this act, and, upon conviction, shall be punished by a fine of not less than two hundred dollars, or imprisonment for not less than six months.

SEC. 3. No act of incorporation shall be conferred upon any organization, the rules and regulations of which contain features not compatible with the provisions of this act.

SEC. 4. All acts or parts of acts inconsistent with this act are hereby repealed.

During the session the criminal law of the State was amended by abolishing capital punishment, except in cases of wilful murder, and providing for the punishment of rape and arson, by imprisonment in the penitentiary for life, or for a period not less than ten years, and making the penalty of manslaughter and burglary imprisonment for a period not exceeding thirty years. The bill passed for the reorganization and government of the militia provides for the enrolment of "all able-bodied male citizens, between the ages of eighteen and forty-five years, residing in this State, and not exempted by the laws of the United States." The power to appoint officers is held by the Governor and by the commander-in-chief of the Militia. The organized militia is to be known as the "National Guard of the State of South Carolina," and the formation of any other military organization in the State is prohibited. By another bill, intended to "remain in full force and effect until the militia of the State is organized and ready for service," the Executive was authorized to enlist, arm, and equip a company of one hundred men, or more if necessary, to enable him to quell any disturbance, and arrest the guilty parties, "when in any county in this State it shall become impossible, from any cause, to enforce the laws and keep the peace by the ordinary civil process."

Many contracts between citizens were made in South Carolina during the late war, in which notes issued by the Confederate States were used as a basis of value. As there were great fluctuations in the value of these notes during the war and after its close, payments of debts and obligations were sought to be enforced in the lawful money of the United States; much confusion existed as to the proper equivalent in lawful money for such Confederate notes. It therefore became necessary for the Legislature to settle this question by some specific enactment. By the act passed for this purpose, the value of these notes was fixed for each month, from January, 1861,

when "one dollar of lawful money was equal to one dollar and five cents of Confederate States notes," to the 1st of May, 1865, when "one dollar of lawful money was equal to $833.33 of Confederate States notes;" and it was provided "that the value of all debts and obligations, whether under seal, created or contracted in Confederate States notes, or with reference to Confederate States notes as a basis of value, issued by the so-called Confederate States Government, or in or by any bills, bonds, or notes assimilated or made equivalent in value to Confederate States notes, by any law or custom of trade, during the years 1861, 1862, 1863, 1864, and 1865, shall be determined by the value of said Confederate States notes in the lawful money of the United States at the time such debts or obligations were created or contracted."

The sentiments of the Republicans of South Carolina, in regard to the political character of the men appointed to office in the State, were expressed in the speeches and resolutions at a meeting of the Republican members of the Legislature, held before the adjournment of that body. Representations had been received from Washington that the Representatives from South Carolina were about to urge upon the President the appointment of certain persons to office in the State, who were and had been open enemies to the State government and the reconstruction laws of Congress. A meeting was at once called, at which speeches were made by many prominent members of the Legislature, both white and colored, remonstrating against the proposed distribution of Federal offices in the State, and the following resolutions were unanimously adopted:

Resolved, That we, the Republican members of the Legislature, representing a large majority of the people in this State, insist and demand of our Representatives in Washington that no person shall be appointed to office in the civil service of the United States, in this State, who is not known to have been, and now is, the true and tried friend of liberty, a free ballot, the enforcement of the reconstruction laws of Congress, and maintenance of the present State government; and further, that every man holding office in this State, who has not, in days gone by, earnestly and unequivocally favored the system of reconstruction of the United State Congress, and the maintenance of the present State government, shall not be allowed to hold office and control the Federal patronage in this State to the exclusion of those who, in the dark hours of the past, have been true to the principles which are the foundation-stones of the present State government, to wit: a free ballot, equal and exact justice before the law for all, and the zealous advocate of the principles enunciated in the present State constitution established by the people of the State of South Carolina, in pursuance of the requirements of the reconstruction acts of Congress.

Resolved, That, in consideration of these things, a special committee be appointed, to consist of members of the Senate and House of Representatives, to draft a suitable preamble and resolutions expressive of the sense of the Republican party in this State, and to forward the same to our Senators and Representatives at Washington.

No question occupied a greater share of public attention in the State during the past year than that growing out of the election for municipal officers in the city of Charleston, held on the 10th of November, 1868. Under the provisions of a law passed at the special session of the Legislature, in September of that year, it became the duty of the mayor and aldermen, in case of an election in an incorporated city, to publish the whole number of votes cast for each candidate, and declare the election of those receiving the highest number. In this case it was ascertained that Gilbert Pillsbury, the Republican candidate for mayor, and the Republican candidates for aldermen, had received the largest number of votes, and were therefore elected. But, in compliance with the protest of a portion of the citizens against the validity of the election, on the ground of alleged irregularities in its conduct, the mayor and aldermen refused to publish the returns as made by the managers of the election, or to declare the election of the successful candidates. The Board of Aldermen, after making an investigation, in which it appeared that the alleged irregularities were merely technical, and did not affect the result, declared the election void. The aid of the Supreme Court was now sought, to compel the existing authorities to declare the election as required by law, and for this purpose an alternative writ of *mandamus* was issued. In answer to this writ, a return was made by the Board of Aldermen, in which they certified that the election had been contested, and that, after an examination of the returns, they had declared the election void, on the ground of certain irregularities. The court having decided that the Board of Aldermen had no authority thus to declare the election void, held the return to be insufficient, and issued an order commanding them to declare the election, as required by law, and make return thereof to the Supreme Court on the 20th day of January, 1869. The Board of Aldermen obeyed this peremptory order by publicly declaring that the Republican candidates had received the largest number of votes, without admitting, however, that they had been *duly elected;* and both mayor and aldermen still refused to vacate or surrender their offices.

As it would have required not less than a year to reach a final adjustment of the difficulty in the courts, the matter was at once brought before the Legislature by Mr. Corbin, a Senator from Charleston, who introduced into the Senate a "Bill to confirm and declare valid the recent election of mayor and aldermen in the city of Charleston," which was subsequently amended to read as follows:

Be it enacted by the Senate and House of Representatives of the State of South Carolina, now met and sitting in General Assembly, and by the authority of the same:

SECTION 1. That the election held in the city of Charleston on the 10th day of November, A. D. 1868, for the several offices of mayor and aldermen of said city, the result of which has been declared by the acting Board of Aldermen of said city, be, and

the same is hereby, confirmed and declared valid, to all intents and purposes, as if the same had been conducted in strict accordance with the technicalities and provisions of existing laws.

SEC. 2. That immediately after the passage of this act it shall be the duty of the acting mayor and aldermen of the city of Charleston, on demand, to turn over all the property, books, and papers pertaining to their several respective offices, to the persons declared by them to have received, on the 10th day of November, A. D. 1868, the largest number of votes for the several offices of mayor and aldermen of said city, and to vacate and surrender to said persons their several and respective offices.

SEC. 3. That for each and every day's detention or holding of the office of mayor or alderman of the city of Charleston, contrary to the provisions of this act, the person or persons so offending shall be subject to a penalty of fifty dollars, the said penalty to be recovered in an action of debt by the person or persons aggrieved and kept out of office thereby.

SEC. 4. Any laws continuing in office persons elected or appointed to office previous to, or during, or under the late provisional government of South Carolina, or under or by virtue of any military orders, shall be held not to apply to or continue in office the present acting mayor and aldermen of the city of Charleston, but as to them said laws shall be held to be null and void. All acts or parts of acts inconsistent with this act are hereby repealed.

This measure elicited a protracted and animated discussion in both branches of the General Assembly. Its opponents contended that the settlement of the question belonged to the judicial department of the government, and was not a subject for legislative action; while on the other hand many precedents were cited to sustain the authority of the Legislature "upon the principle that the law-making power has a right to dispense with the compliance with the formalities or requirements of its own acts."

The bill having become a law on the 1st of March, the refusal of the acting mayor and aldermen to surrender possession of their offices rendered it necessary again to appeal to the courts. Accordingly the claimants sought to obtain possession of the offices and papers by means of a writ of *mandamus*, which, however, being decided by the court not to be the proper remedy, a writ of *quo warranto* was then obtained from the Circuit Court; but it was not until the 1st of May that the contest was ended by the decision of the court in favor of the candidates who had received the highest number of votes. In rendering this decision, Judge Carpenter said: "The act of March 1, 1869, does not amend the charter. It makes an election regular and valid which was before irregular and defective. The State government had constituted certain persons its political agents to conduct the election; they conducted it in an irregular and illegal manner. The conditions upon which it should have been held were prescribed by the political powers of the State; the same powers might have neglected to require the performance of those conditions before the election, had a right to waive them afterward, deemed it expedient to do so, and did make it valid and legal. The power conceded, the expediency and propriety of the measure, are considerations exclusively for the Legislature. The statute is unambiguous, its language explicit; the law has spoken, and it becomes my imperative duty so to decide." In consequence of this decision, no further opposition was manifested, and, on the 3d of May, Mayor Pillsbury, and the aldermen elect, assumed control of the city government.

The relations between laborers and employers have formed a prominent topic of discussion during the past year, as being closely allied with the industrial reconstruction of the State. A large proportion of the laborers, being freedmen employed upon farms and plantations, have had occasion to complain of the unjust conditions imposed upon them by planters in contracts for labor, and of the insufficiency of the wages, and the uncertainty of their prompt collection. Another alleged cause of complaint has been the obstacles encountered by thrifty laborers in their efforts to purchase land in parcels commensurate with their limited means.

In consequence of these grievances, a State Labor Convention, composed chiefly of colored delegates, was held in the latter part of November at Columbia, the object of which was to obtain from the General Assembly then in session the legislation necessary to protect the laborer from the alleged rapacity and dishonesty of his employer. In a memorial presented to the Legislature, the position and the wants of the agricultural laboring-class of the State were defined, and a redress of their grievances asked in the following terms:

We pray that your honorable body will provide by statute:

1. That the claim of the agricultural laborer for wages due shall operate as a preferred lien upon the land that he works, and that the planter or owner of said land shall not sell or alienate the same, until such claim is satisfied.

2. That the Governor shall appoint a discreet and proper person in each county who shall be designated as "commissioner of contracts." Such persons shall be charged with the duty of examining and attesting all contracts between the planter and laborer, and shall act as advisory counsel of the laborer upon all questions that may arise under his contract. He shall make a quarterly report to the Bureau of Agricultural Statistics, setting forth the number of laborers in his county, how employed, and the rate of wages paid, and the names of planters and laborers who may have violated their contracts, all of which shall be laid before the General Assembly, at the commencement of each session thereof, and shall be published for general information.

3. That the suits of all classes of laborers and employés for wages due them shall have precedence on the calendars of the courts, over all other civil suits, and shall be heard at the first term of the court after the declaration of the plaintiff in the same shall have been filed.

4. That the Governor shall be authorized to appoint, in each county, an officer whose duty it shall be to make up the list of jurors, and superintend the drawing of the same, in order that the laboring-classes may have a fair representation on the juries, a privilege which is practically denied them in the rural districts, under the operation of the present system.

5. That, when lands are sold under execution, the sheriff shall divide them, as nearly as practicable, into tracts not exceeding fifty acres each, in order that the small capitalists may be enabled to purchase.

We believe that this measure will greatly facilitate

the acquisition of land by the landless, and that it can be rendered legally practicable by providing that the decree of sale, in each case, shall declare that only so much of the debtor's land, or the subdivisions thereof, shall be sold as may be necessary to satisfy the judgment.

6. That all due-bills given by planters to laborers shall specify in terms the special consideration for which the same shall have been given, and shall be transferable, at the option of the holder, and shall operate as a lien upon the crop and land whenever such due-bill is given, in lieu of payment for agricultural labor.

7. That nine hours shall be a lawful day's work for all mechanics and laborers engaged in manufactures or in any business requiring skilled labor.

8. Abolish all taxes on sales of cotton and rice, by either State or municipal authorities.

Your memorialists are satisfied that the enactment of the laws herein prayed for will be of vast benefit to the agricultural laborers, and will greatly tend to advance the industrial reconstruction of the entire State.

This action on the part of the laboring-class was not without its effect; for a bill was promptly introduced into the House, with fair prospects of becoming a law, embodying the main points of the memorial.

The total receipts into the Treasury during the fiscal year ending October 31, 1869, were $2,084,911.44; the total expenditures amounted to $2,099,345.44, of which the sum of $995,973.24 was paid on account of floating debts, and expenses incurred prior to the beginning of the fiscal year, thus reducing the actual cost of the State government for this year to $1,103,372.20. Deducting from this sum the amount of disbursements ($69,119.80) made in fitting up the new State-house, and in taking the census, there remains as the ordinary current expenses of the State government for the year the sum of $1,034,252.40. The balance remaining in the Treasury at the end of the fiscal year was $11,851.07. The funded debt of the State is $6,183,349.17, bearing an annual interest of $338,693.86. Of this debt, the sum of $304,443.89 falls due in June of 1870. The total amount of assets held by the State is $2,754,660. The taxes paid into the State Treasury during the fiscal year amounted to $1,028,696.98; in addition to which there was paid into the Federal Treasury, for the internal revenue, the sum of $2,622,690.68.

The Land Commission, established in 1868 by the Legislature for the purpose of purchasing lands to be sold in small parcels, on favorable terms, to meet the wants of purchasers of limited means, has been productive of much good to the State. Forty-five thousand acres of land have already been purchased in the several counties, which is now in process of survey and division into tracts of a size adapted to the means of purchasers. The following table shows the extent and nature of the lands of the State and their valuation:

	No. of acres.	Value.
Arable or plough lands....	2,490,445	$23,670,756
Meadow and pasture lands	2,019,105	7,302,275
Wood, uncultivated, and marsh-lands.....	11,975,412	42,389,023
Total.....	16,484,962	$173,362,054

The importance of improving the extensive tracts of swamp-lands by a thorough system of drainage is attracting the attention of thoughtful men in the State. These lands are chiefly situated along the coast, and in their present condition are not only unproductive and worthless, but, by their pestilential exhalations, render the adjacent territory uninhabitable for a considerable portion of the year. Yet, on account of the great fertility of the soil and the mildness of the climate, their improvement and tillage would contribute largely to the agricultural products of the State, and render this extensive region a favorite one for habitation. The great value of this improvement has been called to the attention of the Legislature by Governor Scott in his last annual message to that body.

The public schools of South Carolina are not so well attended as they should be. There are 168,819 children in the State between the ages of 5 and 18 years, of whom 68,108 are white and 100,711 colored. Yet, of this aggregate number, only 16,418 (8,255 white and 8,163 colored) attend the public schools. The whole number of public schools in the State is 381, in which 478 white and 50 colored teachers are employed. Of the white teachers, 405 are from the Southern States and 73 from the Northern; of the colored teachers, 44 are males and 6 females. Of the whole number of teachers, 255 are males and 273 females.

The Lunatic Asylum is reported to be in a favorable condition. Additional accommodations are needed to meet the wants of applicants. The establishment of a separate institution for idiots and imbeciles is recommended, as their condition requires a different treatment from that of lunatics. The number of patients under treatment in the asylum during the year was 298, of whom 64 were discharged, leaving 234 in the asylum at the end of the year. Of the 64 discharged, 47 had been entirely cured. The number admitted during the year was 94, of whom 48 were males and 46 females. Of the total number admitted, 67 were cases of more than one year's standing, and were regarded as chronic; 13 were idiots or imbeciles, and 14 were epileptic. Prior to the close of the war the number of colored patients did not exceed 5 in any year; while during the past year the number admitted was 29. The receipts into the Treasury during the year amounted to $48,244.65, and the expenditures were $48,399.56.

The highest number of convicts in the penitentiary in 1869 was 506, of whom 301 were received during the year. The number discharged during the year on expiration of sentence was 51; 8 died; 16 escaped, and 136 were pardoned; leaving 295 in confinement at the end of the year. The number of pardons granted is unusually large; but in most cases they were granted a few days before the expiration of the sentences, in order to preserve the civil rights of those pardoned. The ex-

penditures of the year were $61,522.50; the amount of work performed by convicts, as estimated at contract price, and of materials and stores on hand, $93,675.69, leaving a balance of $32,153.19 to the credit of the institution.

There has been a marked decrease in the aggregate value of the real and personal property in the State since 1860, the extent of which, owing to the changes wrought within that period, has not been accurately determined. The assessed valuation of the real property in 1860 was $129,772,684, and of the personal property $359,546,444, which included slaves, valued at $160,962,400; in 1869 the assessed value of the real property was $125,170,069, while the personal property was valued at $38,828,410.

The number and assessed value of live-stock in the State in 1869, as compared with the number and value in 1860, are exhibited in the following statement:

	1869.		1860.	
	Number.	Value.	Number.	Value.
Horses	50,071	$3,926,580	81,125	.....
Cattle	270,987	2,589,969	506,776	.....
Mules & Asses	39,257	3,611,671	56,456	.....
Sheep & Goats	164,421	198,664	238,509	.....
Hogs	468,373	1,450,494	965,779	.....
Total	993,109	$11,776,808	1,843,645	$23,934,465

Pursuant to an act of the Legislature, passed in March, 1869, an enumeration of the inhabitants of South Carolina was made during the year, which presented the following results:

COUNTIES.	TOTAL NUMBER OF PERSONS OF ALL AGES.				AGGREGATE OR TOTAL POPULATION.
	MALES.		FEMALES.		
	White.	Colored.	White.	Colored.	
Abbeville	4,478	7,977	5,004	9,376	26,835
Anderson	6,609	4,274	7,463	4,779	23,125
Barnwell	5,179	7,893	5,254	8,728	27,054
Beaufort	3,138	14,198	3,037	18,991	39,364
Charleston	12,367	24,977	13,747	30,165	81,256
Clarendon	2,136	4,248	2,314	4,517	13,215
Chester	3,295	6,305	3,607	6,639	19,846
Chesterfield	3,202	2,036	3,736	2,328	11,302
Colleton	4,142	8,473	4,248	8,483	25,346
Darlington	4,946	7,328	5,495	8,071	25,840
Edgefield	6,493	9,416	7,454	10,223	33,586
Fairfield	2,291	5,580	2,582	5,944	16,497
Georgetown	1,381	6,266	1,300	7,426	16,372
Greenville	7,153	3,876	7,803	4,280	23,112
Horry	3,551	1,457	3,789	1,492	10,289
Kershaw	1,902	3,698	2,078	3,952	11,630
Lancaster	2,472	2,431	2,655	1,823	9,381
Laurens	4,540	6,060	5,464	6,322	22,386
Lexington	4,361	2,426	4,643	2,625	14,055
Marion	2,598	1,827	3,994	3,527	11,955
Marlboro'	2,763	2,871	2,852	3,102	11,588
Newberry	3,021	5,845	3,330	6,081	18,277
Oconee	3,961	1,229	4,476	1,285	10,951
Orangeburg	4,401	8,543	4,344	9,554	26,842
Pickens	3,912	1,231	4,447	1,305	10,795
Richland	3,143	6,022	3,273	6,705	19,143
Spartanburg	7,848	3,491	8,973	3,961	24,273
Sumter	3,375	4,233	3,543	8,546	19,697
Union	3,952	4,491	4,512	5,135	18,090
Williamsburg	2,671	5,335	2,829	5,641	16,476
York	5,423	5,535	6,012	5,561	22,531
Total	130,803	179,572	144,158	206,566	661,099
City of Charleston	9,518	10,275	10,835	14,295	44,923

The number of inhabitants in the State, in 1860, was as follows:

	Males.	Females.	Total.
White	146,201	145,187	291,388
Free colored	4,548	5,366	9,914
Slaves	196,571	205,835	402,406
Aggregate	347,320	356,388	703,708

A comparison of the results above given shows a decrease of 16,427 in the white population of the State since 1860, and 26,182 in the colored, making a total decrease in the population of 42,609. The decrease in the white population has been five and a half per cent., and in the colored six and a third per cent.

SPAIN. Throughout the year 1869 the country was under a Provisional Government. On the 18th of June, 1869, Marshal F. Serrano y Dominguez, Duke de la Torre, was appointed Regent, and formed the following ministry: President of the Council and Minister of War, Captain-General J. Prim, Count de Reus, Marquis de los Castellejos; Minister of State, M. Silvela; Minister of Justice, M. Ruiz Zorilla; Minister of Finances, C. Ardanaz; Minister of the Navy, Counter-Admiral J. B. Topete; Minister of the Interior, P. M. Sagasta; Minister of Agriculture, J. de Echegaray; Minister of the Colonies, M. Becerra.

The area of Spain, inclusive of the Balearic and Canary Islands, is 195,607 square miles; the population, in 1864, was 16,302,625. The population of the colonies, in 1869, was as follows:

America.—Cuba and dependencies (1867)	1,369,942
Porto Rico and dependencies (1864)	615,574
Asia and Oceanica	4,348,459
Africa.—The Guinea Islands	5,590
	6,339,565

The budget of 1869–'70 estimates the revenue at 214,113,800 escudos (1 escudo=48 cents); the expenditures, at 298,708,491 escudos; deficit, 84,594,691 escudos. The public debt on March 1, 1869, amounted to 2,551,000,000 escudos.

The army, according to a statement of the Minister of War, amounted, in the summer of 1869, to 80,000 men. The fleet is to consist of 7 iron-clad frigates, 5 large screw-steamers, 9 smaller screw-steamers, 8 side-wheel steamers, 2 transports, 2 sailing-vessels, 2 school-vessels. For the protection of the coast, there are to be employed 3 gunboats, and 84 sailing-vessels.

The bloody conflict between the republicans of Malaga and the troops of the Government, which took place in the last days of the year 1868, was quelled, after severe fighting, on January 2, 1869. The insurgents having refused the summons of General C. de Rodas to surrender, the latter, supported by the ships-of-war, after a prolonged fight took possession of all their positions, and completely defeated them. They lost 400 killed and wounded, and more than 600 taken prisoners. The conflicts between the republicans and the Government gave new confidence to the partisans of the

dethroned dynasty. The priests especially avowed themselves Bourbonists almost to a man. There were papers, like the *Siglo*, the *Esperanza*, the *Estandarte*, and the *Pensamiento Español*, which never made a mystery of their hopes and desires, which advocated the cause of the throne as indissolubly connected with that of the altar, and which fought its battles with a recklessness commensurate with their ability. The *Epoca* advocated the cause of the banished dynasty under the thinnest disguise of respect for legality. Bourbonism, in short, was militant and rampant throughout Spain—a foe sufficiently to be dreaded, even without reliance on the aid of native and foreign plotters from abroad.

Sagasta, Minister of the Interior, explained the position and duty of the Government regarding these outbreaks, by a circular, in which he says: "The Government has no intention of making a *coup d'état*, or of disarming the citizen militia. The present agitation tends to prevent the carrying out of universal suffrage in Spain, the meeting of the Cortes, and the definitive constitution of the country, and has, moreover, the effect of paralyzing Spanish credit. The Government, aware of the manœuvres which are being employed, is resolved to preserve intact the sacred deposit of the national sovereignty, and to maintain order until the assembling of the Cortes, whose decision it respectfully awaits, and does not desire to influence."

The election for the Cortes closed in the middle of January, and resulted in a considerable majority for the monarchical party. The nation exercised its right of general suffrage for the first time, and, though party spirit ran very high, and certain classes were deeply incensed at the duplicity of the Government, the election passed over with perfect order. The assassination of the Governor of Burgos, while making a new inventory of the archives of the cathedral, by some fanatics, created great excitement, and, at Madrid, demonstrations against the apostolic Nuncio induced the Provisional Government to issue, on January 28th, an address to the nation. The Archbishop of Burgos was arrested and given over to the custody of the military; and Zorilla, the Minister of Instruction, ordered that the archives of all convents and religious edifices should be seized.

The ex-Queen, Isabella, still indulging the hope to be restored to her throne, published, February 12th, the following protest:

To the Spanish Nation:

The Cortes, illegally convoked and elected to a great extent by violent and criminal measures, are about to meet in answer to the appeal of four ambitious men, who, by reducing the army, and even enlisting criminals in their cause, have succeeded by means of terror in substituting their cowardly and fatal tyranny for the constitution to which they mostly all swore fidelity, to the religion, laws, habits, and customs of their country, that they have overthrown, and which they are daily destroying.

The moment has now arrived for me to address you, Señores Senators and Deputies of the legitimate Cortes of the kingdom, the entire nation, impassible witnesses of such a great offence; the heiress of Pelayo and of Saint Ferdinand cannot longer assist at such a spectacle without raising her voice in protest. Therefore, let it be known by all:

I protest in the most solemn and categorical manner; I declare null and void all that has passed and that may transpire; I intend to retain my rights intact, of which those, who pretend to be invested with powers which naught but the demon of darkness, who directs their acts, could have granted, have not been able to dispossess me. It is universally known by what means they have brought the unfortunate Spain to her present painful position. Thanks to a tumultuous cry that proclaimed a universal and sovereign will, they have been enabled to replace the supreme power of the King united to that of the Cortes, the most ancient and legitimate representation of the political right in Spain, by a theory as impracticable as it is deceitful in its appearance.

* * * * * *

Were it not for the injustice, madness, and violence that reign at present, you would see me among you at this moment. * * * *

But if God shortens the term of punishment, if the clouds heaped up by falsehoods, rendered blacker by calumny, end by being dispersed, and if, as I trust, I should be recalled by those who erringly forced me to leave, without knowing how bitter it is for a daughter of kings to eat the bread of exile, to cross the threshold of a stranger's house, to quaff the cup of tears and bitterness, if at last truth, sure but slow, should rekindle the flame of enthusiasm with which my people have so often received me, and which my grieved heart now more requires than my outraged pride; if the love for my name, which I do not for a moment doubt, should awaken within you and inspire the respect by the shadow of which alone can be developed, in a monarchy as ancient as it is Catholic, the precious fruits of peace, wise government, and just administration, the fundamental basis of public happiness, then, Spaniards, in your midst I will only bear in mind faithfulness and rendered services.

In the mean time, I address myself to you, Señores Senators and Deputies of the legitimate Cortes of the kingdom, and honorable men of all parties, in order that you may well understand, and, by all the available means in your power, make known my protest, which must for the present and for the future relieve me of the serious responsibility now pending over me; a protest which, without any ambition to power, merely obeying the love I bear to my country and my dynasty, I beg to make, before you and God, who is the only irrefutable witness of the sincerity of human sentiments. He witnesses mine, and knows that if the public good, the security of the Prince of Asturias, and other elevated considerations did not withhold my conscience, I could encircle my brow with the crown; for in His eternal knowledge God knows that hitherto I have only encountered thorns, and if some laurels have fallen whose offshoots can yield some fruit, those I reserve all for my son, or rather for my sons, Alphonse being but the eldest, because I have always loved the Spaniards with the feelings of a mother.

Let us, therefore, all unite together to remedy the general confusion, and let each in his centre of action do his utmost, in the name of God, to prevent the laws from being trodden under foot, the fostering of evil passions, the disappearance of legitimate right, the overthrowing of the temples of Jesus Christ; in short, let us not be reproached with the act of transmitting to our grandchildren that religion inherited so pure from our fathers, in a state of profanity and contempt. ISABELLA.

The Constituent Cortes organized on February 13th. Rivero was elected President on

the 20th of February, by 167 votes against 47 given to Orense. Serrano, Prim, Sagasta, Zorilla, Topete, Becerra, and Rivero, were elected at Madrid. Espartero, who had been elected at Saragossa, declined to accept. In the sitting of February 22d, Rivero thanked the deputies for the honor they had conferred upon him; and, after some routine business, a proposal was made by one of the secretaries that the Cortes should pass a vote of thanks to the Provisional Government, and intrust Marshal Serrano with the executive power, and the formation of a new Cabinet. Señor Martos strongly supported the motion, and Señor Castellar (Republican) opposed it in a long speech. The debate to which the proposal gave rise was a very protracted one. Three sittings were occupied by it. The Republicans, who opposed the motion, succeeded in obtaining 62 votes—their opponents, 180. At last, on February 24th, it was agreed that the Provisional Government should be thanked, and that Marshal Serrano should be intrusted with the formation of a new ministry. On the following day the marshal made a speech, in which he said that he had assumed office from patriotic motives alone; that, had supreme power been conferred upon him, he would have refused to exercise it; and that his desire was to go hand in hand with the Chamber, having the minority for censor and the majority for judge.

The strength of the parties represented in the Cortes was as follows: 129 Progressists, 80 Unionists, 13 Republicans, 24 Ultramontanes and Isabellists.

Among the aspirants to the royalty, the Duke de Montpensier was in the beginning of 1869 the most powerful, and at the same time the most opposed. In the Cortes the Republican members made bitter attacks upon the ministry for their alleged monarchical proclivities. They demanded that the Duke de Montpensier be divested of his rank of Marshal of Spain, and accused the Provisional Government of endeavoring to smuggle him into the country for the purpose of placing him upon the throne. General Prim replied that the Duke could not with justice be deprived of his title of marshal. Admiral Topete, the Minister of the Marine, amid great excitement declared that a kingdom with Montpensier on the throne was preferable to a republic. Marshal Serrano made a calm and dignified speech, defending the Provisional Government from the attacks of the Republicans, asserting the sovereign authority of the Cortes, and insisting that the determination of a form of government for Spain and the choice of her future ruler should be left to the Constituent Cortes alone. He deprecated the violent pressure brought to bear upon the Cortes by the Republican party as impolitic and unfair.

The Cortes rejected a bill providing for the abolition of the capitation tax, and the military conscription. General Prim having declared to them the country could not do without an army of at least 80,000 men, a new levy of 25,000 men was ordered for the army on March 24th, by 139 votes against 48, but it gave rise to fresh disturbances. Barricades were erected at Xeres; Seville and other towns became agitated. The revolt at Xeres was promptly suppressed by the troops, who attacked the barricades built by the revolutionists, and routed them. They were glad to avail themselves of the approach of darkness to evade their pursuers. On March 7th, however, the revolutionists again showed front, but, after a fierce struggle, were completely defeated.

The committee appointed to prepare a new Constitution made a report to the Cortes on March 30th. The preamble runs thus: "The Spanish nation, and in its name the Cortes Constituentes elected by universal suffrage, desiring to establish justice, to affiance liberty and security, and to develop the good and security of so many as live in Spain, decree and sanction the following:"

Chapter I., containing thirty-one articles, defines the rights of Spaniards, individual liberty, inviolability of domicile and letters, universal suffrage, liberty of speech and of the press, right of assembly, association, and petition. By article 20 the nation obliges itself to maintain the worship and the ministers of the Roman Catholic religion. By the following article the public and private exercise of any other worship is guaranteed to all foreigners resident in Spain, without other limitations than the universal rules of morals and of right. By article 22 it is enacted that if any Spaniards profess any other religion than the Catholic, all the dispositions of the foregoing paragraph are applicable to them. The right of establishing schools without license is guaranteed by article 24. In the second and third chapters the public and legislative powers are defined; the Congress to be composed of one deputy at least to each 40,000 souls of population, elected according to the electoral law; the deputy to be a Spaniard, twenty-five years of age, and in possession of civil rights. Chapter IV. is devoted to the executive power, the relation of the King to the state being stated: The person of the King is inviolable, and he is not subject to responsibility. The ministers are responsible. The King will nominate and freely dismiss his ministers. The power to execute the law resides in the King, and his authority extends to all that conduces to public order within and public security without the state. The King disposes of the sea and land forces, declares war, makes and ratifies peace, giving afterward documentary account to the Cortes. Only once in each legislature can the King suspend the Cortes without the consent of the same. In any case the Cortes must not fail to be reassembled within the time fixed in article 48. In event of dissolution of the Cortes, the royal decree will necessarily contain the convocation of new ones within three months. Beyond these necessary faculties for the execution of the laws, there belong to the King: 1. Care of the coining of money, on which will be placed his bust and name. 2. Appoint to civil and military employs, in accordance with the laws. 3. Concede in the same manner honors and distinctions. 4. Direct the diplomatic and commercial relations with other powers. 5. To forgive criminals, in accordance with the law, save what belongs relatively to the ministers. The King will need to be authorized by a special law: 1. To alienate, cede, or exchange any portion of the Spanish territory. 2. To incorporate any other territory into Spanish. 3. To admit foreign troops into the kingdom. 4. To ratify treaties of alliance, especially of commerce, those

which stipulate for subsidies to foreign powers, and all those which individually affect Spaniards; in no case may secret articles of a treaty modify the public ones. 5. To concede amnesties, and general indulgences. 6. To contract matrimony himself, and to permit it to be contracted by the persons who, being his subjects, have the right to succeed to the crown according to the Constitution. 7. To abdicate the crown. To the executive power belongs the faculty of making rules for the fulfilment and application of the laws previous to the requisites the same supply. The dotation of the King will be fixed at the beginning of each reign. On the succession to the crown (Chapter V.) it is proposed that the royal authority be hereditary. The succession to the throne will follow the regular order of primogeniture, always preferring the nearest lines—in the same line always preferring the male to the female, and in the same sex the oldest to the youngest. Should the dynasty which is called to the possession of the crown become extinct, the Cortes will proceed to a new choice, as may best suit the nation. When the King dies, the new King will swear to guard the constitution and the laws in the same mode and in the same terms as the Cortes may decree for the first occupant of the throne according to the Constitution. The Prince of Asturias will take the same oaths when he attains eighteen years of age. The Cortes will exclude from the succession those persons who may be incapable of governing, or who may have done any thing to merit the loss of the right to the crown. When a female reigns, her husband will have no part in the government of the kingdom. The King is of age at eighteen. The first articles refer to the powers exercised by ministers, and the public forces and taxes. Ministers not members of either of the Chambers cannot take part in the debates. Ministers may be impeached by the Lower House, and will be judged by the Senate. Trial by jury is established alike for political and ordinary offences.

The document was signed by Salustiano de Olozaga, President, and the Committee of Thirteen. The ministry, on finding the chances of the Duke de Montpensier to the throne very doubtful, applied in April to Don Fernando, ex-Regent of Portugal, but he refused the offer of the Spanish crown.

On April 19th, the Minister of Finances presented his budget. He estimates the receipts at 2,141,000,000 reales, of which 473,000,000 are derived from taxes upon landed property, 120,000,000 from taxes upon articles of commerce, and 45,000,000 from the succession duty. The salt and tobacco monopolies are to be abolished in 1870, and various modifications will be made in the tariff. He proposed to effect a reform in the system of prohibitory duties, after a period of six years, by gradually reducing such duties. He recommends that the amount of the floating debt be fixed by law at 600,000,000 reales.

The discussion of the Constitution began April 6th. In the debate on April 22d, the clauses granting the liberty of the press and the freedom of public meeting were adopted, after an amendment empowering the authorities to inspect the contents of newspapers before publication had been suspended. A bill of amnesty was passed by the Cortes on May 1st.

On May 5th a Carlist conspiracy was discovered at Barcelona. Its discovery led to the arrest of thirty-six persons, among whom there were several superior officers.

In the sitting of the Constituent Cortes on May 12th, the discussion on the draft of the Constitution was renewed. Article 31, relating to the circumstances under which the constitutional guarantees may be suspended, was adopted by 96 votes against 56. The Cortes rejected a proposition of Señor Orense to add a clause proclaiming the abolition of slavery in the Spanish colonies. Señor Olozaga and Admiral Topete said that both the Government and the nation wished for the abolition of slavery, but that it must not be effected in a manner prejudicial to established interests. An amendment to the constitution was proposed by the Republicans, to the effect that all powers emanate from the nation, and all persons to whom they are intrusted must be elected by and held responsible to the people, which was agreed to. An amendment tending to the establishment of a federal republic was rejected by 182 against 64. A proposition was consequently made to create a triennial Directory, to be appointed by the Cortes. Fearing that civil war was imminent, the Cortes were ready to accept even the proposition for a regency. Amendments requiring the King to be a native of Spain, and that he be elected by a *plébiscitum*, were rejected. The Cortes then passed the monarchy clause of the Constitution, and, on May 21st, hereditary monarchy was adopted by 214 votes against 71. On this occasion, Castellar made a great effort in favor of establishing a republic, eloquently referring to the example of the United States, and praising their form of government with enthusiasm. His declarations were responded to by great agitation in Barcelona and Saragossa in favor of a republic. On May 10th the Government approved the bill establishing religious liberty, by 156 votes against 31, in consequence of which vote the Ultramontane members, except one, declared their resignation. On June 1st the Constituent Cortes adopted the new Constitution by a vote of 214 against 55. After the vote was declared, Señor Figueras, amid much enthusiasm, announced that the Republicans, though opposed to those clauses of the Constitution which provided for the establishment of a monarchy, would support them. The motion made by the Republicans, that the standing army in Spain be reduced from 85,000 to 25,000, was lost by a vote of 173 against 53.

The Constitution was promulgated with great pomp on June 6th. The members of the Executive Council of the nation, together with the deputies to the Cortes, went out of the Chambers to a platform which had been erected in front of the halls of Congress. After the deputies had taken their allotted places and silence was obtained the secretary commenced to read the Constitution, which was received with loud cheers by the great mass of people assembled in front of the stand. On their return to the Chambers the deputies took the oath to protect the Constitution and the laws.

When the deputies were retiring, a tumult broke out, consequent on the utterance of hisses by a number of persons in the crowd. The disturbance increased in spite of the efforts of the troops to put down the demonstration. The trouble continued for some time, until the military governor of the city appeared, and with great presence of mind rushed in among the foremost of the rioters, shouting, "*Viva la Soberania Nacional!*" This changed the sentiments of the mob, and the crowd took up the cry and joined in loud cheers. Two men, however, were killed in the disturbance, and a good many persons were seriously injured. The deputies subsequently returned to the platform, when the troops outside the building, to the number of thirty thousand men, filed past in marching order. Great enthusiasm was manifested by the spectators who congregated in the streets. None of the Republican members, it was noticed, participated in the ceremonies. A salute of fifty guns was fired in honor of the occasion; fireworks were discharged in the evening in prominent places in the city, and a great banquet was given, which was attended by the notables of Madrid. Fully one hundred thousand people from the country poured into the city and participated in the demonstration during the day.

The Republicans did, however, not fail to give vent to their disappointment and opposition to the new Constitution. Thus, on June 10th, a great demonstration was held in Cordova, at which resolutions were adopted as protests against a return to the monarchical system of government. Deputies from all the southern provinces were present. Speeches of a revolutionary character were made. The stands from which the speakers addressed the crowds were profusely decorated with the American and Spanish flags, which were entwined. Loud cheers were given for the United States and President Grant. It is estimated that there were over fifty thousand persons present.

The army, judges, and magistrates throughout the country, took the oath to observe the Constitution. The debates upon the regency question, in view of the impossibility of electing a king, terminated in the conferring of this dignity on Marshal Serrano, on June 15th, by 193 votes against 45. The ceremony of his swearing-in took place June 18th. The motion, brought in by the Republicans in the Cortes, of expressing displeasure at the arrival of the Duke de Montpensier in Spain, was rejected by 113 against 67.

General Pezuela (Count Cheste) was one of the leading agitators in behalf of a restoration of the Bourbons, who was arrested to be banished to the Canary Islands.

The opposition of the Republicans did not relax. There was a stormy scene in the Cortes on June 17th between the ministers and the Republicans. General Prim, replying to a question from General Pierrad, said no prosecutions could be laid against generals and officers refusing to support the Constitution, but he, as Minister of War, would remove them from employ, and the Government would reserve the right to strike them off the rolls. The Minister Sagasta, in reply to a question of Figueras respecting the Governor of Tarragona prohibiting a republican meeting, said that republican meetings in which were used banners with mottoes against monarchy would be prohibited, as also "*Vivas!*" in favor of the republic, as being subversive of and contrary to the Constitution. Figueras replied that the Republicans would sustain the rights gained by the revolution, cost what it might, Prim demanded the meaning of these words. Figueras replied that he meant within legal grounds, for to appeal to force while they remained was a crime, but when they became useless, and individual rights were attacked, mutilated, or prohibited, it was not only a right but a duty. In the sitting of the Cortes on July 15th, the proposal to prorogue the session until October was unanimously agreed to. The Cortes thereupon nominated a permanent commission of eight members, in which all the different political factions were represented.

A plot for the assassination of Prim and Serrano was discovered. Arrests were made at Madrid, Valladolid, Barcelona, and Cordova; and Don Carlos left Paris for the Spanish frontier. On July 24th martial law was set in force in reference to conspirators against the public tranquillity. On the same day an engagement occurred near Ciudad Real, between a band of five or six hundred Carlists under Sarabuge and troops under Commandant Formaseti. The Carlists were defeated and dispersed, many having been killed and wounded. Don Carlos then ordered a cessation, for the present, of a movement in his behalf. The people seemed to become gradually more and more satisfied with the new order and the Government. However, the real state of things was unsatisfactory, not merely to the party of reaction, but to many Spaniards of good position, who were by no means ill-disposed toward the Government; and the Captain-General of Madrid, General Izquierdo, addressed a long communication to Serrano and Prim, in which he made the following striking declaration: "I took part in the revolution in September in the hope of seeing morality, law, and justice, succeed to the former abuses. The revolution has now been accomplished ten months, but my hopes have been deceived, and greater abuses, extensive immorality, and deplorable anarchy, prevail—disorders to which it is absolutely necessary to put an end. The Constitution having proclaimed the monarchy, it is indispensably requisite that a sovereign should be chosen without loss of time. If the Government does not shortly consider this question, I shall abandon all illusion as to the consolidation of

the revolution, and shall definitively retire into private life."

This letter was read in the Council of Ministers, and created a profound impression as an unmistakable indication of the undercurrent of feeling and opinion in Spain. To add to this dissatisfaction of the people, difficulties were increasing in Cuba; the accounts received from thence were uniform as to the bad prospects of the Spaniards. The execution of General Prim's order, that all rebels captured with arms in their hands should be shot without any kind of trial, created a very bad impression. The revolt in favor of Don Carlos, which was considered abandoned, was kindled afresh. A band of four hundred men invaded Catalonia, other armed bodies showed themselves in Valencia and the mountains of Toledo. On the other hand, the Republicans perfected an organization and published a manifesto favoring a federative republic for the entire Peninsula. The affairs became more perplexing than ever. The "provisional" condition of things continued which had begun since the flight of the ex-Queen. No step was taken toward any definite settlement. Besides this, the Cuban difficulty was very troublesome. The idea of selling the island to the United States, if ever seriously entertained, was given up. The prospect of the insurgents being recognized by the United States was becoming brighter, and Spanish pride threatened to drive the Government into war at any risk. General Prim had an interview with the Emperor of the French on September 16th, but it did not seem to result in any thing beyond advice.

The chances of the Duke de Montpensier, the king of Portugal, and his father the ex-Regent of Portugal, having become apparently hopeless, the choice of the Duke of Genoa for the vacant throne was favorably entertained in Spain. But the difficulty of obtaining a suitable candidate for the throne imparted more and more strength to the idea of prolonging the Provisional Government for three years. Influential members of all parties were in favor of it. Even the Republicans were not opposed to it, as they would thereby gain time for carrying out their plans.

While in Europe and the United States the opinion became prevalent that Spain could not suppress the insurrection in Cuba by force, she grew more and more determined to retain the colony at any price. Prim telegraphed from Paris to the Ministry of War that no sacrifice should be spared, to maintain the honor of Spain, and to quell the insurrection in Cuba. But the insurgents were offered representation in the Cortes, religious freedom, and the right of establishing independent institutions of credit.

The volunteers of Tarragona having manifested republican tendencies, and assumed an attitude hostile to the Government, the authorities ordered them to be disarmed. Several commandants of the volunteers at Barcelona protested against this order, and refused to disarm their battalions. They erected barricades, and took possession of the public buildings in the *arrondissement* of Carmen. After being legally summoned to disperse, they were attacked by the troops, who destroyed the barricades, and completely defeated the insurgents. Order was restored, and numerous prisoners were taken and placed on board the ships in the harbor. There were many killed and wounded.

On September 28, the Council of Ministers, under the presidency of the Regent, agreed to propose to the Cortes the Duke of Genoa as a candidate for the vacant throne. His family, in reply to the Spanish Government, declared that the prince would only accept the crown of Spain if the Cortes elected him by a majority of two-thirds. King Luiz of Portugal addressed the following characteristic letter to the Duke de Soulé relative to the Spanish throne:

PALACE OF MAFRA, *September* 27, 1869.

MY DEAR DUKE: Observing that certain journals persist in affirming that in consequence of combinations made in Paris I am about to abdicate the crown of Portugal in favor of my son under the regency of my august father, and to accept that of Spain; seeing, besides, that this ill-founded report is assuming a certain consistency, and that resolutions of such gravity and so foreign to my ideas are attributed to me, I request you, my dear Duke, to contradict that statement as promptly as possible. If Providence has reserved days of painful trials for Portugal, I confidently hope that with the love of the country, and with the sincere alliance between liberty and the throne, I shall be able to resist these terrible eventualities. Honored in being at the head of your nation, I shall know how to accomplish the duties which a regard for our institutions and devotedness to my country impose upon me. Born a Portuguese, I desire to die the same. Your affectionate LUIZ.

Formidable republican bands concentrated in Catalonia, and compelled the Government to send troops against them. The critical state of affairs induced General Prim, as president of the Council of Ministers, to declare in the Cortes on October 2d as follows:

It is with pain that I have to draw the attention of the Cortes to the state of perturbation which prevails in the country. The Government has no personal feelings against those who have taken up arms to oppose the institutions the nation has adopted; but it will do what the country and the Cortes have the right to expect from it—namely, to reëstablish order. The Government finds itself under the necessity of having recourse, with the sanction of the Cortes, to extraordinary measures, for the ordinary means at its disposal are, at this moment, insufficient. The Government promises that the extraordinary measures shall be employed no longer than the present state of war shall exist. The people who have taken arms under the republican flag, have been unable to sustain any combat of importance, but at various points they have destroyed the railways and telegraphs. The prime minister mentioned the lines intercepted and added that the damage committed would entail great sacrifices on the country. He then proceeded as follows: I can give the Cortes and the country the assurance that the rebels shall not triumph, for they cannot, and, if the Chamber accords what the Government asks, order will be speedily reëstablished. The Government declares that it will not enter upon any

reactionary course, and it promises to render an account to the Cortes, of what it has done, immediately after the cessation of the circumstances which oblige it to solicit extraordinary power.

On October 2d, the republican volunteers of the town of Reuss declared their adhesion to the movement in Catalonia, cut the telegraph-wires, and stopped the trains. Great alarm prevailed on October 1st, at Bejar, where the populace endeavored to set a prisoner named Pec and his accomplices at liberty, but the civil governor, aided by the respectable classes, succeeded in restoring order. The Republican deputy Noguera had organized a band in the province of Huesca, cut up the railway lines, and freed the prisoners in jail. A band, commanded by the deputy Joaritzto, had been defeated in the vicinity of Martarelli by an armed column of troops. Agitation continued to prevail at Xeres and other towns of Andalusia. Serious events were apprehended, but affairs at Madrid were tranquil.

The Cortes opened on October 2d, and the Government presented a bill suspending individual rights until the insurrection, which was increasing, should be quelled. On October 4th the ministry was charged with concealing the truth with regard to the situation of affairs in the provinces. At Reuss—an important manufacturing town in Catalonia—the insurgents were said to number 10,000. The town, however, was soon relieved of their presence, as their leaders were anxious to avoid an engagement with the troops. Santander had established an understanding with Torrelavega, Laredo, and Castro, to cause a rising in those towns on a given day. A rising was feared throughout Castile, and it was said that the city of Valladolid had pronounced. On October 5th the ministerial papers asserted that Señor Paul, the deputy, had threatened with death all those persons who did not join the insurrection. Acts of vandalism and pillage and assassination were perpetrated by the insurgents. The situation was considered bad, but not desperate, if the army remained faithful to the Government. The plan of the republicans was to raise all the provinces, and afterward to attempt a *coup de main* upon Madrid from various points at once. On October 6th the Republican minority retired from the Chamber before the vote upon the bill for suspension of individual liberties. General Prim urged them to remain, in a speech partly of entreaty and partly angry, intimating that he should regard them as enemies, and that he would meet iron with iron, force with force. Señor Castellar said they might reconsider their determination in deference to judicious counsels, but they would never yield to threats.

Meanwhile the republican risings spread all over Spain; their headquarters were in Manresa, 30 miles north of Barcelona; several bands were roving through Andalusia. The volunteers in Madrid offered their assistance to the Government, and several battalions left the capital to perform active service in the field. The connection between Madrid and Barcelona was interrupted. The insurgents evacuated Reuss, however, at the advance of the troops, and were subsequently defeated by General Baldrick with a loss of 80 dead, 300 wounded, and many prisoners. Fights took place between the national troops and the republican insurgents in Catalonia, Aragonia, Old Castile, and Andalusia, the troops coming off victorious.

In October, the Government took still more decided measures against the republicans. The police-inspectors of the different quarters of Madrid received instructions to warn the inhabitants to arm their servants in order to defend their houses. The civil governor ordered the republican clubs to be closed in Madrid. Several batteries of artillery and regiments of infantry started from Madrid in pursuit of the insurgents in the neighborhood of Alcala de Henares, the garrison being reënforced by some chasseurs of the Military School of Toledo. A grand review was held by General Prim of the troops in the city, mustering 8,000 to 10,000 in number, evidently with the intention of showing his real military strength and to disprove the current rumor that the garrison had been reduced by detachments to 8,000. The insurrection was declining in Catalonia, Granada, and Andalusia. About 6,000 rebels submitted themselves in the provinces of Tarragona, Gerona, Lerida, and Barcelona. The movement, however, continued in Valencia, but strong bodies of troops were expected to make the attack. Madrid was still quiet. The Committee of the Cortes recommended the passing of a formal vote of censure on the Republican minority, and the authorization of legal proceedings against those deputies who have joined the insurrection. On October 14th, official intelligence was received, stating that the insurgents of Valencia and the greater part of those from the country had retired to a part of the city which they were fortifying. Eighteen battalions of Government troops had occupied the greater portion of the town. The republican movement was now reduced to Valencia, and to a few small bands of insurgents in Catalonia and Aragon, but they were daily surrendering. On October 15th, the insurgents at Valencia proposed to capitulate, but the authorities demanded unconditional surrender. In Bejar, forty-five miles south of Salamanca, a revolt broke out and many inhabitants fled. A detachment of troops were ordered there to restore order. The republican leaders, Paul and Salvochea, were abandoned by their adherents and fled to Gibraltar. Their adherents were defeated on their retreat through Andalusia, 70 being killed, and the rest dispersed. A number of republican provincial papers were suppressed. The deputies forming the Republican minority did not attend the sessions of the Cortes. The committee appointed by the Cortes to investigate the attitude of the Republican dep-

uties in the insurrection, recommended in their report a vote of censure against them for leaving their seats, and a judicial proceeding against those deputies who had taken an active part in the rebellion. One hundred and twenty-four persons were arrested in Barcelona. The militia of Villafranca laid down their arms. In the middle of October there were still about 20,000 insurgents in the field. The national troops defeated the insurgents in Catalonia and Granada. Railroads and telegraphs around Madrid were destroyed. The session of the Cortes was suspended on October 16th, after the Government had been authorized to prosecute seventeen Republican deputies who had taken part in the insurrection. The insurgents in Valencia surrendered unconditionally, after a fight of several hours. Their leaders disappeared, and the troops of the Government occupied the city. Many houses were consumed by fire, and a large number of rebels captured with arms in their hands. In many streets where barricades had been erected, or the advancing troops were resisted, the walls bore the inscription, "Here stood Valencia!" Order was now pretty well established throughout the provinces. The Cortes resumed their sittings. General Prim worked hard in consolidating the disjointed state of affairs, and paid a tribute to the bearing of the army and navy in defence of the Government and the people. The revolt in Bejar was suppressed. The troops had a fight with the remnants of Salvochea's force and routed them. Among the killed was Guillen, a deputy.

The prospects of the election of the Duke of Genoa to the throne of Spain continued to improve. By the end of October, 110 members had openly pronounced for him; but the majority of the people seemed opposed to him.

On October 30th General Prim declared in the Cortes that the Government hoped to withdraw at an early day the decree establishing martial law; but that at present such a step could not be taken, because conspirators still remained at large, and the cases of several rebel leaders were pending before the councils of war. Señor Ardanaz, in his budget submitted to the Cortes, announced that the financial deficit for the current year amounted to 520,000,000 reals. He said he looked forward with hope to the ensuing fiscal year, extending from January, 1870, to January, 1871, his estimates for which showed a surplus in favor of the Treasury.

On November 1st, the Cabinet was partly reconstituted by the appointment of Martos as Minister of Foreign Affairs, and of Figuerola as Finance Minister. According to General Prim's explanation, the question of a candidate for the throne was the cause of the ministerial crisis. He added that the attitude of the Unionists hindered a solution of the question, and declared that the Government would remain faithful to the principles of the resolution. The opposition to the Duke of Genoa became more determined. Admiral Topete resigned, owing to disagreement with General Prim, and was elected Vice-President of the Cortes. The situation became again critical. The Unionists and Progressists disagreed more than ever, not only regarding the choice of a king, but also concerning the constitutional oath and the election of deputies for the vacated seats in the Cortes. In the middle of November, 161 deputies were in favor of the Duke of Genoa. The constitutional guarantees suspended on account of public security were reëstablished in the beginning of December. In the middle of December, the Carlists recommenced their movements on the French and Portuguese frontiers. The Cortes having adopted a resolution to investigate the theft of the crown jewels by 120 votes against 5, ex-Queen Isabella replied that she had not taken them away. On December 17th the Cortes adopted a resolution directing the Constitutional Committee to prepare a bill concerning the election of a king. The Government ordered that the parliamentary elections to fill the seats remaining vacant in the Cortes should be held on January 20, 1870. The press of the opposition demanded that elections should be first held for the different municipal councils, so as to thus terminate the existing unconstitutional situation, the present municipal officers having been illegally appointed by the Government. In the Cortes the Republican minority made an energetic protest against these elections and demanded the restoration of the former ayuntamientos. They declared that they would carry the matter before the legal tribunals, but counsel the people in the mean time to keep the peace and make vigorous efforts at the new elections to return their true friends. The popular opposition to the Duke of Genoa increased. Even the Minister of Justice, Zorilla, declared in a public speech that, if the Government could not find a king, they would throw themselves into the arms of a republic, although he spoke everywhere in favor of monarchy. On December 29th, Castellar, the leader of the Republican party, attacked the ministry, because they were ready to throw the crown of Spain upon a mere boy-king. On December 31st it was announced that Victor Emmanuel had absolutely refused his consent to the candidature of the Duke of Genoa. The Spanish Cabinet offered its resignation in consequence of this refusal.

STANLEY OF ALDERLEY, EDWARD JOHN, second Lord, an English liberal statesman and cabinet officer, born at Alderley Park, November 13, 1802; died in London, June 16, 1869. He was educated at Eton and Christ Church, Oxford, graduating B. A. in 1823. He entered Parliament for Hendon, in 1831, and was a representative of the northern division of Cheshire from 1832 to 1841, and again from 1847 to 1848, when he was raised to the peerage as Lord Eddesbury. He succeeded to his father's title, as Lord Stanley of Alderley, in 1850. In 1833–'34 he was Under-Secretary

of State for the Colonies; in 1834–'35, under Lord Melbourne, Under-Secretary for the Home Department. Late in 1835 he was made Patronage Secretary of the Treasury, and continued in this office till 1841, when he was promoted to be Paymaster-General of the Forces, but went out with the ministry three months later. In 1846, in Lord John Russell's Cabinet, Mr. Stanley was made Under-Secretary of State for Foreign Affairs. In 1852 and again from 1853 to 1855 he was Paymaster of the Forces and vice-president of the Board of Trade, and in 1855 he became president of the Board of Trade, which position he held for three years. In September, 1860, he was Paymaster-General in Lord Palmerston's administration, with a seat in the Cabinet, and continued in that office under Earl Russell's second administration, retiring from official life in 1866. He was offered a seat in the Cabinet by Mr. Gladstone in December, 1868, but declined it on account of failing health. He was a man of great shrewdness and good sense, and thoroughly familiar with the political movements and measures of the last hundred years. In private life he was a man of genial temper, ready wit, and great kindliness of heart.

STANTON, Edwin M., LL. D., an American statesman, and Cabinet officer, born in Steubenville, Ohio, December 19, 1814; died in Washington, D. C., December 24, 1869. At the age of thirteen he became a clerk in a book-store in Steubenville, and in 1831 a student in Kenyon College, Gambier, Ohio, where he graduated in 1833. After a few months more as a bookseller's clerk at Columbus, he commenced the study of law early in 1834 in the office of his guardian, Daniel S. Collins, in Steubenville, and subsequently in the office of Benjamin Tappan, an eminent jurist of Ohio. In 1836 he was admitted to the bar and commenced practice at Cadiz, in Harrison County, where he was very soon elected county prosecuting attorney. He speedily attained to a large practice, especially in the Circuit Courts. In 1839 he removed to Steubenville, and was a partner for some years of his old preceptor, Judge Tappan. In 1842 he was elected reporter of the decisions of the Supreme Court of Ohio, and prepared volumes xi., xii., and xiii., of the Ohio State Reports. He had by this time attained a very high position at the Ohio bar, and was regarded as the ablest lawyer of the State in all questions of land-titles and commercial law. In 1847, he formed a partnership with Charles Shaler and Theodore Umbstratter, of Pittsburg, Pa., and, though retaining an office in Steubenville, removed with his family to Pittsburg. The firm devoted their attention almost entirely to civil causes of the highest character in the higher courts of Pennsylvania, and in the United States District, Circuit, and Supreme Courts. In all the important cases Mr. Stanton's services were secured on the one side or the other. He was possessed of great powers of application, and a remarkable intuition. His business before the Supreme Court of the United States became so large that in 1857 he was compelled to remove to Washington to attend to it. In 1858, he was sent by the Government to California, to attend to some land cases of importance. He was successful in these, and returned in 1859, and was employed as one of the counsel in the Many and Mc Cormick reaper case, where for the first time he met Mr. Lincoln, who was associated with him in the case. In December, 1860, while still engaged in a later stage of this same case, he was nominated by Mr. Buchanan Attorney-General, as the successor of Judge Black. He accepted the appointment, though aware of its difficulties. General Cass, Howell Cobb, and John B. Floyd, had resigned, the two latter with the purpose of going into the secession movement; Judge Black, now Secretary of State, and Mr. Thomas, of Maryland, Judge Holt, General Dix, and Mr. Stanton, were the members of the Cabinet, and all Democrats. On the 4th of March, 1861, Mr. Stanton retired from the Cabinet, and resumed the practice of his profession, but manifested a deep interest in the national cause. On the 11th of January, 1862, on the resignation of Mr. Cameron, Mr. Stanton was nominated by President Lincoln as Secretary of War. He was confirmed by the Senate on the 13th of January, and immediately entered upon his duties. The position was one of responsibility and overwhelming labor. During the greater part of the war, he had two or three assistant secretaries, men chosen for their executive ability and energy, as well as for other good qualities, but one after another they broke down in attempting to keep up with their chief. He never seemed to know the need of rest, and for months, we might almost say years, he slept at the office, working on till two or three o'clock in the morning, and rising before the sun to renew his toil. The burden of the war was upon him, and manfully and skilfully did he sustain it. That some of his measures were not judicious, that amid the pressure of care and anxiety he was at times brusque, harsh, and overbearing, must be admitted. Even his errors of judgment were prompted by his intense zeal for the national cause, and his anxiety to have the war brought to a successful close. That his course should bring down upon him the most intense hatred, and the most violent maledictions, was to be expected, but even his bitterest enemies never accused him of perverting the public funds to his own purposes, or to fill the pockets of his friends. He was believed to be quite incorruptible. After Mr. Lincoln's death he was retained in the Cabinet by Mr. Johnson; but ere long his stanch fidelity to the principles for which the war had been prosecuted made him obnoxious to the President, who,

fearing while he disliked him, sought to drive him to resign. Mr. Stanton, however, believing that his remaining in office would better strengthen the aims of his party, refused to resign, although heartily sick of his position. The President, at length, in August, 1867, suspended him from office, and made General Grant Secretary *ad interim;* but when Congress came together in December, 1867, they decided that Mr. Stanton was still Secretary, and General Grant promptly vacated the office in his favor. The President, thereupon, removed Mr. Stanton on the 21st of February and appointed General Lorenzo Thomas Secretary *ad interim;* and a day or two later sent a nomination for Secretary of War to the Senate. These measures being regarded as violations of the Tenure-of-office Act, led to the President's impeachment and trial, Mr. Stanton remaining in office till the conclusion of the trial, when, in May, 1868, the articles of impeachment failing to receive the constitutional majority, he regarded himself as rebuked from any further continuance in a position which for more than a year had been exceedingly tenacious. After leaving the Cabinet, Mr. Stanton sought to regain his health, which had been seriously impaired by his labors; but it was too thoroughly broken to be fully restored, and, though he appeared in a few cases before the Supreme Court, and manifested much of his old ability, each effort was followed by great prostration. In December, 1869, President Grant nominated him for an Associate Justice of the Supreme Court in place of Grier, resigned, and he was promptly confirmed by the Senate. His commission had not been made out, however, when he died after two or three days' illness. His property being insufficient for the support of his family, Congress ordered a year's salary as Justice of the Supreme Court to be paid to them, and his friends throughout the country made up a memorial fund for them.

STEWART, CHARLES, Rear-Admiral, U. S. N., and senior flag-officer in the service, born in Philadelphia, July 28, 1778; died at Bordentown, N. J., November 6, 1869. He was of Irish parentage, and his father, a captain in the merchant service, died when he was but two years old. His mother, a woman of remarkable talent and energy, superintended his education, and guided as carefully as she could the fun-loving and somewhat erratic tendencies of her son. When he was about ten years old, his mother was married a second time to Captain Britton, a former shipping-master, and then a prosperous shipping-merchant of Philadelphia, who had at one time commanded Washington's body-guard. At the age of twelve, he accompanied his step-father in a formal visit to General Washington, whom he had often seen, and for whom he felt a great reverence. The general spoke to him very kindly and showed him considerable attention, an honor which he remembered to his last day. Some years later he had the opportunity of another interview, as the representative of Captain Barry, of the Navy, with Washington.

At the age of thirteen, Charles Stewart made his first voyage as a cabin-boy in the merchant service, and passing through many and great perils (for, in those days of revolution, buccaneering, and piracy, a sailor's life was full of dangers), he rose rapidly in his profession, till, at the age of twenty, he was the commander of an Indiaman, a position only attained at his age by nautical skill and consummate courage. But his ambition led him to seek a higher and more honorable position, and the same year (1798) he abandoned the merchant service and took a lieutenant's commission in the navy of the United States. He was at first with Commodore Barry on the West India station, but in July, 1800, he was assigned to the command of the United States schooner Experiment, mounting twelve guns, in which he cruised in the West Indies, capturing French privateers, demanding and obtaining the release of American sailors who had been impressed on English vessels, and protecting the hapless inhabitants of the islands who were the prey of some of the insurgents and revolutionists. He was next ordered to the Mediterranean and employed in the blockade and siege of Tripoli. At the conclusion of hostilities there, he returned to New York to superintend, in 1806–'7, the construction of President Jefferson's gunboats. Subsequently, for several years, with the sanction of the Government, he and several other of the naval officers were engaged in the prosecution of mercantile enterprises in the Mediterranean, the Arctic, the Adriatic, and the East Indies. In 1812, as soon as war had been declared with Great Britain, Stewart, who already held a captain's commission in the navy, and Captain (afterward Commodore) Bainbridge, hastened to Washington to offer their services to the Government. They were met there with the announcement that the Cabinet, in view of the great superiority of the British Navy, had decided to place all the ships-of-war belonging to our navy in the harbor of New York, for the defence of that city. Such a decision seems now so absurd, that we can hardly realize that it could ever have been made; but the evidence is too conclusive to admit of a doubt. Against this preposterous determination, Captains Bainbridge and Stewart protested so earnestly and indignantly, that the President (Madison) reversed the Cabinet's decision, and directed the Secretary of the Navy to send the vessels-of-war to sea, to seek their enemy, and he would take the responsibility upon himself. Rejoiced at thus gaining permission to meet the enemy, instead of remaining in the harbor awaiting his onset, the two heroes returned to Philadelphia, and Stewart was assigned to the command of the Constellation, and assisted in defending Norfolk and Craney Island. In 1813 he assumed command of the Constitution, of 49 guns, and during a year's cruise succeeded

in capturing several British vessels. On the 19th of February, 1815, he fell in with the British ships-of-war Cyane, of 34 guns, and the Levant, of 21 guns, and captured them after a sharp combat of 40 minutes, having three men killed and 13 wounded, while the British vessels lost 35 killed and 42 wounded. The Levant was subsequently recaptured by the British squadron, but the Constitution escaped with her other prize. On his return he was received with the highest honors. The Legislature of Pennsylvania presented him with a sword, and a gold medal, commemorative of the capture of the Levant and Cyane, was ordered to be struck by Congress. The skill with which Captain Stewart had managed his ship, so as to rake both his antagonists without giving them the opportunity of damaging him, was indeed deserving of the highest praise. In 1817, Stewart, by this time a commodore, was ordered to the command of the Mediterranean squadron, which was almost in a state of mutiny, the officers in command of the vessels composing the squadron manifesting a spirit of insubordination which was exceedingly alarming. On his taking command, there was, for a time, a somewhat better spirit manifested, though there were still occasional evidences of a mutinous disposition. In June, 1819, however, these officers were guilty of an act of gross insubordination which could not be overlooked. A court-martial had been ordered to meet on the Guerrière to try a marine for some offence; but the officers preferred to meet on shore at the comfortable Sun Tavern in Naples, and there tried the culprit and found him guilty. The papers were sent to the commodore, and, as their proceedings had been entirely illegal, he disapproved them, released the prisoner, and called the court together to inform them of his decision. When they were assembled, he addressed a communication to them, stating what he had done, attributing their conduct to inadvertence, saying that therefore he should take no further notice of it, and recommending greater carefulness in the future. The officers, ready for a mutiny, took offence at this very mild rebuke, and a series of resolutions were offered which were grossly insulting to the commodore; and, as their vessels were getting under weigh for another port of the Mediterranean, they adjourned to meet at the call of their president. At their next meeting, the resolutions were passed, and the commodore immediately suspended from command, and sent home under arrest, Captain Thomas McDonough, of the frigate Guerrière, Master-Commandant Henry E. Ballard, of the ship Erie, Master-Commandant I. I. Nicholson, of the brig Spark, Lieutenant-Commandant John Gallagher, of the ship Franklin, and Lieutenant Benjamin Page, Jr., executive officer of the same ship. Lieutenant (afterward Commodore) Stockton commanded the vessel in which these officers made their unwilling voyage homeward. This sudden blow had an excellent effect. There was no more insubordination, and the Mediterranean squadron, from being the worst, became the best disciplined and most orderly squadron of the navy. The President and Cabinet approved Commodore Stewart's course, but, as the officers were deeply humbled and penitent, they were let off from any further punishment with a reprimand, the commodore himself interceding in behalf of one or more of them. In 1821 Commodore Stewart was transferred to the command of the Pacific squadron, another position of great difficulty, owing to the revolutions in progress in the South American states, the Spanish blockades, and the frightful piracies of the buccaneers. His administration of affairs, and defence of our rights on this coast, were able and satisfactory to all right-minded men. There were, nevertheless, some of those whose selfish and nefarious projects had been thwarted by his straightforward management, who filled the ears of the Government with their clamors against him, and on his return home, in 1824, the Naval Department thought it best that these accusations should be submitted to a court-martial. The result was eminently satisfactory to the commodore. The court, not content with acquitting him from all charges of mismanagement or dereliction of duty, felt itself compelled to make this declaration to the world: "So far from having violated the high duties of neutrality and respect for the laws of nations—so far from having sacrificed the honor of the American flag, or tarnished his own fair fame, by acting upon any motive of a mercenary or sordid kind—so far from having neglected his duty, or betrayed the trust reposed in him, by refusing proper protection to American citizens and property, or rendering such protection subservient to individual interests, no one circumstance has been developed, throughout the whole course of this minute investigation into the various occurrences of a three-years' cruise, calculated to impair the confidence which the members of this court, the navy, and the nation, have long reposed in the honor, the talents, and the patriotism, of this distinguished officer, or to weaken in any manner the opinion which all who know him entertain of his humanity and disinterestedness. These virtues only glow with brighter lustre from this ordeal of trial, like the stars he triumphantly displayed, when valor and skill achieved a new victory to adorn the annals of our naval-glory." From 1825 to 1837, Commodore Stewart was almost constantly employed on naval boards and commissions, naval courts-martial, etc. In 1837 he succeeded Commodore Barron as commander of the Navy-yard at Philadelphia, and remained there until 1861, when he was relieved at his own request. In 1855 the retiring board, created by act of Congress in that year, placed him on the retired list. He was at this time seventy-seven years of age, but he appealed in eloquent terms to Congress against this indignity,

feeling that he possessed as yet the vigor and the intellectual ability to do his beloved country service. On the death of Commodore Barron he became the senior officer of the service, and when a special act of Congress was passed in 1861, conferring upon him the title of senior flag-officer on the active list, he refused the commission, claiming that he already held that rank. In July, 1862, he was commissioned as the first rear-admiral under the new law. In 1841 a resolute effort was made by some of his friends to place him in nomination for the presidency, but, failing to receive his sanction or approbation, nothing came of it. He sympathized most heartily with the Union cause in the late war, and, though eighty-three years of age at its commencement, pleaded most earnestly to be allowed an active command. His counsels, clear, and wise as ever, were of great service to the Administration. He had purchased a home in Bordentown, in 1816, but his long absences and official duties had prevented his occupying it very constantly until after 1855. His last illness was protracted and attended with intense suffering, but it was endured with the most heroic patience.

STOW, Baron, D. D., an American Baptist clergyman and author, born in Croydon, Sullivan County, N. H., June 16, 1801; died in Boston, Mass., December 27, 1869. In his childhood his parents removed to Newport, N. H., where his youth was passed. He was fitted for college at Newport, and entered Columbian College, Washington, D. C., in 1821, graduating with the highest honors of his class in 1825. For the next two years he was editor of the *Columbian Star*, a religious paper published in Washington, and meanwhile was prosecuting his theological studies under the direction of Rev. Dr. Staughton. On the 24th of October, 1827, he was ordained pastor of the Baptist Church in Portsmouth, N. H. Here he remained five years, and, in 1832, accepted the call of the Baldwin-Place Baptist Church of Boston, to become their pastor. He remained with them until 1848, and then became pastor of the Rowe Street (now the Clarendon Street) Church. In the autumn of 1867 he resigned his pastorate, and since that time had been without a charge, but had been one of the editorial corps of the *Watchman and Reflector*. He was an able preacher, an excellent executive officer, and a faithful and affectionate pastor. At all times, and under all circumstances, he sought the things that make for peace, shrinking sensitively from strife and debate, and ever ready for any service in the cause of Christian love and duty. He had, from his first entering upon the ministry, manifested a deep interest in the cause of missions. He was Recording Secretary of the Board of the General Missionary Convention, afterward merged in the American Baptist Missionary Union, from 1838 to 1846. He served thirty years or more on its Executive Committee, and was several times elected Corresponding Secretary, but in each case declined, from a preference for pastoral work. Dr. Stow also served as President of the Trustees of the Newton Theological Institution, and was a member of the Board of Fellows of Brown University and of the Board of Overseers of Harvard. His published works, apart from occasional sermons, numerous articles in reviews and periodicals, etc., were: "Daily Manna for Christian Pilgrims," "Christian Brotherhood," "The Psalmist," "First Things, or Development of Church Life," "The Whole Family in Heaven and Earth," "History of the Danish Mission on the Coast of Coromandel," "Memoir of Harriet Dow," "Question Book of Christian Doctrine," and "History of the English Baptist Mission to India." In 1840–'41 Dr. Stow made the tour of Europe, and in 1859 he spent some time in Great Britain.

STRANGFORD, Percy Ellen Algernon Frederick William Smythe, eighth Viscount, Baron Penshurst, F. R. S., F. R. G. S., F. R. A. S., etc., a British Orientalist, philologist, geographer, and diplomatist, born in St. Petersburg, November 26, 1825; died in London, January 9, 1869. His father was, at the time of his birth, and had been for some years, British minister at St. Petersburg, and though Percy was removed to England when but a few months old, the Russian tongue was that which he first spoke. He was educated at Harrow and Oxford, and at Harrow, being unable, from extreme near-sightedness, to join in the athletic sports of the school, he occupied his out-of-school hours in acquiring a knowledge of Persian, while he was foremost in his classical studies. At Oxford he mastered Arabic, and when appointed, in 1845, one of the student attachés of the Constantinople embassy, he speedily made himself thoroughly familiar with the structure, idioms, and history of all the Asiatic languages except the Chinese, beginning with the Sanscrit, and acquiring such a thorough command of all of them that he spoke them with the fluency of a native, distinguished the different dialects and the place of their origin whenever he encountered them, and habitually thought in Persian. He was not, however, simply a linguist, though few living men are masters of so many languages as he was; but he was a philologist and ethnologist in his thorough study of the structure, progress, and history, of all these languages, and of the knowledge to be derived from them of the migrations of the tribes to whom they were native. He was passionately fond of physical geography, and had made his linguistic studies contribute to his acquirements in that fascinating study, and possessed a remarkable ability for careful and extended generalization of the great mass of facts so patiently and laboriously gathered. He remained in Constantinople until 1858, a paid attaché of the embassy from 1849 to 1851, and thenceforward Oriental Secretary, till his succession to the

title and estates of his brother, and his own failing health, made a change necessary. He continued to prosecute his favorite studies, however, till his death; but, with singular modesty, he seldom published any thing, though he wrote much. His few papers in the Transactions of the Royal Society, the Royal Geographical Society, and the Royal Asiatic Society, of which last he was president, gave evidence of vast learning, and careful, almost painful, research. His death occurred from apoplexy. In the summer of 1869 his widow, the accomplished daughter of Admiral Beaufort, edited and published two 8vo volumes of Lord Strangford's "Selected Writings on Social, Political, and Geographical Subjects," which contain many very valuable papers.

SUBTERRANEAN ROME. Although most educated people have a tolerably well-defined impression of the nature and appearance of the subterranean primitive Christian cemeteries of Rome, there are yet many facts concerning them of which they must necessarily be in ignorance, because as time goes on fresh discoveries are made which furnish new information. Most people, for instance, will be surprised to hear that the extent of galleries now found, would, if drawn out in a straight line, stretch from the northernmost part of Italy to its southernmost shores. In many particulars, too, the newest information requires us to throw away opinions that were supposed to be founded on facts. Thus it is now ascertained, and demonstrated too, that the subterranean galleries and chambers are not adaptations of old sand-pits, or *arenaria*, but were originally made by the early Christians for the purpose to which they put them. It used to be looked upon as certain that the pozzolana so largely used in building operations in Rome was found here, and that the workings, when abandoned because exhausted, were thus utilized. Ordinary visitors to the dim, narrow labyrinthine passages, and the crypts opening out of them, looked into their guide-book, and read: "The origin of these subterranean cemeteries was evidently for the purpose of extracting that peculiar species of volcanic ashes called pozzolana, so extensively used by the ancient and modern inhabitants in their constructions. Nearly all the catacombs can be traced to no other cause. Originally *arenaria*, the classical designation of these sand-pits, they were arranged by the primitive Christians for their new destinations of dwellings, places of worship, and retirement;" and, having read, they believed. More earnest students consulted bulkier volumes, but found the same opinion expressed. Looked at from an artistical point of view, too, the paintings with which they are decorated were formerly described as poor, meagre, and feeble. To entertain these opinions to-day, however, is to have fallen out of the ranks in the grand march of progress, to be behind the time, and of the old school. The catacombs were excavated out of the *tufa granulare*, which material was useless for any other purpose, showing that it must have been selected by the early Christians as suitable for graves, and not adapted by them because it was already hollowed out to their hand. Again, the language of the old criticism of the worth and date of the art-work no longer applies. Specimens that were inaccessible and scarcely to be made out have in these latter days been opened out; many others have been found, and a certain degradation from simplicity and excellence, to be noted in those examples that are clearly the first steps of mediæval effort, points out that many works of much richness, freedom, and variety, must be of earlier date than those of this stiff and meaner type. And when this poorer style of art is known to belong to the end of the third century, it follows that the earlier specimens must have been painted in days that were close upon those we term Apostolic.

Who is it that makes these discoveries, asks the English *Journal of Engineering*, and comes to these conclusions? As is well known, a Commission of Sacred Archæology has been directing excavations for some years, and among the members was the late Padre Marchi, who published a work upon the monuments of the primitive Christians, and gave great impulse to the interest felt about them; and the Commendatore de Rossi, who has given nearly thirty years of his life to a minute examination and classification of the same relics of early Christian art. For the last few years all eyes in Rome have been directed to the appearance of a rumored work by this last-mentioned authority, which was expected not only to recount the proceedings of the society, or the results of them, but to give to the world a narrative of surpassing interest, which his discoveries would enable him to relate. Padre Marchi's work was published in 1841. The twenty-nine years that have elapsed since that date have proved more fruitful than the two centuries that preceded it; and De Rossi's industry has been rewarded with the discovery of six or seven historical monuments of great interest, to the position of which, owing to his intimate acquaintance with all the old records, and, specially, two ancient itineraries, he was able to point beforehand with sufficient precision to lead to a successful search.

To study these ancient catacombs, where not "cooked," is to take up the history of Christianity from the time and place where the New Testament breaks off the wondrous thread. Immediately we approach them we are transported back to those old times when the bodies of St. Peter and St. Paul were but newly buried; and when many, who had listened to their stirring words entranced, were still living. De Rossi speaks positively on this head: "Precisely in those cemeteries to which history or tradition assigns apostolic origin, I see, in the light of the most searching archæ-

ological criticism, the cradle of Christian art and Christian inscriptions; there I find memorials of persons who appear to belong to the times of the Flavii and of Trajan; and, finally, I discover precise dates of those times." There is one inscription known bearing date the third year of Vespasian, i. e., A. D. 72, but no record has been kept of the site on which it was found. In the catacomb of St. Lucina, however, scratched on the mortar of one of the *loculi*, was found by Boldetti a record of the time of the consulate of *Sura et Senecio*, which marks the year A. D. 107; and another on marble in the same place recording *Piso et Bolano*, consuls, A. D. 110; as well as a third inscription which De Rossi considers marks the burial of a Christian within forty years of the time that the body of St. Paul was deposited in the same place. This interesting record runs thus:

"DORMITIONI
T. FLA. EVTY
CHIO. QVI. VI
XIT. ANN. XVIIII
MES. XI. D. III
HVNC. LOCVM
DONABIT. M
ORBIVS HELI
VS. AMICVS
KARISSIMVS
KARE BALE"

"As a resting-place for Titus Flavius Eutychius, who lived nineteen years, eleven months, three days, his dearest friend, Marcus Orbius, gave this spot. Farewell, beloved."

The cemetery of St. Priscilla, on the Via Salaria Nova, always said to have been dug on the property of the family of Pudens, converted by the Apostles, also presents evidences that confirm the statement of this antiquity. The catacomb of St. Agnes is supposed to be no other than the cemetery of Ostrianus, described by Pauvinus, the Augustinian friar, as the oldest of all, "because it was in use when St. Peter preached the faith of the Romans;" and, again, the sepulchre at Tor Marancia is now identified as that cemetery which was formerly called by the name of St. Domitilla, or by that of her chamberlains, Sts. Nereus and Achilles, for two inscriptions found there clearly state that the ground formerly belonged to this member of the imperial family. After glancing in succession at the principal catacombs supposed to be of apostolic antiquity, the authors of a summary of De Rossi's work (Northcote & Brownlow's "Roma Sotterranea") thus draw up the facts of the position:

The local traditions of ancient Christian Rome have come down to us, partly embodied in the acts of the martyrs; partly in the stories that were told to foreigners visiting the city in the seventh and eighth centuries, and by them committed to writing in itineraries; partly in the "Books of Indulgences," and in the "Book of the Wonders of Rome," compiled both for the use of strangers and of citizens; partly also, but more sparingly, in the scattered notices of a few mediæval writers. From a diligent comparison of all these various authorities, it is gathered that some five or six of the subterranean cemeteries of Rome were believed to have had their origin in apostolic times; and in every one of these instances, so far as we have an opportunity of examining them, something peculiar has been either noted by our predecessors, or seen by ourselves, which gives countenance to the tradition. When these peculiarities are brought together, they are found to be in perfect harmony, not only with one another, but also with what we should have been led to expect from a careful consideration of the period to which they are supposed to belong. The peculiarities are such as these: Paintings in the most classical style, and scarcely inferior in execution to the best specimens of contemporary pagan art; a system of ornamentation, in fine stucco, such as has not yet been found in any Christian subterranean work later than the second century; crypts of considerable dimensions, not hewn out of the bare rock, but carefully, and even elegantly, built with pilasters and cornices of bricks or terra-cotta; no narrow galleries, with shelf-like graves thickly pierced in their walls, but spacious *ambulacra* with painted walls, and recesses provided only for the reception of sarcophagi; whole families of inscriptions, with classical names, and without any distinctly Christian forms of speech; and, lastly, actual dates of the first or second century. It is impossible that such a marvellous uniformity of phenomena, collected with most patient accuracy from different and distant cemeteries on all sides of the city, and from authors writing at so many different periods, should be the result of accident or of preconceived opinion.

Two of the itineraries, mentioned as having conveyed useful information to the archæologist, were discovered only about a hundred years ago in the library of Salzburg, and were therefore unknown to Bosio and other writers on the Christian remains after their discovery in A. D. 1578. One of these important guides was written between the years 625–638, and the other within a few years of the same date. The first starts from the centre of Rome, passing out through the Flaminian Gate, and passes to the principal roads from one to the other by by-paths, some of which can be still pointed out; the other follows a similar plan, but is second to it in interest, because the writer does not seem to have actually made the survey himself, but rather to have compressed the descriptions he gives from some larger work; but both of them are useful in containing mention of topographical details concerning the cemeteries before the great work of emptying them of their choicest contents was commenced. A third document that has been useful in pointing out the locality of particular tombs is a list of relics collected by Abbot John from the various shrines in the catacombs, in the days of St. Gregory the Great, for Theolinda, Queen of the Lombards, which list is written on papyrus, and preserved with some of the relics in the Cathedral of Monza. But the chief clew to the success of De Rossi's labors was the tact which enabled him, instead of rejecting these authorities as worthless, to accept their help. He saw that, where St. Damasus and other early popes had been at the trouble to build spacious staircases down to particular spots in the catacombs, would be found the tombs of martyrs that were once visited by pilgrims, for whose accommodation these means of access had been

made. Whereas Padre Marchi avoided such places as bore evidence of having been tampered with in later times, and was always on the lookout for chambers and galleries in their primitive condition as when first hewn out of rock, De Rossi judged that where the crypts had been changed into sanctuaries, *luminaria* opened out for light and air, galleries widened, and any other structural arrangements made for the accommodation of numbers, then he stood upon a site of the utmost value. Pope Damasus, too, must not be overlooked for the large share he has borne in handing down a true history of the contents of the catacombs in his custom of renewing old inscriptions, and placing others to mark important sites. His assistance, rendered 1,500 years ago, has been invaluable. The beginning of the fifth century, when Rome was sacked by the Goths, ended the history of the catacombs as cemeteries; and for the next 400 years they were used only as shrines and places of pilgrimage, except in rare instances, when they have been chosen as places of refuge, as when Boniface I. concealed himself for a time in the cemetery of St. Felicitas. The popes during these centuries kept the tombs of the martyrs beautified and repaired, as we may see from entries in the *Liber Pontificalis*. Even after Totila had desolated Rome these were restored, and the services renewed, John III. ordering that oblations, cruets, and candles, should be sent from the Lateran Palace for the ceremonies every Sunday. But after the siege by the Lombards, under Astolphus, when some of the graves were broken open and the bodies carried off, Paul I. resolved to remove "the bodies of the martyrs, and confessors, and virgins of Christ" into Rome, and place them in a church he built to receive them, dedicated to Sts. Stephen and Sylvester, on the site of the house in which he was born and bred, and which he had then inherited. On this occasion more than a hundred saints were removed, and their names duly chronicled in a list still extant. The succeeding popes endeavored, however, to rehabilitate the ancient cemeteries with their ancient glories, but without much popular support; for, in consequence of the crypts of the martyrs being destroyed and abandoned, Paschal I. translated 2,300 bodies in July, 817; and this new feature in the history of early Christian relics remained in great favor for some time, the succeeding popes not only translating more, but retranslating those already deposited in Rome. Thus rifled, ruined, and abandoned, the cemeteries that were not near monasteries were one by one forgotten. In those that were so fortunately situated, lamps were kept burning as late as the eleventh and twelfth centuries. A pilgrim of the eleventh century noticed the cemetery of St. Valentine, on the Via Flaminia, and another writer mentioned it again in the twelfth century. In the fourteenth century, a statistical account of Roman churches mentions only three that were attached to cemeteries; and by the fifteenth there was only one cemetery that was left open and frequented by pilgrims, which was that beneath the Church of St. Sebastian, called, in old documents, *Cœmeterium ad Catacumbas*. This title, applying only to the part of the Campagna in which the church was built, just as the circus built in the same neighborhood by Maxentius was called the *Circus ad Catacumbas*, has since been indiscriminately given to all subterranean cemeteries over the globe. Except as belonging to that of St. Sebastian, the term is not mentioned in old times, the names in use being *hypogæum*, *cœmeterium*, *martyrium*, or *confessio*.

A set of terms, new, yet very old, has to be mastered by those who would understand any thing of these ancient burial-places. The little chambers opening out of the narrow passages are known as *cubicula*. An ordinary grave—that is, a flat oblong compartment large enough to receive a body, hollowed in the sides of the passages, generally in tiers one above another — is called a *locus* or *loculus*. When a grave was made large enough to contain two, three, or four persons, it was called *bisomum*, *trisomum*, or *quadrisomum*, accordingly. There are to be seen in many of the *cubicula* graves of a more ornamental type. These consist of a semicircular arch recessed in the wall, below the straight base line of which is sunk the space for the body; they are called *arcosolia*, *solium* being the term in use among the pagans for their funeral-urns. Sometimes the recess is found square-headed instead of semicircular: when De Rossi, for the sake of distinction, calls it *sepolcro a mensa*. Burial was called *depositio*, and those who dug the graves, *fossores*, in old writings.

Prominence is given to the cemetery of St. Calixtus. This, it will be remembered, is that which De Rossi discovered on the Via Appia, after having seen only a fragment of a marble slab, bearing part of the letter R and the syllables NELIUS MARTYR, in the cellar of a vineyard, 1849. He induced Pope Pius IX. to purchase this and the adjoining vineyard, and in the course of subsequent excavations found the other portion of this slab, with the missing piece of the letter R and the letters C O upon it, which showed him that the conjecture he formed, that the tomb of Cornelius, pope and martyr in the middle of the third century, was before him, was correct. This tomb he knew from the old writings was close to the cemetery of St. Calixtus, in which there was a chapel more famous than most others, as the bodies of the popes in the third and fourth centuries were deposited in it, to which adjoined another chapel in which St. Cecilia was laid. The author of the earliest itinerary we have mentioned, specially notices this cemetery as containing "an innumerable multitude of martyrs; first, Sixtus, pope and martyr; Dionysius, pope and martyr; Julian, pope and martyr; Flavianus, martyr; St. Cecilia,

virgin and martyr. Eighty martyrs rest here below." Further excavations were made, in the course of which 121 fragments of one of the Latin inscriptions Pope Damasus put up were found.

This decided De Rossi that he was in the papal vault mentioned, ruined indeed, with its approaches blocked up, probably to preserve it from depredators, but still containing among its *débris* fragments of monuments of great interest. In one corner of this crypt, to which access was at first obtained, it appears, down the *luminare*, though one of the ancient staircases has now been restored, is a narrow doorway cut irregularly in the rock, which opens into a large chamber about 20 feet square, furnished with a wide *luminare*, which enables it to be well seen now. When first found it was filled with earth, which had to be removed, as in other instances, to the surface through this *luminare* or shaft from above. As this work proceeded, and the *luminare*, also full of earth, was emptied, the figure of a woman in the attitude of prayer was deciphered on the wall; below this a Latin cross between two sheep; and below this again, though still in the *luminare*, the figures of three saints. On the wall of the chamber, close to the entrance-way from the burial-place of the popes, was found a painting of a woman, "richly attired, and ornamented with bracelets and necklaces such as migh be looked for in a high-born and wealthy Roman bride, and might well be intended to represent St. Cecilia." But this painting, which appeared of seventh-century date, was found to be executed on the surface of ruined mosaic-work; and a niche close by, decorated with a Byzantine head of our Lord, was also noticed to have been previously encased with marble, indicating there had been a renewal of ornamentation, marking a site of high religious interest. This fact, taken in connection with the circumstance that close to these paintings was a recess large enough to hold a sarcophagus, and which left but an inch of rock between it and the back of a similar recess in the papal crypt, and compared with the statements in the documents we have mentioned, led De Rossi to the conclusion that it was in this chamber that the beautiful Christian bride of the martyr Valerius was laid, after three strokes of the executioner had left her to bleed slowly to death on the pavement of her own palace.

We would mention the care with which the rude scribblings, or *graffiti*, of ancient visitors are now scanned. De Rossi calls them "the faithful echo of history and infallible guides through the labyrinth of subterranean galleries." Sometimes the writing is a mere name, with or without a title; others are exclamations connected with distant or departed friends; and others are invocations addressed to the martyrs upon whose tombs they are inscribed. The names are of two kinds, the most convenient parts of the walls being scribbled over with such classical appellations as Rufina, Felix, Polynices, Leo; and those higher up with more mediæval designations, such as Ildebrand, Bonizo, Joannes, Presb., etc. The ejaculations correspond with the simplicity of the earliest epitaphs. They repeat "VIVAS, VIVAS IN DEO CRISTO, VIVAS IN ETERNO," and similar aspirations, over and over again. This custom is referred to one among the heathens, that prompted them to write the names of those they loved on sacred places they visited, in the hope they might then partake of any benefit to be derived from the attention. An inscription in the island of Phyle, Egypt, is quoted as an illustration, where Seraphion, son of Aristomachus wrote, "Having come to the great Isis, Goddess of Phyle, he makes a remembrance there of his parents, for their good." One Christian pilgrim can be traced, from sanctuary to sanctuary, by this means. On the vestibule of the principal sanctuary he wrote, what was evidently the wish nearest to his heart, which we translate, "Sofronia, mayest thou live with thine own;" and when he approached the entrance he wrote and prayed, "Sofronia, mayest thou live in the Lord;" again, when he came to an altar tomb in another chapel he scratched, "Sweet Sofronia, thou shalt ever live in God;" and before he left he added, "Sofronia, thou shalt live." Other *graffiti*, calling upon the martyrs, take the following forms among others: "Holy souls have in remembrance Marcianus, Successus Severus, and all our brethren. Holy souls, ask that Verecundus and his friends may have a prosperous voyage. Ask for rest, both for my parent and his brethren; may they live with God. Holy Sixtus, have ye in remembrance in your prayers Auretius Repentinus. Have ye in remembrance Dionysius." We have selected these as extremely ancient examples. Sometimes they are cut off in the middle of a sentence by some alteration or renovation that has been made since they were written. As such works were executed chiefly by St. Fabian about the year 245, or by St. Damasus in 370, we get a tolerably precise clew to their date. One of them, De Rossi states, must have been written while the plaster was wet. This is an apostrophe to Pontianus, who was probably an exiled pope of that name, brought home after his death in Sardinia, and buried here by St. Fabian.

Of the paintings in the catacombs, De Rossi ascribes two to the first century. These are the Virgin and Child, with the prophet Isaias, in the catacomb of Sta. Priscilla; and the free and flowing vine covering the roof of the entrance to St. Domitilla. The decoration of the roof of the Chapel of St. Januarius, in the catacomb of St. Prætextatus, with the paintings of the fish carrying a basket, and the lambs on either side of a milk-pail on an altar, on the walls of a *cubiculum* in the crypt

of St. Lucina, he ascribes to the second; while the great bulk of the Biblical paintings he considers the work of the third century. He divides the paintings, generally, into six classes, those that are symbolical being the earliest and largest; the next, allegorical; the third, Biblical, depicting histories from both the Old and New Testaments; the fourth, pictures of our Lord, the Virgin, and the saints; the fifth, scenes from the lives of these latter, or from the history of the Church; and scenes from the Liturgy being the sixth. There does not appear to be any addition to the known circle of symbols recently discovered, but the instances in which they are associated with one another, interchangeably, and sometimes with the names of the deceased on whose gravestones they occur, make the array large. One gravestone is illustrated, which the *fossor* inserted in the wall with the name upside down, but upon which the artist sculptured his dove correctly, showing it must have been executed after the stone was fixed in its place. The subjects of the Biblical paintings are limited in number, and are also treated in a symbolical manner. We have Noah in the ark, typical of baptism—the ark a small box, with a man in it, and sometimes a woman, as in the instance in which a dead person's name is painted on it, Juliana; Jonas and the fish, a type of the resurrection — the fish being a large-headed dragon with a long neck, perhaps, it is supposed, to keep the representation distinct from the fish, which was so often employed as a symbol of the Saviour; Daniel in the lions' den, intended either to encourage the persecuted, or as an emblem of the resurrection, and used for both purposes by the Fathers; upward of twenty examples of the adoration of the Magi; Moses striking the rock, whence issued the living water, which was Christ; and the resurrection of Lazarus, or the Victory over Death; and Moses taking off his shoes as he approaches the burning bush, typical of the renunciation of the world, the flesh, and the devil. This limited range of subjects occurs over and over again, as though they were current illustrations of the thought of those old times. No real portraits of Christ or of the Virgin have been found, though it is shown that there is always an adherence to certain leading characteristics in the faces of Sts. Peter and Paul in the glasses found in the catacombs, as though from an attempt to maintain a likeness. There are representations of Christ, however, one of which is quoted by Kugler as the oldest portrait in existence, and, in consequence, is eagerly inquired for by visitors to the catacombs. This is a head and bust in a medallion, occupying the centre of a roof in a *cubiculum* in the cemetery of Saints Nereus and Achilles. Its claim to the highest antiquity is not allowed by all. The liturgical paintings are very rare —quite, in fact, exceptional; they are found in the *cubicula* near the papal crypt we have mentioned, and belong to the end of the second century. Baptism and the Consecration of the Holy Eucharist are the subjects of representation—the first mixed up with Biblical stories and allegories, and the second still further veiled and complicated by the sign of the fish, and both associated with full-length figures of *fossors* about to hew with their pickaxes fragments of rock. A man fishing, another baptizing a youth in the same water, and a paralytic carrying away his bed, are painted on one wall. On that which faces the doorway is a three-legged table with bread and fish upon it, with a woman on one side of it and a man on the other. The first is standing with arms thrown up and hands extended, which is called an attitude of prayer; and the second, partially draped only in the pallium, extends both hands toward the table, which he actually touches with his right. This attitude has been interpreted by some to indicate the act of consecration. Again, seven men sit at a table with two dishes of fish before them, and eight baskets of loaves upon the floor; and close to them Abraham is preparing to offer up his son. These last three scenes, which are painted side by side between two graves, have the figure of a bareheaded, bare-legged *fossor* on either side of them. The same series of subjects is introduced, slightly varied in details, in the other *cubicula* in the neighborhood of the papal crypt, which persistence again suggests some familiar homily or teaching. Tertullian's explanation of their meaning is referred to as sufficient for their complete interpretation.

Gilded glasses were also found in the catacombs; at the present time there are some examples of them on loan in the South Kensington Museum. There are about thirty specimens also in the British Museum, and a few others in the museums of Paris, Florence, and Naples; but the largest collection is in the Vatican Library. Mr. Wilshere, the owner of the specimens at South Kensington, possesses about twenty. In all not more than 340 examples are known; and De Rossi's twenty-three years of labor in the catacombs have only yielded two fragments. They are, we need scarcely add, generally the bottoms of drinking-cups, with designs executed in gold-leaf between two surfaces of glass, so arranged that the figures and letters were seen from the inside. The cups of which they were the base were stuck in the cement round newly-made graves before it hardened; but, as they were thinner than the double glass enclosing the gold-leaf and more exposed, they have in nearly every instance got destroyed. The subjects depicted upon them are more numerous than those painted on the walls of the catacombs; and are minutely described by the authors of the work from which this summary is prepared. One of those in the possession of Mr. Wilshere has the Apostles Peter and Paul in the centre,

with six compartments round them, each having a distinct subject. Another, belonging to the same gentleman, has Christ with the rod of power, changing water into wine; and, again, enabling the paralytic to carry his bed, and also protecting the "three children" in the fiery furnace; as well as Tobias with the monster fish. Our Lord is frequently represented as the Good Shepherd upon them. The Virgin also occurs very frequently, and in various combinations. There are inscriptions upon them, too, such as "Joyfully mayst thou live with all thine; happy mayst thou live forever in the peace of God." Eighty of the known examples have figures of Saints Peter and Paul upon them; and some of these have inscriptions which are of a convivial character, as though they were intended for use at feasts, or especially at the feasts of those Apostles. The examples of these quoted are, when translated, as follows: "A mark of friendship, drink, and [long] life to thee, with all thine. Mayest thou live [long]. A mark of friendship, drink, and [long] life to thee, with all thine, drink [or, live], and propose a toast. Mayst thou live happily with thine own. Life and happiness to thee and thine."

The Christian sarcophagi are another distinct department in the antiquities of the catacombs. By far the largest number of these have been transported to the great hall of the Lateran palace, where they were arranged by Padre Marchi, and have since been increased in number by De Rossi. They are not so early as the paintings. Only eighteen can be identified by their inscriptions as belonging to the first four centuries, and of these only four are considered as anterior to the time of Constantine. The earliest, with a definite Christian subject depicted upon it, the nativity, has a consular date, which determines it as the work of A. D. 343. The cause of this tardy use of sculpture is attributed to the fact that the painter could prosecute his work underground safe from observation, while there would be not only the danger of drawing attention to any sculpture executed in a workshop, but the difficulty of getting it conveyed to the catacombs. But, directly the Christian religion became protected by the conversion and profession of Constantine, the sculptor was freely employed. Sometimes, we know, a Christian, desirous of placing some beloved object in a sarcophagus in preference to depositing the remains in an ordinary recess in the wall of a catacomb, bought a sculptured stone of a pagan artist, and then effaced his work with a chisel, or turned the ornamentation to the wall that it might not offend Christian eyes when fixed. On the reverse of a tomb slab inscribed Irene, for example, was found a Bacchanalian scene; and a representation of Cupid and Psyche was found with signs of plaster upon it buried beneath the floor, as though it had been likewise hidden from devout eyes. This branch of the subject is also ably treated.

The mode of construction, and the gradual development of a cemetery is the next department broached. It is illustrated with several plans, which make it extremely clear notwithstanding its intricacy. Taking the catacomb of San Calixtus as an example, it is shown that after the Christian proprietor had secured a site 250 feet along a road, with a depth of 100 feet, he caused a staircase to be dug down to a certain level, and then a gallery to be picked out which extended round three sides of the area, and was furnished at the extreme end with a second staircase to the surface. The second side, of course, connected the two others, but at intervals down the length of frontage there were two other galleries that extended and also communicated right through the site with both. Besides these, there were also four other galleries crossing the depth, but not quite extending to the opposite side. One of these shorter galleries led to the papal crypt and its accessories; and opening out of the main passage close to the approach to this celebrated centre were formed three *cubicula*. Thus the plan is three sides of an oblong, with passages crossing from one side to the other, and others beginning to cross, but not completing the undertaking; and one of these shortened galleries widening out and opening into crypts, all alike being filled with graves. Afterward fresh excavations, on a lower level, gained by steps, formed more galleries stretching across the area; and additional *cubicula* were made to open out of the first main gallery, uniform with the first set, only, instead of ascending a few steps into them as in their case, a descent of several was made. A third extension of the cemetery is visible when the *fossori* endeavored to penetrate to a still lower level: but when they had made thirty-three steps down they found themselves through the stratum of *tufa granulare* in which they had hitherto been working, and in one of a friable pozzolana. They strengthened their wall with brickwork, and made some *loculi* with bricks and pushed on, probably thinking to get through this unsuitable stratum, but eventually abandoned the plan of obtaining space by this means. The tiles and bricks used by them are found to be all stamped with the mark of the imperial brick-kiln of Marcus Aurelius, and must therefore have been manufactured between the years A. D. 161 and 180. The *fossori* enlarged the crypt of the popes at this time. By-and-by we find means taken to prevent the approach to the cemetery by concealing the entrances and blocking up the staircases. About six feet of the base of one staircase was removed, and several entrances were made from an adjacent sand-pit, so that, in case of pursuit, escape was facilitated. Finally, this cemetery was enlarged by communications made into others, into the history of which we cannot enter. And, after all, in the days of the persecution under Diocletian, the galleries that had been made with so much care, and lined with

the pious dead from the floor-lines to the headways, were purposely filled with earth, so as to baffle the tyrant's attempts to dishonor them.

SWEDEN AND NORWAY, two kingdoms in Northern Europe, united under one king; present King, Charles XV., born May 3, 1826; succeeded his father July 8, 1859. Area of Sweden and Norway, 292,929 square miles. Population of Sweden, in 1868, 4,173,000, against 4,195,681 in 1867, a decrease of 22,681, partly, to the increase of emigration, which amounted in 1867, to 9,334; in 1869, from the beginning of the year to June, to 17,878. The population of Norway, in 1867, amounted to 1,701,756. The Swedish island of St. Bartholomew in the West Indies had, in 1866, 2,898 inhabitants. In the Swedish budget for 1870, the revenue was 42,966,300 rix-dollars; the expenditures 44,969,250; deficit, 2,002,950. The public debt amounted, in 1868, to 120,206,642 rix-dollars. The imports in 1867 were valued at 134,200,000 rix-dollars; the exports at 128,600,000. Number of vessels entering the Swedish ports in 1867, 5,711, together of 188,670 lasts; number of clearances, 10,877, together of 504,019 lasts (1 Swedish last=4.7 English tons). The merchant navy consisted, in 1867, of 3,301 vessels, together of 94,842 lasts. In the Norwegian budget for the period 1869–'72, the annual revenue and expenditure are fixed at 5,092,000 specie thalers each. The public debt, in 1867, amounted to 8,154,200 specie dollars; but, deducting assets, only to 750,800 dollars. The imports, in 1867, were valued at 24,500,000 thalers; the exports, at 17,400,000. The number of vessels entering Norwegian ports in 1867 was 11,881, together of 676,191 lasts; the number of clearances, 11,915, together of 683,946 lasts. The merchant navy, in 1867, numbered 6,457 vessels, together of 418,294 commercial lasts (1 commercial last=2 English tons).

A Swedish newspaper describes the large export trade in ice carried on in Norway. It appears that a company has purchased an extensive lake, surrounded by mountains, in the neighborhood of Droebak, on the Gulf of Christiania, and, to insure the perfect purity of the water from sewage, has even bought all the houses that stand on its shores. Each winter the ice, which frequently attains a thickness of two or three feet, is cut by a kind of plough into long strips, and subsequently sawn into blocks weighing from three to five hundredweight. In this form it is shipped for export, and, in properly-constructed cellars, can be preserved for so long a period that a large portion of the ice now sold in London actually arrived there in 1866. Besides the regular ships belonging to the company, many vessels accidentally frozen up in the Norwegian fiords leave in the spring with cargoes of ice. By far the largest trade is carried on with England, which in 1865 took 44,055 tons out of a total of 45,593 exported.

The two Chambers of the Swedish Diet, in April, discussed the royal proposition relative to the revision of the Act of Union between Sweden and Norway. This suggestion was intended to realize the idea, constantly pursued by King Charles, of drawing closer the ties which unite the two Scandinavian kingdoms, and to assimilate their legislation, the differences of which are essential, from a political point of view. Norway, enjoying democratic institutions and an almost absolute autonomy, experiences, as may be conceived, the greatest repugnance to sacrifice the slightest portion of her privileges for a union the advantages of which do not appear very clear. In Sweden, for other reasons, the proposition also encounters a persistent opposition. In the Upper Chamber the committee charged with the examination of the affair advocated the postponement of the question as involving a reform of the fundamental law, and that course, in spite of the efforts of the Government, was (April 28th) adopted by a large majority (89 to 21). The Lower Chamber voted still more emphatically on the same side. The matter is, therefore, put off till the Diet of 1870, but it will certainly be again postponed, because it cannot be considered by the Norwegian Storthing till 1871 (the annual meeting of that Assembly then commencing), and the decision has been made to treat the question simultaneously in both countries.

In May, a royal proposition for the establishment of more enlarged religious freedom was adopted by both Chambers.

The Norwegian Storthing rejected a royal proposition for the abolition of the office of stadtholder (the highest executive office of the kingdom). The Government intended, by its proposition, to make it possible for a Swede to hold that office.

SWEDENBORGIANS. The fifteenth annual session of the General Convention of the New Jerusalem in the United States was opened in New York City, June 16th. The most prominent subject of discussion, besides the consideration of the reports, was whether the use of the words "parish" and "diocese," to describe the societies and associations of the Church, should be tolerated. No decision was arrived at, but the question was recommitted. The sales of the publishing-house during the year were about $12,000, being an increase of fifty per cent. over those of the previous year. The capital of the establishment is $14,807.34. Three periodicals, a monthly magazine, a weekly paper, and a child's paper, are published. Six new books have been stereotyped. The theological school at Waltham, Mass., was taught four months during the preceding year. Six students attended. The committee of missions, consisting of six members, had charge of missionary work only in those parts of the country which were not within the limits of the associations. But little missionary work had been done by the committee as a board under the auspices of the convention, but much

by individual members, and on behalf of the different associations. A book is in course of publication in German, which is designed to aid in disseminating the doctrines of the New Church among the Germans in the United States. Prof. R. L. Safel has been engaged, at Stockholm, Sweden, and London, under the direction of a committee of the convention, in examining the condition of the manuscripts of Swedenborg, with a view of having them copied by photolithographic or other process. This work was attended with interesting results in the discovery of new manuscripts, and writings which had been before inaccessible. The idea of photolithographing the manuscripts was, however, abandoned, because of the small amount of the subscriptions to the work that were obtained in the United States, and because the Swedenborg Society of England declined to coöperate in the enterprise. The thanks of the convention were voted to the Royal Swedish Academy of Sciences, for the courtesies and assistance which it had rendered Prof. Safel. A complete copy of all the publications of the convention was ordered to be presented to the Royal Library at Stockholm.

The Tract Society have published three tracts, printing 82,000 copies in all. It has a membership of 68, 39 life-members and 29 members. Its receipts for the year were $1,253.97.

The numerical statistics of the New Church are imperfect in shape and incomplete. The following is a view of the associations and societies:

ASSOCIATIONS.	Ministers.	Societies.	Members.
Illinois	9	10	656
Maine and New Hampshire	2	5	240
Maryland	5	6	393
Massachusetts	16	16	1204
Michigan and Northern Indiana	7	6	....
Missouri	..	5	208
New York	11	10	358
Ohio	9	12	359
Pennsylvania	4	4	156

The title "ministers" includes licentiates.

In connection with the Massachusetts association, there is a New Church Union, which has a free library, and supports a missionary. Sunday-school unions are connected with several of the associations. Besides the theological school at Waltham, Mass., there is a children's school at the same place, which has given instruction, since its establishment, to nearly three hundred children. The church school at Urbana, Ohio, had sixty to seventy pupils. It reports the receipt of legacies and donations amounting to $30,000. A school at Foster Hill, near Glendale, Ohio, had twenty-one pupils. Lay teaching has been tried by the New York Association with successful results. Isolated societies reported to the General Convention from Philadelphia, Edenfield, Pa., and Milwaukee, Wis. There is a society at Laporte, Indiana, which is not connected with the association.

SWITZERLAND,* a federal republic in Europe. Area, 15,722 square miles; population, in 1860, 2,510,494. President of the Federal Council, from July 5, 1869, to the close of the legislative session ending in 1869, L. Ruchonnet, of the Canton of Vaud. The budget, for 1869, estimates the revenue at 20,812,700 francs; the expenditures at 20,740,000 francs; the surplus at 72,700 francs.

On April 18th, the electors of the Canton of Zurich adopted, by 34,000 votes against 22,000, the new Constitution submitted to them. It is assumed that this vote marks the beginning of a new era in the internal politics of Switzerland. Taken by itself, it is the adhesion of the most advanced, the best educated, and richest canton of the Confederation to a system of government in which the people are called upon to play a more immediate and more important part in the management of what most nearly affects themselves than they have ever yet done. The Constituent Assembly, which sprang from this vote, devoted the greater part of last year to a revision of the cantonal constitution, and the changes which it has introduced may be briefly stated. The liberty of the press is henceforth to be complete; no special legislation with regard to press offences will be recognized; editors, like other citizens, will be subject to common law alone. Public functionaries are to have no special privileges. The whole penal code is modified, and the punishments are made less severe. Capital punishment is abolished; any citizen illegally arrested is to be indemnified by the state; a *habeas corpus* act similar to our own is introduced; civil marriage is sanctioned, but compliance with it is purely voluntary; at the same time, all services necessary to constitute a marriage, whether civil or religious, are to be wholly gratuitous. Some of the other enactments are interesting to foreigners as indicative of the peculiar customs of the people. That important person in a Continental town, the notary, is to be elected in each district by the votes of his fellow-citizens from a list of candidates, none of whom shall present themselves without proper certificates of qualification. All actions for debt are to be undertaken by the municipal authorities of the district. Such are the law reforms. The financial are scarcely of less importance. The sliding-scale of income-tax is introduced, applicable, however, only to moneys raised for the purposes of the whole canton. Legacy and succession duties, in imitation of our own, will be raised. All monopolies are abolished. No taxes upon the necessaries of life are to be imposed; those already existing are to be reduced or removed with all possible dispatch. The care of the poor is to be left to each district or township, but the state will aid any district overburdened with poor, as well as make grants to all asso-

* For an account of the Council of State, the National Council, and the Army, see ANNUAL CYCLOPÆDIA for 1868.

ciations for the relief of pauperism. It will also assist private efforts which have for their objects the education of pauper children or the care of the sick and helpless. The railroads are to be worked under the inspection of the state, and, should fresh lines be judged necessary, the canton is to bear part of the expense of their construction in districts too poor to support the total outlay. A cantonal bank is to be established under Government auspices, and lastly the contingent of recruits furnished to the federal army is to be wholly equipped and armed at the expense of the canton. What are called "the rights of the people" are carefully defined and guaranteed by the new constitution. Every citizen has the right of petitioning the Grand Council to promulgate, modify, or abrogate any law. If one-third of the Grand Council approves the petition, it is to be submitted to the vote of the canton. In the same manner, any demand emanating from 5,000 citizens is to be at once submitted to the popular vote, unless the Grand Council adopts it of its own free will. By the side of the right of petition the old right of the *referendum* is revived and reinvigorated. Twice a year, in the spring and autumn—and oftener if necessary—the whole body of the people is to be convoked to approve or annul any fundamental changes in the Constitution, any new laws or concordats, agreed upon by the Grand Council. No decision of this executive body on such matters is valid until ratified by the people. Thirty days before each General Assembly every citizen is to be furnished with a copy of all the laws to be voted. The people are to vote yea or nay, and the absolute majority decides. The people have further the right of a limited veto upon the minor acts of the Grand Council—for example, in deciding upon any work or undertaking the cost of which will exceed 250,000 francs (£10,000), or create an annual charge on the budget of more than 20,000 francs (£800). Last of all, the executive body in the State is to consist of seven members, directly chosen by the entire canton voting as a single electoral college. In like manner, and at the same time, and for the same term of three years, the two deputies who shall represent the canton in the Federal Diet are to be elected. Such is the constitution adopted by the canton of Zurich. Already Thurgau has adopted an almost identical constitution by 11,681 votes against 6,741; Lucerne, by 8,600 against 4,200; and Saint Gall, which stands in many respects next to Zurich in importance, by a still larger majority.

Two international Congresses were held, in 1869, in Switzerland—the International Labor Congress at Basle, and the Peace Congress at Lausanne. These bodies almost invariably unite in denouncing the present system of "bloated armaments" and crushing war taxation, which is producing so much misery and poverty throughout Christendom. The burdens of war, we are told, have become intolerable. Millions of soldiers are being maintained, and must be supported by the industrious classes, a large proportion of whose strongest helpers are withdrawn by conscription or enlistment. Hence the weight of taxation and hard labor is falling heavily even on weak women and poor girls. For example, one of the complaints latterly raised against the present system has come from the female spinners of Lyons and Anduze. These wretched women have been compelled to earn their livelihood by working sixteen hours a day (and for the pittance of one shilling). They have at length struck for a change; but, with a remarkable patience and moderation, only demand that their working-hours should begin at five and end at seven. Of course the women of France must work (and exceedingly hard) as long as the present law continues, which renders every man above twenty-one years of age liable to conscription, and enacts a minimum annual draft of 160,000 soldiers. Further, these are prohibited from marriage. The consequent vice and distress brought upon the cities and families of France are incalculable. The first act of the Labor Congress of Basle was to elect a president and to nominate the various bureaux, to each of which was confided the duty of drawing up a general report, framed upon the instructions given to the delegates, on each of the five questions set down for discussion. These questions were—landed property and land tenure; the rights of inheritance; mutual credit, and how far it can be employed by the working-classes in their struggle for emancipation; compulsory and thorough education; the use of trade unions in defending the workman's interests. The president chosen by the Congress was M. Jung, a Swiss watchmaker, residing in London, who speaks each of the three languages in use at the meetings with equal facility. The task which fell to the lot of the president was not of the lightest, and M. Jung displayed a tact and firmness which entered largely into the success of the proceedings. Among the most notable of the reports were those of Marseilles, where the sailors have formed themselves into a trade union; and from Lyons, where the women have adopted a similar course. In Spain, the progress of trade-unionism has been more rapid than elsewhere—upward of 195 unions, with 25,000 members, exist. The Spanish workmen appear to be in favor of a federal republic, including Portugal as well as Spain, and they advocate the abolition of all property in the soil by individuals, and gratuitous and complete education for all. The committee appointed to consider the land question was unable to agree on a report, and two were therefore presented—one advocating that the soil should be vested in individuals or associations, and the other that the land should be the inalienable property of the village or parish, to be cultivated for the benefit of the community.

The Congress of the International Peace and Liberty League assembled on September 15th, at Lausanne. Upward of 400 members were present, among them Victor Hugo, the honorary president, Gambetta, Terrier, and Laurier, from France; Louis Simon and Venedey from Germany. The following resolutions were adopted:

Whereas, The material and permanent cause of the warlike condition in Europe is the entire want of judicial international institutions;

Whereas, It is the first condition that an international tribunal to decide upon questions, to solve which war and diplomacy try in vain by force and deceit, should be chosen and appointed directly by the will of the nations and governed in its decisions by international laws voted by these same nations;

Whereas, The moral weight of such tribunal requires that to effectuate its decisions it should be secured by an executive vested with sufficient power;

Whereas, Such executive power can legally exist only if regulated and countenanced by the direct will of the peoples; and

Whereas, The three institutions together, namely, an international statute, a tribunal to apply it and a power to execute its decisions, constitute a government:

The assembled Congress declares that—

1. The only means to secure peace in Europe is to establish a confederation of the peoples, by the name of a United States of Europe.

2. The government of this union must be republican and federal—that is, it must be based upon the principle of the sovereignty of the people, with a proper regard to the autonomy and independence of each member of the confederation.

3. The forms of government must be open to improvement.

4. The European Confederation has to guarantee to all nations belonging to it—

(*a*) Sovereignty and autonomy.
(*b*) Individual freedom.
(*c*) Liberty of the ballot.
(*d*) Liberty of the press.
(*e*) Liberty of assembling and forming associations.
(*f*) Liberty of conscience.
(*g*) Liberty to labor without taking undue advantage of operatives.
(*h*) Actual personal responsibility of all executive officers.

5. No peoples can be admitted to join the European Confederation if not in the full possession of—

(*a*) The general franchise.
(*b*) The right of voting or refusing taxes.
(*c*) The right of making peace and declaring war.
(*d*) The right of entering into and ratifying political and commercial treaties.
(*e*) The right to amend its constitution.

T

TALLMADGE, FREDERICK AUGUSTUS, a political leader and jurist of New York City, born in Litchfield, Conn., August 29, 1792; died there, September 17, 1869. He was a son of Colonel Benjamin Tallmadge, a distinguished officer of the Revolutionary War. He was educated at Yale College, where he graduated in 1811, studied law under Judge Reeve, at the Litchfield Law School, commanded a troop of volunteer cavalry for the defence of New York in 1812, was admitted to the New York bar, and commenced the practice of his profession in New York City in 1813, and for more than half a century was identified with the prosperity of New York. He had attained high rank in his profession before he intermingled in politics at all. In 1834 he was chosen Assistant Alderman for the Eighth Ward, and in 1836 Alderman for the same ward. In 1837 he was elected State Senator, and at the end of his term was reëlected. In 1841 he was appointed Recorder of the City of New York, a judicial office, analogous to that of city judge, which position he held till 1846, when, the recordership under the new constitution becoming an elective office, Mr. Tallmadge was nominated, as a Whig, for Congress from the Fifth District, and elected by about 400 majority over his Democratic competitor, David Broderick, subsequently a California Senator in Congress. In the beginning of 1849 he was again chosen Recorder. In May, 1849, occurred the Astor Place Riots, which were effectually put down by Recorder Tallmadge's decision and energy. The history of these riots was briefly this: Edwin Forrest, the tragic actor, had become a leader in the Native American movement, and was attempting to obtain a nomination and election to Congress through it. He was at the same time vaunting himself as the great American tragedian. William C. Macready, a well-known and able English tragedian, had, at the time, an engagement at the Astor Place Opera-House. Certain partisans of Forrest, led by E. Z. C. Judson (Ned Buntline), and secretly supported, it was said, by Captain Rynders, Mike Walsh, and others, determined to mob Macready, and assaulted the Opera-House during his performance, with a shower of paving-stones. The Seventh Regiment were called out to preserve the peace, but were assailed by the rioters and thrown into disorder. The Sheriff (Westervelt) was urged by prominent citizens to order the military to clear the streets, but he had not the nerve to do it. They then appealed to the Mayor (C. S. Woolhull), but he was even more timid than the sheriff. Meantime the riot was increasing, the police were useless, and the military powerless for want of orders. At this juncture, Recorder Tallmadge came upon the ground, and, having commanded the mob to disperse, ordered the military to fire over their heads. They did so, but, as no one was hurt, the rioters rushed upon them, hurling paving-stones and other missiles at them with great violence. The soldiers held their lines without wavering, though a number of their men were injured. Recorder Tallmadge immediately gave his second order to fire, and aim low, and within three minutes nearly twenty of the rioters were killed, more than thirty seriously wounded, and

the remainder in full flight. His action received the approval of all good citizens. It was eight years before another riot was attempted in New York. Mr. Tallmadge continued in office as Recorder till the close of 1851. When the Metropolitan Police was established in 1857, Mr. Tallmadge was its first Superintendent, remaining in that position, and doing much to perfect its organization, until 1859. In 1861 he was the Union candidate for Canal Commissioner, but was defeated. In 1862 he was candidate for Clerk of the Court of Appeals, and was elected by 8,669 majority. He served from 1862 to 1865, and then returned to New York City and to the practice of his profession.

TELEGRAPHIC CABLE. The laying of the telegraphic cable from Brest, France, to the island of St. Pierre, near the Gulf of St. Lawrence, and thence to Duxbury on the coast of Massachusetts, was successfully accomplished in July of the year 1869. The Société du Câble Transatlantique Français was organized under a charter granted by the French Government in the summer of 1867 to Emile d'Erlanger, of Paris, and Julius Reuter, of London, who were empowered to lay the cable and control its operation for a period of twenty years from the 1st of September, 1869. It was provided in the charter that no soil foreign to the United States or France should be touched in the transit of the cable, and that the price for transmitting messages should not exceed $20 for twenty words. The capital stock of the company was fixed at $6,000,000 in 60,000 shares of $100 each, the whole of which was speedily taken by capitalists in London and Paris. The contract for constructing and laying the cable was given to the Telegraph Construction and Maintenance Company, of England, who were to receive £920,000 for successfully performing the work. The entire length of the cable is about 3,047 miles, which is upward of 1,000 miles longer than the English cable; it consists of two main sections, one from Brest to St. Pierre, 2,825 miles, and the other from St. Pierre to the American terminus, 722 miles. The cable was so manufactured as to give it the greatest strength and the greatest conductive capacity. The central copper wire is larger than that in the English cable, the former weighing 400 lbs., and the latter 300 lbs. to the mile. To render insulation more perfect, the wire is covered with Chatterton's compound, and over that are four layers of gutta-percha. Around these is bound a spiral net of steel wires, each wire being surrounded with five strands of Russian hemp, saturated with a preservative compound. The actual strength of this hemp and steel cable is 7¼ tons, while the strain required for submersion was estimated not to exceed 14 cwt. The conductive capacity of the French cable was estimated at twelve words per minute, which represented a gain of four words per minute over what had previously been attained. On the 22d of June, the Great Eastern, carrying 2,725 miles of cable, departed from Brest, and on the 13th of July reached St. Pierre, when successful communication between these two points was established, as proved by the transmission of a message to the Emperor Napoleon. The remaining section of the cable was soon laid to Duxbury, the American terminus.

The physical character of the ocean-bed along the route chosen is such as to afford complete protection to the cable from anchorages and dangers from icebergs. The main cable, extending from deep water off Brest to the junction with the shore end at St. Pierre, lies on one of the great plateaus known to exist at the bottom of the Atlantic, on one of which the cable between Newfoundland and Valentia was laid. The path of the cable from Minou Bay is in water gradually increasing in depth from shallow to ninety fathoms, until in a line with the most westerly part of the coast of Ireland, where, taking a northerly course, it passes down a gentle slope of sand, and in a short distance a depth of 1,700 fathoms was reached. The course then continues in a uniform depth of 2,000 and 2,200 fathoms on a bottom of mud, shells, and sand. The line is taken in an arc of a large circle, the most southerly point of the cable being in latitude 42° N., and the most northerly 48°. Along the southern end of the Newfoundland Bank it is sunk in a depth of from 150 to 200 fathoms, the water on the bank itself varying from 50 to 90 fathoms. From this point to the western terminus of the line the water varies in depth from 100 to 500 fathoms.

Before the completion of the enterprise the question arose as to the right of a foreign company to land a cable upon territory of the United States without first having obtained the consent of Congress. The position of the United States Government on this subject may be considered as set forth in the bill relating to telegraphic communication between the United States and foreign countries which passed the Senate in February, but was not acted upon by the House, for want of time. The bill provides that, whenever communication shall hereafter be established between a foreign country and any point within the jurisdiction of the United States, the same shall be subject to the following conditions and stipulations:

1. The Government of the United States shall be entitled to exercise and enjoy the same or similar privileges with regard to the control and use of any such line or cable, and the lines or cables connected therewith, that may by law, agreement, or otherwise, be exercised and enjoyed by any foreign government whatever.

2. The United States Government shall at all times be entitled to the use of any such line or cable, and the lines or cables connected therewith, by a telegraphic operator of its own selection to transmit any messages to and from its military, naval, diplomatic and consular agents; and such messages shall be entitled to take precedence of all other messages.

3. The rates to be paid for the transmission of any such message or messages, when not otherwise fixed by agreement, shall be established by the Postmaster-General of the United States.

4. The offices of any such lines or cables shall be kept open to the public for transmission for daily publication of market and commercial reports and intelligence, and all messages, dispatches, and communications, shall be forwarded in the order in which they are received, except as hereinbefore provided.

5. It shall at all times be within the power of Congress to determine the rates to be charged for the transmission of messages and communications over any such line or cable, and to fix and establish such rules and regulations in relation thereto as it may judge necessary.

6. Before extending or establishing any such line or cable in or over any waters, reefs, islands, shore, and land, within the jurisdiction of the United States, a written acceptance of the terms and conditions imposed by this act shall be filed in the office of the Secretary of State by the company, corporation, or party, proposing to establish telegraphic communication.

SEC. 2. *And be it further enacted*, That, subject to the foregoing conditions, stipulations, and reservations, the consent of Congress is hereby given to the laying and maintaining of telegraphic or magnetic lines or cables, between the United States and foreign countries, in and over the waters, reefs, islands, shores, and lands, within the jurisdiction of the United States, subject, however, to any and all rights of property and State jurisdiction over the same; provided that the privilege conferred by this act shall not be enjoyed by any company or persons whose line or cable, by its connections or otherwise, terminates or extends to any foreign country in and by which similar privileges are not conferred upon companies incorporated by the authority of the United States, or of any State in this Union.

Before the connection of the French cable with this country had been effected, Mr. Fish, the Secretary of State, on behalf of the United States Government, addressed a letter to the French minister at Washington, and also the British minister, informing them of the action of the Senate and the disposition of the Government, so far as the same had been developed. It was thought, however, by many that the difficulty would be obviated by the action of the Massachusetts Legislature. A bill was passed by that body and approved on the 30th of March, incorporating the "Ocean Telegraph Company," who were authorized to "lay and maintain a telegraph cable in and over the waters, shores, and lands, of this Commonwealth, from some point or points on the shore of the county of Plymouth to the open sea, and to connect the same with any foreign telegraph cable." The validity of such legislation on the part of a State was subsequently considered in an opinion given by Attorney-General Hoar, who regarded it as a violation of that provision of the Constitution vesting in Congress the power "to regulate commerce with foreign nations and among the several States." The views of the Attorney-General upon this point are clearly stated in the opinion: "Telegraph communication is a new means of commercial intercourse which the discoveries of modern science have supplied. Being, however, an instrument of commerce, and a most efficient instrument of commercial intercourse, the fact that it is a new one does not, in my judgment, prevent the application to it of the constitutional provision. I am of the opinion that the control of telegraphic communication with foreign nations, so far as it is exercised by means of cables leading from the shores of the United States, is within the constitutional authority of Congress—to permit, regulate, or prohibit, in such cases and under such circumstances as their judgment shall direct; and that consequently there can be no security for such enterprises while no authority or protection for them has been derived from the acts of Congress. In other words, that the jurisdiction of the United States Government to regulate commerce with foreign nations, including every kind of commercial intercourse, is complete and supreme; that it can be exercised and asserted whenever and in such manner as Congress shall think fit, and that no action of the government of any *ex parte* State of the Union can confer any rights upon any person or corporation to carry on intercourse with foreign nations by a telegraphic cable, which will afford any permanent security for their value or their continuous enjoyment, unless the previous assent of Congress has been obtained. The separate States may grant the enjoyment of their own rights of soil and of privileges within their control, but they cannot grant rights which interfere with or limit the exercise of the authority of the national legislature so far as that authority is derived from the Constitution of the United States." It is further held that, aside from the question of the power of Congress to regulate commerce, the "connection of this country with a foreign nation by means of a telegraphic cable is a means of national communication so vital and important, both in peace and in war, to the national interests, and under some circumstances possibly even to the national existence, that it is in its own nature a subject for national control, which it would be impossible for the Government or the people of the United States to allow to exist under the separate control of a single State, or to depend upon the arrangements made by one of the States with a foreign power, its citizens or subjects, acting either in a private or corporate capacity." The discussion of this subject did not lead to any actual interference on the part of the American Government to prevent the connection of the foreign line with this country. The French cable proper, however, was not brought within the jurisdiction of the United States; but connection with the shore at Duxbury was effected by means of a cable laid by the "Ocean Telegraph Company," which had been incorporated for the purpose by the Legislature of Massachusetts. A complete communication having been thus secured, the offices of the company were at once opened to the public for the transaction of business.

which has since continued without interruption.

TELEICONOGRAPHY, OR THE DRAWING OF DISTANT OBJECTS. M. Revoil, an architect well known in France, from having had charge of the restoration of the Roman remains at Montpellier, Toulon, and Nîmes, has recently been engaged in a special study of the early architecture of the southern provinces of the ancient kingdom. In the course of his attempts to arrive at exactitude of definition, by the aid at one time of the camera lucida, and at another of the telescope, he has been induced to make experiments as to the combination of the principles of the two instruments. The result of this effort M. Revoil has called the *Têléiconographe.*

The principle of this instrument is that of allowing the image transmitted by the object-glass of a telescope to pass through a prism connected with the eye-piece. The rays of light, that would in the ordinary use of the telescope be transmitted direct to the eye, are refracted by this prism, and thrown down upon a table placed below the eye-piece. The distance between the prism and the table determines the size of the image projected on the latter, and it is easy for the observer to trace, on a paper placed on this sketching-table, the actual outlines indicated by the refracted light.

The idea once grasped, it is easy to work out the details. The telescope is fixed on a stand with screws and clamps, allowing of both horizontal and vertical motion, as it may often be necessary to give traverse to the instrument, in order to make a connected drawing of a larger area than can be included in the object-glass at one view. In fact, an entire panorama can be traced, if the relative positions of the axis of the telescope and the surface of the sketching-table are undisturbed.

M. Revoil's eye-piece might be adapted to the ordinary theodolite, so that any person who possesses one of these instruments may, at a small expense, obtain a good sketching-apparatus.

The advantage possessed by the teleiconograph over the camera lucida is manifest. The size of the image may be determined at will by the person who uses the former, without any diminution of accuracy. The croquis for a lithograph of the summit of one of the towers of Notre-Dame de Paris was taken, by means of the instrument of M. Revoil, at the distance of about 800 metres. It is twelve inches long. A sketch taken by the aid of a camera lucida is drawn alongside, and is only one inch in length, or one-twelfth part of the linear measure of the bold outline of the teleiconogram. Two mountain-peaks, in Provence, sketched by aid of the same apparatus, show how admirably it can be applied to the sketching of country. For the purpose of military surveying, its services promise to be of the utmost value.

The teleiconograph insures certitude in drawing, but it does not draw. It is an aid to the artist, not a self-acting substitute for his eye and hand. The sharp, bold touch of a master of the art of drawing will be as distinct from the feeble peddling of an inferior workman, when the refracting prism is used, as when free-hand sketching is resorted to. The division of attention between the object and the copy, which is often so painful, will be entirely avoided by the use of this instrument. In the hands of a true artist the result will be every way admirable—exact as a photograph, without the distortion of all those parts of the field which are distant from the centre, and at the same time marked by all the peculiarity of touch proper to the master.

TENNESSEE. The disorders which were prevalent in several localities in the State of Tennessee at the close of 1868 continued to disturb the tranquillity of the community during the early part of the past year. Popular sentiment throughout the State condemned these outrages as the acts of a band of outlaws, armed and disguised, whose deeds of violence were productive of excitement among the people, and a source of great damage to the commercial interests of the State. In several counties meetings were held, composed of men of all parties, and resolutions deprecating the prevalent spirit of violence were passed, of which the following may be regarded as a specimen:

Whereas, The people of Bedford County, without distinction of party, desire the repose and safety of society, and the security of property and life, and the maintenance of civil law: therefore be it

Resolved, That we most earnestly condemn, and will persistently oppose, all secret or open organizations, in resistance to the civil law; and we condemn in unmeasured terms the practice of an organization known as the Ku-klux Klan, or any set of men who assume disguise and prowl over the country, creating terror and excitement, or who write anonymous letters, or who are threatening innocent parties with retaliation; and we hereby pledge ourselves to use every persuasive and peaceable effort in our power to put down all lawlessness of whatever character, no matter who may be the perpetrators.

As the efforts of the civil authorities for the preservation of peace seemed to be ineffectual, Governor Brownlow deemed a resort to extreme measures necessary, and on the 20th of January issued a proclamation, in which, after stating that "there exist, in the middle and western divisions of this State, lawless bands of desperadoes, who are setting at defiance civil law, and who, by threats and acts of violence, are forcing many of our citizens to leave their homes;" and that, "in certain localities in those divisions of the State named, it is entirely impossible for the civil officers of the State to enforce the laws thereof," he calls upon "all good and loyal citizens to enter the ranks of the State Guards, and be mustered into service, and assist in putting down these lawless combinations and proceedings, and bringing the offenders to justice, so aiding to

preserve the peace of this Commonwealth." Those enrolled under this call in East Tennessee were to be furnished with transportation to Nashville, and there armed, equipped, and distributed, under command of General Joseph A. Cooper. The Governor further adds:

This proclamation will, in due time, be followed by another, designating the counties over which I shall declare martial law, the effect of which will be to set aside civil law, and turn offenders over to the military, who will try them, and, upon their conviction, dispose of them in summary manner.

These outrages have been long borne with, in the hope that they would be abated by the public sentiment of the respective communities concerned. Forbearance has now ceased to be a virtue. The Executive is not to be brow-beaten, cajoled, nor terrified out of the discharge of the duties demanded by existing exigencies.

All citizens who may not enroll under this call are hereby requested and enjoined to use their utmost endeavors, in conjunction with the State Guards, and otherwise, to restore and preserve the peace and dignity of this Commonwealth, and all citizens are also hereby warned against harboring those masked marauders called Ku-klux Klans, or giving them aid and countenance.

The Governor is determined to make the State Guards sufficiently numerous and effective, and to continue them in the field sufficiently long, until Middle and West Tennessee are as orderly and secure as, happily, East Tennessee is to-day.

Shortly after the publication of this proclamation, the following order was issued by General Cooper:

General Order, No. 1.

HEADQUARTERS TENNESSEE STATE GUARDS,
NASHVILLE, TENN., *January* 25, 1869.

In obedience to instructions from his Excellency the Governor,

The undersigned assumes command of all the Tennessee State forces in the field.

All persons applying for permission to raise companies must be of good moral character and must be in sympathy with the State and Federal Government.

There will be no commissions issued to line officers until they have a command equal to the rank which the commission represents; eighty-four men will be entitled to a captain, first and second lieutenant; forty-four to one first-lieutenant, and will be consolidated with some other organization if they fail to fill up a minimum company.

By command of
JOSEPH A. COOPER, Brig-Gen'l., Commander.
L. B. GAMBLE, Captain, A. D. C.

On the 20th of February, martial law was declared in nine counties of the State by the following proclamation of Governor Brownlow:

Whereas, There are now sixteen hundred State Guards at Nashville, armed and equipped, under command of General Joseph A. Cooper; and

Whereas, These troops are intended to preserve the peace and enforce the laws in counties heretofore partially in rebellion: now, therefore,

I, William G. Brownlow, Governor of Tennessee, do hereby proclaim martial law in and over the following-named counties, to wit: Overton, Jackson, Maury, Giles, Marshall, Lawrence, Gibson, Madison, and Haywood; and I further direct that General Cooper distribute these troops at once, and continue them in service until we have unmistakable evidence of the purpose of all parties to keep the peace.

It is further ordered in this proclamation that the general in command shall enforce the most rigid discipline among his troops, requiring them in every particular to conform to strict military discipline, showing no quarter to either officers or privates who shall be found guilty of habitual drunkenness.

In testimony whereof, I have caused the great seal of the State to be attached hereunto, this 20th day of February, 1869, and I order that the same be inserted three times in each of the newspapers entitled to publish legal advertisements.

(Signed) W. G. BROWNLOW,
Governor of Tennessee.

The policy chosen by the Executive to secure the enforcement of the laws caused no little alarm among the citizens in the counties affected thereby, who made efforts to free themselves from the inconveniences of martial law, by the adoption of resolutions pledging the coöperation of all good citizens to aid the civil authorities in a fearless execution of the laws, and expressing the belief that "neither martial law nor troops is necessary to preserve the peace or protect the lives of citizens." The Executive, however, was determined not to withdraw the militia until order was fully restored, and the civil authorities were able to preserve the peace. During the spring the attention of the people was gradually diverted from the subject of martial law by the growing excitement of the political canvass, which during the summer became unusually spirited, and attracted the attention of the country at large. The contest was waged not by the usual rival parties, but by opposing factions of the Republican party. These factions were unable to agree upon any candidate for Governor in the Republican State Convention held at Nashville on the 20th of May, and so irreconcilable was the difference between them that the Convention abruptly terminated in disorder before even a permanent organization had been effected. Subsequently the delegates representing the two hostile factions of the party held separate meetings, and respectively nominated De Witt C. Senter and William B. Stokes as candidates for Governor, each of whom claimed to be the regular nominee of the Republican party. Both of these candidates were prominent Republicans, and claimed to "stand fully and frankly upon the platform of the National Republican party." Mr. Stokes represented the third district of the State in Congress, and Mr. Senter, by virtue of his position as president of the Senate, had, in the latter part of February, succeeded to the office of Governor, made vacant by the resignation of William G. Brownlow to enter the Senate of the United States. No nominations for Governor were made by any other party; and it was understood that the Conservatives and the Democrats would unite in supporting Mr. Senter on account of his views on the franchise question, while Mr. Stokes was regarded as the representative of the more radical element of the State. On account of the disruption of the convention, no declaration of principles in the form of resolutions had been made by either party;

but the views of both sides were presented to the people by the joint discussion of the two leading candidates in various parts of the State. The most important question at issue had reference to the enfranchisement of a large portion of the population still subject to political disabilities. Mr. Stokes was opposed to an immediate restoration of the disfranchised class to the privileges of citizenship, and indorsed the policy announced in the National Republican platform adopted at Chicago in 1868, favoring "the removal of the disqualifications and restrictions imposed upon the late rebels in the same manner as the spirit of disloyalty will die out, and as may be consistent with the safety of the loyal people." His views were expressed in a letter bearing date January 31st, as follows:

When the killing of Union men ceases, the hellish organization of the Ku-klux is disbanded, and the laws are observed, then I am willing to entertain a proposition to amend the State constitution so as to allow the disfranchised to come in gradually, by providing that the Legislature may, by a two-thirds vote, remove the disabilities of those who petition and come well recommended by their loyal neighbors. This would let in well-disposed ex-rebels, and keep out bad ones. This would not endanger the Republican party, for the reason that it would require a two-thirds vote of each House to remove their disabilities, and, in my judgment, it will be some time before the Conservative Democracy will have such a majority.

The idea of amending the constitution so as to place the ballot in the hands of those outlaws at one clean sweep, and at the present time, would be cruel to the Union men.

The sentiments of those opposing the election of Mr. Stokes may be regarded as expressed in the address issued by Governor Senter in the early part of the canvass, the following passage of which has reference to the important topic of franchise:

The question which most interests the people of Tennessee at the present time, and which, in itself, is, perhaps, more pressing and important than any other, is the elective franchise. On this subject I am free to say that, in my judgment, the time has come, and is now, when the limitations and disabilities which have found their way into our statute-books as the result of the war should be abolished and removed, and the privilege of the elective franchise restored, and extended so as to embrace the mass of the adult population of the State. In other words, I am in favor of so amending the constitution and laws of the State that the present disfranchising clause and provisions shall be made to disappear from the same, and the privilege of the elective franchise made to rest upon the facts and conditions of the present instead of the past, and upon principles of impartiality, equality, and justice. * * *

Disfranchisement was adopted only as a temporary necessity growing out of the needs and situation of the time, and with no expectation that it would be long continued; and there can be no reason for its further continuance now except in a selfish partisan ambition to gain office, or a selfish partisan fear of losing it. Disfranchisement necessarily produces restlessness and discontent, and, as we have all seen, engenders animosities, discord, and strife. Enfranchisement will, in my opinion, heal the animosities which have so long divided our people, and bring concord, peace, and prosperity to the State, while, at the same time, it is most consonant with the theory and principles of our republican form of government, and with the declared policy and purpose of the party now in power."

Mr. Senter then declares in favor of a liberal system of common schools and a reduction of "taxation to the lowest possible point consistent with the punctual payment" of the obligations of the State. In advocating the ratification by the Legislature of the fifteenth amendment to the Federal Constitution, he says:

Its practical adoption and recognition are the ultimate fact and necessity of the Government, and its adoption now will remove much of the division, discord, and danger, which will otherwise disturb the future. Fears have been expressed that, if the disfranchised citizens of Tennessee should be again admitted to the ballot-box, and to the possession of political power, they would endeavor to use it so as to deprive our colored fellow-citizens of the political privileges which they now possess.

I am assured and satisfied that such would not be the result, and have taken the position I now occupy, and have said what I have in their behalf, upon the assumption that they would be willing to guarantee to others, without distinction of color, or previous condition of servitude, all the rights and privileges they claim for themselves; and trust that they will soon so express themselves in the indorsement to this amendment, that all doubts and fears in reference to their position may be removed.

The canvass was ended by the election held on the 5th of August, which resulted in the choice of Mr. Senter for Governor, by a majority of 65,297. The whole number of votes cast was 175,369, of which Mr. Senter received 120,333, and Mr. Stokes 55,036. At the presidential election of the preceding year, 82,757 votes were polled, of which 56,628 were cast for Grant, and 26,129 for Seymour.

The results of this election were influenced in no small degree by the important decision of the Supreme Court, delivered in May, declaring unconstitutional the acts of the Legislature authorizing the Executive to set aside registrations of voters in cases of fraud and irregularities. This question arose on an indictment in the Circuit Court against William Staten, in which he was charged with illegal voting. On the 10th of December, 1867, the name of Staten had been registered as a qualified voter in Gibson County, and a certificate to that effect issued to him. But on the 25th of February, 1868, in accordance with the act of the Legislature empowering the Executive to set aside the registration of any county "when it shall be made to appear to his satisfaction that frauds and irregularities have intervened in the registration of the voters of such counties," Governor Brownlow issued a proclamation declaring the registration in Gibson and other counties null and void. Subsequently, on the 7th of March, Staten, by virtue of the certificate issued to him in December, and still in his possession, voted at an election for county officers, whereupon he was arraigned for illegal voting. The counsel for the defendant demurred to the indictment in the Circuit Court, on the ground that the Legislature,

neither by direct legislation, nor by conferring power upon the Governor, could deprive a citizen of his right to vote after the franchise had once vested it in him. The indictment having been quashed in the Circuit Court, the question was taken to the Supreme Court, and the action of the court below was sustained. The Supreme Court held that the elective franchise was a "right which the law protects and enforces as jealously as it does property in chattels or lands," and that "the rules of law which guard against deprivation or injury the rights of persons in corporeal property, are alike and equally applicable to the elective franchise, and alike and equally guard persons invested with it against deprivation of, or injury to, it. Persons invested with it cannot be deprived of it otherwise than by due process of law." It was the opinion of the court that "due process of law," by which a person may be deprived or divested of his properties, rights, privileges, or franchises, was not "an act of the Legislature, or an act of Executive power, or a proceeding in court, other than a proceeding wherein the party whose right is involved can have, or is authorized to have, a hearing, and to make a defence," and that the act of the Governor, in setting aside and annulling the registration of a county, was not "due process of law." In deciding that the functions and powers of the commissioners of registration were of a judicial nature, and not properly subject to legislative or Executive control, the chief justice said:

> The act, and decision, and judgment of the commissioner are of a judicial nature. Under the franchise law he is the appointed tribunal, and the only tribunal, empowered to ascertain and decide what persons possess the qualifications which entitle to the privilege of the elective franchise, and to award to them the evidence of their right to vote, and authority to exercise and enjoy the right. Without his adjudication no person can establish his right, and obtain the evidence of the right and authority to exercise and enjoy it. And, with his adjudication, persons are invested with the privilege of the franchise, and the right to exercise and enjoy it. It is an adjudication upon a right, and a decision declaring its existence, and awarding its enjoyment. Without, and until such adjudication, the privilege of the franchise has no practical existence to the person, and with such adjudication the applicant is invested with the privilege and the authority to exercise it.
>
> The functions and powers, then, of the commissioner, are of a judicial nature; and his office is an office of a judicial nature; and his decisions are of a judicial nature; and his decision in favor of an applicant is an adjudication of a right; and the certificate issued to the applicant is in the nature of a judicial award, declaring, evidencing, and establishing the right.

After a thorough discussion of the subject in all its bearings, the conclusions reached by the court were expressed as follows:

> The form and plan of the constitution of the State, expressed in the whole and in the parts, declare, organize, and establish a system and form of government, popular, elective, republican, wherein sovereignty is in the electoral body of the people. This is expressed in and by the clauses which delegate, reserve, restrain, and distribute the powers of government among the several departments and officers, for the purpose of maintaining and enforcing checks and balances upon the several functionaries, and so securing the liberties and rights of the people, and a popular, elective, and republican form of government.
>
> The statute which empowers the Governor, in his discretion, practically and effectually to abrogate the right to vote, of any and every qualified citizen of the State, and at any time and all elections, is repugnant to that portion of the Constitution which is expressly ordained to secure to the people the right to elect officers of the government.
>
> The statute which practically and effectually empowers the Governor to determine who of the qualified citizens shall vote and who shall not, and who shall elect and who shall not elect the officers of the government, himself included, is repugnant to that portion of the organic frame of the government which was ordained to establish and maintain a republican form of government.
>
> The statute which empowers the Governor practically and effectually to divest any and every qualified voter his right to vote, not only once, but from time to time and without end, is repugnant to those provisions of the organic law which are ordained to invest the courts with judicial power, and to exclude the Executive Department of the government from the exercise of such power.
>
> For these reasons the court is constrained to hold that the statute which confers on the Governor the power to set aside and annul the registration of a county, in whole or in part, is unconstitutional and void.

By this decision the elective franchise was restored to many thousands of citizens, whose registration and privilege of voting had been annulled by Executive proclamation.

The Legislature assembled at Nashville on the 4th of October, and proceeded without delay to the consideration of important measures. This body was composed of 20 Democrats and 5 Republicans in the Senate, and 66 Democrats and 17 Republicans in the House, showing a Democratic majority of 15 in the Senate and 49 in the House. Intimations having been made that there was a party in the General Assembly that favored repudiation of a portion of the State debt, the following resolutions, intended to restore full confidence in the public faith, were introduced into the Senate and unanimously adopted under a suspension of the rules:

> *Whereas*, Previous legislation on the part of those who have heretofore controlled the State government, in pledging the public faith by the issuance of State bonds, has tended greatly to impair the public credit and impart distrust to the minds of many as to the ultimate payment of our public debt; and
>
> *Whereas*, A people who, in all their history, have shown scrupulous fidelity, commercial and otherwise, to private obligations, must consider justice to all public creditors as essential to the honor and dignity of the State: therefore,
>
> *Resolved by the General Assembly of the State of Tennessee*, That the people of Tennessee will never signalize their restoration to the control of public affairs by sanctioning in any manner indifference to public obligations.
>
> *Resolved*, That expediency, together with the honor and good faith of the State, demands that the interest on the public debt be paid at the earliest practicable moment, and its principal securely provided for at maturity; and to these ends, under a careful retrenchment and rigid economy in all other respects, the en-

tire available revenues and resources of the State should be faithfully applied, as they in honor are pledged.

Resolutions were also passed requesting Congress to remove from the citizens of the State the political disabilities imposed by the fourteenth amendment to the Federal Constitution. When the fifteenth amendment to the Constitution came up for consideration in the House, the proposition to ratify it was rejected by a vote of 57 to 12.

Among the reasons advanced in the majority report of the Committee on Federal Relations for its rejection were the following:

"It is class legislation of the most odious character. It singles out the colored race as its special wards and favorites, and upon them it confers its immunity, bestows its bounty, confers its affection, and seals its love.

"It is inexpedient, because it will become a bone of contention in all future time, and the subject of ceaseless agitation in the halls of Congress and before the people. One Congress will think our mode of legislation 'appropriate,' and another Congress will think a different mode 'appropriate' to enforce said fifteenth amendment. It leads inevitably to a concession of all sovereign power to the legislative branch of the Federal Government, and consequently is destructive of the rights of States, and tends to consolidation and despotism."

Considerable attention was attracted by the contest which occurred at this session for the election of United States Senator for the term of six years from the 4th of March, 1871, for which position ex-President Johnson was a candidate. His successful rival was Henry Cooper, a member of the State Senate, who, though a young man, had for many years held a prominent position in the public affairs of the State as an old-line Whig, a stanch supporter of the Union during the war, and subsequently a conservative in politics. Mr. Cooper had been appointed to the judiciary of the State by Andrew Johnson when Governor of Tennessee, and was the first to present the name of the ex-President for the senatorial honors which were subsequently conferred upon himself. The claims of Mr. Johnson were at first contested by the friends of Emerson Etheridge, who, after the withdrawal of the name of that gentleman, supported Mr. Cooper. The ballotings continued during four days, when on the last ballot 55 votes having been cast for Henry Cooper, and 51 for Andrew Johnson, the former was declared elected.

The most prominent question considered by the General Assembly at this session had reference to the calling of a constitutional convention, for the purpose of changing the organic law of the State. Various bills were introduced early in the session, having for their object certain changes in the constitution, by "striking out the present franchise law," by repealing the law requiring the test oath, passed May 3, 1866, and all other laws requiring test oaths in order to procure certificates to constitute persons electors, and to enable them to become candidates for office, and by "making such amendments to the constitution of the State as will secure equal taxation to all the people—the last provision having reference to levying a poll-tax upon colored citizens." In lieu of all other bills and resolutions a bill was reported by the Judiciary Committee of the House, the leading features of which were the following:

A Bill to authorize the people to call a Convention, and for other purposes.

Whereas, According to section one, article one, of the Declaration of Rights, all power is inherent in the people, and all free governments are founded on their authority and instituted for their peace, safety, and happiness; and

Whereas, It is declared that, for the advancement of these ends, the people have at all times an inalienable and indefeasible right to alter, reform, or abolish the government in such manner as they may think proper; and

Whereas, In the opinion of this General Assembly, the public exigencies do now demand the exercise of these inherent and reserved powers on the part of the people of the State: therefore

Be it enacted by the General Assembly of the State of Tennessee, That the citizens of the State, entitled to vote for members of the General Assembly, are hereby athorized to assemble on the —— day of ——, 1869, at the several places of holding elections in their several counties, and vote for or against calling a convention to amend, revise, or form and make a new constitution for the State.

SECTION 2. *Be it further enacted*, That, in submitting the question of a convention to the people, they shall have written or printed on their ballots the words "*Convention*," or "*No Convention*," and if the number of votes cast for a convention be greater than the vote cast against a convention, then there shall be a convention.

SEC. 3. *Be it further enacted*, That an election for delegates to a convention of the people of the State shall be held in the several counties thereof, at the same time and places, and that said election shall be held at all the precincts and voting-places established by law, and shall be managed and conducted by the Commissioners of Registration and other proper officers of the counties respectively, in the same manner and under the same rules, regulations, and restrictions, that members of the General Assembly are now elected. And it is hereby declared to be the duty of the Governor to issue his proclamation to the several Commissioners of Registration of the State, at least thirty days before the time appointed for holding said election, requiring them to hold and conduct the same as herein provided. The said Commissioners of Registration shall advertise the time and places as in cases of members of the General Assembly.

SEC. 4. *Be it further enacted*, That the whole number of delegates elected to said convention shall be one hundred, and that each one of the twenty-five senatorial districts shall each compose a district and elect each one delegate to said convention.

SEC. 5. *Be it further enacted*, That each one of the representative districts, as established by the apportionment act of 19th February, 1852, shall constitute a district, and elect and send to said convention exactly the same number of delegates that they have representatives in the General Assembly by said act of apportionment.

SEC. 6. *Be it further enacted*, That each one of the electoral districts, as established by said act of apportionment, shall constitute a district, and elect and send to said convention each one delegate.

SEC. 7. *Be it further enacted*, That the votes of the several senatorial, representative, and electoral districts shall be compared at the several places where the votes for members of the General Assembly were compared in the last August election.

SEC. 8. *Be it further enacted*, That no person shall be eligible to a seat in said convention who is not twenty-one years of age, and who has not been a citizen of the State for twelve months, and of the county and district from which he is elected six months immediately preceding the election.

SEC. 9. *Be it further enacted*, That all laws requiring test-oaths to enable persons to become candidates for office, or requiring judges and clerks of elections to take said oaths, shall not apply to the election under this act.

The first section of this bill, which excluded from a participation in the convention that class of citizens who were disfranchised, was the subject of a protracted and animated discussion. It was contended, by those opposing this feature of the bill, that the call for a convention should come from the people, who were the true source of power, and that there is no power, either in the Legislature or the constitution, to prescribe as to who shall vote, when it is agreed that a convention of the people shall be held. This inherent right of the people to call a convention was guaranteed by the constitution, and had never been surrendered; nor was it subject to legislative control. It was further claimed that the franchise law had never been recognized as a part of the constitution by any legal tribunal, and that the Legislature had full power to repeal any of its provisions.

On the other hand it was argued that the franchise law was part of the constitution, and could not be changed by mere legislative action; that "the people had a right to assemble and elect delegates to a convention for the purpose of altering, or abolishing, the State government only by and with the assent of the existing State government, given by the Legislature;" and that only those were competent to unite in the call for such a convention, who were vested by the constitution with the right of suffrage. The prevailing sentiment of the House was in favor of allowing the disfranchised class to vote on the call for the convention, and the first section of the bill was amended so as to read as follows:

Be it enacted by the General Assembly of the State of Tennessee, That every male person not convicted and rendered infamous for crime, of the age of twenty-one years, being a citizen of the United States and a citizen of the county where he may offer his vote six months next preceding the day of election, is hereby authorized to assemble on the third Saturday in December, 1869, at the several places of holding elections in their several counties, and vote for or against calling a convention to amend, revise, or form and make a new constitution for the State, and no certificate or other qualification than the foregoing shall be required by the judges holding said election.

When the bill came before the Senate for consideration, a minority report of the Judiciary Committee was presented in favor of submitting to a popular vote, including the disfranchised class, the following amendments to the constitution:

ARTICLE I., *Sec.* 1. That every male person, not indicted and rendered infamous for crime, of the age of twenty-one years, being a citizen of the United States, and of the county where he may offer his vote six months next preceding the day of election, shall be entitled to vote for members of the General Assembly and other civil officers for the county or district in which he resides.

ARTICLE II., *Sec.* 1. The General Assembly of the State of Tennessee shall have power to grant reprieves and pardons in all cases of conviction under impeachment, two-thirds of both Houses concurring therein.

This proposition not meeting with the approval of the Senate, the following amendment to the House bill was adopted, but on a subsequent reconsideration of the vote was rejected:

Be it further enacted, That said delegates when assembled in convention shall only amend the constitution of the State as it now exists, in so far as the same has reference to the qualification of voters, to the judiciary, and to the regulation of taxables and towns and formation of new counties, and on these and cognate subjects they are clothed with full power; but all the other articles and provisions of the constitution of the State, as contained in the constitution of 1834, except so far as they relate to the former condition of slavery, shall be preserved, and not amended, altered, or changed in any way whatever by said delegates.

The convention bill, having been amended by fixing the number of delegates at seventy-five, passed both branches of the General Assembly. It is made the duty of the Governor, if a majority of those voting be in favor of a convention, "immediately to issue his proclamation announcing the result, and said convention shall convene in the city of Nashville, on the second Monday in January, 1870." It is also provided that the constitution or form of government which said convention may adopt shall not be of any binding force or efficacy until the same has been submitted to and ratified by the people of the State in such manner and in such time as the convention shall provide.

At the election held on the 18th of December, 50,520 votes were cast for, and 10,020 against the convention; accordingly, that body assembled on the 10th of January, 1870.

The receipts into the Treasury for the year ending September 30, 1869, amounted to $2,842,209.06, and the expenditures to $2,834,348.54, leaving a balance of $29,209.54 in the Treasury on the 1st of October.

The total debt of Tennessee is stated at $39,264,244.55, and is classified as follows:

STATE DEBT PROPER:	
Turnpike	$1,223,856 66
Bank of Tennessee	1,000,000 00
Railroads	410,250 00
Hermitage Purchase	48,000 00
State Capitol	658,000 00
Total	$3,344,606 66
Funded interest	735,553 00
Total	$4,080,159 66

RAILROAD DEBT:

State bonds loaned	$26,412,000
Bonds indorsed by the State	2,196,000
Funded interest	3,213,046
Interest to July 1, 1866	2,306,477
Total	$34,127,523

In addition to which the State has loaned to turnpike-roads $545,000 in bonds, and has assumed claims of the United States against the Edgefield and Kentucky Railroad, and the Memphis and Clarksville Railroad, amounting in the aggregate to $511,560.24. The estimated receipts into the Treasury for the fiscal year ending October 1, 1870, are stated at $1,555,382, and the expenditures, including the interest on $18,099,000 bonds, at $1,500,000, indicating an excess of receipts over expenditures amounting to $55,382. In referring to the finances of the State in his last message to the Legislature, Governor Senter said:

With a return, under economy, to our average annual expenditures preceding the war, in State government proper, so saving about $400,000; with largely-increased revenues from polls, by universal enfranchisement; with all causes for State Guards and other extraordinary expenses by the State forever removed, I trust; and with confidence and satisfaction in the hearts of the people at such results, I feel thoroughly convinced the small deficit in our revenues, needed to enable prompt resumption of interest payments on our public debt and, at the same time, provide a sinking fund adequate to discharge it at maturity, can be easily supplied by your wisdom, without in the least discontenting the people by undue taxation.

TERRITORIES OF THE UNITED STATES.

The number of organized Territories is nine, viz., Arizona, Colorado, Dakota, Idaho, Montana, New Mexico, Utah, Washington, and Wyoming. Besides these, there is the Unorganized Indian Territory, and the District of Columbia. The vast tract purchased from Russia, known as Alaska, has been annexed as a county to Washington Territory, by the Forty-first Congress, at its session 1869–'70. The opening of the Union and Central Pacific Railroads in 1869, the energetic prosecution of work on the Northern Pacific, and the progress made on the Kansas Pacific and Southern Pacific, have greatly stimulated emigration to the Territories, and it will not be long before three or four of them will be asking admission to the sisterhood of States. The exploration of the Colorado River by Captain Powell and his party in the summer of 1869, elsewhere described (*see* GEOGRAPHICAL EXPLORATIONS), has thrown much light on the geological structure, climate, soil, and capabilities, of the extraordinary region through which that river cuts its way. The agriculture and mineral productions, especially of gold, silver, iron, lead, and coal, of the Territories, are in process of rapid development, and although in Dakota, Montana, New Mexico, Arizona, and some sections of Idaho and Wyoming, there are some Indian troubles, the measures taken by the Government, and the progress of the railroads, will speedily remove these.

Arizona.—This Territory lies between the 31st and 37th parallels of latitude, and the 32d and 38th meridians west from Washington. It has Utah on the north, New Mexico on the east, Mexico on the south, and California and Nevada on the west. Its area is estimated at 130,800 square miles. The Colorado River and its affluents drain the northern and northwestern portions of the Territory, and the main stream forms the greater part of its western boundary. The southern and southeastern portions are drained by the Gila and its tributaries. The greater part of the Territory is an elevated plateau, from 3,000 to 8,000 feet above the sea-level, with occasional bluffs, and volcanic cones, rising from 500 to 2,500 feet above the plateau. These lofty table-lands are riven almost to the sea-level by the cañons of the Colorado, and its affluents, the Grand, Green, Colorado, Chiquito, and San Juan Rivers, and in the south and southeast by the more open valleys of the Gila and its branches. Much of it is dry and parched for the want of water, rain seldom falling, and being drained rapidly into the river cañons. There are, however, abundant evidences that it was, five or six hundred years ago, a fertile and populous country, with numerous walled towns, and a considerable degree of civilization. It is believed by the settlers that, by means of artesian wells and irrigation, its fertility can be restored, and it can again become densely inhabited. Its mineral wealth is very great, and during the year 1869 many rich lodes were opened. In those portions of the Territory where irrigation can be practised, or where, as in the valley of the Gila, there is sufficient moisture, the crops are excellent, and the cereals yield abundantly. The Territory had raised nearly all the grain consumed there, including a supply for the half-dozen United States forts within its limits. Fruit-raising has been very successful wherever it was tried. The Apache Indians are troublesome, but the other tribes are generally friendly. There was during the year a considerable increase in the number of new settlements, and the value of taxable property was increased about twenty-five per cent. As no portion of the Territory has yet been surveyed by the Government, the settlers can only preëmpt their land.

Colorado.—Area, 105,675 square miles. Population estimated at 110,000 in 1869. Capital, Central City. Governor, General Edw. McCook. The Territory has nineteen counties, viz.: Larimer, Weld, Boulder, Arapahoe, Douglas, Jefferson, Gilpin, Clear Creek, Summit, Park, Lake, Saguache, Conejos, Costilla, Huerfano, Las Animas, Fremont, Puebla, and El Paso. The Kansas Pacific Railroad, eastern division, is in rapid progress to Denver, and arrangements have been entered into between that road and the Denver Pacific Railroad, by which they are to prosecute their enterprises together, and unite their rolling-stock for the working of their several roads. They have also in progress

a railroad to Georgetown, in Clear Creek County, and others surveyed from Denver to Santa Fé, New Mexico, to South Park, and the Rio Grande, with a branch to the head of the Arkansas River, to Pueblo and the south line of Colorado, with a branch to Cañon City, and a branch road to Boulder. The yield of bullion in 1869 was a little more than $5,000,000. The gold and silver ores of Colorado are more refractory than most of the ores of the Pacific coast, but when the precious metals are extracted the yield is very large, averaging from $300 to $600 per ton. New processes have been devised for reducing the ores more readily, and less expensively, and the results are already very encouraging. Coal is abundant and of excellent quality, and there is no reason to fear any future scarcity. Iron, copper, and lead, abound, and the mines of each are becoming better known and developed. In its agricultural productions Colorado is happily disappointing those who have regarded it as a part of the Great American Desert. It has not less than 6,000,000 acres which can be supplied with water by irrigation, and thus irrigated yield enormous crops. Of course with its present sparse population but a small portion of these arable lands is yet under cultivation, but the crops of 1869 were stated by Mr. W. R. Thomas, at the anniversary of the Colorado Agricultural Society, to have been in round numbers 675,000 bushels of wheat, 600,000 bushels of corn, 550,000 bushels of oats and barley, 350,000 bushels of potatoes and other root crops, and, adding to these the hay and dairy products, the aggregate market value of the agricultural crops of the year was above $3,500,000. Wheat averages 28 to 30 bushels per acre; oats and barley 35 bushels, corn 40 bushels, and potatoes 100 bushels. Colorado is said to be the best grazing country in the United States. Neat-cattle can be raised to the age of five years at a total cost not exceeding $10, or $2 per annum. The natural grass of the Territory is remarkably nutritious and fattening, and there is no occasion for housing the cattle, as the climate is so mild that they can graze the year round. All the expense of stock-raising consists in the hiring of a few herdsmen, and the gathering of a small quantity of hay for occasional feeding during the extreme cold which occurs in some winters. Wool-growing is equally profitable and easy. The natural increase of sheep and goats in these pasture-lands is 100 per cent. per annum, and of neat-cattle about 80 per cent. Over 1,000,000 pounds of wool were shipped from Colorado to the East in 1869. Dairy products are also becoming abundant, and are of excellent quality. The Territory supplies the demand of its own population for them and is beginning to export them to some extent.

Dakota.—This Territory has on the north the British possessions, on the east Minnesota and Iowa, on the south Nebraska, and on the west Montana and Wyoming. Its area is 150,931 square miles, and a population of about 60,000 whites and civilized Indians, and not far from 25,000 Indians of the Sioux and other wild tribes. Capital, Yankton. Governor, J. A. Burbank. The surface of Dakota is generally elevated, but not mountainous. Traversing the eastern portion for several hundred miles is a plateau called the Couteau des Prairies, having an average elevation of 1,500 feet above the sea, with a breadth of from 15 to 20 miles, while a similar table-land of less height, the Couteau du Missouri, extends from the southeastern to the northwestern portion, and westward nearly to the Missouri River. The basin of the Red River of the North, and that portion east of the Dakota River, are covered with grassy plains, with but slight irregularities to break the uniformity of their appearance. The remaining portion of the Territory, mostly west of the Missouri River, consists of high-rolling prairie. The soil of the eastern and southern parts is excellent and well adapted to the cultivation of the cereals, and root crops, and to stock-raising. Almost the entire Territory is well watered, and the western and northwestern parts contain fine grazing-lands, as well as some adapted to the growth of the smaller grains. The "Bad Lands" (*Mauvaises Terres*) in the southwest, and the high gravelly land between the Missouri and Dakota Rivers, are the only poor soils in the Territory. The Missouri, with it numerous affluents, traverses the Territory almost centrally, and the Red River of the North, with its southern tributaries, drains the northern portion. The Missouri has eight large, and numerous smaller, affluents within the Territory. In the eastern part are many lakes, six or seven of them of considerable size. The Territory abounds in mineral wealth. Gold, silver, iron, copper, and coal, are known to exist in considerable quantities in the Black Hills in the southwest, and in 1868 and 1869 valuable lodes of both gold and silver were discovered in that section, and considerable immigration ensued. In the southeast, in the neighborhood of the Big Sioux River, coal of good quality has been discovered, while the southern portion has quarries of building-stone, and limestone, and beds of excellent clay for brick. In the north, near Devil's Lake, there are rich deposits of salt. The Territory would be rapidly settled, if immigrants could be satisfied that the wily and treacherous Sioux would remain quiet; but their presence and their hostile disposition are serious drawbacks on its growth and prosperity.

Idaho.—Area, 86,294 square miles (a small tract having been set off to Wyoming in 1868). Population, about 30,000. Capital, Boise City. Governor, D. W. Ballard. The whole Territory is highland, and portions of it mountainous, varying in elevation from 2,000 to 5,000 feet above the sea. The climate on the uplands is severer than that of Utah or Nevada, but the sheltered valleys of its numerous streams have a mild, equable, and delightful climate. The

Territory is copiously watered, the Clearwater, Salmon, Snake, and Boise Rivers, and their numerous tributaries, furnishing an abundant supply of pure water, from their sources in the perpetual snows of the Bitter-Root and Rocky Mountain summits. Yet, except on its northeast and east border, where the rain and snow fall, on the western slope of the Rocky Mountains, is considerable, Idaho belongs to the *dry* regions, the annual rainfall not being more than one-fourth that of the Atlantic States. Yet, such is the depth of the soil in the valleys, and such its facilities for successful irrigation, that the crops can be depended upon with as much certainty as in countries of greater rainfall. The cereals, fruits, and root crops, do well in the valleys, and the remainder of the Territory is well adapted to grazing, and wool-growing is likely to be largely profitable. It is estimated that there are not less than 3,000,000 acres of land so situated that irrigation is practicable, a considerable district where it is not generally necessary, and at least 30,000,000 acres of good grazing-lands. In mineral wealth it is probably not inferior to any of the Territories, with the possible exception of Arizona. Its yield of gold in 1869 exceeded $8,000,000, mostly from quartz lodes, the placers which first attracted attention having, in many cases, become exhausted. The Northern Pacific Railroad, now in course of construction, will prove of immense benefit to Northern Idaho, while the branch railroad from Ogden, on the Union Pacific, which is to connect with the Northern Pacific in Oregon, will pass through the Boise Basin, the rich mining-district of Southern Idaho. Iron-ore of superior quality, and excellent coal, are found in close proximity, and Idaho will probably eventually furnish much of the iron for rails, machinery, and building, which will be required in the States on the Pacific slope. As yet the lands of the Territory, over 55,000,000 acres, have not been brought into market, the surveys not having been completed. The settlers have generally preëmpted their claims.

Montana.—Area, 143,776 square miles. Population in 1869, 50,000. Capital, Virginia City. Governor, James M. Ashley. The territory is bounded on the north by the British Possessions, on the east by Dakota, on the south mainly by Wyoming, on the west by Idaho. The Rocky Mountains, with their numerous spurs and ranges, occupy a tract in the western part of Montana 200 miles in width and 320 miles in length from north to south, with summits rising from 2,000 to 14,000 feet in height, many of them covered with perpetual snow. The eastern part of the Territory consists chiefly of rolling and elevated table-lands, while the western has, nestling among its mountains, many beautiful and fertile valleys. The Missouri and Yellowstone, with their numerous affluents, drain the portion east of the watershed of the Rocky Mountains, and discharge their waters into the Gulf of Mexico, while the highlands west of the water-shed are drained by the Clarke's Fork and Kootenay Rivers and their tributaries into the Columbia River and the Pacific Ocean. The Territory is therefore well watered, and has a much greater rainfall than Idaho. Its climate is diversified. In the more protected valleys, and in the basin of Clarke's Fork, as well as in the southern portion generally, it is pleasant and salubrious, snow seldom falling, and cattle grazing throughout the year. On the more elevated lands it is colder, and the climate approximates to that of Northern New England. The mineral wealth of the Territory is very great. From 1862 to 1867, both inclusive, the aggregate product of gold and silver from its mines and placers was $72,100,000. In 1868 there was $8,640,000 of gold and silver refined and run into bars in the Territory, besides the ores and crude gold and dust sent out. The product in 1869 is estimated at over $9,000,000. The principal gold-bearing regions are four or five in number, at considerable distances from each other, on the Hell-Gate River, the Big-Hole Creek, and other tributaries of the Madison and Jefferson rivers, on the Missouri, from the junction of the Three Forks to the mouth of Smith's or Deep River, and on the branches of the Yellowstone east of Helena. Silver is found in most of these localities, and also in four or five others, where it is not combined with either gold or copper. There are also extensive deposits of copper and lead. Bituminous coal is abundant, and lignite exists in great quantities on the Yellowstone and Missouri, and the northern tributaries of the latter. Iron, gypsum, plumbago, arsenic, antimony, tellurium, tin, and cinnabar, have been met with. There are hot springs and geysers in numerous localities, but principally about the head-waters of the Madison.

The Surveyor-General estimates that more than 30,000,000 acres, or one-third of the area of the Territory, is susceptible of profitable cultivation, with the aid of occasional irrigation. The assessed value of real and personal property in 1868 was $9,400,000. The Indians are troublesome in the eastern section, but have done little mischief in the southern and western part of the Territory. At the election in 1869, James M. Cavanagh, Democrat, was elected delegate to Congress, receiving 1,860 majority in a total vote of 9,350. The Council was entirely Democratic; the House had twenty-one Democrats to three Republicans. There are eleven organized counties in the Territory.

New Mexico.—Area, 121,201 square miles. Population in 1869, about 100,000, of which about 25,000 are Indians. Capital, Santa Fé. Governor, William A. Pile. There are 18 counties, viz.: Bernalillo, Colfax, Dona Ana, Grant, Lincoln, Mora, Rio Arriba, Santa Ana, Santa Fé, San Miguel, Socorro, Taos, and Valencia. At the election in 1869, J. Francisco

Chaves, of Santa Fé, Republican, was elected delegate to Congress by a majority of 1,921, in a total vote of 14,467. The Council consisted of ten Republicans and three Democrats, and the House of Representatives of twenty Republicans and six Democrats.

The surface of New Mexico, like that of Arizona, consists of immense elevated plateaus, from which rise occasional bluffs and rounded mountain-summits, often giving evidence of past volcanic action. Through these plateaus the rivers and streams have, during long periods of time, worn deep channels and furrowed out valleys, often of picturesque beauty and great fertility. The rivers of New Mexico have not generally such deep and dark cañons as those of Arizona; the river valleys are generally narrow, but very fertile. The principal rivers of the Territory are the Rio Grande, a river strongly resembling the Nile in many particulars; the Pecos, the Canadian, an affluent of the Arkansas, and the San Juan and Gila, tributaries of the Colorado. The climate is dry, rather warm, but exceedingly healthful, and admirably adapted for the growth of the cereals, which, under the thorough irrigation practised there, yield immense crops. It is also an excellent country for stock-raising, its grama-grass and mesquit-grass furnishing nutritious food for cattle and sheep, and fattening them rapidly. The infrequency of rain and the mildness of the temperature are great advantages, as it is not necessary to house the stock at any season of the year. Experienced viniculturists pronounce it the best region in the world for the cultivation of the grape for wine. The Apache and Camanche Indians, by their constant depredations upon stock, render the business of stock-raising more precarious; but it is to be hoped that this hinderance to the growth of the Territory will ere long be obviated. The Pueblo or village Indians are a quiet, peaceful race, of considerable civilization. The Navajos, though nomadic, are not troublesome. The mineral wealth of the Territory is as yet very imperfectly developed; but there can be no doubt that it is exceedingly rich in gold and silver ores, which can be easily and cheaply reduced. There are also copper, iron, coal, cinnabar, and zinc.

Utah.—Area, 84,476 square miles. Population, in 1869, 120,000. Capital, Great Salt Lake City. Governor, J. Wilson Shaffer. The Territory is intersected by the Wasatch Mountains, which divide it into two unequal parts, that west of the range being the smaller, and included within the "Great Basin," while the eastern division forms part of the basin drained by the Colorado of the West. The "Great Basin" has no known outlet for the waters which flow down the mountains, and its lakes, which are numerous, are mostly either brackish or salt. Lake Utah, having the river Jordan for its outlet, is an exception, its waters being pure, sweet, and abounding in fish. The general elevation of the valleys and lakes is from 4,000 to 6,000 feet above the sea. The mountain-ranges traversing its surface rise from 2,000 to 7,000 feet above the valleys, the highest peaks being perpetually snow-clad. The lands of the "Great Basin" are generally sterile, for want of moisture, though when irrigated they yield very large crops. The region east of the Wasatch Mountains is a better soil, furnishing excellent grazing-lands, and where irrigated yielding large crops of cereals. Fruits generally succeed remarkably well. There are numerous mineral springs, of various kinds. There are, probably, gold and silver in the foothills of the Wasatch range, and lodes have been discovered near Great Salt Lake City; but the policy of the Mormon leader has been to discourage mining, and hence it has received no development. During the past year a branch of the Union Pacific Railway has been in progress from Ogden to Salt Lake City, and the junction of the Union Pacific and Central Pacific has been effected within the bounds of Utah, at Ogden. The great influx of people from all quarters into the Territory, consequent upon the completion of the great railway, and an uprising of a considerable body of malcontents against Brigham Young, the head of the Mormon Church, have created considerable excitement among the people of Utah, and may eventually lead to the breaking up of this extraordinary community, or to the departure of its leader to some other secluded and desert region.

Washington.—Area, 69,994 square miles. Population, in 1869, estimated 40,000. Capital, Olympia. Governor, E. S. Salomon. At the election for delegate to Congress in 1869, Selucius Garfield, Republican, was chosen, receiving 148 majority in a total vote of 5,338. The Legislature had 5 Republicans to 4 Democrats in the Council, and 16 Republicans to 14 Democrats in the House. The Territory is divided into two unequal parts by the Cascade range of mountains, the eastern division, including the great basin of the Columbia, embracing an area of 40,000 square miles, and a general altitude of from 1,000 to 2,000 feet above the sea. It is drained by the Columbia River and its tributaries, these tributaries often flowing through cañons with perpendicular walls from 500 to 2,000 feet in height. The western portion, extending from the summit of the Cascades to the Pacific Ocean, is divided into three basins, the Columbia, the Chehalis, and Puget Sound, and embraces an aggregate area of 28,000 square miles. The climate of the eastern section is generally clear and cold in winter, hot and dry in summer, resembling in temperature that of Southern Ohio and Pennsylvania. It is chiefly a grazing region, the bunch-grass affording excellent food for cattle. Much of it is also well adapted to the growth of cereals and root crops. The snow falls early, and usually lies till spring. In the western section there are two seasons—the wet and dry. The temperature is very mild

for so high a latitude, the difference in mean temperature between summer and winter in Puget Sound being only 24 degrees. The rivers of the west coast abound in fine salmon, cod, and halibut. The real and personal property of the Territory is assessed at a little more than ten million dollars. Gold is found in Stevens County, in the northern part of the Territory, on Clark's Fork of the Columbia and its tributaries, and silver near the coast in Pacific County, in the southwest part of the Territory. Coal is found, of excellent quality and in large quantities, at several points. Iron and other minerals abound. The leading exports of Eastern Washington are live stock, gold, wheat, and flour; of Western Washington, lumber, coal, salmon and other fish, piles and spars.

Wyoming.—Area, 97,883 square miles. Population, in 1869, estimated at 60,000. Capital, Cheyenne. Governor, J. A. Campbell. The Territory was organized in 1868, and held its first election September 2, 1869. For delegate to Congress, S. F. Nuckolls, Democrat, was elected, having 1,336 majority in a total vote of 5,266. The Legislative Council has nine members, and the House of Representatives thirteen. Both are unanimously Democratic. The Territory had five counties—Albany, Carbon, Carter, Laramie, and one not named at the time of the election. To Wyoming more than to any other Territory or State of the Union the title of "The Heart of the Continent" may be appropriately applied. Situated between the 41st and the 45th parallels of north latitude, and between the 27th and 34th degrees of west longitude from Washington, traversed in its whole breadth by the Union Pacific Railway, and soon to be connected by railroad lines with Idaho, Montana, and Colorado, with a soil of remarkable fertility, well adapted to all the crops of the temperate zone, and to the rearing of stock with the greatest facility, rich in the precious metals, which only require development to equal the abundant yield of the Territories north and south of it, and still more rich in its vast coal-beds, its excellent iron-ores, its silver, copper, lead, and its petroleum-wells, with a market at hand for all it can produce from its mines, its fields, its herds, the new Territory enters upon its organized existence under favorable auspices. There were in May, 1869, in the northern part of the Territory (the Wind River Valley) some troubles with the Indians, but these are not likely to be repeated, as the United States troops are specially watchful in that region, and the locality is not so favorable as some others for Indian raids.

TEXAS. The great event of 1869 in Texas was the work of reconstruction in accordance with the provisions of the acts of Congress, known as the "Reconstruction Acts," to the end that she might be recognized and admitted as a State into the Union again, and, as such, participate, through her representatives, in the administration of the Federal Government.

An election having previously been held and delegates chosen to sit in a convention, for the purpose of framing a new State constitution, the Assembly met at Austin on the 15th of June, 1868, and the session was long and stormy, though the delegates were almost all Republicans, the Democrats numbering only about ten. But the Republican members themselves composing that body were not of one mind. A great, seemingly irreconcilable, contrariety of sentiments on substantial points manifested itself among them from the beginning, and time served only to increase it.

The chief subjects of discord between these two sections were the white citizens of the State who had favored secession, and the extent of the State. Texas now measures about 220,000 square miles, which is nearly equal to five times the area of the State of New York. The "Radicals" insisted on disfranchising some thirty thousand whites—all those, in fact, who had been in any way connected with secession; they insisted also upon dismembering Texas, and dividing it into several States, so that the organic law, in course of formation, should be moulded for the use of that one only among the projected States within whose boundary they would continue to reside. On both these subjects the Conservatives met and firmly opposed the "Radicals," contending that the white citizens who had taken part in the secession movement should now be enfranchised, and that the State should remain, in regard to its area, as at present, and be governed by the provisions of the new constitution.

These two sections of the Republican party had about an equal number of adherents among the delegates in the convention, and, as neither would yield to the other, the result was an open disruption, when they formed themselves into two opposite parties. Each division had also its leader, the Radicals being headed by Edmund E. Davis, who was also the president of the convention; the Conservatives by A. J. Hamilton, formerly Governor of the State, in 1865–1866, and now one of the Associate Justices of the Supreme Court, who exercised, perhaps, a greater influence on a large portion of the assembly than the president.

This split, on the other hand, gave strength and importance to the few Democratic delegates, who, on account of their number, must have otherwise been quite insignificant. They could, indeed, neither originate nor carry a measure calculated to give expression to their principles or promote their interests; but they were enabled to hinder the passage of extreme measures proposed against them by adding their weight to that portion of their adversaries who were less inimical.

By a letter dated February 4, 1869, Major-General Canby, commanding the Fifth Military District, informed the Secretary of War

at Washington that "the convention had completed the work of forming a constitution for Texas," and that this instrument "would be submitted to the people some time in July." This time had been suggested by himself, because of the somewhat unsettled condition of the State, which he describes as follows: "In thirty counties there is no civil organization that is in relation with the Executive department of the State; in some of the counties there is none whatever; in others it is partial, while in others it is understood to be complete, but the county officers have refused to recognize the Secretary of State or to make any reports to him. Some counties are so remote, and so difficult are the means of communication, that it takes from twenty-five to forty days to send to them and to receive an answer. In many other counties the county organization is still very imperfect, and in my judgment it will take at least ninety days to complete the civil organization throughout the State. The registrars of election having been discharged last fall, there are no original lists on file. Measures have been taken, however, to collect the original records, and to reorganize the *personnel* of the registration. Although the condition of the State has materially improved since the November election, and appears to be improving constantly, there are still some sections in which the authority of the United States and of the State is openly defied, if not resisted, and the civil authority is indifferent or powerless, while the military force stationed there is too small to make itself respected." He concludes: "The arrangement of the troops now being made will, I hope, cure the evil; but, until that be done, and the machinery for the registration of voters and holding elections be established, a fair and free election, as contemplated by the fifth section of the law of March 23, 1867, cannot be secured."

To his letter the general appends one addressed to him by Mr. Davis, president of the Constitutional Convention, who stated that "the convention had passed a resolve for the division of the State," and that "the division was supported by nine-tenths of the loyal people," concluding: "We earnestly believe that this measure will finally disperse and demoralize the disloyal element, and give us a separation of the State which will bring us the rest, peace, and prosperity, which we have for so many years been striving to secure."

Those who were for dividing the State had previously held the "Republican State Convention of Texas," in which they adopted the following preamble and resolutions:

Whereas, The extent of territory of the State of Texas, the conflicting interests of the widely-separated sections of the State, and the disorganization so widely prevalent, render a division of the State essential to the proper well-being of the people thereof, and the establishment of law and order: therefore, be it

Resolved, That, in the opinion of this convention, the State of Texas ought to be subdivided into States of more convenient size.

Resolved, That the President of this convention is hereby directed to forward a copy of this preamble and resolutions to the Speaker of the House of Representatives and President of the Senate of the United States.

Resolved, That for the purpose of giving the Congress of the United States a correct report of the condition of the State, and to bring to the attention of that body all such matters relating to the condition of the State, and the wants of her loyal people, as may require the consideration and action of Congress, the convention shall proceed to elect by ballot, for commissioners, members of this convention, one of whom shall be a resident of that portion of Texas lying north of the thirty-second parallel of latitude, one a resident of that portion of the State lying east of the Trinity river, and south of said thirty-second parallel, one a resident of that portion of the State lying between the Trinity and Colorado Rivers, and south of said thirty-second parallel, and one a resident of that portion of the State lying west of the Colorado River, and two commissioners from the State at large, who, being intimately acquainted with the wants of their respective sections of the State, shall proceed to Washington City to bring to the attention of the United States all such matters relating to the condition of this State, and the wants of her loyal people, as in the judgment of this convention or of said commissioners require the consideration of Congress.

They also caused these commissioners to be voted for in the Constitutional Convention, and sent to Washington, at an expenditure of $1,000 of State money for each commissioner, the president of the convention being one among the chosen six.

At the time when General Canby wrote the above letter to the Secretary of War, the work of forming a constitution for Texas seems not to have been completed, since, upon the convention being adjourned, which was subsequently done in disorder, he sought to take possession of its disjoined records and papers, and assumed to himself, with the coöperation of his assistants, military and civil, the task of examining what the convention had done, and reducing it to the form of a constitution. The *Weekly Texas State Gazette*, of February 13, 1869, published the following account of the time and manner in which the convention was adjourned, as well as of some of its proceedings; and its statements have been confirmed by subsequent events, even by the confession of the actors themselves. It says: "The reconstruction convention was adjourned *sine die* on Saturday evening last, at about 8 o'clock, by its president, General Davis, a quorum of its members not being present. Its records, such as they were, went into the possession and care of the military commander, through his assistant adjutant-general, who was present and received them. The closing hours of the convention were worthy of its long and stormy existence, and were distinguished by so much and varied wrangling and cross-purposes, that it would be impossible, if desirable, to give the details thereof. A brief statement of general causes which have, from the begin-

ning, led to confusion and disorder, may not be amiss." * * * It further says:

After the divisionists had succeeded so far as to appoint six of their number to go on to Washington and represent their views at an expense of $6,000 to the State, a majority of the convention proceeded to complete a constitution for the whole State. Not liking the provision on suffrage, which was finally adopted, the *ab initio* and division portion commenced doing their utmost to break up the convention, beginning to leave, and preventing the orderly conclusion of the whole business. * * * The last quarrel was over the printing, the president's faction being determined to prevent its being given to the Republican office, in which they succeeded by breaking up a quorum. Their plan was to give the control of the printing to the Washington committee, who were to take every thing on to the North, and have the printing done there, which would have been a disgraceful proceeding for themselves and the State. Finally, the whole matter ended by the military taking possession, and we believe that General Canby will fix up matters as well as they can be arranged under the state of confusion and disorder in which the convention left them. We have heard it reported that the general will appoint one of each wing of the Republicans, together with a military officer, to inspect and determine what the convention really did do; and thus, after a while, we shall be enabled to know what has been done, and then the people of Texas can begin to consider what they ought to do in the premises. General Canby, an unprejudiced party, will be able to perform all the ministerial duties left undone by the turbulent body which has, at last, dispersed. We have full confidence that the military commander will act for the best under all the circumstances.

In its issue of February 20th, the same paper says: "We understand, through the energy of General Canby and his assistants, military and civil, the constitution has been put in proper shape, and will shortly be published. We trust, on the whole, it may be found such a one as the people of Texas may accept with honor and safety."

Some two weeks later, the constitution was published in pamphlet form, and circulated among the citizens. It was also generally printed, or commented upon, in the newspapers throughout the State, so that the people at large might easily acquire a knowledge of its contents. Its preamble and first section were as follows:

PREAMBLE.—We, the people of Texas, acknowledging with gratitude the grace of God, in permitting us to make a choice of our form of government, do hereby ordain and establish this constitution:

ARTICLE I.—*Bill of Rights.* That the heresies of nullification and secession, which brought the country to grief, may be eliminated from future political discussion; that public order may be restored, private property and human life protected; and the great principles of liberty and equality secured to us and our posterity: we declare that—

SECTION 1. The Constitution of the United States, and the laws and treaties made, and to be made, in pursuance thereof, are acknowledged to be the supreme law; that this constitution is framed in harmony with, and in subordination thereto; and that the fundamental principles embodied herein can only be changed, subject to Federal authority.

Concerning the right of suffrage, Article VI. ordains thus: "Every male citizen of the United States, of the age of twenty-one years and upward, not laboring under the disabilities named by this constitution, without distinction of race, color, or previous condition, who shall be a resident of this State at the time of the adoption of this constitution, or who shall thereafter reside in this State one year, and in the county in which he offers to vote sixty days next preceding any election, shall be entitled to vote, etc. Persons disfranchised, of unsound mind, and criminals, are excepted.

The oath of office is to be as follows:

SECTION 1. Members of the Legislature, and all officers, before they enter upon the duties of their offices, shall take the following oath or affirmation: "I (A.B.) do solemnly swear (or affirm) that I will faithfully and impartially discharge and perform all duties incumbent on me as ——, according to the best of my skill and ability, and that I will support the Constitution and laws of the United States and of this State. And I do further swear (or affirm) that since the acceptance of this constitution by the Congress of the United States, I, being a citizen of this State, have not fought a duel with deadly weapons, or committed an assault upon any person with deadly weapons, or sent or accepted a challenge to fight a duel with deadly weapons, or acted as second in fighting a duel, or knowingly aided or assisted any one thus offending, either within this State or out of it; that I am not disqualified from holding office under the fourteenth amendment to the Constitution of the United States (or, as the case may be, my disability to hold office under the fourteenth amendment to the Constitution of the United States has been removed by act of Congress); and further, that I am a qualified elector in this State.

The Ordinance of Secession made by the State of Texas in 1861, and all her subsequent acts relating thereto, the new constitution expressly declares, in Article XII., to have been null and void from the beginning, with some limitations, especially as they may affect claims acquired by private parties.

The new constitution makes important provision for the education of youth in Texas. Having created the office of a Superintendent of Public Instruction, and defined the duties of that officer, it earnestly enjoins the Legislature to establish and perfect a general system of public schools, and enforce strict compliance with its regulations; it also provides, for their maintenance and progress, ample means from various sources.

The State being as yet very thinly inhabited, the framers of the new constitution, with a view to increase her population and thus promote the development of her vast resources, made provisions which seem well calculated to invite and draw settlers from abroad, as follows, namely:

SECTION 1. There shall be a Bureau, known as the "Bureau of Immigration," which shall have supervision and control of all matters connected with immigration. The head of this Bureau shall be styled the "Superintendent of Immigration." He shall be appointed by the Governor, by and with the advice and consent of the Senate. He shall hold his office for four years, and, until otherwise fixed by law, shall receive an annual compensation of $2,000. He shall have such further powers and duties, connected with immigration, as may be given by law.

SEC. 2. The Legislature shall have power to appropriate part of the ordinary revenue of the State, for the purpose of promoting and protecting immigration. Such appropriations shall be devoted to defraying the expenses of this Bureau, to the support of agencies in foreign seaports, or seaports of the United States, and to the payment, in part, or *in toto*, of the passage of immigrants from Europe to this State, and their transportation within this State.

Powerful inducements to settlers are also the ordinances set down in Article X., reserving the lands of the State with whatever minerals found beneath their surface, for gratuitous distribution among them, as follows:

SECTION 6. The Legislature shall not hereafter grant lands to any person or persons, nor shall any certificates for land be sold at the Land-Office, except to actual settlers upon the same, and in lots not exceeding 160 acres.

SEC. 8. To every head of a family, who has not a homestead, there shall be donated 160 acres of land, out of the public domain, upon the condition that he will select, locate, and occupy the same for three years, and pay the office fees on the same. To all single men, twenty-one years of age, there shall be donated 80 acres of land, out of the public domain, upon the same terms and conditions as are imposed upon the head of a family.

But more, perhaps, than other inducements, the section which secures to the citizen the possession and use of his property, by exempting it to a liberal amount from attachment and sale for all common debts, will both attract people from abroad, and fix them there.

The convention appended two acts to the constitution: the one distributing the counties of the States into four Congressional districts, the other assigning the first Monday and next following days of July, 1869, as the time in which the people should be called out to vote for the ratification or rejection of the new constitution, as well as for the election of Senators and Representatives in the Legislature, of all State, district, and county officers, and of members of the United States Congress; and the second Monday of September, 1869, in which "the members of the Legislature elected under this act should assemble at the capitol in the city of Austin.

Soon after the Constitutional Convention had been adjourned, its president, Edmund J. Davis, with the other five commissioners, representing the State-division and white-disfranchisement party, proceeded to Washington, where they endeavored to persuade Congress and the Administration that the new constitution should be set aside, and they themselves, with their adherents in Texas, empowered to mould another, embodying the realization of those views. In this they failed, however. A. J. Hamilton, with other Republicans, followed them and showed the character and provisions of the constitution to be just and expedient; so that the conflict which had been carried on for so long a time between these two Republican sections at the convention-hall in Texas was in a manner fought over again in Washington with no less ardor, and the same result. But, though the radicals failed to accomplish the chief purpose of their mission, they did so far succeed as to render the conservative Republicans suspected of having entered into a coalition with the Democrats and secessionists of Texas, and get themselves the credit of representing the only Republican party existing in that State. They succeeded also in obtaining the postponement of the general election for the ratification or rejection of the new constitution, which had been fixed for the first Monday in July. It was postponed by the President on the 30th day of November, as appears from the following proclamation:

In pursuance of the provisions of the act of Congress approved April 10, 1869, I hereby designate Tuesday, the 30th day of November, 1869, as the time for submitting the constitution adopted by the convention which met in Austin, Texas, on the 15th day of June, 1868, to the voters of said State, registered at the date of such submission, viz.:

I direct the vote to be taken upon the said constitution in the following manner, viz.: Each voter favoring the ratification of the constitution as adopted by the convention of the 15th of June, 1868, shall express his judgment by voting "For the Constitution." Each voter favoring the rejection of the constitution shall express his judgment by voting "Against the Constitution."

In testimony whereof I have hereunto set my hand and caused the seal of the United States to be affixed.

Done at the city of Washington, this fifteenth day of July, in the year of our Lord one thousand eight hundred and sixty-nine, and of the independence of the United States the ninety-fourth.

U. S. GRANT.

By the President:
HAMILTON FISH, Secretary of State.

Meantime, the Radicals, having failed in the attempt to prevent the new constitution from being framed and adopted by the convention in Texas, and in the further attempt of causing it to be repudiated in Washington, resolved publicly to announce their acceptance of it and run candidates for State officers to be elected under its provisions, with Edmund J. Davis for Governor. The Conservatives, to whose exertions that instrument in its present form owes its existence, naturally offered their candidates for State officers to be chosen at the same election, with A. J. Hamilton for Governor; whereupon the two Republican sections engaged in a hot contest, which found its expression in meetings, conventions, and speeches, throughout the State.

By order of the Army Headquarters at Washington, issued on April 10, 1869, Brevet Major-General J. J. Reynolds had been appointed to the command of the Fifth Military District again, and returned to Texas. In a letter to the President of the United States, dated September 4, 1869, the general represents the relative positions and doings of those two Republican sections from the beginning, as follows:

HEADQUARTERS FIFTH MILITARY DISTRICT,
STATE OF TEXAS, *September* 4, 1869.

To the President of the United States:

MY DEAR GENERAL: After your summer recreation, I have determined to add to your fall labors a few words on the political situation in Texas.

You will remember that about the 4th of March last there were present in Washington two delegations of Texans, both claiming to be representatives of *the* Republican party of Texas. One of these delegations, headed by General E. J. Davis, was appointed by the Constitutional Convention; the other delegation, headed by General A. J. Hamilton, was self-appointed.

Pursuing the policy which I had decided upon in October, 1867, upon my arrival in Austin, of always endeavoring to produce harmony among all classes of Republicans, I declined to permit myself to be identified specifically with either faction, but frankly told their leaders (E. J. Davis and A. J. Hamilton) that I would recommend for office men of both factions, who, I was satisfied, would make good officers. The Federal appointments were pretty evenly divided between the two factions, much to my gratification, as I still hoped to see harmony brought about.

The Radicals (E. J. Davis wing) charged, while in Washington, that the Conservative Republicans (A. J. Hamilton wing) had entered into a coalition with the Democrats of the State to support A. J. Hamilton for Governor, and in turn to be permitted by him, if elected, to exert their influence with the new State government. I then offered to denounce this coalition to you on the production of satisfactory evidence that it existed. The evidence was not produced. I said nothing on the subject, returned to Texas, and I have endeavored to keep myself well informed on all questions of public interest, and especially those affecting the reconstruction of the State.

I travelled from New Orleans to Galveston with Judge J. H. Bell, who is one of the leading men in the A. J. Hamilton faction. He is an ex-Confederate judge. In conversation about Texas politics, I urged upon Judge Bell that all Republicans should attend the convention that had been called by the Radicals to meet at Galveston on the 10th of May, and there to harmonize, bring out their candidates, and cement the party in the State. He emphatically opposed such action. The same course of conduct was pursued by A. J. Hamilton, Governor Pease, Colonel Haynes, and all the leading men of that wing.

The convention met in Galveston on the 10th of May, and, without transacting much business, adjourned to meet in Houston on the 7th of June.

At this last convention, E. J. Davis was nominated for Governor. A. J. Hamilton, Pease, Bell, Haynes, Langley, and many other Conservative Republicans, were in Houston at this time, but took no part in the proceedings of the convention. I am assured by parties in whom I place reliance, that overtures were made at this convention by the Radicals, and rejected by the Conservatives.

A ticket, with A. J. Hamilton for Governor and E. J. Davis for Lieutenant-Governor, might have been nominated then and there, and would have produced harmony in the Republican party, but for the persistent opposition of the A. J. Hamilton (Conservative) faction.

This convention might have been larger, or another one held, but for the same opposition, and to-day the only organized Republican party in Texas is that headed by E. J. Davis.

The Conservative faction have opposed all organized concert of action in the Republican party. It is believed that the reason for this action is found in the fact that, although the Democrats will not openly affiliate with the Conservative Republicans, many Democratic papers advocate the election of A. J. Hamilton for Governor. Some of them place his name at the head of their papers, others do not announce his name, but support him.

The Conservative Republicans who pretend, especially when in Washington, to stand on the reconstruction laws of Congress, nevertheless come right to Texas, and, in their district conventions, nominate men for office who cannot qualify according to these very laws. (Examples are Stribling, of San Antonio, for Congress, and McFarland, of Austin, for the State Senate.)

They denounce such men as General William T. Clarke, who was nominated to Congress by a convention, but not by A. J. Hamilton men.

No fault can be found with such men as William T. Clarke, whose military and civil record is without blemish. No reason can be given for any Republican to oppose such men as Clarke, unless, to be sure, they are included in the class that A. J. Hamilton has denounced from the stump and called carpet-baggers and scallawags.

The circumstances all considered, I am constrained to believe that the coalition which has been charged as existing between the Conservative, or A. J. Hamilton Republicans, and the Democrats (generally ex-rebels), does actually exist.

The platforms of the two wings of the Republican party are precisely the same. The Radical wing act out their professions of adherence to the reconstruction laws of Congress, and present for office men who are qualified under these laws.

The Conservative wing frequently nominate men for office who are known to be disqualified under the reconstruction laws, but who are also known to be acceptable to the Democrats.

The success of the A. J. Hamilton faction, as it will be produced by Democratic votes, will be the defeat of Republicanism in Texas, and will put the State in the hands of the very men who, during the entire period of the rebellion, exerted every nerve to destroy the Union, and who have uniformly opposed the reconstruction laws with a persistency worthy of a better cause.

This letter is already too long. Use it as you please.

Believe me, very truly yours,

J. J. REYNOLDS,
Brevet Major-General, U. S. A.

On publication, this letter was charged with partiality and untruth by both Democrats and Republicans. The Democrats disclaimed all intention to favor the election of such as could not take the test-oath, or were for any reason disqualified according to the requirements of the reconstruction law; they also disclaimed their connection with Republicans of any sort, though they would support those among their adversaries who cherished sentiments of moderation and impartiality to all. Nor was a large portion of the Republican party better satisfied with General Reynolds's letter. In consequence of the representations made by him to the President, that "the only organized Republican party in Texas was that headed by E. J. Davis," and of his belief that the A. J. Hamilton Republicans had actually entered into a coalition with the Democrats, and that their success "would be the defeat of Republicanism in Texas, and put the State into the hands of the very men who, during the entire period of secession, exerted every nerve to destroy the Union," the Administration at Washington seems to have entered into a system of removing from Federal offices the supporters of A. J. Hamilton, and filling them with favorers of E. J. Davis. This was generally complained of, as depriving the people of the freedom of suffrage, and forcing them to vote at dictation. On this account, and to clear himself of all suspicion of being an accomplice in this seeming persecution of Re-

publicans, Governor Pease sent his resignation to the military commander.

Among other removals, two seem worthy of special mention. In the latter part of October, 1869, William R. Fayle, Judge of the Criminal Court of Harris and Galveston Counties, was removed by order No. 249 of the military commander, on the ground that the judge had ordered the sheriff to summon a white jury for the trial of a particular case some time standing, in which the criminal was "accused of two of the gravest offences known to the law," but who appears to have had the power greatly to influence the result of the approaching election in favor of E. J. Davis. The fact that the order removing the judge was issued on the eve of the trial, and based on the mere personal representation of the criminal himself, asking not to be tried before Judge Fayle, with other rather strange circumstances concurring in this affair, are set down in detail by the judge in his letter to General Reynolds on the subject, dated October 26, where he cites, for the truth of his statements, the authentic records of the court, and other facts, concluding thus: "But, general, will not the peculiar circumstances under which that order was issued * * * fasten the conviction in the minds of all unprejudiced and thinking men that the real ground of interference *in this certain case*, by you, is not that there was any actual or intentional violation of the law on my part, but that there was an essential necessity to secure the acquittal of the mouth-piece of E. J. Davis's faction, lest his fair and rightful conviction should prove destructive to their prospects in the coming election, and very largely tend to undeceive the authorities at Washington as to the true condition of affairs in this State of Texas?" Even more remarkable, perhaps, than the removal just referred to, is that relating to Judge D. J. Baldwin, suspended from the office of District Attorney of the Federal Court, because he was a supporter of A. J. Hamilton. This elicited loud cries of indignation even from the judge's political adversaries, it being well known that he condemned secession from the beginning, and maintained his inviolate attachment to the Federal Union by word and deed ever afterward. On this account, he was arrested by General Magruder's orders, and confined, with others, in the jail at Anderson for many months, in continual apprehension of losing his life at the hands of the Confederate mob, who attempted to storm the place for that purpose, but were hindered from accomplishing it only by the firmness and courage of the men who guarded the place. To prevent the repetition of similar attempts, and, perhaps, to employ in other service the many men posted to guard the jail, General Magruder finally sent Mr. Baldwin and the other prisoners out of the Confederacy.

To provide for the manner of holding and conducting the general election at which the new constitution should be submitted to the people for ratification or rejection, when State and county officers, members of Congress and State Legislature, should also be elected, the military commander issued two months in advance the following order:

General Orders, No. 174.

HEADQUARTERS FIFTH MILITARY DISTRICT,
STATE OF TEXAS,
AUSTIN, TEXAS, *October* 1, 1869.

In compliance with the proclamation of the President of the United States, of the 15th day of July, 1869, and the reconstruction laws of Congress, it is ordered:

1. That an election be held at the county seat of each organized county in the State of Texas, commencing on Tuesday, the 30th day of November, 1869, and to continue during the first, second, and third days of December, 1869; at which election all registered voters may vote by ballot "For the Constitution," or "Against the Constitution."

An election will be held at the same time and place, for—

Four members of House of Representatives of United States Congress;

Also, for the following "elective officers, provided for by the said constitution," viz.:

Governor.
Lieutenant-Governor.
Comptroller of Public Accounts.
Treasurer of the State.
Commissioner of the General Land-Office.
Thirty Senators.
Ninety Representatives.

And for each county, one Clerk of the District Court, one Sheriff, and five Justices of the Peace.

Each registered voter, besides his vote on the constitution, may vote for Governor, Lieutenant-Governor, Comptroller, Treasurer, Land-Office Commissioner, one member of the United States Congress, one State Senator and the number of Representatives apportioned to the district in which he resides, one Clerk of the District Court, and one Sheriff for his county, and one Justice of the Peace for the precinct in which he resides.

Where the Police Court of any county has not already divided the county into Justices' precincts, in accordance with General Orders, No. 27, from this headquarters, it will be done immediately. The Clerk of each County Court will furnish to the Board of Registrars, on or before the day of election, the boundaries of the Justices' precincts for the county.

There can be no election of District Attorneys until the Legislature shall have districted the State in compliance with the new constitution.

Residents of unorganized counties may register and vote in the counties by whose Boards they were registered in 1867.

2. Commencing fourteen days before the day of election, viz.: on Tuesday, the 16th day of November, the Board of Registrars will, for a period of ten days, not including Sunday, revise, at the county seat of each county, the registration list of the county, being governed by the reconstruction laws of Congress, as published in General Orders, No. 92, current series, from this Headquarters.

3. It shall be the duty of the Board during the revision of registration, upon the application of any duly-registered voter who has removed, or is about to remove, from the county in which he was originally registered, to furnish him with a certificate that he was so registered, and to note the fact and erase the applicant's name from the original list, forwarding a duplicate of the certificate to the Board for the county in which the applicant will vote; and, upon the presentation of said certificate at the place of registration of the county in which his new residence is situated, the Board of Registration for that county will enter

his name upon their rolls, indorsing the fact upon the certificate of the applicant.

4. All registrars, before entering upon the duties of their office, if they have not already done so, will take and subscribe the oath of office of July 2, 1862; and no payments will be made for services rendered until this oath is filed in the office of the Secretary for Civil Affairs for this military district.

5. To prevent the registration of any person not entitled to vote under the reconstruction laws, the Boards may select two white and two colored persons to challenge the right of any person to be registered at the revision, who, in the opinion of the persons challenging, is disqualified as a voter by reason of any of the causes set forth in said acts of Congress, and the Board shall examine and determine upon the right of such challenged person to register.

6. An applicant for registration, who is rejected by the Board, may appeal to the district commander. The Boards will not enter the name of such applicant, but a list of the names of those who appeal will be made out, with the reasons for rejection stated in full, and will be forwarded by mail, or in the most expeditious manner practicable, to district headquarters. A duplicate of this list will be retained with the registration records, to be disposed of as directed in paragraph sixteen of this order.

7. Boards of Registration are invested, while in performance of the duties of their office, with the power to summon witnesses and to compel their attendance to give evidence in cases of challenge, and to suppress disorder and preserve the peace. They are authorized to call upon the civil or military authorities for such aid as may be necessary.

8. The registrars for each county shall be managers of election for their respective counties, and shall appoint to assist them in holding the election two clerks, who shall take the oath prescribed by act of Congress of July 2, 1862.

9. The vote shall be by ballot. The ballot of each colored person will be marked "colored," by one of the managers of election, before being deposited in the ballot-box; but no other marks will be permitted to be placed upon it by the Board of Registrars. Each person, on presenting his ballot, will announce his name, and, if upon examination his name should be found on the list of registered voters for that county, his ballot will be received and his name will be entered upon the poll-list with a remark, showing whether he is white or colored. Blanks for poll-lists will be furnished, upon which the names of all persons voting will be entered.

10. When a person offers to vote whose name appears on the registry, and who is without a certificate of registration, or when the party tendering the ballot presents a certificate of registration unsupported by the registry, or when the certificate shows upon its face that it was issued in another county, he shall be subject to challenge on the ground of identity, or residence, or both. To prevent the confusion, excitement, and delay, which might arise from a multiplicity of challengers, the Board may select two registered voters to act as challengers at the polling-place. Challenges shall be received by the managers of election only through the appointed challengers, or a member of the Board. If the person challenged is known to either of the managers of election or one of the clerks, his vote shall be admitted at once. If he is not known, he must produce satisfactory evidence.

11. No person who is a candidate for office at said election shall be a registrar, manager of election, or clerk.

12. All places where intoxicating liquors are sold, at and in the vicinity of the county seats, will be closed from sunset on the evening of the 29th of November, and will remain closed until sunrise on the morning of the 4th of December; and the sale of intoxicating liquors at or near the polling-places is prohibited.

13. The sheriff of each county, with two deputies, will be required to be present at the revision of the registration-lists and during the period of holding the election, and they are required to obey in good faith all instructions from registrars relative to preserving order, and to see that paragraph *twelve* of this order is strictly enforced.

14. Boards of Registration will see that a full and fair opportunity is given for every man entitled to vote to have his name registered; and managers of election will in like manner do every thing that is required to secure a full and impartial expression of the wishes and opinions of the registered voters.

15. In case of disturbance at the polls, such as to obstruct the free and full exercise of the privilege of voting to any registered voters whatever, the Board will at once close the polls and make full report in the premises to the nearest post commander, who will take immediate action to arrest the offenders, and hold them in military custody until further orders. This election will not be resumed until so ordered from district headquarters.

16. Immediately upon the closing of the polls, the managers and clerks of election shall count the number of votes polled, and compare them with the separate poll-lists, and correct if possible any error that may exist. (The ballot-boxes will not, under any circumstances, be opened during the holding of the election.) The managers will then enter upon blanks, to be furnished, the summary of votes "for" and "against" the constitution, and the number of votes polled for each candidate for election to office, together with the designation of the office. This list will be made out in triplicate, and will be certified to, before an officer authorized to administer oaths, by all the managers and clerks of election: one copy to be forwarded by mail to the secretary for civil affairs at this headquarters; one copy to be retained by the president of the Board. The ballots shall then be placed in packages and securely sealed, and, together with the third copy of the lists of the result of the election, and all other papers and records, will be taken by the president of the Board to the post commander in whose post his county is situated, and turned over to him for safe-keeping.

17. The compensation for registrars, managers of election, and sheriffs, will be at the rate of six dollars per day for each day actually employed; they will also be allowed ten cents per mile in going from their homes to their stations, and in returning therefrom. The clerks and deputy-sheriffs will be allowed five dollars per day.

18. The sessions of the Boards of Registration and election shall be from 8 o'clock A. M. to 5 o'clock P. M. daily, excepting one hour, from 12 o'clock M. to 1 o'clock P. M.

19. The revision and election shall be held in the court-house of each county, if practicable.

20. If from any cause any of the registrars of a county fail to act, their places will be supplied, if it occurs before the time for holding the revision or election, by the post commander; if during this period, the vacancy will be supplied by the remaining registrars. The person selected must be able to qualify according to this order.

21. All communications regarding questions arising from registration should be addressed to the "Secretary for Civil Affairs" at this headquarters.

By command of Bv't Maj.-General REYNOLDS.
H. CLAY WOOD, Assistant-Adjutant-General.

The persons whom the commander subsequently selected to compose the Board of Registrars were pointed to as calculated to secure the election of the "Radical" ticket, they being well known as most declared partisans of Davis, whereas the practice had always been to have the contending parties equally represented by the members of the Board.

The Democrats, as a party, took no direct action in regard to this election. They held no State Convention, nor offered candidates for office. Their leading men and papers, however, earnestly urged every one to vote for the new constitution and for the election of those among the Republican candidates who professed sentiments of impartiality toward all citizens.

The result of the election appears from an order issued by the military commander on January 11, 1870, as follows:

VOTE ON THE CONSTITUTION.

Number of votes "For"	72,366
Number of votes "Against"	4,928
Majority for Constitution	67,438

The following-named persons having received a plurality of the votes cast, were declared elected to the positions designated:

Members of Congress.—First District, G. W. Whitmore; Second District, J. C. Connor; Third District, W. T. Clarke; Fourth District, E. Degener.

State Officers.—Governor, Edmund J. Davis; Lieutenant-Governor, J. W. Flanigan; Comptroller, A. Bledsoe; Treasurer, G. W. Honey; Land-Office Commissioner, Jacob Knechler.

The Legislature elected under the provisions of the new constitution seems to have a fair representation of all parties, "Democratic," "Conservative," and "Radical," the last-named apparently preponderating. They have been so classified in some papers as to make seventeen "Radical" and thirteen "Conservative" senators; though others contend that "several of those marked Radical were elected by Conservative votes;" in the Lower House, forty "Democrats" and "Conservatives," and fifty "Radicals." Among the members of the legislative body there are ten negroes; two in the Senate, eight in the House of Representatives.

With regard to the natural and social condition of Texas, it might be described as an immense country with vast resources of all sorts, and with very few inhabitants to render them available. The amount of her live-stock, especially of horned cattle, has become proverbial, it being almost countless; although the Indians and the Mexicans, separately or jointly, make their efforts to diminish it by stealing as much, and as frequently, as they dare.

Among the products raised upon its soil, including wheat and other cereals, cotton seems the principal. A correspondent, not a Texan, of the New York *Sun*, in a letter dated Houston, August 25, 1869, says: "Lands can be bought in Texas to-day at from $3 to $5 per acre, upon which can be annually raised a 500-pound bale of cotton per acre. The cotton crop last year brought about $20,000,000; the beeves and hides about $10,000,000; and the wool grown and exported amounted to about $5,000,000. It is thought by some that the cotton crop this year will amount to 300,000 bales, of 500 pounds each, which at to-day's price would bring $52,500,000. This, however, may be rather a large estimate." The cotton crop set down by its correspondent at $20,000,000, actually amounted to more than $30,000,000.

Railway communication is now much attended to, a large portion of the surplus money being generally invested in that interest. Several important lines are at present under construction within the State, which will be a great addition to those in actual operation. "The Houston and Texas Central Railroad will be running from Houston to Calvert on the 1st of September, 1869. This will extend communication by rail one hundred and eighty miles from the coast into the interior. The Memphis, El Paso, and Pacific, and the Vicksburg, Shreveport, and El Paso Railroads, as well as the Texas and New Orleans, and the Mexican Gulf and San Antonio Railroads, are now in process of construction; while there are three lines of steamships in successful operation between New York and Galveston, besides a number of sail-vessels." A branch of the Central Railroad is now being laid from Brenham to Austin, and the work is vigorously prosecuted, some four hundred and fifty hands being employed on it, over two hundred convicts among the number.

A great calamity befell portions of Texas in July, caused by the freshet in consequence of extraordinary rains of three days' continuance. The Guadalupe, Comal, Nevada, San Marcos, and Colorado Rivers, and Peach Creek, rose higher above their usual level than ever known before—even to the height of forty-seven feet eight inches. The adjacent lands on each side, to the distance of ten miles and more, were completely submerged, the crops and stores destroyed, and not only all the bridges and mills on the banks were swept away, but the cabins of the negroes and farm-houses, situated far inland, were overtopped and carried off by the flood. In the city of San Antonio itself, both of its bridges lay deep under water, and a large portion of the houses forming the town of La Grange, not to mention other places, when the waters had retired, was seen no more. Not a few human lives were lost by drowning. With regard to property of all kinds, the loss was incalculable. A few days after the high flood, when the waters subsided, the damage on the Colorado alone was estimated at three million dollars. A large number of farmers and workmen were thus reduced to absolute destitution.

On the general condition of Texas, a summary of General Reynolds's report for the year ending September 30, 1869, has been published, as follows:

The length of frontier line in this district to be protected against Indian incursions extends from the Red River to the Rio Grande, about 490 miles, and along the Rio Grande for about 816 miles—a total of 1,306 miles.

Indian raids during the year have been unusually bold, and, it is believed, commanded in most in-

stances by white men. Heavy damages to the citizens, in live-stock and property, have resulted, but the loss of life has been small, amounting to about twenty-six persons.

It will be impossible to prevent Indian raids as long as there are wild Indians not assigned to any defined territory, and protection to the frontier cannot be afforded with the force in the district, owing to the numerous demands made upon it in the execution of the reconstruction laws.

Voluntary county organizations of citizens have in some cases been authorized and proved effective in some localities, but in others the arrangement has not met with cordial response from the people.

It is recommended by General Reynolds that a line of telegraph be built connecting the posts between Red River and the Rio Grande at some convenient point, with Austin, San Antonio, or Waco. Such a line will afford prompt communication with frontier posts, and will effect concert of action. The expenses will be trifling compared with the advantages that may reasonably be expected.

Depredations in the country between the Nueces and Rio Grande, which is sparsely peopled and devoted chiefly to the raising of cattle, have been numerous. The offenders, Indians and Mexicans, generally come from the south side of the Rio Grande, and the stolen cattle are conveyed there for sale. Orders have accordingly been issued directing that the crossing of cattle shall be limited to specified points, but a sufficient time has not elapsed in which to test the efficiency of this regulation. The evil threatens to become one of such magnitude as to demand a reference to the Government of Mexico.

The ordinary civil machinery of the State has been in operation, aided, whenever necessary and practicable, by the military force of the United States. Improvement is apparent in the disposition of juries to punish for murder and other high crimes. Military aid has been furnished to civil authorities to suppress bands of desperadoes who infest the State.

Under the provisions of the joint resolution of February 18, 1869, many county offices were vacated. Efforts to fill the vacancies thus occasioned have, in many cases, been unsuccessful. Laxity in execution of laws and interference with the collection of State taxes have been caused by persons qualified being unwilling to accept office on account of the short duration of the term, and the fact that "appointees" are in most cases unpopular. The number of cases tried by military commission, under section 8 of the act of March, 1867, from October 1, 1868, to September 30, 1869, is fifty-nine, of which twenty-one were convicted, and thirty-eight acquitted.

The number of murders in the State from January 1, 1869, to September 30, 1869, was three hundred and eighty-four, and the number of crimes of this nature is steadily diminishing.

Quarantine regulations have been established, and an officer of the medical department detailed to supervise their observance. The State has been exempt from all epidemic disease.

TOUCEY, Isaac, LL. D., an American jurist, political leader, and Cabinet officer, born in Newtown, Fairfield County, Conn., November 5, 1796; died in Hartford, Conn., July 30, 1869. He was of a family distinguished for intellectual culture and refinement, and was early destined for the bar. His education was mostly a private one, though pursuing the full collegiate course of study. From 1810 to 1814 he was prosecuting his studies with a very accomplished teacher at Westport, Conn., and for nearly three years more he was engaged in teaching the classics and mathematics, and thus fixing indelibly in his mind what he had previously acquired. In 1817 he commenced a course of legal study under Judge Chapman of the Supreme Court, who resided in his native town; and, in 1818, he was admitted to the bar, at Hartford, which thenceforward became his home. He soon attained a high rank in his profession, though surrounded by some of the ablest lawyers in New England. In 1822 he was appointed State Attorney for Hartford County, and retained the position till 1835. In the spring of 1835 he was elected to Congress from the First Connecticut District, and in 1837 was reëlected by a handsome majority. His two terms of service covered the period of the great financial panic of 1837, and, true to his earliest convictions, Mr. Toucey sustained the measures of the Executive (General Jackson during his first term and Mr. Van Buren during his second). A man of calm, thoughtful, judicial cast of mind, he wielded a powerful influence in the House of Representatives. He was chairman of the special committee on the Graves and Cilley duel, and his report on the subject, concluding with a resolution for the expulsion of Graves and the censure of the seconds, was fully approved by the best men of both parties in the House. In 1839 Mr. Toucey returned to the practice of his profession; was again appointed State Attorney in 1842, and held the office till 1844. In 1845 he was nominated for Governor of Connecticut; there was no election by the people, and the Whigs, having a majority in the Legislature, elected their candidate. The next year he was again put in nomination, and, as before, there was no election by the people, but, the Democrats having a majority in the Legislature, Mr. Toucey was chosen. His course in regard to a proposed prohibitory liquor law, and the question of a bridge over the Connecticut at Middletown, was used to prevent his nomination the next year, as he had foreseen would be the case. In 1848 President Polk nominated him for Attorney-General of the United States. He accepted and served in this capacity till the close of Mr. Polk's Administration, being also, for a part of the time, acting-Secretary of State. He added, while in this position, to his already high reputation as a jurist. In 1850, a year after his return home, he was elected a State Senator, and in 1852 a member of the Assembly from Hartford. There was an unfilled United States senatorship at this time, and Mr. Toucey was elected to serve out the five years of it. He took his seat immediately after receiving his credentials, and though during that period he was for but little of the time the representative of a majority of the people of his State, yet his course in the Senate was dignified, and never specially offensive to his political opponents. His term expired March 4, 1857, and Mr. Buchanan at once offered him a seat in his Cabinet as Secretary of the Navy, which he accepted, and held till March 4, 1861. As a member of the Cabinet and one of the constitutional counsellors of the President, his opinions were always

characterized by a judicial deliberation and coolness, and usually by sound judgment. He was never impetuous or violent, never rash or hasty. It should be said, in justice to his memory, that the two charges persistently made against him while in this position, that he deliberately sent away the vessels of the Navy to distant seas, to prevent their use in suppressing secession at its commencement, and that he favored and aided it, had very little foundation in truth. It was proved before the "Committee on the Conduct of the War," that in the summer and autumn of 1860 the number of vessels on the Home Squadron was larger than for many years, and that the dispatch of some of the best ships of that squadron to foreign stations, late in 1860, was only a necessary change, in accordance with all previous precedent. We have his own distinct avowal that in the Cabinet from first to last he opposed secession, believing that it was entirely inadmissible under the Constitution. But, though as a jurist he held this view, it cannot be denied that his personal sympathies were with the South, and opposed to the war. He returned to Hartford in March, 1861, and thenceforward seldom appeared in public, devoting himself to the duties of his profession, and to literary studies, in which he always took delight. In private life Mr. Toucey was remarkable for his dignified courtesy, his hospitality, and his general amiability. His manners were refined, and no political strife or controversy ever caused him to neglect those social amenities which give so much of its charm to private life.

TREASURY DEPARTMENT, UNITED STATES.—In the early part of the third session of the Colonial Congress, a resolve was passed, dated February 17, 1776, "that a standing committee of five be appointed for superintending the Treasury." On the first of April subsequent, it was resolved that "a Treasury Office of Accounts be instituted and established, and that such office be kept in the city or place where Congress shall from time to time be assembled and hold their sessions, and that the said office of accounts be under the direction and superintendence of the standing committee of the Treasury." On the 26th of September, 1778, Congress established the offices of Comptroller, Auditor, Treasurer, and two Chambers of Accounts, to consist of three commissioners each, all of whom were to be annually appointed by Congress. On the 11th of February, 1779, the office of "Secretary of the Treasury" was established, with a salary of $2,000, but without any designation of the duties of the office; this law lasted but a few months. July 30, 1779, an ordinance was passed "establishing a Board of Treasury and the proper offices for managing the finances of the United States," consisting of five commissioners for "the Board," an Auditor-General, and six (temporary) auditors of the army; this ordinance dropped the Secretary, but clothed the Auditor with his powers. On the 7th of February, 1781, it was resolved "that there be a Superintendent of Finance, a Secretary of War, and a Secretary of Marine." In the September following, "the functions and appointments of the Commissioners of the Treasury, Chamber of Accounts, Auditor-General, auditors, and extra commissioners of accounts, their assistants, under-officers, and clerks" were ended, and a Comptroller, a Treasurer, a Register, auditors and clerks were appointed in their place. On the 28th of May, 1784, it was ordered "that a board, consisting of three commissioners to be appointed by Congress, be instituted to superintend the Treasury, and manage the affairs of the United States, which shall be styled "The Board of Treasury." And here ended the efforts to organize the Treasury during the Confederation.

In the first session of Congress under the Constitution, an act was passed dated September 2, 1789, "to establish the Treasury Department," which was thus organized: "There shall be a Department of Treasury, in which shall be the following officers, namely, a Secretary of the Treasury, to be deemed the head of the department, a Comptroller, an Auditor, a Treasurer, a Register, and an Assistant to the Secretary of the Treasury." That law has met with various modifications in the eighty years that have elapsed since its passage; it has been enlarged to meet the requirements of a growing nation; but so perfect is its theory, that its general provisions still remain the law of the land. Under it the following persons have been Secretaries of the Treasury:

Alexander Hamilton, of New York, appointed in 1789; Oliver Wolcott, Jr., of Connecticut, 1795; Samuel Dexter, of Massachusetts, 1800; Albert Gallatin, from Pennsylvania, 1801; G. W. Campbell, of Tennessee, 1814; A. J. Dallas, of Pennsylvania, 1814; W. H. Crawford, Georgia, 1816; Richard Rush, Pennsylvania, 1825; Samuel D. Ingham, Pennsylvania, 1829; Louis McLane, Delaware, 1831; W. J. Duane, Pennsylvania, 1833; Roger B. Taney, Maryland, 1833; Levi Woodbury, New Hampshire, 1834; Thomas Ewing, Ohio, 1841; Walter Forward, Pennsylvania, 1841; John C. Spencer, New York, 1843; George M. Bibb, Kentucky, 1844; R. J. Walker, Mississippi, 1845; W. M. Meredith, Pennsylvania, 1849; Thomas Corwin, Ohio, 1850; James Guthrie, Kentucky, 1853; Howell Cobb, Georgia, 1857; Philip F. Thomas, Maryland, 1860; John A. Dix, New York, 1861; Salmon P. Chase, Ohio, 1861; W. P. Fessenden, Maine, 1864; Hugh McCulloch, Indiana, 1865; and George S. Boutwell, of Massachusetts, 1869.

The office of Assistant-Secretary, established in 1789, was abolished as early as May, 1793, Tench Coxe, of Pennsylvania, having been the only incumbent. The law was renewed sixty years later, and the following persons appointed under it: Charles B. Penrose, of Pennsylvania,

1849; A. A. Hall, Tennessee, 1849; W. L. Hodge, Louisiana, 1850; Peter G. Washington, District of Columbia, 1853; Philip Clayton, Georgia, 1857; George Harrington, District of Columbia, 1861; and J. F. Hartley, Maine, 1865. In 1864 an additional Assistant Secretary was authorized, and the place has been filled by Maunsell B. Field, of New York, 1864; William Eaton Chandler, New Hampshire, 1865; Edmund Cooper (for six months), Tennessee, 1867; and W. A. Richardson, 1869.

The Treasury Department, as now organized, is divided into eighteen Bureaus, of which ten have to do with the collection, safe-keeping, and distribution of the public moneys; eight with the Mint, statistics, coast survey, light-houses, etc. The Secretary has the appointment of about sixteen thousand employés, of whom over three thousand are in the Bureaus at Washington, five thousand in the various custom-houses and sub-Treasuries, and over seven thousand in the internal revenue service. About two-fifths of the officers of Government act under the direction of the Secretary. The collection of moneys is chiefly made through the Customs and Internal Revenue Bureaus; the distribution of them is under the charge of the two Comptrollers and the six Auditors. All claims for money must first pass the decision of an Auditor, then of a Comptroller. The Comptrollers decide all legal questions; their decisions overule the opinion of the Secretary himself; no moneys can be paid out, unless, in their judgment, authorized by law. They instruct the Auditors how to state accounts and correct the settlements; with them lies the ultimate power of control in the settlement of accounts. The Auditors examine and adjust all claims for payment, and certify their correctness to the Comptroller. The system of checks and balances in the settlement of accounts and management of moneys in the Treasury Department is as perfect as eighty years of financial experience can make it.

The office of the Treasurer of the United States is the highest in the Treasury under the Secretary. During the current year he has had at all times about one hundred and fifty million dollars in his hands for safe-keeping. It is his duty to receive and keep the moneys of the United States, and to disburse the same upon warrants drawn by the Secretary, examined by the Auditor, countersigned by the Comptroller, and recorded by the Register. Seven Assistant-Treasurers, at New York, Boston, Philadelphia, Charleston, New Orleans, St. Louis, and San Francisco, are his deputies to aid in the charge of the public funds. During the six years from 1862 to 1868 the Treasury has annually received and expended six billion five hundred million dollars a year. The following persons have been Treasurers of the United States: Samuel Meredith, 1789; Thomas T. Tucker, 1801; Michael Nourse (*ad interim*), 1828; William Clark, 1828; John Campbell, 1830; William Selden, 1840; John Sloane, 1850; Samuel Casey, 1853; W. C. Price, 1860; and Francis E. Spinner, 1861.

The First Comptroller revises the accounts settled by the First and Fifth Auditors, and the Commissioner of the Land-Office; these include all the civil accounts except those relating to customs and the postal service. The Second Comptroller revises the accounts settled by the Second, Third, and Fourth Auditors, which are exclusively naval and military. The Comptroller of the Currency is charged with the execution of all laws concerning the issue and regulation of the national currency.

The First Auditor examines all accounts accruing in the Treasury Department, and the salaries and contingent expenses of all the departments, including the salaries of the civil list, the construction of public buildings, the contingent expenses of Congress, the salaries of Government clerks, etc., etc. The Second Auditor, whose Bureau is the largest at Washington, audits all accounts relating to the pay of the army, the recruiting, hospital, and medical service, and the property account of officers. The Third Auditor examines the Quartermasters' accounts, and all such as relate to the subsistence of the army, pension-agents' accounts, and the claims of States and Territories for national military services. The Fourth Auditor supervises the expenses of the naval service exclusively. The Fifth Auditor examines and adjusts accounts connected with the diplomatic and internal revenue service; and the Auditor of the Treasury for the Post-Office Department, commonly called the Sixth Auditor, is both auditor and comptroller for all post-office work.

The Internal Revenue Bureau, established July 1, 1862, collects the moneys assessed for internal duties, stamps, licenses, etc. The Commissioner pays over daily to the Treasurer all public moneys which come into his possession. To facilitate the collection of these extensive revenues, the country is divided into two hundred and forty districts, each having its assessor and collector. In the fiscal year 1866, this Bureau collected and paid over more than three hundred and nine million dollars, a sum that considerably exceeded the entire revenue of Great Britain for that year, including customs, excise, stamps, property-tax, and postal receipts. By the acts of 1867 and 1868 considerable reductions have been made in the collections of this Bureau, but during the present year (1869) there have been paid into the Treasury from this source nearly one hundred and sixty million dollars.

The National Currency Bureau, established March 25, 1863, is charged with the execution of all laws respecting the issue and regulation of the national currency. The head of the Bureau is the Comptroller of the Currency. By this act, banking associations may be formed by any number of persons not less than five, with a capital of at least $100,000; in cities containing over 50,000 inhabitants, the cap-

ital must be at least $200,000, and in smaller places, by the approval of the Secretary of the Treasury, with a capital of not less than $50,000. Before commencing business, each association is required to deliver to the Treasurer of the United States registered bonds for not less than $30,000, nor less than one-third of the capital stock paid in. These bonds are held in security for notes to be issued by the bank, which must not exceed either the capital stock, or ninety per cent. of the bonds so transferred. By this law, all State banks were suspended, a currency provided that is equally good in all parts of the country, and the entire control of the currency of the nation placed in the hands of the Federal Government.

The first bank authorized under this act was established in July, 1863. In July, 1869, there were 1,619 banks in existence, with a capital of $422,000,000, with $295,000,000 of notes outstanding, and $587,000,000 of deposits.

The Registrar of the Treasury records the receipts and expenditures of the public moneys; the debts due to and from the United States; and superintends the issue of national bonds, and the examination and destruction of Treasury-notes and fractional currency. Transcripts from the books of the Treasury, certified by him, and authenticated by the seal of the department, are received as evidence in all courts.

The Commissioner of Customs supervises the receipts from customs, and the accounts of collectors. The erection and repair of custom-houses, and the support of marine hospitals and light-houses, and the prevention of smuggling, are under his superintendence.

The Statistical Bureau is the youngest branch of the Treasury. It prepares monthly exhibits of statistics from all parts of the United States, and publishes tabular statements in regard to trade and industry, especially those connected with railroad returns, manufactures, and the material interests of the nation.

The Light-house Board, the Mint, the Coast-survey Office, the Supervising Architect's Office, and the Solicitor's Office, are Bureaus of the Treasury Department, but have no charge of the financial interests of the nation. Their sphere is indicated by their name.

Of the Treasury Department, as thus organized, the following were the receipts and expenditures for the fiscal year ended June 30, 1869.

RECEIPTS.

Customs	$180,048,426 63
Internal revenue	158,356,460 86
Lands	4,020,344 34
Direct tax	765,685 61
Miscellaneous	27,752,829 77
Total exclusive of loans	$370,943,747 21

EXPENDITURES.

Civil service and miscellaneous	$56,474,061 53
Pensions and Indians	35,519,544 84
War Department	78,501,990 61
Navy Department	20,000,757 97
Interest on the public debt	130,694,242 80
Premium on Treasury-notes	300,000 00
	$321,490,597 75

Showing receipts in excess of expenditures to the amount of $49,453,149.46.

When the successful termination of the Revolutionary War made the United States one of the nations of the earth, our domestic debt amounted to $42,000,000; our foreign debt, principally due to France and Holland, to nearly $12,000,000 more. Although this debt had mostly passed at a great sacrifice from the original owners into the hands of speculators, Hamilton advised its payment in full, and the further assumption of $25,000,000 of war debts incurred by the States. The proposition was at first defeated, but, by uniting this measure with one for establishing the capital of the nation on the borders of the Potomac, both were passed. Accordingly the Congress that assembled in New York, in January, 1790, funded the domestic debt, including $21,500,000 of State indebtedness, weighing the young nation down with a debt of $75,000,000. The outstanding continental money was redeemed at the rate of one dollar in specie for each hundred in paper. To meet the interest of this debt, a duty was laid, in 1790, on imported wines, spirits, and coffee, and subsequently on stills and domestic spirits. A duty of five per cent. was laid on sundry woollen manufactures, seven and a half per cent. on those of silk, cotton, and iron, ten per cent. on articles composed of gold, silver, pearls, or other precious stones: moderate duties were also laid on most other imported commodities.

The French Revolution began in the year of the adoption of the American Constitution. The consequent disturbance in Europe greatly increased the price of American productions, more than doubled our exports in seven years, and raised our tonnage from 490,000 tons to 1,033,000.

In February, 1791, a United States Bank was chartered, with a capital of $10,000,000, four-fifths to be taken by the people, one-fifth by the United States. In his next message, Washington congratulated the country on the rapidity with which its stock had been taken: "The rapid subscription to the United States Bank, which completed the sum allowed to be subscribed in a single day, is among the striking and pleasing evidences which present themselves, not only of confidence in the Government, but of resources in the community."

In April, 1792, a national mint was established at Philadelphia; the original act directed it to be kept wherever the seat of government should be located; but it has never been moved from Philadelphia.

In July, 1798, a direct tax of $2,000,000 was laid upon the people, the only tax of the kind prior to 1812. In 1799 a valuable tariff act was framed by the Secretary, Oliver Wolcot, Jr., and passed by Congress.

November 17, 1800, the Treasury Department, with its full corps of fifty clerks, was transferred from Philadelphia to Washington, and commenced its operations in a plain brick

building on the same spot the present Treasury building occupies.

In 1803 Louisiana was purchased from France for $15,000,000; yet so rapid was our financial growth, owing to the wars then pervading Europe, that this increase to our debt was wholly paid off within three years.

The War of 1812 necessitated loans to the amount of $70,478,209.73, and issues of Treasury-notes to the amount of $36,680,794. War taxes were imposed on sugar refined in this country, on distilled spirits, sales at auction, retailing wines and spirits, on pleasure-carriages, bank-notes, bills of exchange, imported salt, furniture, watches, and manufactures. Postal rates were increased fifty per cent. In 1814, two loans were advertised—one of them for $25,000,000—but the rate of discount was so great that the Government declined to negotiate. In August, 1814, the Treasury was burnt to the ground by the British, but most of the papers were saved.

In April, 1815, a new national bank was chartered for twenty years, with a capital of $35,000,000.

To meet the expenses of the war with Great Britain, a new tariff act was passed in 1816, fixing duties at from 7½ to 30 per cent *ad valorem*. This act remained in force till 1824. In 1828, a bill was enacted for the avowed purpose of protection, increasing the duties on cottons, woollens, etc. In July, 1832, the national debt being comparatively paid off, a low-scaled tariff was adopted. But in March, 1833, Mr. Clay's Compromise Bill was enacted, providing a graduated scale for reducing, till 1841, all duties over 20 per cent.

April 1, 1833, the Treasury building was again destroyed by fire, with many of its records and papers.

In December, 1835, the President's message announced that the national debt would be paid off at the close of that year, and a surplus of $19,000,000 would remain in the Treasury. A bill was accordingly passed directing the Secretary of the Treasury to deposit with the States, for safe keeping, all surplus funds over $5,000,000.

In July, 1840, the Treasury was divorced from the banks, and its funds were retained in its own keeping. Receivers of the public moneys were appointed in New York, Boston, Charleston, and St. Louis. In August, 1842, a strongly protective tariff was passed, raising the *ad valorem* duties 30, 50, and more, per cent. In 1846, three important acts were passed; the Independent Treasury, the warehousing, and a free-trade tariff, constructed by Robert J. Walker. The war with Mexico increased the national debt from $16,000,000 to $64,000,000.

In July, 1862, the Internal Revenue Bureau was created. In February, 1863, a national currency bill was passed, making banks National, and not State.

Prior to 1863, our national receipts mainly arose from customs. The sums received from the sale of lands varied greatly, from $21,877,179 in 1836, to $125,048 in 1862. Since 1863, large sums have been realized from internal revenue; but the history of our national finances may be best traced in the following table, exhibiting our exports, imports, expenditures, and debt, for each year since the commencement of Washington's presidency.

WASHINGTON'S ADMINISTRATION.

Year.	Exports.	Imports.	Expenditures.	Debt.
1789.	.....	.....	.....	.....
1790.	$20,205,156	$23,000,000	.....	.....
1791.	19,012,041	29,200,000	$7,207,589	$75,463,476
1792.	20,753,096	31,500,000	9,141,569	77,227,924
1793.	26,109,572	31,000,000	7,529,575	80,352,634
1794.	33,026,283	34,600,000	9,309,124	78,427,400
1795.	47,989,472	69,756,268	10,405,069	80,747,587
1796.	67,064,097	81,436,164	8,367,776	83,762,172

JOHN ADAMS'S ADMINISTRATION.

Currency	12,773,963	
Sinking fund	23,545,927	
Bonds purchased	64,908,350	
		209,387,716
Debt, less amount in Treasury		$2,448,746,952

TROPLONG, RAYMOND THEODORE, a French jurist, statesman, and publicist, born at St. Gaudens (Haute-Garonne), October 8, 1795; died in Paris, February 28, 1869. Of his childhood and youth we have no information, but shortly after the second Restoration he was admitted to the bar, and in 1819 entered the magistracy as a substitute in the Civil Tribunal of Alençon. He was soon after appointed King's Attorney, at Sartène, and about a year later deputy Attorney-General at Bastia. Here he married, and became after a time Advocate-General. In 1829 he was appointed to the same office at Nancy. Here he gained a high reputation by his learned and careful investigation of the territorial rights appertaining to the sovereignty of the Dukes of Lorraine. In 1833 M. Troplong was made President of the Court of Nancy; in 1834 he received the decoration of the Legion of Honor, and in 1835 was called to occupy a seat as Councillor in the Court of Cassation. This rapid promotion was due mainly to his very able treatises on legal topics, which had given him a high reputation throughout France. On the 4th of July, 1846, he was made a Peer of France, and two years later, on the death of Baron Seguier, First President of the Court of Paris; he was called to that high position by a decree dated December 22, 1848. His great abilities as a jurist did not escape the notice of Louis Napoleon; and a month after the *coup d'état*, January 25, 1852, he was made Senator. He was soon elected Vice-President, and, in 1854, President of the Senate, and on the 30th December, 1854, the Emperor conferred on him the Grand Cross of the Legion of Honor. In 1852 he succeeded M. Pourtales as First President of the Court of Cassation, and in 1858 was made a member of the Privy Council. As early as 1840 he had been elected (as successor to M. Daunou) a member of the French Academy of Moral and Political Science, in the section of legislation. He was also a member of the commission for the management of the Opera, and President of the Council-General of the Department of the Eure. M. Troplong's greatest work is "The Civil Code Explained," in 29 vols., 8vo (1833-'58), a continuation of "The Commentary on the Civil Code" of Toullier. Several of the treatises in this great work have been published separately, and have passed through numerous editions, particularly the following: "On Privileges and Mortgages," 4 vols., 8vo; "Of Sales," 2 vols.; "Of Prescriptive Rights," 2 vols.; "Of the Marriage Contract," 4 vols.; "Of Donations," 4 vols. Besides this great work, M. Troplong is the author of "The Influence of Christianity on the Civil Law of the Romans," 8vo, 1843; "Of the Power of the State over Education," 1844; "On Property," 1848; "The Armida of Gluck," 8vo, 1859; and numerous contributions to the reviews.

TURKEY, an empire in Europe, Asia, and Africa. Area, 1,917,472 square miles. The monarch of the Ottomans is usually known abroad as the Grand Sultan, and at home as the Padishah, but his true title is Khan, which, as in the case of pachas, beys, agas, and effendis, is appended to the name. The present sovereign is Abd-ul-Aziz-Khan, born February 9, 1830 (according to Turkish chronology, 15th of Chabaun, A. H. 1245). He is the thirty-second of the house of Osman, and the twenty-ninth who since the capture of Con-

* To June 30.

stantinople has held the throne. He succeeded his brother, Abd-ul-Medjid-Khan—the eldest male of the family taking succession, whether in a direct line or not—June 25, 1861. His children are Youssoff Izz-ed-Deen Effendi, born October 9, 1857, colonel in the army; Sultana Salihé, born August 10, 1862; Mahmoud-Djemil-ed-Deen, born November 20, 1862; Mechmed Selim, born October 8, 1866, and Abd-ul-Medjid, born June 27, 1868. His only sister, the Sultana Adile, born May 23, 1826, was married to the late Mehemet Ali Pacha, June 12, 1845; so that the present vassal ruler of Egypt is connected by family ties with his suzerain.

The high ministers of state are—1. Ali Pacha (March, 1868), Grand-Vizier, who has the title of Highness, and presides over the Council of State. 2. Hassan, Sheik-ul-Islam, or Mufti, who is chief of the Ulema, or legal and religious Council, and is the chief interpreter of the law. The Council of State is further made up of the following ministers, who are dependent upon the Grand-Vizier: Foreign Affairs, Ali Pacha; War, Hussein Pacha (1869); Finance, Sadyk Pacha (1869); Marine, Mahmoud Pacha; Commerce, Agriculture, and Public Hygiene, Cabouli Pacha; Police, Houssny Pacha; Justice, Mumtaz Effendi; Public Instruction, Safvet Pacha; Intendant of Mosques, Tefvid Effendi; Interior, Mehemed Ruchdi Pacha; Postmaster-General, Yaver Pacha; Comptroller of Public Debt, Kiani Pacha; Grand Marshal (vacant); Lieutenant-Governor of the Serdar-ekrem, Abd-ul-Kerim; and ministers without portfolio, Riza Pacha, Kybryslu Mehemed Pacha, Kiamil Pacha, and Mustapha Fazyl Pacha.

The Divan, or Council of State, comprises the superior and inferior clerical force, and embraces six ranks of functionaries. Besides the Divan there are special councils, such as Justice, War, Admiralty, etc. Since 1868, there has been a Council of State (Chourai-Devlet), charged with the preparation of laws, the discussion of the budget, etc., and divided into five sections—Administration, Finance, Justice, Instruction, and Commerce. It is composed of fifty members, Christians and Mussulmen, chosen by the Sultan, and the president is a member of the Cabinet.

The Ottoman empire is divided into general governments (*eyalets*), under the administration of governors-general (*valis*). These are again divided into provinces (*livas*) under lieutenant-governors (*kaimonokans*); these into districts (*caeas*), and these into villages and hamlets (*nehozes*). Since 1865 the government has adopted a new system of provincial administration, founded on the principle of decentralization, which has been extended gradually to all parts of the empire. The general governments in the European and African dominions of Turkey, including the semi-independent countries, giving the names best known to Americans, are as follows:

EYALETS.	GOVERNORS-GENERAL.	CAPITAL.
	Turkey in Europe.	
Thrace	Kourchid Pacha	Adrianople.
Touna	Sobri Pacha	Roustchouk.
Roumania	Charles I., Prince	Bucharest.
Servia	Michael Obrenovitch, Prince, Woiwode, with rank of Vizier.	Belgrade.
Bosnia	Osman Pacha	Bosna-serai.
Epirus	Ahmed Rassim Pacha	Janina.
Macedonia	Arif Pacha, Vizier	Salonica.
Crete	Aarif Effendi	Candia.
	Turkey in Asia.	
Archipelago	Kaisseriu Ahmed Pacha, Vizier	Rhodes.
Paphlagonia	Tevfik Pacha	Kastamoreni
Bythinia	Husni Pacha, Field-Marshal	Broussa.
Lydia	Ismael Pacha	Smyrna.
Phrygia, Pamphylia	Veli-ud-Deen Pacha, Vizier	Konia.
Angora	Ahmed Tevfik Pacha	Angora.
Cappadocia	Ali Riza Pacha	Sivas.
Tarabezoren	Mouchlis Pacha	Trebizonde.
Erzeroum	Mehmed Rachid Pacha	Erzeroum.
Koordistan	Mustapha Pacha	Diarbekir.
Charbront	Izzet Pacha	Charbront.
Aleppo	Nechad Pacha	Aleppo.
Syria	Rachid Pacha	Damascus and Beirout.
Lebanon	Franco Effendi	Deir-el Kamr
Babylonia	Takieden Pacha	Bagdad.
Mecca	Scherif Abd-ul-lah Pacha	Mecca.
Habech, Hedjas	Moammer Pacha	Djidda.
Yemen	Ahmed Pacha	Mecca.
	Turkey in Africa.	
Egypt	Ismail Pacha, Grand Vizier, Kedewi	Cairo.
Tripoli	Mahmoud Nedim Pacha	Tripoli.
Tunis	Mehmed Sadik Pacha, Field-Marshal.	

Besides the princes of Roumania and Servia, also the Governor-General of the Lebanon, in Asia (Franco Effendi), is a Christian.

The population amounts to 42,060,510, of which 24,876,000 are Mussulmans, 15,260,000 Christians of the Greek, Armenian, Syrian, and other Oriental rites, 150,000 Israelites, 214,000 Zingaries or Gypsies, and the rest mainly Christians of the Latin rite (Roman Catholics), with a sprinkling of Protestants. The Mussulmans are under the religious control of the Sheik-ul-Islam, and their own religious functionaries, the Mohammedan being the state faith; but, as all other religions are tolerated, the other denominations have their hierarchy. Throughout the empire there are two patriarchs and eleven archbishops and vicars apostolic of the Roman Catholic, and eighteen archbishops of the Greek, Melchite, Syrian, Armenian, and Chaldean rites, with a numerous body of bishops and minor ecclesiastics. For the purpose of official communication with it the Sublime Porte recognizes the following chiefs of the different religious communities: Gregory, Patriarch of the separated Greek Church (resigned in 1869); Boghos, Patriarch of the seceding Armenians (resigned in 1869); O. Varthalites, Civil Chief of the Latins; Clements, Civil Patriarch of the Greeks; Hassoun, Patriarch of the Armenians, and Takir, Grand Rabbi of the Israelites.

The army is divided into six grand corps, each under the command of a field-marshal (*mouchir*). The first of these is the Imperial Guard at Constantinople, commanded by Omer

Pacha. The standing army is composed of, first, the active force (*nizam*), each corps of which is made up as follows: Infantry, 12,000; cavalry, 2,880; artillery, 1,536; pioneers, 1,500; sappers and miners, 500. These last two are taken from the surplus force of the Imperial Guard. The sum total of all these corps brings the active force up to 100,496 men. Second, the reserve (*redif*), containing the same number of men. Third, auxiliary troops from Egypt and other provinces, 100,000 men. Fourth, forces detached in Tripoli, Crete, etc., and in garrisons, 21,200 effective men. Irregular troops, bashi-bazouks, Tartars of the Dobroutcha, etc., 90,000. Total available force, 442,192; which could be swelled in case of a popular war to a half or even three-quarters of a million. Thus, in the present exigency, the Pacha of Egypt, whose contingent included in the above amount is only 20,000, has already placed 50,000 troops and all his fleet at the disposal of the Porte.

The fleet, without counting that of the provinces, consists of 185 vessels, among which are several heavy iron-clads, carrying 2,370 guns. The fleet is manned by 40,000 men, including 4,000 marines, and is in a high state of discipline and effectiveness.

The financial affairs of Turkey, under the present administration, are in a satisfactory state. Hitherto the rule has been an annual deficit of from one to fourteen millions. The result has been a national debt, which, at the commencement of 1867, since which it has been slightly diminished, was as follows: Foreign debt, $167,448,508.80; domestic debt, $167,199,978. Total, $334,648,486.80, or $7.95 *per capita*. The annual expenses of the Government, by the latest budget, were 3,266,931 purses, or $63,247,784.16, being $1.51 *per capita*.

In the beginning of 1869, the difficulties between Turkey and Greece, on account of the insurrection in Crete, had assumed so threatening an appearance, that the great powers hastened to settle it by a conference. This conference met in Paris, for the first time, on January 9th. Turkey had asked for a postponement of nine days, but, in consequence of communications received from the French Government, the Porte consented to waive objections. The conference met under the presidency of the Marquis de la Valette, the members constituting it being the ambassadors and ministers plenipotentiary of England, Prussia, Russia, Austria, Italy, Turkey, and Greece. The points agreed on as the bases of discussion were—1. The Ottoman ultimatum. 2. The limitation of the debates to the special difference between Turkey and Greece. The plenipotentiaries agreed on one point, that, if they could not come to a settlement, the courts they represent would engage to observe the strictest neutrality between Turkey and Greece; so that, should war take place between those powers, Europe would be simply a spectator.

General Ignatieff asked the Porte to recall Hobart Pacha from Syra, but his demand was rejected on the ground that Hobart Pacha was only blockading the Enosis, and not the port of Syra. As the result of their deliberations, all the plenipotentiaries, Turkey included, agreed to a protocol, which was sent to Greece through the president, the Marquis de la Valette. Turkey agreed to withdraw her ultimatum if Greece would accept the conditions proposed. With no single power to support Greece, no other course seemed open to her but to accept the settlement proposed, as she would have had no chance in a war against Turkey. The declaration of the Conference (*see* GREECE) was delivered to the Government at Athens, on January 28th, by Count Walewski, who was also the bearer of an autograph letter from the Emperor Napoleon to King George, recommending a conciliatory policy as the wisest course for Greece to adopt.

Under the pressure of the concerted action of all the great powers in favor of Turkey, the Cretan revolution died away. All the insurgent chiefs submitted, in February, to the Turkish authority, and the island became tranquil. The Greek Patriarch addressed a pastoral to the Christians in Crete, urging them to return to peaceful pursuits. In March, the Porte reopened all the ports of Crete.

A dispute arising between Turkey and Persia about the frontier question, began to look threatening. Midhat Pacha, one of the ablest and most energetic of the Turkish governors, was dispatched to Bagdad with full powers and instructions to settle the difficulty by force of arms, if necessary. Numerous reënforcements of troops and artillery were sent to the frontier.

The approaching opening of the Suez Canal gave rise to animosity between the Sultan and the Viceroy of Egypt, the latter having sent invitations on his own account to the European sovereigns. In June, the Porte sent instructions to its ministers abroad, to protest against those invitations by the Viceroy, saying that such invitations should emanate from the Sultan, as the suzerain of the Viceroy. The Sultan, at the same time, declined, through his Grand-Vizier, to be present at the opening of the Suez Canal. Mustapha Fazil Pacha, the Viceroy's brother and bitter enemy, was appointed to the ministry, and two refugee pachas from Egypt were made members of the Grand Council of the Sultan. The Sultan addressed a letter to the Viceroy. Its tone was decidedly dictatorial, and the Viceroy was very sharply and peremptorily reminded of his powers and functions. The Khédive returned a most conciliatory and satisfactory reply.

On August 31st, the Sultan's reply was sent from Constantinople. It was conciliatory, and reciprocated the sentiments expressed by the Khédive, but, while giving full credit to the latter's assurances of loyalty, it reiterates that

the viceregal privileges, as regards the maintenance of land and sea forces, must be kept within the limits prescribed by the successive firmans granted by the Sultan to Ismail Pacha and his family. Among the stipulations of the Grand-Vizier's letter to the Viceroy, is one that his Highness shall not contract any further loan in Europe without the sanction of the Imperial Government.

The Empress Eugénie arrived, on her way to the Suez Canal, at Constantinople, on October 13th. The imperial yacht Aigle, preceded by the Sultan's yacht, and attended by English, French, Italian, and Russian dispatch-boats, conveying the ambassadors, and Turkish iron-clad squadron, under the command of Ibrahim Pacha, following in the rear, rounded the Seraglio Point into the Bosporus, and proceeded to the Palace of Beglerbey, situated on the Asiatic shore, where the Empress stayed. The Sultan waited there to receive his imperial guest. Salutes were fired from the forts and from the men-of-war, and all ships in the harbor were gayly decorated. On the arrival of the Empress in the Bosporus, the girls from the Catholic schools of Constantinople, who were on board a French steamer, sang a hymn of welcome, and the Empress warmly bowed her acknowledgments. On landing, the Sultan gave his arm to the Empress and escorted her up the avenue to the palace, while royal salutes from the Asiatic and European sides of the Bosporus were fired. The yards of the squadron were manned. The Sultan then returned to the Palace of Dalmagachtiche, and a general holiday was held. After sunset the vessels at the Golden Horn and in the Bosporus, and the minarets of the mosques, were lighted up, and a general illumination took place, and fireworks were displayed from the Sea of Marmora to the Black Sea.

A like imperial reception was given to the Crown-Prince of Prussia, on October 24th. Prince Asmodeus, of Italy, also arrived at Constantinople, as also the Emperor of Austria, in whose honor a grand parade was held.

As soon as the grand festivals of November 17, on the occasion of the opening of the Suez Canal, were fairly over, the Sultan resumed his quarrel with the Viceroy of Egypt by sending him the following firman (the great powers having given up the idea of an intervention in the Egyptian question):

It is superfluous to say how great is my solicitude for the prosperity of the important province of Egypt, and for the increase of the well-being and security of its inhabitants. While I devote serious attention to maintaining intact the interior privileges accorded to the Egyptian administration, my duty requires me at the same time to watch over the strict accomplishment of the obligations undertaken, either toward my crown or toward the people of that country. In consequence, I have accepted the explanations which you have furnished, and the engagements you have taken relative to arms and war-vessels, as well as with regard to the foreign relations of the province by your letter dated the 10th Djemazi-el-evvel, 1286, in answer to one which my Grand-Vizier had sent you by my sovereign order on the 18th Rebuil-Akhir, of the same year.

Only, the question of finances being a vital one for every country, if the amount of the taxes is beyond the means of those called on to pay them, or if the produce of these imposts, instead of being applied to the real necessities of the state, are absorbed by profitless expenditure, the risk is indubitably incurred of losses and incalculable dangers. The result is that the sovereign has the sacred and imprescriptible right to watch over that important object with solicitude; and, in order that no doubt or misunderstanding should any longer exist in this regard, I have decided to give you the following instructions, which shall likewise be brought to the knowledge of all the Egyptians:

Thus, according to the fundamental conditions which serve as the base of the present administration of Egypt, all taxes and duties should be assessed and gathered in my name. I cannot, therefore, consent in any way that the sums proceeding from these imposts should be employed otherwise than in meeting the real wants of the country, nor that its inhabitants should be charged with fresh burdens without legitimate and recognized necessity. My absolute will, therefore, is that your incessant care and zeal may be directed toward these two important objects, as also to the necessity that my Egyptian subjects be treated always with justice and equity. In like manner foreign loans engaging for many years the revenues of the province I cannot allow, unless all the reasons requiring to have recourse to them should have been laid in detail before my Government, and unless my authority should have been obtained beforehand, lest the sums previously raised on the resources of Egypt might be injuriously affected by resorting to fresh obligations.

My will is, therefore, that at no time can a loan be negotiated until after the absolute necessity of it has been well established and my authorization obtained. You will henceforth conform your acts and conduct to the terms of this imperial firman, which is entirely in accordance with respective rights and duties as well as with precedents.

While the language of this imperial message was firm, and admitted of no discussion regarding the army, navy, and the foreign loans, it was worded in a manner which allowed the Viceroy to accept the orders sent him without appearing to be forced to it by extraordinary pressure on the part of the Porte. But the Khédive did not abandon his iron-clad fleet, nor answer the communication of the Sultan. The Porte, therefore, forwarded a violent message to the Viceroy at the end of the year regarding the fleet.

As to its home administration, the Turkish Government has begun to show an energy and activity which have hitherto been very unusual among Turkish functionaries. Strict instructions have been issued to the local authorities to suppress all attempts at revolutionary agitation, and in some districts these instructions have been carried out with extreme severity. At Toultcha, in Bulgaria, the police, having found a small quantity of gunpowder in a shop, arrested the proprietors, two young men twenty years of age, for conspiracy. They were condemned to four years' hard labor, and, though the French consul warmly interceded in their behalf, the sentence was confirmed by the governor. Shortly after one of the young men became ill, and died in

irons on the day he was taken to the hospital.

One of the most important reforms announced by the Turkish Government is the establishment of a civil code, which will be binding on all the subjects of the Sultan, without distinction of creed. A legislative commission is to be appointed for this purpose, under the direction of Ali Pacha. This commission will be instructed to commence its labors by a careful examination of all the precepts of the Koran relating to the civil organization of society, with the object of using them as a basis for the new code. The Koran will then no longer be, as hitherto, the official text-book for courts of justice, but only be recognized as an authority in questions of dogma and religious practice. This reform will doubtless be violently opposed by the clergy and the Turks of the old school, but it has been approved by the Sultan and his ministers, and steps are already being taken for introducing it. Another question which is now under the consideration of the Council of State is a proposed alteration in the mode of collecting the taxes. At present all taxes in the empire are farmed out to speculators, who pay fixed sums to the Government, which in certain provinces amount to barely one-half of the contributions imposed on the inhabitants. The Government will in future receive the taxes through its own officials, as in other European countries.

It has been the custom for the Sultan to go to the Porte at the commencement of each year to hear his ministers report upon the events of the past year and the state of the country. These reports are never published, and the public is consequently unable to judge if the information given to his Majesty is borne out by facts. The Sultan's annual visit to the Porte has, hitherto, possessed no interest. It has been looked upon as a mere formality, and allowed to pass with the mere record of its having taken place. Last year, for the first time in the history of Turkey, the Sultan, after receiving the customary report, made a speech, in which he expressed sentiments and made promises which, for good, sound common-sense and liberality, might compare most favorably with the royal declarations of his European fellow-sovereigns. This speech was much commented upon at the time, and has been quoted and referred to continually ever since as a mark of progress on one hand, and as a species of text-book against oppression and injustice on the other.

The speech, delivered on May 6, 1869, to the first Turkish Parliament, is not less important as a mark of progress in civilization, and, as such, a "sign of the times," and a matter of hearty congratulation to the Government and the country. The speech, though delivered by the Sultan, must, of course, in accordance with usage, be considered as the mere dictum of the Divan; but, even so, its publication in the public journals, and its submission thereby to criticism, are marks of enlightened liberality that few could have foreseen or believed in.

This important and highly-interesting speech was as follows:

A very fortunate circumstance, upon which we cannot congratulate ourselves too highly, has been the public recognition last year of the rights of my Government, and the friendly action of the great powers, my friends and allies. This is the happy result of the respect shown by my Government to the treaties and rights of those powers, as also of our moderation, and our efforts, based upon our own well-being and that of other nations, to preserve peace. And, as I desire in future faithfully to strive for the protection and preservation of our legitimate rights, and also most assiduously to seek to arouse and develop the friendly sentiments so happily established by treaties with friendly powers, our foreign relations will in future be as much in accordance with the rights and honor of every one as with the demands of civilization.

Another benefit of Providence has been the complete repression of the deplorable troubles which for some time, and from various causes, have disturbed Crete. To-day the island and its inhabitants are entirely tranquil, and perfect security prevails. This fortunate result we owe as much to the good and numerous services of the army and the devoted zeal of the officers of every grade, as to the people of Crete who remained faithful. I rejoice here to record my entire satisfaction. I also repeat that I have given the necessary orders that without negligence or partiality the greatest care should be taken to carry out those laws which have been enacted for the purpose of according to the island all possible prosperity, and to promote the well-being and security of the inhabitants of the island, both as regards their persons and property.

As in the case of individuals, the necessities of a state advance equally with the progress of civilization. If one were to say that the necessary expenses of such or such a state twenty, thirty, or even ten, years ago did not represent one-tenth part of the expenses of to-day, it would be no exaggeration. The progress of science and art has produced such numerous discoveries in the arms of war, and all things connected therewith, that a state anxious to preserve its rank, and to place itself in a position to defend its rights, must, according to its position and resources, assure its possession of the means of defence. The present expenses of empires are in fact so much increased that they cannot be compared with those of former times. In one word, civilization and progress mean the advancement of the constituent principles of a state in all its parts. Public credit depends on the richness of the people, that is, on the development of agriculture and commerce, and agriculture and commerce increase by the propagation of science and art.

The facilitation of trade depends upon the number of the railroads and routes, upon the employment of capital and productive materials, and, lastly, upon the existence of a magistracy guaranteeing the full execution of justice. Whoever knows and judges us with justice will see that our Government has already made great advances on this path, nor shall we stand still, but rather that which we have already performed will excite us on to fresh efforts. We do not look back upon the road we have traversed, but our eyes are fixed upon the path before us, until we attain that rank among those civilized nations whose works we see in all things. Our efforts must strive to reach that goal.

Another important step to reform is the employment of Christians in the army. Hitherto all non-Mussulmans in Turkey have purchased their exemption from military service. The result has been that the Mussulman population

was drained from the provinces to fill the ranks of the army, and greatly diminished the number of agriculturists of the interior. The objection of the Christians has been the disrespect shown them by the Mussulmans, and even by the Government, and their treatment as an inferior people. Now, that some of the Sultan's ministers of state and other superior functionaries are Christians, the latter feel that full justice will be done to them, and that they may also serve as defenders of their country, as well as the Mussulmans. Military law, and what is called *esprit de corps* among the new soldiers, will be of great service to the Sultan's Government in a political point of view, inasmuch as it will check any future attempt by the Russian Government to create dissensions among the Sultan's Christian subjects. In no country is there a more loyal and patriotic people than the Greeks and Armenians of Turkey, if let alone, and treated by their own Government with justice and ordinary respect. A new epoch is now opening before them, which, if persisted in, cannot but have the happiest results.

The prejudices which heretofore prevented the Ottoman Government from welcoming foreign capital, industry, and immigration, are also giving way before the new system on which it has entered. This "prejudice," however, has had a basis or cause which must be removed by foreign governments. Formerly certain "capitulations" gave to all foreigners in Turkey almost a perfect *exteritoriality*, which means a position of independence of the laws of the country in which they reside. All concessions made by the Ottoman Government to foreigners placed the latter in a position of antagonism to the government which conceded it, and involved it in continual conflicts with the governments of the countries to which the said foreigners belonged. The result was, that the Government could rarely be induced to allow any enterprises, however useful, on the part of such as were its own subjects. To grant the exploration of a mine to a Frenchman, or a French company, was sure to render the mine a part of France, and, sooner or later, to involve the Porte in a series of suits for losses and damages of an unpleasant character. Diplomacy was brought to bear, with fearful threats upon the government which made the concession, and the result was that very many advantageous enterprises remained unexplored, solely because the Porte feared such complications as soured its relations with foreign powers. Laws and codes have now been made—based mostly upon those of Europe—which will define the rights of foreign explorers of enterprises in Turkey, and, if the obselete and now senseless "ancient capitulations" be revised, a wide field of public and private industry will be opened in Turkey to the people of all other nations.

Owing to the combined efforts of the British, French, and Austrian ministers, there is now a prospect of securing the free navigation of the Dardanelles for the merchant marine of all nations.

The Asiatic provinces of Turkey, as well as the European, would offer a great field for settlements, if necessary protection could be afforded to the immigrants. Since the Christian Lebanon stands under the protection of England and France, it has become a garden, this little tract of land producing in 1868 a silk crop to the value of some twenty million francs.

Roumania.—The most important event with regard to industry was the opening of the railroad from Bucharest to Giurgevo on October 31st. On November 24th, Prince Charles and his spouse solemnly entered the capital. Triumphal arches had been erected; all the houses were adorned with flags, and the streets filled with an enthusiastic people. The mayor performed the civil act of marrying the princely couple, to whom forty simultaneously married Roumanian couples were introduced. The prince pardoned on this occasion seventy-two criminals.

The prince opened the Chamber on November 27th. His speech alluded to the satisfactory relations to other countries, the almost settled frontier question, and the improvement of navigation; promised the regulation of common interests by international treaties, laws for regulating the floating debt, organizing the army, improving instruction, and a speedy completion of the projected railroad lines.

Servia.—Servia has, up to this time, derived hardly any benefit from her position on the banks of her great thoroughfares, the Danube and the Save. One of the chief national resources of Servia is its forests; but, from want of means of transport, little is yielded but firewood and charcoal; the pine-wood used for building at Belgrade is brought by water-carriage from Styria and Bosnia. Such is the waste of this natural wealth, that whole forests of fir are cut down to procure small quantities of pitch, resin, and potash; and custom has assigned a full-grown oak to every peasant for his coffin. A law has been proposed against this last abuse. Coal, of an inferior description, is to be found in many parts, and it is highly probable that a scientific exploration would bring to light coal of a superior quality. The mining resources of the country in copper, iron, and graphite, have also yet to be properly dealt with. Some zinc-mines are being worked at a profit. There are also said to be, but hitherto imperfectly explored, gold washings at Zachar, on the Bulgarian frontier; fire-clay and lithographic stone at Valjevo; and magnetic stone, lead, silver, and copper, in the Copanic ranges of mountains, on the frontier of Northern Albania. The comparative state of agriculture in any part of the Ottoman empire may be pretty accurately determined by the proportion which the cultivation of maize holds to that of corn in general; and in Servia maize is the chief corn-food of the people, pre-

ferred, because it costs little labor and expense, and, therefore, suits the habits of an indolent people. The population, about 1,100,000, increases by only 4,000 a year. This unsatisfactory progress is attributed in part to the public health having become extensively undermined by syphilitic disease, and to epidemics generated by malaria, but still more, to the custom of marrying youths of immature age to women much older, and who have passed their best years, the motive being an unwillingness to dispense earlier with the labor of a daughter in the household and the field. The Servians have much degenerated in forty years, passed under a political guarantee which inspires recklessness; in some districts, the debasement, both moral and physical, is visible in the looks of the people. Their martial and independent spirit still exists to a great extent; but it may be doubted if Servia could now muster the number of fighting-men she did during the war of independence. The proportion of town population was but 86,841 at the census of 1859. It is a nation of herdsmen. Society furnishes few of the elements of a town-life, there being no manufactures, little traffic, and trades in their infancy. One of the chief aims of the Government has been, for some time past, a municipal reform, which, with a view chiefly to military organization, will have a centralizing effect, withdrawing the inhabitants from the forests and mountains, in which, as retreats from tyranny, there was a tendency to gather or disperse in former times. Pigs are the great product of the nation; about 200,000 are exported every year to Hungary, but it is a precarious trade. The breed of oxen and sheep requires much improvement. The amount of litigation about land is enormous; but gradually, through the operation of mortgages and then sales of the land, the class of squatters is giving place to that of day laborers. It is very important to give this people a taste for labor. Such is their inertness, that their houses are, for the most part, built and repaired for them by itinerant masons and carpenters from Macedonia and Albania, about 5,000 of whom pass and repass the frontier every year, levying a heavy self-imposed tax (for their savings are computed at £50,000 a year) on a poor but indolent population. The foreign trade appears to be almost stationary, little more than about £500,000 on each side; the exports higher than the imports. The resources of the people have been taxed by military preparations and armaments, interfering with and discouraging industry. The immigration has consisted chiefly of Turkish and Austrian refugees and outcasts. The principal inducement to European settlers generally would be the cheapness and fertility of the soil; but they would have to provide themselves with labor; they would find markets not easily accessible, and they could only hold in their own right as naturalized Servians.

The session of the Skuptschina (Legislative Assembly) was opened by the members of the regency on June 25th. The presiding member, in his speech from the throne, said: "It would be incumbent upon the Skuptschina to decide whether a new constitution was a necessity for the country. The charter of 1838, being merely a grant imposed by the sovereign, had long since failed to satisfy the wants of the people. In case the Skuptschina should resolve upon introducing a constitutional *régime*, the latter would come into force after being duly sanctioned by the regency. This legislative body discussed a new constitution, which was adopted in August. It proclaims equality of all citizens before the law, the principle of ministerial responsibility, liberty of the press, independence of the judges, and autonomy of the communities. The Prince and the Skuptschina constitute together the legislative power. The deputies are chosen every three years. The Senate continues as a consultative body. The throne is hereditary in the male line of the dynasty Obrenowitsch.

TYNDALL ON HAZE AND DUST. One of the most remarkable, and, perhaps, one of the most prolific discoveries of modern science, was announced and described by Prof. Tyndall in a lecture recently delivered at the Royal Institution, London, briefly noticed in the *Pall Mall Gazette*. The subject of the lecture, which was illustrated by a series of very beautiful experiments or demonstrations, was the very familiar one of "Dust and Disease," and its object was to show the probability of an intimate connection between atmospheric dust and epidemic diseases. Everybody knows that whenever a direct ray of sunshine crosses a shaded room its direction is made manifest by a line of apparent vapor. Looking at this vapor, it is seen to consist of innumerable particles of dust, which float in the atmosphere, and, catching and reflecting the sunshine, are rendered visible.

In the course of some beautiful experiments on the decomposition of vapors by light, Dr. Tyndall found it to be essential that he should get rid of this floating dust. He strained the air through a tube filled with bits of glass wetted with concentrated sulphuric acid, and through another tube filled with bits of marble wetted with caustic potash; he even made it bubble through the liquid acid and potash solution, but still the dust particles remained in it. He tried various other ways of straining out this dust, but none of them succeeded. At length he passed the air on its way to the tube over the flame of a spirit-lamp, and at once every particle of dust disappeard. It was, therefore, organic matter, and the flame had burned it.

Passing the air a little more quickly over the flame, a fine blue cloud appeared in the tube—the smoke of the dust-particles. The organic and combustible nature of these particles was a discovery, for they had hitherto been taken to be inorganic and incombustible.

Air was then passed through a tube which contained a roll of platinum gauze; and it was found that, when the platinum was cold, the dust-particles all passed through with the air, but, when it was made red-hot, the dust-particles were all consumed. In this case, too, when the air was forced quickly through, a fine blue cloud of smoke appeared, just as in the experiment with the spirit-lamp. An attempt was then made to burn the dust-particles by the concentrated rays of a convergent mirror, but it failed; the particles flitted too quickly through the focus of the burning ray to be consumed by it.

The next experiment was to put the flame of a spirit-lamp in the ray of light which was revealing the floating dust. At once the flame was seen to be surrounded by wreaths of darkness, resembling intensely-black smoke. On lowering the flame beneath the beam of light, the same dark masses were seen wreathing upward. "They were, at times," said Dr. Tyndall, "blacker than the blackest smoke that I have seen issuing from the funnel of a steamer, and their resemblance to smoke was so perfect as to lead the most practiced observer to conclude that the apparently pure flame of the alcohol required but a beam of sufficient intensity to reveal its clouds of liberated carbon." But, when a red-hot poker was placed under the beam, the same black wreaths came floating through. A hydrogen flame was next put under it, and the whirling masses of darkness wreathed upward more copiously than ever. The blackness was, therefore, nothing but air from which all dust-particles had been burned out, and which, consequently, contained nothing to catch the light and reflect it to the eye, as the dust-particles do.

Here, however, a difficulty came in. The same effect was produced by a copper ball not hot enough to burn the dust, and by a flask filled with hot water. In this case it was found that the air was rarefied with the warmth, and, as the dust-particles were not heated to the same extent, it dropped them and floated upward without them. Other gases, even common coal-gas, carefully prepared so as to exclude the dust-particles, have the same black appearance when they cross a ray, which the dust-laden air renders visible, and if coal-gas or hydrogen be let into the top part of a glass shade, which has been placed in a sunbeam or a ray of the electric light, the line between the dust-laden air and the gas is rendered visible—where the air is, the shade will seem full of the illuminated particles; where the gas is, it will appear absolutely empty. "The air of London rooms is filled with this organic dust, nor is the country air free from its pollution. It only needs a sufficiently powerful beam to make the air appear as a semi-solid rather than a gas."

Nobody could, in the first instance, without repugnance, place the mouth at the illuminated focus of the electric beam and inhale the dirt revealed there. Yet we are inhaling it every moment, and the wonder is, that so small a portion of it should be injurious to health.

What is the portion of this ever-present and all-pervading dust which is injurious to life? Now, it was long believed that epidemic diseases were propagated by malaria, which consisted of organic matter in a state of motor-decay; that, when such matter was taken into the body through the lungs or the skin, it had the power of spreading in it a similar decay—yeast was a case in point. Why should not a bit of malarious matter operate in the body as a little leaven, leavening the whole lump? But, in 1836, Cagniard de la Tour discovered the yeast-plant, which, when placed in a proper medium, grows and spreads, and produces what we call fermentation. In the next year Schwann, of Berlin, discovered the plant independently. He also proved, that when a decoction of meat is effectually excluded from common air, and supplied solely with air which has been raised to high temperature, it never putrefies. Putrefaction, therefore, he said, came from the air, and could be destroyed by a sufficiently high temperature. Helmholtz and Ure repeated and confirmed his experiments; but the high authority of Gay-Lussac, who ascribed putrefaction to oxygen, drove chemists back on the old notion. That notion was finally exploded by Pasteur, who proved that ferments are organized beings which find in what we call ferments their necessary food.

Side by side with these discoveries grew up the germ-theory of epidemic disease. Kircher expressed the idea, and Linnæus favored it, that epidemic diseases are due to germs which, floating in the atmosphere, enter the body and produce disease by the development of parasitic life. Sir Henry Holland has favored this theory, which derives its strength from the perfect parallelism between the phenomena of contagious disease and those of life. As an acorn planted in the soil gives birth to an oak which produces a whole crop of acorns, each of which has power to reproduce its parent tree, and thus, from a single seed, a whole forest may spring, so a germ of disease, planted in the human body, grows and shakes abroad new germs, which, meeting in other human bodies with their proper food and temperature, finally take possession of whole populations. Thus, Asiatic cholera, beginning in a small way in the delta of the Ganges, spread itself, in seventeen years, over nearly the whole habitable world.

An infinitesimal speck of small-pox virus will develop a crop of pustules, each charged with the original poison. The reappearance of this scourge, as in the case of the Dreadnought, at Greenwich, so ably reported on by Dr. Budd and Mr. Busk, is explained by the theory which ascribes it to the lingering of germs about the infected place. Surgeons have long known the danger of admitting air

to an open abscess, and abscesses are always opened by an instrument which carefully excludes the air from contact with the wound. The instrument should, of course, be scrupulously clean; but it can be made perfectly clean in an atmosphere of dust only by being made as hot as its temper will bear. This is not done, and therefore inflammation often sets in after the first operation; rapid putrefaction accompanies it, and the pus, which at first showed no traces of animal life, is now found to be full of active little organisms called vibrios. Prof. Lister, from whose letter this fact is derived, contends that this astounding development of animal life is due to the entry of germs into the abscess during the first operation, and their subsequent development by favorable circumstances. Hay fever is another case in point.

The celebrated physiologist Helmholtz suffers from the 20th of May till the end of June from a catarrh of the upper air-passages, and he has found that, during this period, and at no other, his nasal secretions are peopled by these vibrios. They nestle in the cavities of the nose, and a sneeze is necessary to dislodge them. These are uncomfortable statements, but, if the germ-theory is found to be true, it will give definiteness to our efforts to stamp out disease: and it is only by some definite efforts under its guidance that its truth or falsehood can be established. Dr. Tyndall drew certain practical conclusions from the survey of these two classes of facts. The dust cannot be blown away by ordinary bellows, since the air they send out is equally full of the particles. But fill the nozzle with cotton-wool, not too tightly pressed, and the air is filtered, and, being then blown across the beam of light, forms a clean band of darkness, like the air from the spirit-lamp, or from the heated platinum wire. This was the filter Schroeder used in his experiments on spontaneous generation; it was also turned to account in the excellent researches of Pasteur. Since 1868, Prof. Tyndall has constantly employed it himself.

The most interesting of all illustrations of this filtering process is furnished by the human breath. Fill the lungs with ordinary air, and breathe through a warm tube—warmed to prevent the condensation of the watery particles—across the beam of light which is revealing the dust-particles in the air. The particles move with the moving air, but the current from the lungs shows, at first, as many particles as the ordinary atmosphere. Gradually, however, the dust-particles clear away from the course of the breath, and, by the time you have completed your expiration, the expired air cuts a sharp black line through the motes in the sunbeam. The air has left its dirt in the lungs, and the last portions of the expired breath are free from floating dust. But empty the lungs as far as possible, and then inhale a deep breath through a handful of cotton-wool, and, on expiring the air the same way, it cuts a black line through the sunbeam at once. Place the tube below the beam and blow upward, and the air rises through the dancing particles like black smoke, just as it did from the heated surfaces on which the dust was burned. The cotton-wool has completely intercepted the floating matter on its way to the lungs, and, as no dust was inhaled, none is exhaled.

Here, then, is the philosophy of an instinctive habit of medical men. In a contagious atmosphere the physician puts his handkerchief to his mouth, and inhales through it; in so doing he keeps back the floating germs. If the poison were a gas, it could not thus be intercepted. Dr. Bence Jones repeated Dr. Tyndall's experiment with a silk handkerchief, with a similar but less-marked result. Cotton-wool is, in fact, the best and surest filter, and a physician who wants to hold back from the lungs of his patient, or from his own lungs, the germs by which contagious disease is said to be propagated, will employ a cotton-wool respirator. "After the revelations of this evening," concluded Dr. Tyndall, "such respirators must, I think, come into general use as a defence against contagion. In the crowded dwellings of the London poor, where the isolation of the sick is difficult, if not impossible, the noxious air around the patient may, by this simple means, be restored to practical purity. Thus filtered, the attendants may breathe the air unharmed. In all probability, the protection of the lungs will be the protection of the entire system. For it is exceedingly probable that the germs which lodge in the air-passages, and which, at their leisure, can work their way across the mucous membrane, are those which sow in the body epidemic diseases. If this be so, then disease can certainly be warded off by filters of cotton-wool. I should be most willing to test their efficacy in my own person; and time will decide whether, in lung-disease, also, the woollen respirator cannot abate irritation, if not arrest decay. By its means, so far as the germs are concerned, the air of the highest Alps may be brought into the chamber of the invalid.

U

UNDERGROUND TEMPERATURE. The temperature inside the earth has often been a matter of speculation. Mr. G. J. Symons, the well-known authority on rain and rain-fall, has been investigating the subject. He has carried on his experiments at Hampstead. A well was sunk there many years ago into the chalk to the depth of between 500 ft. and 600 ft. for the water-supply, and the demand exceeding the supply, an Artesian bore was made through

the centre of the well to the depth of a quarter of a mile, in expectation of finding water in abundance in the lower greensand. The Waterworks Company, 1853, reached the depth of 1,302 ft., sunk nearly £8,000 in two years, found no lower greensand, unfortunately, no water, and became ruined. The property passed eventually into the hands of the new River Company, who accorded to Mr. Symons the permission he sought to conduct a series of thermometric experiments on the abandoned site. Mr. Symons erected a hut over the well, and fitted up a little observing-house. At the British Association meeting at Dundee a committee was appointed to investigate the temperature of the earth at great depths. Mr. Symons is a member of that committee, also Sir W. Thompson, who moved for its appointment. Upon the solution hang certain matters of contention between Sir William and Prof. Huxley, as to how far underground temperature may be made to test the age of the world. Mr. Symons's experiments are not yet concluded. The results so far he regards as decisive. He has made gradual observations down to a depth of 1,100 ft., and has ascertained that the temperature there is 20° higher than aboveground: that is to say, the thermometer showed 70°, whereas the mean temperature of London is 50°. If this rate of increase continues, as there seems no reason to doubt would be the case, boiling-point (212°) would be reached about a mile and a half down. At present, however, Mr. Symons is at a standstill; he has literally stuck in the mud. About 200 ft. of blue-black deposit has accumulated at the bottom of the tube, and into this the thermometers cannot penetrate.

UNITARIANS. The *Year-book* of the Unitarian Congregational Churches for 1870 gives lists of 334 societies in the United States (against 315 in the preceding year), and 396 ministers, of whom, however, a large number (157) are not settled. In 1869, five periodicals were published by the denomination; two monthlies (*Old and New*), established in January, 1870, with which the *Christian Examiner* and the *Monthly Journal* were consolidated, and the *Monthly Religious Magazine*, semi-monthly *Sunday-School Gazette*, two weeklies, the *Christian Register*, Boston, and the *Liberal Christian*, New York.

The National Conference of the Unitarian Churches meets biennially. The third conference was held in 1868, and the fourth will meet in 1870.

The number of Unitarian associations was increased in 1869 by the establishment of the Western Illinois Conference of Unitarian and other Christian Churches, which was organized at Sheffield Ill., January 28, 1869; and the Liberal Christian Conference of Michigan, organized at Kalamazoo, November 8, 1869.

The Conference of the Western Unitarian Churches held its sixteenth annual session at Quincy, Ill., commencing on Wednesday, October 20th. Artemas Carter, of Chicago, was chosen president for the coming year. A prominent feature of the session was the almost unanimous determination to unify the action of the denomination.

In Great Britain and Ireland there are, according to the English *Unitarian Almanac*, 395 Unitarian places of worship (against 382 in the previous year), and 311 ministers, of whom 274 are settled. The *Almanac* also mentions the names of 15 Unitarian societies and associations, the most important of which is the British and Foreign Unitarian Association, established in 1825. The number of Unitarian periodicals is seven, of which one is published in the Welsh language.

The Unitarians in Hungary* number 106 congregations, with 50,000 worshippers. The congregations are under the care of a bishop, J. Kriza, who resides at Clausenburg.

The following letter from the Unitarians in Hungary was submitted, and was recommended for publication, along with the proceedings of this meeting:

From the Consistory of the Hungarian Unitarians to the Unitarian Christians of the United States of America, through the American Unitarian Association.

DEAR BRETHREN IN CHRIST: Our bishop, the Rt. Rev. John Kriza, communicated to our Consistory a letter which he had some days ago the pleasure of receiving from the secretary of your Association, and in having read it we found a great delight in being convinced and assured of your cordial sympathy and interest in us and in our common faith.

Your secretary relates us in this letter that, on the one hand, a letter from our friend, the Rev. Dominik Simen, convinced you that German tracts would not well answer the purpose here; and that, on the other hand, as you have found much difficulty in having your works translated and printed in Hungarian, therefore your Association offers to our Consistory the sum of five hundred dollars, in order to cause to be translated and printed a selection from the writings of the most celebrated American Unitarian authors as would best answer our purpose. He tells us at the same time that you were ready to send us the money as soon as you hear from us.

Our Consistory accepts this offer with the greatest pleasure, and takes it as a token of your love in our common cause, the Unitarian Christianity, and of your sympathy and interest in us.

We confess that now, when the minds of men in our own country are more and more directed to religious matters, so that people of different denominations, from every quarter, make inquiries about our religious writings and publications, nay, in fact, freely declare their love toward Unitarianism, and we have good prospects that in a short time Unitarian congregations will be formed in Hungary itself—now, under such aspects, your kind offer seems to our Consistory to be the best Christmas-present; for this will enable us to excite at this time a greater interest toward Unitarianism, and to make an important turning in the views of our countrymen by the publication of the writings of such eminent American Unitarians as Dr. Channing, whose single sermons, already published, have convinced many individuals of the truthfulness of Unitarian Christianity.

We, dear brethren, will, as soon as the money you so kindly offered in the aid of our common cause arrives, commence the publication of the writings of

* For fuller statistics, *see* AMERICAN ANNUAL CYCLOPÆDIA for 1868.

your most celebrated Unitarians, the more because we have some of them already in translation. It will give us great pleasure to send in time, to your Association, copies of our publication. We will even not neglect to send you a statement of in what measure and to what purpose your offer was applied.

At last we are glad to express that, as, up to this time, we have gained a great spiritual enjoyment from the books you so kindly sent to us, we shall afterward, too, be very glad to have the pleasure of receiving some of your tracts from time to time.

Accept, dear brethren, our best thanks for your very kind offers, in the name of Unitarianism. And, asking our Heavenly Father's blessing upon all your apostolic labors, we remain,

Your brethren in Christ,
ALEXIUS NAGY DE KAL,
Supremus Curator, Consistorii a parte seculari præses.
JOANNES KRIZA,
Superintendens Ecclesiarum Unitariarum in Hungaria.
MOSES PAP, Generalis Notarius.
CLAUSENBURG, *the 23d of December*, 1869.

In India, the Unitarians have missions at Calcutta, Salem, Secunderabad, and Madras, with schools at the three first-named places.

In Australia there are Unitarian associations at Adelaide, Melbourne, and Sydney.

UNITED BRETHREN. The Fifteenth Quadrennial General Conference of the United Brethren in Christ met at Lebanon, Pa., on the 20th of May. A proposition to abrogate the rule against secret societies was the subject of a debate of considerable length. The following rule was adopted on the subject by a vote of 71 to 26. It does not differ materially from the old rule:

We believe that secret societies are evil in their nature and tendency (a secret society is one whose initiatory ceremony is a secret); and any member or preacher of our Church, who shall be found connected in any way with such a society, shall be admonished to sever said connection. If the offender be a lay member, he shall be so admonished by the preacher in charge; if a preacher or exhorter, by the presiding elder; if a presiding elder, by the bishop; if a bishop, by the presiding elder of the district in which such bishop may reside. If such offending person fails to comply with this admonition within six months after it is given, his name shall be erased from the record, and he be no longer considered a member of our Church. Provided, further, that, should the accused deny said connection, the case shall be tried according to sections nineteen and twenty of Discipline, respectively.

The following was the expression of the Conference on the subject of lay representation:

Resolved, That while we do not consider lay representation in general and annual conferences as wrong in principle or practice, and inasmuch as there is no general desire expressed in favor of lay representation, we do not deem it expedient at present to take action in regard to it.

The law prohibiting the introduction of choirs and instruments of music into the churches was so modified as to be a rule of advice.

A rule was adopted which prohibits bishops from remaining more than four consecutive years in the same district. An effort was made to abolish the district system of the Episcopacy by a rule allowing the bishops to make a division of their work annually over the whole field, as in the Methodist Episcopal Church, but it failed. Superintendents of Sunday-schools were required to be selected from members of the church, and to be made members of the Quarterly Conferences, except when suitable persons cannot be obtained from among the members. Steps were taken looking to the foundation of a Biblical Institute for the education of candidates for the ministry. The growth of the Church, in all its interests, had been very rapid since the preceding General Conference.

The Church of the United Brethren sustains 177 home missions, 95 frontier missions, and one foreign mission. There were paid, during the four years ending May, 1869, $188,538.40 for home missions; $81,300.52 for frontier missions; and $6,183.45 for foreign missions. The receipts of the mission fund for 1868 were $14,079.92. One hundred and seventy-seven missionaries were employed in the home work, ninety-three in the frontier work, and three on the foreign work. The foreign mission, which is at Shengay, Africa, has made but little progress, on account of the sickness of the laborers. The chief missionary, the Rev. O. Hadley, returned to the United States and died. The *Missionary Visitor* has a circulation of 14,000 copies.

UNITED STATES. The fifteenth amendment to the Constitution of the United States, which provided that the right of citizens of the United States to vote shall not be denied or abridged by any State, was introduced and passed by Congress during the session which closed on March 4, 1869 (*see* CONGRESS, UNITED STATES). It was then submitted to the States, and ratified by a large number previous to the end of the year; there were not, however, the three-fourths required by the Constitution.

The Administration of Andrew Johnson closed on the 4th of March, and the ex-President went to Tennessee. There he became a candidate before the Legislature of the State for a seat in the United States Senate, but failed of an election by two votes. The members of his Cabinet, Wm. H. Seward, Secretary of State, Gideon Welles, Secretary of the Navy, John M. Schofield, Secretary of War, Hugh McCulloch, Secretary of the Treasury, Orville H. Browning, Secretary of the Interior, William M. Evarts, Attorney-General, and Alexander W. Randall, Postmaster-General, resigned their offices at the same time.

After the canvass of the votes of the States for President by Congress, Senator Morton, of Indiana, and Representatives Pruyn, of New York, and Wilson, of Iowa, were appointed a committee, to present to General Grant the certificate of his election as President of the United States. In discharge of this duty, Senator Morton addressed the President-elect, at his office as General of the Army, announcing that with his companions they were the committee appointed by Congress to present him with his commission as President of the United

States for four years, commencing on the 4th of March next, and in a few remarks assured the General that the great majority of his countrymen hailed his election with delight, while even those who did not support him at the polls entertained for him the highest confidence and respect. "The friends of liberty throughout the world," continued Morton, "rejoice at your election, and all believe that you will bring to the performance of your duty unalloyed patriotism, inflexible integrity, great powers of intellect, and all the high qualities that enabled you to achieve such distinguished success in another sphere of duty. They cherish full faith in your ability and virtues, entertain the highest hopes of your success, and that during your Administration the work of reconstruction will be completed, the wounds of civil war healed, and that our country will take a new departure in progress and prosperity."

General Grant replied to Senator Morton as follows: "I can promise the committee that it will be my endeavor to call around me as assistants such men only as I think will carry out the principles which you have said the country desires to be successful—economy, retrenchment, faithful collection of the revenue, and payment of the public debt. If I should fail in my first choice, I shall not at any time hesitate to make a second, or even a third trial, with the concurrence of the Senate, who have the confirming power. I should just as soon remove one of my own appointees as the appointee of my predecessor. It would make no difference.

"There is one matter that I might properly speak of here, and that is the selection of a Cabinet. I have always felt that it would be rather indelicate to announce or even consult with the gentlemen whom I thought of inviting to positions in my Cabinet before the official declaration of the result of the election was made, although I presumed there was no doubt about what that declaration would be. But, after consideration, I have come to the conclusion that there is not a man in the country who could be invited to a place in the Cabinet without the friends of some other gentleman making the effort to secure the position; not that there would be any objection to the party named, but that there would be others whom they had set their hearts upon having in the place. I can say that much from the great number of requests which come to me, in writing and otherwise, for this particular person, or that one, from different sets and delegations. If announced in advance, efforts would be made to change my determination; and, therefore, I have come to the conclusion not to announce whom I am going to invite to seats in the Cabinet until I send in their names to the Senate for confirmation. If I say any thing to them about it, it will certainly not be more than two or three days previous to sending in their names. I think it well to make a public declaration of this to the committee, so that my intentions may be known."

Mr. Pruyn, of the House Committee, then addressed General Grant as follows:

In the great principles which you have marked out for the conduct of your Administration you will have the political support of those with whom I am associated, ready to act with you.

The members of the staff of General Grant were present, about twenty gentlemen altogether, including the committee and staff officers.

The committee subsequently waited upon Mr. Colfax, who, in response to the notification by the committee of his election as Vice-President of the United States, said:

Gentlemen: Please convey to the two Houses of Congress my acceptance of the office to which I have been elected by the people of the United States, and assure them that I shall endeavor to prove worthy of this mark of confidence by fidelity to principle and duty.

The inauguration, as usual, took place on March 4th. (For the Inaugural Address, *see* PUBLIC DOCUMENTS.) On the next day the President sent to the Senate the following names of persons whom he had selected as heads of the departments: E. B. Washburne, of Illinois, Secretary of State; A. T. Stewart, of New York, Secretary of the Treasury; J. D. Cox, of Ohio, Secretary of the Interior; Adolph E. Borie, of Pennsylvania, Secretary of the Navy; John M. Schofield, of Illinois, Secretary of War; J. A. J. Creswell, of Maryland, Postmaster-General; E. Rockwood Hoar, of Massachusetts, Attorney-General. These nominations were immediately confirmed by the Senate. Subsequently objections were advanced in the public press against the legality of the appointment of A. T. Stewart as Secretary of the Treasury. An act of Congress of 1789 provided that no person should hold the office of Secretary of the Treasury who was engaged in carrying on the business of trade or commerce. Mr. Stewart was largely engaged in trade in the city of New York, and it thus became necessary for him to retire from business, or to decline the appointment. While the subject was under consideration, the President sent to the Senate the following message:

WASHINGTON, D. C., *March* 6, 1869.

To the Senate of the United States:

Since the nomination and confirmation of Alexander T. Stewart to the office of Secretary of the Treasury, I find that by the eighth section of the act of Congress, approved September 2, 1789, it is provided as follows, to wit:

SEC. 8. *And be it further enacted*, That no person appointed to any office instituted by this act shall, *directly or indirectly, be concerned or interested in carrying on the business of trade or commerce*, or be owner, in whole or in part, of any sea-vessel, or purchase by himself, or another in trust for him, any public lands or other public property, or be concerned in the purchase or disposal of any public securities of any State or of the United States, or take or apply to his own use any emolument or gain for negotiating or transacting any business in the said department, other than what shall be allowed by law; and, if any person shall offend against any of the prohibitions of

this act, he shall be deemed guilty of a high misdemeanor, and forfeit to the United States the penalty of three thousand dollars, and shall, upon conviction, be removed from office, and forever thereafter incapable of holding any office under the United States: *Provided*, That if any other person than a public prosecutor shall give information of any such offence, upon which a prosecution and conviction shall be had, one-half of said penalty of three thousand dollars, when recovered, shall be for the use of the person giving such information.

In view of these provisions, and the fact that Mr. Stewart has been unanimously confirmed by the Senate, I would ask that he be exempted, by joint resolution of the two Houses of Congress, from the operations of the same. U. S. GRANT.

After the message had been read in the Senate, Mr. Sherman, of Ohio, at once rose and presented a bill, in effect repealing the section quoted. Mr. Sumner, of Massachusetts, objected to its present consideration, remarking that it was a matter which demanded the most profound consideration. It was then laid over. As no further action was taken, on the request of the President, Mr. Stewart on the 9th addressed the following note to the President:

WASHINGTON, *March* 9, 1869.

To the President.

SIR: Appreciating the high honor conferred by your nomination, and the unanimous confirmation, by the Senate, of myself to the office of Secretary of the Treasury, I regret that circumstances beyond our control compel me to decline. Could the difficulties presented by the provisions of the act of 1789, which, in organizing the Department of the Treasury, prohibit the Secretary from being "directly or indirectly concerned or interested in carrying on the business of trade or commerce," be overcome by any reasonable sacrifice personal to myself, I would willingly make it. I would promptly transfer, to the hands of gentlemen in whom the public have felt confidence, every interest in the gains and profits that could possibly accrue to myself in the business of my house during my official term, to be applied to such public charities as their judgment should dictate—and have proposed and sought, by the execution of appropriate instruments, to accomplish that end; but serious differences of opinion have been expressed as to whether that course would satisfy the requirements of the law.

Although I will not hesitate to make this appropriation, provided it would enable me to accept the office, and thus unite my efforts with your own, and those of other members of your Cabinet, in restoring economy, honesty, and strict frugality in the administration of the Government, and lift, as rapidly as practicable, for the people, the great burdens of taxation, debt, and extravagance, resting upon them; yet, the business relations of my firm, in its connections with others largely interested in their continuance, are such that they cannot be severed summarily; nor can my interest in it be wholly and absolutely disposed of without producing fresh embarrassment and loss to those with whom I have been so long connected.

I cannot consent to enter upon the administration of laws by any act or course that may be construed into a disregard or violation of law; and while, therefore, I regret that the plan proposed is deemed inadequate to relieve me from legal, and, as it seems to me, technical disabilities, I yield to the better judgment of others, rather than seem to be willing to accept the position in disrespect of law.

In finally renewing the declination which was tendered at the outset of these objections, I repeat to you, Mr. President, my thanks for the honor done me in offering this high position, and assure you that you will have my earnest efforts to sustain your Administration in carrying out the wise and salutary measures indicated by you on entering upon your office. Sincerely your friend,

ALEXANDER T. STEWART.

The declination of the office tendered in this letter was accepted by the President. Subsequently the President sent to the Senate a request to withdraw his message of the 6th. (See CONGRESS, U. S.) The vacancy thus occasioned was filled by the nomination of George S. Boutwell, of Massachusetts. At the same time Mr. Washburne retired from the office of Secretary of State, having been appointed Minister Plenipotentiary to France. The vacancy thus made was filled by the appointment of Hamilton Fish, of New York. About the same time General Schofield retired from the office of Secretary of War, and was succeeded by John A. Rawlins, of Illinois. Mr. Rawlins died on September 6, and was succeeded as Secretary of War by William W. Belknap, of Iowa. Mr. Borie retired from the office of Secretary of the Navy, and was succeeded by George M. Robeson, of New Jersey.

The subject of reconstructing the Southern States, in such a manner that the political control of them should be only in the hands of persons designated as loyal by the authorities at Washington, was the most prominent at the time of the inauguration. Virginia, Mississippi, and Texas, were still held under the command of the military officer of the district, supported by his troops. The President, as early as April 7th, sent a message to Congress, then in session (*see* page 198), urging that body to restore to their proper relations with the Federal Government the States still excluded, and suggesting that a law should be passed authorizing a vote of the people on the new constitutions which had been drafted. In compliance with this suggestion, Congress passed an act, which was approved on April 10th, providing that the President might, at such time as he deemed best for the public interest, submit the constitution of either Virginia, Mississippi, or Texas, to the registered voters of such States for their ratification or rejection. He was further authorized to submit, at the same time, to a separate vote of the people, such provisions of the constitutions as he might deem best. It was further specified that, before these States were admitted to representation in Congress, their several Legislatures, when legally organized, should ratify the fifteenth article, which had been proposed as an amendment to the Federal Constitution. A still further stipulation was made, that the proceedings in either of the three States should not be deemed final, or operate as a complete restoration thereof, until their action respectively should be approved by Congress. The President accordingly issued his proclamations designating the day for a vote on the constitution and for State officers in each of the three States respectively. The elections were held, the constitutions ratified,

State and Federal officers elected, and the fifteenth article, above mentioned, ratified in Virginia. The work advanced no further during the year. (For details the reader is referred to VIRGINIA, MISSISSIPPI, and TEXAS, respectively.)

The fifteenth article of amendment to the Federal Constitution, the ratification of which was made a condition precedent to the restoration of these States to the Union, was brought forward by Congress at its session during the first months of the year. It was adopted as a joint resolution on February 25th (*see* page 171). A large portion of the time of this session was consumed in the discussion of the subject, and the arguments and objections will be found fully stated under the title CONGRESS, in the preceding pages of this volume. The object of this amendment was to secure the right and the privilege of suffrage in every State of the Union to each person who had been heretofore excluded on account of race, color, or previous condition of servitude. This was intended to give a free ballot to all persons of the African race. The regulation of suffrage in a State had hitherto been under the control of its Legislature. This amendment so far limits that control as to forbid that it should be withheld from any one on account of race, color, etc. This amendment was ratified in nearly all the States in which the Republican party held the ascendency, and whose Legislatures assembled before the close of the year. The number, however, did not reach twenty-eight, which was required by the Constitution, until it was completed by Mississippi and Texas, early in the ensuing year.

Some other amendments to the Federal Constitution were unofficially brought before the public during the year. A sixteenth amendment was offered in the House of Representatives, on March 16th, by Mr. Julian, of Indiana, in the following words:

The right of suffrage in the United States shall be based on citizenship, and shall be regulated by Congress, and all citizens of the United States, whether native or naturalized, shall enjoy this right equally, without any distinction or discrimination whatever founded on sex.

The design of this amendment was to secure to females in all the States the right of suffrage. During the year an incessant discussion of the subject was maintained by a number of men and women who devoted their efforts to accomplish this object. Through their exertions conventions were held in many of the States, and also a National Convention, the proceedings of which are mentioned hereafter.

Another amendment, proposed by religious bodies, was so to change the preamble of the Constitution as to contain a recognition of a Supreme Being, and to read as follows:

We, the people of the United States, acknowledging Almighty God as the source of all authority and power in civil government, the Lord Jesus Christ as the ruler among nations, and His will, as revealed in the Holy Scriptures, as of supreme authority, in order to constitute a Christian government, form a more perfect union, establish justice, etc.

On May 19th the President issued a proclamation, directing that there should be no reduction in the wages paid by the Government by the day on account of a reduction in the hours of labor by an act of Congress. This act was passed in June, 1868, and fixed the time, constituting a day's work of laborers in the employment of the United States, at eight hours. A question was raised by the Secretary of the Navy, as to the operation of the act on the wages to be paid. The Attorney-General expressed the opinion that the act had nothing to do with compensations to be paid to workmen in navy-yards. The rate of compensation was left to be determined under the rule prescribed in the statute of July 16, 1862. This provides that "the hours of labor and the rate of wages of employés in navy-yards shall conform, as nearly as consistent with the public interests, with those of private establishments in the immediate vicinity."

An important case came up for decision before the Supreme Court, which involved the question of "the status of the State of Texas." The State appeared before the Supreme Court as the complainant in a bill of equity relative to certain bonds formerly issued to the State by the United States. An objection taken by the opposite party was, that the recent hostile proceedings in the State had disabled her from prosecuting suits in the national courts. The opinion of the court was delivered by Chief-Justice Chase, and a dissenting opinion by Mr. Justice Grier. The Chief Justice said:

It is needless to discuss at length the question whether the right of a State to withdraw from the Union, for any cause regarded by herself as sufficient, is consistent with the Constitution of the United States.

The Union of the States never was a purely artificial and arbitrary relation. It began among the colonies, and grew out of common origin, mutual sympathies, kindred principles, similar interests, and geographical relations. It was confirmed and strengthened by the necessities of war, and received definite form, and character, and sanction, from the Articles of Confederation. By these the Union was solemnly declared to "be perpetual." And, when these articles were found to be inadequate to the exigencies of the country, the Constitution was ordained "to form a more perfect Union." It is difficult to convey the idea of indissoluble unity more clearly than by these words. What can be indissoluble, if a perpetual Union made more perfect is not?

But the perpetuity and indissolubility of the Union by no means imply the loss of distinct and individual existence, or of the right of self-government, by the States. Under the Articles of Confederation each State retained its sovereignty, freedom, and independence, and every power, jurisdiction, and right, not expressly delegated to the United States. Under the Constitution, though the powers of the States were much restricted, still all powers not delegated to the United States, nor prohibited to the States, are reserved to the States respectively, or to the people. And we have already had occasion to remark at this term, that "the people of each State compose a State, having its own government, and endowed with all the functions essential to separate and independent existence;" and that "without the States in union there

could be no such political body as the United States."* Not only, therefore, can there be no loss of separate and independent autonomy to the States, through their union under the Constitution, but it may be not unreasonably said that the preservation of the States and the maintenance of their governments are as much within the design and care of the Constitution as the preservation of the Union and the maintenance of the national Government. The Constitution, in all its provisions, looks to an indestructible Union, composed of indestructible States.

When, therefore, Texas became one of the United States, she entered into an indissoluble relation. All the obligations of perpetual union, and all the guarantees of republican government in the Union, attached at once to the State. The act which consummated her admission into the Union was something more than a compact—it was the incorporation of a new member into the political body, and it was final. The union between Texas and the other States was as complete, as perpetual, and as indissoluble, as the union between the original States. There was no place for reconsideration or revocation, except through revolution or through consent of the States.

Considered, therefore, as transactions under the Constitution, the ordinance of secession adopted by the convention and ratified by a majority of the citizens of Texas, and all the acts of her Legislature intended to give effect to that ordinance, were absolutely null. They were utterly without operation in law. The obligations of the State as a member of the Union, and of every citizen of the State as a citizen of the United States, remained perfect and unimpaired. It certainly follows that the State did not cease to be a State nor her citizens to be citizens of the Union. If this were otherwise, the State must have become foreign and her citizens foreigners; the war must have ceased to be a war for the suppression of rebellion, and must have become a war for conquest and subjugation.

Our conclusion, therefore, is, that Texas continued to be a State, and a State of the Union, notwithstanding the transactions to which we have referred. And this conclusion, in our judgment, is not in conflict with any act or declaration of any department of the national Government, but entirely in accordance with the whole series of such acts and declarations since the first outbreak of the rebellion.

But, in order to the exercise by a State of the right to sue in this court, there needs to be a State government competent to represent the State in its relations with the national Government, so far, at least, as the institution and prosecution of a suit are concerned.

And it is by no means a logical conclusion, from the premises which we have endeavored to establish, that the governmental relations of Texas to the Union remained unaltered. Obligations often remain unimpaired, while relations are greatly changed. The obligations of allegiance to the State and of obedience to her laws, subject to the Constitution of the United States, are binding upon all citizens, whether faithful or unfaithful to them; but the relations which subsist while these obligations are performed are essentially different from those which arise when they are disregarded and set at naught. And the same must necessarily be true of the obligations and relations of States and citizens to the Union. No one has been bold enough to contend that, while Texas was controlled by a government hostile to the United States, and, in affiliation with a hostile confederation, waging war upon the United States, Senators chosen by her Legislature, or Representatives elected by her citizens, were entitled to seats in Congress; or that any suit instituted in her name could be entertained in this court. All admit that, during this condition of civil war, the rights of the State as a member, and of her people as citizens of the Union, were suspended. The government and the citizens of the State, refusing to recognize their constitutional obligations, assumed the character of enemies and incurred the consequences of rebellion.

These new relations imposed new duties upon the United States. The first was that of suppressing the rebellion. The next was that of reëstablishing the broken relations of the State with the Union. The first of these duties having been performed, the next necessarily engaged the attention of the national Government.

The authority for the performance of the first had been found in the power to suppress insurrection and carry on war; for the performance of the second, authority was derived from the obligation of the United States to guarantee to every State in the Union a republican form of government. The latter, indeed, in the case of a rebellion, which involves the government of a State, and, for the time, excludes the national authority from its limits, seems to be a necessary complement to the former.

Mr. Justice Grier, in the dissenting opinion, said:

Is Texas one of these United States? Or was she such at the time this bill was filed, or since?

This is to be decided as a *political fact*, not as a *legal fiction*. This court is bound to know and notice the public history of the nation.

If I regard the truth of history for the last eight years, I cannot discover the State of Texas as one of these United States. I do not think it necessary to notice any of the very astute arguments which have been advanced by the learned counsel in this case, to find the definition of a State, when we have the subject treated in a clear and common-sense manner, and without any astute judicial abstractions, by Chief-Justice Marshall, in the case of Hepburn & Dundass *vs.* Elzey, 2 Cranch, 452. As the case is short and clear, I hope to be excused for a full report of the case as stated and decided by the court. "The question," says Marshall, C. J., "is whether the plaintiffs, as residents of the District of Columbia, can maintain an action in the Circuit Court of the United States for the District of Virginia. This depends on the act of Congress describing the jurisdiction of that court. The act gives jurisdiction to the Circuit Courts in cases between a citizen of the State in which the suit is brought and a citizen of another State. To support the jurisdiction in this case, it must appear that Columbia is a State. On the part of the plaintiff it has been urged that Columbia is a distinct political society, and is, therefore, a 'State' according to the definition of writers on general law. This is true; but, as the act of Congress obviously uses the word 'State' in reference to that term as used in the Constitution, it becomes necessary to inquire whether Columbia is a State in the sense of that instrument. The result of the examination is a conviction that the members of the American Confederacy *only* are the States contemplated in the Constitution. The House of Representatives is to be composed of members chosen by the people of the several States, and each State shall have at least one Representative. 'The Senate of the United States shall be composed of two Senators from each State.' Each State shall appoint for the election of the Executive a number of electors equal to its whole number of Senators and Representatives. These clauses show that the word 'State' is used in the Constitution as designating a member of the Union, and excludes from the term the signification attached to it by writers on the laws of nations."

Now, we have here a clear and well-defined test by which we may arrive at a conclusion with regard to the questions of fact now to be decided.

Is Texas a State, now represented by members chosen by the people of that State and received on the floor of Congress? Has she two Senators to represent her as a State in the Senate of the United States? Has her voice been heard in the late election of President? Is she not now held and governed

* County of Lane *vs.* The State of Oregon.

as a conquered province by military force? The act of Congress of March 28, 1867, declares Texas to be a "rebel State," and provides for its government until a legal and republican State government could be legally established. It constituted Louisiana and Texas the Fifth Military District, and made it subject, not to the civil authority, but to the "military authorities of the United States."

It is true that no organized rebellion now exists there, and the courts of the United States now exercise jurisdiction over the people of that province. But this is no test of the State's being in the Union: Dakota is no State, and yet the courts of the United States administer justice there as they do in Texas. The Indian tribes, who are governed by military force, cannot claim to be States of the Union. Wherein does the condition of Texas differ from theirs?

Now, by assuming or admitting *as a fact* the present *status* of Texas as a State not in the Union *politically*, I beg leave to protest against any charge of inconsistency as to judicial opinions heretofore expressed as a member of this court or silently assented to. I do not consider myself bound to express any opinion judicially as to the constitutional right of Texas to exercise the rights and privileges of a State of this Union, or the power of Congress to govern her as a conquered province, to subject her to military domination, and keep her in pupilage. I can only submit to *the fact* as decided by the political position of the Government: and I am not disposed to join in any essay of judicial subtlety to prove Texas to be a State of the Union, when Congress have decided that she is not. It is a question of fact, I repeat, and of fact only. *Politically*, Texas is not *a State in this Union*. Whether rightfully out of it or not is a question not before the court, and I am not called on to confute a fact with syllogisms.

An important decision to the Southern States was rendered by the same court during the year, on the subject of the paper-money issued by the Confederate States. The suit was brought for the recovery of a mortgage-note with vendor's lien given for the purchase of lands in Alabama in 1864. The defence was, that the contract was made within the insurgent States, during a rebellion, and for Confederate treasury notes, unlawfully issued by a usurping government, and that no such contract can be enforced in the courts of the United States.

The court examined these questions at length, and decided:

That the Confederate government was a *de facto* government of the second degree. The first degree represents such governments as that of England under the Commonwealth, and France under the Republic, which are denied by other governments to exist *de jure*, but are dealt with as existing facts.

The Confederate government was never so recognized by the United States Government. It was held to be a temporary military dominion over territory in which the lawful authority was entirely suspended. On this ground, the rights of belligerency were conceded to its military character. The lawful supremacy of the United States being excluded by military combinations, the substituted supremacy, while it existed, must be conceded to be that of a government *de facto* of this secondary class. Civil obedience to its authority, while it lasted, "was not only a necessity, but a duty." It must be left to the lawful Government, when reëstablished, to decide how far this obedience to the powers that be, in positive acts of hostility to the Government of the United States, can be excused by circumstances.

In other respects, the court ruled that the people in the insurgent States, under the Confederate government, were, in legal contemplation, substantially in the same condition as inhabitants of districts of country occupied and controlled by an invading belligerent.

They "must be regarded as under the authority of the insurgent belligerent power actually established as the government of the country; and contracts made with them must be interpreted and inferred with reference to the condition of things created by the acts of the governing power."

As to the amount which the plaintiff could recover, the conclusion was, that he could only receive the value of the Confederate notes at the date of the transaction, in lawful money of the United States.

The question whether the obligations of the United States, known as certificates of indebtedness, were liable to be taxed by State legislation, was also decided by the same court. The Chief Justice, on delivering the opinion of the court, said:

The principle of exemption is, that the States cannot control the national Government within the sphere of its constitutional power, for there it is supreme, and cannot tax its obligations for the payment of money issued for purposes within that range of powers, because such taxation necessarily implies the assertion of the right to exercise such control. The certificates of indebtedness in the case before us are completely within the protection of this principle.

The question whether United States notes come under another rule, in respect to taxation, than that which applies to certificates of indebtedness, was also considered by the court. The Chief Justice said:

We think it clearly within the discretion of Congress to determine whether, in view of all the circumstances attending the issue of the notes, their usefulness as a means of carrying on the Government would be enhanced by exemption from taxation, and within the constitutional power of Congress, having resolved the question of usefulness affirmatively, to provide by law for such exemption. There remains, then, only this question: Has Congress exercised the power of exemption? A careful examination of the acts under which they were issued has left no doubt in our minds upon that point.

Another important national question that came before the courts was, whether the clause, making United States notes a legal tender, had reference to State taxes?

The Chief Justice, on delivering the opinion of the court, concludes thus:

In whatever light, therefore, we consider this question, whether in the light of the conflict between the legislation of Congress and the taxing-power of the States, to which the interpretation insisted on in behalf of the plaintiff in error would give occasion, or in the light of the language of the acts themselves, or in the light of the decisions to which we have referred, we find ourselves brought to the same conclusion, that the clause making United States notes a legal tender for debts has no reference to taxes imposed by State authority, but relates only to debts,

in the ordinary sense of the word, arising out of simple contracts, or contracts by specialty, which include judgments and recognizances. Whether the word "debts," as used in the act, includes obligations expressly made payable, or adjudged to be paid in coin, has been argued in another case.

In the case here referred to by the Chief Justice, he said: "It seems to us clear, beyond controversy, that the act must receive the reasonable construction not only warranted, but required, by the comparison of its provisions with the provisions of other acts, and with each other; and that, upon such reasonable construction, it must be held to sustain the proposition that express contracts to pay coined dollars can only be satisfied by the payment of coined dollars. They are not *debts* which may be satisfied by the tender of United States notes."

An important decision on the operation of the fourteenth amendment to the Federal Constitution was rendered on a case which came up in Virginia. (*See* VIRGINIA.)

On a visit to the South during the month of May, the Chief Justice, Mr. Chase, was very flatteringly received. While at Charleston, an invitation was extended to him to attend the memorial decoration of the graves of Federal soldiers in Magnolia Cemetery. Pressing engagements prevented his attendance, but he addressed the following letter to the committee on the occasion:

CHARLESTON, S. C., *May* 29, 1869.

DEAR SIR: Your note, inviting me to attend the ceremony of decorating at Magnolia Cemetery the graves of the brave men who fell in defence of the Union during the recent civil war, only reached me this morning. I am very sorry that I cannot be with you on the interesting occasion, but it is now too late to make the necessary arrangements.

The nation cannot too tenderly cherish the memory of her dead heroes, or too watchfully guard the well-being of those who survive. And may we not indulge the hope that ere long we, who adhered to the national cause, will be prompt also to join in commemorating the heroism of our countrymen who fell on the other side, and those who now specially mourn their loss, consenting to the arbitrament of arms, and resuming all their old love for their country and our country, one and indivisible, will join with us in like commemoration of the fallen brave of the army of the Union?

The dead are not dead. They have only gone before, and now see eye to eye. Why may not we all borrow from their sacred graves oblivion of past differences, and henceforth unite in noble and generous endeavor to assure the honor and welfare of our whole country, of all her States, and of all her citizens? Very respectfully yours,

S. P. CHASE.

Captain B. H. MANNING.

Still later in the year the following letter appeared:

NARRAGANSETT, R. I., *August* 14, 1869.

MY DEAR MR. BRIGGS: Your note of the 29th, after a rather long journey, reached me here yesterday. I should be very glad to see you and talk with you on any subject but politics. Dr. Bailey used to say that of Bunyan's Pilgrims he represented Christian and I Hopeful. I am still hopeful. When I was younger, and thought that if largely trusted by the people I could do good service to the country, I should have been glad to have been trusted. Now I am older, and not at all satisfied that, if in a higher place, I could do any better than those now exercising executive functions do. I am more than content to let aspiration alone. My hopes are in others.

It amuses me to hear of Chase movements here and there. I don't believe there are any such. As far as locality is given to them in Maryland, I know there are none, for I spent two or three days in Frederick this week, and should have heard of them if any existed. I don't believe a bit in them elsewhere. If I can only perform with reasonable satisfaction to my own conscience, and to the opinions of those best qualified to judge, the duties of my present position, I shall fill the largest measure of my present ambition. I want nothing whatever of a political character, and desire that my name may be disassociated hereafter in men's minds with all political action. If this is too much to expect, let me hope, at least, that no friend of mine will lend any countenance to such absurd nonsense as that to which I have referred.

Sincerely your friend, S. P. CHASE.

JAMES A. BRIGGS, Esq.

A large number of conventions, aspiring to possess somewhat of a national character, assembled during the year. The earliest of these convened at Washington, on January 13th, and was known as the "Colored National Convention." Its object was to take into consideration the condition of the colored people in the United States. The convention was organized by the election of Frederick Douglass as president, and a series of resolutions was adopted, and addresses issued to the colored people. A National Executive Committee was appointed of one member from each State and Territory. A motion to admit President Roberts, of Liberia, as an honorary member of the convention, was voted down. Some of the resolutions adopted were as follows:

Resolved, That it is with special satisfaction as colored men, and with a general satisfaction as Americans, that we notice the favorable reception of the proposition to alter the Constitution on the subject of franchise, not only by both branches of Congress, by a large proportion of the press of the land, but by the people thereof; and that we believe that in U. S. Grant and Schuyler Colfax, who, we are confident, represent the progressive spirit so happily ripe in the land, we have two honest personages who will exercise their utmost influence, so far as they may consistently, to place all American citizens, without regard to their complexion, on an equal political basis.

Resolved, That the original abolitionists—those who were not ashamed or afraid to declare uncompromisingly, when they endangered their lives to do so, for the immediate abolition of slavery, and that the colored man should enjoy all the political, educational, and religious rights that any other class of citizens might claim—have a large and abiding share of our gratitude for their heroic, self-sacrificing advocacy and defence of the right, out of which has grown the present advanced public sentiment.

Resolved, That whatever shortcomings may be laid to the Republican party, it is the party through which the rights legally secured to the colored American in his country were secured; that it has our gratitude and shall receive our support; that no other party need hope to alienate us therefrom unless by outstripping it in consistency and in an honest advocacy of genuine democratic principles.

Resolved, That a Central Executive Committee, composed of seven persons, with its headquarters at Washington, be appointed to urge the necessity of lending their immediate influence to secure homes for the homeless of the South, and that said committee be empowered to add to its number and act with

any organization that shall desire the furtherance of the end contemplated; which committee be furthermore empowered to urge before Congress the expressed wishes of this convention.

Whereas, We believe that the pulpit is a mighty power in controlling minds on the question of reform: therefore,

Resolved, That it is the opinion of this committee that it is the duty of every minister of the Gospel to urge from the pulpit the reform now going forward in favor of universal liberty and equal rights to all men.

Resolved, That, while we must cheerfully acknowledge our gratitude to all who have labored and voted for the removal of the unjust disabilities against our people in regard to voting, we are under special obligations to the radical press and people of the distinguished State of Iowa, and also of Minnesota, for their able advocacy of impartial suffrage, and their late great victory at the polls.

Resolved, That we congratulate the nation on the success of the reconstruction policy of Congress in the restoration of so many of the States lately in rebellion to their normal relation with the Federal Union, despite the determination and desperate opposition of Southern rebels and their Northern sympathizers, and we earnestly appeal to Congress to complete the work so auspiciously inaugurated by establishing governments in those States yet unreconstructed, at the very earliest time possible, in consonance with the wishes of the loyal citizens of said States, and in the hands of men loyal to the Government of the United States, who will administer the laws on the broad principles of justice and equality to all.

Resolved, That the liberties of the citizens of this country can never be safe or uniform while the States are acknowledged to be the only power to regulate the suffrage.

Whereas, By the laws of the District of Columbia all persons, without regard to caste or color, are required to aid in bearing the burdens of the Government, all should be admitted to a full enjoyment of its blessings; and whereas, under the existing laws of the said District, our people are excluded from the jury-box: therefore, be it

Resolved, That a committee of five be appointed by the Chair to memorialize Congress in this matter, with a view of securing the rights of our race in this respect and in every other.

Resolved, That it is proper and opportune that we should now reaffirm the sentiments of our fathers with reference to African colonization, as expressed by them in 1816, and give such other testimony against it as is justified by its history to the present hour.

Resolved, That while we desire, indeed would aid in the success of our cause, to the extent of our opportunities, any enterprise having for its object the improvement of mankind in any part of the world, we nevertheless here enter our stern protest against the action of any class of men who would compromise our popular status by asserting that our duty to Africa is more binding upon us than upon other citizens of our country.

Another convention, designated as the "Irish National Republican Convention," composed of 221 delegates, assembled in Chicago, on July 4th. Its object was to effect an organization among Irishmen belonging to the Republican party. The views of the convention were expressed in the following resolutions:

Resolved, That it is the duty of the Irish people in this republic, and of all men over the world, to give their support to those who on principle contend for the right of all to perfect liberty, without regard to race, color, creed, or sex.

Resolved, That loyalty to the American Republic is a fixed and unalterable determination to stand by the only free government on earth, and to preserve and defend it against the attacks and machinations of all its enemies is the first political duty which the Irish citizens of this country are called upon to discharge.

Resolved, That to spread the principles of freedom is a duty we owe to ourselves and to the oppressed people of the earth, and one which, by all means consistent with international obligations, we are bound to discharge.

Resolved, That we ask for the oppressed people of our native land, for Cuba, and the down-trodden of all enslaved lands, the sympathy and support of the people and Government of the United States.

Resolved, That we protest against the presence of the armed despotism of Europe on this continent, and pledge our hearty coöperation to any plan adopted for their removal.

Resolved, That free trade, falsely so called, is a cunning and selfish device of the enslavers of mankind, and saps the very foundation of American prosperity and independence; and that we, in the interests of the entire American people, claim full and adequate legislative protection to American industry, and for those only who maintain the principle of protection, and who will make honest efforts to embody it in a protective tariff, should the votes of Irishmen in America be given.

Resolved, That the tendency which induces so many to neglect the cultivation of the soil and congregate in great cities, we mark as an evil, and one which consigns many of the Irish people of this country to life-long misery; we therefore declare our determination to take measures to afford facilities to our fellow-countrymen to settle down in the free and fertile lands of this great and glorious country.

Resolved, That we rejoice in the triumphant success of the Republican cause at the late presidential election, and pledge to President Grant our cordial and earnest support in preserving and defending the great principles of human liberty at home and abroad.

Resolved, That the existing neutrality laws being instrumental only in aiding the monarchies of the earth in sustaining their oppressive system of government, and having on various occasions placed the American Government in the anomalous position of using their power for the support of said government, and receiving only in return active and open hostility from the British Government, we hereby pledge ourselves to labor for their entire repeal.

The first resolution was passed by a vote of 49 to 41, the words "or sex" being the chief objection to it. There was also a division on the seventh. A resolution was adopted, after considerable debate, requesting Congress to pass a law making foreigners to be citizens after one year's residence in the country. A resolution was also passed in favor of the formation of immigration societies; also one against any distinction as to race or color in the membership of trades'-union associations.

The proceedings of this convention failed to attract any special public attention.

A National Labor Convention, or Congress, assembled in Philadelphia, on August 16th, consisting of delegates from the various labor unions organized throughout the country. The following resolutions, expressing the views of the congress, were adopted:

Resolved, That laborers in all departments of useful industry are suffering from a system of monetary laws which were enacted during the late war as measures, it was assumed, "necessary to the life of the nation," and which is now sought to be perpetuated in the interest of bondholders and bankers, as a means to

subvert the government of our fathers, and establish on its ruins an empire, in which all political power shall be centralized to restrain and oppress the rights of labor, and subordinate its votaries to the merciless demands of aggregated capital and supercilious authority.

Resolved, That the national banking system, being inimical to the spirit of liberty, and subversive of the principles of justice, and without warrant in the Constitution of the United States, and wrongfully increasing the burdens of the wealth-producing classes millions of dollars annually, justice, the aspirations of honest industry, and the spirit of imperilled liberty, demand its immediate repeal, and the substitution of legal-tender notes as the exclusive currency of the nation.

Resolved, That the "National Labor Union" is opposed to the continuance and creation of banks by acts of incorporation by either State or national authority, with the privilege of making, issuing, or putting in circulation any notes, bills, or other paper of any other bank, to circulate as money, except the "legal-tender or Treasury notes" therein contemplated.

Resolved, That the present rate of interest is in excess and disproportionate to the increase of national wealth, and, being the governing power in the distribution of the products of capital and labor, is oppressive to the producing classes.

Resolved, That the revenue laws of the United States should be altered, so that, instead of subordinating labor to capital, they may afford just protection to labor and the industrial interests of the whole country.

Resolved, That the legal-tender money should be made a legal tender in the payment of all debts, public and private, and convertible, at the option of the holder, into Government bonds, bearing interest at the rate of three per cent. per annum, with privilege to the holder to reconvert the bonds into money, or the money into bonds, at pleasure.

Resolved, That the claim of the bondholders, that the bonds which were bought with greenbacks, and the principal of which is by law payable in currency, should nevertheless be paid in gold, is unjust and extortionate.

Resolved, That the exemption from tax of bonds and securities is a violation of the just principle of revenue laws.

Resolved, That land monopolies are at variance with the doctrine that "all freemen, when they form a social compact, are equal in rights," and, if persisted in, must ultimately result in the subversion of free institutions, as also the social and political well-being of the laboring masses. To prevent this calamity, the public lands adapted to agriculture should be given, in reasonable quantities, to none but American citizens and such as have declared their intention to become citizens. Individual owners of extensive tracts of land should be encouraged to dispose of the same in small parcels, at reasonable prices, to actual settlers, that they may thus become identified with the soil as responsible, intelligent citizens.

Resolved, That it is a duty which should be exercised with pleasure to guard with vigilant care the delicate and sacred rights of the daughters of toil who are engaged in various industrial pursuits, and solicit their hearty coöperation in our efforts to vindicate the rights of the laboring classes, while we pledge them in return our individual and undivided support.

Resolved, That religion, morality, and knowledge, being necessary to success, schools and other means of education should be encouraged, such as the formation of labor unions, mechanics' institutes, lyceums, reading-rooms, and whatever additional agencies may hereafter be deemed conducive to the cause of morality and intelligence.

Resolved, That as labor is the foundation and cause of national prosperity, it is both the duty and interest of Government to foster and protect it. Its importance, therefore, demands the creation of an executive department of the Government at Washington, to be denominated the Department of Labor, which shall aid in protecting it above all other interests.

Resolved, That the protection of life, liberty, and property, are the three cardinal principles of government, and the first two more sacred than the latter; therefore money necessary for prosecuting wars should, as it is required, be assessed and collected from the wealth of the country, and not be entailed as a burden on posterity.

Resolved, That the National Labor Congress earnestly recommends the adoption of such measures among all classes of workmen, in all sections of the country, as will secure the adoption of the eight-hour system, and calls upon the respective State Legislatures to follow the example of the national Congress in recognizing eight hours as a legal day's work.

Resolved, That voluntary associations of working men and women are entitled, at the hands of legislation, State and national, to the same chartered rights and privileges granted to associated capital, and we demand their practical recognition and enforcement.

Resolved, That political equality being one of the cardinal principles of this organization, we therefore urge full restoration of civil and political rights to every American citizen, except such as have been convicted of felony.

On September 1st the National Temperance Convention assembled in Chicago. It consisted of about five hundred members, and had been called for the purpose of organizing a national political party, having the prohibition of liquor-selling for its distinct object. Much opposition was manifested to the design of embodying the movement in a distinct political party organization, but it was generally conceded that this was the only course open to the advocates of prohibition, both on the score of principle and policy. The views of the convention were expressed in the following resolutions:

Whereas, Protection and allegiance are reciprocal duties, and every citizen who yields obedience to the just demands of his Government is entitled to the full, free and perfect protection of that Government in the enjoyment of personal security, personal liberty, and private property; and,

Whereas, The traffic in intoxicating drinks greatly impairs the personal security and personal liberty of a large mass of citizens, and renders private property insecure; and

Whereas, The existing parties are hopelessly unwilling to adopt an adequate policy on this question, therefore, we, in National Convention assembled, as citizens of this free republic, sharing in the duties and responsibilities of its government, in discharge of a solemn duty we owe to our country and our race, unite in the following declaration of principles:

1. That while we acknowledge the pure patriotism and profound statesmanship of those patriots who laid the foundation of the Government, securing at once the rights of the States, severally, and their inseparable union by the Federal Constitution, we would not merely garnish the sepulchres of our republican forefathers; but we do hereby renew our solemn pledges of fealty to the imperishable principles of civil and religious liberty embodied in the Declaration of American Independence, and our Federal Constitution.

2. That the traffic in intoxicating beverages is a dishonor to Christian civilization, inimical to the best interests of society, a political wrong of unequalled enormity, subversive of the ordinary objects of government, not capable of being regulated or restained by any system of license whatever, but imperatively

demanding for its suppression effective legal prohibition, both by the State and national Legislature.

3. That in view of this, that inasmuch as the existing political parties either oppose or ignore this great and paramount question, and absolutely refuse to do any thing toward the suppression of the rum-traffic, which is robbing the nation of its brightest intellects, destroying internal prosperity, and rapidly undermining its very foundations, we are driven by an imperative sense of duty to sever our connection with these political parties, and organize ourselves into a National Temperance party, having for its primary object the entire suppression of the traffic in intoxicating drinks.

4. That while we adopt the name of the National Temperance party, as expressive of our primary object, and while we denounce all repudiation of the public debt, and pledge fidelity to the principles of the Declaration of Independence and the Federal Constitution, we deem it inexpedient to give prominence to other political issues.

5. That a Central Executive Committee, of one from each State and Territory and the District of Columbia, be appointed by the Chair, whose duty it shall be to take such action as, in their judgment, will best promote the interests of the party.

The action of this convention was not generally heeded by temperance advocates in the several States.

A National Capital Convention assembled at St. Louis, on October 21st. Its object was by political agitation to effect a removal of the national capital from Washington to some city in the valley of the Mississippi. The following were among the resolutions adopted:

Whereas, The present site of the national capital was selected as the most central point, when the people of this republic, only a few millions in number, inhabited only a narrow strip of country along the Atlantic coast; and

Whereas, The population of this republic has increased thirteen-fold since then, and spread over a vast continent, of which the States in existence when the seat of government was located form only the eastern edge; and

Whereas, The present location of the national capital is notoriously inconvenient in times of peace, and, as the darkest pages of our national history demonstrate, in times of war or domestic turbulence is so dangerously exposed as to require vast armaments and untold millions of money for its special defence; and

Whereas, All the reasons which caused the location of the seat of government where it now is, have, by the enormous development of the country, and a corresponding change in the wants of the people, become utterly obsolete: therefore,

Resolved, That the people have endured the present illy-located capital for three-quarters of a century, patiently waiting for the Western territory of the Union to be peopled and organized into States, and until the centre of population, area, and wealth, could be determined, when a permanent place of residence for the government could be selected. That time has now come. All sectional issues are settled; all dangerous domestic variances disposed of; a new era has been entered upon, and a new departure taken.

Resolved, That, in the language of James Madison, in the Congress of 1789, "an equal attention to the rights of the community is the basis of republics. If we consider the effects of legislative power on the aggregate community we must feel equal inducement to look to the centre in order to find the proper seat of government." This equal attention has not been and cannot be given to the interests and rights of the people so long as the capital is located in an inconvenient portion of the Union.

Resolved, That the natural, convenient, and inevitable place for the capital of the republic is in the heart of this valley, where the centre of population, wealth, and power, is irresistibly gravitating; where the Government, surrounded by numerous millions of brave and Union-loving citizens, would be forever safe against foreign foes or sectional seditions, and where it would need neither armaments nor standing armies for its protection.

Resolved, That, while advocating the removal of the seat of government to the Mississippi Valley, we do not mean to serve the interests of any particular locality, but that we urge Congress to appoint a commission for the purpose of selecting a convenient site for the national capital in this great valley of the Mississippi, pledging ourselves to be satisfied with and to abide by the decision to be arrived at by the national Legislature.

Resolved, That in urging the removal of the national capital from its present inconvenient, out-of-the-way, and exposed location in the far East, we are in earnest, and that we shall not cease in our efforts until that end is accomplished, firmly believing that the absolute necessity for the removal will become more and more apparent every day, and the majority of the American people will not long permit their interests and convenience to be disregarded.

Resolved, That, the removal of the national capital being only a question of time, we emphatically oppose and condemn all expenditures of money for enlargement of Government buildings and the erection of new ones at the present seat of the national Government, as a useless and wanton waste of the property of the people.

A National Woman Suffrage Convention assembled at Cleveland, Ohio, on November 24th. One hundred and eighty-three delegates were present from sixteen States. The object of the convention was to form a national organization as a consummation of the work which had been undertaken during the year to form an association in each State. A constitution was prepared and adopted, and Rev. Henry Ward Beecher was chosen the president of the new organization.

A convention to consider the subject of the importation of Chinese labor was held at Memphis, Tennessee, on July 13th, at which a large amount of information on the subject was presented.

A National Colored Labor Convention assembled in Washington on December 10th. During the session a delegation was sent to the President of the United States, headed by James H. Harris, of North Carolina.

After each member had been introduced, Mr. Harris said:

Mr. President: In obedience to a resolution passed at the National Labor Convention that has been in session in this city for the last five days, we are here to tender the thanks of the colored people of the United States for your recognition of their right to positions of honor and trust in the several departments of the Government; the colored mechanics are especially indebted for the recognition of their right to work in the navy-yards and other departments where skilled labor is employed. I am instructed to pledge the support of the colored men of the East, West, North, and South, to your Administration, because they believe that in the position you have taken you are carrying out the fundamental principles of the Republican party.

The President replied:

I think your movement in organizing your labor is in the right direction. I am willing to do any thing in my power to protect and advance the condition of

the working-men of the country. Your organization will force all to recognize your rights to labor and self-respect. I hope the day will speedily come when there will be no party in the land that will make color a test of citizenship. I wish you, gentlemen, success.

Rev. Stella Martin, speaking for the delegation, said:

Mr. President: One great subject of interest during our deliberations was the securing of land for the laborers of the South, so that they may become permanent settlers and independent citizens. There are eight millions of acres of land that may be used by Congress to secure these results, and we desire to secure your influence to prevent any renewal of the lapsed land grants to railways and other corporations, to the detriment of actual settlers.

The President replied that he could only aid the matter by suggestion and recommendation, and that he would give the matter his attention.

Since the close of the late war, the project of connecting the Atlantic and Pacific Oceans by a ship-canal across the Isthmus of Darien has been favorably considered by the United States Government, and active measures have been taken in behalf of that great work. Within the last few years various routes have been explored and recommended as practicable by surveying parties sent by the United States and foreign Governments. The most prominent of these, with their distances, are as follows:

Route.	Miles.
Isthmus of Tehuantepec	198
Nicaragua, from San Juan del Norte to Brito	194
Chagres to Panama (Colombia)	51
Chepo to San Blas	30
San Miguel to Port Escoces (Caledonia Bay)	39
Atrato Valley, by Napipi and Cupica	172

It is now generally conceded that the Isthmus of Darien presents less formidable difficulties to the achievement of such a work than any other region which has been explored. In an exhaustive report upon this subject, submitted to the Government in July, 1866, Admiral Davis says: "It is to the Isthmus of Darien that we are first to look for the solution of the great problem of an interoceanic canal. We know enough of the interior topography to adopt the view of Dr. Cullen, that if we leave the Indian trail, which always passes over the highest ground, and explore the country beyond the ordinary line of travel, we shall probably find a valley transversely dividing the Cordilleras, or at least a lower ridge than any yet surveyed. Our most trustworthy engineers in these regions, Trautwine, Michler, Prevost, McDougall, and others, tell us that it is impossible, from the very limited inspection of the country taken on the Indian line of travel, to form any conception of the nature of the ground, even in the immediate vicinity."

In order to gain control of the isthmus for the purpose of constructing the canal, overtures were made by the American Government in the latter part of 1868 to the United States of Colombia, which led to the negotiation of a treaty between the two Governments. By this treaty, which was concluded on the 14th of January, 1869, the United States is empowered to survey a route and construct a canal at any point across the isthmus, except that it shall not be constructed across the route of the Panama Railroad without the consent of the company. The United States shall have sole control of the canal, shall pay all expenses and damages, and may keep a military force not exceeding 500 men on the canal after its completion. The Government of Colombia stipulates not to undertake or permit the construction of any other oceanic canal or railway across the isthmus without the consent of the United States, and appropriates all the territory, including land, ocean, and tributary waters, besides ten miles of waste and unimproved lands on each side of the canal throughout its entire length. Each Government, however, is to be entitled to alternate water-fronts not exceeding 8,300 yards. After the canal shall have been in operation for twelve years, Colombia shall receive ten per cent. of the net proceeds annually, after the capital expended shall be reimbursed to the United States, such payment to be made semi-annually in New York. Colombia shall retain political control over the canal and adjacent territory, but the United States shall have free passage for troops, munitions, and vessels, except when engaged in war, when the use of the canal shall be denied to all nations. The grant is to continue for 100 years from the time the canal goes into operation, when it shall revert to Colombia.

The Senate of the United States did not act upon this treaty at the session of 1869, but awaited the action of the Government of Colombia. The treaty having been submitted to the Senate of that country, was rejected on the 1st of March by a large majority. This result has been attributed to the condition of political parties in Colombia, and it is believed that a large majority of the new Congress, subsequently elected, will favor the treaty. On the 15th of October a resolution was passed by the Legislature of Panama requesting the national Senate to reconsider their rejection, and accept the treaty. September, 1870, is the limit of time prescribed in the treaty in which a ratification may be made, and it is expected that within that period this important treaty will be duly ratified by both Governments. In the mean time the Colombian Government has given permission to the United States to explore the isthmus, with a view of determining upon the most practicable route. An exploring expedition, comprising a competent force of scientific men and engineers, and fully supplied with all necessaries requisite for the undertaking, has been fitted out by the Government, and ordered to survey "the most direct route across the Isthmus of Darien for the proposed ship-canal provided for by the treaty between the United States and the Colombian Government." The expedition having proceeded to its destination, the work is now progressing under the general superintendence of Rear-

Admiral Davis, who, by his extended knowledge of the isthmus, and the different routes heretofore surveyed, is specially qualified for the duties assigned him.

The commerce that will pass through the Darien Ship-canal has been estimated to embrace the trade between the United States and the Dutch East Indies, British Australia, and New Zealand, British East Indies, French East Indies, half of Mexico, half of New Granada, Central America, Chili, Peru, Ecuador, Sandwich Islands, China, other ports in Asia and of the Pacific, as well as between the Eastern and Western coasts of the United States. The value of the exports and imports between the United States and the foreign ports above mentioned, in 1857, was $193,168,937, including ships aggregating 1,857,485 tons, and the saving in money on this amount that would result from the use of the canal has been estimated at $35,995,930. It is also claimed that the trade of England and France will pass over the new route, amounting in the aggregate to about $260,000,000 annually, on which the saving in money will amount to about $12,000,000. The total value of the commerce that will be affected by the use of the canal is estimated at $467,831,180, and the savings at $49,530,208. The number of miles saved in distances by the route across the Isthmus of Darien is shown in the following table:

From New York to	Distance via Cape of Good Hope.	Distance via Cape Horn.	Distance via Isthmus of Panama.	Saving in distance over the route by the Cape of Good Hope.	Saving in distance over the route by Cape Horn.
Calcutta	17,500	23,000	13,400	4,100	9,600
Canton	19,500	21,500	10,600	8,900	10,900

UNIVERSALISTS. The General Convention of Universalists in the United States of America was incorporated in 1866. It is empowered to hold property to the extent of $500,000, "to be devoted exclusively to the diffusion of Christian knowledge, by means of missionaries, publications, and other agencies."

The meeting of the convention for 1869 was held at Buffalo, N. Y., on the 21st of September. Two new State Conventions, those of Kansas and Missouri, were recognized and admitted by their delegates. The Board of Trustees reported that, in accordance with a resolution of the previous convention, they had appointed a committee of seven from the members of the Executive Board of the Northwestern Convention, to supervise the work of the convention in the West. The new committee are entitled "The Northwestern Board of the General Convention."

The financial receipts, including cash on hand, at the beginning of the year, were $8,620.47; expenditures, $6,301.12. With this sum two churches (at Washington and at Wilmington) were partially sustained, and fourteen theological students aided. Arrangements were made for celebrating the centenary of the first preaching of Universalism in the United States, which would occur in 1870. Among the features of the plan were: that all church debts should be paid; that new churches should be erected; that liberal aid should be given to education, missions, Sunday-schools, and publications; that $200,000 should be raised, to be known as the Murray Centennial Fund, to be controlled by the trustees, and used in the education of theological students, and other appropriate purposes; that commemoration services be held in all Universalist churches on the first Sunday of 1870; that general Sunday-school reunions be held on the second Sunday; that there be special gatherings in the cities of New York and Philadelphia; and that reports be made at the Centennial Convention, which should be held next September at Gloucester, Mass., in the Murray Universalist Church, the first of the denomination established in the country.

The Northwestern Conference of Universalist Churches is declared, by resolution of both bodies, to be auxiliary to the General Convention, and makes annual reports of its doings to the trustees of the latter body. It has labored in missionary work, has furnished nine students to the theological institution at Canton, N. Y., and completed the raising of $100,000 for the endowment of Lombard University, at Galesburg, Ill. It has taken steps to establish a theological department of this institution. It has received bequests of large amounts in trust, for the establishment of theological schools. It has not yet completed its reconstruction as an element of the General Convention.

No statistics have been compiled of the number of members in the Universalist churches. The statistics in other respects, so far as they have been reported, are as follows: conventions, 17; associations, 81; societies, 844; ministers, 520.

Thirteen periodicals are reported in the various States. Several of the State Conventions have also missionary societies, Sunday-school

unions, etc., connected with them. In New York there is a State Relief Fund of $30,000.

The literary institutions of the Universalists are steadily improving. The principal one is Tufts College, at Medford, Mass. The total value of its property is $805,000. The present number of students is 63. The Divinity-school at this institution was opened in July, 1869.

Lombard University, Galesburg, Ill., has property valued at $165,000, and an endowment fund of $100,000.

The St. Lawrence University, at Canton, N. Y., has classical, theological, and law departments.

Smithson College will be located at Logansport, Ind. The buildings will be commenced in 1870.

There are also seven academies and institutes in Maine, Vermont, Massachusetts, New York, and Wisconsin, with full boards of instruction.

The total number of students in all the schools was 1,450. The number of collegiate students, including 28 young women, and 21 in scientific and partial courses, was 21. The number of divinity students was 33.

Universalists in the British Provinces: Nova Scotia, two societies, one minister; New Brunswick, two societies, one minister; Canada West, one association, three societies, two ministers; Canada East, one minister.

V

VENEZUELA, a republic in South America. Area, about 368,000 square miles; population, in 1858, about 1,565,000. The revenue, wholly derived from customs, amounted, during the year from July 1, 1866, to June 30, 1867, to 4,390,054 pesos. The internal debt amounted on June 30, 1868, to $18,297,811; the external debt to $53,612,801. The most important article of export is coffee, of which, Porto Cabello, in the year 1867–'68, exported 18,300,000 pounds.

In the beginning of 1869, the provisional Administration issued a decree, setting aside fifty per cent. of the revenue of the country for the payment of all debts, and of this fifteen is to be applied to the payment of international claims, such as American, French, British, Spanish, Italian, Dutch, and probably German, as a minister from the North-German Confederation was expected to arrive shortly. The gross revenue of the country being estimated at $4,000,000 (Venezuelan currency), would therefore leave the sum of $300,000 for this purpose.

The Venezuelan Congress provisionally intrusted, in February, the executive powers to Generals José Ruperto Monagas and Guillermo Villegas, until an election for President of the republic should take place. The factions of the ambitious leaders seemed bent, however, upon plunging Venezuela again into the troubles of revolution. While ex-President Falcon remained at Curaçoa, his adherents in Venezuela actively conspired for his restoration to power. In June, the ministers resigned, being dissatisfied with the timid and vacillating policy of the acting-President, Monagas.

Congress enacted only one important measure. On May 11th it decreed that the navigation of the Orinoco, and the Lakes of Valencia and Maracaibo, shall be thrown open from that date to merchant steam-vessels owned by foreigners, and sailing under foreign flags. During ten years, all machinery, fixtures, and necessary combustibles for the said vessels, are to be exempt from duty.

The Government of the United States, becoming tired of the machinations constantly practised by Venezuela to thwart the pressing demands on her by the American ministers, finally succeeded in making a treaty to organize a mixed commission for the decision of all the claims pending between the two Governments, and the amount to be awarded, made payable to the United States Government by Venezuela, in ten annual instalments, with interest at five per cent.

In June, another civil war commenced. Pulgar, Governor of the State of Zulia, made vigorous preparations for an armed conflict with the General Government. He added several rifled guns of heavy calibre to the armament of the Fort of San Carlos, commanding the channel to the Lake of Maracaibo; erected a number of batteries on the island of Baji Seco, at the entrance of the lake; and fortified strongly every point at which an enemy might attempt to force a passage. Domingo and Gregorito Monagas were in his favor; the adherents of Falcon were generally also on his side. The country again was in a wretched condition. On October 2d, General Monagas left with 4,000 men, four steamers, and several sailing-vessels, to operate against General Pulgar, at Maracaibo, but he was defeated by the latter near Coro. On October 21st, however, President Monagas entered, after a bloody action for seven hours, Maracaibo, and on the 26th of October General Pulgar and many of his officers were carried as prisoners to Fort San Carlos. A large number of troops were sent in December to operate against the guerrillas in the State of Valencia. President Monagas appointed a new ministry, and was making, according to the last accounts, efforts to unite the different political parties.

VERMONT. The system of government of the State of Vermont contains a provision for

an alteration of the State constitution of an unusual nature. A Council of Censors is elected, who are required to meet and consider the subjects proposed for the amendments, to draft the articles, and to fix the time for the convention to be held. On the last Wednesday of March, such a Council of Censors was elected. This body subsequently met and organized, and called a convention to assemble on June 8, 1870. Certain amendments to the constitution were prepared by them and published, as follows:

ARTICLE I. Corporations shall not be created, nor their powers increased or diminished, by special laws, except for municipal purposes.

ART. II. *Sec.* 1. The General Assembly shall meet on the first Wednesday of October, biennially; the first election shall be on the first Tuesday of September, A. D. 1870; the first session of the General Assembly on the first Wednesday of October, A. D. 1870. *Sec.* 2. The Governor, Lieutenant-Governor, Treasurer of the State, Senators, Town Representatives, Assistant Judges of the County Court, Sheriffs, High-Bailiffs, State's Attorney, Judges of Probate, and Justices of the Peace, shall be elected biennially on the first Tuesday of September, in the manner prescribed by the constitution of the State. *Sec.* 3. The term of office of the Governor, Lieutenant-Governor, and Treasurer, of the State, respectively, shall commence when they shall be chosen and qualified, and shall continue for the term of two years, or until their successors shall be chosen and qualified, or to the adjournment of the session of the Legislature, at which, by the constitution and laws, their successors are required to be chosen, and not after such adjournment. *Sec.* 4. The term of office of Senators and town representatives shall be two years, commencing on the first Wednesday of October following their election. *Sec.* 5. The term of office of the Assistant Judges of the County Court, Sheriffs, High-Bailiffs, State's Attorneys, Judges of Probate, and Justices of the Peace, shall be two years, and shall commence on the first day of December next after their election.

ART. III. Whenever the office of Senator or town representative shall become vacant from any cause, the Legislature may provide by law for filling such vacancy.

ART. V. *Sec.* 1. The Judges of the Supreme Court shall be appointed by the Governor, by and with the advice and consent of the Senate. *Sec.* 2. The term of office of the Judges of the Supreme Court shall be six years, provided that, under the first appointment made in pursuance of this section, one-third of the judges first appointed shall hold their office for the period of four years; and one-third thereof last in the order of appointment shall hold their offices for a period of two years. *Sec.* 3. The Judges of the Supreme Court shall, at stated times, receive a reasonable compensation for their services, which shall not be diminished during the terms of their offices.

ART. —. (Proposed for adoption if Article II. is adopted, and Article IV. is rejected.) The Judges of the Supreme Court shall be elected biennially, and their term of office shall be two years.

ART. V. Hereafter, women shall be entitled to vote, and with no other restrictions than the law shall impose on men.

ART. VI. *Sec.* 1. At the session of the General Assembly of this State, A. D. 1880, and at the session thereof every tenth year thereafter, the Senate may, by a vote of two-thirds of its members, make proposals of amendment to the constitution of the State, which proposals of amendment, if concurred in by a majority of the members of the House of Representatives, shall be entered on the journals of the two Houses, and referred to the General Assembly then next to be chosen, and be published in the principal newspapers of the State; and, if a majority of the members of the Senate and of the House of Representatives of the next following General Assembly shall respectively concur in the same proposals of amendment, or any of them, it shall be the duty of the General Assembly to submit the proposals of amendment so concurred in to a direct vote of the freemen of the State; and such of said proposals of amendment as shall receive a majority of the votes of the freemen voting therein shall become a part of the constitution of the State. *Sec.* 2. The General Assembly shall direct the manner of voting by the people upon the proposed amendments, and enact all such laws as shall be necessary to procure a free and fair vote upon each amendment proposed, and to carry into effect all the provisions of the preceding section. *Sec.* 3. The House of Representatives shall have all the powers now possessed by the Council of Censors to order impeachments, which shall in all cases be by vote of two-thirds of its members. *Sec.* 4. The forty-third section of the second part of the constitution of this State is hereby abrogated.

The Democrats of the State held a convention on June 17th, to nominate State officers. Homer W. Heaton was selected as the candidate for Governor, and Morrell Noyes for Lieutenant-Governor. The following platform was adopted:

Resolved, That the practical working of the General Government, as administered by the opposition to the Democratic party, renew our zeal and love for the principles of our party.

Resolved, That we are still in favor of a strict adherence to the Constitution of the United States, as the safeguard of the States.

Resolved, That the Democracy now, as ever, make no distinction between citizens, whether of native or foreign birth; and that we sympathize now, as ever, with men of all nationalities striving for self-government.

Resolved, That we are opposed to the present unequal system of taxation of the General Government, and to the corrupt and wasteful expenditure of the proceeds of such taxation.

Resolved, That we prefer a system of government, in accordance with the principles of the Democratic party, rather than the present system of radical rule.

The Republican Convention assembled on June 16th, and nominated P. T. Washburn for Governor, and George W. Hendee for Lieutenant-Governor. The following platform was adopted:

Resolved, That the Republican-Union party of Vermont hereby affirms its adherence to the cardinal principles of the party, and especially the exclusion of traitors from the positions of public trust, the right of impartial suffrage, and the integrity of the public credit.

Resolved, That we have confidence that the Administration will wisely and firmly protect the interests and dignity of the nation in respect to our just claims against Great Britain, and that, in our judgment, we can afford to wait until her Majesty's Government finds it for her interest to make settlement.

Resolved, That we wholly approve the principles and policy of the Administration of President Grant, and we particularly commend that point of his inaugural address wherein he declares, "I would protect the law-abiding citizen, whether of native or foreign birth, wheresoever his rights are jeopardized, or the flag of our country floats, and would protect the rights of all nations, demanding equal respect for our own.

Resolved, That we cordially commend the State ticket this day nominated, and pledge to its support such a majority as shall show that Vermont takes no step backward in her Republican course.

The election was held on September 7th, and resulted in the entire success of the Republican ticket. The total vote was 43,289, of which P. T. Washburn received 31,834, and H. W. Heaton 11,455. Washburn's majority was 20,379. The Legislature elect consisted in the Senate of all Republicans, 30 in number; in the House there were 211 Republicans, and 24 Democrats.

The regular session of this body commenced on October 14th. The Governor, in his message to that body, stated the total funded debt of the State to be $1,075,000, which included $27,000 of bonds due in 1876, and $8,000 that had been purchased by the Treasurer.

The liabilities of the State amounted to $1,096,108. To be deducted from this is the amount of the sinking-fund, $75,000, with bonds above-mentioned held by the Treasurer.

The Governor further remarked that the amount required to be paid during the year for expenses of the State, allotment claims, State pay due to soldiers, and other matters, besides payment of interest on bonds and loans, had largely exceeded the estimated amount, on which the tax levied in 1868 was based. It was obvious that, for the purpose of meeting the necessary and current expenses, with provision for redeeming 1871 bonds, a larger tax must be imposed than was levied in 1868.

The great number of small school-districts in the State is a drawback to education, for, in some districts containing but few families, as compared with a large district with many families, it is obvious that one of two results must follow: if good teachers are employed, the expense of each pupil must be above the average of the larger district; and if the expense for each scholar is kept within the average, only poor teachers can be employed. The Board of Education recommended, as a remedy, that all school-districts be abolished, and the support and supervision of the schools be committed directly to towns. The expenditure in each year for supporting schools in the State is about $500,000. The State has a right to require, for its own protection against anarchy and misrule, which are the handmaids of ignorance and idleness, that the children shall be educated, and yet a very large number of both native and foreign-born do not attend any school, and the present law is insufficient to compel them.

The law of the State prescribing the legal rate of interest for money loaned, and positively prohibiting the taking, directly or indirectly, of a greater rate, is daily and openly violated by banks and individuals, and its violation disregarded. It is thus a direct element of moral and practical mischief. The Governor recommended that the law should be essentially modified, or provision made for its enforcement by ordinary officers of the law, and this without reference to any supposed interest of either borrower or lender, but only for the promotion of a sound morality and respect for law.

The people of this State must ever remain, essentially, an agricultural community; although the progress made in the development of its mineral resources—marble, slate, and iron, found in large quantities—has modified the character of the State in this respect. The result is, that large numbers of the young men, trained to depend for their livelihood upon the fruits of patient toil upon the farm, attracted by the rich soil, easy cultivation, and large returns of the alluvial regions of Western States, leave yearly, thus preventing any considerable increase in the population, and enriching the States to which they remove. Every considerable stream in the State affords water-power which has not yet been put to use, and large amounts of lumber, iron, and other materials are yearly sent away to other States, and returned in their manufactured form, to be consumed, thus paying the profits upon the manufacture to other communities, which should be enjoyed at home. As means by which the resources of the State may be put to use within its limits, the Governor recommended a modification of the interest laws to a certain extent, or absolute exemption from taxation, for a limited time, of capital invested in new manufacturing or mechanical establishments, instead of leaving it as at present to the uncertain action of towns.

In alluding to the fifteenth amendment of the Constitution of the United States, the Governor remarked that the adoption of it will, for the first time in the history of the nation, give reality to the truth enunciated in the Declaration of Independence, and incorporated into this Constitution, that "all men are created equal," and will preserve inviolate the faith pledged to the national freedmen. The sense of the people of Vermont upon this subject has been too often expressed, through the ballot-box and by their representatives, to leave its adoption for a moment in doubt.

In the Agricultural College it has been found necessary to increase the space hitherto allotted for scientific works. The attendance during the past sessions has been largely increased.

The academic department has been conducted with satisfactory results. In addition to the usual course of instructions, lectures on physiology and geology have been given by some of the most prominent professors of the State. A gymnasium has lately been introduced, which has been found to confer essential benefit upon the pupils, not alone in health, but in morality.

By the report of the Auditor of the State it appears that a settlement has been effected with the United States for outstanding war-claims; $108,056.31 having been received.

However, $108,821.17, of claims presented, are still unpaid, but it is not anticipated that more than $34,000 of this claim will be allowed by the Government.

The Commissioners of the Insane report the institution in a favorable condition. There were 137 State beneficiaries to August 1st. Admitted during the past twelve months, 46; discharged cured, 11; discharged uncured, 8; died, 18. Total number (at report), 89.

There are 81 convicts in the State Prison, an excess of five over the preceding year; and it is gratifying to learn that of the former number only three are women.

VIRGINIA. No provision was made, in the year 1868, for submitting the constitution of Virginia to a vote of her people, although that instrument was completed in April of that year. The provisions of the constitution regarding the elective franchise were quite restrictive, and would exclude from the exercise of that privilege a large portion of the most intelligent and best-educated citizens of that State on account of their participation in the late civil war on behalf of the Southern Confederacy. A movement began in the latter part of 1868, among the more moderate Republicans and all the conservative men of the State, for a modification of these clauses, or their entire omission from the new organic law. This question was destined to create a new division of political parties throughout the campaign of the year. Not only was the subject discussed by the newspapers and public men in the early part of the year, but a delegation of prominent citizens visited Washington to urge upon Congress the expediency of submitting the constitution to a vote of the people, with important changes in its provisions. A bill providing for the submission of the constitution to a popular vote had originated in the House of Representatives, and was, at that time, occupying the attention of the Senate Judiciary Committee. The delegation from Virginia addressed a letter to that committee, setting forth the views generally entertained in the State, and the feelings which prevailed among all liberal citizens, and asking, as a fit embodiment of those views and feelings, that an amendment to the pending bill be adopted, providing that the constitution should never be so changed as to deprive any citizen of the right to vote, and that the disqualifying sections should be stricken out. The discussion of this subject, both in Virginia and at Washington, continued until the recommendation of President Grant in his message of the 7th of April, and the consequent action of Congress, put the substantial object aimed at in the way of accomplishment. The President, in his message, recommended that provision be made for holding an election under the direction of the military commander, at which the question of the adoption of the constitution should be submitted to the citizens, and "that a separate vote be taken upon such parts as may be thought expedient, and at the same time and under the same authority there be an election for the officers provided under such constitution, and that the constitution, or such parts thereof as shall have been adopted by the people, be submitted to Congress on the first Monday of December next for its consideration, so that, if the same is then approved, the necessary steps will have been taken for the restoration of the State of Virginia to its proper relations to the Union. * * I am led to make this representation," he said, "from the confident hope and belief that the people of that State are now ready to coöperate with the national Government in bringing it again into such relations to the Union as it ought as soon as possible to establish and maintain, and to give to all its people those equal rights under the law which were asserted in the Declaration of Independence, in the words of one of the most illustrious of its sons." A bill to carry into effect these recommendations was immediately introduced into the House of Representatives, and rapidly passed through that body and the Senate, and received the approval of the President on the 10th of April. It provides that the President may, at such time as he may deem best, "submit the constitution which was framed by the convention which met in Richmond, Va., on Tuesday, the 3d day of December, 1867, to the registered voters of said State, registered at the date of said submission, for ratification or rejection, and may also submit to a separate vote such provisions of said constitution as he may deem best, such vote to be taken either upon each of said provisions alone, or in connection with the other portions of the constitution, as the President may direct."

After authorizing the election of officers at the same time, and making similar provisions with regard to the States of Texas and Mississippi, the act closes by requiring the Legislature to ratify the fourteenth and fifteenth amendments of the Federal Constitution as a condition precedent to the readmission of the State to the Union, and declaring that these proceedings shall not be final, or operate as a complete restoration of the State until approved by Congress. In pursuance of the provisions of this act, the President issued his proclamation on the 14th of May, designating the 6th of July as the time for the election and submitting the following clauses to a separate vote:

ARTICLE III. *Section* 1, *Clause* 4. Every person who has been a Senator or Representative in Congress, or elector of President or Vice-President, or who held any office, civil or military, under the United States, or under any State, who, having previously taken an oath as a member of Congress, or as an officer of the United States, or as a member of any State Legislature, or as an executive or judicial officer of any State, shall have engaged in insurrection or rebellion against the same, or given aid or comfort to the enemies thereof. This clause shall include the following officers: Governor, Lieutenant-Governor, Secretary of State, Auditor of Public Accounts, Second Auditor, Register of the Land-office, State Treasurer, Attorney-General, sheriffs, sergeant of a city or town, commis-

sioner of the revenue, county surveyors, constables, overseers of the poor, Commissioners of the Board of Public Works, judges of the Supreme Court, judges of the Circuit Courts, judge of the court of hustings, justices of the county courts, mayor, recorder, alderman, councilmen of a city or town, coroners, escheators, inspectors of tobacco, flour, etc., clerks of the supreme, district, circuit, and county courts and of the court of hustings, and attorneys for the Commonwealth: *Provided*, That the Legislature may, by a vote of three-fifths of both Houses, remove the disabilities incurred by this clause from any person included therein, by a separate vote in each case.

ART. III. *Sec.* 7. In addition to the foregoing oath of office, the Governor, Lieutenant-Governor, members of the General Assembly, Secretary of State, Auditor of Public Accounts, State Treasurer, Attorney-General, and all persons elected to any convention to frame a constitution for this State, or to amend or revise this constitution in any manner, and mayor and council of any city or town, shall, before they enter on the duties of their respective offices, take and subscribe the following oath or affirmation: *Provided*, The disabilities therein contained may be individually removed by a three-fifths vote of the General Assembly:

"I, ——, do solemnly swear (or affirm), that I have never voluntarily borne arms against the United States since I have been a citizen thereof; that I have voluntarily given no aid, countenance, counsel, or encouragement to persons engaged in armed hostility thereto; that I have never sought nor accepted, nor attempted to exercise the functions of any office whatever, under any authority, or pretended authority, in hostility to the United States; that I have not yielded a voluntary support to any pretended government, authority, power, or constitution within the United States hostile or inimical thereto. And I do further swear (or affirm), that, to the best of my knowledge and ability, I will support and defend the Constitution of the United States against all enemies, foreign and domestic; that I will bear true faith and allegiance to the same; that I take this obligation freely, without any mental reservation or purpose of evasion, and that I will well and faithfully discharge the duties of the office on which I am about to enter: So help me God."

The above oath shall be taken by all city and county officers before entering upon their duties, and by all other State officers not included in the above provision.

In the mean time the State remained under the military jurisdiction of the United States. On the 6th of February Congress passed a joint resolution, providing that "the persons now holding civil offices in the provisional governments of Virginia and Texas, who cannot take and subscribe to the test-oath prescribed by the act entitled 'An act to prescribe an oath of office, and for other purposes,' approved July 2, 1862, shall, by the passage of this resolution, be removed therefrom; and it shall be the duty of the district commanders to fill the vacancies so created by the appointment of persons who can take said oath." Persons, whose disabilities had been removed, were exempted from the operation of the resolution, and it was not to take effect in any case until thirty days after its passage. General Stoneman issued an order on the 15th of March, promulgating this resolution, and making the removals from office which it required. On the 21st of March the same officer made a report to the Adjutant-General of the Army at Washington, in which he stated that there were 5,446 offices in the State, 532 of which had been filled by General Schofield and 1,972 by himself: of the incumbents, 329 were able to take the oath, and there were still 2,613 vacancies to be filled. In speaking of the difficulty of obtaining competent men to fill the offices of the State, who were at the same time able to take the test-oath, the commanding general said: "In accounting for the very small number of persons in the State who can take the test-oath of office, it must be taken into consideration that Virginia was one great battle-field during the war; that there was small chance for escape from the rigors of the conscript laws; that nearly every man was directly under the eye and control of the Confederate government, and that some time or other nearly every one gave 'aid, countenance, counsel, or encouragement, to persons engaged in armed hostility to the Government of the United States; and besides, once having engaged in the war, probably no portion of the Southern people, old and young, male and female, were more earnest in its prosecution. The conclusion will force itself upon every intelligent mind, that, if, with all the efforts that have been made and the latitude that has been allowed, the offices in the State have not been filled by competent persons, they certainly cannot be filled when the restrictions of any one party are to be observed and complied with, as will be the case upon the adoption of the proposed constitution, under which it is desired by some that the people of Virginia shall be forced to live, and to the requirements of which they are expected to consent."

On the 27th of March, Provisional-Governor H. H. Wells was removed from office by an order of the military commander, declaring that "all the powers conferred upon the chief executive officer of the State of Virginia by its constitution and laws, and heretofore exercised by the Provisional Governor thereof under the reconstruction laws of Congress, are hereby devolved upon the commanding officer of the First Military District, and will, until further orders, by him be assumed and performed."

Already, on the 5th of March, a general order had issued from the headquarters of the Army at Washington, removing Brevet-Major General George Stoneman from the command of the First Military District, and assigning Brevet Major-General E. R. S. Canby, the commander of the Fifth District, to the position. On the 31st of March another order issued, assigning General Alexander S. Webb to the command of the First District until the arrival of Canby, thus relieving General Stoneman from the position which he had held for nine months, to the general satisfaction of the people of the State. General Webb assumed the command on the 2d of April, and his first act was to restore Mr. Wells to the position of Provisional Governor. On the 3d of April an order was issued appointing military officers to

fill vacancies in various civil offices, owing to the impossibility of finding citizens who were qualified for the positions under the laws of the United States.

General Canby assumed the command of the First Military District on the 20th of April. On the 22d he issued an order, declaring that all officers of the provisional government would be required to take the test-oath, which was followed on the 7th of May by an order, directing that "all persons elected or appointed to civil office, who have subscribed the oath of office of July 2, 1862, and filed the same with the county clerks, or with other civil officers, as required by law, will cause duly-certified copies of said oath to be made and filed at these headquarters, that their ability to qualify under the joint resolution of Congress, passed February 6, 1869, may be definitely ascertained." A failure to comply with this order, in any case, was to be regarded as an indication that the office was vacated.

By an order of April 30th, the military divisions of the State were reorganized and a new assignment of military commissioners was made. The districts were twenty-seven in number, and the commissioners were at the same time appointed superintendents of registration and election. On the 21st of May the election order was issued. It named the day of election, gave the clauses of the constitution which were to be separately voted upon, and set forth in detail the duties of registrars and judges of elections. Directions were given for the registration of all qualified electors, the revision of the lists, and the final casting of the ballots. To prevent the registration of any person not entitled to vote, two white and two colored persons, registered voters of the district or ward, were to be selected by the Board of Registrars, to challenge the right of any person to be registered, who, in the opinion of the person challenging, is disqualified as a voter by reason of any of the causes set forth in said acts of Congress. Upon said challenge being made, the board shall examine the person presenting himself for registration, with reference to each cause of disqualification alleged, and evidence shall be taken, if offered, to sustain or disprove the challenge."

Provision was also made for challenging at the polls, "to prevent repeating or fraudulent personations of duly-registered voters." Regulations were made for the preservation of order in all respects similar to those prescribed at other elections for the consummation of reconstruction in the Southern States. (*See* MISSISSIPPI, and CYCLOPÆDIA of 1868, ALABAMA, etc.)

The Boards of Registration were composed of persons selected by the military commissioners, and special instructions to the registrars were issued by the commander of the district. These instructions designated the classes of persons who were disqualified from voting by the terms of the reconstruction acts. Among the persons specified as "disfranchised" were the following:

8. All persons who voluntarily joined the rebel army, and all persons in that army, whether volunteers or conscripts, who committed *voluntarily* any hostile act, thereby engaged in insurrection and rebellion. Any person, however, who was forced into the rebel army, but avoided, as far as possible, doing hostile acts, and escaped from that army as soon as possible, cannot be said to have engaged in the rebellion.

9. All who exercised the functions of any office under the Confederate government, or the government of any of the Confederate States, which functions were of a nature to aid in prosecuting the war, or maintaining the hostile character of those governments, engaged in the rebellion, or gave aid and comfort to the enemy.

10. Voting, in convention, for the ordinance of secession, or, at the election, for its ratification, like any other act of engaging in rebellion or adhering to the enemy, *if done voluntarily*, works disfranchisement of the person who had previously held one of the specified offices; but, if the act be committed involuntarily, through fear or force, it does not work disfranchisement. Any act is assumed to have been voluntary unless the contrary is shown by satisfactory evidence. In reference to this and other questions, the oath of the person applying for registration is to be given such weight as, in the opinion of the board, it is entitled to.

11. Those who *voluntarily* furnished supplies of food, clothing, arms, ammunition, horses or mules, or any other material of war, or labor, or service of any kind, to the Confederate military or naval forces, or money, by loan or otherwise, to the Confederate government, or aided in any way the raising, organization, or equipment of troops, gave aid and comfort to the enemy, and participated in the rebellion and civil war against the United States.

12. To give individual soldiers food or clothing enough to relieve present suffering, or to minister to the sick or wounded, are simple acts of charity or humanity, and do not constitute giving "aid or comfort to the enemy." A parent may give his son who belongs to the hostile army food and clothing for his own use; but if he give him a gun, horse, or other thing, to be used for hostile purposes, he thereby gives aid and comfort to the enemy.

Meantime the political parties were engaged in an active canvass of the State. They were known as the Radical and Conservative parties, and consisted mainly of two discordant sections of the Republican organization, which had divided on the question of incorporating into the constitution the proscriptive features already mentionad. About 120 Republican delegates assembled in convention at Petersburg on the 9th of March, and, after a somewhat turbulent session of two days, nominated H. H. Wells for Governor, J. D. Harris (colored) for Lieutenant-Governor, Thomas R. Bowden Attorney-General, and A. M. Crane for Congressman at large. The State Central Committee was reorganized, and resolutions were adopted to the following effect.

1. Favoring the early restoration of Virginia under the new constitution without changes or amendment, and an early election, without which there is danger of final disaster.

2. That the election of General Grant has awakened confidence in, and given a new guarantee for, the principles of the Republican party, and made sublime the truth that all men are free and equal, and entitled to all the privileges of citizens.

3. Holding with gratitude Grant's Inaugural, and thanking him for declaring that until there is universal suffrage there cannot be peace.

4. Expresses the hope that hereafter no State can deny the right to citizens to vote and be voted for.

5. Thanking the President for restoring Sheridan and Reynolds to the commands from which they had been removed for the faithful discharge of their duties, and also pledging the President the support of Virginia.

6. Asserting equality of rights for all citizens; urging a provision for the education of the people in the public schools, open to all; a more equal system of taxation; a reasonable provision to preserve a home exempt from levy and sale; the payment of the honest debts of the State; to secure an impartial jury trial by opening the jury-box to all male citizens, without regard to race or color.

7. Asserting the right of the real Republican party of reconstruction to determine the manner, as well as the constitution and laws, under which the State shall be restored.

8. Asserting that no republican form of government can long exist or be wisely administered where a considerable portion of the people are disfranchised, and that the Republican party of the State is not in favor of the creation of permanent disabilities, but pledge its effort and influence to secure the removal of the disabilities of those who accept in good faith the results of the war, and coöperate in earnest efforts for the restoration of the State under the reconstruction laws; but such removal should be claimed on superior claims for amnesty, which are not possessed by the great body of disfranchised persons.

9. Asserting that the Republican party is the real party of reconstruction, and that there can be no permanent restoration of the State except through its instrumentality.

A number of influential delegates, who were dissatisfied with the action of the convention, met on the day following its adjournment, and prepared an address to the people, in which they declared that the nominations already made were of "such a character as to render it utterly impossible to make the party successful in the State and thereby secure the best interest of the country," and recommended that another convention be held on the 15th of April, "with a view to the very best interests of the Republican party and our Commonwealth, and to the more permanent establishment of this political organization in the State of Virginia, upon the broad principle of true *republicanism*, and with a further view to the reconstruction of our State, and its restoration to the Federal Union, upon the terms prescribed by the reconstruction acts of Congress; and in the solemn belief that the existing dissensions which have resulted from the action of the Petersburg Convention will militate fatally against all these objects, impair the efficiency of the existing Administration of the national Government, and finally culminate in the disintegration of our Republican party in the State of Virginia."

At about the same time another address was issued, signed by prominent citizens who had always acted with the Republican party, but who took no part in the proceedings of the Petersburg Convention. The address was as follows:

The undersigned, citizens of Virginia, and earnest friends of the restoration of our State to the Union, under the reconstruction acts of Congress, believe that the time has fully come when a determined and zealous effort should be made to rescue the Republican party of Virginia from the management and control of designing and selfish politicians.

We are satisfied that the convention which assembled at Petersburg on the 9th inst. did not reflect the feelings and wishes of the Republicans of the State, and that the means used to secure the nomination of the persons who are placed upon the State ticket were such as cannot secure the sanction or approval of those who desire to promote the welfare of our people. We feel that there has never been a period in our history when the counsel and direction of wise, experienced, and patriotic men, whose unselfish regard for the public weal commends them to the confidence and support of the people, were more eminently needed. The men who are put forward for the highest honors of our restored Commonwealth are not sufficiently identified with our people to secure that confidence, and we fear that defeat awaits the party, because many of the best of our citizens who are now identified with it anticipate the worst consequences to our material interests in the event of their election, and are disposed to resent and resist the dictation of the arrogant and presumptuous clique of political adventurers by whom the late convention was controlled.

We believe that a large majority of the intelligent and reflecting people of Virginia who have a permanent interest in the prosperity of the State are becoming convinced that wisdom and sound policy alike demand that they shall accept and carry out, in good faith, the measures proposed by Congress for the reconstruction of the Southern States, and are earnestly desirous of adopting the great principles enunciated by the Republican party of the country. We believe that they will cheerfully support true and well-known Republicans for State officers; and to afford them an opportunity to do this we respectfully recommend—

For Governor: G. C. Walker, of Norfolk city.

For Lieutenant-Governor: John F. Lewis, of Rockingham County.

For Attorney-General: J. C. Taylor, of Montgomery County.

On the 28th of April the Conservative party, which was organized in 1868, held its convention at Richmond. About sixty-five delegates were present, composed of the State Central Committee and the county superintendents. The candidates nominated on the State ticket in May, 1868, withdrew their names, but no new nominations were made. The Committee on Business made two reports, one of which was signed by nine members, and the other by three. After considerable debate, the majority report was adopted. It was as follows:

Resolved—1. That this meeting accepts the said resignations of said candidates, and hereby expresses its high appreciation of their devotion to the best interests of the State, and of their zeal and ability in the discharge of those duties which their candidacy imposed on them.

2. That, notwithstanding the accepted resignation of our nominees, the Conservative voters of the State are urged to organize for the purpose of defeating such obnoxious provisions of the constitution framed by the late convention in Richmond as may be separately submitted; and to that end, as well as to secure the election of proper persons to the Legislature, the organizations already in existence are exhorted to increased activity, and in those localities where no organizations have been formed, the people are earnestly requested to meet together and adopt measures for

the purpose of preventing the incorporation of such iniquities in the organic law of the State.

3. That this convention, while expressing its hostility to the leading and general features of the said constitution, and while urging the necessity of organization for the purpose of defeating such provisions as may be submitted separately, declines to make any recommendation to the Conservative voters of the State, as to their suffrages upon the constitution expurgated of said provisions, or as to the candidates that may be before the people, feeling well assured that their good sense and patriotism will lead them to such results as will best subserve the true and substantial interests of the Commonwealth.

The minority report opposed the constitution and the plan of reconstruction altogether, declaring:

3. That the clauses of the Underwood constitution proposed to be submitted to a separate vote are immaterial and insignificant compared to the leading features of that instrument: universal negro suffrage, negro eligibility to office. That the same number of votes that will strike out the clauses to be submitted to a separate vote, will, if polled to that effect, defeat the whole constitution.

4. That the military rule of one of our own race, responsible to his superiors, is far preferable to the domination of an irresponsible multitude of ignorant negroes; and that, impelled by these considerations, we call upon all white men, whether native or adopted citizens, to vote down the constitution, and thereby save themselves and their posterity from negro suffrage, negro office-holding, and its legitimate consequence—negro social equality.

An address to the people was subsequently published by the Conservative State Central Committee, in which they urged the defeat of the articles of the constitution which were to be separately submitted, and favored the election of Walker and his associates on the general State ticket suggested by the anti-Wells Republicans. A Colored Convention was held at Richmond on the 28th of May, which indorsed the platform and nominations of the radical party adopted at Petersburg on the 10th of March.

The election took place on the 6th of July, but the official promulgation of the result was not made until the 9th of September. The whole number of names registered was 269,884. The vote on the constitution was as follows: Total vote cast on the question of ratification, 215,422; for the constitution, 206,238; against the constitution, 9,189; majority in favor, 197,044; total vote on the disfranchising clause, 208,765; in favor of the same, 84,404; against it, 124,361; majority against it, 39,957; total vote on the test-oath clause, 207,220; in favor of the same, 83,114; against it, 124,106; majority against it, 40,992. Gilbert C. Walker was elected Governor by a majority of 18,817 out of a total vote of 220,753, he having received 119,535 votes, and H. H. Wells 101,204. The other Conservative candidates for State offices were chosen by large majorities. The Legislature, which was elected at the same time, consisted of 43 Senators and 138 Representatives. In the Senate there were 30 Conservatives and 13 Radicals, 6 of the latter being negroes. In the Lower House there were 95 Conservatives, 8 of them negroes, and 42 Radicals, of whom 18 were negroes, while one seat was contested.

The act of April 10th, providing for the election, declared that the Legislature chosen at that election should assemble at the capitol of the State on the fourth Tuesday after the official promulgation of the ratification of the constitution, which day fell on the 5th of October. Before that body came together, the question was brought up as to whether its members would be required to take the "test-oath." General Canby had written a letter as early as the 26th of June, in reply to inquiries on that point, in which he took the position that they would have to take that oath, "unless the constitution should first be approved by Congress, or the oath be otherwise dispensed with by law." He also undertook to show that "this decision is in conformity with the action heretofore taken upon the same subject in another district, and was based upon a careful consideration of all the laws bearing upon the question now presented." The question was, however, brought before the Attorney-General of the United States, and he decided, on the 28th of August, that the members of the Legislature might meet and transact any business necessary to facilitate the restoration of the State to the Union, without taking the test-oath, but could not go into any "general legislation." The question then arose, whether the election of Senators was included in business "necessary to facilitate the restoration of the State;" and this, too, was submitted to the Attorney-General, who expressed himself "of opinion that the election of Senators, like voting upon the fourteenth and fifteenth amendments to the Constitution of the United States, is a part of the action contemplated by Congress as preliminary to a restoration of the State to its full relation to the Government of the United States, as one of the States of the Union."

Before the meeting of the Legislature, Provisional-Governor H. H. Wells resigned, and the Governor-elect was installed in his place on the 21st of September. The Legislature, which assembled at Richmond on the 5th of October, was the first deliberative assembly which had occupied the halls of the capitol for three years, and the first regularly-constituted Legislature which had sat in the Commonwealth for ten years. It effected a permanent organization, and proceeded to the business of the session, but not until an attempt had been made by some extreme members to have the test-oath exacted, followed by a protest against the loyalty and legality of the body. On the third day of the session, a message was received from the Governor, submitting the fourteenth and fifteenth amendments, and recommending the election of United States Senators, and the appointment of standing committees, for the "consideration of finance, education, internal improvements, and the judiciary." This latter suggestion was made "in

view of the fact that the new constitution inaugurates many radical changes in the State government, and necessitates prompt and thorough legislation upon almost every subject within the scope "of the powers of the Legislature." "In conclusion," the Governor says, "permit me to congratulate you upon the progress already made toward the restoration of the State to civil government. Its good effects are already visible everywhere within the State. Confidence is being restored; commerce is reviving; mining and manufacturing enterprises are being organized; capital is seeking investment in our public improvements, and in our rich agricultural and mineral lands; and, above and more gratifying than all, joy and hope are taking the place of gloom and despondency. Peace and prosperity are once more dawning upon our desolated land. Conscious of the rectitude of our own acts, motives, and intentions, and relying upon the continued favor of the Almighty Disposer of human events, let us all manfully grapple with the living present, and confidently hope for a glorious future for the Commonwealth."

The two amendments to the Federal Constitution were ratified on the 8th of October. The fourteenth amendment received 36 votes in its favor in the Senate, and 4 votes were cast against it. In the House of Delegates it was ratified by a vote of 126 to 6. The fifteenth amendment passed the House unanimously, and received 40 votes in the Senate to 2 cast against it. The election of United States Senators occupied several days, and finally resulted in the choice of John F. Lewis, the Lieutenant-Governor, and John W. Johnston, who had formerly been a judge in the State, and had participated in the cause of the Southern confederacy, but whose political disabilities had been removed by Congress. The Legislature was in session nearly three weeks.

The leaders of the Radical Republican party, being dissatisfied with the result of the late election, called a convention, to meet at Richmond on the 24th of November. Delegates, selected in the different counties of the State, accordingly gathered in an old theatre at the capital on the day appointed, and organized as a convention; but it soon became evident that their counsels would be far from harmonious. There appeared to be two factions, one of which favored the plan of calling upon Congress to repudiate and reject the whole action of the State thus far in the work of reconstruction, while the other displayed a much more moderate spirit. A committee was appointed to frame an address to Congress, and two reports on the subject were the result, one, signed by a majority of the committee, and the other by a minority. The majority report, which was adopted by the convention, declared that "the election held in this State on the 6th of July last resulted in a Confederate triumph, which we unhesitatingly assert was achieved by artifice, intimidation, and fraud." "We believe," it continues, "that the secret of our defeat can be found in the unfortunate submission to a separate vote of the test-oath and disfranchising clauses of the State constitution, in direct conflict with the action of our Constitutional Convention, and in opposition to the deliberate and unanimous opinion of the rank and file of the Republican party of Virginia." What was asked of Congress was: "That your honorable body guarantee a republican form of government to Virginia, either by ordering a new election, and by submitting the whole constitution to a vote of the people, or by requiring the test-oath of the members of the Legislature, and awarding the seats of those who cannot take it to those eligible opponents who received the next highest vote, where the circumstances show that the electors must have known that they were casting their votes for ineligible candidates. In the event of a new election, we would ask for a military force sufficient to protect us in our political and civil rights."

They further claimed that every thing done by the Legislature at its late session was illegal and void, and that there was but one course for Congress to adopt. "This," they say, "is perhaps our last contest. On your decision, loyalty in Virginia lives or dies. If you decide against us, no one will dare to avow his Republicanism, the pernicious example set here will extend to other Southern States, the colored people will again be at the mercy of their former masters, the national debt will be repudiated, and the rebel Democratic yoke may probably be placed on the necks of the American people in 1872.

The minority report admitted that "a constitution thoroughly republican in form was ratified by a large majority of the qualified voters of Virginia, at the election held on July 6, 1869," but, in view of the "unwilling support given that instrument by many who voted for it," it asked attention to "probable dangers of readmission without security for the future." The minority, nevertheless, recognized "as a fact of perhaps graver import, that prolonged exclusion will certainly entail loss and suffering to party and individuals," and declare that they desire rather "to remove than place obstacles in the way of early readmission of the State to her full Federal relations." They further say:

> Pause in internal improvement, public and private; condition of the people as to anti-war indebtedness; postponement of the operation of homestead and school provisions of the constitution, imperfect civil machinery for prompt administration of justice, and rapid emigration from the State of handy laborers—all warn that we must do whatever lies in our power to meet the needs of the people fully and speedily.
>
> In view of the election of the State and county officers, to be held shortly after the readmission of the State, we affirm as our platform of principles—in national politics, the Union, the Constitution and the enforcement of the laws; in State poli

tics, faithful compliance with the letter and spirit of the constitution of Virginia, as adopted July 6, 1869.

Relying upon the justice of our cause, and reposing implicit confidence in the wisdom of Congress, be it, therefore,

Resolved, That we do hereby respectfully ask that the State of Virginia be admitted to representation in the Congress of the United States, such admission to be in strict accordance with the requirements of the reconstruction acts.

This report was rejected, and the delegates who favored it withdrew from the convention and held a separate meeting, at which a committee of sixteen was appointed to call a Republican Convention, at such time as it might seem proper, for the reorganization of the party.

The question of readmitting Virginia to her place in the Union was brought up in Congress at the beginning of the session in December. An address, prepared by a committee of nine appointed by the Legislature to urge the claims of the State to immediate readmission, was submitted to the Reconstruction Committee. This address recounted the action of the State in compliance with the acts of Congress, and claimed that every thing required by the law had been done. The committee, therefore, respectfully asked that "Virginia's Senators and Representatives be promptly admitted to their seats, and that she be restored to her place in the family of States." A bill was soon introduced, providing for the admission of the State without further condition, and after considerable debate it passed both Houses and received the approval of the President on the 26th of January, 1870. On the following day General Canby issued a military order turning the government of the State over to the civil authorities. After stating the action which had been taken by Congress, the order proceeds in the following terms:

Second.—The following instructions are given for the information and guidance of all officers or other persons invested with, or exercising authority under and by virtue of the law of March 2, 1867, to provide for the more efficient government of the rebel States and the several laws supplementary thereto or amendatory thereof:

1. All military commissioners will at once cease to exercise any and all authority under the above-cited laws, except so far as may be necessary to close up the unfinished business of their offices; they will at once transmit to these headquarters all books and records that relate to their duties as military commissioners.

2. All citizens who may be held by military authority for trial, either in custody or upon bail, for acts in violation of the above-cited laws, will be released from custody or discharged of their bail bonds, and the military prosecution dismissed.

3. All citizens, held by military authority for trial for crimes or offences cognizable under the laws of the provisional government of the State of Virginia, will be turned over to the custody of the proper civil authorities of the county or corporation in which the crime or offence was committed, and all bonds, recognizances, or other security taken for the appearance of persons charged with crimes or offences, or for the appearance of witnesses, will be turned over in like manner to the proper civil authorities.

4. The Judge Advocate of the district will furnish the Attorney-General, for such action as may be necessary and proper, a history of each of the cases now undergoing investigation, together with the depositions or other evidence in relation thereto. In like manner, for the like purpose, all affidavits, evidence, or other information in relation to persons accused of crime, who have escaped from confinement or have evaded arrest, will be transferred to the Attorney-General.

5. All prisoners (citizens), who, when the afore-cited law of March 2, 1867, becomes inoperative by reason of the conditions and limitations of the reconstruction laws, may be in confinement or custody by virtue of the final judgment and sentence of a military commission or other military tribunal, will be continued in said custody until entitled to discharge on expiration of sentence, or the case is otherwise disposed of by proper authority. Upon a writ of *habeas corpus* or any other process issuing from a court of the United States in the case of any prisoner so held, the writ will be promptly responded to, and the officer in making his return to the writ will set forth all the material facts of the case. If the writ be issued from a State court, the officer having the custody of any such prisoner will make a respectful return to the writ, setting forth the fact that the prisoner is held by virtue of the final judgment and sentence of a court of competent jurisdiction, held under the authority of the laws of the United States, and that the jurisdiction is exclusively in the courts of the United States. The division between United States and State jurisdictions is not always distinctly marked, but officers will be guided in their action by the principles laid down in the Supreme Court of the United States in the case of Ableman *vs.* Booth (21 Howard, p. 506).

6. At all forts, arsenals, light-houses, custom-houses, cemeteries, and other public establishments, whether held by original cession or by recent occupation under the laws of the United States, the jurisdiction will be held to be exclusively in the United States until otherwise directed by law or other proper authority.

7. The canvass-returns, poll-lists, and ballots for the several elections held in the State under the authority of the laws of the United States will, as soon as practicable, be arranged and inventoried according to the several election districts, and turned over to the Secretary of the Commonwealth for deposit and safe-keeping.

8. An authenticated copy of the final registration of voters, arranged by counties and cities having a separate municipal organization, will be deposited in the office of the Secretary of the Commonwealth.

9. Authenticated copies of all general or special orders, regulations or decisions, by the district commanders, changing or modifying the provisional laws of the State, or affecting any rights of persons or property, will be prepared; one set for the office of the Governor of the State, and the other for the office of the Secretary of the Commonwealth.

10. The term of office of all officers of the provisional government of the State of Virginia, whether holding by original election or appointment under the laws of the State, or by appointment or detail under the laws of the United States, will expire when their successors, elected or appointed under the new constitution, shall have been duly qualified.

11. The clerks of the several district courts of appeal will retain the possession and be responsible for the safe-keeping of the records of said courts until the Legislature of the State shall provide for the disposition to be made of them.

Third.—The provisions of the schedule of the constitution are republished for more general information and convenience of reference:

That no inconvenience may arise from the changes in the constitution of this State, and in order to carry the same into complete operation, it is hereby declared that:

SECTION 1. The common law and the statute law now in force, not repugnant to this constitution, shall remain

in force until they expire by their own limitation, or are altered or repealed by the Legislature.

SEC. 2. All writs, actions, causes of action, prosecutions and rights of individuals and of bodies corporate and of the State, and all charters of incorporation, shall continue; and all indictments which shall have been found, or which may hereafter be found, for any crime or offence committed before the adoption of this constitution, may be proceeded upon as if no change had taken place. The several courts, except as herein otherwise provided, shall continue with the like powers and jurisdiction, both in law and in equity, as if this constitution had not been adopted, and until the organization of the judicial department of this constitution.

SEC. 3. That all fines, penalties, forfeitures, and escheats, accruing to the State of Virginia under the present constitution and laws, shall accrue to the use of the State under this constitution.

SEC. 4. That all recognizances, bonds, obligations, and all other instruments entered into or executed before the adoption of this constitution, to the people of the State of Virginia, to any State, county, or township, or any public officer or public body, or which may be entered into or executed, under existing laws, "to the people of the State of Virginia," to any such officer or public body before the complete organization of the departments of government under this constitution, shall remain binding and valid; and rights and liabilities upon the same shall continue, and may be prosecuted as provided by law. And all crimes and misdemeanors and penal actions shall be tried, punished, and prosecuted, as though no change had taken place, until otherwise provided by law.

By command of Brevet Major-General CANBY.
LOUIS V. CASIARC, A. D. C., Acting Assist.-Adj't-General.

Mr. Walker, who had been acting in the capacity of Provisional Governor since September, was formally installed in the position of Governor of the Commonwealth, and took the oath of office as such. His first act was to issue the following proclamation, which may be regarded as an official announcement of the final consummation of reconstruction in Virginia:

Whereas, A duly-authenticated copy of an act of Congress, entitled "An act to admit the State of Virginia to representation in the Congress of the United States," approved by the President of the United States on the 26th day of January, 1870, has been received by me from the Secretary of State of the United States, by which action of Congress the constitution adopted by the people of Virginia on the 6th day of July, 1869, and the action of the Legislature of Virginia thereunder, have been approved and ratified by Congress, and the State of Virginia restored in her political relations to the Federal Union:

And, whereas, There is no day appointed by the said act of Congress for the convening of the General Assembly:

Therefore, I, Gilbert C. Walker, Governor of the Commonwealth of Virginia, do hereby make known the facts stated above; and do further make known that the General Assembly of Virginia will convene at the capitol, in the city of Richmond, on Tuesday, the eighth day of February, 1870, at twelve M., for the discharge of its functions under said constitution.

In testimony whereof I have hereunto set my hand and caused the seal of the Commonwealth to be affixed, at Richmond, this twenty-seventh day of January, 1870. GILBERT C. WALKER.

By the Governor:
GARRICK MALLORY, Sec'y of the Commonwealth.

The cost of reconstruction during the year ending September 30, 1869, was $146,902.86, and it was thought at that time that $65,000 more would be required to complete the work. The general financial condition of the State is represented to be "as good as could be expected," but no official statement of its accounts has been made.

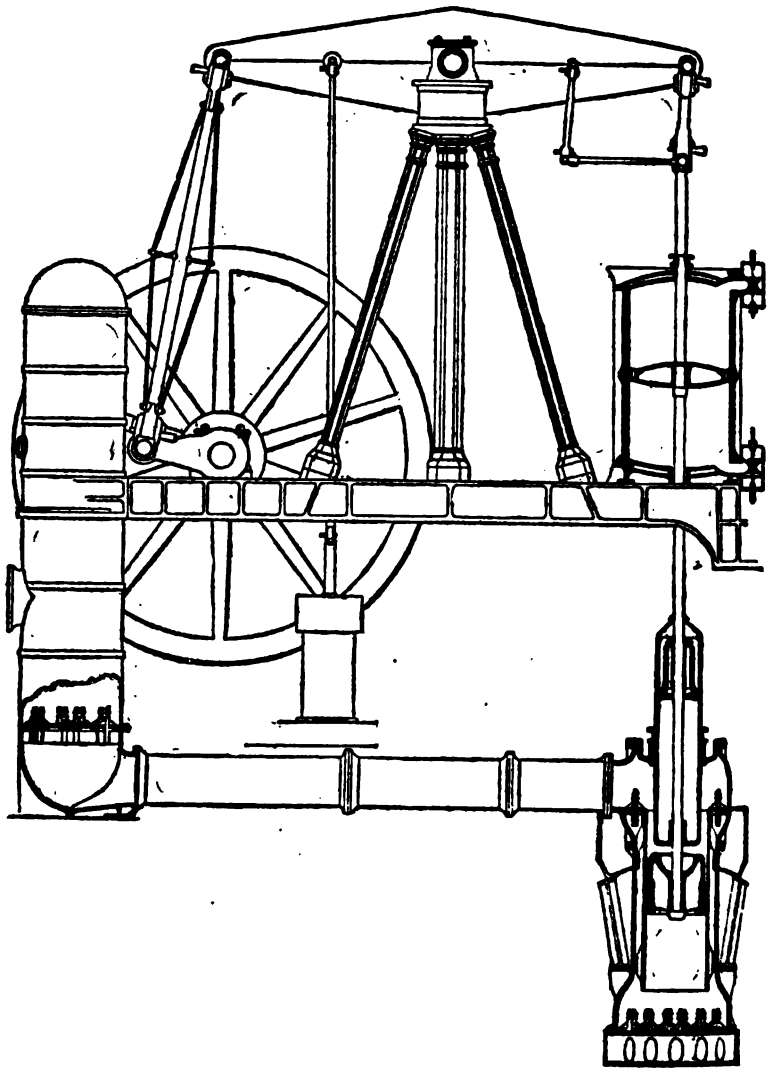
A judicial decision was pronounced in the Circuit Court of the United States for the District of Virginia by the Chief Justice on the 10th of May, which involved the proper construction of the fourteenth amendment of the Federal Constitution. It appears that Cæsar Griffin, a colored man, had been tried and convicted in a State court in Rockbridge County, and sentenced to two years' imprisonment by Hugh W. Sheffey, the Circuit Judge of that county. While the prisoner was in the custody of the sheriff, a writ of *habeas corpus* was sued out of the United States Court for his discharge, on the ground that the judge was disqualified, at the time his decision was rendered, to hold any office under the United States, or any State, on account of his having taken an oath to support the Constitution of the United States, and subsequently become a member of the Legislature of Virginia during the civil war, and as such voted for measures to sustain the so-called Confederate States in the contest against the Union. It was claimed that the disqualification of persons belonging to this category to hold office, by the terms of the fourteenth amendment, rendered the act of Judge Sheffey null and void. The District Judge, John C. Underwood, took this view of the case, and ordered the discharge of the prisoner, but the matter was carried to the Circuit Court, and this decision reversed by the Chief Justice. The grounds for the reversal were set forth at considerable length in the opinion rendered on the occasion, but the general conclusion arrived at is briefly expressed in the following paragraph:

"It results from this examination that persons in office by lawful appointment or election before the promulgation of the fourteenth amendment are not removed therefrom by the direct and immediate effect of the prohibition to hold office contained in the third section; but that legislation by Congress is necessary to give effect to the prohibition by providing for such removal. And it results further that the exercise of their several functions by these officers, until removed, in pursuance of such legislation, is not unlawful."

W

WALKER, ROBERT JAMES, an American statesman and publicist, born at Northumberland, Pa., July 19, 1801; died in Washington, D. C., November 11, 1869. He was educated at the University of Pennsylvania, graduating in 1819; studied law in Philadelphia, and, on his admission to the bar in 1821, settled at Pittsburg, Pa. Here he commenced the practice of his profession, taking from the first an active interest in politics, and bringing forward the name of General Jackson for the presidency before it had been elsewhere mentioned. He removed to Natchez, Miss., in 1826, where he speedily acquired an extensive practice, and was nominated Judge of the Supreme Court of Mississippi in 1828 (which honor he declined), and where, in 1835, he defeated the Hon. George Poindexter as candidate for the United States Senate. Soon after entering upon his duties in that body (in January, 1836), he made a spirited reply to Mr. Clay on the question of public lands, by which he acquired great popularity throughout the West. When the acquisition of Texas and California became a serious consideration, a secret agent was sent to the former country to inquire into its resources, and the party movement was inaugurated which led to their conquest. In this matter Mr. Walker was the personal adviser of the President. He supported the principal measures of President Van Buren's Administration, especially on the bank question, and it was mainly through his influence that President Tyler vetoed the bank bill, which had been prepared by Mr. Clay. He remained in the Senate until March 10, 1845. Friend as he had been to Mr. Van Buren, when the President announced his opposition to the annexation of Texas, Mr. Walker took grounds against him, and secured the nomination of James K. Polk, by the Baltimore Convention in 1844, and was by him appointed Secretary of the Treasury, an office which he resigned March 5, 1849. Mr. Walker was a strong advocate of free trade, and his report on the subject was reprinted by order of the British House of Commons. He urged the strongest measures during the Mexican War, proving the ability of the Government to sustain its finances without the aid of banks. In June, 1853, he was appointed commissioner to China, but resigned because a steamer could not be furnished him, according to promise. At the close of Mr. Polk's administration Mr. Walker returned to his practice, but was appointed by Buchanan Governor of Kansas in April, 1857, during the great excitement. He became unpopular by refusing to admit an election return from Oxford, in Johnson County, where the names on the register were said to have been copied from a Cincinnati Directory. The Lecompton constitution was shortly afterward promulgated, against his remonstrance, and he immediately resigned (December, 1857), because, in his own language, he "would not aid in forcing slavery on Kansas by fraud and forgery." In the three years which followed, Mr. Walker approximated gradually in his views to those of the Republican party, and in 1860 advocated with zeal the election of Mr. Lincoln. At the beginning of the war (in April, 1861) he made a very able speech in New York City in defence of the course of the Union party. In March, 1863, he was appointed by Secretary Chase financial agent of the United States Government in Europe, and returned in November, 1864, having effected the sale of $250,000,000 of 5-20 United States bonds, and defeated the second Confederate loan of $75,000,000. After his return he was in Government employ for one or two years, making investigations in financial matters, and contributing articles to influential periodicals on revenue, tariff, and other financial topics; and, at the instance of Mr. Seward, moving public opinion in favor of his annexation projects. Later he devoted considerable attention to literature, editing, in connection with his law-partner, Mr. F. P. Stanton, a monthly magazine of considerable literary merit, but which did not prove a financial success. He finally settled at Washington and engaged in the prosecution of claims and specific measures of legislation. In the latter capacity he was influential in procuring the ratification of the Alaska Treaty, and was unjustly accused of dispensing bribes to procure congressional action. He had been for years an able and effective advocate of the Pacific Railroad. Mr. Walker possessed an able and comprehensive intellect, and his written essays and documents were very influential in accomplishing the objects he sought; but his personal appearance was not commanding, and his voice and manner were unattractive.

WATER-WORKS. Just before the close of the year there was completed for the Nassau water-works, Brooklyn, a pumping-engine of the largest capacity of any in this country. It is a beam rotative engine, with steam-cylinder 85 inches diameter, 10 feet stroke, with an adjustable cut-off and double poppet-valves; the fly-wheel, 26 feet diameter. The pump is of the Thames-Ditton variety, placed directly beneath the cylinder, and worked by a continuation of the main piston-rod through the bottom of the cylinder. The bore of the pump-cylinder is 51½ inches, diameter of plunger 38 inches. The general arrangement will be understood from the following diagram (*see* page 718). The engine was made by Messrs. Hubbard & Whittaker,



of Brooklyn, and tested by Messrs. Copeland & Worthen, engineers. The maximum capacity was 833,000 United States gallons per hour, and the duty for forty-eight consecutive hours of 720,000 lbs. ft. per lb. of coal, and delivering at the same time into the reservoir 35,500,000 gallons (of water). The static lift was about 163 feet.

WATTS, THOMAS, M. R. S. L., an English linguist, bibliographer, and author, born in London in 1811; died at his residence in the British Museum, London, September 9, 1869. He received an excellent early education, and at twenty years of age was familiar with the Russian, Hungarian, and other Slavonic languages, as well as with the Scandinavian tongues; and, on visiting the British Museum to prosecute his linguistic researches, was surprised to find that there were no Russian or Hungarian, and but few Scandinavian, works in that great library. He wrote, not long after, some articles in the *Mechanics' Magazine*, making suggestions for the remedying of this deficiency. In 1838 he was appointed assistant-keeper of printed books in the Museum, and under his careful labors and thorough knowledge the library soon became as remarkable for the completeness of its collection of Slavonic and Scandinavian literature as it had been before for their absence. In 1857 he was made superintendent of the new reading-room, and in 1866, at the retirement of Mr. Panizzi, keeper of the department of printed books. He contributed numerous very able philological

articles to the *Quarterly Review*, *Gentleman's Magazine*, *Athenæum*, and other periodicals, a very able "Essay on the Welsh Language and Literature" to the *Penny Magazine*, and biographical memoirs of over one hundred foreign authors, chiefly of the Scandinavian and Russian nations, to the *English Cyclopædia*. His "Essay on the Hungarian Language" led to his being elected a member of the Hungarian Academy; and he was also a member of several of the learned societies of Continental Europe. His death was the result of an accident, which occurred about three weeks previous, while he was travelling in Shropshire.

WELCKER, KARL THEODOR, a German publicist, professor, and political leader, born in Oberofleiden, Upper-Hesse, March 29, 1790; died at Heidelberg, Baden, April 10, 1869. He was educated at the Universities of Geissen and Heidelberg, studying law at the latter, and, while yet a student, wrote and published a treatise entitled "The ultimate Ground of Law, Government, and Penalty." He also formed a student league. In 1814 he was appointed professor extraordinary at Geissen, but soon joined the army as a volunteer. Subsequently he was called to a professorship at Kiel, where he also assisted in editing a liberal journal. A year or two later he obtained a professorship at Heidelberg, where he remained till 1819, when he accepted a position at Bonn, where his brother, F. G. Welcker, the philologist (see WELCKER, ANNUAL CYCLOPÆDIA, 1868) was already professor of philology. The liberal views of the two brothers, and the intolerance of the government, led to their being accused and tried for sedition, but both were acquitted. In 1823 he was appointed professor of law in the University of Freiburg. He was an ardent advocate of freedom of the press, and in 1830 sent to the German Diet a petition for it, which excited much feeling throughout Germany. In 1831 he had been chosen a delegate to the Upper Chamber or Senate of Baden; in that body he brought in several motions for greater freedom of the press, and was associated with some others in founding *Der Freisinnige* (a journal of free thought), and for articles in this, of a liberal character, he was arrested and imprisoned, but eventually acquitted. After his release he was suspended from his professorship, but at once, in connection with Rotteck, undertook the editing of the *Stadts Lexikon* (a Cyclopædia of Political Science), which was published at Altona, in 12 vols., in 1834, and a second edition in 1846–'48. In 1840 he was reinstated in his professorship, but in October, 1841, was again suspended, after a journey into Northern Germany, where he was received with great triumph by the liberals. He then went to Heidelberg, where he was again tried for sedition, but was acquitted. In 1848 he was elected a member of the German Parliament in Frankfort, and was appointed ambassador of Baden to the same city. In 1849 he withdrew from the Parliament. In 1850 he was elected again to the Lower Chamber of the Baden Legislature. After the failure of the revolution he returned to Heidelberg, and retired into private life, whence nothing was afterward able to draw him. Though earnestly and decidedly liberal in his views, Welcker was so cautious in his expression of them, that every effort of the reactionary party to injure or punish him recoiled on their own heads. He lived to see the triumph of many of the principles he had advocated, and the partial union of the Fatherland he had so earnestly sought.

WEST VIRGINIA. Many of the citizens of this State are still subject to the political disabilities imposed by the amendment to the State constitution ratified by the people in the month of May, 1866, which disfranchises those who gave voluntary aid to the Confederates. The registration law which is intended to secure the enforcement of this constitutional provision occasioned during the past year much discussion and some bitter feeling. There was no general opposition to the execution of the law, but in a few localities a very excited state of feeling was displayed, and in Nicholas County the Board of Registration was prevented by a mob from performing its duties. In nine of the fifty-three counties of the State complaints were made against the Boards of Registration for rejecting the applications of certain persons who were entitled to vote, and for registering the names of others who were disqualified. As soon as this official misconduct came to the knowledge of the Executive, prompt measures were taken for correcting the abuses. There is a wide difference of opinion among the citizens of the State as to the expediency of removing the political disabilities. This diversity of opinion, however, has reference only to the mode and time of restoring all to the privileges of citizenship, as but few think that these disabilities were intended to be perpetual. The Democratic party, and some few Republicans, favor an immediate restoration of all those now disfranchised to full political privileges; while a great majority of the Republicans are of the opinion that the time has not yet arrived when these restrictions can be entirely removed without detriment to the welfare of the State.

In regard, however, to the acts imposing the test-oaths, known as the "attorney's oath," and the "teacher's oath," there seems to be a general conviction in the minds of the people that the further continuance of these laws upon the statute-book is inexpedient, and their repeal has been recommended to the Legislature by the Executive.

The financial affairs of the State are in a satisfactory condition. The receipts from all sources into the treasury for the fiscal year 1869 were $611,411.29 and the disbursements $553,654.26; leaving a balance of $66,167.10 in the treasury on the 1st of October, 1869.

The military claims of the State against the General Government for expenditures incurred in supplying military forces during the war have been finally settled, and the balance of $127,679.28 due the State has been paid into the treasury.

West Virginia has not yet contracted any State debt, but is liable for a portion of the State debt of Virginia under a provision of the constitution that "an equitable proportion of the public debt of the Commonwealth of Virginia, prior to the 1st day of January, 1861, shall be assumed by this State; and the Legislature shall ascertain the same as soon as may be practicable, and provide for the liquidation thereof by a sinking-fund sufficient to pay the accruing interest and redeem the principal within thirty-four years." The amount of this debt is still undetermined, its adjustment having been postponed on account of the pendency in the Supreme Court of the United States of a suit brought by Virginia against West Virginia to recover jurisdiction over the counties of Berkeley and Jefferson.

The free schools of the State attained a greater prosperity last year than at any former time since the organization of the State. Their condition in 1869, as compared with that of 1868, is shown in the following statement:

	1868.	1869.
Number of schools in the State	1,769	2,164
" teachers employed	1,810	2,283
" persons between the ages of 6 and 21	152,621	154,864
" children attending school	54,724	78,342
Amount expended for building purposes	$244,389	264,995
Current expenditures	276,465	295,950
Permanent school fund	209,800	231,200
Value of school property	717,846	956,116

The number of school-houses in the State is 1,708, of which 366 were erected during the year 1869.

The number of pupils attending the State Normal School, at Marshall College, at its last session was 96; the attendance upon this school will be largely increased when the new building, now in process of construction, is completed. The branch of the State Normal School, at Fairmont, held its first session during the past year, when about 100 pupils were in attendance. Both of these schools, as well as others in the State, have received donations from the Peabody Educational Fund. The West Virginia University is said to be exerting a wide influence for good throughout the State. The attendance is larger than at any previous time, and comprises pupils from nine different States and Territories. The accommodations of this institution will be greatly increased by the completion of the University Hall, the construction of which is now rapidly progressing.

On account of the recent organization of the State, charitable and reformatory institutions adequate to the needs of the community have not as yet been established. For want of accommodations at home, many proper subjects for public maintenance are sent to the Asylum for the Deaf, Dumb, and Blind, at Staunton, Virginia. Great need is felt for a reformatory school for juvenile offenders against the law, who are, at present, sent to the county jails or the penitentiary, and are thus subjected to the bad influence resulting from contact with hardened criminals. The attention of the Legislature has recently been called to the necessity of providing institutions for these classes, and for the destitute families of soldiers who fell in the late war. Owing to a want of funds, but little progress has been made during the past year in the work upon the main building of the Hospital for the Insane, although there is an urgent necessity for additional accommodations in this institution. The number excluded, for want of proper provision for their maintenance, is estimated to be not less than 150 persons. The number of inmates of the hospital at the close of the year was 202, showing an increase of 22 over the number at the close of the previous year. The average number for 1869 was 149; for 1868, 132. The cost of supporting the Hospital for the year was $29,239.59, which is estimated to be an average cost of $2.54 per week for each patient. Since the hospital was opened, in 1864, 530 have applied for admission, of whom 303 have been admitted and 227 refused admission. The number of convicts in the penitentiary at the beginning of the year 1869 was 78; during the year 52 were received, 27 discharged, 7 pardoned, and 20 escaped, of whom 11 were recaptured. The number confined at the close of the year was 87. The law enacted at the last session of the Legislature, allowing convicts credit for "good time," is reported to be producing favorable results, and further reforms in prison discipline are under consideration. Work upon the penitentiary building has progressed satisfactorily during the year. In the south wing three tiers of cells have been built; 56 cells in the lower tier have been completed, and the convicts placed in them.

The Legislature which assembled in the early part of January continued in session until the 4th of March; the measures passed were mostly of a local nature. The fifteenth amendment to the Constitution of the United States was ratified by a vote in the Senate of 10 to 6, and 22 to 19 in the House. By an act of the Legislature, to take effect on the 30th of April, 1870, the town of Charleston, in the county of Kanawha, was selected as the permanent seat of government. The construction of the State-house at Charleston has been carried rapidly forward, and it will be completed about May, 1870. The building will be constructed of stone, at a total cost (including land) of $52,750, and will be 138 feet long, 56 feet wide, and 140 feet high. The first floor will be devoted to offices and committee-rooms; the hall of the Senate and of the House of Delegates will be on the second story, and the third story will be occupied by the Supreme Court and the Federal Court.

There was no general State election held during the year, except for members of the Legislature. The political complexion of this body for 1870 is 18 Republicans and 4 Democrats in the Senate, and 32 Republicans and 24 Democrats in the House.

The manufacturing and mining interests of West Virginia are reported to be in a more flourishing condition than at any previous time since the organization of the State. During the year there has been a rapid increase in many localities in the production of salt, coal, and lumber. The amount of salt produced in the Great Kanawha Valley the past year exceeded the amount in 1864 by about half a million of bushels, the shipments for 1869 amounting to about 160,000 bushels per month. The amount of coal obtained in the same region during the year was about 4,000,000 bushels, showing an increase of 300 per cent. since 1864. The amount of gas-coal transported from points in the State west of the mountains, on the Baltimore and Ohio Railroad, was 269,000 tons in 1869, which exhibits an increase of more than 100,000 tons over the shipments of the previous year. In the coal-region on the Ohio River, in Mason County, the number of coal-mines before the organization of the State was three, producing an aggregate of 60,000 bushels per annum. In 1869 the number of mines had increased to 16, which produced during the year 500,000 bushels of coal. The production of salt in this locality has increased nearly 500 per cent. since the organization of the State, the number of bushels manufactured in 1869 being 350,000.

The Executive recommends that a geological survey of the State be made for the purpose of obtaining and disseminating information in regard to the character of the soil, coal-fields, iron-ore, and other minerals abounding in the State.

WHISTLER, GEORGE WILLIAM, died at Brighton, England, December 24. He was a son of the late Major George W. Whistler, and was born at New London, Ct., in 1822. Under his father, he commenced the profession of civil engineer in 1840. He was connected with various railroads in this country, both in the laying out and construction, and had charge of the Erie and New York and New Haven Railroad as assistant superintendent and superintendent. In the fall of 1856 he went to Russia, to take charge of the running of the St. Petersburg and Moscow Railroad under the Winans contract, a road of which his father had been the chief engineer. At the completion of this contract, he retired for a while to Frankfort and Brighton; but, on the resumption of the contract by the Winans Brothers, returned to St. Petersburg, where he continued till the spring of 1869, when he retired entirely from active duties, to recover his health by quiet and literary pursuits. As an engineer Mr. Whistler was well known, especially for his knowledge of railway machinery, and his executive ability in the management of railways. His death was sudden and unexpected, although his health had for many years been delicate, and he had been ordered by his physician to Germany for a more genial climate.

WICKLIFFE, CHARLES A., a Kentuckian, political leader, and Cabinet officer, born in Bardstown, Ky., June 8, 1788; died in Howard County, Maryland, October 31, 1869. He received such education as was possible at that time in the newly-settled country, in the Bardstown grammar-school, studied law, and was admitted to the bar in 1809. He soon achieved a high reputation as a lawyer. During the War of 1812, he became an aid to General Winlock, and, after serving in the Legislature, appeared in the battle of the Thames on the staff of General Caldwell, after which he was reëlected to the Legislature, where he remained until chosen to Congress in 1823, to which body he was reëlected for four terms in succession. As chairman of the Committee on Public Lands, he was perhaps best known as a legislative worker. After quitting Congress in 1833, he became once more a legislator, in which capacity he was made Speaker in 1834, and in 1836 he was made Lieutenant-Governor of Kentucky. On the death, in 1839, of Governor Clark, he succeeded to the actual governorship, and in 1841 his influence and leadership were recognized by President Tyler, in appointing him to the office of Postmaster-General, which he held till March, 1845. President Polk, in 1845, sent him on a delicate and private mission to Texas in the interest of annexation. In 1849 he was a member of a Constitutional Convention of Kentucky; in 1861, once more a Congressman, having previously (January and February, 1861) held a place in the Peace Convention, and served to the end of the Thirty-seventh Congress (March 4, 1863); in 1866 he was a delegate to the Chicago Convention. Governor Wickliffe was a brother-in-law of David L. Yulee, of Florida, one of the seceding Senators, and his family was among the most powerful in the South through its social and political connections. Governor Wickliffe (as he was often called) was one of the stateliest and most aristocratic of Kentuckians in his manner and bearing; and this stateliness, together with his large landed possessions, and his hardly concealed contempt for the poorer classes, led to his receiving the sobriquet of "The Duke," by which he was generally known throughout the Southwest. He had a very extensive estate, and leaves an ample fortune to his family. For some years past he has been almost blind, and had recently gone to the residence of his son-in-law near Baltimore for the purpose of submitting to an operation upon his eyes.

WIRE TRAMWAYS. There is a mode of transit which has been practised in India and Australia by means of a rope stretched from point to point, but which as yet has been only what may be called a local arrangement used principally for bridging rivers or ravines. The

system known as the wire tramway is an attempt to convey goods over natural obstacles at so moderate an expense as to render it possible to profitably work collieries, mines, quarries, etc., situated in wild or mountainous places. The invention is already in actual practical operation, a line of three miles being successfully worked in Leicestershire at this time. It runs from some granite quarries—the property of Messrs. Ellis & Everard—at Markfield to Bardon, a station on a branch of the Midland Railway. The line is conveying stone from the quarries to a powerful crushing-machine at Bardon, to be broken for road-metal. The line has been constructed to carry 100 tons a day, but has never as yet been worked to its full powers. It is actuated by a double-cylinder portable engine of sixteen-horse power, but which, like the tramway, is not nearly fully worked. To suspend a weight from a rope supported by a post at either end would seem simple enough; to move the rope with such load would likewise appear easy to accomplish; but to cause the load to pass the post is another matter, but yet one that a little reflection will show can be managed without difficulty. The rope passes twice over the ground in one of the modes of arrangement, being, in fact, an endless belt passing at one end of the line round a Fowler's clip-drum, and at the other round a large pulley, or wheel, with a deep groove in the rim. The rope between the termini is supported on posts of any reasonable height, resting at these points on small wheels grooved in the rims, to prevent the rope slipping from them. On motion being communicated to the clip-drum, the rope moves also at the same speed as the periphery of the drum, of course. Any weight hung on the rope will move with it, and supposing the weight to be able to clear the posts it will move from end to end of the line, and, were it not for the drums at the ends, would move continuously; indeed, by proper arrangement and formation of the hooks, they would pass round these, and then the load would move continuously if required. The posts which support the rope are placed midway between the up and the down line of rope, and have at their upper extremities cross-bars, at whose ends the grooved wheels are placed at such distance from the upright as to bring them in a line with the rope; these wheels act as friction-rollers, and rotate as the rope moves.

The rolling-stock consists of a number of boxes, each of which is provided with two iron hooks, lined, where they rest on the rope, with wood; the shape of these hooks is the method whereby the boxes pass the posts. At the place where they hang on the rope they are simply hooks; a little below the rope, however, they spring back with a curve, similar to that of the bar which suspends the flat pan or plate used for weighing butter, etc., by cheesemongers. This curve leads the hook, or hanger, clear of the wheel supporting the rope, and, when quite below, it bends in horizontally, and supports the box which thus hangs below the wheel, its centre of gravity coinciding with the centre of the rope. When the rope moves the box moves, and the depth of the groove in the supporting wheel being but little in excess of the diameter of the rope, and the wood liners of the hooks being suitably curved, they pass gently up on the edge of the wheel and down the other side to the rope again, without perceptible jerk of any kind. So long as the supports and rope are of sufficient strength to sustain the load and the hauling power adequate, any given load may be transported from place to place without difficulty. The boxes will hang true, irrespective of the shape of the hangers connecting them with the rope, so long as the centre of gravity is kept in a proper line. The plan for curves is a series of wheels set with their axes at an angle both with the horizon and also with each other, so that they would, if produced, meet in one common point, whose distance from the wheels would be proportionate to the rapidity of the curve. The number of wheels varies with the amount of alteration of the direction of the rope that is found necessary. The arrangement at the unloading end of the Bardon line is simply a light angle-iron, curved round the same centre as that of the clip-drum, save that it is farther away from the latter, in the opposite direction to the line of rope. This angle runs parallel with the rope for two or three feet, and at the incoming side curves gently up higher for a short distance, and then inclines all round to its other extremity, which is a little below the rope-level. The hangers of the boxes are each fitted with a little grooved trunnion, and as each box comes to the angle-iron, these trunnions pass on to it, and the impetus of the box causes it to run the trunnions up the angle-iron, thereby lifting the hooks from the rope, and it then has the falling incline, down which it runs to an attendant, who upsets the box over a railway truck standing beneath, and when empty allows it to pursue its course along the angle-iron till it rolls gently on to the rope, to pursue its way back to the quarry at Markfield, where a somewhat similar arrangement is provided, the boxes being there shunted by hand to be loaded.

The general dimensions of the details of the Bardon line are as follow: The posts are from 10 ft. to 12 ft. high; the carrying-wheels are 15 inches diameter on the bottom of the groove; the posts are about 150 ft. apart, with one exception, where it was found necessary to place them 600 ft. apart; the two supports here are about 12 ft. in height. The clip-drum is 4 ft. 6 inches diameter; the distance between the up and the down line being also 4 ft. 6 inches. The rope is a wire one, 1¼ inches in circumference. The speed of the boxes is about four miles an hour, though this may be considerably exceeded. The boxes carry about 1 cwt. of stone, when loaded.

WISCONSIN. The public affairs of Wisconsin during the past year have been managed with such efficiency as to secure general prosperity to the people. The reports of the various educational, reformatory, and charitable institutions show a successful and enlightened management of the interests of the State in these departments. The common schools have been liberally sustained, and there has been a marked improvement in the educational work during the year just closed; the standard of instruction has been raised, and a wider range of studies pursued. Although there has been a gradual advance in the wages paid to teachers, the total amount expended for public educational purposes does not exceed eight dollars for each pupil registered.

The number of public schools in the State, and the proportion of the children attending them, are as follows:

Number of school-districts in the State	4,735
Number of children over four and under twenty years of age	398,747
Number attending public school during the past year	264,033
Number of public school-houses	4,742
Value of school-houses and sites	$3,482,125 71

Although the public-school facilities afford ample accommodations for the whole school population of the State, yet a very large proportion of those between the ages of four and twenty do not avail themselves of the advantages afforded for education.

To prevent this large number from growing up in ignorance, the Executive has recommended the enactment of "such a law as will compel each child in the State of proper age, under ordinary circumstances, to attend school a given number of months in each year, for a reasonable number of years."

The productive School Fund at the end of the fiscal year amounted to $2,387,414.37, which shows an increase of $31,927.54 in the fund during the year. The total receipts of the school fund for the fiscal year were $178,896.75; while the disbursements apportioned by the Superintendent of Public Instruction amounted to $177,118.49.

The Normal Schools, at Whitewater and Platteville, are in successful operation, and good results have followed from raising the standard of qualification for teachers. To accommodate the increasing number of applicants for this grade of instruction, a new school-building is in process of erection at Oshkosh, and will be ready for the reception of pupils during the coming fall; and the erection of another will be commenced as soon as the condition of the Normal School Fund will warrant the outlay.

This fund arises from the proceeds of the sale of lands set apart for the support of Normal schools by the laws of the State; there are now 792,342 acres of this land held by the State. The amount of the productive Normal School Fund on the 30th of September, 1869, was $638,941.99, which represents an increase during the year of $13,647.88. The receipts of the Normal School Fund income for the fiscal year were $52,212.50.

The prosperity of the State University during the past year has given great satisfaction to its friends and the general public. The whole number of students in attendance during the year was 495, while many other applicants were rejected for want of adequate accommodations in the university. The increasing number of the students of this institution has proved the necessity of enlarging its facilities; in view of which, the Executive in his message to the Legislature recommended an appropriation of $50,000, to be expended in the erection of a college-building for the use of females. The prosperous financial condition of this institution is shown in the following statement:

Total productive University Fund	$202,698 14
Total productive Agricultural College Fund	86,526 40
Receipts of the University Fund income	30,013 03
Disbursements of University Fund income	28,066 83
Disbursements of Experimental Farm Fund	7,053 72
Number of acres of University lands remaining unsold	11,733
Number of acres of Agricultural College land remaining unsold	152,387

The Institute for the education of the Deaf and Dumb, at Delavan, and that for the education of the Blind, at Janesville, are in a prosperous condition, and afford excellent advantages for the unfortunate subjects for whose benefit they are intended. During the past year 112 students received instruction at the former institution, at a total cost to the State, for current expenses, of $29,319.14. The number receiving instruction at the Institute for the Blind was 95, and the total cost of supporting the school for the year was $21,437.98. Improvements are now in progress, which, when completed, will afford ample accommodations for all who may wish to enter this school for the next fifteen or twenty years. The Soldiers' Orphans' Home, in Madison, has been in a flourishing condition during the past year, having given support and instruction to 278 children, at a total cost of $32,645.22; but its accommodations are not sufficient for more than one-third of those in the State needing the advantages of such an institution, to which fact the attention of the Legislature has been called, as showing the urgent necessity for the establishment of another home.

The State Hospital for the Insane is under the most efficient management, and will compare favorably with any similar institution in the United States. The present number of inmates is 364, of whom 209 were admitted during the year. The current expenses of the Hospital for 1869 were $71,320.08. During the year, 51 inmates were discharged who had entirely recovered, and 14 whose condition had been much improved; the deaths amounted to less than three per cent. of the whole number of patients.

Although this institution has been filled to its utmost capacity, there are still about 500 insane persons in the State without proper care and treatment. To meet the wants of

these, the Legislature has been urged to provide for the erection, at an early day, of another hospital. Great benefits have resulted to the State from the present institution; since it was opened July 14, 1860, 1,155 patients have been admitted and cared for, of whom 482 were born in the United States; 575 were of foreign birth, and the nationality of the remainder is unknown. The assigned causes of the insanity of those treated during this period are shown in the following table:

CAUSES.	Males.	Females.	Total.
Intemperance	40	1	41
Religious excitement	33	26	59
Unknown	231	197	428

The report on the condition of the State Prison, at Waupun, represents the "most perfect system and order existing in every department" of that institution. The current expenses of the prison for the past year were $43,722.68. Deducting from this amount the earnings of the 190 convicts, the total expense of the institution to the State was $22,093.64.

Owing to the great diversity of the management of the different State institutions, it has been recommended that some system be adopted which shall place all of them under the management of one board, consisting of five persons, assisted by a local board for each institution, to consist of three persons resident in its vicinity. The State charities are now subject to the management of 42 persons, besides the superintendents of the different institutions.

The following comparative statement will show the annual current expenses and cost of subsistence, fuel, and lights, per inmate, in the several benevolent and penal establishments of the State:

STATE PRISON.

Current expense, per inmate	.....	$229 22
Subsistence, "	.....	65 32
Fuel and lights, "	.....	21 00

REFORM SCHOOL.

Current expense, per inmate	.....	$149 76
Subsistence, "	.....	48 76
Fuel and lights, "	.....	6 07

BLIND INSTITUTE.

Current expense, per inmate	.....	$343 72
Subsistence, "	.....	84 86
Fuel and lights, "	.....	26 62

DEAF AND DUMB INSTITUTE.

HOSPITAL FOR THE INSANE.

Current expense, per inmate	.....	$220 05
Subsistence, "	.....	68 30
Fuel and lights, "	.....	35 09

The National Military Asylum, for disabled volunteer soldiers, was formally dedicated in the early part of October, 1869, and is now in successful operation. This is one of three national institutions intended as a home for soldiers disabled in the late war. The other two are situated, one at Augusta, Maine, and the other at Dayton, in the State of Ohio. The site of the present institution was selected near Milwaukee, and comprises 425 acres. Temporary buildings were provided in the year 1864, and in the spring of 1868 the erection of a commodious permanent edifice, with convenient accommodations for 500 persons, was begun, which, with the exception of the wings, is now completed. The whole amount expended on the asylum to September 1, 1869, including the cost of the land, was $291,881.97, a portion of which was contributed by citizens of Wisconsin, and the balance appropriated by Congress.

The finances of the State are represented to be in a sound condition. The receipts of the General Fund for the fiscal year ending September 30, 1869, were $874,995.70, which, with the balance of $44,946.38 in the Treasury at the beginning of the year, amounted to $919,942.08. The amount of the disbursements for the same period was $919,372.33; leaving a balance of $569.75 in the General Fund September 30, 1869. Of the above disbursements, $314,405.86 were for the ordinary current expenditures of the State.

The State debt is considered small, being about $200 *per capita* for each inhabitant of the State; and, excepting a small proportion, is in the form of certificates of indebtedness to the Trust Fund of the State. During the past year there was no decrease in this debt, but merely a change in the form of investment, which is now classified as follows:

State bonds unpaid	$104,800
Certificates of indebtedness	2,147,200
Currency certificates	57
Total	$2,252,057

The assessed valuation of the real and personal property of the State, as returned by the assessors, for the year 1869, was $427,627,356, which is more than double the amount of any previous assessment. Had the State tax for 1869 been levied upon the assessed valuation of this year, instead of that of 1868, it is estimated that the ratio of taxation would have been only a trifle more than a mill on the dollar. The State taxes for the last four years, together with the assessed valuation of the real and personal property of the State upon which the rate of taxation was based, are given in the following statement:

	Valuation.	State Tax.	Rate per cent.
1866....	$162,820,153	$312,816 34	1 925-1,000 mills.
1867....	196,851,161	649,958 86	3½ "
1868....	244,140,774	544,389 12	2 21-100 "
1869....	242,641,124	515,961 13	2½ "

The number of acres of land sold by the State during the past year was 183,960; while the sales of the preceding year amounted to 212,662 acres, and those of 1867 to 163,451. The number of acres held by the State on the 30th of September, 1869, are classified as follows:

School lands	429,847.53
University lands	11,733.15
Swamp lands	2,100,742.15
Agricultural College lands	152,387.12
Military road lands	13,382.71
Marathon County lands	39,448.85
Total acres	2,746,542.04

The political campaign of this year was inaugurated by the assembling of the Republican State Convention at Madison on the first of September. The convention nominated Lucius Fairchild for Governor, Thaddeus C. Pound for Lieutenant-Governor, Eli A. Spencer for Secretary of State, Henry Baetz for State Treasurer, S. S. Barlow for Attorney-General, G. F. Wheeler for State Prison Commissioner, and A. J. Craig for Superintendent of Public Instruction. Mr. Breese subsequently became the candidate for Secretary of State.

The principles of the party were fully set forth in the following resolutions, which were unanimously adopted:

Resolved, That we acknowledge, with gratitude, the care of that superintending Providence, which, having built us up a great and free nation, and having preserved us amid the perils of revolution and war, has now crowned the labors of the year with an abundant harvest, and filled the land with plenty.

Resolved, That this convention, representing the Union Republican party in Wisconsin, in the same spirit which has made that party the uncompromising foe of injustice and oppression, and the steadfast supporter and defender of liberty and Union, renews the pledge it has heretofore given, and reaffirms as cardinal tenets of its political faith the following:

1. The inalienable right of all men to life, liberty, and the pursuit of happiness.

2. As enunciated in that wise provision known as the "fifteenth amendment," no discrimination at the ballot-box, founded on property, birthplace, creed, or color.

3. Liberty of speech and of the press as the best guarantees for the security of republican institutions.

4. Free schools and the diffusion of education among all classes of the people.

5. The just subordination of State and local authorities and interests to the authorities and interests of the nation.

6. Prompt acquiescence in the decisions of the people at the ballot-box.

7. Maintenance inviolate of the national faith as pledged to its creditors.

8. Such adjustment of the burdens of taxation, by revisions and modifications from time to time of the revenue laws, as will cause them to fall equitably upon all classes of the people.

9. Retrenchment and economy in the administration of the national Government.

Resolved, That it is the well-known aim of the Republican party more clearly to define, and to establish firmly, and forever, that perfect civil and religious liberty which is now guaranteed by our State and national Constitutions, and that we are in favor of the largest measure of individual liberty consistent with the public good, and opposed to any legislation in derogation thereof, except to prevent acts which infringe the equal liberty of others.

Resolved, That, while the necessary burdens of taxation are great, we require the most rigid economy in the administration of affairs, both of the nation and of the State; yet we also know that the strength of the nation is in the national faith; that the loyal millions of this land were in earnest when they declared that they would put down the rebellion at whatever cost; and that they will never consent to repudiate the debt which was incurred to meet that cost.

Resolved, That we renew the expression of our gratitude to the heroic soldiers of the Republic, by whose patriotism, fortitude, and valor, the nation's life was defended, and the supremacy of its flag triumphantly asserted, and we again pledge to them, and to the widows and orphans of those who died in the service of their country, our sympathies and substantial support.

Resolved, That the upholders, in the reconstructed States, at the late elections, of the principles for which the country struggled and suffered in the recent great conflict, have our hearty sympathy in their efforts to maintain in their midst, inviolate, through defeat as well as success, the regular organization of the National Republican party of the Union.

Resolved, That we have reason to congratulate the country upon the increased revenues arising from a faithful enforcement of the laws, and upon the great economy and saving to the Government, in the collection of the same, by the present national Administration, and that we point with pride to the rapid reduction of the public debt by the judicious management of our national finances, at the hands of a Republican President and his constitutional advisers; and that, in view of this fulfilment of his pledges to the people, and his faithfulness to the avowed principles of the Republican party, the Administration of General Grant meets with our cordial indorsement.

Resolved, That the State administration, in its general conduct of the affairs of the State, has realized the best expectation of its friends, and has earned the approval of all.

Resolved, That the improvement of the navigation of the Fox and Wisconsin Rivers, and the canal connecting the same, is a great national work; that, if completed, it would add greatly to the prosperity not only of this State, but of the entire Northwest, by increasing and cheapening the facilities for marketing our vast agricultural, mineral, and lumber products, and that we therefore favor the early completion of said improvement by the General Government.

On the 8th of September the Democratic

Convention assembled at Milwaukee, and nominated a full State ticket, with Charles D. Robinson as candidate, for Governor, and H. H. Gray for Lieutenant-Governor. The following resolutions were adopted as the platform of the State Democracy:

Resolved, That the unity of the nation and the permanence of Republican institutions depend upon the subordination of the Government to the popular will, upon the cheerful and implicit obedience of rulers and people to law, upon the reservation to the several States of the sacred and imperishable right to local self-government, upon the inalienable right of citizens to life and liberty, upon freedom of speech and of the press, and upon a rigidly honest and economical application of the public revenues; and that we solemnly protest against those acts of the Republican party by which these fundamental conditions of national freedom and prosperity have been repeatedly and ruthlessly violated.

Resolved, That we entertain the most grateful remembrance of those true and noble men who laid down their lives in defence of the integrity of the Union, and that we will ever cherish the highest admiration of the living who have survived the shock of arms.

Resolved, That the financial disorder and depression apparent to all business-men, the corruption which confessedly attends the administration of the laws, the ingenious and burdensome system of taxation, by which enterprise is paralyzed, and the vast surplus wealth of the State is fruitlessly squandered and consumed, are evils which demand less of partisanship, more of statesmanship, a purer morality in our rulers, and a radical reform in the administration of the State and Federal Governments.

Resolved, That the continued and persistent imposition upon the people of the tariff laws, avowedly designed to tax the masses of the people for the benefit of the accumulated capital of the Eastern States, whereby millions of dollars are annually abstracted from Wisconsin, without any corresponding gain to the common Government, is a wanton and intolerable abuse of Federal power, for which the only effective remedy is the complete union of the friends of free labor and our domestic industry at the ballot-box.

Resolved, That we lament that chronic infirmity of the dominant party, by which the exercise of its long-continued and abundant power to "adjust the burden of taxation by revisions and modifications, from time to time, of the tariff and other revenue laws," is limited to pretentious confessions of the consequences of its own misrule, and to periodical resolutions deploring the evils which it persistently refuses to abolish.

Resolved, That we believe the honor and welfare of the nation alike require the rapid and complete extinction of the national debt by the full payment of the principal and interest thereof, in exact accordance with the terms of the contract between the Government and its creditors; but that we oppose, with all the influence at our command, the ill-disguised efforts of the party in power to convert the debt into a permanent burden for the aggrandizement of special classes, by discriminating legislation against the people and the lesser creditors of the Government in behalf of incorporated capital.

Resolved, That the public avenues, on which move the commonest products of the States, are the highways to wealth and the general prosperity of the people; that, kindred with the numerous improvements that have received the protection of the General Government, is the work of enlarging the Fox and Wisconsin Rivers, in order to secure a permanent channel of water communication between the great lakes and the Mississippi; that we ask the aid of the General Government for this purpose; and, in addition, will unite with our sister States of the West, equally to be benefited with Wisconsin in securing the completion of the same, as a matter of State enterprise, should the General Government fail to aid us therein; and that the continuous failure of the party in power, after many years of ample opportunity, to contribute effective legislative aid to this enterprise, leads us to doubt its sincerity, or its capacity to fulfil its professions.

Resolved, That we protest against the narrow partisanship and pervading greed for spoil which characterizes all the influences surrounding our State government, against the exaction of exorbitant fees in the State departments, and against that indifference to the burdens of the people which compels the taxpayers to contribute the enormous sum of nearly one million dollars per annum for the support of the State government and its partisan dependants.

Resolved, That the Democratic party of Wisconsin rejoices in the extinction of slavery; in the prompt and general acquiescence of the Southern people in the results of the war; in every well-directed effort for the enlightenment and elevation of oppressed humanity at home and abroad, and in every measure, compatible with good government and public order, to broaden the basis of suffrage and extend the blessing of free institutions to all classes of people; and that, in strict fidelity to this spirit of progress and patriotism, we deplore the many and inexcusable infringements of our national Congress upon the liberty of the citizen and the freedom of the ballot; its failure to recognize the equitable right of foreign-born residents to an early participation in the privileges of the ballot-box, on terms as liberal as those prescribed by the Democratic constitution of Wisconsin; its constant effort to burden labor and encourage monopoly, and its covert purpose to centralize and enlarge the powers of the Federal Government.

Resolutions were also adopted by both conventions, recommending that some plan be devised for the promotion of European immigration to the States of the Northwest.

The election was held on the 2d of November, and resulted in the success of the entire Republican ticket. The whole number of votes cast was 130,866, of which Lucius Fairchild received 69,582, and Charles D. Robinson 61,239, making the majority for the former 8,343. Of the total number of votes (143,510) cast at the preceding State election, in 1867, Governor Fairchild received a majority of 4,764 votes, while at the Presidential election in 1868 there were 103,584 votes cast, of which General Grant received a majority of 24,150.

The Legislature for 1870 is composed of 18 Republicans, 12 Democrats, and 3 Independents, in the Senate, and 54 Republicans, 39 Democrats, and 7 Independents, in the House.

During the past year active efforts have been made by the citizens of this State in favor of the improvements in the Wisconsin and Fox Rivers, which are intended to effect a great change in the freight transportation system between the Northwestern and the Eastern States. This movement is prompted by the belief that the cost of transporting freight from the Northwest to Eastern markets will be greatly reduced by the establishment of a water communication between the Mississippi River and the northern lakes through the Wisconsin and Fox Rivers, thus securing an ade-

quate and convenient outlet for the vast products of the Northwestern States. A convention for the discussion and adoption of measures to secure this improvement was held in October at Portage, which was attended by delegates mostly from Wisconsin, Iowa, and Minnesota. It was the opinion of the convention that this important improvement should be undertaken by the General Government, and that Congress should be memorialized to that end. Of the series of resolutions adopted, the following are the most important:

Resolved, That a water route, by which the steamboats of the Mississippi River can run to the harbors and unload into the vessels of the great lakes, is a public necessity.

Resolved, That, as it has been shown by Government surveys that such route can be made through the Fox and Wisconsin Rivers, the original policy of our Government to make them public highways shall be carried out. It subtantially pledged itself to do this when it kept the control of those streams by the act which admitted Wisconsin as a State into the Union.

Resolved, That, as the late surveys made by the General Government show that the cost of uniting the Mississippi River with the great lakes by a steamboat channel will not greatly exceed four millions of dollars, which is not as much as the saving such route would make in each year in the carrying-trade of the Northwest, it would be great injustice and gross wrong to put off this great work.

Resolved, That, as the Erie Canal, with its contracted channel, its numerous and small locks, the slow movement of its boats, with horse-power, which cannot exceed thirty-six miles in twenty-four hours, has, with these great drawbacks, kept down freight-charges, it is therefore clear that a river route, with a few large locks, which can be navigated by steamboats moving one hundred and fifty miles in twenty-four hours, would protect the Northwestern States from unreasonable charges or dangerous combinations.

Resolved, That the great and growing commerce of the Erie Canal, in the face of the greatest competition in our country, shows that water routes are demanded. Without them, the values of many coarse productions are lost, as they cannot be carried to market otherwise. Railroads, by giving activity to the business of the country, and by filling it with population, have made water routes necessary to meet the varied commercial wants of a great and prosperous community.

Resolved, That the want of the Northwest is cheap transportation; that this can only be secured by a water route which all have a right to use, with their own vessels, upon equal terms, thus giving the public the benefits of free competition.

Resolved, That the Committee on Memorial be authorized to add to or incorporate in the memorial to Congress, prepared under the direction of the convention at its Prairie du Chien session, statistics upon the comparative cost of the Wisconsin and Fox River route, the channels by rail, and the other projected water routes; upon the distances which the value of Western products will bear transportation at present rates; and upon such other questions as, in the conduct of their investigations, shall be deemed important.

Resolved, That the Legislature of Wisconsin be requested to make terms with the Green Bay and Mississippi Canal Company, by which, in the event of an appropriation by Congress, the rights and franchises of said company be surrendered to the General Government or to the State.

The session of the Legislature this year was one of the shortest on record, having extended from the early part of January to the middle of March. The most important measures adopted were the ratification of the fifteenth amendment to the Constitution of the United States by a vote of 15 to 11 in the Senate, and 62 to 29 in the House; the proposed amendments to the State constitution authorizing the abolition of the grand-jury system, the increase of the salary of the Governor to $5,000, and of the Lieutenant-Governor to $1,000 per annum, and the establishment of the township system of school government.

Matthew H. Carpenter was elected to the United States Senate for the full term commencing March 4, 1869. The appropriations for the various State institutions amounted to $275,000.

During the year the dome to the State capitol has been completed, at a cost of $90,828.05. The total cost of the capitol to the present time is $541,447.93.

The question as to the power of the Legislature to raise money, or authorize it to be raised, by taxation, for the purpose of granting aid to railroad companies, was decided by the Supreme Court of this State, which holds that the Legislature does not possess that power. This principle of law was at issue in a recent case, where the citizens of Fond du Lac County had voted to give the Sheboygan Railroad Company county bonds to aid in the construction of a railway from Sheboygan to Fond du Lac. The court held that "though a railroad company may be, as to its capacity to assume and exercise in the name of the State the power of eminent domain delegated to it, so far a public or *quasi* public corporation, yet in all its other powers, functions, and capacities, it is essentially a private corporation, not distinguishable from any other of that name or character." It was added, however, that cities, counties, and towns, had the power to subscribe for stock in railroad companies, and levy a tax to pay for such subscriptions, provided the road be situated in or pass through the corporate limits of the municipality to be taxed; the court affirming that "the city, county, or town, is directly interested and benefited by the money expended in the work, the same being a matter of public concern, and it is upon this principle, and this alone, that the taxation in that class of cases can be sustained."

WOODWARD, Bernard Bolingbroke, F. S. A., Librarian to her Majesty at Windsor Castle, and an industrious antiquarian and author, born at Norwich, England, May 2, 1816; died in London, October 12, 1869. His father was an eminent geologist and antiquary, author of several very valuable geological works, and the son inherited in some measure his father's tastes. Mr. B. B. Woodward received his early education in Norwich, and entered when yet a youth the banking-house of Messrs. Gurney at Great Yarmouth. He was at this time devoting considerable portions of

his leisure hours to antiquarian studies, and, being brought under deep religious influences (his family were Independents), he resolved to devote himself to the work of the ministry. For this purpose he withdrew from the banking-house, and entered Highbury College, an Independent theological school, and passed his examinations and graduated at the University of London. He was settled for some years over an Independent congregation at Harbston, near Bungay, and was, while residing there, consulted and employed by the Messrs. Childs, printers and publishers of Bungay. For them, among other works, he revised and reëdited, with large additions, "Barclay's Universal English Dictionary." In the year 1850 he removed to London, in order to devote himself to literary pursuits. Here he prepared a "History of Wales;" completed W. H. Bartlett's "History of America," in three volumes, two of them being wholly from his pen; began a "History of Hampshire," etc., etc. In 1860 Mr. Woodward was appointed to the responsible position of Librarian in Ordinary to the Queen, and Keeper of the Collection of Prints and Drawings at Windsor Castle, and rendered important services to the queen, and the late prince-consort, both of whom frequently sought his counsel in matters pertaining to art and literature. All who were brought in contact with him were favorably impressed by his genial manners, and the wide extent of his literary and artistic culture. He was here, as everywhere else, constantly occupied with intellectual labors. He founded, and edited, from 1863 to 1867, the *Fine Arts Review;* was a frequent contributor to the *Eclectic Review*, and the *Gentleman's Magazine;* had prepared and published five elementary school-books, on Astronomy, Geography, Natural History, History, and Evidences of Christianity; edited "Maunder's Treasury of Knowledge," prefixing a compendious English Grammar to it; and had prepared, for immediate publication, an elaborate illustrated "Life of Leonardo da Vinci;" a "Cyclopædia of History and Chronology;" a translation of the "*La Terre*," of Elise Riches; "Specimens of the Drawings of Ten Masters," with photograph illustrations; and a "Monograph of Windsor Castle," illustrated by photographs.

WOOL, Major-General JOHN ELLIS, U. S. A., a brave and gallant officer of the Regular Army, born in Newburgh, N. Y., in 1789; died in Troy, N. Y., November 20, 1869. He was of Revolutionary stock, his father, his grandfather, and four of his uncles, having been engaged in the War of the Revolution, and some of them falling in that struggle. General Wool received a good academical education, and removed to Troy, in his youth, where he was proprietor of a book-store before he came of age. Having lost his stock by fire, he determined in the beginning of 1812 to study law. While pursuing his legal studies, the War of 1812 commenced, and Mr. Wool applied for and obtained, through the good offices of Governor De Witt Clinton, a commission as captain in the Thirteenth Infantry. He first distinguished himself at the storming of Queenstown Heights, where he was shot through both thighs, and he was soon after promoted to be major in the Twenty-ninth Infantry. For gallantry in the battle of Plattsburg, he was brevetted lieutenant-colonel. At the close of the war he was appointed Inspector-General of the Northern Division; in 1818 lieutenant-colonel; in 1821 inspector-general of the whole army, and in 1826 brevet brigadier-general for ten years' faithful service. In 1832 the Government sent him to Europe to examine the military system of some of the principal nations, and he was present at the siege of Antwerp. For a year or two after his return he was engaged in inspecting all the coast defences, from Maine to the delta of the Mississippi. In 1836 he was charged with removing the Indians to Arkansas, and in 1838, during the Canadian difficulties, made a reconnoissance through the wilds of Northern Maine, with a view to the defence of the frontier. He obtained the full rank of brigadier-general, June 25, 1841. At the commencement of the Mexican War he was ordered to the West to organize the volunteers (May 30, 1846), and in less than six weeks had dispatched to the seat of war no less than 12,000 troops fully armed and equipped. He then collected 3,000 troops at San Antonio de Bexar, under his personal command, crossed the Rio Grande October 8th, and reached Saltillo after a march of 900 miles, having lost hardly a man, and preserving such admirable discipline in his army as to gain the general good-will of the inhabitants. He selected the ground on which was fought the battle of Buena Vista (February 23, 1847), made the preliminary dispositions, and commanded in the earlier part of the action until the arrival of General Taylor, who, in his official report of the victory, attributes a large share of the success "to General Wool's vigilance and arduous services before the action, and his gallantry and activity on the field." For his conduct on this occasion, General Wool was brevetted a major-general in 1848. He remained in command at Saltillo until November 25, 1847, when, on the return of General Taylor to the United States, he succeeded to the command of the Army of Occupation, and retained it until the conclusion of the war, his headquarters being at Monterey. In this capacity, civil and military duty devolved upon him, and he speedily cleared the country of robbers and guerrillas. According to an eye-witness in Monterey, he enforced more perfect order than was to be found in the United States. After his return home in July, 1848, he commanded the Eastern Military Division, with his headquarters at Troy, until the reorganization of the commands in October, 1853, when he was placed at the head of the Department of the East, with his headquarters

at Baltimore. In 1854 he received the thanks of Congress, and the presentation of a sword, for his services in Mexico. In the same month he was transferred to the Department of the Pacific. In 1856 he put an end to Indian disturbances in Washington and Oregon Territories, in a campaign of three months. At the close of General Pierce's Administration he was recalled to the Department of the East, with his headquarters in New York. When civil war broke out in 1860, he hastened to offer his services to the Government, and after the attack on Fort Sumter he went to New York to organize, equip, and send to Washington the first regiment of volunteers. He took the responsibility of reënforcing Colonel Dimick at Fortress Monroe, thus saving that post from seizure by the Confederates. On the 1st of May he was ordered to return to Troy. In August he was sent to Fortress Monroe as commander of the Department of Virginia, and from that port led an expedition which occupied Norfolk, May 10, 1862. On the 2d of June he was transferred to the command of the Middle Department, with his headquarters at Baltimore. He was promoted to be full Major-General in the Regular Army, May 16, 1862. At the close of the war he was retired from active service, and subsequently resided in Troy. General Wool was a rigid disciplinarian, and as an organizer of troops had no superior in the service. In private life he was an unostentatious citizen, a cordial neighbor, a genial, courteous, and exemplary Christian gentleman. He was much attached to Troy, which had been his home except when duty called him elsewhere, from his youth, and left a considerable bequest to the Rensselaer Polytechnic Institute, and smaller sums to the Troy Orphan Asylum, the Day Home, the Catholic Orphan Asylum, and Williams College.

WYCKOFF, Rev. Isaac Newton, D. D., a clergyman of the reformed (Dutch) Church, eminent for scholarship, executive ability, and goodness, born in Hillsborough, Somerset County, N. J., August 29, 1792; died in Albany, March 28, 1869. He was fitted for college under the care and instruction of the late Theodore Frelinghuysen and his brother Frederick, and subsequently at the Somerville (N. J.) Academy. The death of his father, just before he entered college, left him without the means of support, but by diligent labor, both in teaching and other pursuits, he was enabled to enter Rutgers College in an advanced standing in 1810, and graduated with honor in 1812. He taught for two years after his graduation to pay the debts he had incurred for his education, one year in the Franklin Street Commercial Academy, New York City, and one year in Somerville, N. J. During this period he was in doubt in regard to his profession, and read medical works, and studied law, during his intervals of leisure. But in 1814 his religious convictions became more decided, and he determined to enter the ministry. He accordingly removed to New Brunswick, where he became principal of the Young Ladies' Academy, prosecuting his theological studies at the same time in the seminary. In 1817 he graduated from the Theological Seminary, and was licensed to preach. On the 1st of January, 1818, he was ordained and settled as pastor of the First Reformed Dutch Church in Catskill, N. Y. Here he remained for more than eighteen years, a very successful and laborious pastor. In November, 1836, he accepted a call to the pastorate of the Second Reformed (Dutch) Church in Albany, N. Y. Here he labored diligently for more than thirty years, and received a thousand communicants into his church. He was an able, interesting, and at times eloquent, preacher, and preëminently successful and beloved as a pastor, counsellor, and friend. In all the benevolent and charitable enterprises of the city he was specially active and earnest, and the numerous Hollanders who emigrated to this country, and especially to the vicinity of Albany, from 1845 to 1865, found him a volunteer commissioner of immigration, untiring in his zeal and labors for their welfare. He was a director or manager in most of the great national benevolent societies, and always faithful in the discharge of his duties. Dr. Wyckoff, among his other abundant labors, found considerable time for literary work. The number of his published occasional sermons, lectures, and addresses, was large, and he was a frequent and valuable contributor to Rev. Dr. Sprague's "Annals of the American Pulpit," as well as to several religious periodicals.

Colorado.—(See *Territories.*)

Commerce of the United States for 1869.—Exports and imports, 112; foreign commerce of the port of New York for a series of years, 112; duty-paying goods entered for consumption, 112; for warehousing, 112; foreign goods entered free, 112; imports of specie, 112; total foreign imports at New York, 112; classification of same, 113; exports from New York, 113; reexports from New York, 113; export of specie, 113; total exports from New York, 113; receipt of customs at New York, 114; foreign imports and exports of the United States, 114.

Commercial Conventions.—At Memphis, 114; Southern Pacific Railway, 114; Chinese labor, 115; immigration, 115; other proceedings, 115; at New Orleans, 115; freight transportation system between the West and East, 115; Southern Pacific Railroad, 116; immigration, 116; at Keokuk, 116; improvements of the Mississippi River and tributaries, 116; petition to Congress for a World's Fair, 116; regulations for bridges across the Ohio and Mississippi Rivers, 116; resolutions on transportation between the West and East, 116; removal of the National capital, 116; at Louisville, 117; Southern Pacific Railroad, 117; direct trade with Europe, 117; immigration, 117; resolutions on banking and finance, 117; other measures, 117; meeting of National Board of Trade at Richmond, 117; proceedings, 117; laws against non-resident traders, 118; national finances, 118; transportation of freight between the West and East, 118.

Congregationalists.—Object of the American Congregational Union, 118; finances, 118; purpose of the American Congregational Association, 118.

Congress, United States.—Third session of Fortieth convenes, 120; officers, 120; amendment to the Constitution offered in the Senate, 120; amendment to the Constitution offered in the House, 121; other amendments, 121.

In the Senate, joint resolution of amendment considered, 121; the joint resolution relative to voting, 121; better wait till the other House has completed its action, 121; amendment relative to the mode of amendment, 121; the States should have the power of expressing their opinions, 122; every human being should be enfranchised, 122; without regard to sex or color, 122.

In the House, motion to reconsider the vote by which the bill to secure equal privileges to citizens was recommitted, 122; last of the great measures growing out of the war, 122; amendment necessary, 122; at the formation of the Constitution, all its friends asserted that there was power in it over the elective franchise, 123; there must be power in the Government to provide whatever is necessary for its preservation, 123; consequences if the question of suffrage is vested in the States, 123; meaning of the words, 123; one of two things is true, 124; the powers existing in the States are the measure of the powers which Congress may exercise, 124; a republican form of government is to be guaranteed, 124; does the Constitution prohibit any State from regulating the right of suffrage? 125; the fourteenth amendment, 125; meaning of the word "privileges," 125; other sections, 126; how the bill is defensible, 126; object of the bill, 126; the power of Congress, 127; the right of the State to determine the qualification of electors is older than the Constitution, 127; what authority is there for this bill? 127; it proposes to regulate the State elections or members of the State Legislature, 128; the measure originated in hostility to the States, 128; no advocate of the Constitution at the time of its adoption claimed for it the power to prescribe the qualification of voters in the States, 128; little force in the argument that the

States might refuse to send members to Congress, 129; the United States cannot guarantee any particular form of republican government, 129; the bill and resolution of amendment are a sort of *felo de se*, 130; the singular anomaly presented, 130; we are in no sense a nation, and, if we become so, we will be a centralized despotism in some form, 130; amendment offered, 131; agreed to, 131; the designation of property and educational qualifications recognizes the right in any State to establish a religious test, 131; powers conferred by the different sections, 131; amendment lost, 132; another amendment moved, 132; lost, 132; another amendment, 132; lost, 132; bill passed, 133.

In the Senate, a joint resolution proposing an amendment to the Constitution considered, 133; a declaration to make all men, without regard to race or color, equal before the law, 133; the only measure that will really abolish slavery, 133; amendment moved, 133; the question should be submitted to the people, 134; it is said we are seeking to perpetuate our power, 134; only two modes of ratification, 134; how can a member of a Legislature elected last fall act on a question that was not considered by the people when they elected him? 135; the question taken from the people at the last election, 135; what did the Chicago platform mean? 135; not merely a question of suffrage, 135; an independent republic must necessarily control the question of suffrage in its own elections, 136; amendment moved, 136; the principle of the Constitution in relation to amendments, 136; it is not competent for the Senate, in this state of its organization, to act on an amendment, 136.

In the Senate, the House resolution considered, 137; amendment moved, 137; amendment and resolution substantially the same, 137; why is it necessary to insert these words, "or previous condition of servitude? 138; another amendment moved, 139; why amend what is already sufficient? 139; difficulties in the way of ratification, 139; power given to Congress to regulate elections in States, 140; can color be a qualification of a voter? 140; if the color of the hair, or eyes, or skin, distinguishes one race from the other, then the Legislature has a right to make it a qualification, 141; all the power of Congress on the subject, 141; this general doctrine comprehends woman as well as man, 141; principles and doctrines of predecessors, 142; proposal to submit the amendment to the several States, 142; facts in regard to the last amendment, 142; an amendment proposed to Legislatures or to conventions for ratification, until ratified by three-fourths of the States, is, of necessity, in its very nature, a simple proposition, 143; an anomaly in the Constitution of the United States, 143; impossible so large a portion should remain a long time without suffrage, 144; meaning of the Chicago platform, 145; under the Constitution no State has the power to deny suffrage on account of color, 145; the amendment contains a grant of power to Congress to set up other tests for voting and holding office, 145; the Republican platform, 146; the question of suffrage belongs to the people—is it right for Congress to take it away? 146; two constructions put upon one clause, 146; what limit is there to the power of the people to change the Constitution? 147; a grave question, 147; it is averred that the President may be displaced, and a king established instead, 147; where does the power of the people to amend or change the Constitution end? 147; you change the nature of the Government, 148; the case of McCulloch *vs.* State of Maryland, 148; is it wise to extend suffrage to the colored people? 149; some do not want the Chinese to vote, 149; exclusion on the ground of religion, 149; position of the Senators from the Western coast, 150; historical references, 150; the heresy of secession is not dead, 150; does the Constitution say how far you shall amend it? 151; State sovereignty denied, 151; State sovereignty and Federal sovereignty are the two ideas planted in the Constitution, 151; we must maintain the rights of the States under the Constitution, 152; just as necessary to insist on the rights of the States as on the rights of the Federal Government, 152; cannot find a word in the Constitution which makes a limit on the power of the people to amend it, 152; what right has any State in this Union but that which it gets from the Constitution? 153; is the opinion of Congress supreme on all constitutional questions? 153; the judicial power of the court does not contain political power, 154; when the court assumes the power to declare an act of Congress unconstitutional and void, then begins the struggle in this country, 154; the sovereignty rests with the people, 155; the sovereignty not delegated is reserved to the States and to the people, 155; the government of the States is as essential as the government of the people, 156; an amendment to abolish the government enacted by the Constitution exceeds the powers of Congress, 156; what the people of a State have the power to organize and institute they have the power to maintain, 156; is the denial of the right to do one thing an affirmation of the right to do another? 157; the fourteenth amendment has undertaken to secure to citizens all the privileges that belong to citizens, 157; extent of its provisions, 158; the extent of the name of citizen, 158; an exceedingly erroneous and detrimental view, 159; privilege of a citizen to vote, 160; the key to the question, 160; such construction cannot be maintained, 161; occasion of the first section of the fourteenth amendment, 161; motion to adjourn, 162; lost, 162; amendment lost, 162; further amendment considered, 162; it declares exactly that we mean to enfranchise the African, 163; it will leave out the subject of Chinese immigration, 163; amendment lost, 163; another amendment, 164; causes of exclusion from voting, 164; the rule should be universal, 164; objections urged, 165; amendment lost, 165; other amendments considered and lost, 166–168; resolution passed, 168.

In the House, the amendments of the Senate considered, 168; House refuse to concur, 169.

In the Senate, a committee of conference moved and lost, 169; non-concur in the action of the House, 169; another resolution of amendment considered and adopted, 169, 170; amended in the House, 170; conference held, 170; result, 170.

In the House, action taken for counting the votes for President and Vice-President, 171; action on the vote of Louisiana, 171; do. on the vote of Georgia, 171; total vote, 172; its declaration, 172; protest offered in the House, 173; debate, 173; resolutions offered, 174; further debate, 174, 175.

In the Senate, the House bill to repeal the act regulating the tenure of certain civil offices considered, 175; amendment proposed, 175; the House proposes to go back to the old system, 176; the substantial principle upon which the act of 1867 was founded ought to be retained, 176; the amendment restrains the President except as to his Cabinet, 176; object of the Tenure-of-office Act, 177; remove every obstacle

from the incoming Administration, 178; operation of the new doctrine that the President has not the power of removal, 178; our experience, 178; consequences of the assassination of Lincoln, 179; practice of the Government on the power of removal, 179; amendments offered and rejected, 180; bill laid aside during this session, 180.

In the Senate, a bill for equal rights in the District of Columbia passed, 180.

In the Senate, a resolution considered relative to the public credit, 181; extract from the President's message, 181; proposition to pay the interest simply, 181; the platform of a political party, 181; object of the resolution to express disapprobation of the President's message, 182; amendments proposed, 182; resolution agreed to, 183.

In the House, resolution offered relative to repudiation, and passed, 183, 184; a bill to strengthen the public credit reported, 184; what is intended by this legislation, any thing or nothing, 185; bill passed, 186.

In the Senate, House bill to strengthen the public credit, reported, 186; amendments, 186; bill passed, 187; House refuse to concur, and a conference held, and a new bill reported, 187; explanation of it, 187; protest against its passage, 188; undertake to bind the Government to a material modification of the contract to the benefit of the creditor and detriment of the people, 188; did the people of the country expect these bonds to be paid in depreciated paper? 189; bill passed in both Houses, 190.

Joint resolution relative to persons holding offices in Virginia and Texas passed and sent to the President, 190.

The first session of Forty-first Congress convened, 191; message from the President, 191; bill for the further protection of equal rights in the District of Columbia passed both Houses, 192.

In the Senate, a bill to repeal the Tenure-of-office Act considered, 192; a suspension recommended instead of a repeal, 192; not a subject for legislation, 193; what is proposed to do, 193; report recommitted, 193; new bill reported, amendment agreed to, 194; object of the amendment, 194; explanation of the bill, 194; bill passed in both Houses, 195.

A bill to strengthen the public credit considered, 196; amendments offered, 196; a bill passed in the lower House, 197; in the Senate, substituted for the Senate bill, and passed, 197.

In the House, a motion to suspend the rules for a resolution relative to Mongolians to be introduced, was lost, 197; message from the President, on reconstruction, 198; bill reported and passed, 198-200.

In the House, a resolution relative to Cuba, adopted, 202.

CONKLING, ROSCOE.—Senator from New York, 120; on the bill to repeal the tenure-of-office law, 177.

Connecticut.—Public affairs, 202; finances, 202; debt, 202; expenditures, 202; claims, 202; militia, 202; public schools, 202; Sheffield Scientific School of Yale College, 203; banks, 203; insurance, 203; charitable institutions, 203; State Reform School, 204; State Prison, 204; recommendations in Governor's message, 204; meeting of the Legislature, 205; ratification of the fifteenth amendment, 205; resolutions of the Democratic State Convention, 205; Republican resolutions, 206; election returns, 206.

CONNESS, JOHN.—Senator from California, 120; moves an amendment to the fifteenth amendment, 166.

CORBETT, HENRY W.—Senator from Oregon, 120; offers an amendment to the fifteenth amendment, 166.

Cotton.—Falling off of the crop in 1869, 206; causes, 207; consumption of cotton in the United States in 1869, 207; exhibit of cotton manufactures in the United States for 1869, 207; crop for the past two years, 207, 208; crop of Sea Island cotton, 208; consumption in Great Britain, 208; exportation, 208; prices for 1869, 208; production in foreign countries, 208.

Counting the vote for President and Vice-President, 172.

CRAGIN, AARON H.—Senator from New Hampshire, 120; offers an amendment to the Constitution, 120; on fifteenth amendment, 162.
